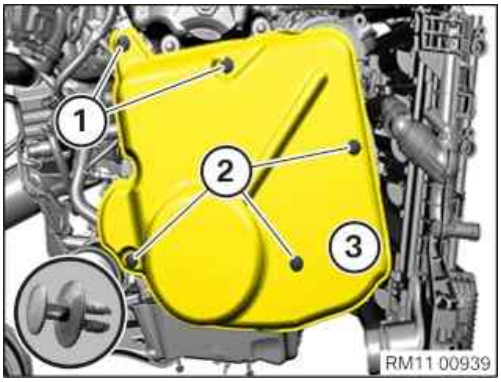
- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

85 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

86 – Installing exhaust manifold

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

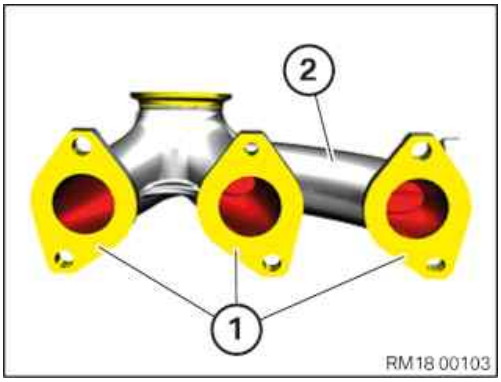
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

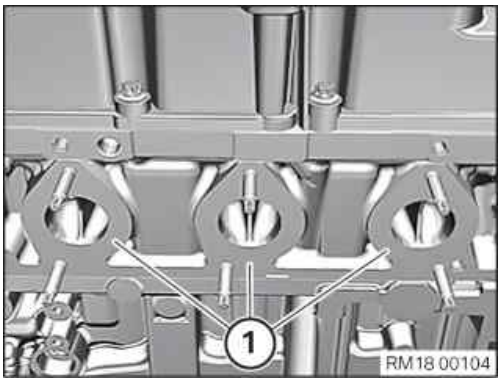
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

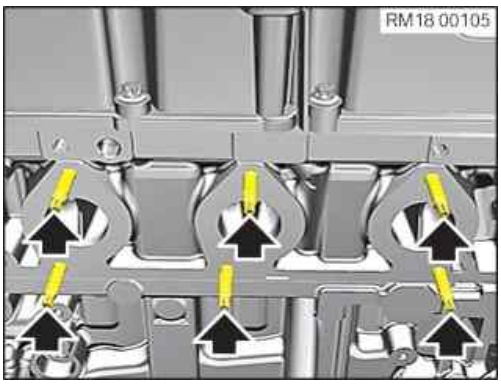
The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the connection points (1) on the exhaust manifold (2) with the special tool **0 495 102 (11 4 470)**.

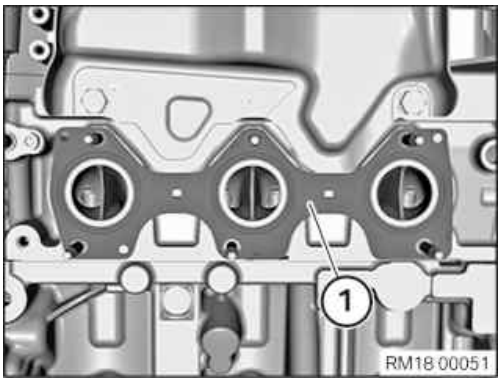


- Clean the connection points (1) on the cylinder head with the special tool **0 495 102 (11 4 470)**.



- Check the stud bolts (arrows) on the cylinder head for **correct** fit.

cardiagn.com

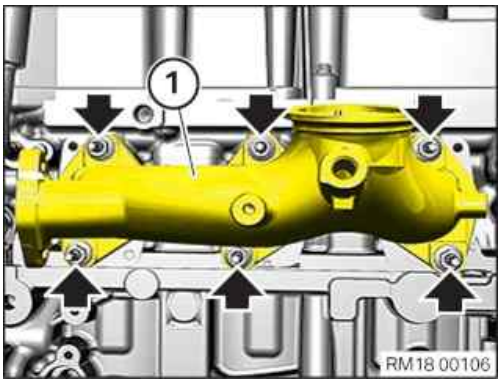


TECHNICAL INFORMATION

The **coated side of the** seal must be mounted facing towards the exhaust manifold.

- Renew the gasket (1).

  Parts: Gasket
- Insert and install the gasket (1).

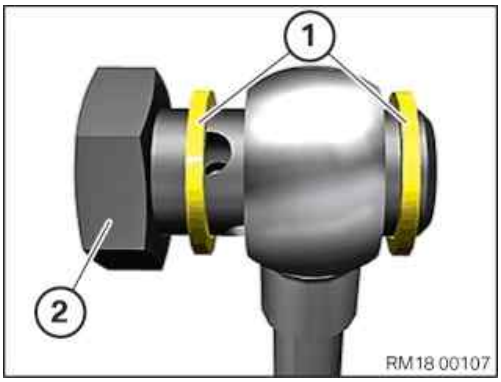


- Insert and install the exhaust manifold (1).
- Renew the nuts (arrows).

  Parts: Nuts
- Hand-tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.
- Tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.

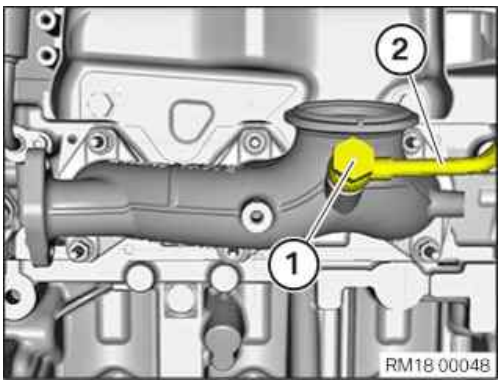
Exhaust manifold to cylinder head

M7	If necessary, renew loose stud bolts.	Tightening torque	11 Nm
	Replace nuts.	Tightening torque	13 Nm



- Renew the sealing rings (1) from the banjo bolt (2).

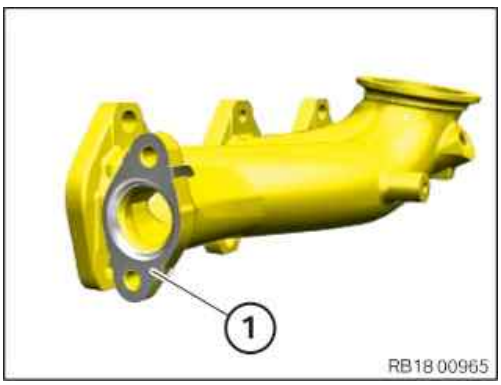
  Parts: Sealing ring



- Insert and install the exhaust gas pressure pipe (2).
- Tighten the banjo bolt (1).

Banjo bolt for exhaust pressure pipe to exhaust manifold

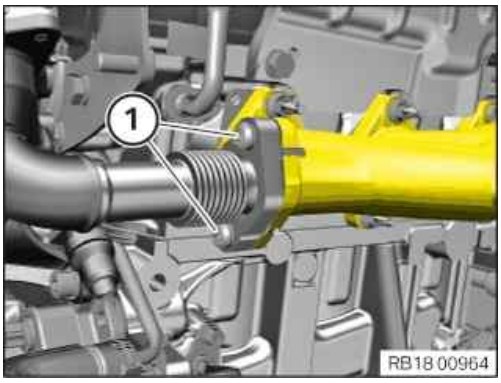
Hollow bolt		Renew sealing rings.	30 Nm



- Renew seal (1) between exhaust-gas recirculation cooler and exhaust manifold.

  Parts: Gasket

cardiagn.com



- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

87 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

88 – Installing exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to the exhaust turbocharger

Inadequate initial filling of exhaust turbocharger leads to dry running.

- Make sure the initial filling is correct when replacing exhaust turbocharger.
- Fill the exhaust turbocharger with the suitable additive (see electronic Parts Catalogue).

cardiagn.com

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.

For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

TECHNICAL INFORMATION

- It is imperative to perform certain test steps to prevent subsequent damage in the event of exhaust turbocharger damage. See further information.

TECHNICAL INFORMATION

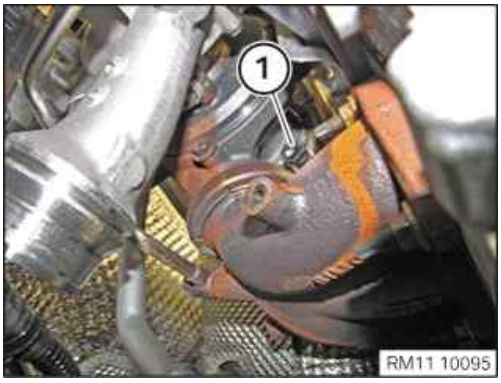
For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger



- Renew gasket.

  Parts: Gasket
- Position seal on exhaust manifold.
- Guide the exhaust turbocharger in from the top and position it.
- **Ensure that gasket is correctly seated.**
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Renew sealing rings.

  Parts: Sealing ring
- Position oil feed line with banjo bolt (1) and sealing rings and tighten hand-tight.

  There are 2 sealing rings fitted on the banjo bolt (1).
- Align oil feed line and tighten banjo bolt (1).

  The oil feed line must not sit on the exhaust turbocharger.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

cardiagn.com

- Renew gasket.

  Parts: Gasket
- Position oil return line (2) with **seal** on exhaust turbocharger.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Feed in and tighten screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

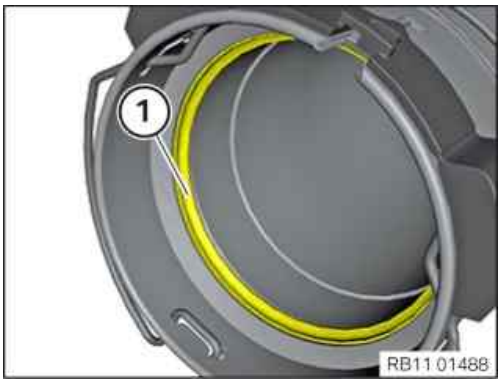
89 – Install right charge air duct

RISK OF DAMAGE

Damage to the exhaust turbocharger.

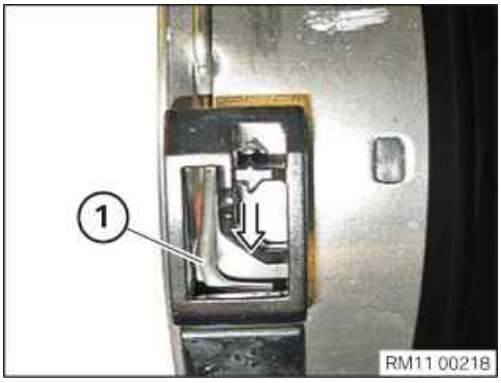
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.



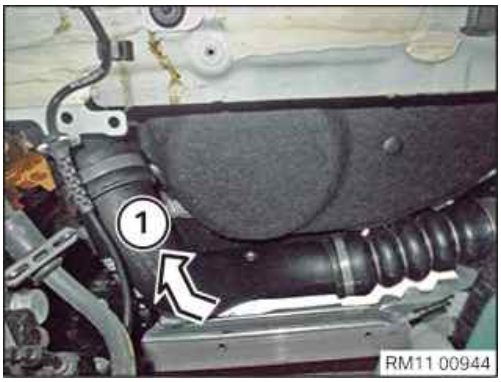
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

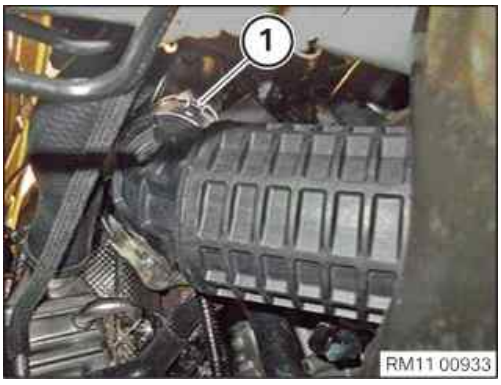


- Let the lock (1) engage at the holder (arrow).

cardiagn.com

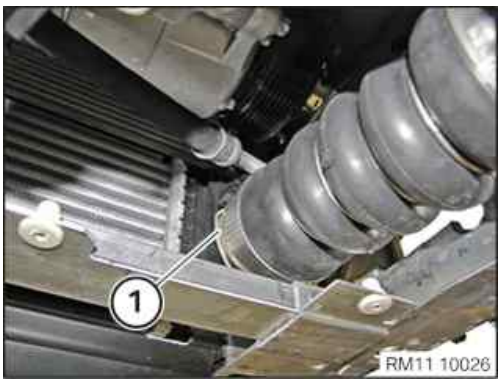


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



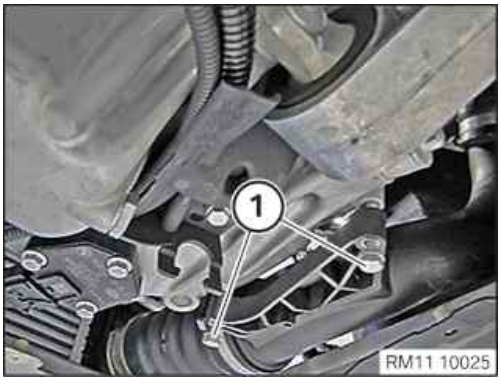
- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm



- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

90 – Installing heat shield on exhaust turbocharger at the rear

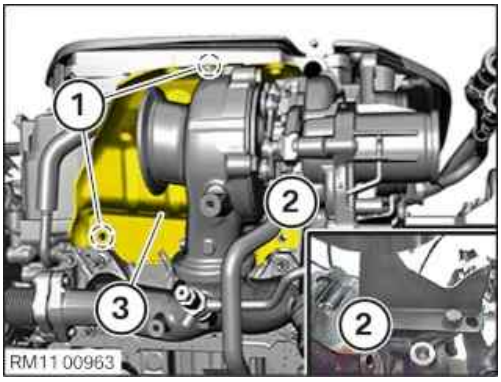
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

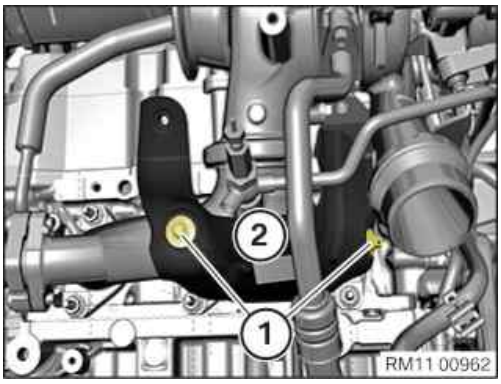
91 – Installing heat shield on exhaust turbocharger at bottom

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (2).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

92 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

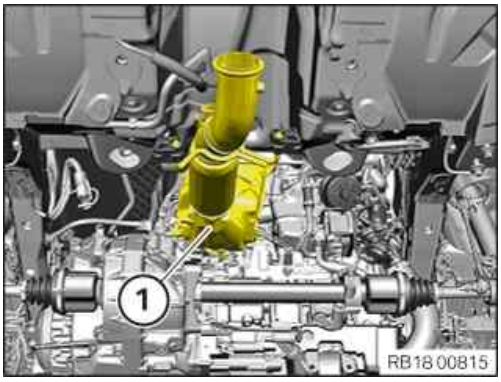
cardiagn.com

- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

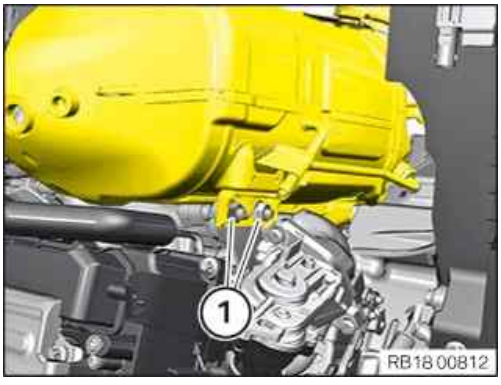
  Parts: Gasket

- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.



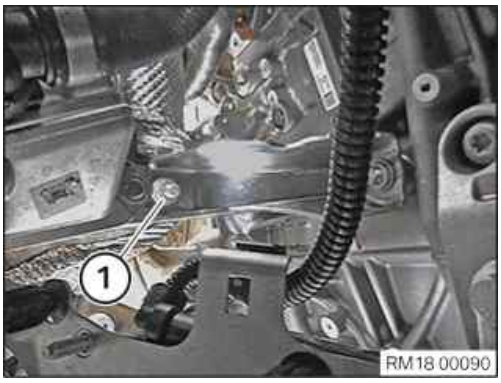
- Carefully insert and install the diesel particulate filter (1).

- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).



- Tighten nuts (1) by hand.

cardiagn.com



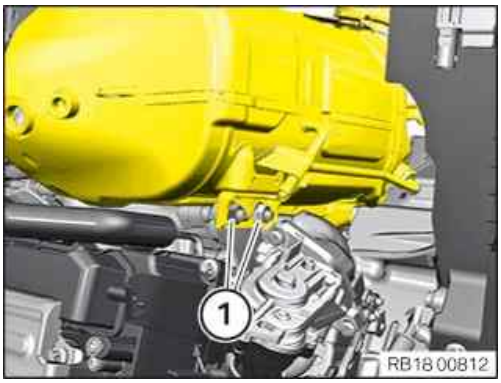
- Tighten the nut (1) hand-tight.

- Remove fitting aid (1) for the flexible tube.

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

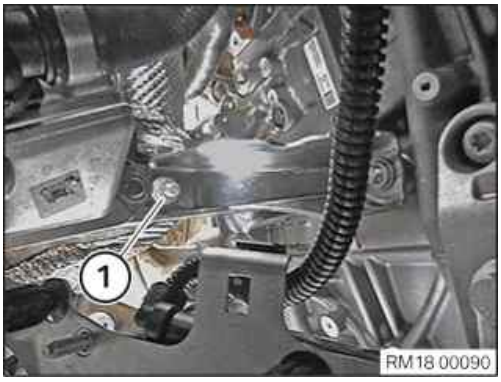
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

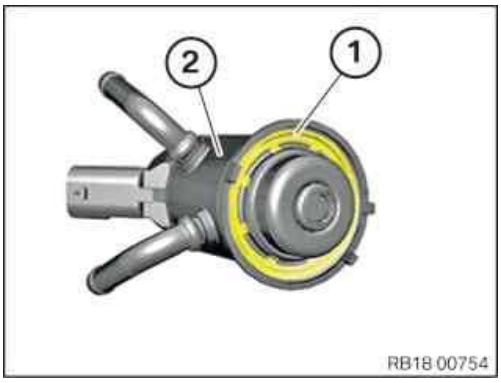


- Tighten nut (1).

Diesel particle filter to holder

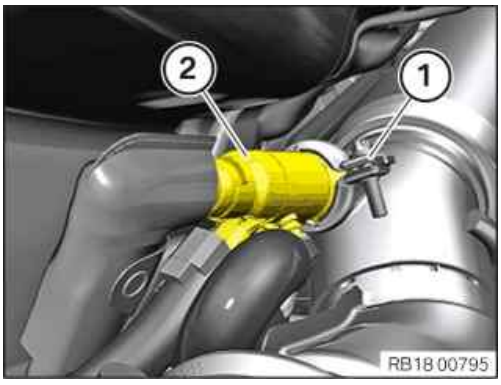
M8 hexagon nut		Tightening torque	19 Nm

cardiagn.com



- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

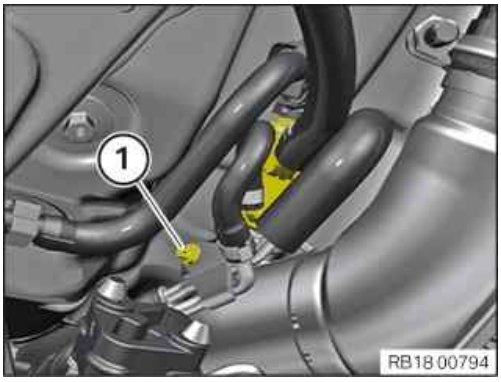


- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

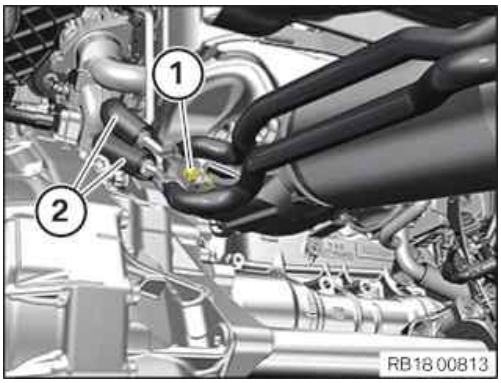
V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm



- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

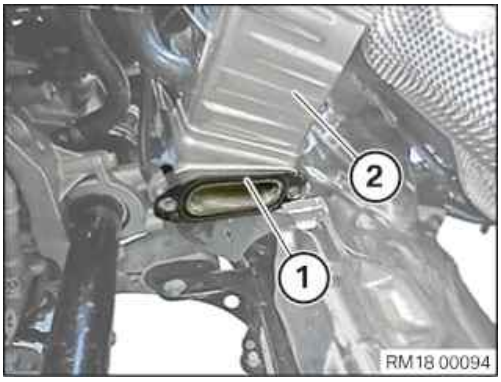
Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

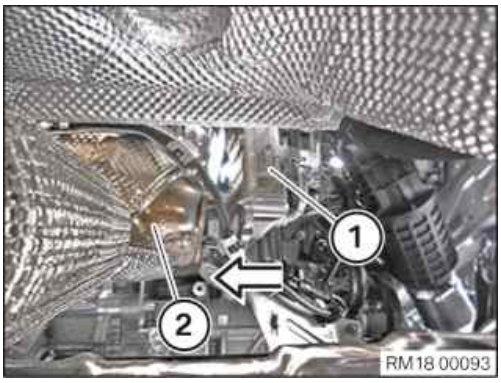
Torx bolt BM6x16		Tightening torque	8 Nm



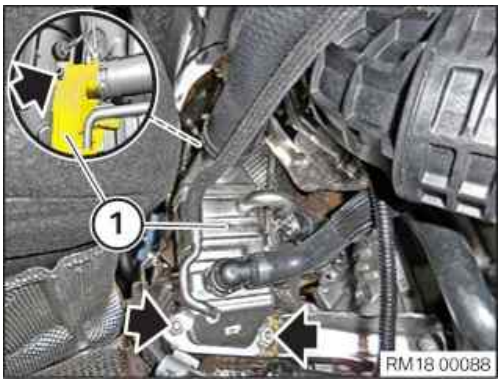
- Replace seal (1) of the low pressure exhaust-gas recirculation cooler (2).

  Parts: Gasket

cardiagn.com



- Feed in and install the low pressure exhaust-gas recirculation cooler (1) in at the diesel particulate filter (2) in the direction of arrow.



- Tighten nuts (arrows) of the low pressure exhaust-gas recirculation coolers (1).

Low-pressure exhaust-gas recirculation cooler to diesel particulate filter

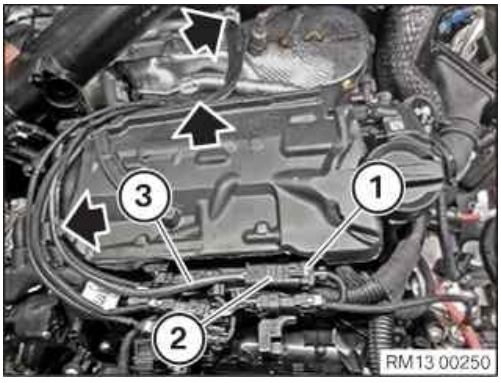
Flange nutM8		Tightening torque	19 Nm

93 – Install the control sensor

- Feed in front oxygen sensor (1) and install.
- Tighten the front oxygen sensor (1) with the special tool **0 491 075 (11 7 030)**.

Control sensor

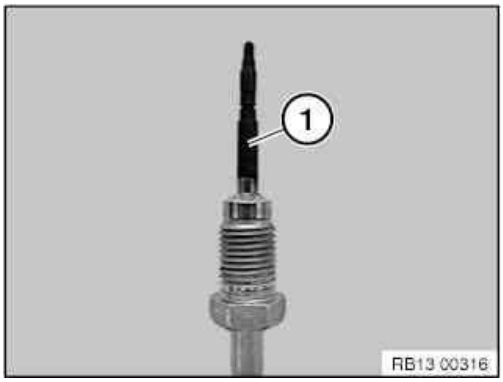
Control sensor		Tightening torque	50 Nm



- Feed in and install cable (3) from the oxygen control sensor into the clamps (arrows).
- Secure connector (2) on holder.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

94 – Install the exhaust-gas temperature sensor on the diesel particulate filter



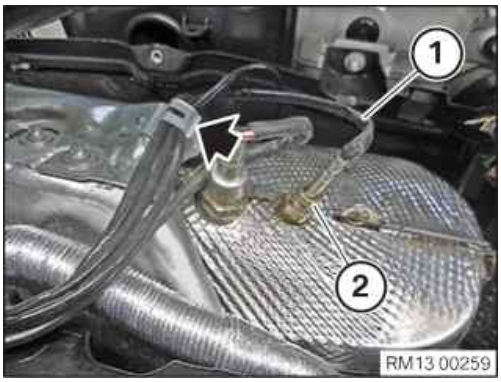
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.
- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

cardiagn.com



- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

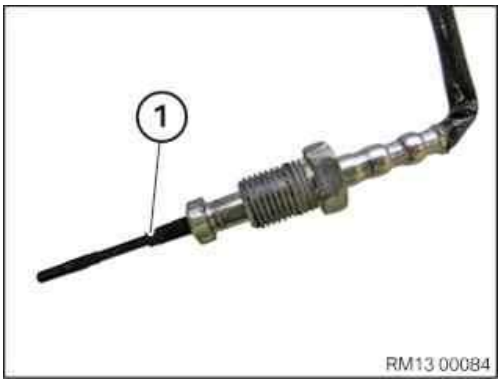
95 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

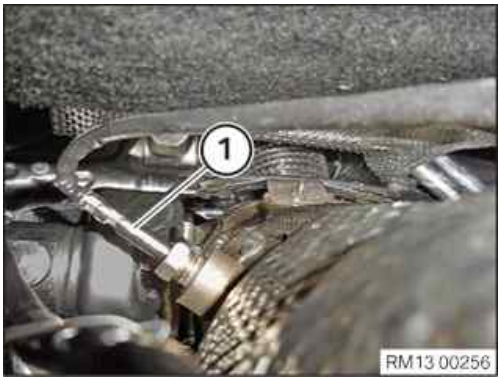
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.



- Make sure the gauge tip (1) is not damaged during installation.



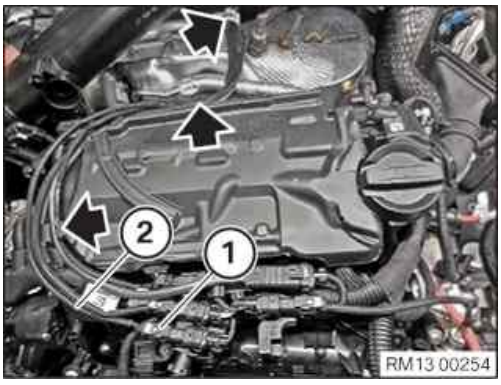
- Feed in and install the exhaust temperature sensor (1).

cardiagn.com

- Tighten the exhaust temperature sensor (1) with conventional tools (2).

Exhaust temperature sensor to diesel particulate filter

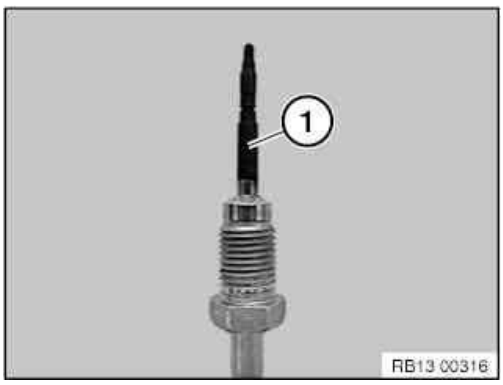
Exhaust-gas temperature sensor		Tightening torque	28 Nm



- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

96 – Installing exhaust temperature sensor on catalytic converter



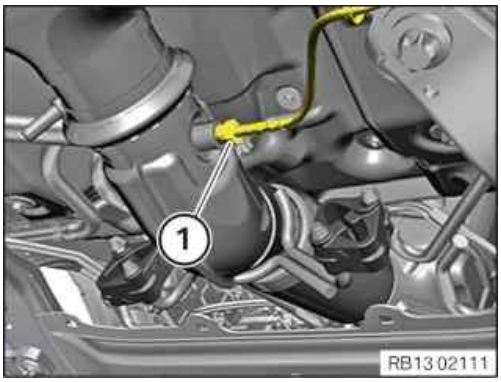
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.



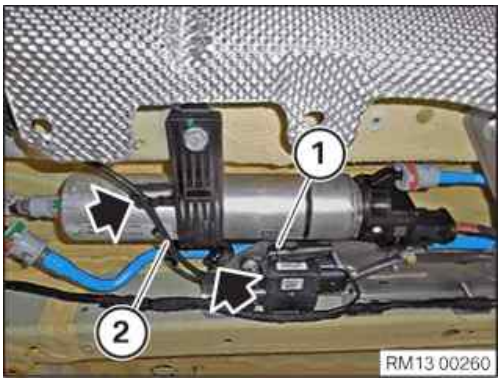
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Secure the cable clips (1).

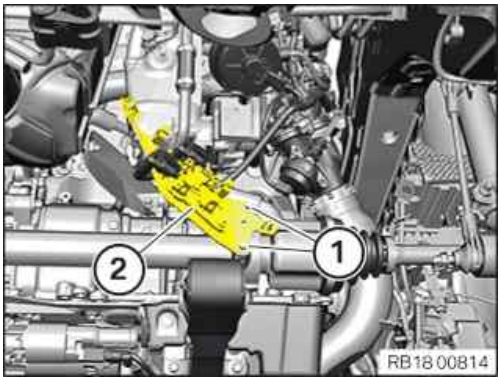
cardiagn.com



- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

97 – Install holder for oxygen sensor

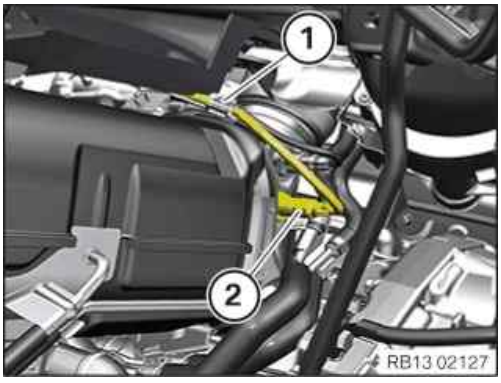


- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm

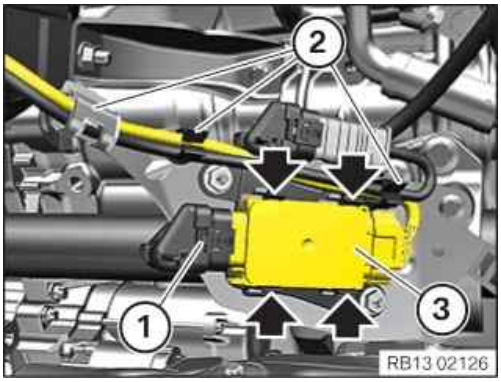
98 – Installing the nitrogen oxide sensor before SCR catalytic converter



- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

Sensor		Tightening torque	50 Nm



- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

99 – Install the monitoring sensor

TECHNICAL INFORMATION

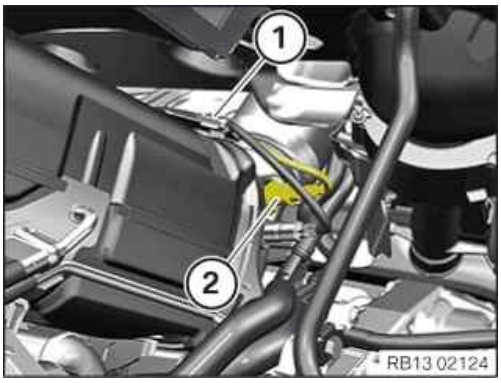
New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

cardiagn.com

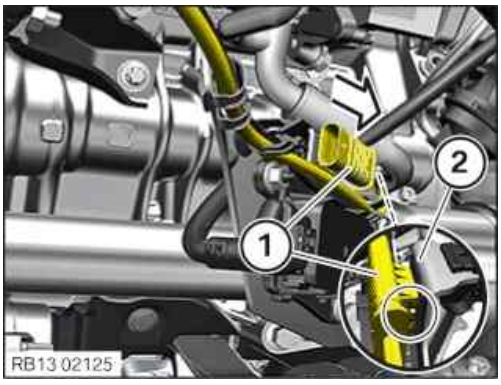


- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor

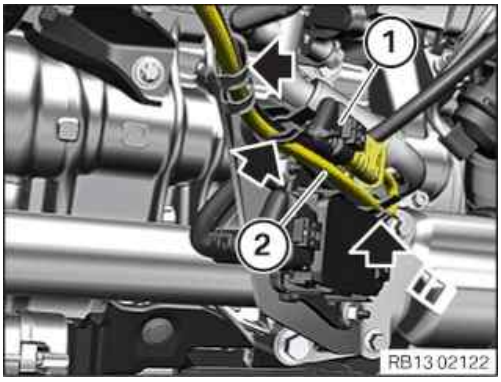
Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.



- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.



- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

100 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

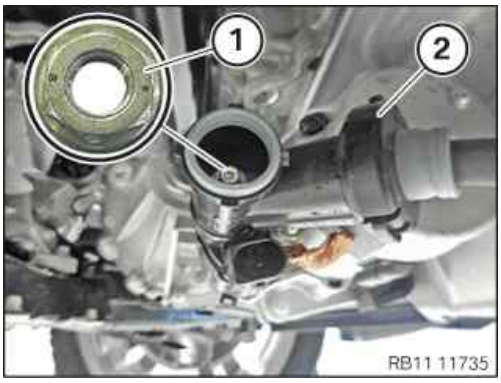
- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

cardiagn.com



- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

101 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

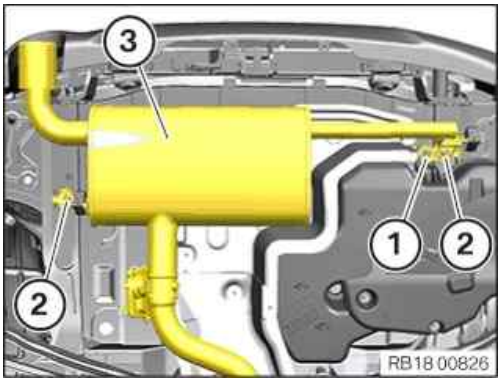
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Insert and install the exhaust system (3) with the help of another person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).

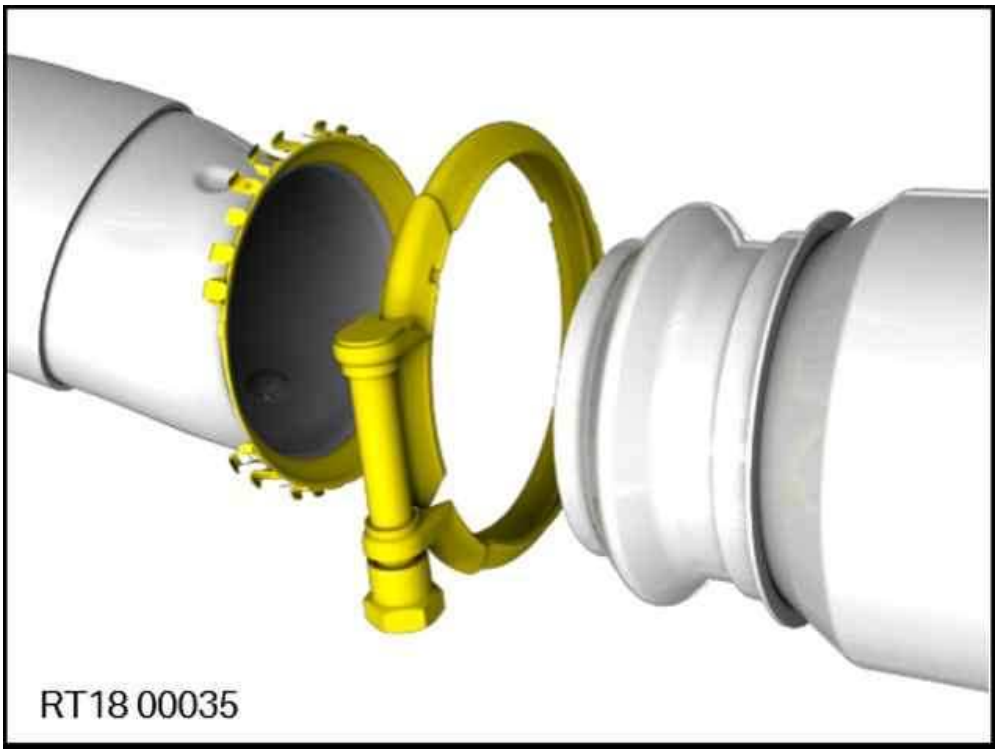
Exhaust bracket on body

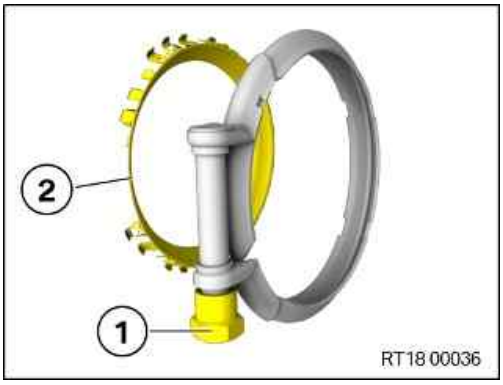
Hexagon screw M8x30		Tightening torque	19 Nm

cardiagn.com

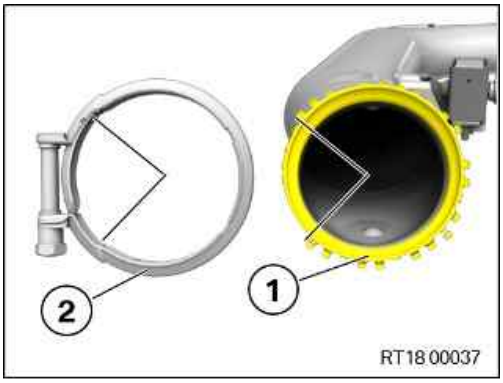
▶ **Install the V-clip**

V-band clamp



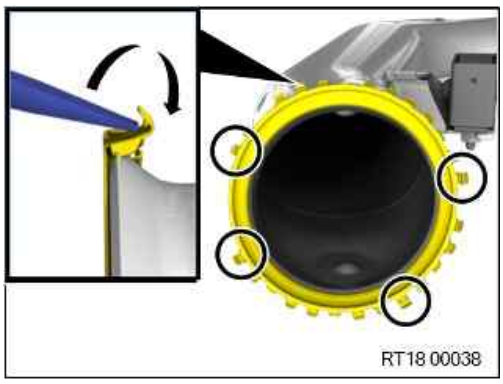


- Unscrew the nut (1) and remove the sealing ring (2).



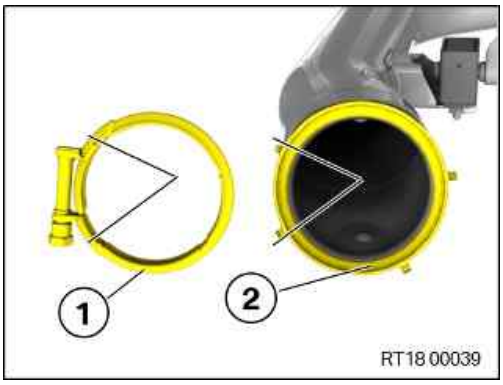
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.



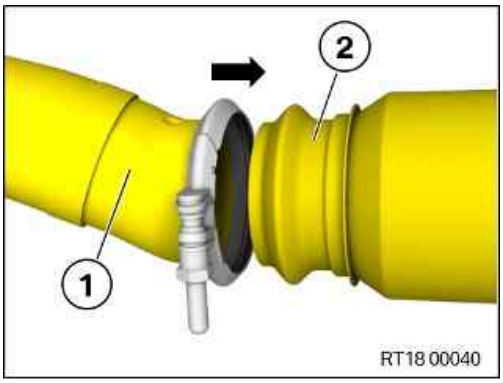
- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

cardiagn.com

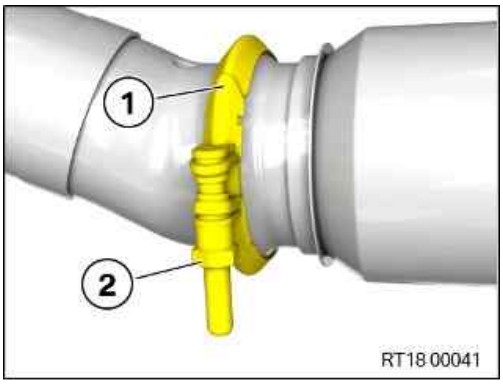


- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).



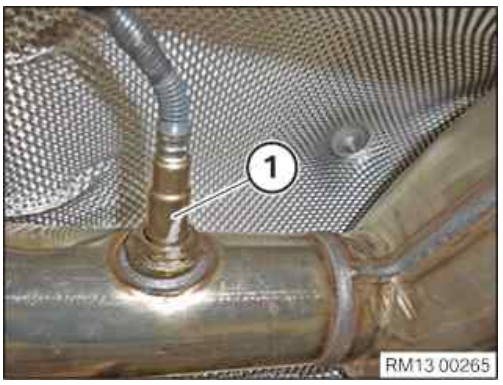
- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.



- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

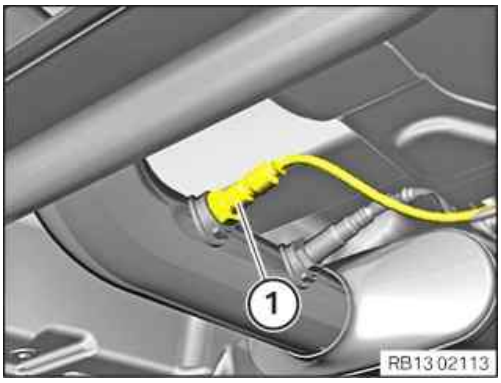


- Guide in, position and tighten the diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm

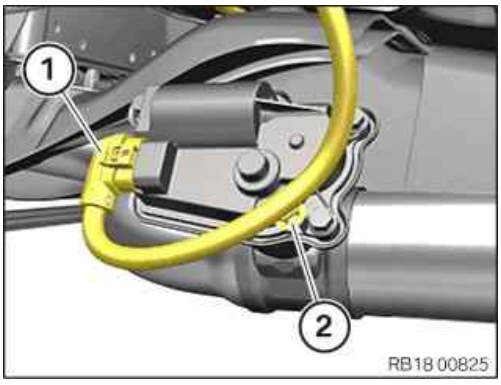
cardiagn.com



- Guide in, position and tighten the nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

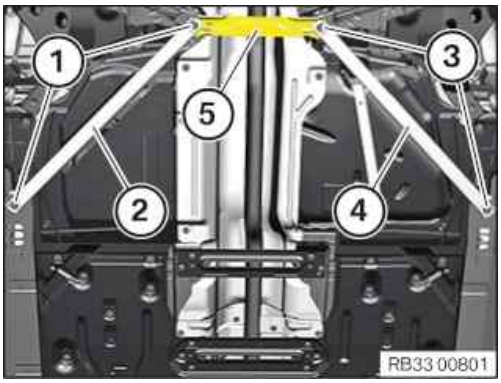
Sensor		Tightening torque	50 Nm



- Secure clamps (2).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

102 – Install the cross-member with torsion struts



- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

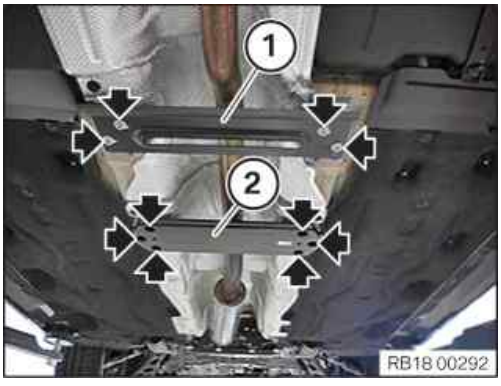
- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

103 – Install the connecting support on the tunnel in front and back



- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

M10x18		Tightening torque	56 Nm

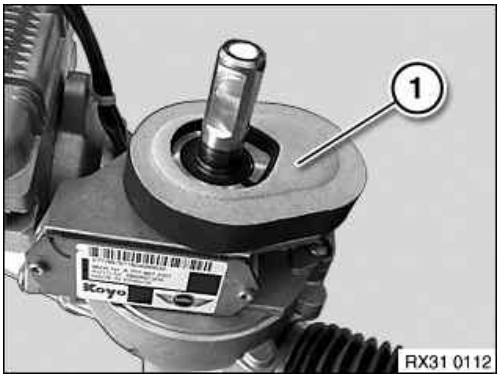
- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

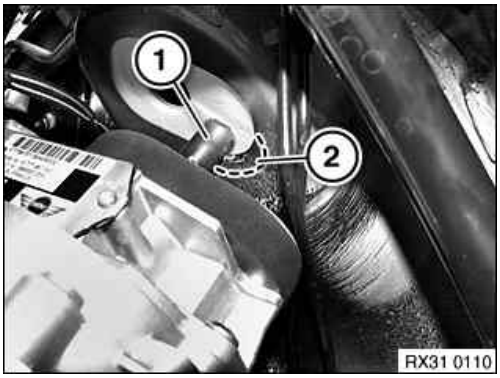
cardiagn.com

104 – Mount and secure the complete front axle



- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

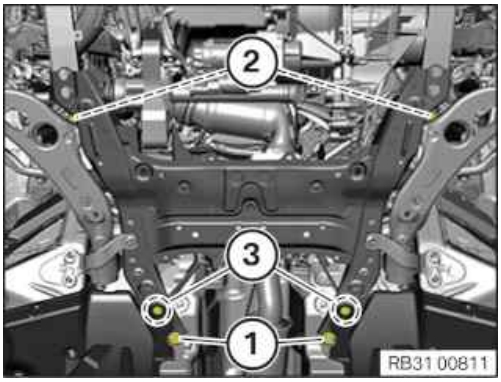


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

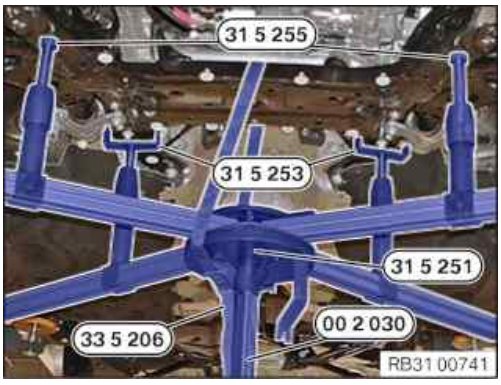
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).

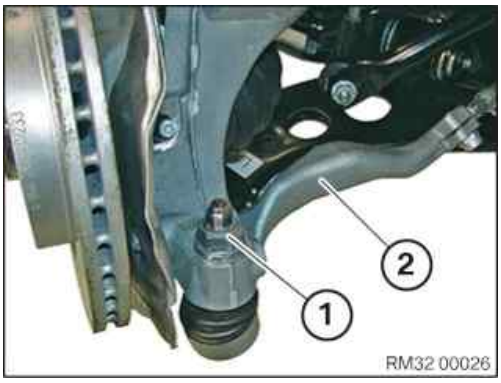
Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and place it to the side.

cardiagn.com



NOTICE

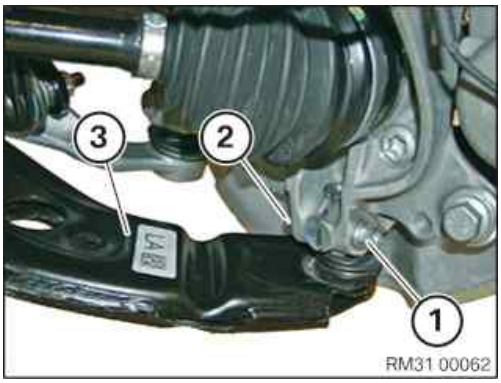
Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm



NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

105 – Install the mounted parts on the front axle support

NOTICE

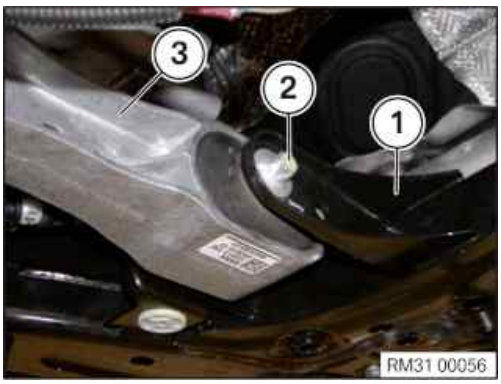
Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

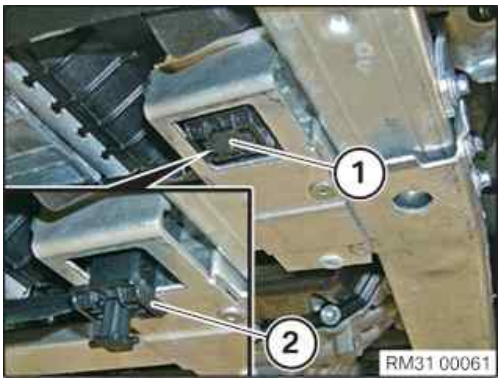


- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm

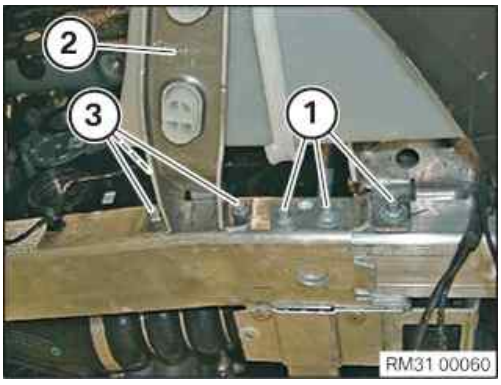
cardiagn.com



NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.



- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

Perform the operations on the left and right side.

- Tighten the screws (1).

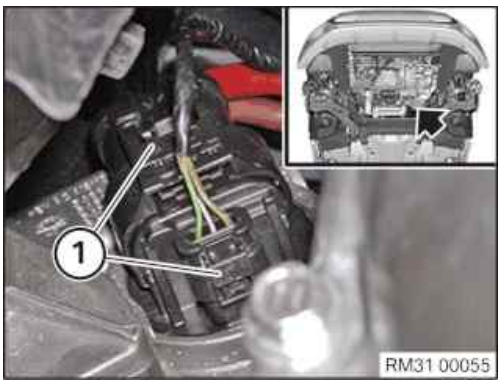
Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm

106 – Attaching connector at steering gear

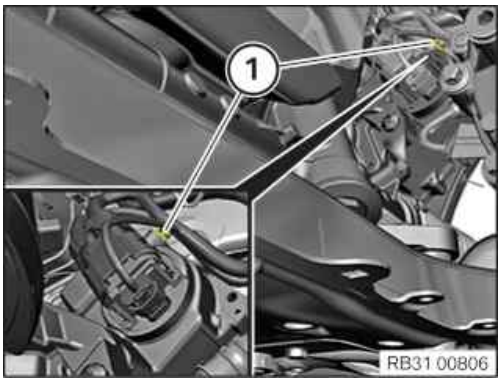
- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.



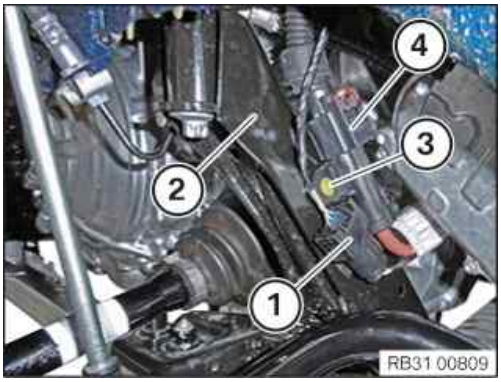
- Connect and lock connector (arrow) (1) with the steering gear.

cardiagn.com



- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

107 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

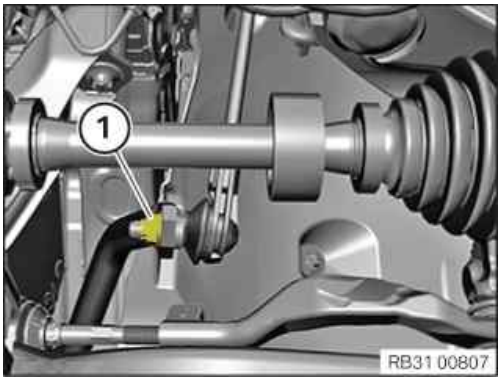
  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

108 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**



- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

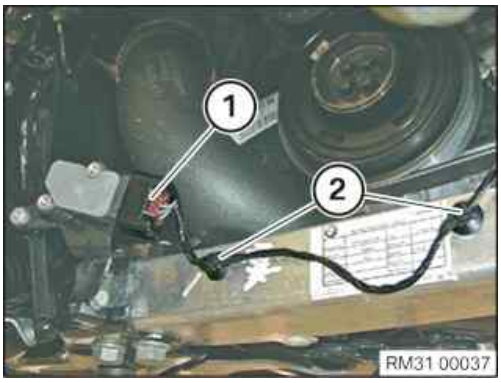
Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

109 – With right installation: Securing the cable for the ride height sensor

cardiagn.com



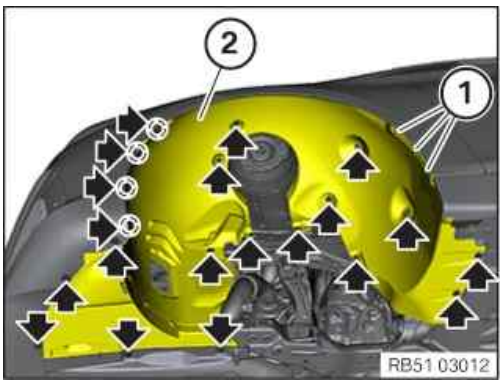
- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

110 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▶ **Installing the front wheel arch cover**



- Guide the wheel arch cover (2) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

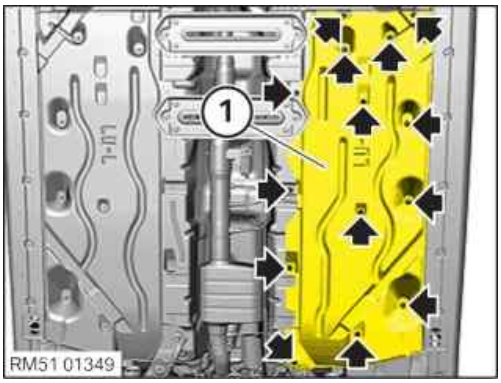
Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

- Secure expanding rivet (1).

111 – Installing underbody panelling , right



- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

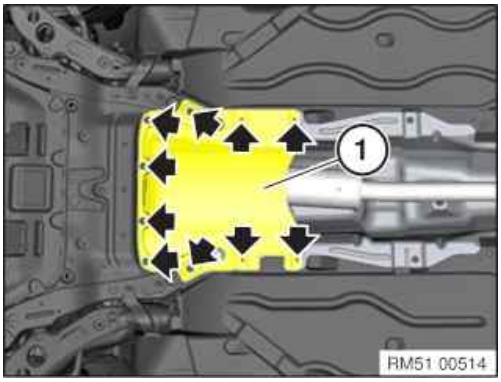
Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

112 – If installed: Installing underbody protection at rear



- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

113 – Mount the front left and right wheels

cardiagn.com

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

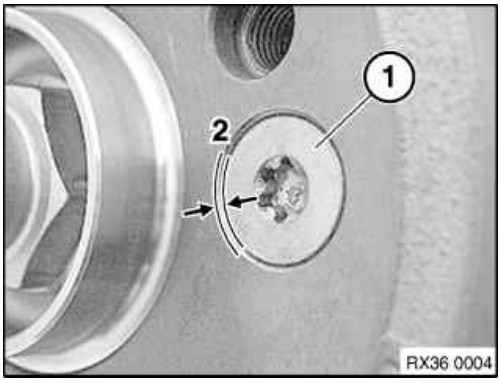
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

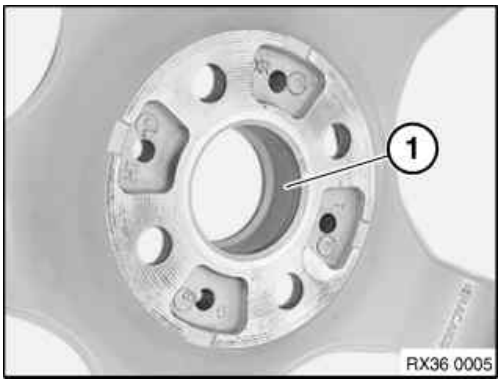
  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

◁

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

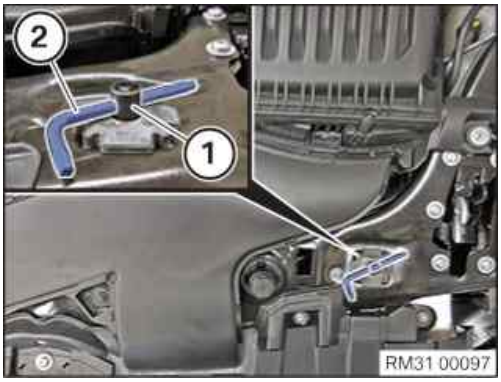
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check wheel bolts (arrows) and threads for damage, renew the wheel bolts if necessary.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

114 – Removing fastener for left and right radiator



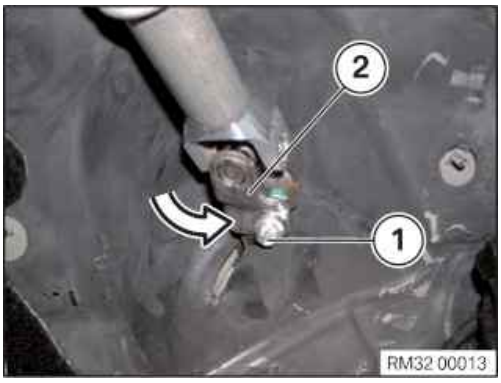
NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

115 – Secure the steering shaft at the bottom on the steering gear

cardiagn.com

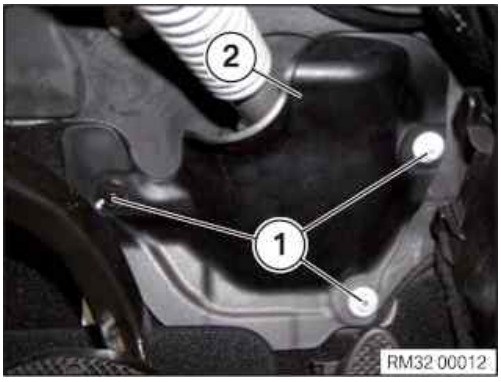


- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm



- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

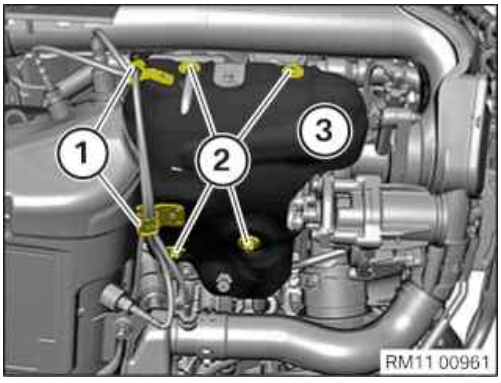
116 – Install the heat shield on the exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



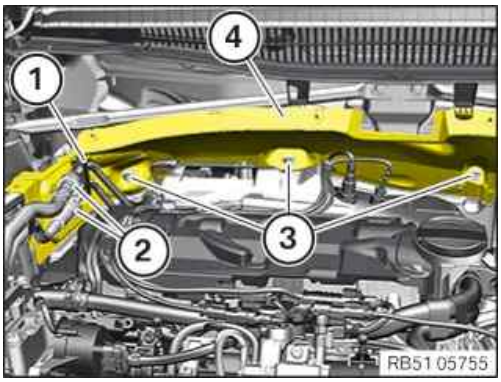
- Feed in and install the heat shield (3).
- Tighten down screws (2).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Secure cable in holders (1).

117 – Installing rear bulkhead upper part



- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

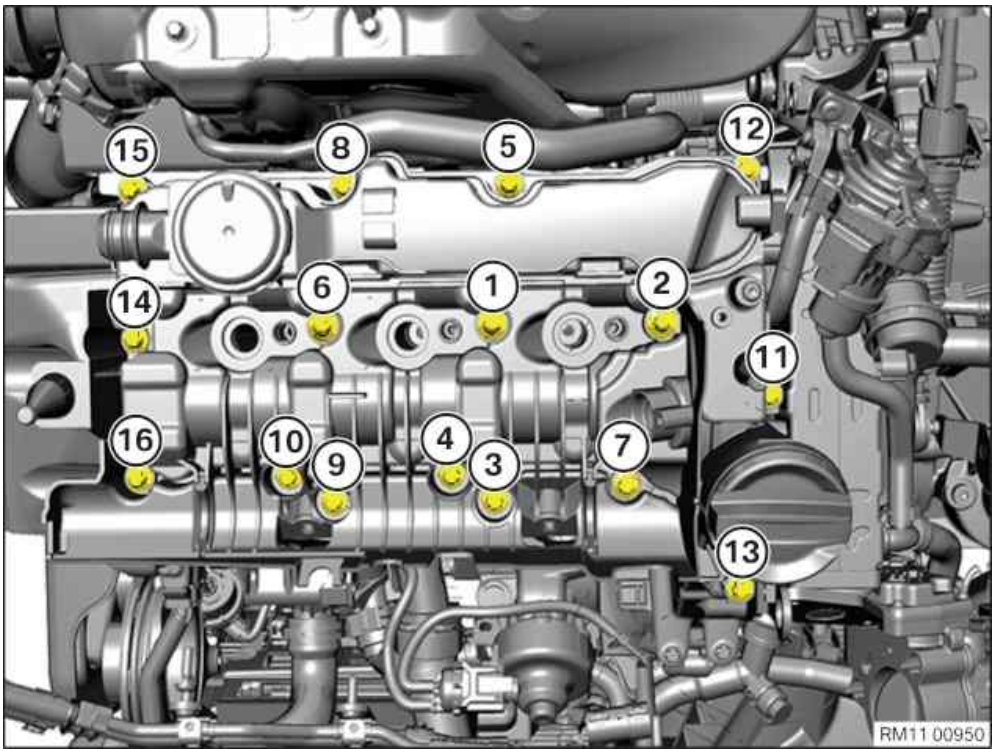
- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

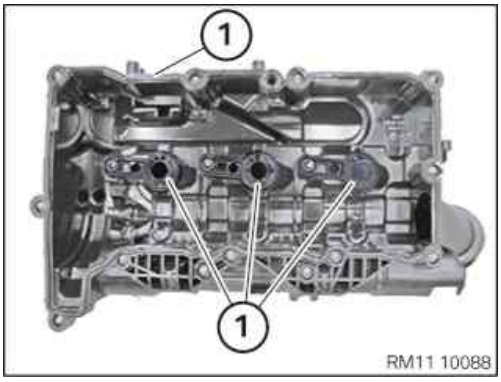
cardiagn.com

118 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

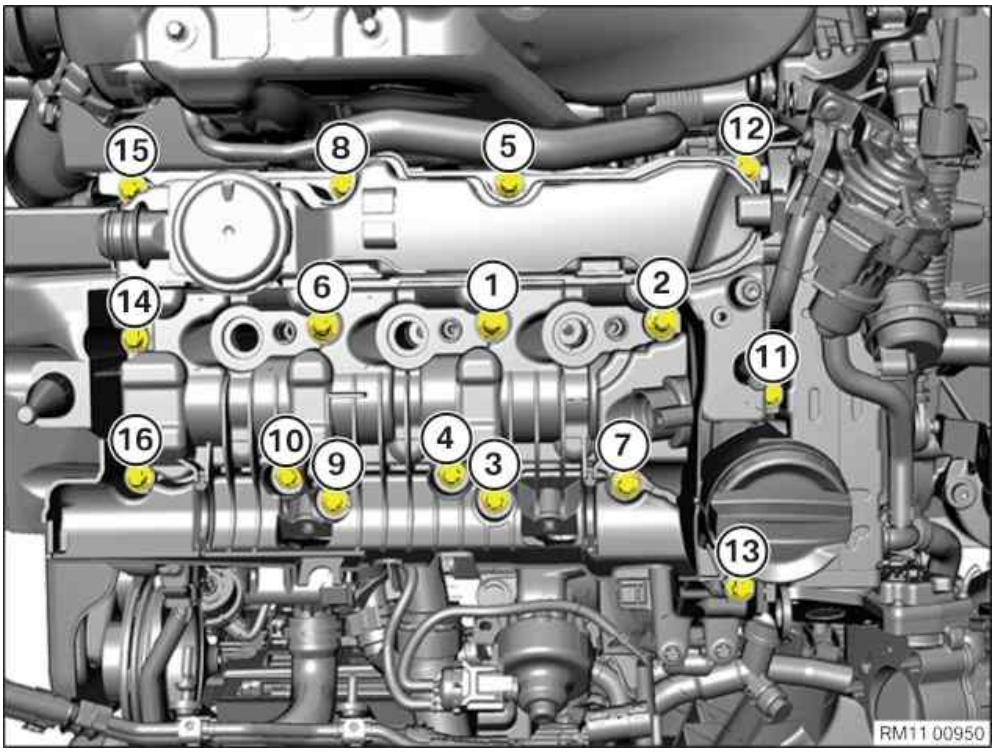


1 to 16 Bolts of the cylinder head cover



- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

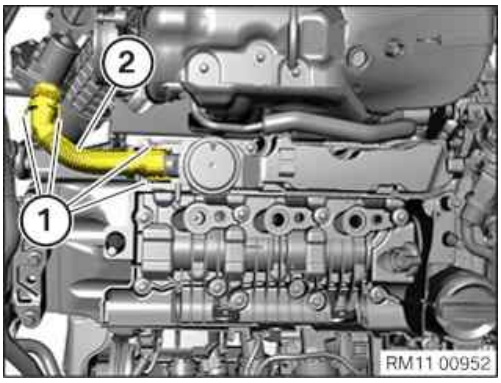


- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nn

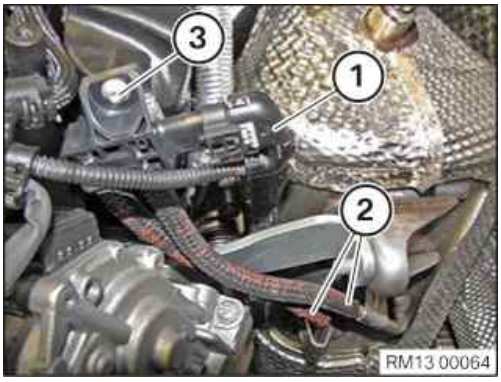
cardiagn.com



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

119 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

120 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.

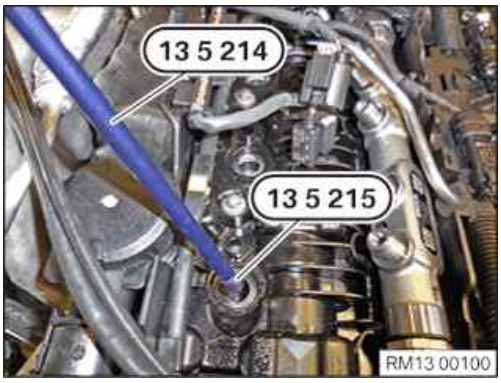
RISK OF DAMAGE

Contaminant or foreign body.

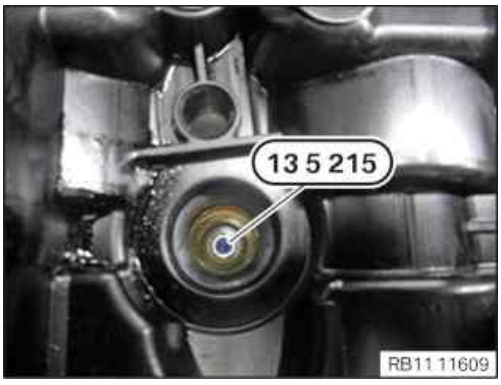
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com



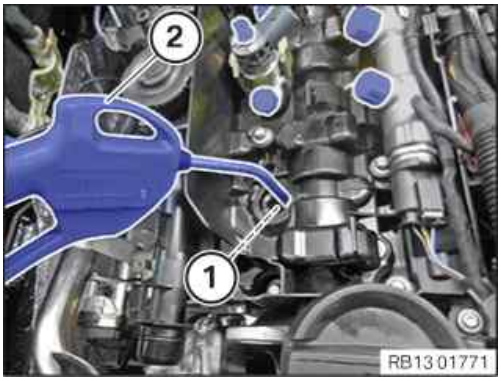
- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

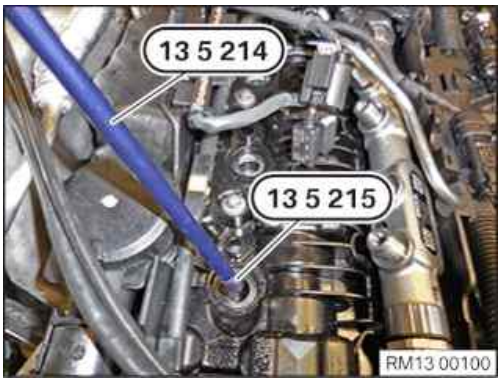
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.



- Blow out injector shaft (1) with air gun (2).

cardiagn.com



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

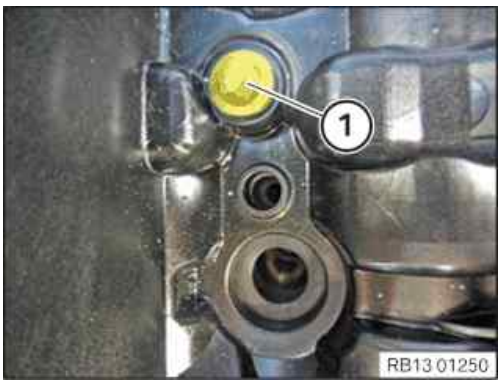
▶ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▶ **Prepare the injector for installation**

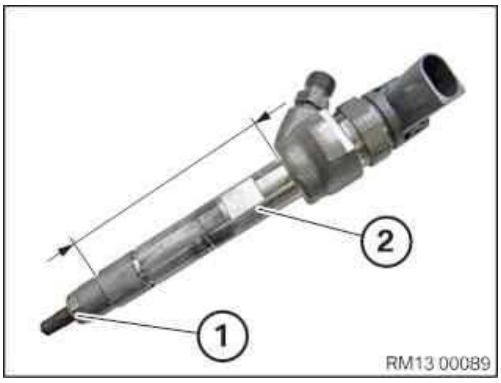
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com



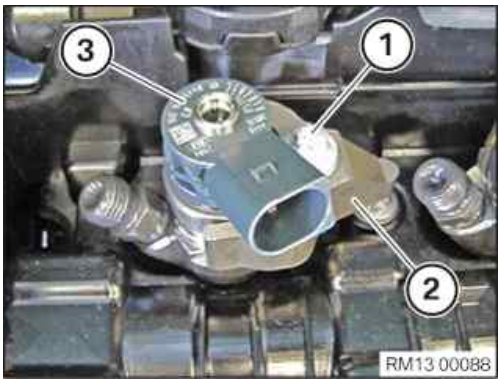
- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

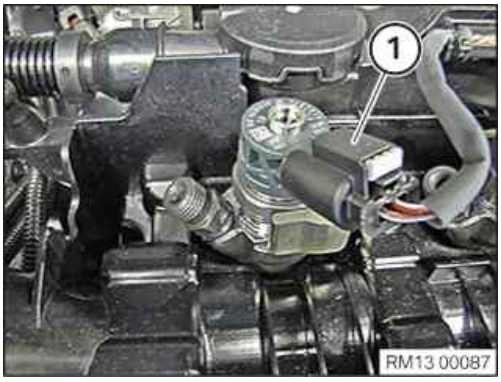
Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

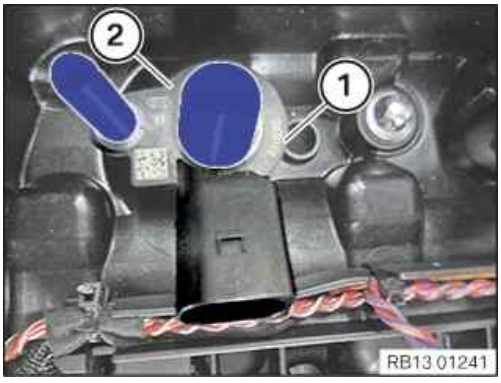
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

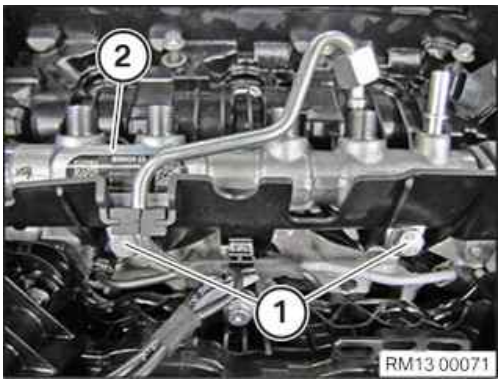


- Read off the adjustment value (1) on the new injector (2).

cardiagn.com

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

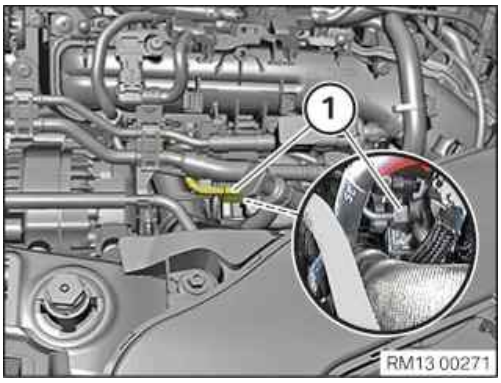
121 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm



TECHNICAL INFORMATION

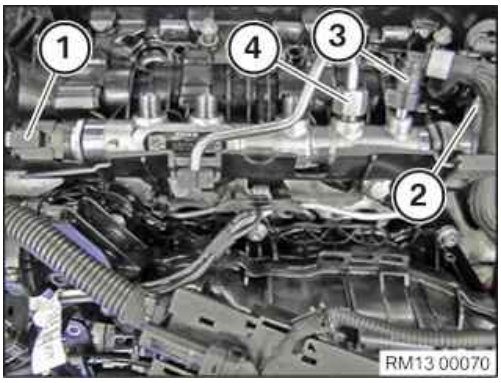
Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

122 – Installing high pressure line between rail and high pressure pump

WARNING

Working on fuel system.

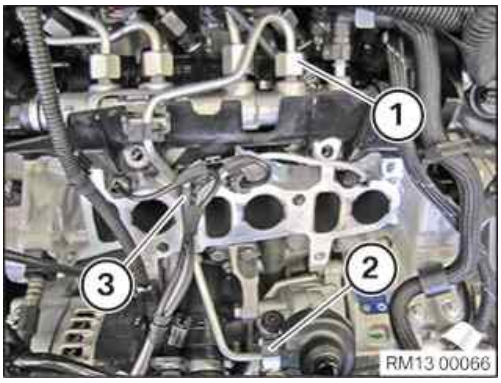
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com



- Remove special tool **2 413 106**.
- Thread in and install the high pressure line (3).
- Make sure that the rubber grommet is positioned correctly in the area of the cylinder head cover.
- Tighten the union nut (1) hand-tight.
- Tighten the union nut (2) hand-tight.
- Ensure that high pressure line (3) is installed without any strain.

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the union nut (1) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Tighten the union nut (2) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

123 – Installing high pressure lines between rail and injectors

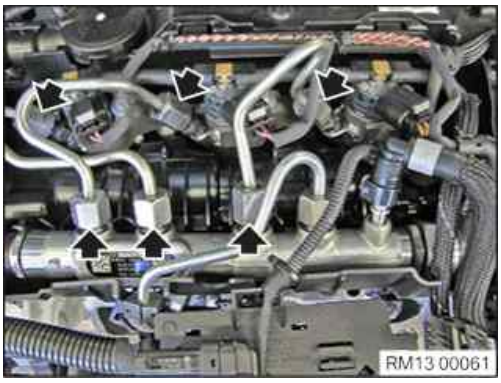
TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

124 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

125 – Installing the exhaust-gas recirculation cooler

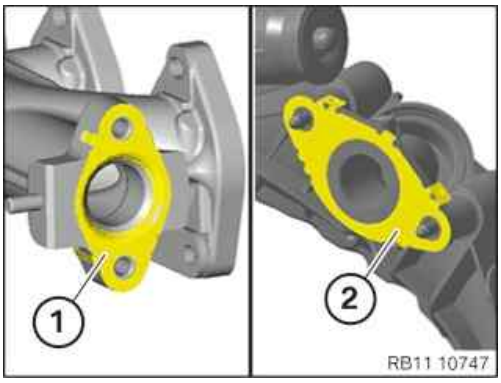
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

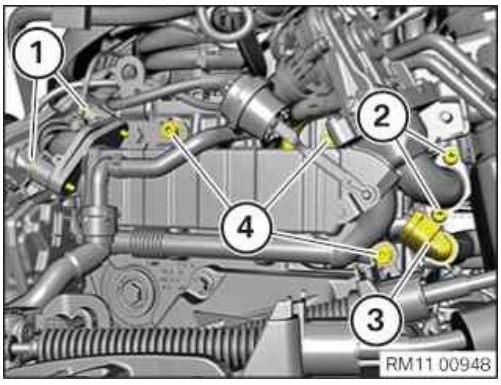


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

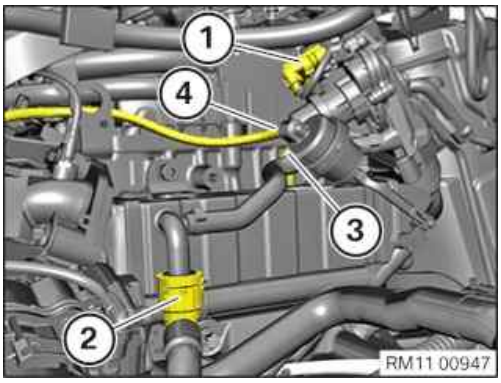
  The coolant hose (3) must audibly engage.

- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com



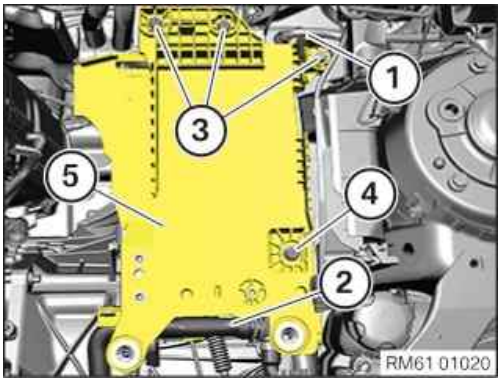
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

126 – Install the battery holder



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

127 – Install electronics box

Prerequisite

Battery earth lead is disconnected.

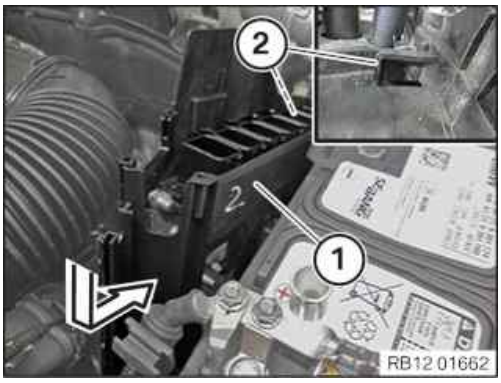
RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

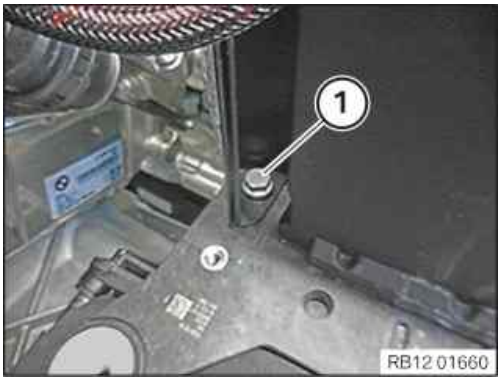
- Route all cables without abrasions, do not trap and crush.

cardiagn.com



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

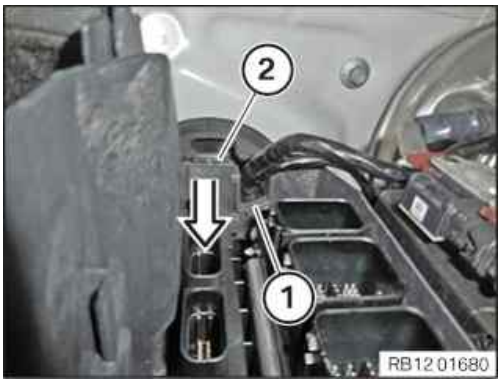
- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



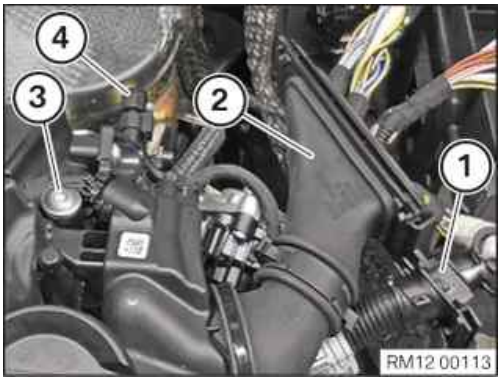
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



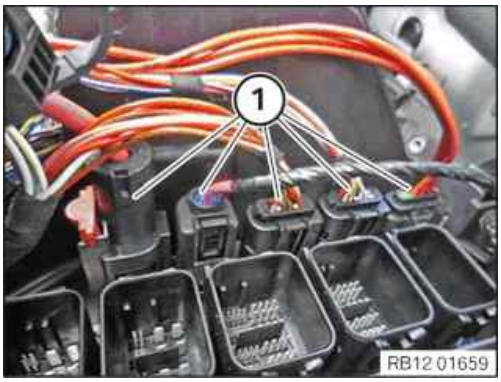
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

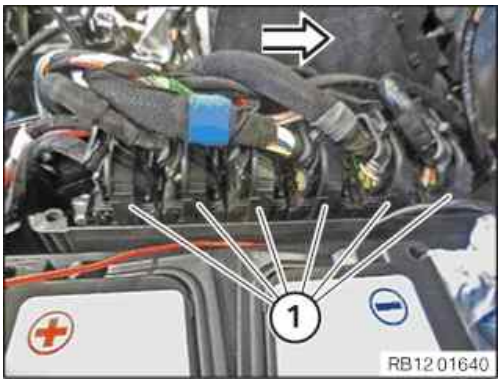
TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

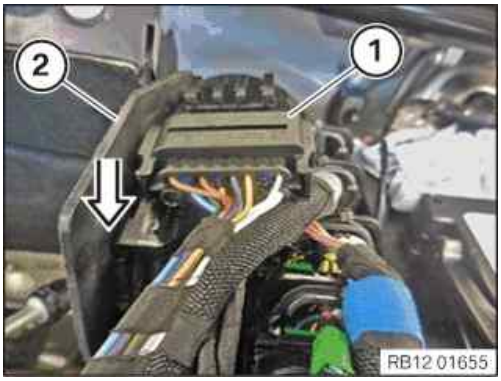
cardiagn.com



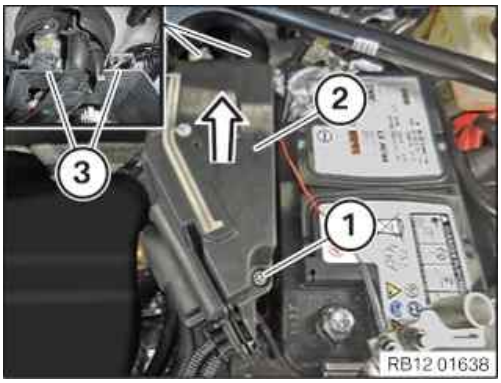
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

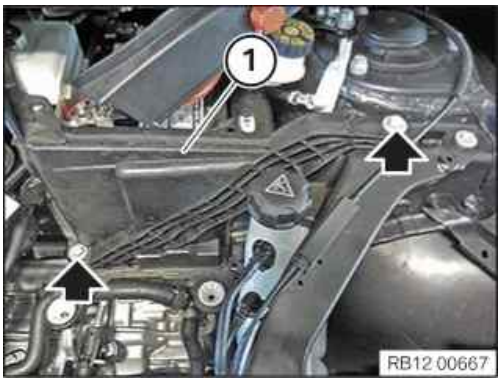
RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (1).
- Tighten screws (arrows).

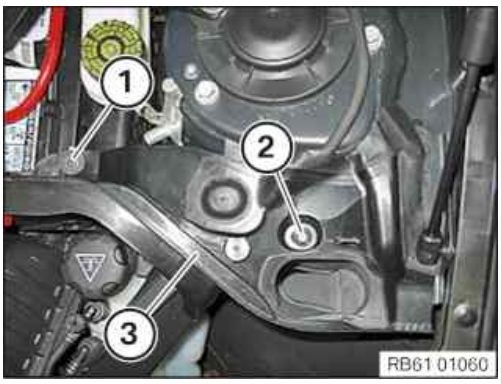
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

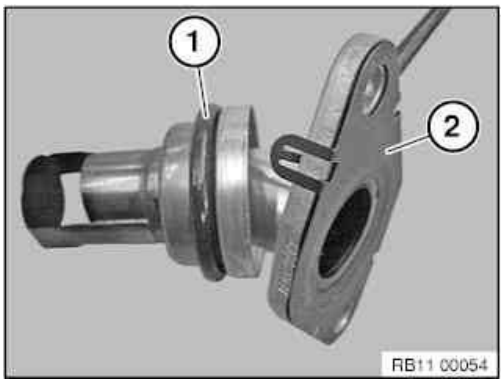


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

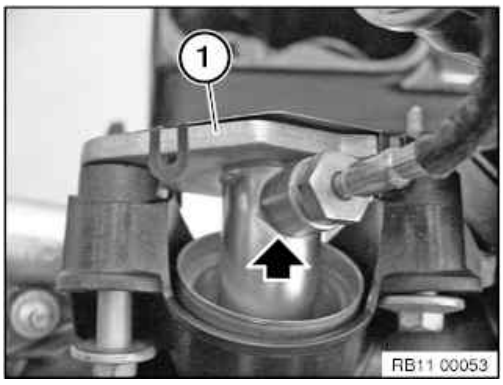
128 – Installing the intake plenum



- Renew O-ring (1).

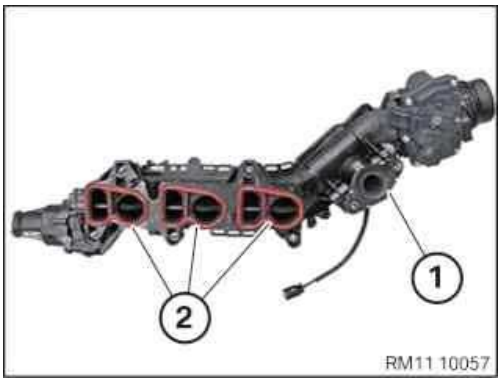
  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.



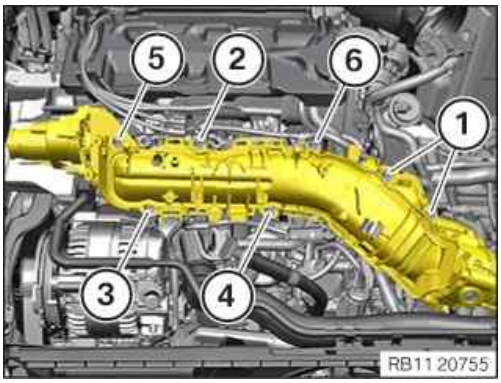
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

cardiagn.com



- Renew gaskets (2).

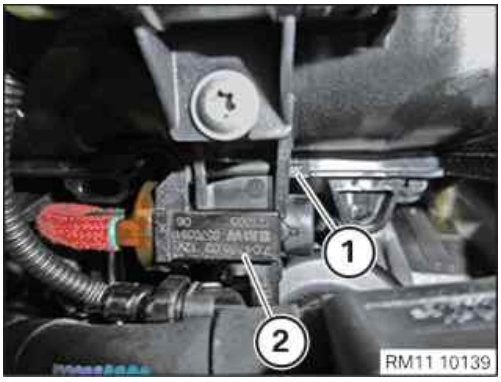
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



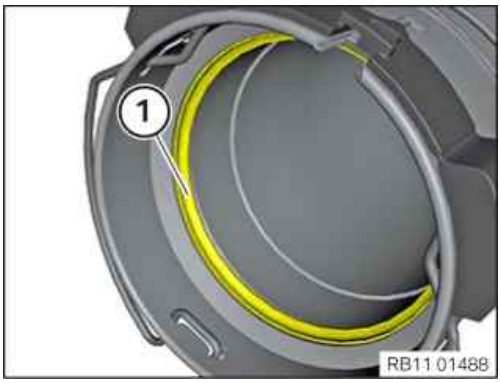
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm

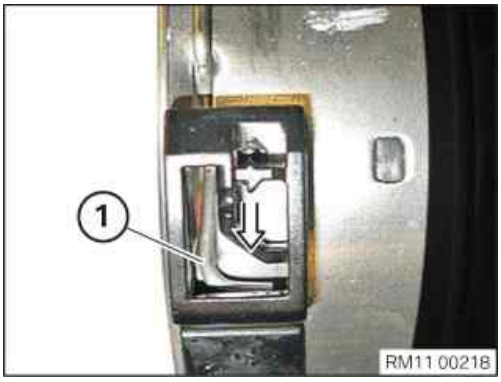


- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.



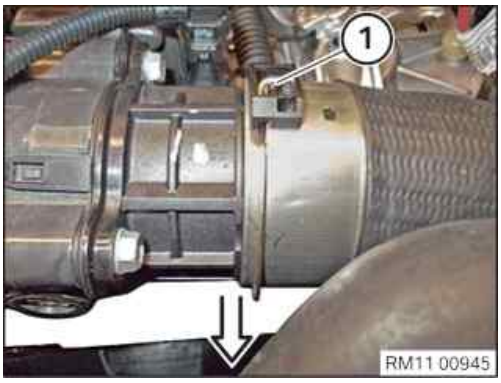
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring



- Engage the lock (1) on the bracket (arrow).

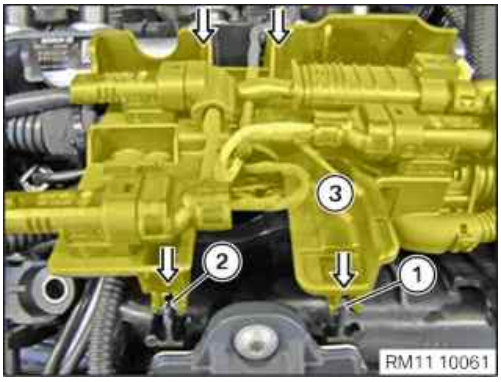
cardiagn.com



- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

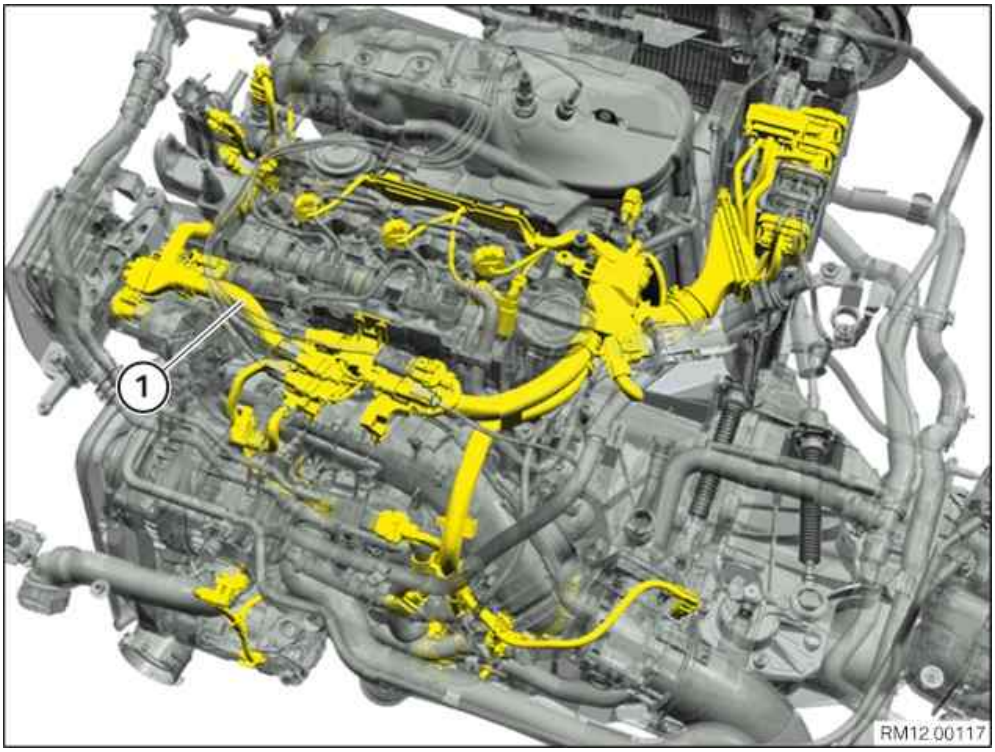
129 – Installing the cable clip for the intake plenum



- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).

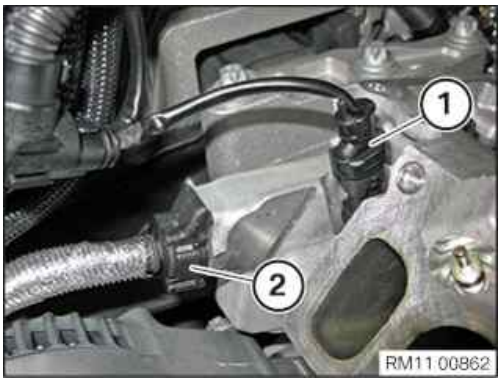
130 – Fastening the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine

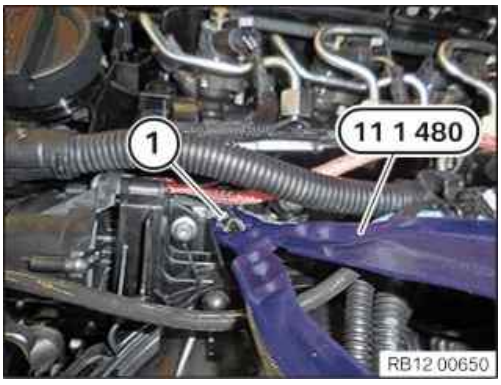


1 Wiring harness section for the engine

cardiagn.com

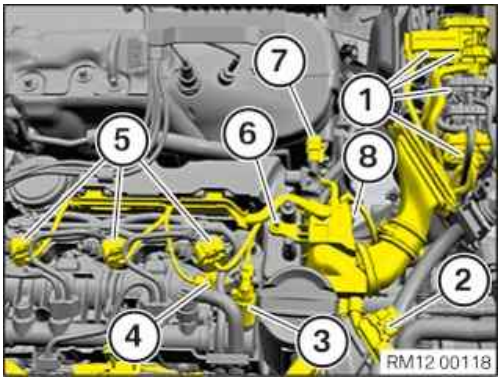


- Connect the coolant line (2) and lock the clamp.
- Connect and lock the connector (1).
- The locks must engage audibly.



- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

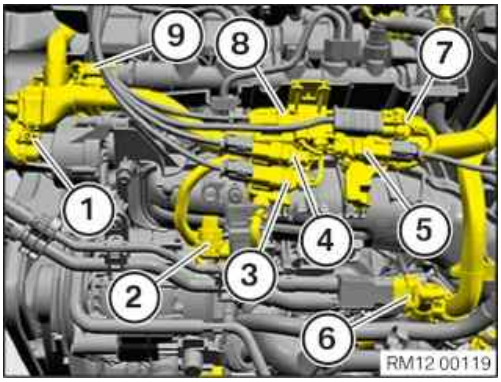


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

Wiring harness to cylinder head cover

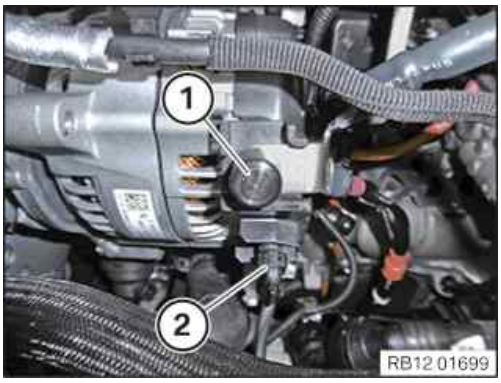
TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.



- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.

cardiagn.com

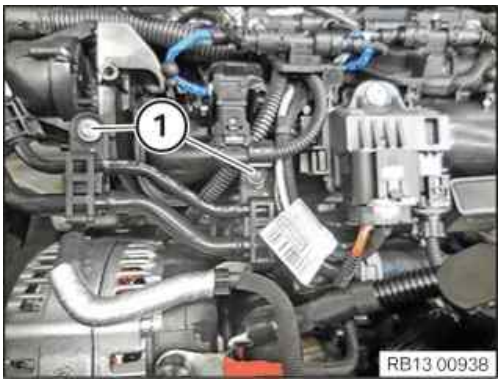


- Connect and lock the connector (2).

  Lock must audibly engage.
- Connect positive battery cable (1) on alternator and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

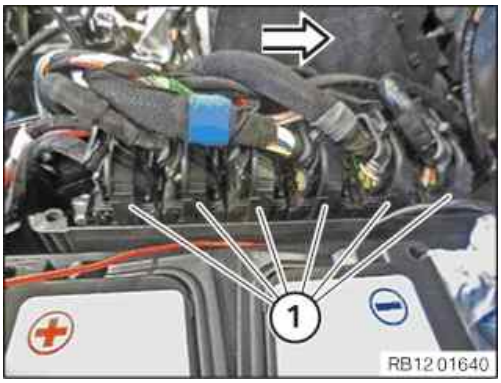


- Position fuel lines.
- Tighten the screws (1).

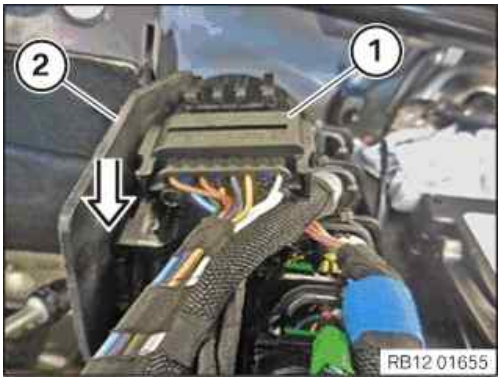
Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

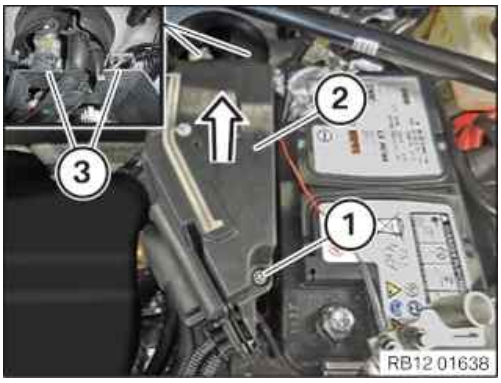


- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

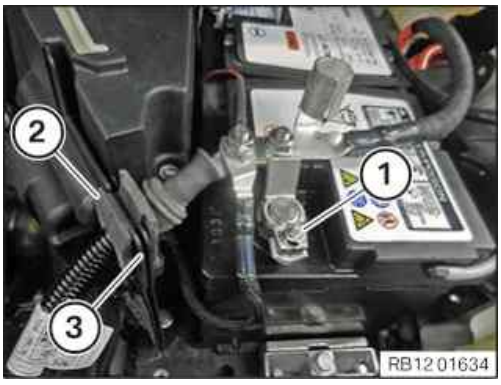
cardiagn.com



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

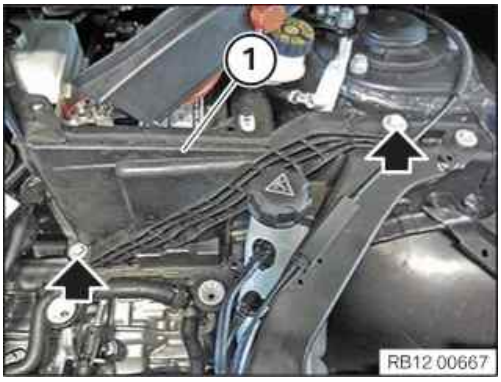
RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (1).
- Tighten screws (arrows).

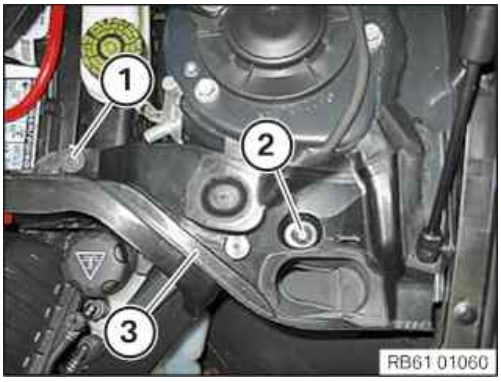
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm



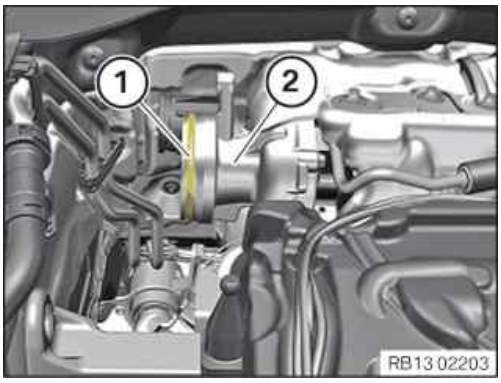
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

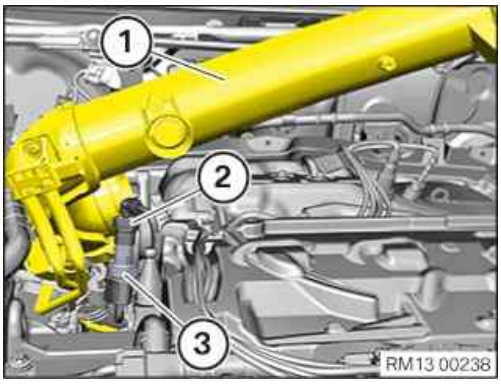
Screw			2,8 Nm

131 – Installing clean air pipe

cardiagn.com



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.



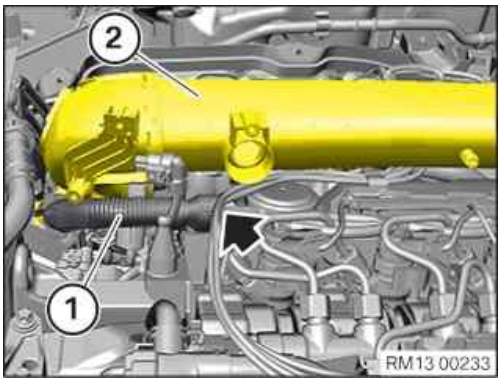
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

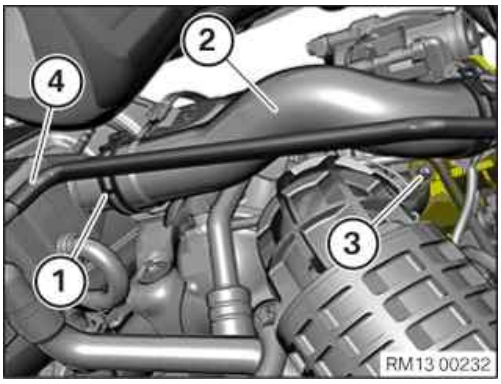
Exhaust gas pressure sensor		Tightening torque	13,5 Nm

- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

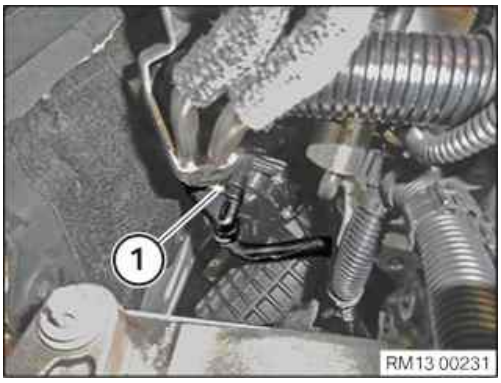
- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

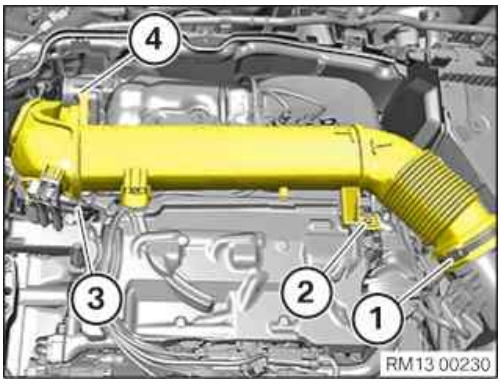
Clamp 15–19mm		Tightening torque	3 Nm

cardiagn.com



- Connect and lock the connector (1).

  The connector (1) must lock audibly.



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

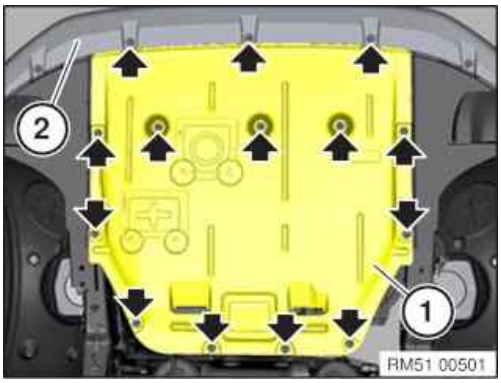
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

132 – Installing the front underbody protection

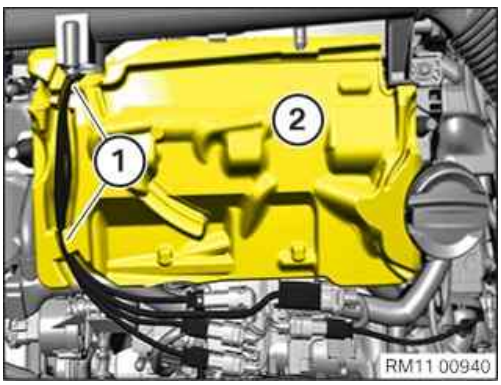


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

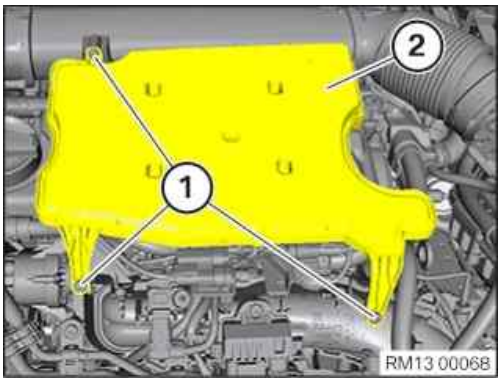
133 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

134 – Install resonator

cardiagn.com



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

135 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

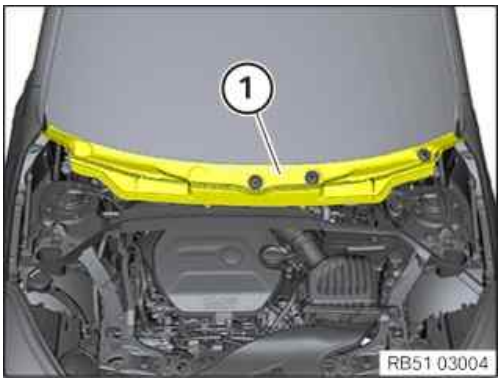
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

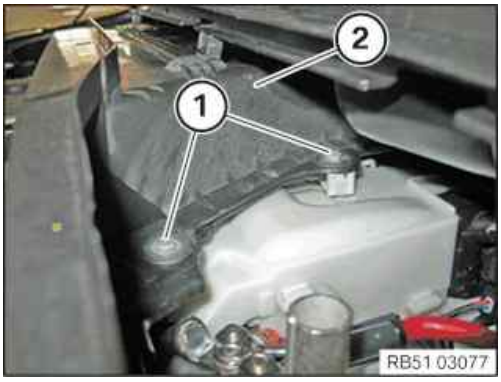
136 – Install the rear cowl panel cover

cardiagn.com



- Feed in and engage the rear cowl panel cover (1).

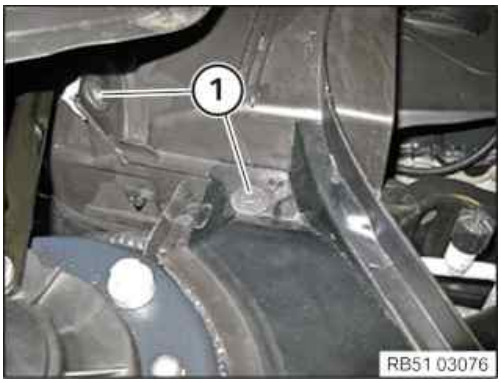
137 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

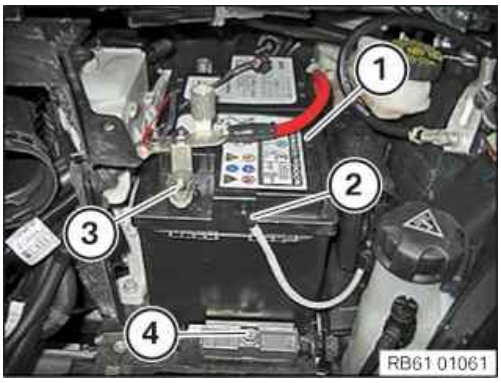
Screw		Tightening torque	3 Nm

138 – Install vehicle battery

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Install vehicle battery (1).
- Tighten the holder with the bolt (4).

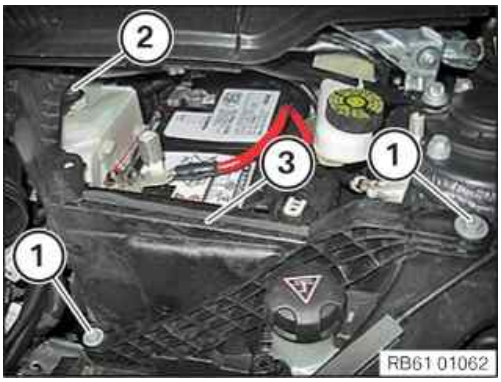
Battery terminal rail to battery tray

M8 screw		19 Nm

- Position the vent hose (2).
- Position the positive terminal.
- Tighten the nut (3) on the positive terminal.

Positive battery terminal

NutM6		5 Nm



- Insert the tension strut (3).
- Tighten down screw (2).

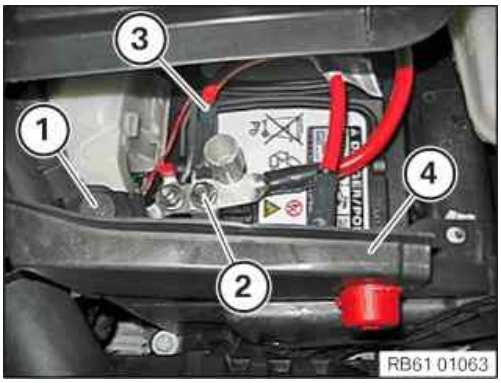
Battery cover

Screw		2,8 Nm

- Tighten the screws (1).

Trailing link

M8 screw		19 Nm



- Position the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten down screw (1).

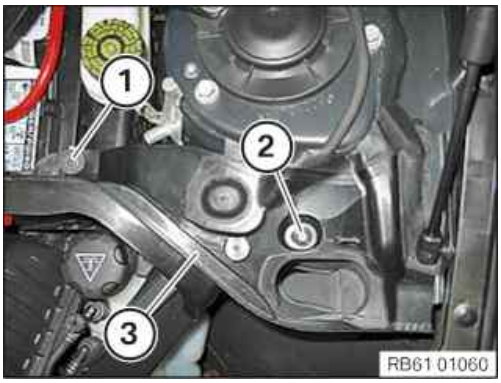
Battery cover

Screw		2,8 Nm

- Tighten the nut (2) on the positive terminal.

Positive battery cable to battery terminal

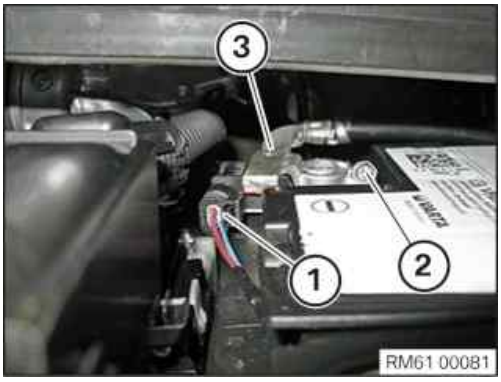
Nut M8		15,2 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm



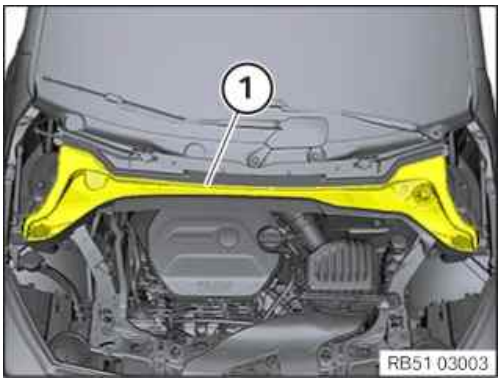
- Position the negative battery terminal (3).
- Tighten nut (2).

Negative battery terminal (with IBS)

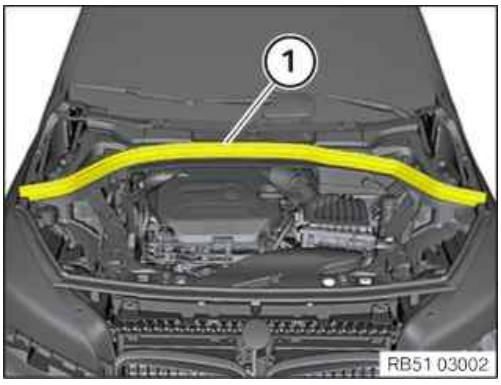
NutM6		5 Nm

- Connect connectors (1) and lock.

cardiagn.com



- Feed in the cowl panel cover (1).



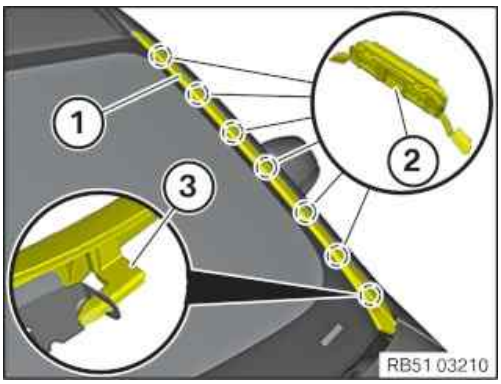
- Press the gasket (1) in a downwards direction.

139 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the gutter strip on the windscreen**



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

140 – Install left and right wiper arm

NOTICE

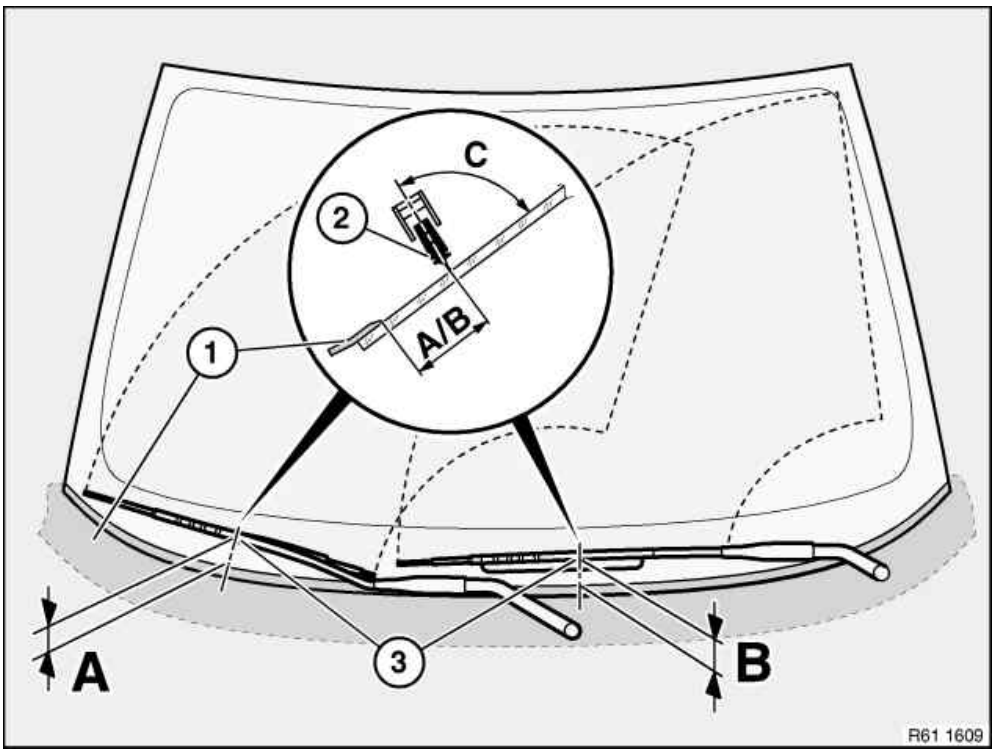
Description is for left component only. Procedure on the right side is identical.

▸ **Install the wiper arm**

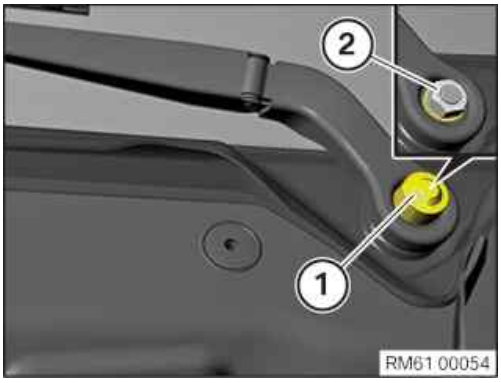
cardiagn.com

TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

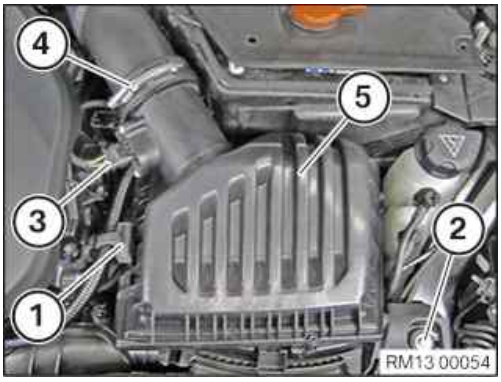
- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

141 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

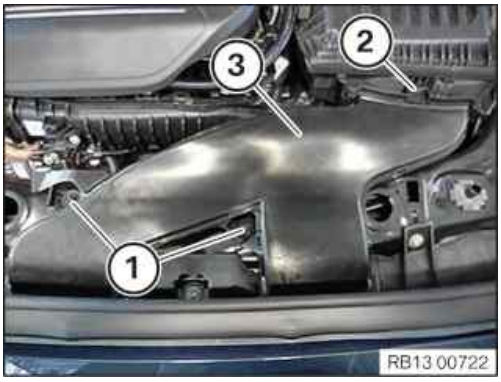
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

cardiagn.com

142 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

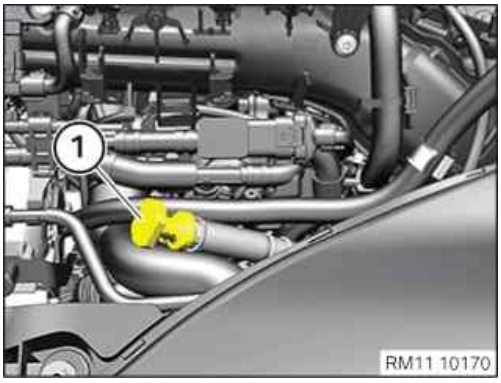
143 – Check engine oil level

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▶ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

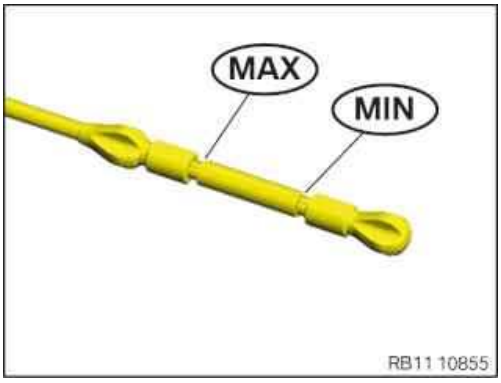


- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.



TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

144 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

Exhaust temperature sensor to diesel particulate filter

Used in step 94 95

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Exhaust-gas temperature sensor to exhaust system

Used in step 96

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Oxygen sensor holder to intermediate shaft

Used in step 97

Hexagon screw M6x16		Tightening torque	8 Nm

Nitrogen oxide sensor before SCR catalytic converter

Used in step 98

Sensor		Tightening torque	50 Nm

Monitoring sensor

Used in step 99

Sensor		Tightening torque	50 Nm

Starter motor to transmission

Used in step 100

M8x45		Tightening torque	19 Nm

Battery positive lead to starter

Used in step 100

M8		Tightening torque	13,5 Nm

Exhaust system to body

Used in step 101

M8	Replace nuts.	Tightening torque	19 Nm

Exhaust bracket on body

Used in step 101

Hexagon screw M8x30		Tightening torque	19 Nm

cardiagn.com

V-clip to catalytic converter

Used in step 101

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Diesel particulate sensor to exhaust system

Used in step 101

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter

Used in step 101

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting

Used in step 102

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

Front connection carrier to body

Used in step 103

M10x18		Tightening torque	56 Nm

Rear connection carrier to body

Used in step 103

M8x18		Tightening torque	28 Nm

Track rod end to swivel bearing

Used in step 104

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing

Used in step 104

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body

Used in step 105

M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °

Holder with rubber mount to front axle support

Used in step 105

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate

Used in step 105

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier

Used in step 105

		Tightening torque	11,8 Nm

Holder to front axle support

Used in step 106

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar

Used in step 108

M10	Renew nut.	Tightening torque	56 Nm

Wheel arch cover to body

Used in step 110

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 110

Plastic nut		Tightening torque	3 Nm

cardiagn.com

Underbody panelling, side

Used in step 111

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Used in step 111

Plastic nut		Tightening torque	2,6 Nm

Brake disc to front wheel hub

Used in step 113

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

Used in step 113

M8	Renew screw.		16 Nm

Wheel bolts

Used in step 113

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 115

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 115

Plastic nut		Tightening torque	3 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 117

Oval-head screw		Tightening torque	5 Nm

Cylinder head cover to cylinder head

Used in step 118

M6		Tightening torque.	8,5 Nm

Differential pressure sensor to holder

Used in step 119

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor

Used in step 119 131

Clamp 15–19mm		Tightening torque	3 Nm

Clamping claw facing to cylinder head cover

Used in step 120

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 120

Screw		Jointing torque Angle of rotation	8 Nm 120 °

Rail on cylinder head cover

Used in step 121

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com

High pressure line between high pressure pump and rail

Used in step 121 122

High-pressure pipe		Tightening torque	28 Nm

High pressure lines between injector and rail

Used in step 123

High pressure lines		Tightening torque	28 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 125

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 125

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 125

M8x20		Tightening torque	19 Nm

Battery holder to engine support

Used in step 126

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray

Used in step 127

M8X16		Tightening torque	15 Nm

Wiring harness to cylinder head cover

Used in step 127 130

TS5x20		Tightening torque	3,5 Nm

Cover to electronics box

Used in step 127 130

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery

Used in step 127 130

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 127 130

M8		Tightening torque	19 Nm

Positive battery connection point cover to engine compartment partition wall

Used in step 127 130

		Tightening torque	3 Nm

Battery cover

Used in step 127 130 138

Screw			2,8 Nm

Intake plenum to cylinder head

Used in step 128

M6		Tightening torque	11 Nm

Positive battery cable to alternator

Used in step 130

M8		Tightening torque	19 Nm

Fuel line to intake plenum

Used in step 130

TS6x20		Tightening torque	5 Nm

Exhaust gas pressure sensor

Used in step 131

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

cardiagn.com

Clean air pipe to exhaust turbocharger — Used in step 131

Torx bolt BM8x25		Tightening torque	8 Nm

Clean air pipe to cylinder head cover — Used in step 131

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 131 141

Clamp		Tightening torque	3 Nm

Underbody protection front — Used in step 132

			3 Nm

Resonator to manifold and clean air pipe — Used in step 134

Screw TS6	Renew screw.	Tightening torque	5 Nm

Bulkhead cover, top — Used in step 137

Screw		Tightening torque	3 Nm

Battery terminal rail to battery tray — Used in step 138

M8 screw		19 Nm

Positive battery terminal — Used in step 138

NutM6		5 Nm

Trailing link — Used in step 138

M8 screw		19 Nm

Positive battery cable to battery terminal — Used in step 138

Nut M8		15,2 Nm

Negative battery terminal (with IBS) — Used in step 138

NutM6		5 Nm

Windscreen wiper arm — Used in step 140

Combination hexagon nut		Tightening torque	35 Nm

Intake silencer housing to lock bridge — Used in step 141

M6X30		Tightening torque	8 Nm

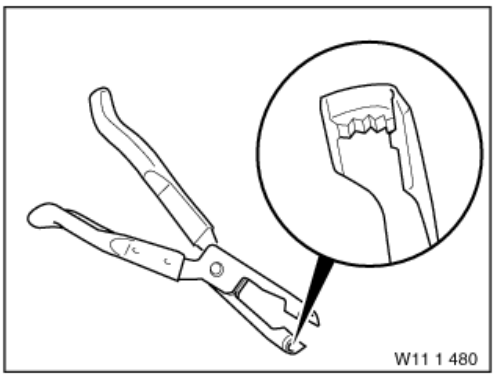
Intake neck to cross connection — Used in step 142

M6		Tightening torque	8 Nm

Overview of Special Tools

cardiagn.com

0 490 796 (11 1 480) Pliers



Common	Used in step 20 71
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 495 910 (37 1 152) Socket wrench

Common	Used in step 24 25 26 121 122 123
Usage	(Socket wrench)SW19
Included in the tool or work	0 495 908
Storage location	B21
Replaced by	
In connection with	
SI-Number	01 01 07 (333)

cardiagn.com

2 413 106 Fastener

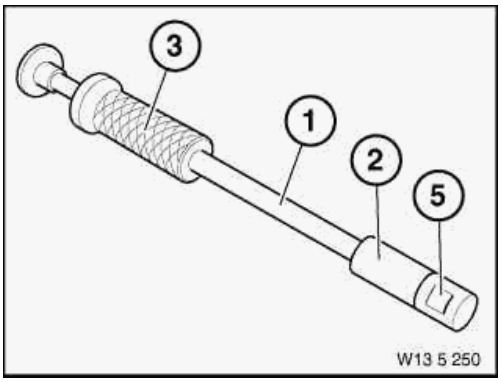
Common Used in step 24 25 122 123

Usage	For avoiding contamination and damage of rail, injectors and high pressure pump.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 16 (419)

0 493 321 (13 5 250) Puller

Used in step 27

cardiagn.com



Common

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common

Used in step 27

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

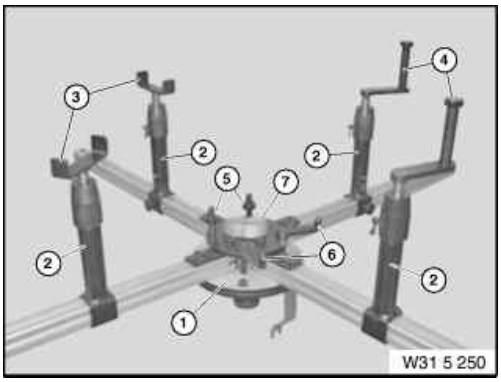
Common

Used in step 27

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

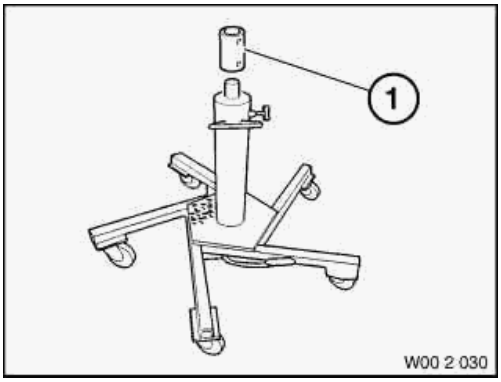
0 495 817 (31 5 251) Basic body



Common Used in step 43 67 76 104

Usage	(Basic body) No longer available separately, only via special tool set 31 5 250 (83 30 0 495 567)
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

0 490 133 (00 2 030) Device



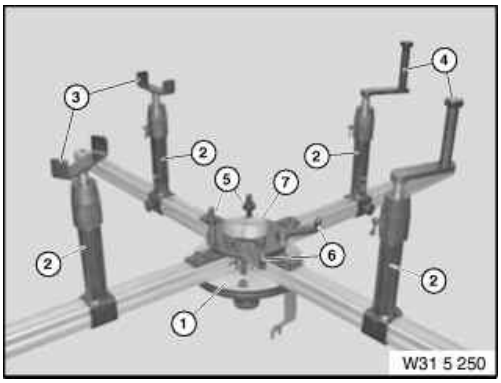
Common Used in step 43 67 76 104

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

0 495 821 (31 5 255) Adapter

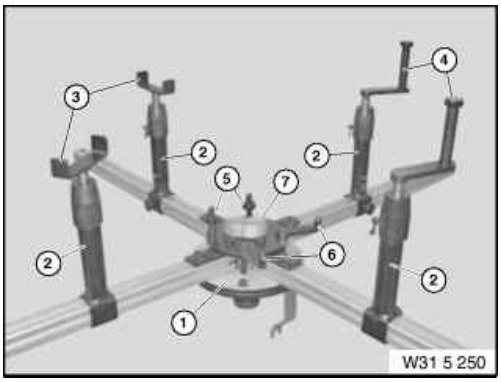


Common Used in step 43 76

Usage	(take-up adapter for bore holes (2 x))
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

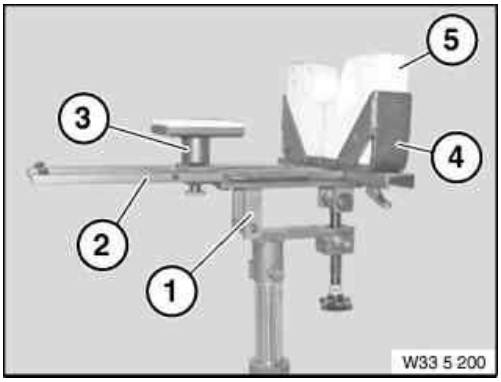
cardiagn.com

0 495 819 (31 5 253) Adapter



Common	Used in step 43 76
Usage	(take-up adapter U-section (2 x))
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

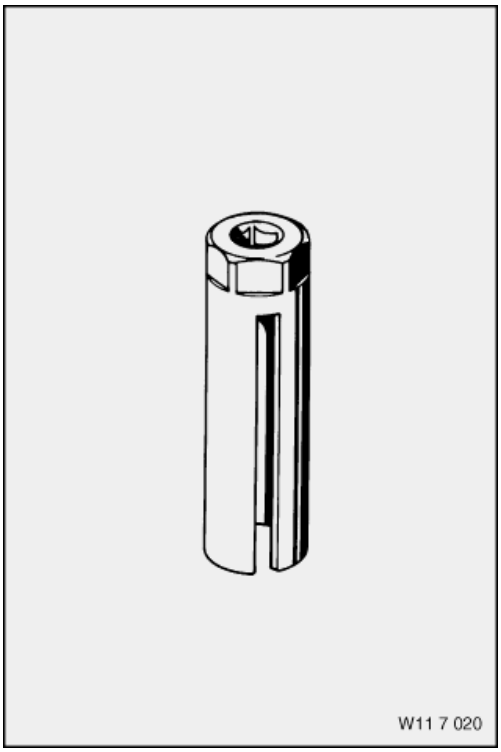
0 496 080 (33 5 206) Belt



Common	Used in step 43 67 76 104
Usage	(Tensioning strap)
Included in the tool or work	0 496 009
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 491 074 (11 7 020) Socket wrench insert



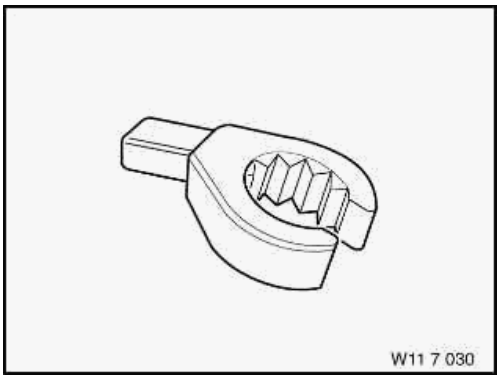
Common

Used in step 48 49 99

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

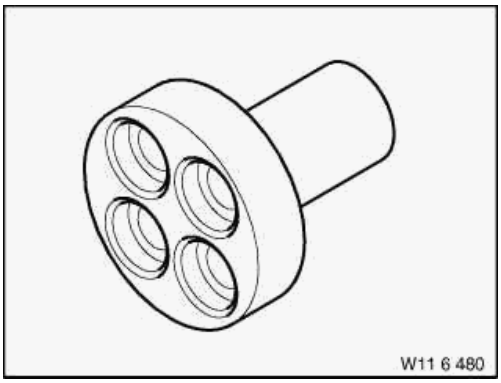
cardiagn.com

0 491 075 (11 7 030) Socket wrench insert



Common	Used in step 54 93
Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	01 06 95 (963)

0 493 380 (11 6 480) Connector



Common	Used in step 62 84
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

Common	Used in step 62 83 84
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

cardiagn.com

0 496 112 (11 8 760) Gauge

Common	Used in step 62 82 84
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

2 414 691 Support

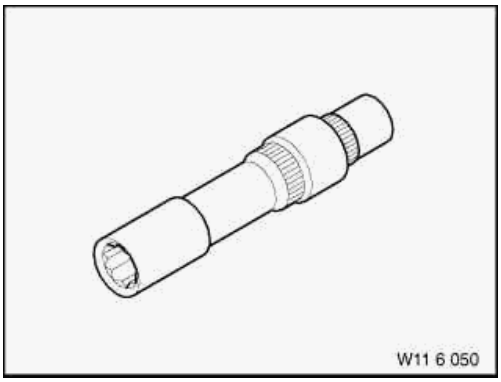
Common	Used in step 67 76
Usage	To support the engine when the engine support is removed.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	2357071
SI-Number	01 12 16 (406)

2 357 071 Panel

Common	Used in step 67 76
Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

cardiagn.com

0 491 068 (11 6 050) Socket wrench insert



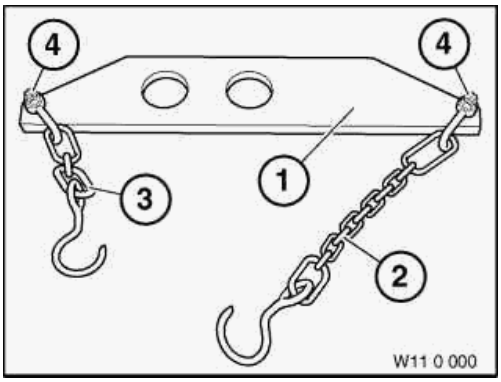
Common	Used in step 67 76
Usage	(Wrench socket AF 10) bi-hexagon/glow elements
Included in the tool or work	
Storage location	B10
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

2 459 012 Holder

Common	Used in step 67 76
Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

cardiagn.com

0 490 561 (11 0 000) Lifting gear



Common

Used in step 67 76

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)

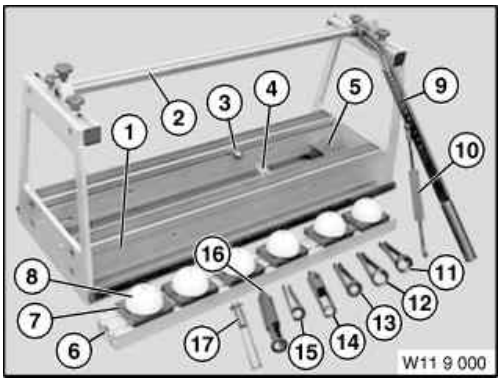
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

0 494 362 (11 9 000) Device

Used in step 67 70

cardiagn.com



Common

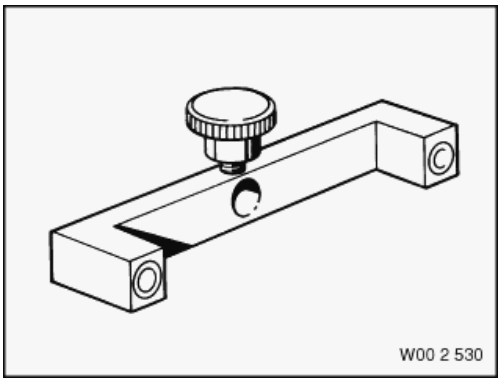
Usage	(Cylinder head expander tool)
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 03 02 (833)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 366 (11 9 001)		**Device**	
6	0 494 371 (11 9 006)		**Insert** (Aluminium strip)	
11	0 494 376 (11 9 012)		**Basket** (Valve spring cage) Engine M41, M51, S50	
17	0 495 028 (11 9 017)		**Basket** (Valve spring cage) Engine N52	
2	0 494 367 (11 9 002)		**Rod**	
3	0 494 368 (11 9 003)		**Adapter** (Sliding block)	
4	0 494 369 (11 9 004)		**Tab**	
5	0 494 370 (11 9 005)		**Quick fastener**	
7	0 494 372 (11 9 007)		**Shaped part** (shaped part)	
8	0 494 373 (11 9 008)		**Shaped part** (Shaped part) Shaped part made of plastic	
9	0 494 374 (11 9 009)		**Lever**	
10	0 494 375 (11 9 011)		**Hook**	
12	0 494 377 (11 9 013)		**Basket** (Valve spring cage) Engine M43, M73	
13	0 494 378 (11 9 014)		**Basket** (Valve spring cage) Engine M44, M52, M54, M56, M62, S52, S54, S62	
14	0 494 379 (11 9 015)		**Basket** (Valve spring cage) Engine M47, M47TU, M57, M57TU, N40, N42, N62, N73	
15	0 494 380 (11 9 016)		**Basket** (Valve spring cage) Engine M21, M40	

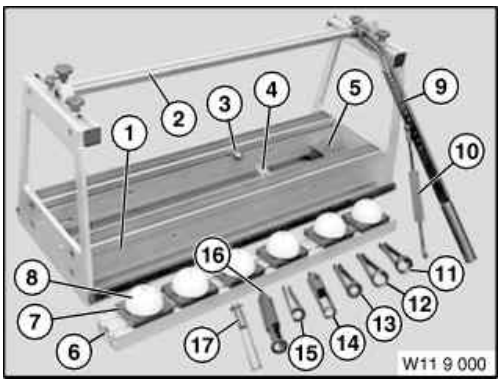
cardiagn.com

0 490 185 (00 2 530) Bridge



Common	Used in step 68
Usage	(Measuring bridge) For determining the piston projection (Diesel)
Included in the tool or work	
Storage location	A3
Replaced by	
In connection with	
SI-Number	

0 494 366 (11 9 001) Device

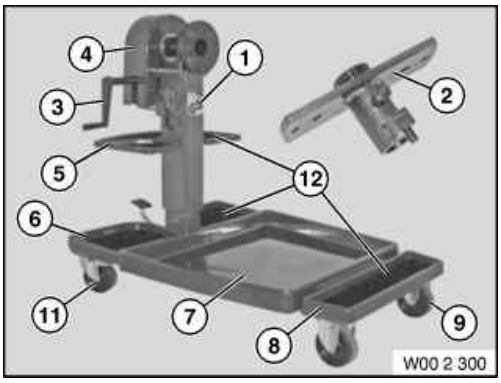


Common	Used in step 70 73
Usage	
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 187 (00 2 300) Assembly stand

Used in step 70 73

cardiagn.com



Common

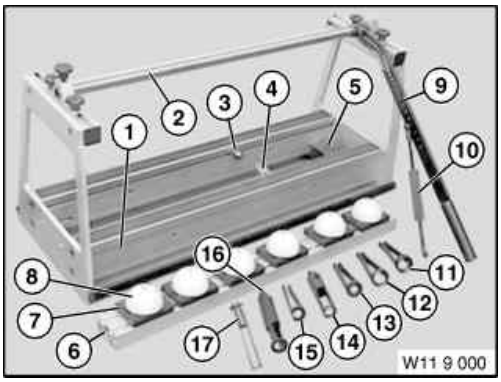
Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

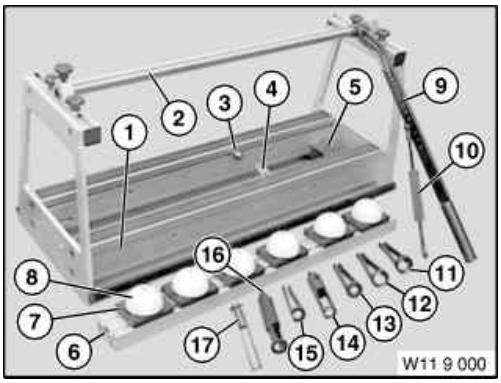
cardiagn.com

0 494 371 (11 9 006) Insert



Common	Used in step 70
Usage	(Aluminium strip)
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

0 494 372 (11 9 007) Shaped part

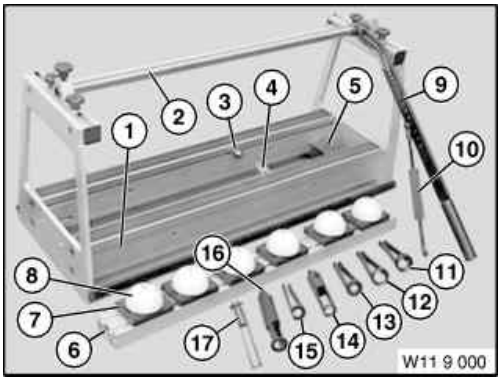


Common	Used in step 70
Usage	(Shaped part)
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

0 494 373 (11 9 008) Shaped part

Common	Used in step 70
Usage	(Shaped part) Shaped part made of plastic
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

0 494 370 (11 9 005) Quick fastener



Common	Used in step 70 73
Usage	
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 494 374 (11 9 009) Lever

Common	Used in step 70 73
Usage	
Included in the tool or work	0 494 362
Storage location	
Replaced by	
In connection with	
SI-Number	

0 496 143 (11 8 840) Basket

Common	Used in step 70 73
Usage	(Valve spring cage) For removing and fitting the valves.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common

Used in step 70

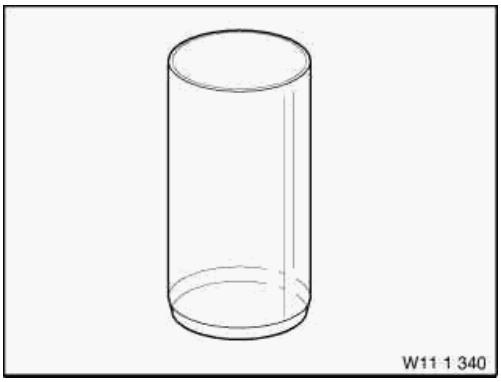
Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

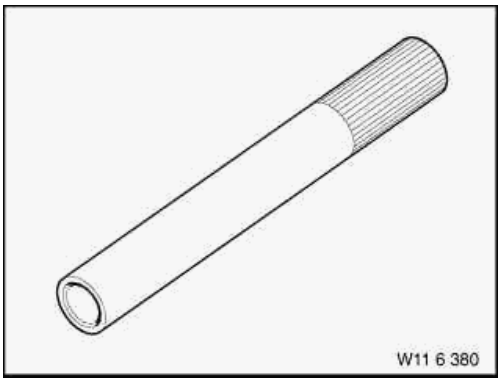
cardiagn.com

0 490 746 (11 1 380) Holding sleeve



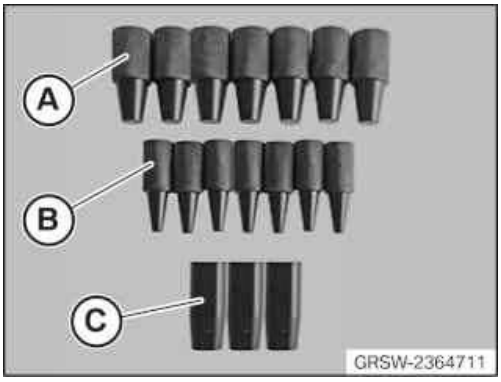
Common	Used in step 72
Usage	(Assembly sleeve) For fitting the valve stem seal, diameter 7 mm
Included in the tool or work	
Storage location	individual
Replaced by	
In connection with	
SI-Number	

0 493 249 (11 6 380) Bush



Common	Used in step 72
Usage	For fitting valve stem seal
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

2 364 711 Plug



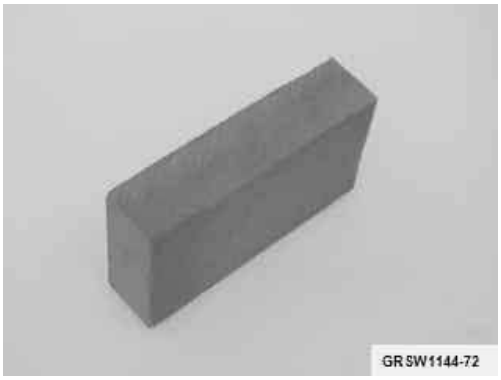
Common	Used in step 74
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

cardiagn.com

0 495 103 (11 4 471) Scraper

Common	Used in step 74
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

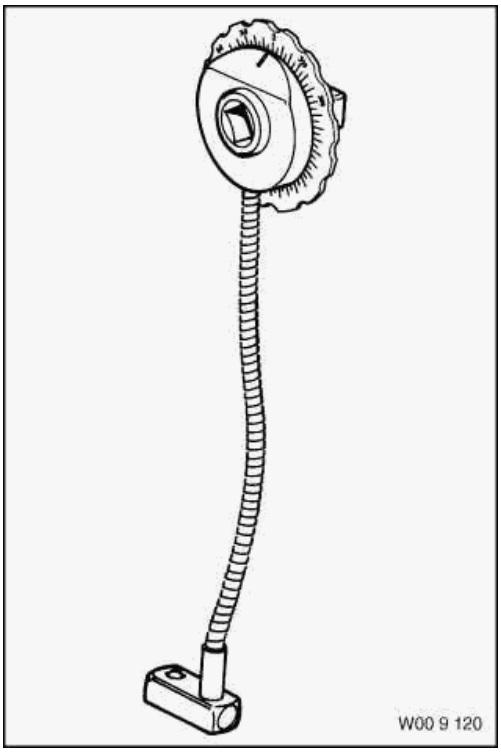
0 495 104 (11 4 472) Extractor



Common	Used in step 74
Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 490 504 (00 9 120) Torque angle measuring dial



Common Used in step 76

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number

11 34 560 Replacing all valve stem seals (B37C)

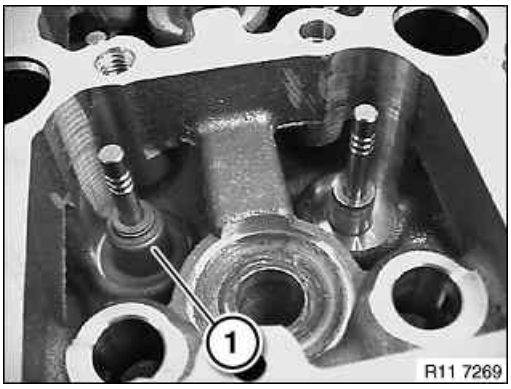
Special tools required:

- 11 1 480
- 11 6 380

Necessary preliminary tasks:

- Remove valve springs

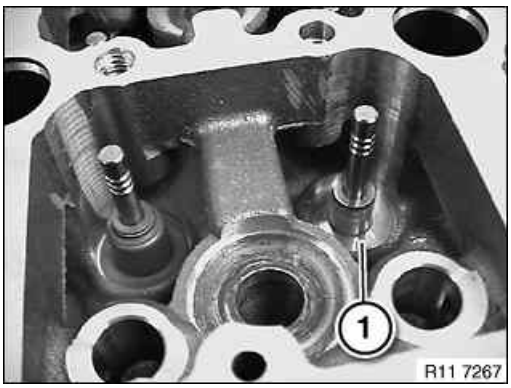
Removal:



Tap open valve stem seal (1) with special tool 11 1 480 or with a size 13 or 14 hexagon bit.

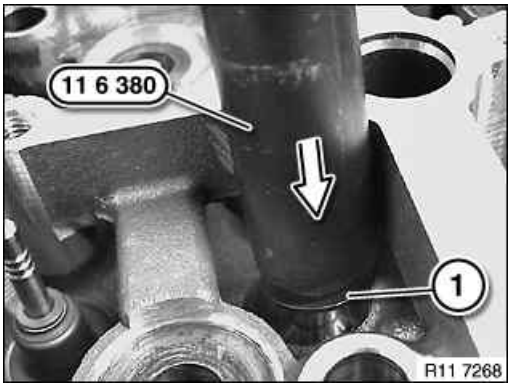
Remove valve stem seal (1) with turning and pulling motions.

Installation:



Installation note:
The contact surface (1) must be clean.

cardiagn.com



Installation note:
Before installing the valve stem seals, the **assembly sleeve must** be fitted on the valve stem! **Risk of damage** to the sealing lip!

Press on valve stem seal (1) to stop using special tool 11 6 380 in direction of arrow.

Required follow-up work:

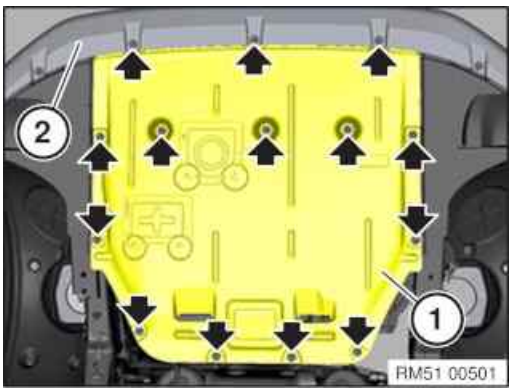
- Install valve springs
- Assemble engine

cardiagn.com

11 40 000 Checking engine oil pressure

PRELIMINARY WORK

1 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

MAIN WORK

2 – Checking the oil pressure

WARNING

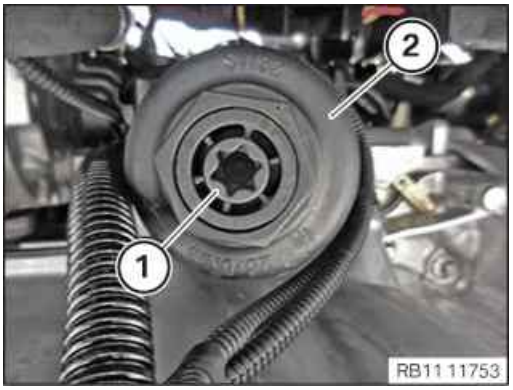
Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



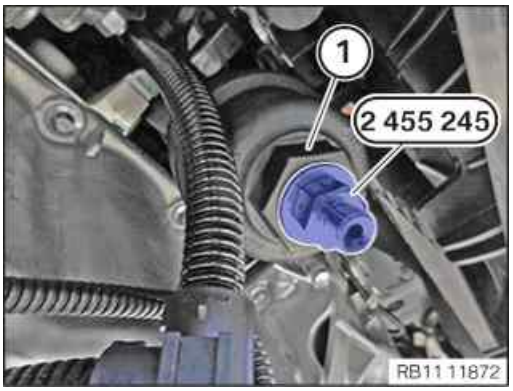
- Undo the oil drain plug (1) on the oil filter cover (2).
- Feed out and remove oil drain plug (1).
- Catch and dispose of emerging engine oil.

- Renew oil drain plug (1) with the sealing ring (2).

  Parts: Oil drain plug, sealing ring

cardiagn.com

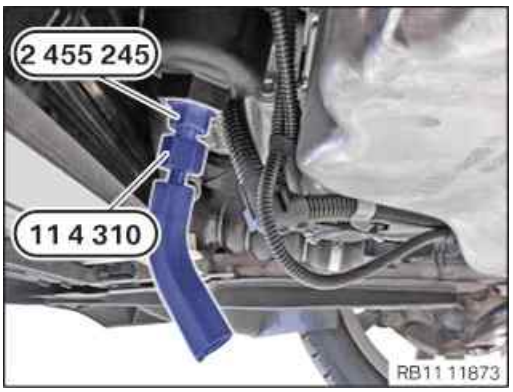
- Apply a thin coating of oil on the sealing rings on the special tool .



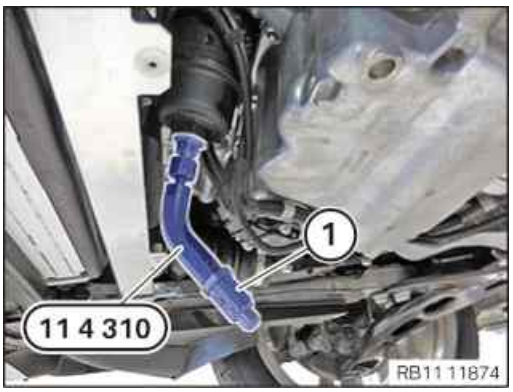
- Thread in the special tool at the oil filter cover (1) and install.
- Tighten the special tool on the oil filter cover (1).

Special tool to oil filter cover

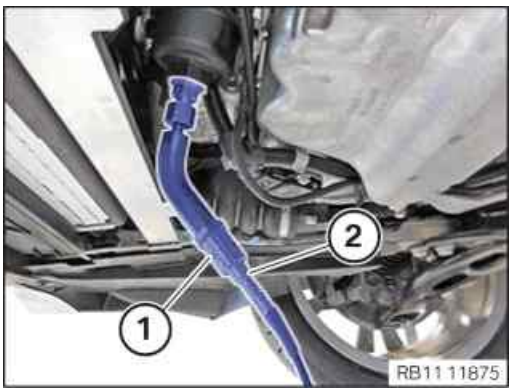
Special tool		Tightening torque	6 Nm



- Connect special tool **0 496 623 (11 4 310)** to special tool .



- Slightly grease gasket on the pressure sensor (1) **(part number: 81 31 2 357 801 and 81 38 0 431 592)**.
- Manually tighten the pressure sensor (1) **(part number: 81 31 2 357 801 and 81 38 0 431 592)** in the special tool **0 496 623 (11 4 310)**.



- Connect and lock the connecting cable (2) on the pressure sensor (1).
- Connecting cable (2) and pressure sensor (1)**(part number: 81 31 2 357 801 or 81 38 0 431 592)** with the Integrated Measurement Interface Box (IMIB) (81 38 2 295 937).

▸ **Check engine oil level**

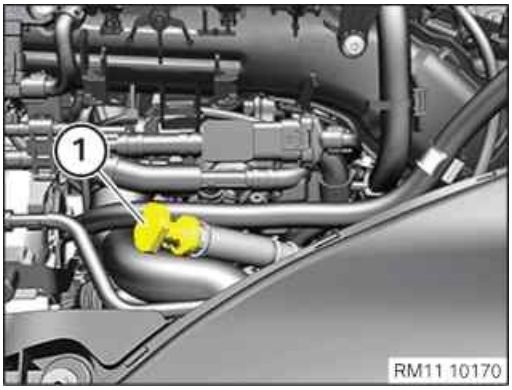
cardiagn.com

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▷ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

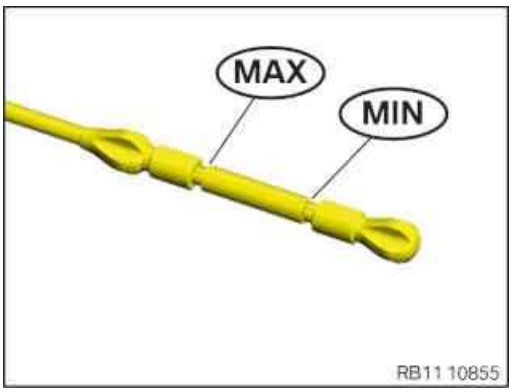


- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.



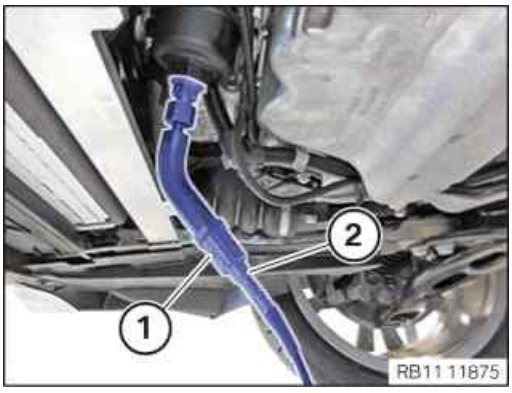
TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

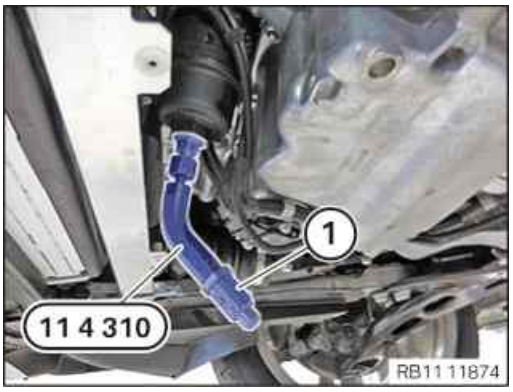
◁

- Check oil pressure.
- Observe diagnosis instructions.

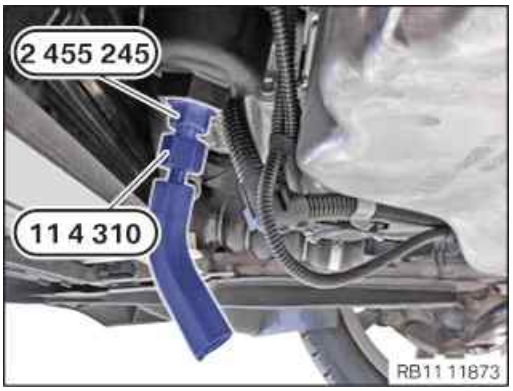


- Unlock and disconnect the connecting cable (2) from the pressure sensor (1).

cardiagn.com

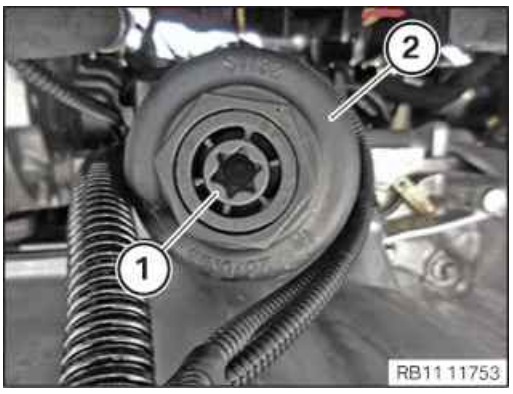


- Thread out the pressure sensor (1) from the special tool **0 496 623 (11 4 310)** and remove.



- Thread out the special tool **0 496 623 (11 4 310)** from the special tool and remove.

- Thread out the special tool from the oil filter cover (1) and remove.



- Feed in and install new oil drain plug (1).
- Tighten new oil drain plug (1) on the oil filter cover (2).

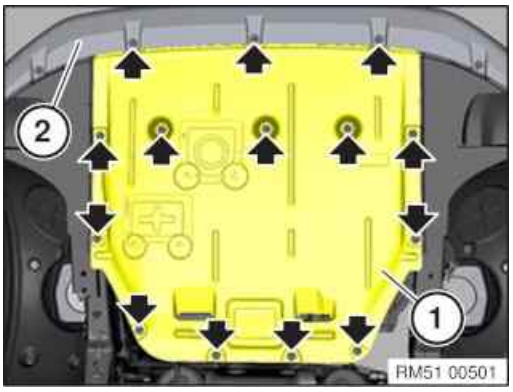
Oil drain plug to oil filter cover

	Renewoil drain plug.	Tightening torque	6 Nm

POSTPROCESSES

3 – Installing the front underbody protection

cardiagn.com



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

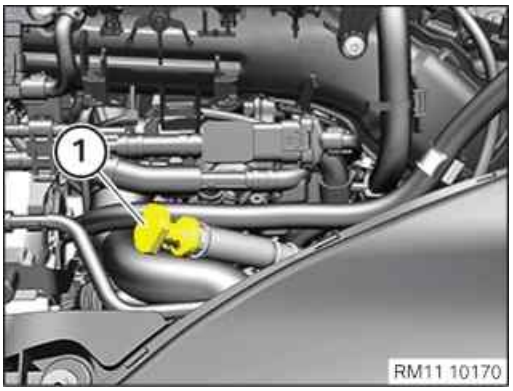
4 – Check engine oil level

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▸ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

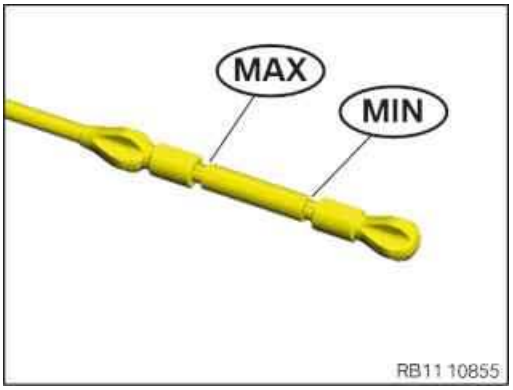


- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.



TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

Overview Technical Data

cardiagn.com

11 40 000 Checking engine oil pressure (B37C)

Special tools required:

- 2 289 603
- 11 4 310

Necessary preliminary tasks:

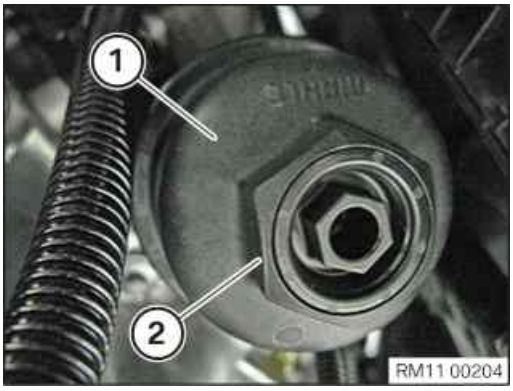
- Remove underbody protection

Removal:

Remove oil drain plug (1).
Drain oil.

Parts: Replace screw (2) with O-ring (1).
Install and tighten screw (2).
Tightening torque: 11 42 6AZ.

cardiagn.com



Undo oil filter cover (1) at hexagon head (2).

Checking engine oil pressure with diagnosis tester:

Remount filter element (1) in the special tool 2 289 603 .

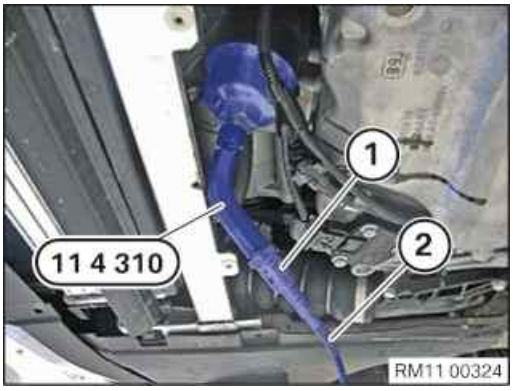
Remount O-ring (2) if necessary.

Screw special tool 2 289 603 with oil filter element into the oil filter housing (1).

Tightening torque: 11 42 1AZ.

Connect special tools 2 289 603 and 11 4 310 .

cardiagn.com



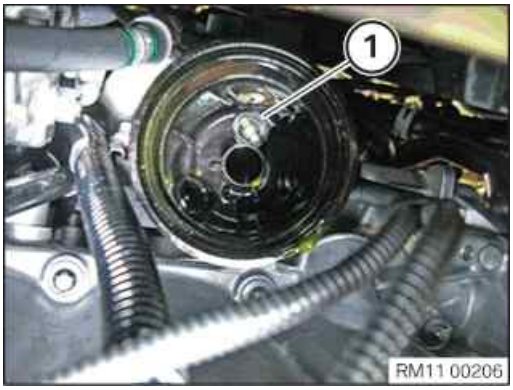
Lightly oil O-ring at the pressure sensor (1), (100 bar, order number: **0 431 592**).

Screw pressure sensor (1) hand-tight into special tool 11 4 310 .

Connect connecting cable (2) of **I**ntegrated **M**easurement **I**nterface **B**ox (IMIB) to pressure sensor (1).

Run the corresponding test module.

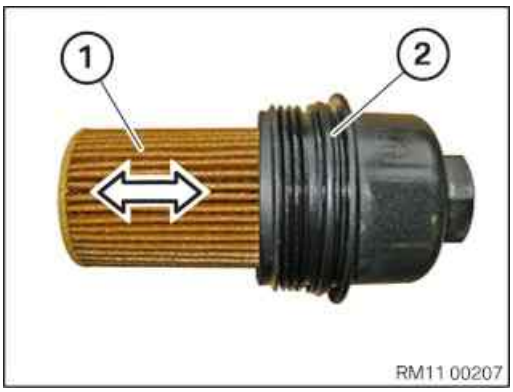
INSTALLATION:



Stop engine.

Remove the special tools.

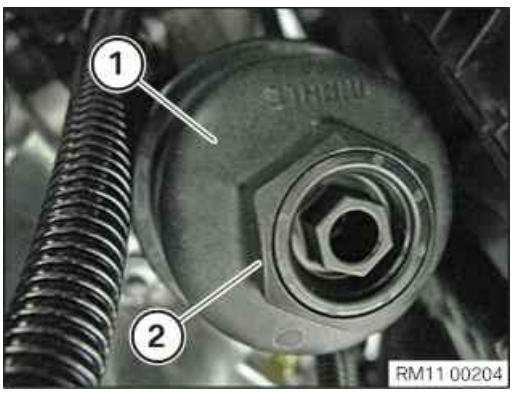
Check the freedom of movement of the non-return valve (1).



Part: Replace O-ring (2).

Insert the oil filter element (1) into the oil filter cover.

Replace O-ring (2) and oil it with engine oil.



Install oil filter cover (1) and tighten at hexagon head (2).

Tightening torque: 11 42 1AZ.

cardiagn.com

Concluding tasks:

- Install underbody protection.
- Vehicle horizontal.
- Allow engine to run briefly and stop.
- Check oil level and correct if necessary.

cardiagn.com

11 40 000 Checking engine oil pressure (B37D)

Special tools required:

- 2 289 603
- 11 4 310

Necessary preliminary work:

- Remove oil filter .

Remount filter element (1) in the special tool 2 289 603 .
Remount O-ring (2) if necessary.

Screw in special tool 2 289 603 with filter element to 25 Nm.

Checking engine oil pressure with diagnosis tester

Connect special tool 11 4 310 and special tool 2 289 603 .
Lightly oil O-ring at pressure sensor (0 431 592).
Screw pressure sensor (0 431 592) hand-tight into special tool 11 4 310 .
Connect connecting cable of IMIP to pressure sensor (0 431 592).

Follow diagnosis instruction.

Required follow-up work:

- Install oil filter.
- Remove all special tools.
- Reassemble vehicle and set in horizontal position.
- Switch off engine, wait approx. 5 minutes and then check engine oil level.
- Top up engine oil if necessary.

cardiagn.com

11 41 000 Removing and installing or replacing oil/vacuum pump (B37C)

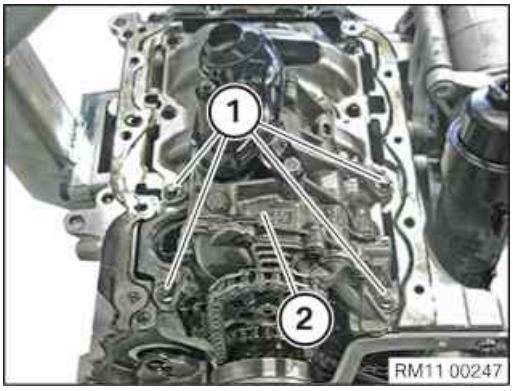
Important!

It is possible to remove and install the oil/vacuum pump **without** removing the transmission.

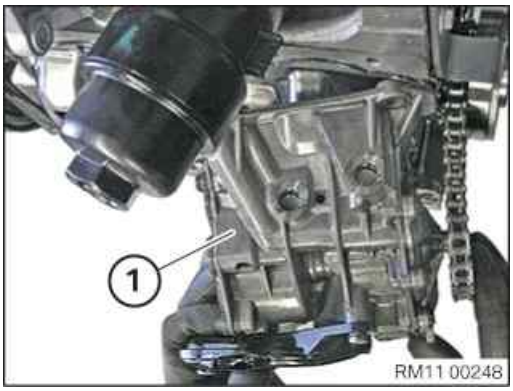
Necessary preliminary tasks:

- Removing oil sump.

REMOVAL:

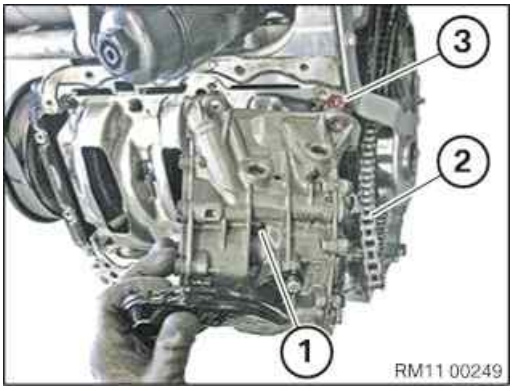


Release screws (1) of oil/vacuum pump (2).

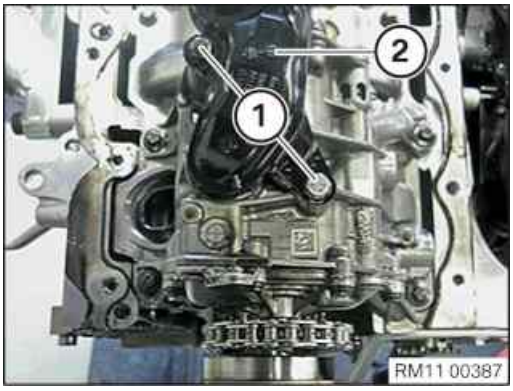


Remove oil/vacuum pump (1).

cardiagn.com



Feed oil/vacuum pump (1) out of drive chain (2) and remove.

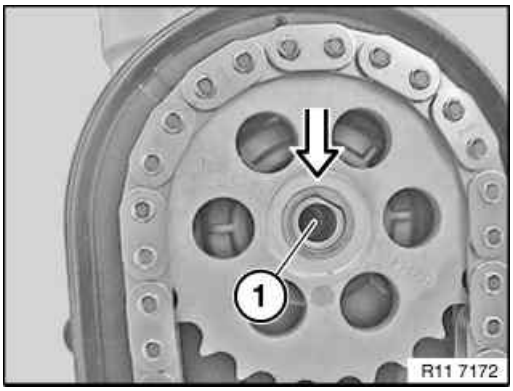


Replacement:

Release screws (1). Remount intake pipe (2).

Tighten down screws (1).

Tightening torque: 11 41 1AZ.

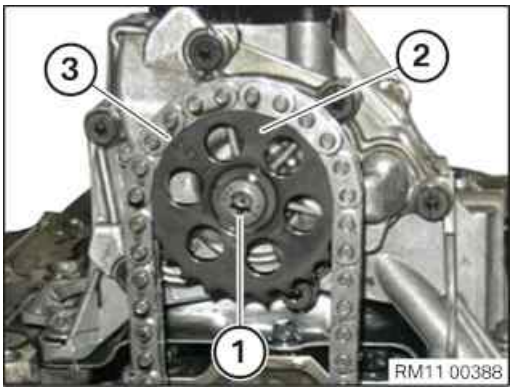


Replacement: Important!

Pay attention to mounting flats (1) on oil pump (see arrow).

The label "Front" must be visible.

Note:
Figure N47.



Replacement:

Important!

Screw (1) has left-hand thread.

"Front" (3) must be readable.

Hold down camshaft sprocket (2) with a suitable tool. Release screw (1). Remount camshaft sprocket.

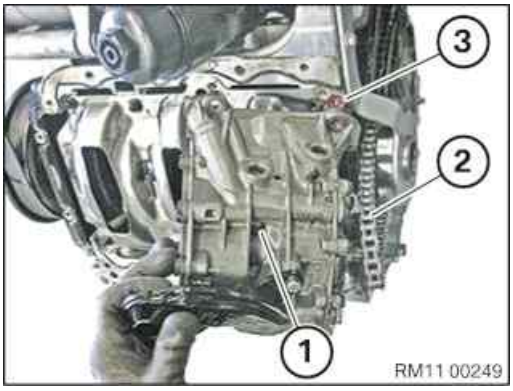
Parts: Replace screw (1).

Mount camshaft sprocket (2) and hold down with a suitable tool. Tighten screw (1).

Tightening torque: 11 41 4AZ.

INSTALLATION:

cardiagn.com

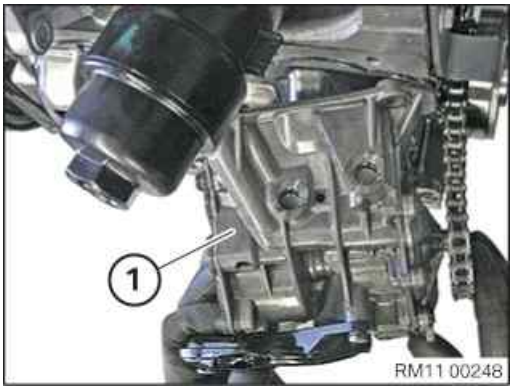


Important!

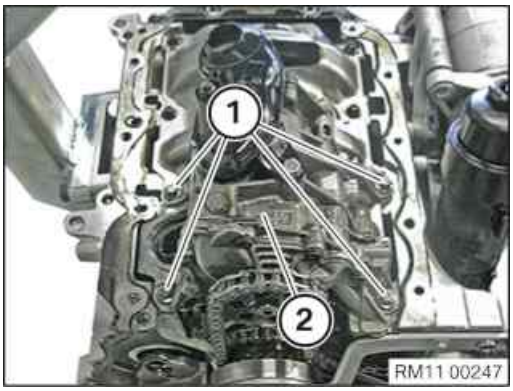
Sealing ring (3) must not be damaged or missing.

Check centring bushes for damage, replace if necessary.

Feed oil/vacuum pump (1) into drive chain (2).



Install oil/vacuum pump (1).



Tighten down screws (1) of oil/vacuum pump (2).

Tightening torque: 11 41 2AZ.

Required follow-up work:

- Install oil sump.

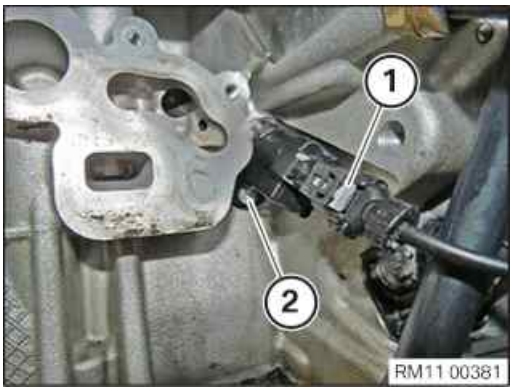
cardiagn.com

11 41 115 Removing and installing/replacing hydraulic valve (B37C)

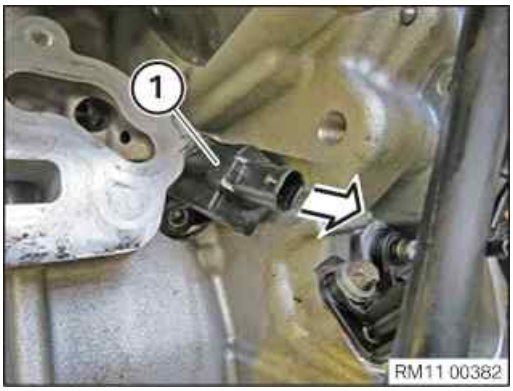
Necessary preliminary tasks:

- Remove full-flow oil filter.

Removal:

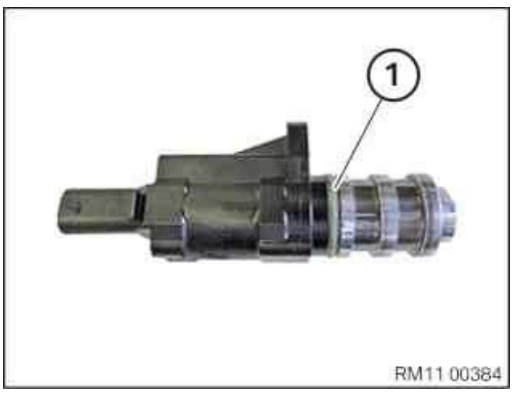


Unlock and disconnect the connector (1).
Release screw (2).



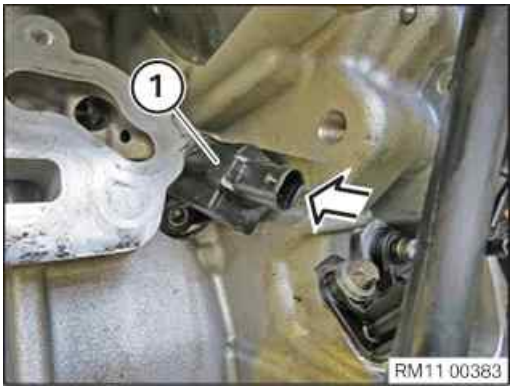
Remove hydraulic valve (1) in direction of arrow.

Installation:

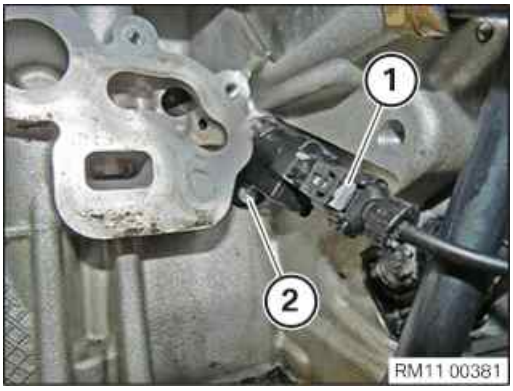


Parts: Replace O-ring (1).
Oil O-ring (1).

cardiagn.com



Install hydraulic valve (1) in direction of arrow.



Tighten screw (2).
Tightening torque: 11 00 2AZ.
Connect the plug (1).

Required follow-up work:

- Install full-flow oil filter.
- Assemble engine.

cardiagn.com

11 41 115 Removing and installing/replacing hydraulic valve for oil-pressure control

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.

For additional information see:

Main group 17

17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Filling **without** the vacuum filler device (watering can filling) is **not permitted**.

Non-compliance will result in danger of component damage and/or engine damage.

Filling specification **absolutely must** be adhered to.

The operation of the vehicle is not permitted unless the filling procedure has been completed. Otherwise, functional limitations (degradation) and/or overheating may occur.

A bleeding procedure is required after a part has been exchanged in the cooling system and/or after refilling the cooling system.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

cardiagn.com

1 – Disconnecting all battery earth leads

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

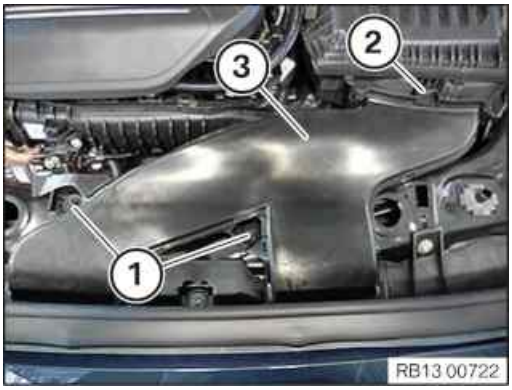
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

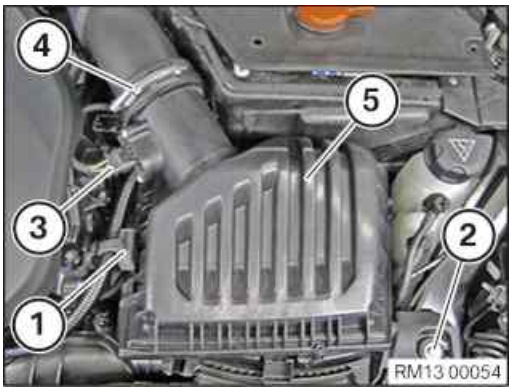
3 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

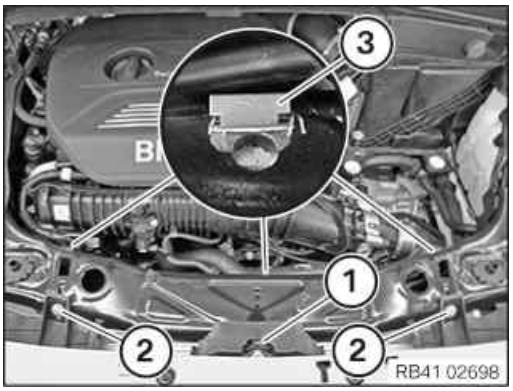
4 – Removing intake silencer housing

cardiagn.com

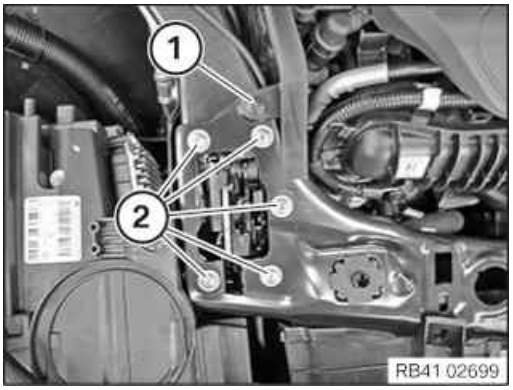


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

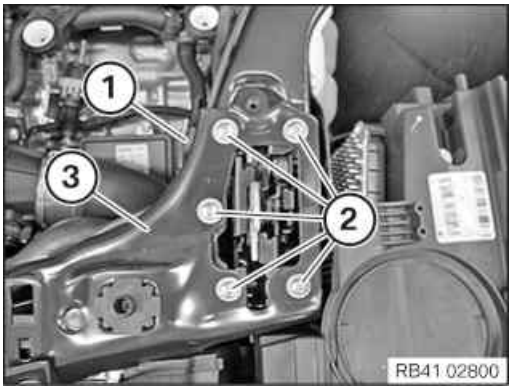
5 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

6 – Removing the fan cowl with electric fan

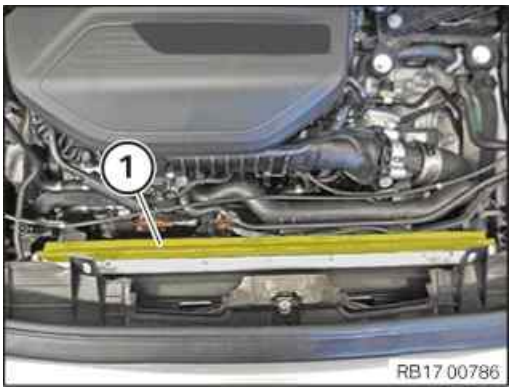
WARNING

Hot surfaces.

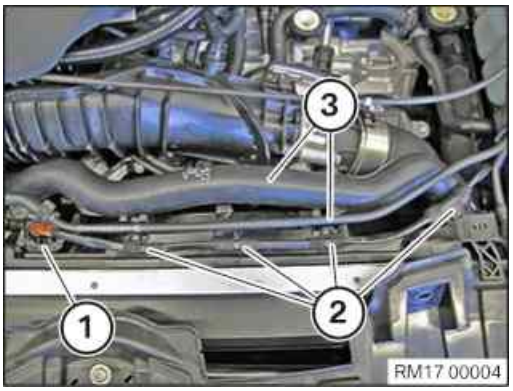
Risk of burning!

- Perform all work only on components that have cooled down.

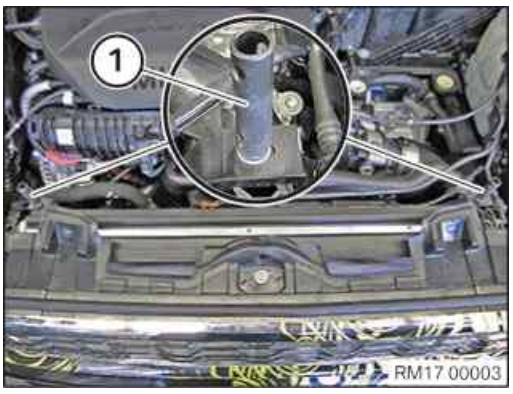
cardiagn.com



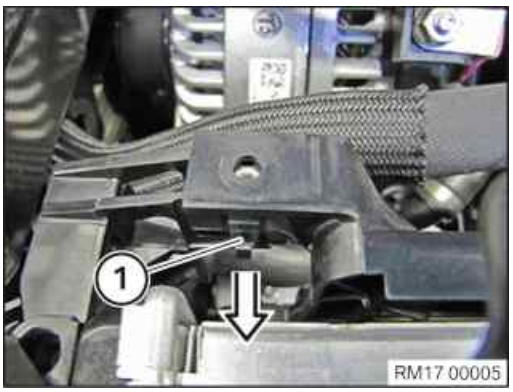
- Feed out and remove the sealing (1) from the radiator.



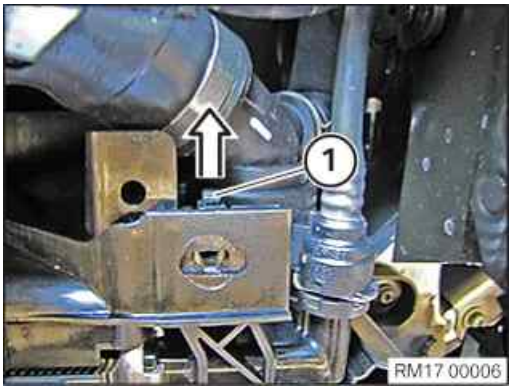
- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.



- Loosen screws (1).

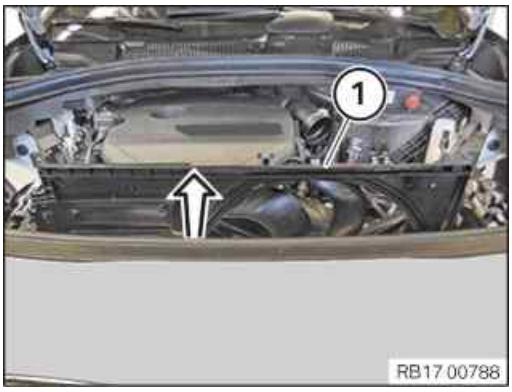


- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



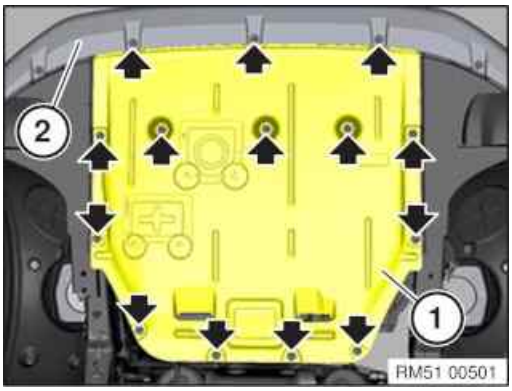
- Unlock the left lock (1) on the fan cowl in the direction of the arrow.

cardiagn.com



- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

8 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

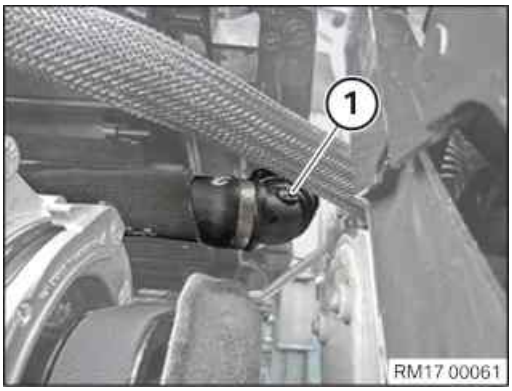
In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

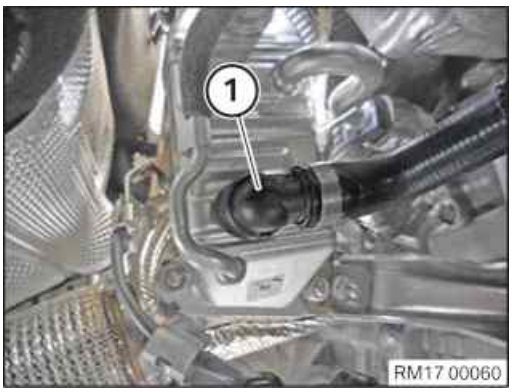
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Loosen sealing cap (1).



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

9 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

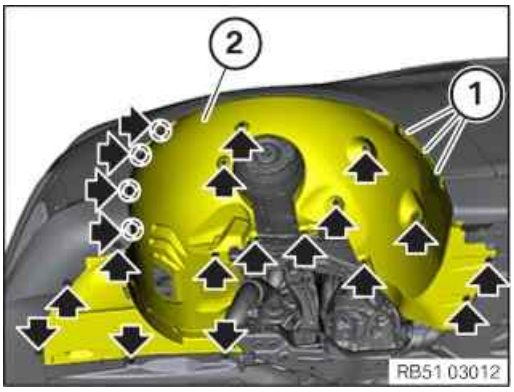
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

cardiagn.com

10 – Removing the front right wheel arch cover



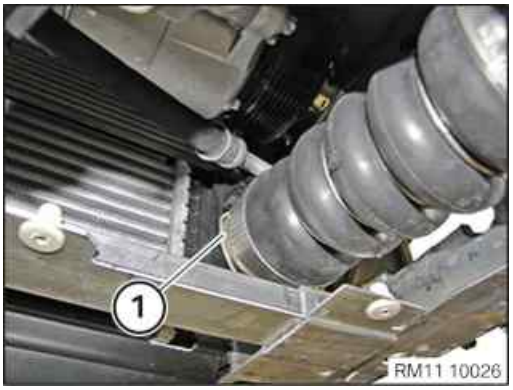
- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

11 – Remove right charge-air line

- Release charge air duct screws (1) on oil sump.

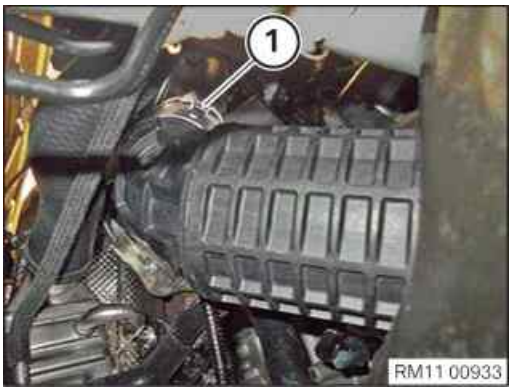
- Detach charge air duct screw connection (1) on crankcase.

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).

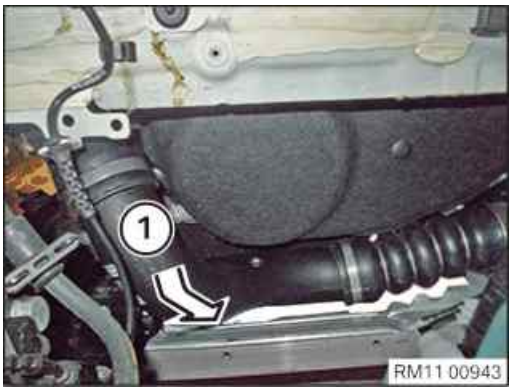


- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

cardiagn.com

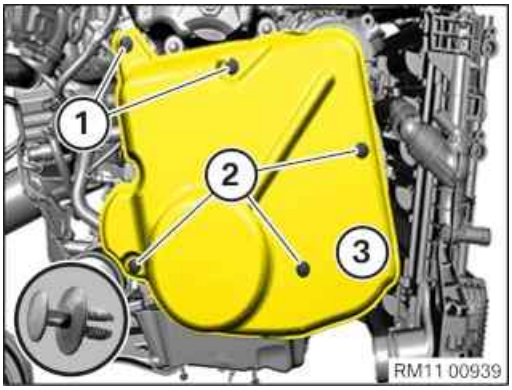


- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

12 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

13 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

cardiagn.com

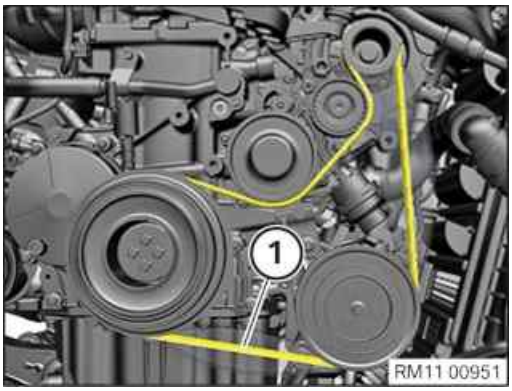
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

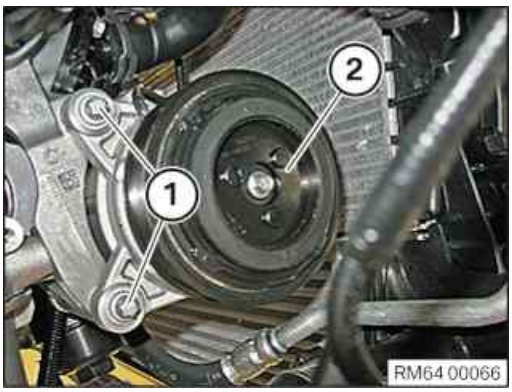
The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .



- Guide out the drive belt for the alternator (1) and remove it.

14 – Releasing air conditioning compressor



- Protect the air conditioning compressor (2) from falling.
- Loosen screws (1).
- Slide the air conditioning compressor (2) out and set it aside.

15 – Undoing the oil drain plug on the oil filter cover

WARNING

Hot fluids.

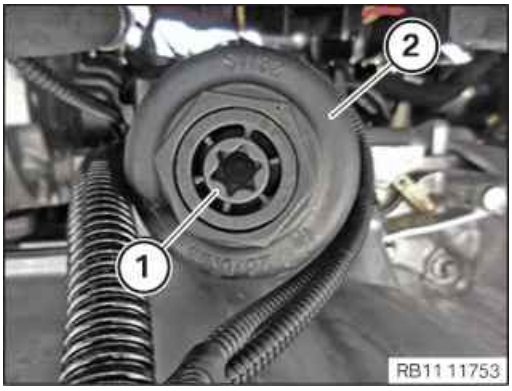
Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

cardiagn.com

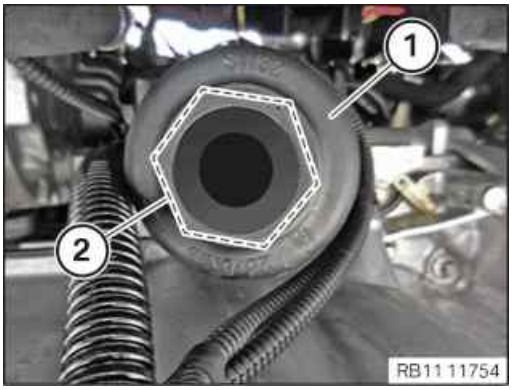
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Undo the oil drain plug (1) on the oil filter cover (2).
- Feed out and remove oil drain plug (1).
- Catch and dispose of emerging engine oil.

16 – Releasing the oil filter cover

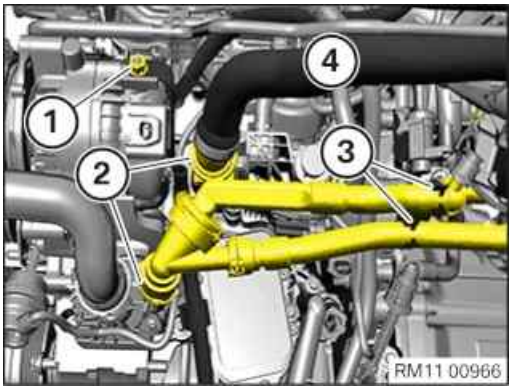


- Release oil filter cover (1) from hexagon head (2).

17 – Remove full-flow oil filter.

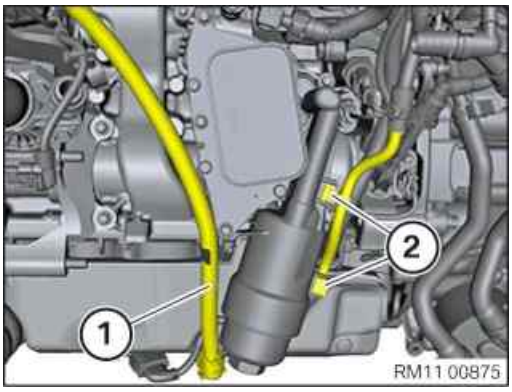
TECHNICAL INFORMATION

Make sure that there are no particles or impurities in the medium openings. Coolant or foreign substances in the oil can cause engine damage such as damage to the connecting rod bearing.

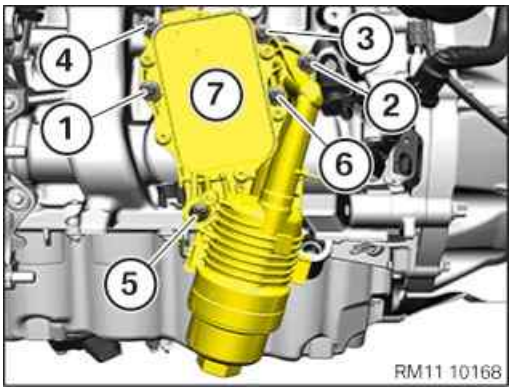


- Loosen the nut (1) of the positive battery cable on the alternator.
- Open unlocking mechanisms (2).
- Release the coolant pipe (3) from the holder, pull off and set it aside.
- Detach the coolant hose (4) and set it aside.
- Catch and dispose of escaping coolant.

cardiagn.com



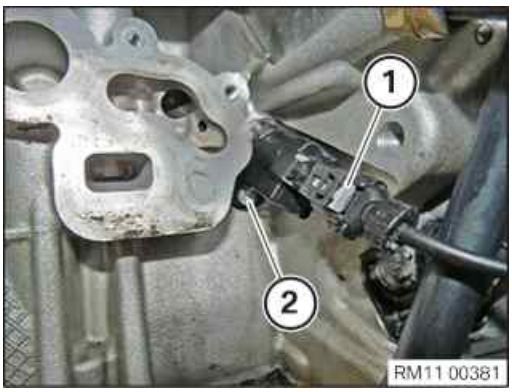
- Release the positive battery cable (1) from the clamp on the full-flow oil filter.
- Release the engine wiring harness (2) from the full-flow oil filter.



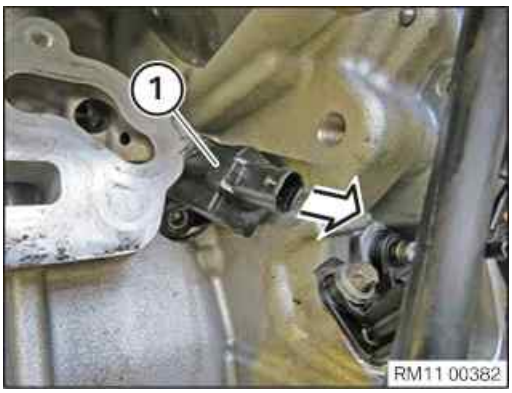
- Loosen screws in the order (6) to (1).
- Guide out and remove the full-flow oil filter (7).

MAIN WORK

18 – Removing the hydraulic valve for the oil pressure control



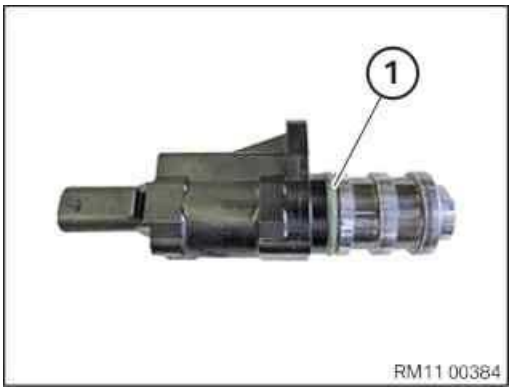
- Unlock and disconnect connector (1).
- Loosen screw (2).



- Remove the hydraulic valve (1) in the direction of the arrow.

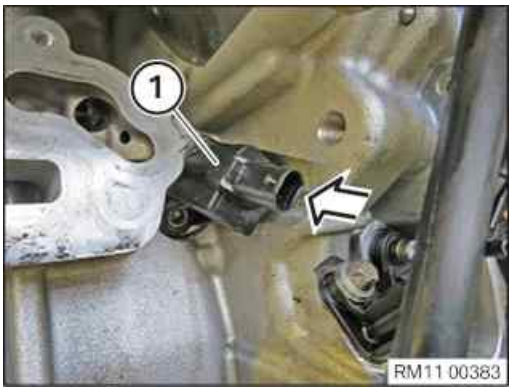
19 – Installing the hydraulic valve for the oil pressure control

cardiagn.com

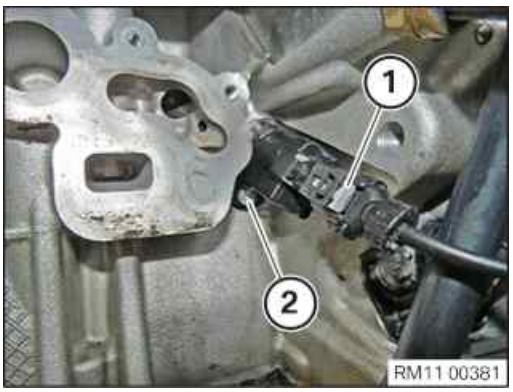


- Renew O-ring (1).

  Parts: O-ring
- Oil O-ring (1).



- Install the hydraulic valve (1) in the direction of the arrow.



- Tighten down screw (2).

Hydraulic valve to crankcase

M6 x 18		Tightening torque	8 Nm

- Connect connectors (1) and lock.

POSTPROCESSES

20 – Install full-flow oil filter

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

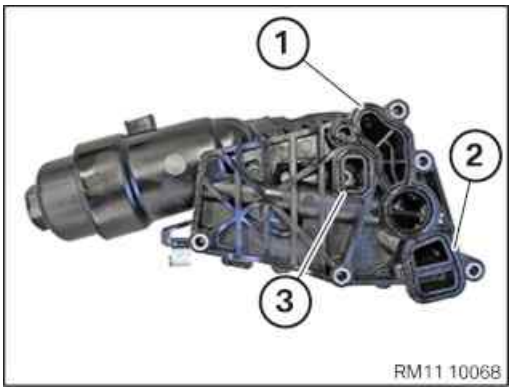
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

cardiagn.com

- Clean the sealing residue off the sealing surface on the crankcase (1) using the special tool **0 495 102 (11 4 470)**.



- Remove seals (1), (2) and (3) with a suitable tool.
- Clean the sealing residue from the full-flow oil filter.
- Renew gaskets (1), (2) and (3).

  Parts: Sealing kit
- Install seals (1), (2) and (3).

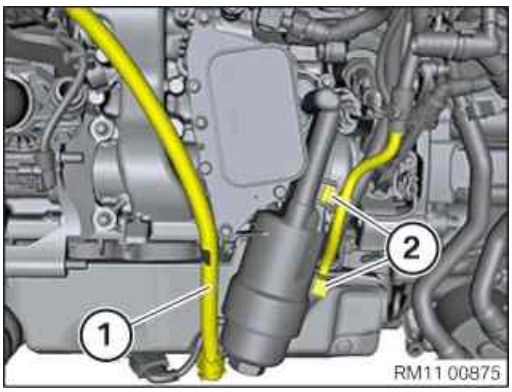
- Crank the engine twice with the special tool **0 493 380 (11 6 480)** in direction of rotation.

- Have a cleaning cloth ready.
- Catch any engine oil leaking from the oil duct of the crankcase (1) and dispose of this.

TECHNICAL INFORMATION

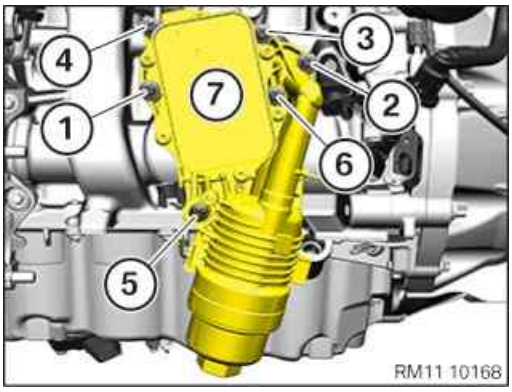
The sealing surfaces must be free from oils, grease and cleaning agents.

- Clean sealing surface (1).



- Secure positive battery cable (1) in the clamp on the full-flow oil filter.
- Secure engine wiring harness (2) on full-flow oil filter.

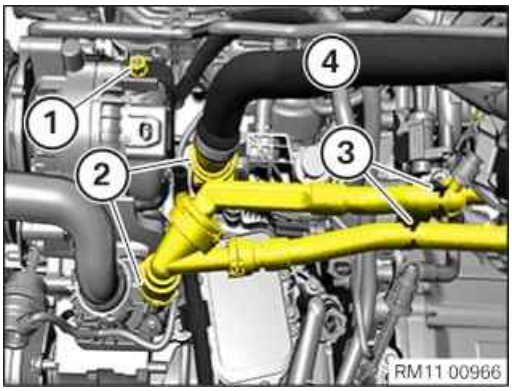
cardiagn.com



- Feed in and install the full-flow oil filter (7).
- Make sure seals are correctly seated.
- Tighten screws (1) to (6) on full-flow oil filter (7).

Full-flow oil filter to crankcase

Screw M6	Observe tightening sequence.	Jointing torque	8 Nm
		Tighten down	8 Nm



- Connect positive battery cable to alternator.
- Tighten nut (1).

Positive battery cable to alternator

M8		Tightening torque	19 Nm

- Secure coolant pipe (3) in the holder.
- Connect coolant pipe (3) on the thermostat and lock.
- Connect and lock coolant hose (4).

  The locks (2) must engage audibly.

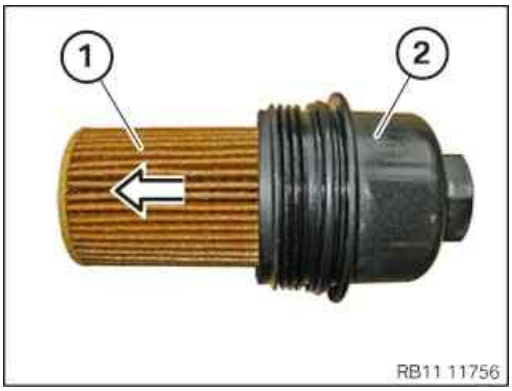
21 – Replace oil filter element

RISK OF DAMAGE

Contaminant or foreign body.

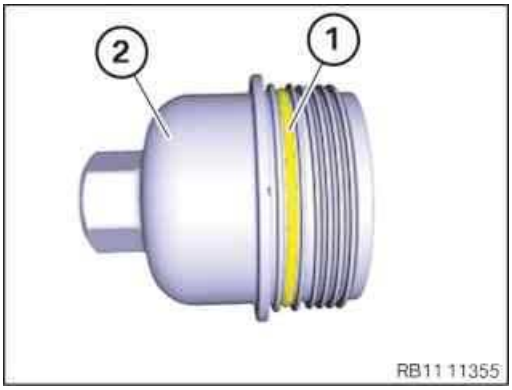
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Guide the fuel filter element (1) out of the fuel filter cover (2) in the direction of the arrow and remove.
- Renew the oil filter element (1).

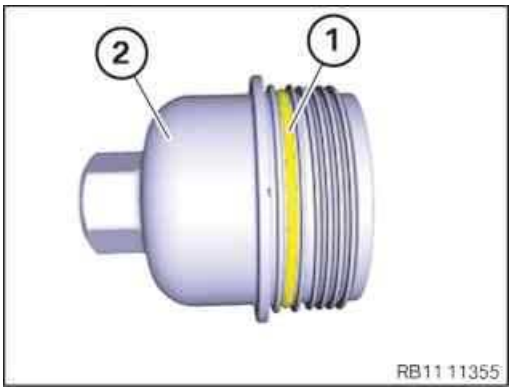
  Parts: Oil filter element



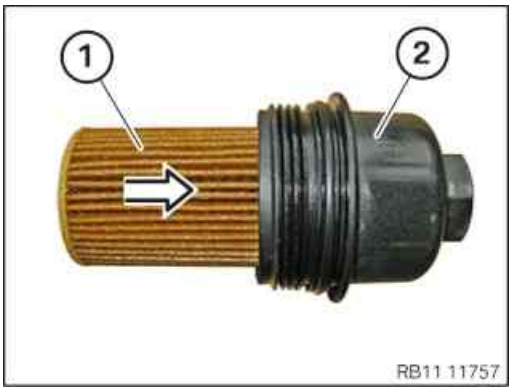
- Guide the sealing ring (1) out at the oil filter cover (2) and remove.
- Renew sealing ring (1).

  Parts: Sealing ring

cardiagn.com



- Feed in and install new sealing ring (1) on the oil filter cover (2).
- Coat new sealing ring (1) with engine oil.



- Feed in and install the new oil filter element (1) on the oil filter cover (2) in the direction of the arrow.
- Make sure the oil filter element (1) engages audibly at the oil filter cover (2).

TECHNICAL INFORMATION

Elastomers (O-rings) must not come into contact with brake cleaner. Before installing the O-rings, the thread must be free from grease and cleaning agents. Allow the brake cleaner to flash off or blow dry with compressed air.

- Clean thread (1).

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

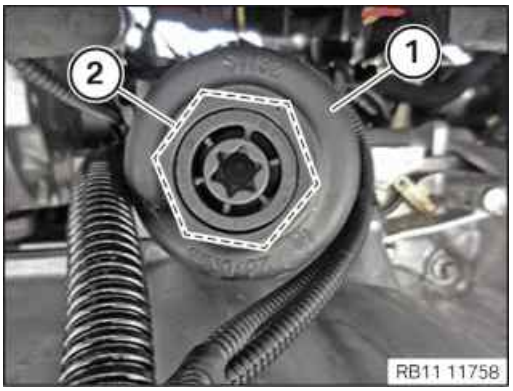
- Make sure that the thread (1) is completely free of engine oil and brake cleaner.

- Coat new sealing ring (2) of the oil drain plug (1) with engine oil.

cardiagn.com

- Tighten oil drain plug (1) hand-tight.

22 – Tightening the oil filter cap



- Feed in and install oil filter cover (1).
- Tighten oil filter cover (1) at the hexagon head (2).

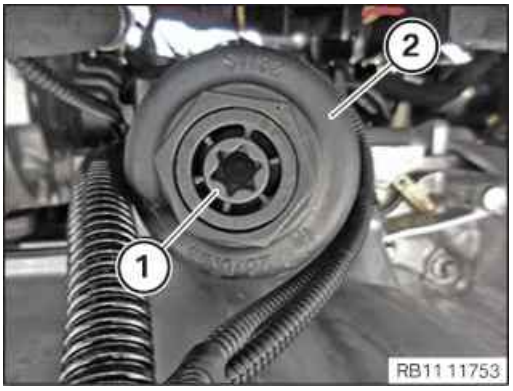
Oil filter cover to oil filter housing

S88.5 x 3	*Newsealing ring, lightly oiled.*	Tightening torque	27 Nm

23 – Tightening the oil drain plug on the oil filter cover

- Renew oil drain plug (1) with the sealing ring (2).

  Parts: Oil drain plug, sealing ring



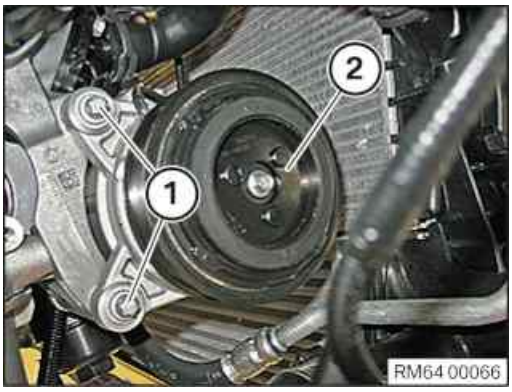
- Feed in and install the oil drain plug (1).
- Tighten the oil drain plug (1) on the oil filter cover (2).

Oil drain plug to oil filter cover

	Renewoil drain plug.	Tightening torque	6 Nm

24 – Tighten the air conditioning compressor

cardiagn.com



- Position the air conditioning compressor (2).
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

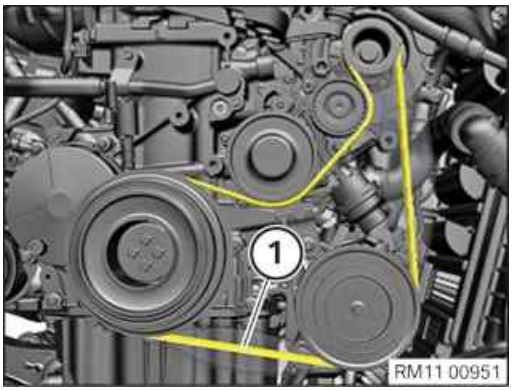
25 – Installing the drive belt for alternator

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

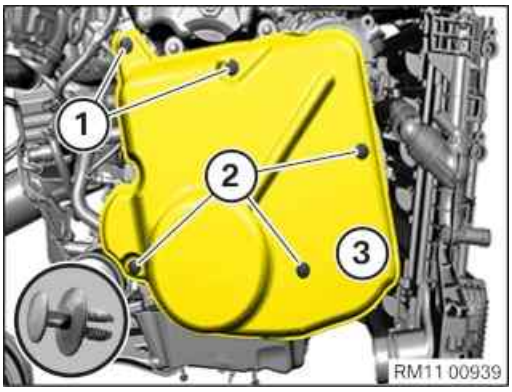


- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

26 – Install the acoustic cover for the engine at the front

cardiagn.com



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

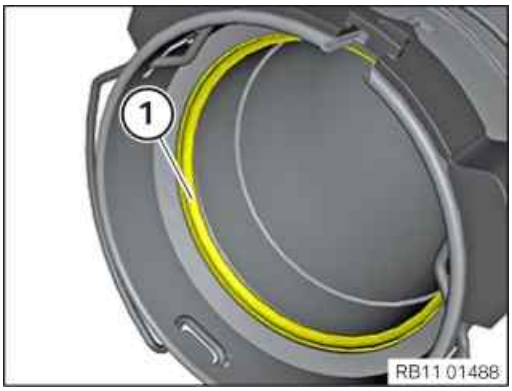
27 – Install right charge air duct

RISK OF DAMAGE

Damage to the exhaust turbocharger.

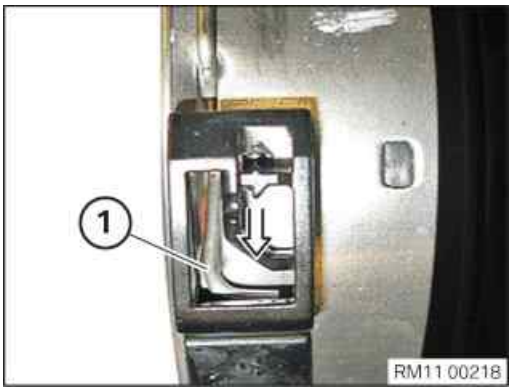
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

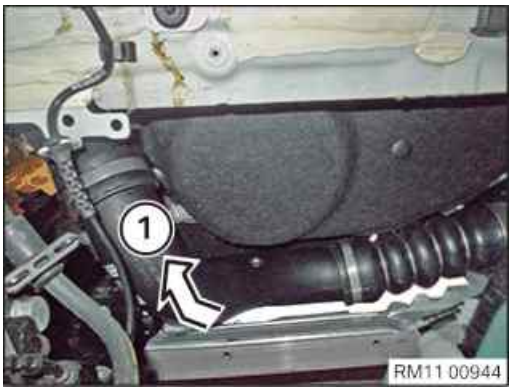


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

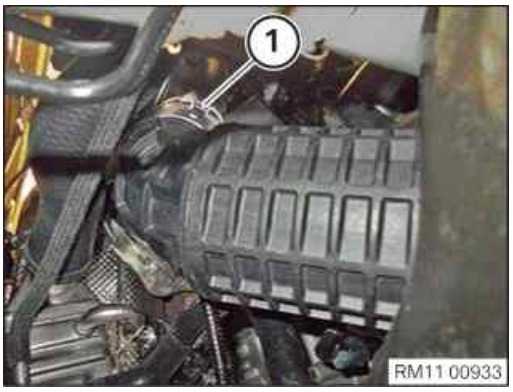


- Let the lock (1) engage at the holder (arrow).



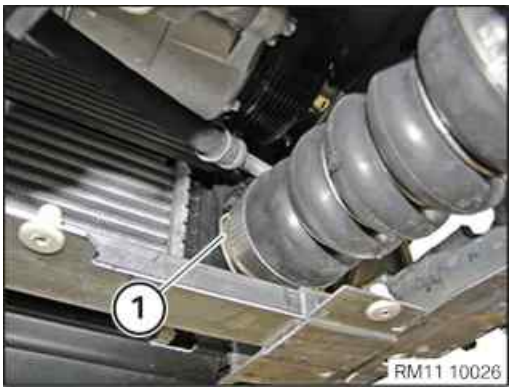
- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.

cardiagn.com



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

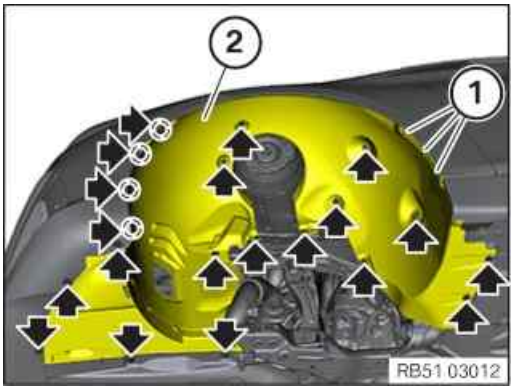
M6x25		Tightening torque	5 Nm

- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

28 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

29 – Installing the front right wheel

cardiagn.com

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

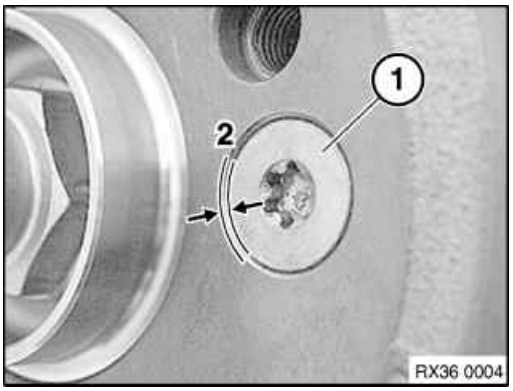
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

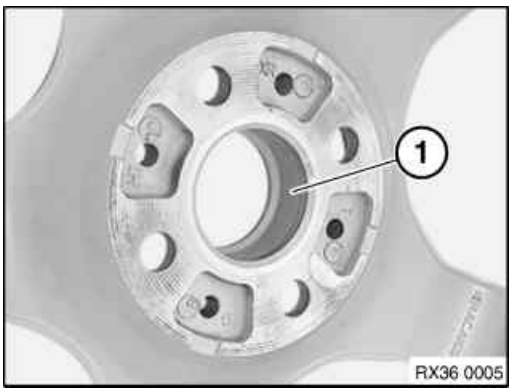


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

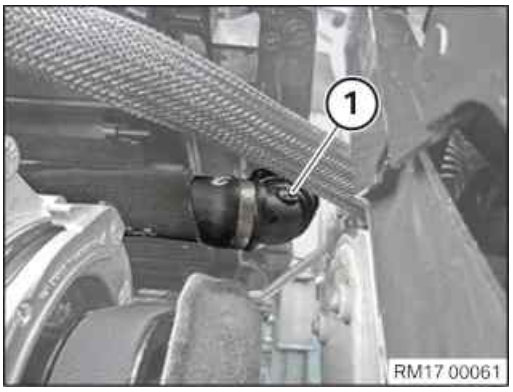
M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

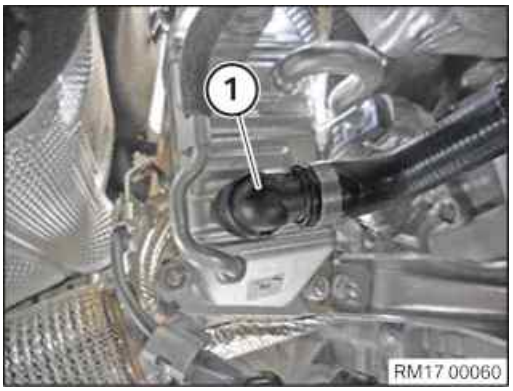
30 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

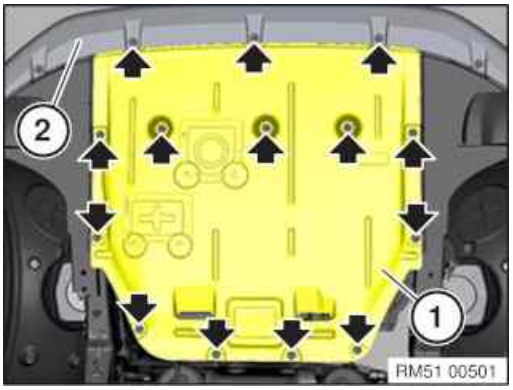


- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

31 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

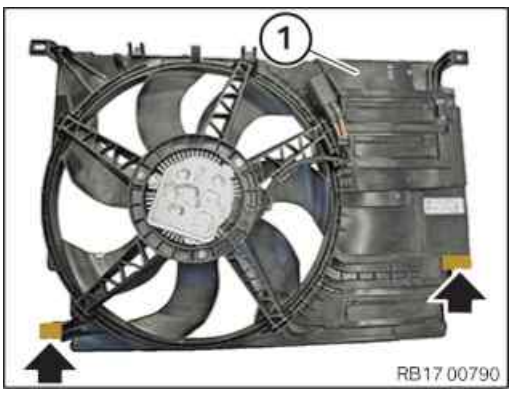
Underbody protection front

			3 Nm

32 – Installing fan cowl with electric fan

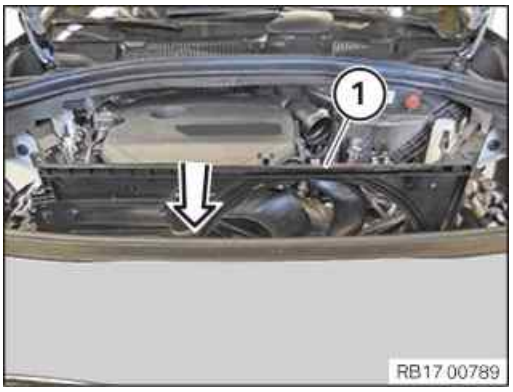
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



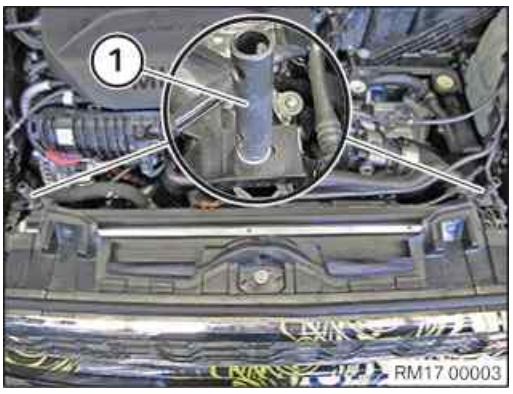
- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.

cardiagn.com



- Feed in and install the fan cowl (1) in the direction of the arrow.

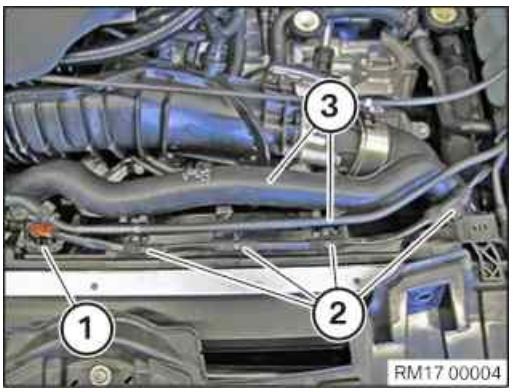
- Lock the left and right locks (arrows).



- Tighten the screws (1).

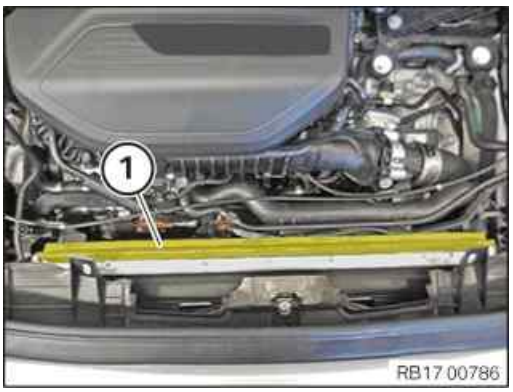
Fan cowl on radiator

M6X12		Tightening torque	6 Nm



- Connect connectors (1) and lock.

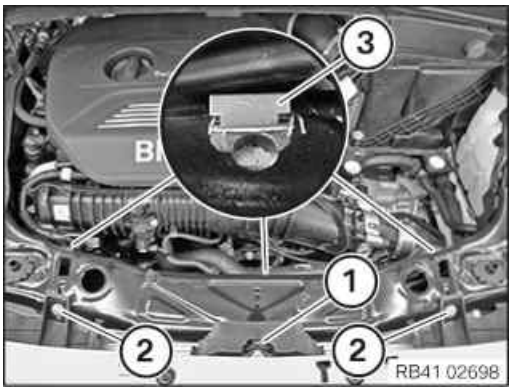
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).



- Guide the sealing (1) on the radiator in and install it.

33 – Install cross connection

cardiagn.com



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

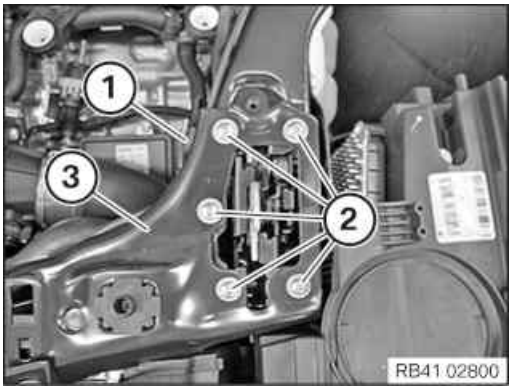
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

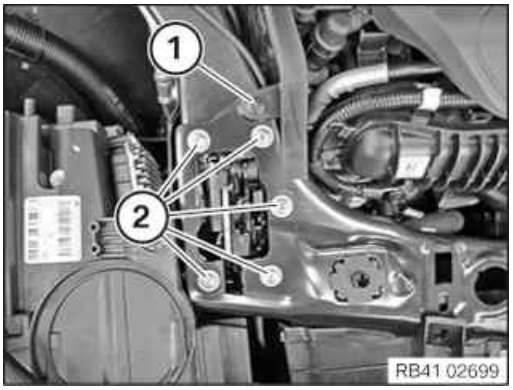


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



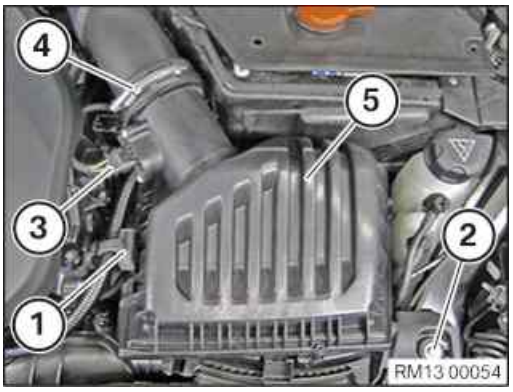
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

34 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

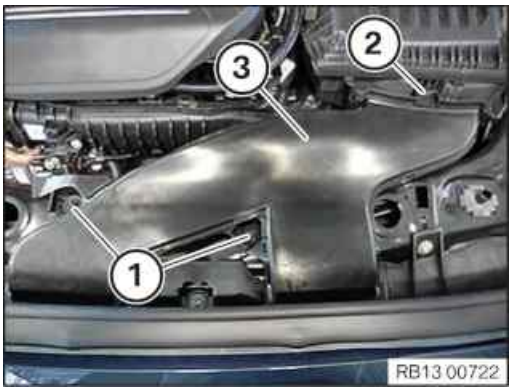
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

35 – Install the intake neck for the intake filter housing

cardiagn.com



- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

36 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

37 – Check engine oil level

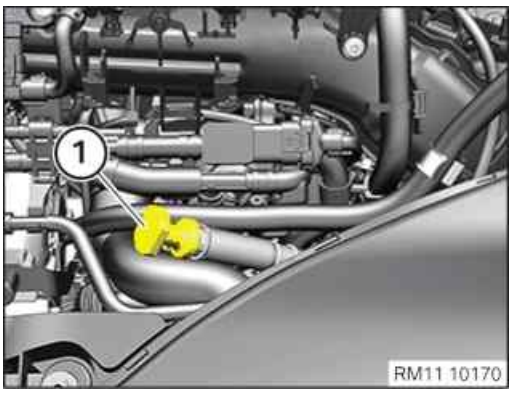
- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

cardiagn.com

▸ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

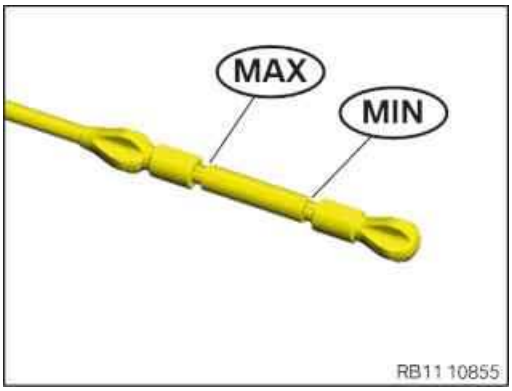


- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.



TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

38 – Disconnecting all battery earth leads

- See additional information.

39 – Fill and bleed the coolant circuit

▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

Operating materials	Used in step
2.0 Grease for wheel centring	29

cardiagn.com

11 42 020 Removing and installing/replacing full-flow oil filter completely

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.

For additional information see:

Main group 17

17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Filling **without** the vacuum filler device (watering can filling) is **not permitted**.

Non-compliance will result in danger of component damage and/or engine damage.

Filling specification **absolutely must** be adhered to.

The operation of the vehicle is not permitted unless the filling procedure has been completed. Otherwise, functional limitations (degradation) and/or overheating may occur.

A bleeding procedure is required after a part has been exchanged in the cooling system and/or after refilling the cooling system.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

cardiagn.com

1 – Disconnecting all battery earth leads

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

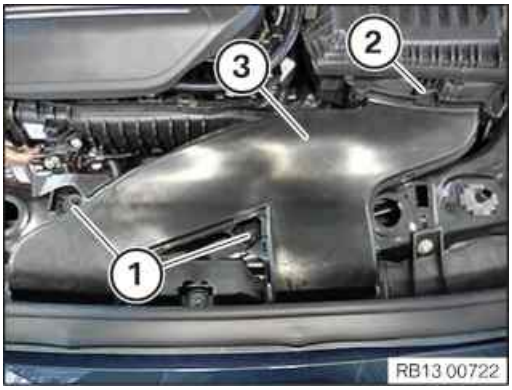
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

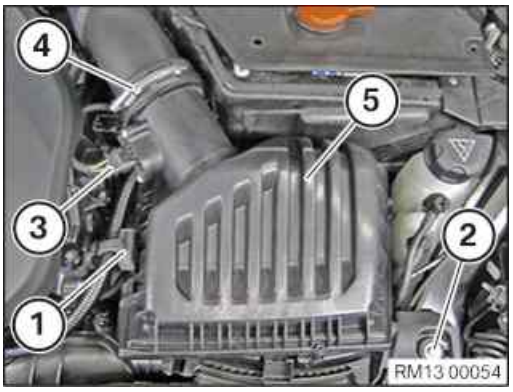
3 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

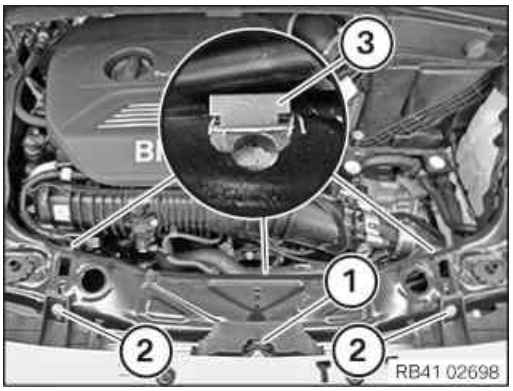
4 – Removing intake silencer housing

cardiagn.com

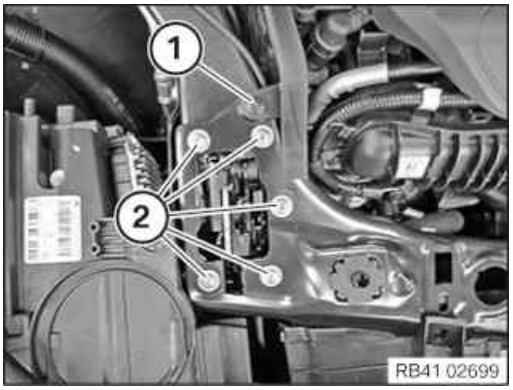


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

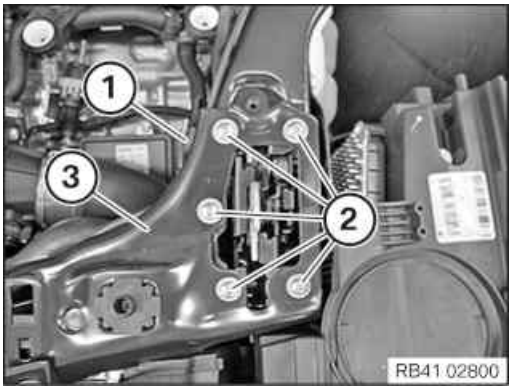
5 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

6 – Removing the fan cowl with electric fan

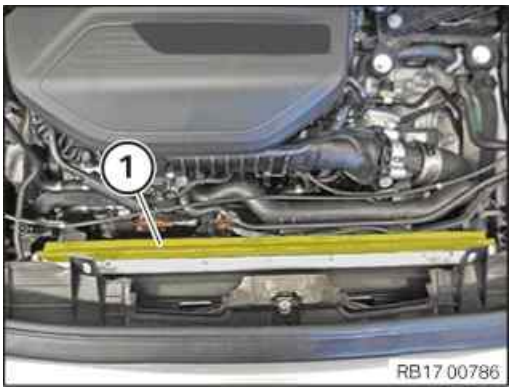
WARNING

Hot surfaces.

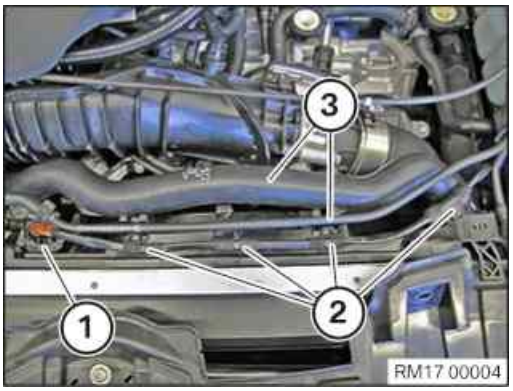
Risk of burning!

- Perform all work only on components that have cooled down.

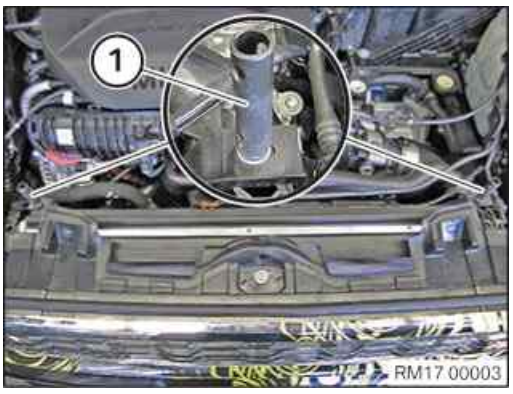
cardiagn.com



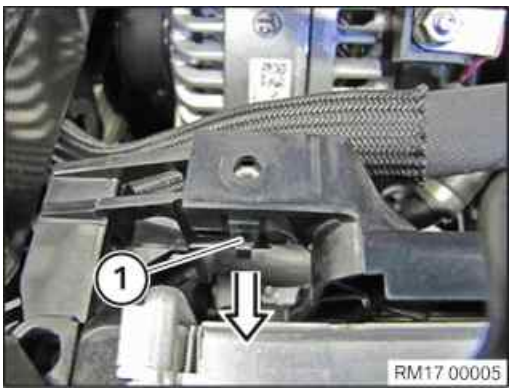
- Feed out and remove the sealing (1) from the radiator.



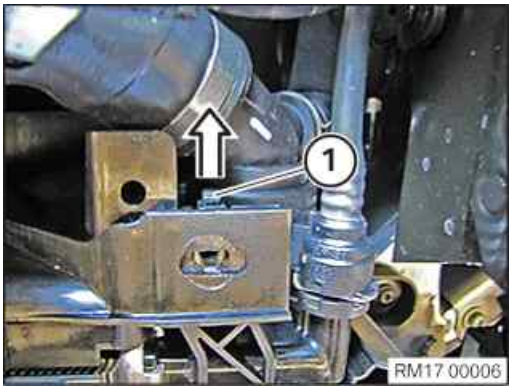
- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.



- Loosen screws (1).

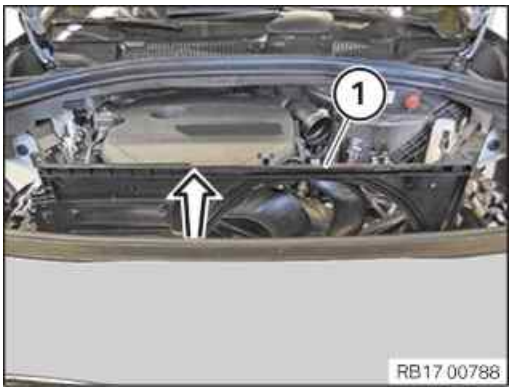


- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



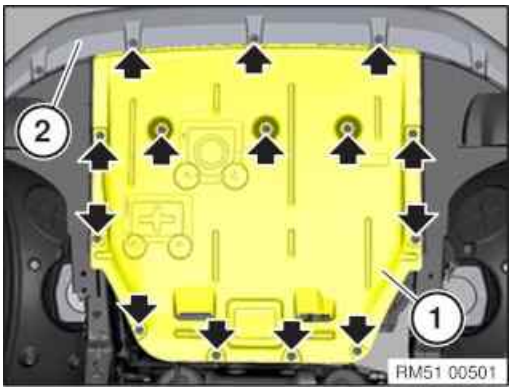
- Unlock the left lock (1) on the fan cowl in the direction of the arrow.

cardiagn.com



- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

8 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

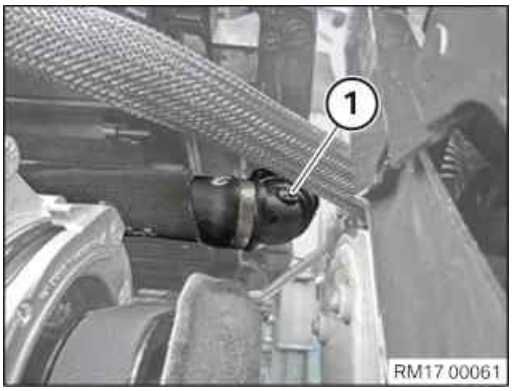
In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

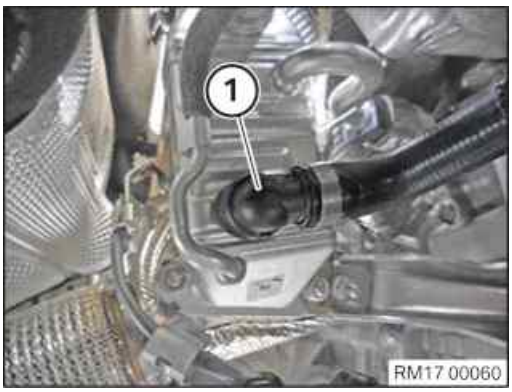
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Loosen sealing cap (1).



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

9 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

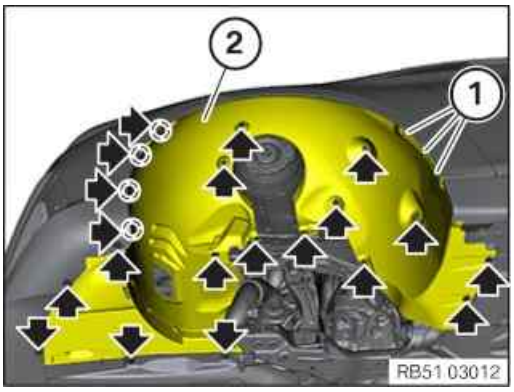
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

cardiagn.com

10 – Removing the front right wheel arch cover



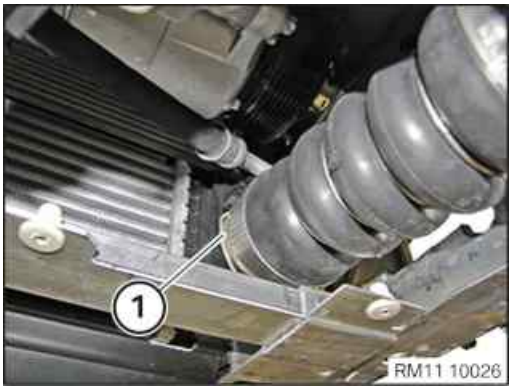
- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

11 – Remove right charge-air line

- Release charge air duct screws (1) on oil sump.

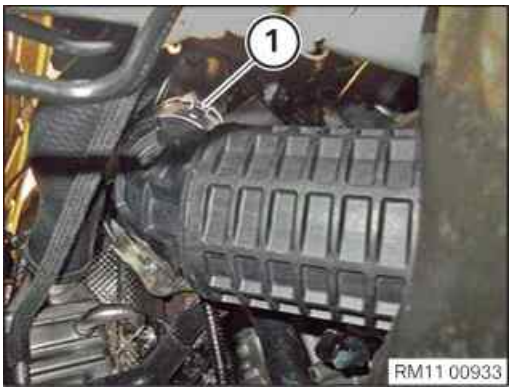
- Detach charge air duct screw connection (1) on crankcase.

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).

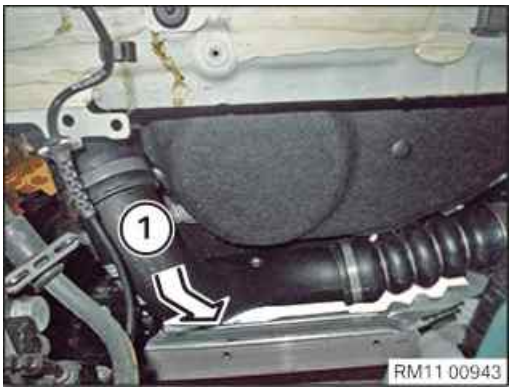


- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

cardiagn.com

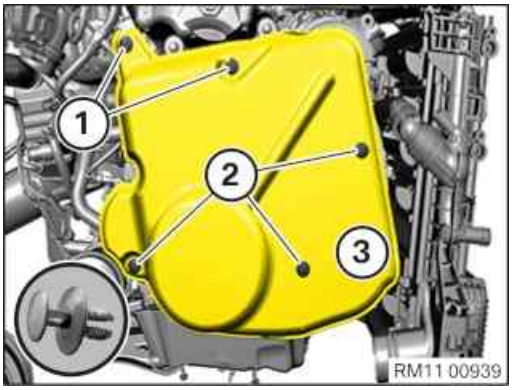


- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

12 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

13 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

cardiagn.com

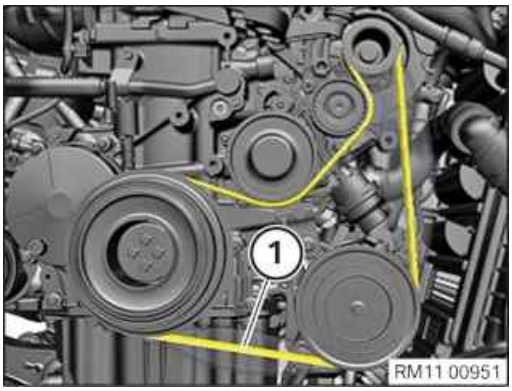
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

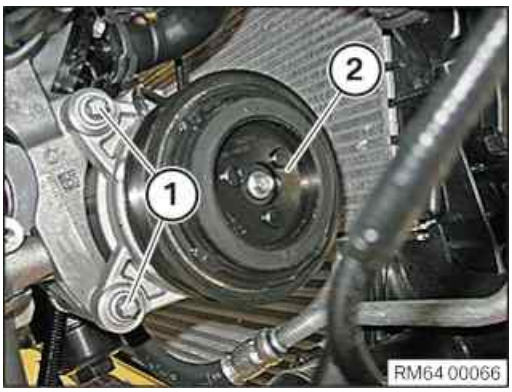
The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .



- Guide out the drive belt for the alternator (1) and remove it.

14 – Releasing air conditioning compressor



- Protect the air conditioning compressor (2) from falling.
- Loosen screws (1).
- Slide the air conditioning compressor (2) out and set it aside.

15 – Undoing the oil drain plug on the oil filter cover

WARNING

Hot fluids.

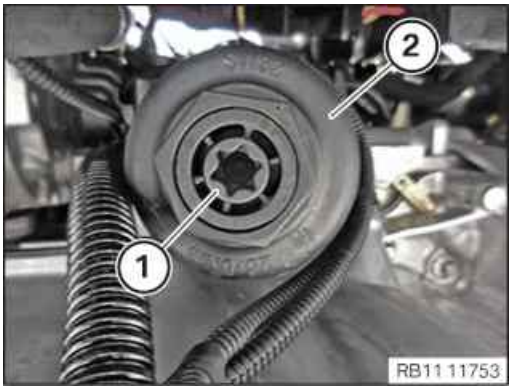
Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

cardiagn.com

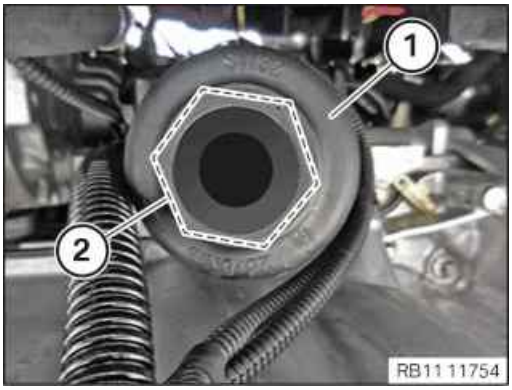
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Undo the oil drain plug (1) on the oil filter cover (2).
- Feed out and remove oil drain plug (1).
- Catch and dispose of emerging engine oil.

16 – Releasing the oil filter cover



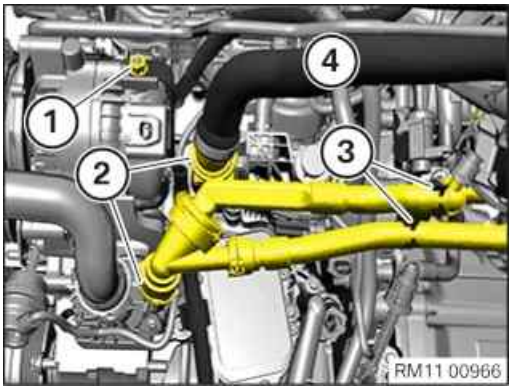
- Release oil filter cover (1) from hexagon head (2).

MAIN WORK

17 – Remove full-flow oil filter.

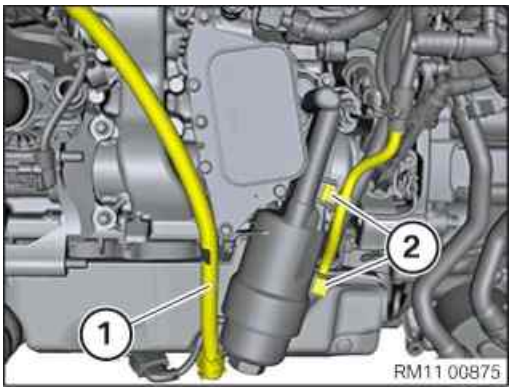
TECHNICAL INFORMATION

Make sure that there are no particles or impurities in the medium openings. Coolant or foreign substances in the oil can cause engine damage such as damage to the connecting rod bearing.

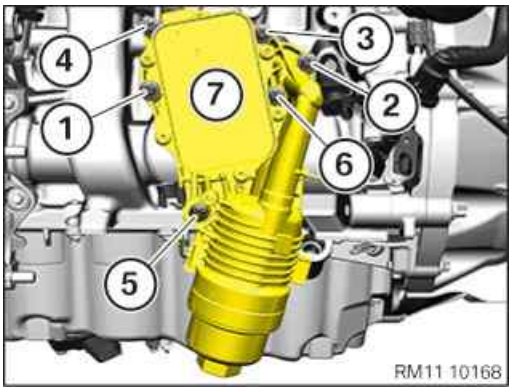


- Loosen the nut (1) of the positive battery cable on the alternator.
- Open unlocking mechanisms (2).
- Release the coolant pipe (3) from the holder, pull off and set it aside.
- Detach the coolant hose (4) and set it aside.
- Catch and dispose of escaping coolant.

cardiagn.com



- Release the positive battery cable (1) from the clamp on the full-flow oil filter.
- Release the engine wiring harness (2) from the full-flow oil filter.



- Loosen screws in the order (6) to (1).
- Guide out and remove the full-flow oil filter (7).

18 – Install full-flow oil filter

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

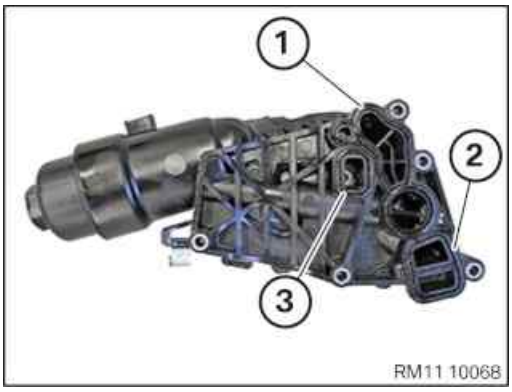
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Clean the sealing residue off the sealing surface on the crankcase (1) using the special tool **0 495 102 (11 4 470)**.

cardiagn.com



- Remove seals (1), (2) and (3) with a suitable tool.
- Clean the sealing residue from the full-flow oil filter.
- Renew gaskets (1), (2) and (3).

  Parts: Sealing kit
- Install seals (1), (2) and (3).

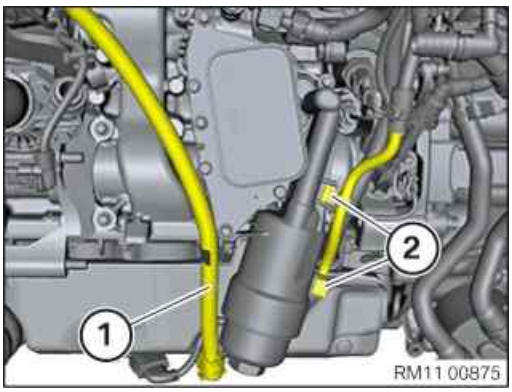
- Crank the engine twice with the special tool **0 493 380 (11 6 480)** in direction of rotation.

- Have a cleaning cloth ready.
- Catch any engine oil leaking from the oil duct of the crankcase (1) and dispose of this.

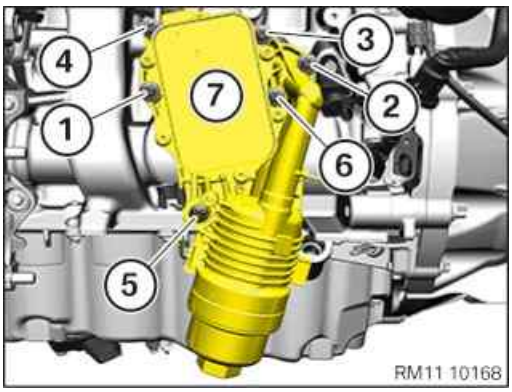
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Clean sealing surface (1).



- Secure positive battery cable (1) in the clamp on the full-flow oil filter.
- Secure engine wiring harness (2) on full-flow oil filter.

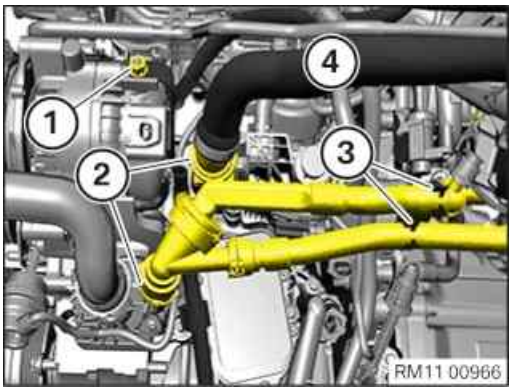


- Feed in and install the full-flow oil filter (7).
- Make sure seals are correctly seated.
- Tighten screws (1) to (6) on full-flow oil filter (7).

Full-flow oil filter to crankcase

Screw M6	Observe tightening sequence.	Jointing torque	8 Nm
		Tighten down	8 Nm

cardiagn.com



- Connect positive battery cable to alternator.
- Tighten nut (1).

Positive battery cable to alternator

M8		Tightening torque	19 Nm

- Secure coolant pipe (3) in the holder.
- Connect coolant pipe (3) on the thermostat and lock.
- Connect and lock coolant hose (4).

  The locks (2) must engage audibly.

POSTPROCESSES

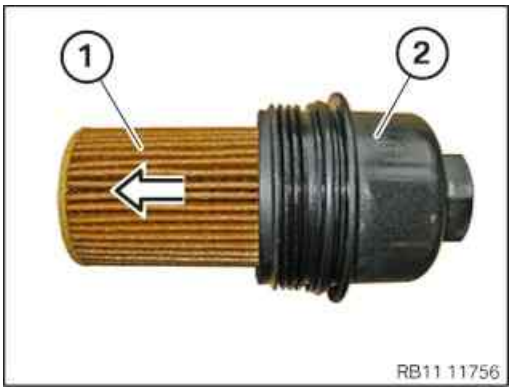
19 – Replace oil filter element

RISK OF DAMAGE

Contaminant or foreign body.

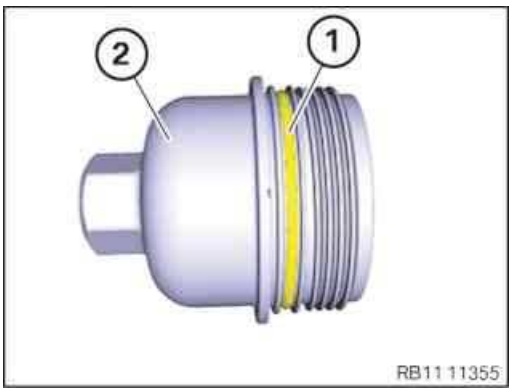
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Guide the fuel filter element (1) out of the fuel filter cover (2) in the direction of the arrow and remove.
- Renew the oil filter element (1).

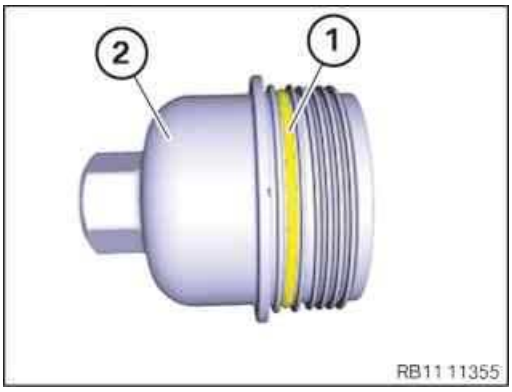
  Parts: Oil filter element



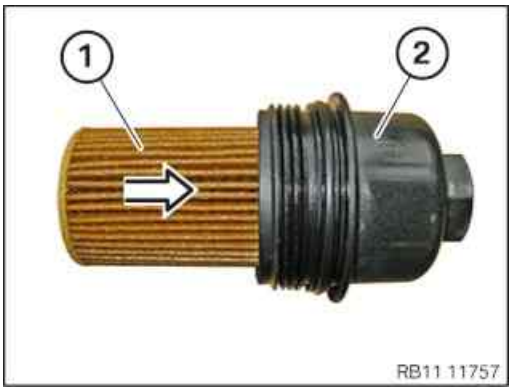
- Guide the sealing ring (1) out at the oil filter cover (2) and remove.
- Renew sealing ring (1).

  Parts: Sealing ring

cardiagn.com



- Feed in and install new sealing ring (1) on the oil filter cover (2).
- Coat new sealing ring (1) with engine oil.



- Feed in and install the new oil filter element (1) on the oil filter cover (2) in the direction of the arrow.
- Make sure the oil filter element (1) engages audibly at the oil filter cover (2).

TECHNICAL INFORMATION

Elastomers (O-rings) must not come into contact with brake cleaner. Before installing the O-rings, the thread must be free from grease and cleaning agents. Allow the brake cleaner to flash off or blow dry with compressed air.

- Clean thread (1).

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

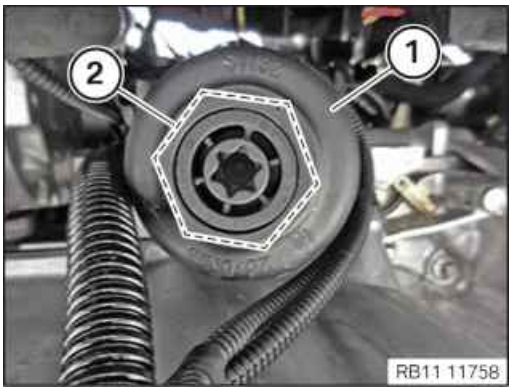
- Make sure that the thread (1) is completely free of engine oil and brake cleaner.

- Coat new sealing ring (2) of the oil drain plug (1) with engine oil.

cardiagn.com

- Tighten oil drain plug (1) hand-tight.

20 – Tightening the oil filter cap



- Feed in and install oil filter cover (1).
- Tighten oil filter cover (1) at the hexagon head (2).

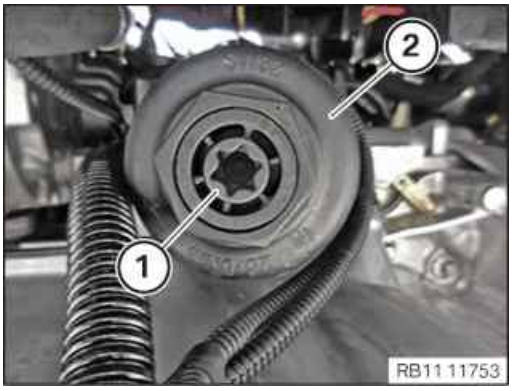
Oil filter cover to oil filter housing

S88.5 x 3	*Newsealing ring, lightly oiled.*	Tightening torque	27 Nm

21 – Tightening the oil drain plug on the oil filter cover

- Renew oil drain plug (1) with the sealing ring (2).

  Parts: Oil drain plug, sealing ring



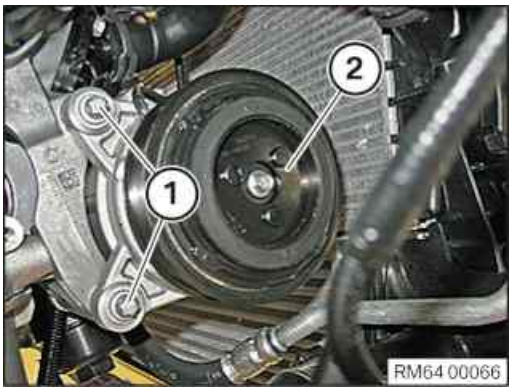
- Feed in and install the oil drain plug (1).
- Tighten the oil drain plug (1) on the oil filter cover (2).

Oil drain plug to oil filter cover

	Renewoil drain plug.	Tightening torque	6 Nm

22 – Tighten the air conditioning compressor

cardiagn.com



- Position the air conditioning compressor (2).
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

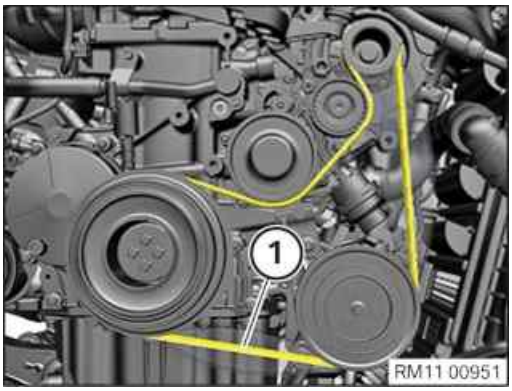
23 – Installing the drive belt for alternator

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

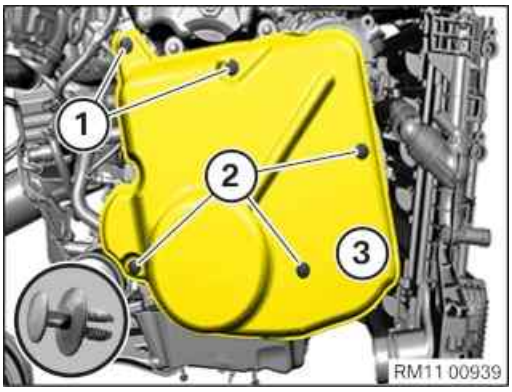


- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

24 – Install the acoustic cover for the engine at the front

cardiagn.com



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

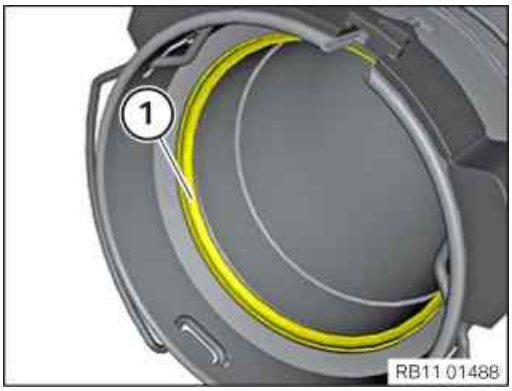
25 – Install right charge air duct

RISK OF DAMAGE

Damage to the exhaust turbocharger.

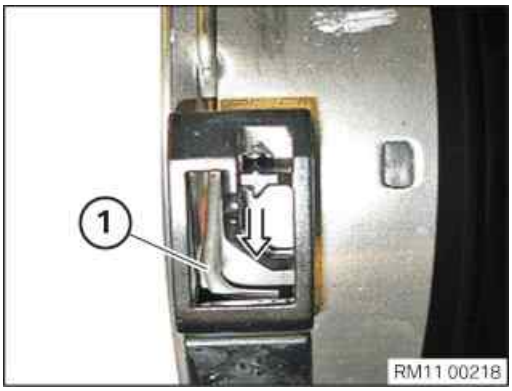
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

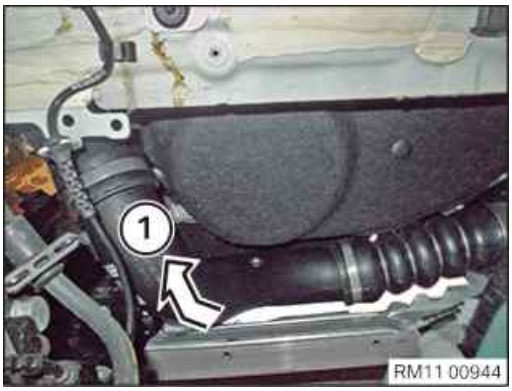


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

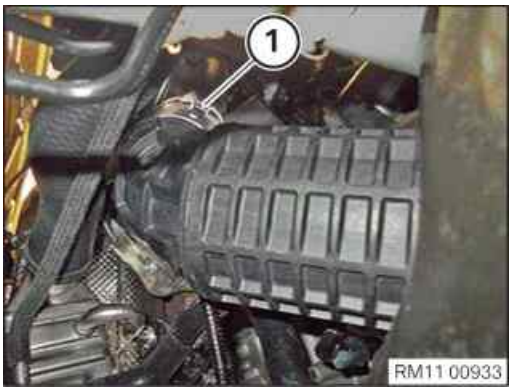


- Let the lock (1) engage at the holder (arrow).



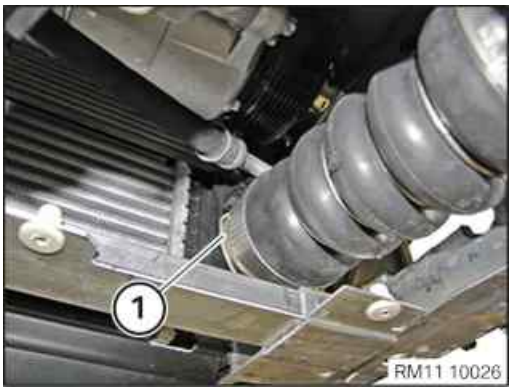
- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.

cardiagn.com



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

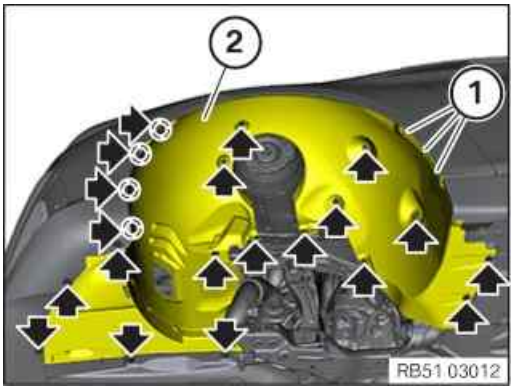
M6x25		Tightening torque	5 Nm

- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

26 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

27 – Installing the front right wheel

cardiagn.com

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

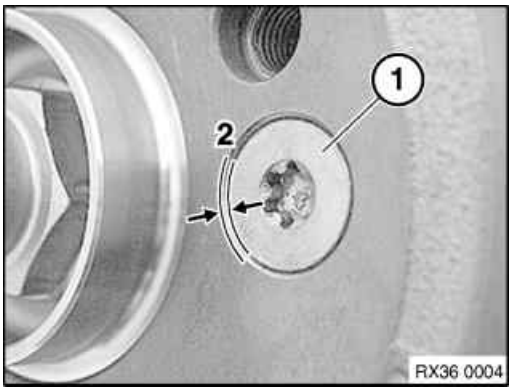
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

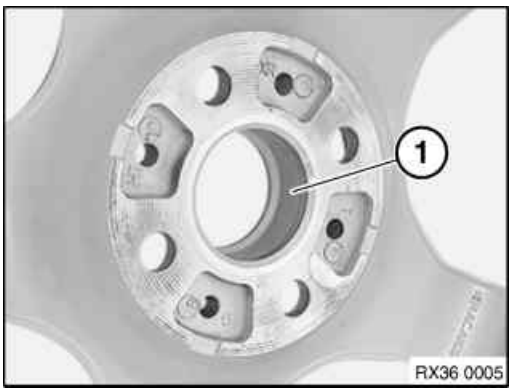


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

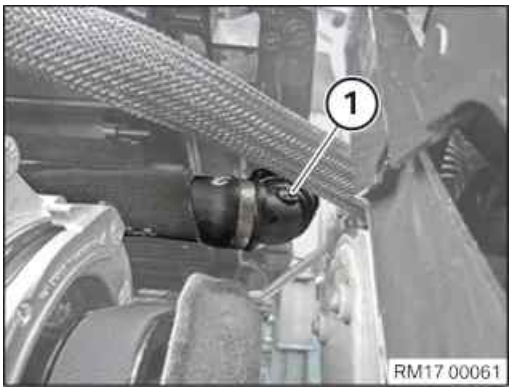
M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

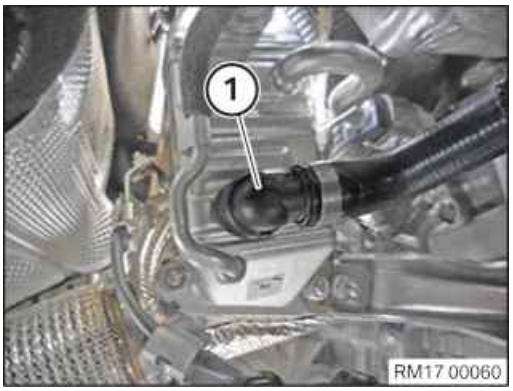
28 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

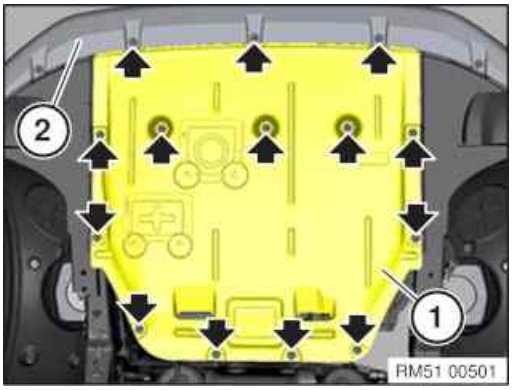


- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

29 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

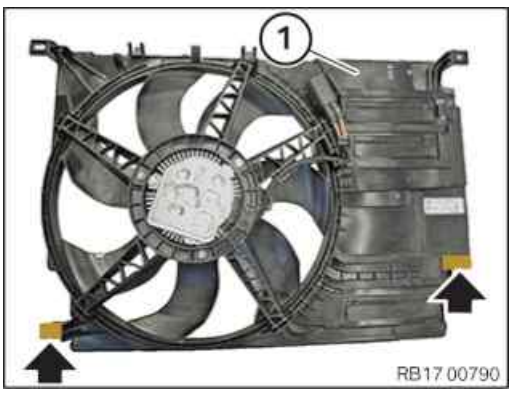
Underbody protection front

			3 Nm

30 – Installing fan cowl with electric fan

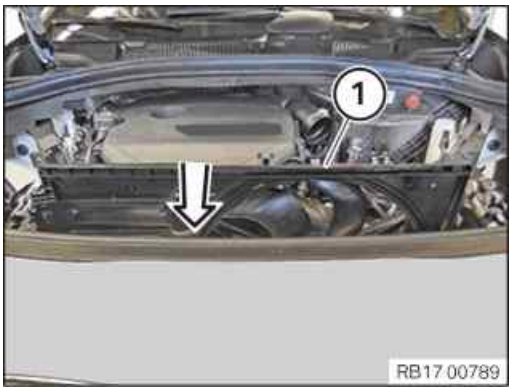
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



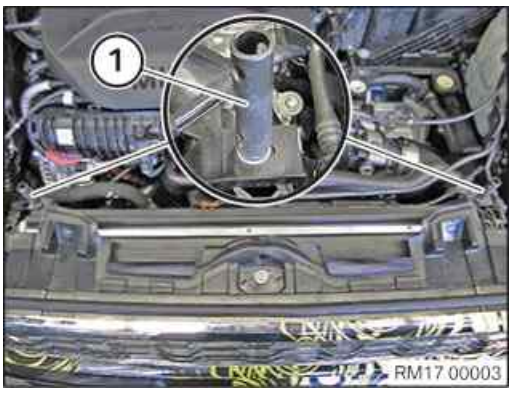
- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.

cardiagn.com



- Feed in and install the fan cowl (1) in the direction of the arrow.

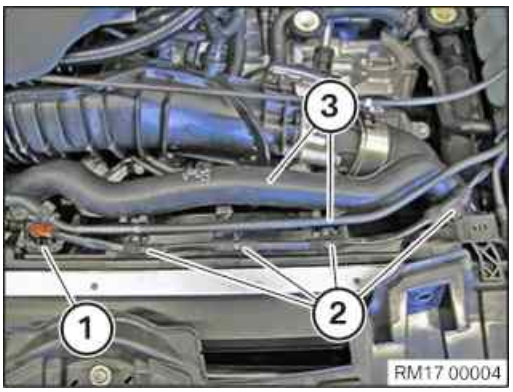
- Lock the left and right locks (arrows).



- Tighten the screws (1).

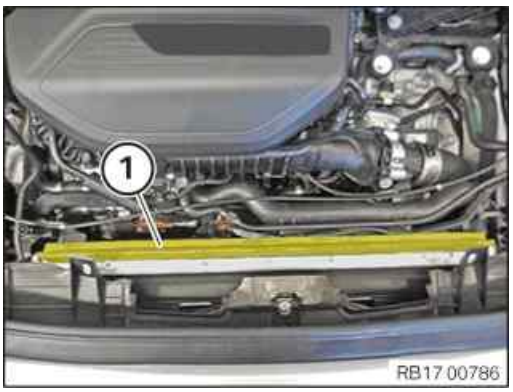
Fan cowl on radiator

M6X12		Tightening torque	6 Nm



- Connect connectors (1) and lock.

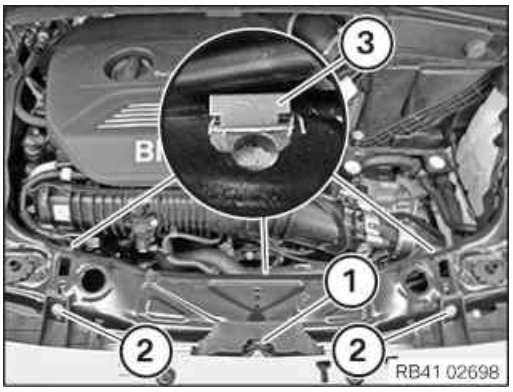
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).



- Guide the sealing (1) on the radiator in and install it.

31 – Install cross connection

cardiagn.com



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

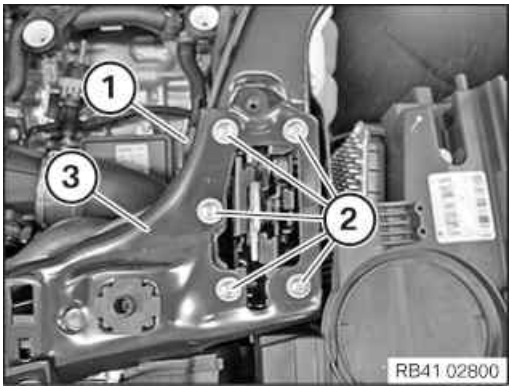
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

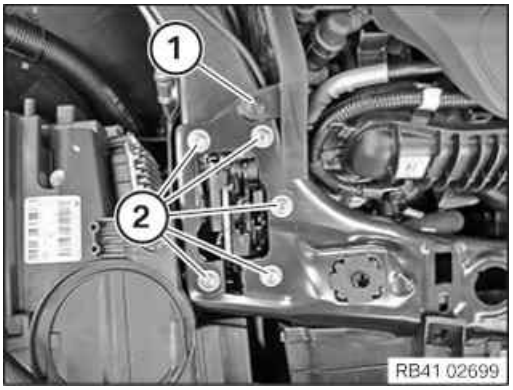


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



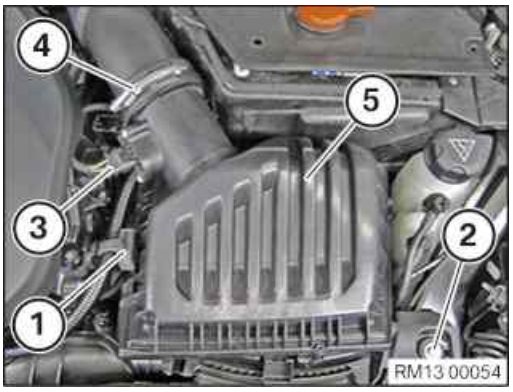
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

32 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

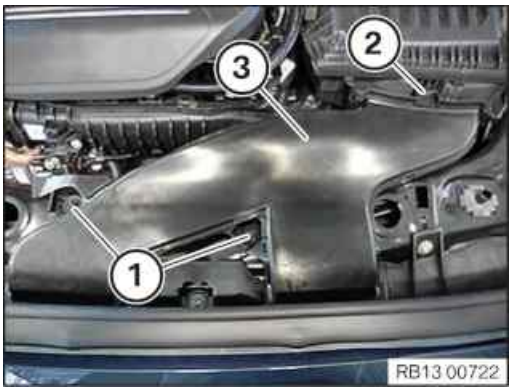
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

33 – Install the intake neck for the intake filter housing

cardiagn.com



- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

34 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

35 – Check engine oil level

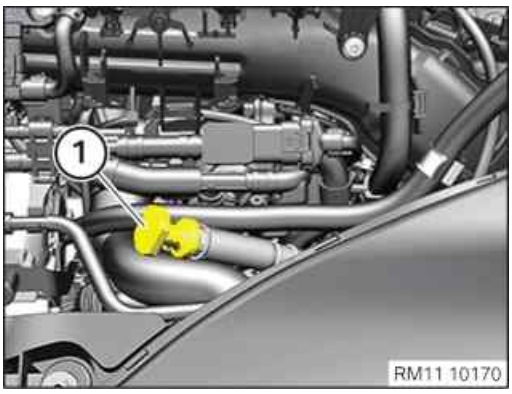
- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

cardiagn.com

▸ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

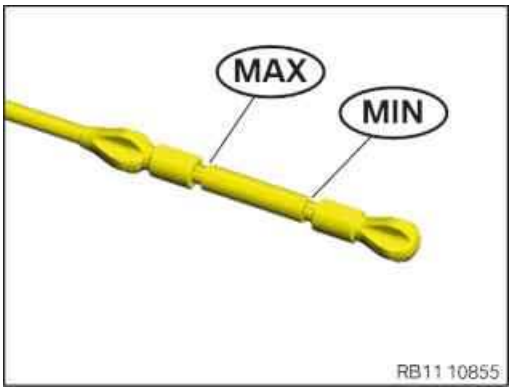


- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.



TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

36 – Disconnecting all battery earth leads

- See additional information.

37 – Fill and bleed the coolant circuit

▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

Operating materials	Used in step
2.0 Grease for wheel centring	27

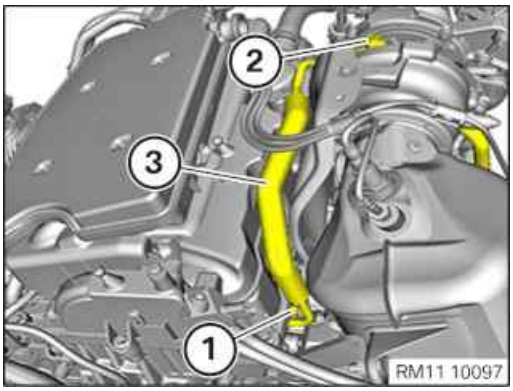
cardiagn.com

11 42 200 Removing and installing/replacing oil feed line (B37C)

Necessary preliminary tasks:

- Remove clean air pipe.
- Remove exhaust-gas recirculation cooler

Removal:

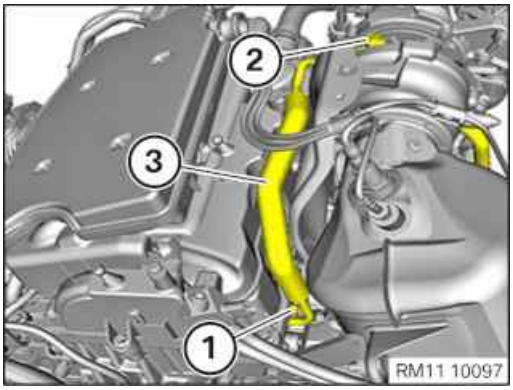


Release screw (1).

Unfasten banjo bolt (2).

Remove the oil feed line (3).

Installation:



Install oil feed line (3).

Tighten banjo bolt (2).

Tightening torque 11 42 5AZ.

Parts: Replace sealing rings.

Tighten screw (1).

Part: Replace O-ring.

Tightening torque 11 42 2AZ.

Required follow-up work:

- Install exhaust-gas recirculation cooler.
- Install clean air pipe.

cardiagn.com

11 42 210 Removing and installing/replacing oil return line (B37C)

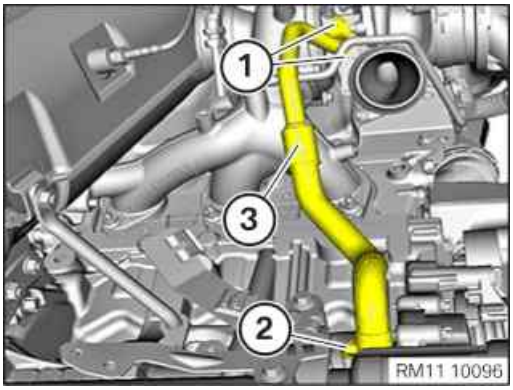
Necessary preliminary tasks:

- Remove front underbody protection
- Remove clean air pipe

Removal:

Release screws (1).
Remove heat shield (2).

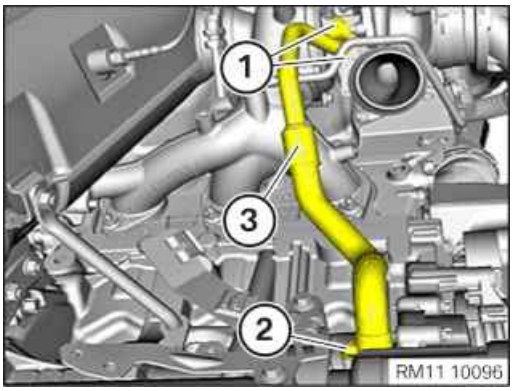
Release screw (1).
Release screw (2).
Remove heat shield (3).



Release screws (1).
Release screw (2).
Remove oil return line (3).

cardiagn.com

Installation:



Position oil return line (3).
Tighten down screws (1).
Part: Replace O-ring.
Tightening torque 11 42 4AZ.
Tighten screw (2).
Part: Replace O-ring.
Tightening torque 11 42 3AZ.

Install heat shield (3).
Tighten screw (1).
Tighten screw (2).

Install heat shield (2).
Tighten down screws (1).

Required follow-up work:

- Install front underbody protection
- Install clean air pipe

cardiagn.com

11 42 020 Removing and installing/replacing the full-flow oil filter (B37C)

Special tools required:

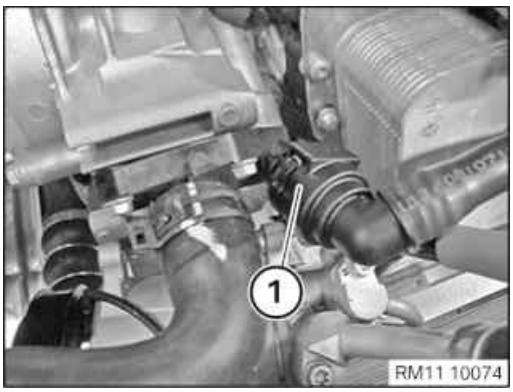
- 11 4 470
- 11 6 480

Necessary preliminary tasks:

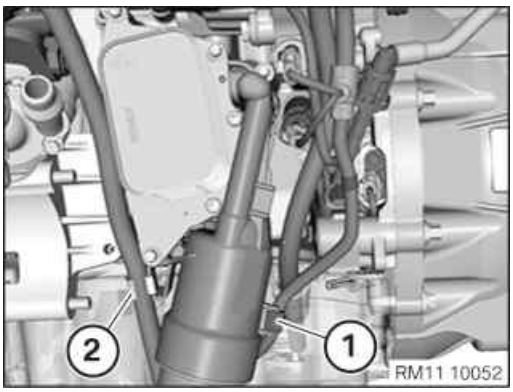
- Disconnect battery negative lead.
- Drain off oil.
- Remove fan cowl.
- Remove underbody protection
- Drain coolant.
- Release A/C compressor and place to one side.

Removal:

Unlock and detach coolant hose (1).

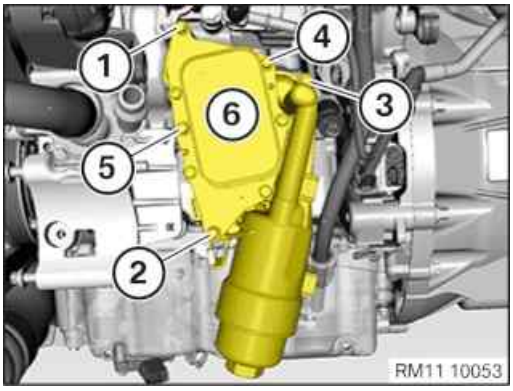


Unlock and detach coolant hose (1).



Unclip wiring harness (1).
Unclip positive wire (2).

cardiagn.com



Release screws in the sequence **5 - 1**.

Remove full-flow oil filter (6).

Installation:

Important!

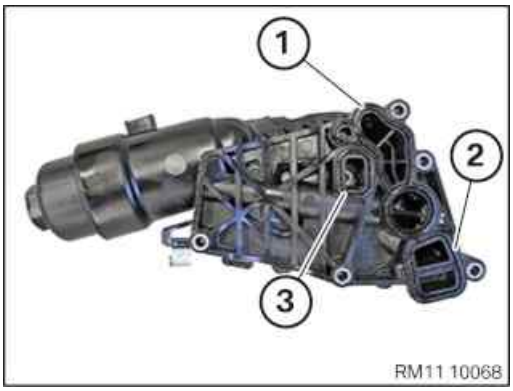
Clean away gasket residues from the crankcase and full-flow oil filter with the special tool 11 4 470 .

Do not use any metal-cutting tools (e.g. emery cloth).

No particles/foreign material may enter the media openings.

Foreign particles in the oil cause damage to the connecting rod bearing/engine.

Crank engine with special tool11 6 480 until engine oil exits from the oil channels in the area of the full-flow oil filter.

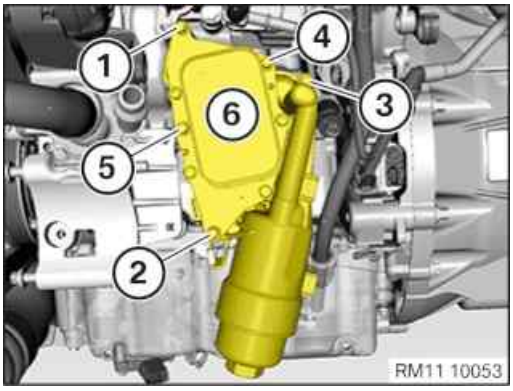


Note:
All sealing surfaces and gaskets must be cleaned and free of oil.

Replace gaskets (1, 2 and 3).

When replacing, remount oil-to-water heat exchanger.

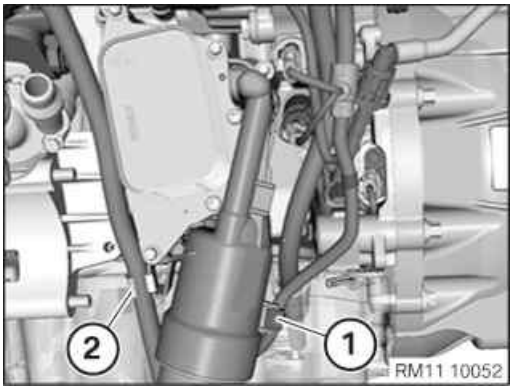
cardiagn.com



Position full-flow oil filter (6).

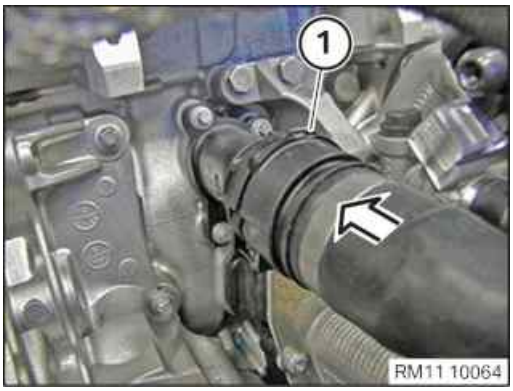
Tighten screws in the sequence **1 - 5**.

Tightening torque: 11 42 7AZ.



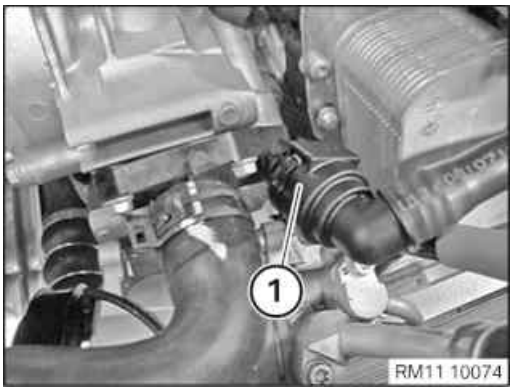
Clip in wiring harness (1).

Clip in positive wire (2).



Connect coolant hose (1).

Lock must snap audibly into place.



Connect coolant hose (1).

Lock must snap audibly into place.

cardiagn.com

Required follow-up work:

- Secure air conditioning compressor.
- Install fan cowl.
- Install underbody protection.
- Top up coolant.
- Top up oil.
- Connect battery earth lead.

cardiagn.com

11 42 200 Removing and installing/sealing or replacing oil feed line for exhaust turbocharger

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.

For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

TECHNICAL INFORMATION

Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger

TECHNICAL INFORMATION

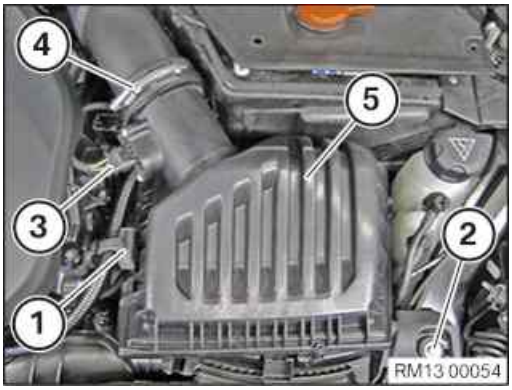
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Maintain conditions of absolute cleanliness.

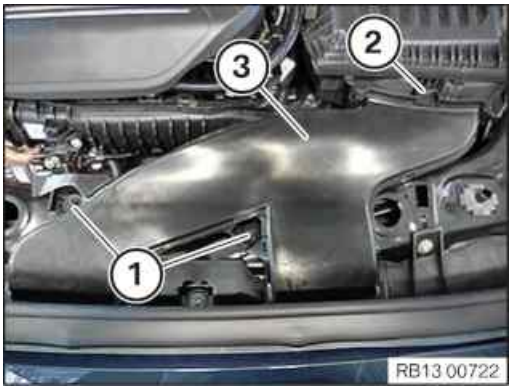
cardiagn.com

1 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

2 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

3 – Remove vehicle battery

WARNING

Working on 12 V vehicle electrical system.

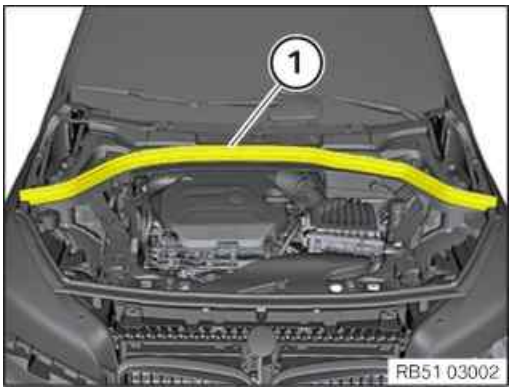
Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

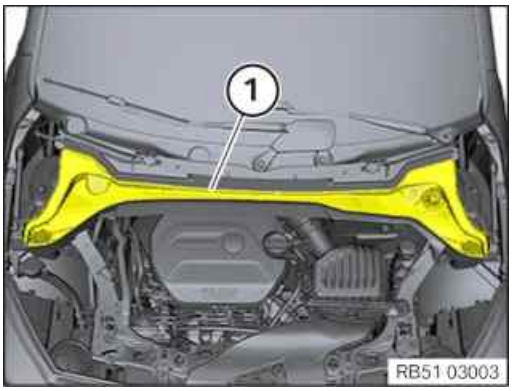
TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

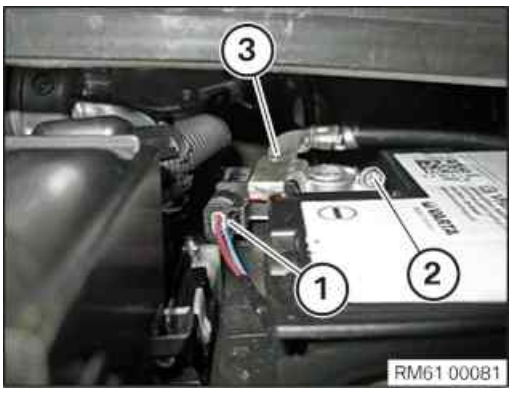
cardiagn.com



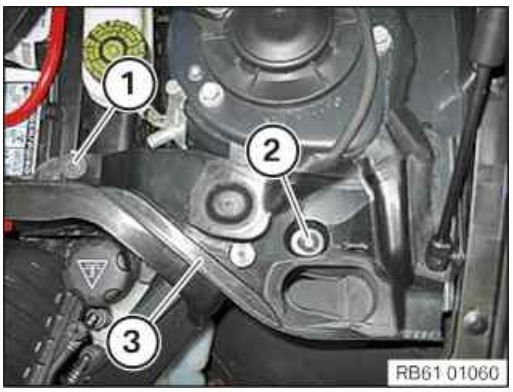
- pull off gasket (1) upwards.



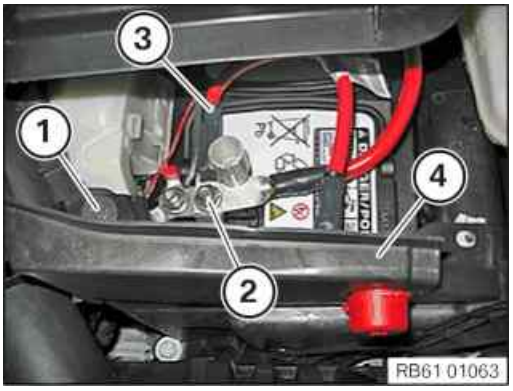
- Remove the cowl panel cover (1) to the top.



- Unlock and disconnect connector (1).
- Slacken nut (2).
- Disconnect the negative battery terminal (3).

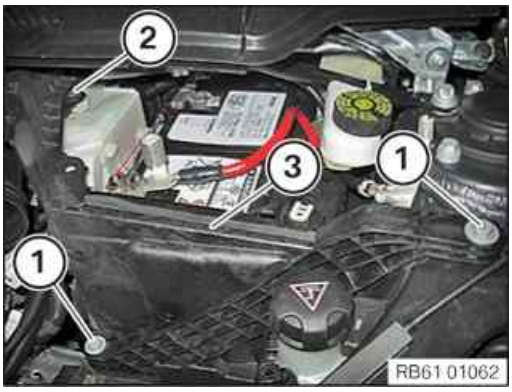


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

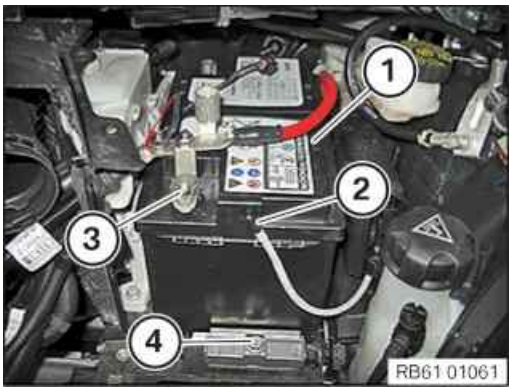


- Loosen screw (1).
- Unscrew the nut (2) and remove the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten nuts (2) on the positive terminal hand-tight.

cardiagn.com



- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.



- Pull off the vent hose (2).
- Slacken the nut (3) on the positive terminal and remove the positive terminal.

WARNING

Unprotected battery terminals.

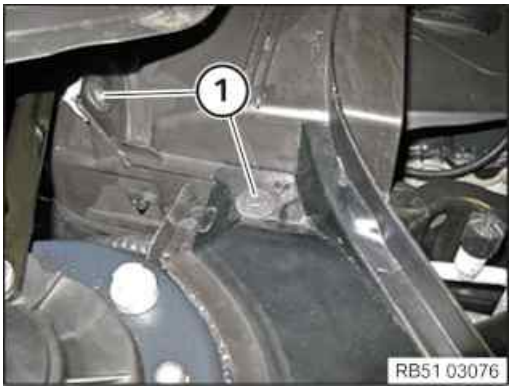
Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

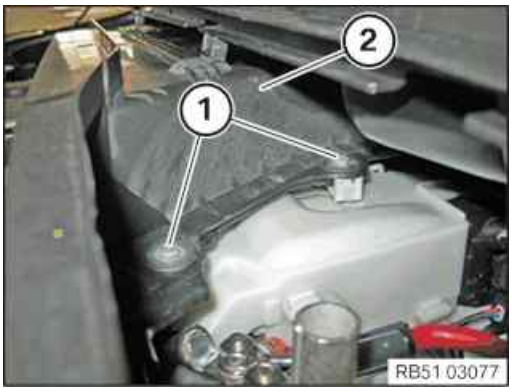
4 – Removing the upper bulkhead cover

- Loosen screws (1).



- Loosen screws (1).

cardiagn.com



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

5 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

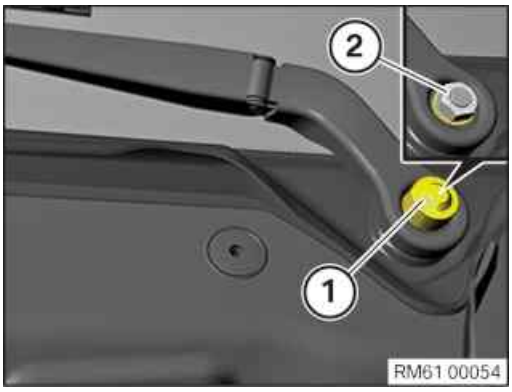
▶ **Remove the wiper arm**

RISK OF DAMAGE

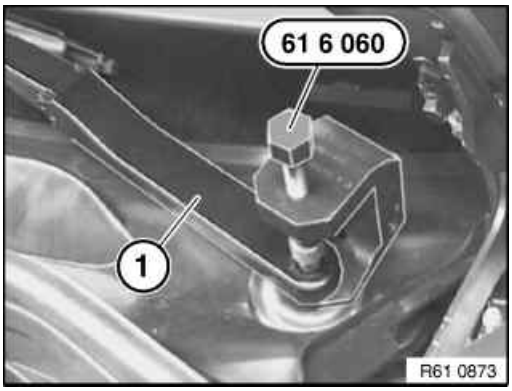
Damage to wiper console

While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.



- Remove the protective cap (1).
- Loosen nut (2).



- Pull off the wiper arm (1) using special tool .

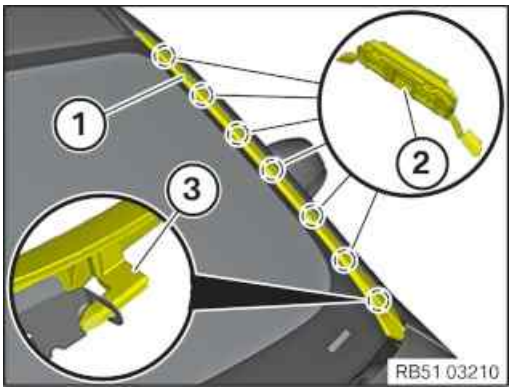
6 – Remove the gutter strip on the windscreen on the left and right

cardiagn.com

NOTICE

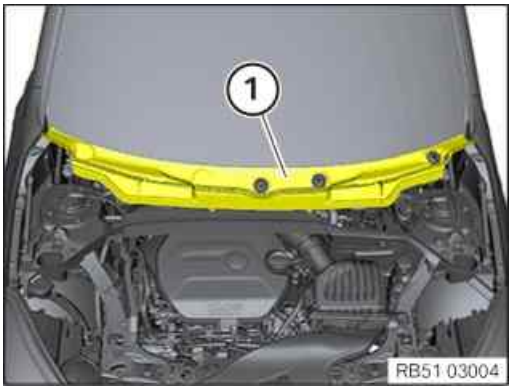
Description is for left component only. Procedure on the right side is identical.

▶ **Remove the gutter strip on the windscreen**



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

7 – Remove the rear cowl panel cover



- Disengage and guide out the rear cowl panel cover (1) towards the top.

8 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

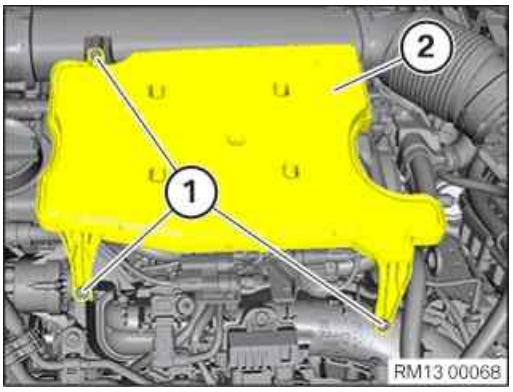
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

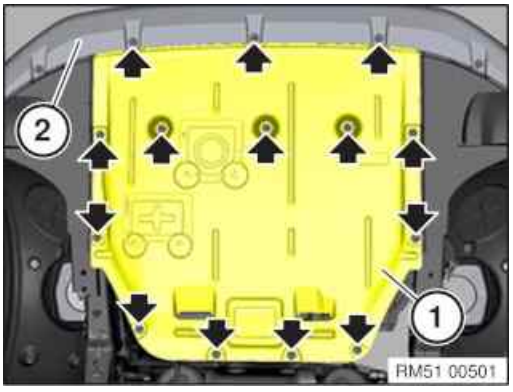
- Unclip the acoustic cover from the marked areas towards the top.

9 – Remove resonator



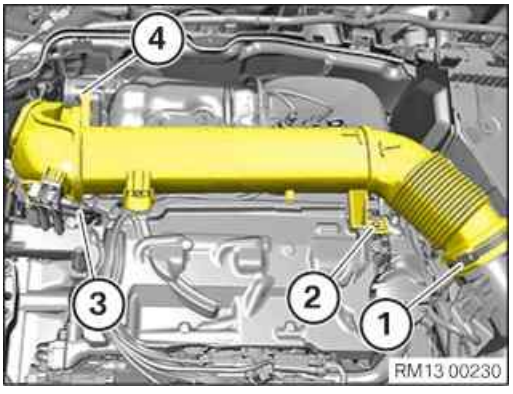
- Loosen screws (1).
- Guide out and remove the resonator (2).

10 – Removing the front underbody protection



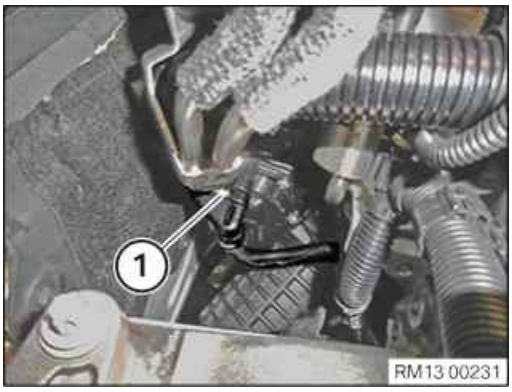
- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

11 – Removing clean air pipe

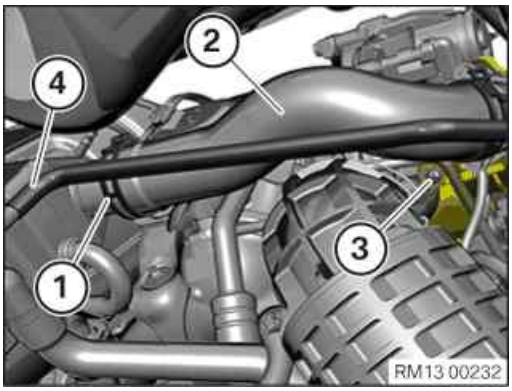


- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).

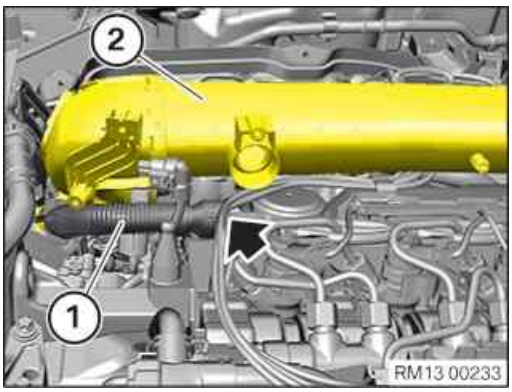
cardiagn.com



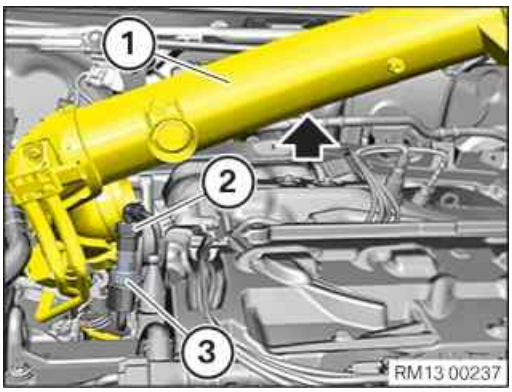
- Unlock and loosen connector (1).



- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

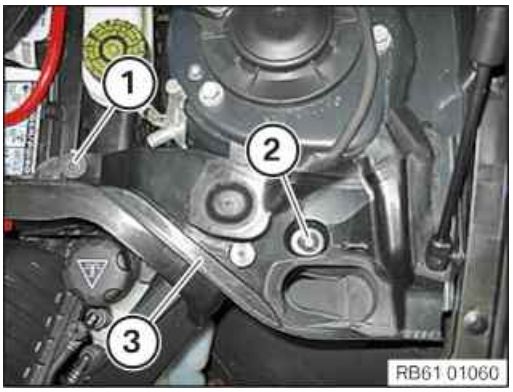
- Do not pull on the wires when disconnecting connectors and plug connections.

TECHNICAL INFORMATION

Follow instructions for removing and installing control units.
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

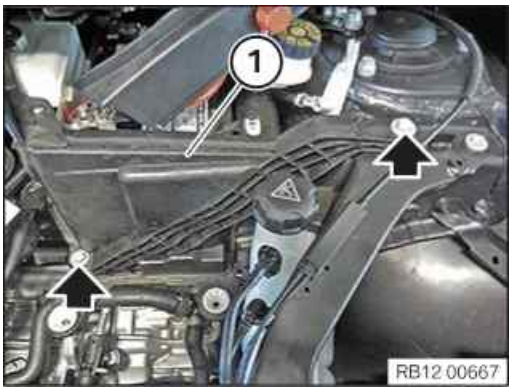
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



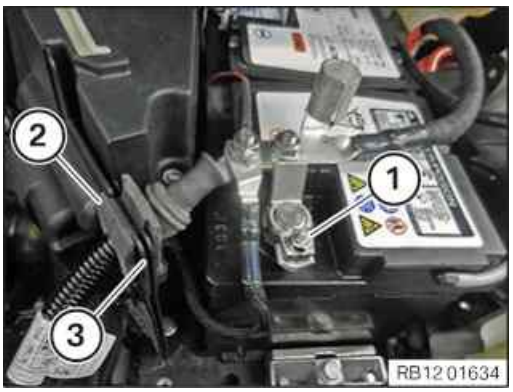
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

cardiagn.com

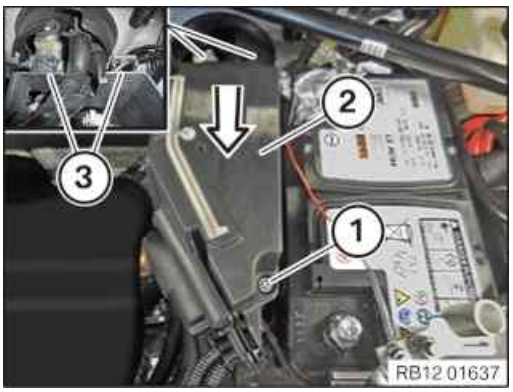
- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.



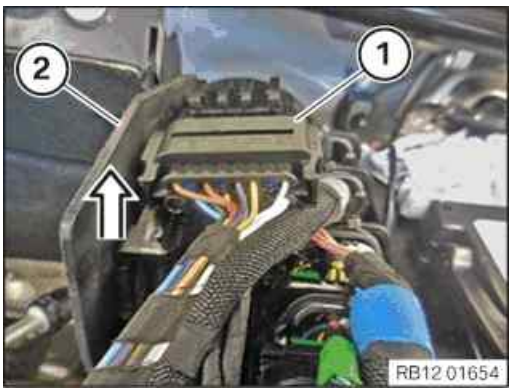
- Remove screws (arrows).
- Guide out tension strut (1) and remove.



- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

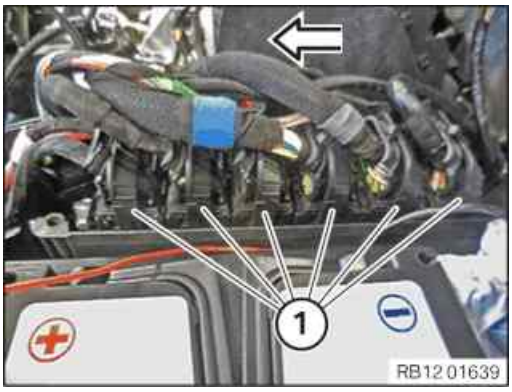


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

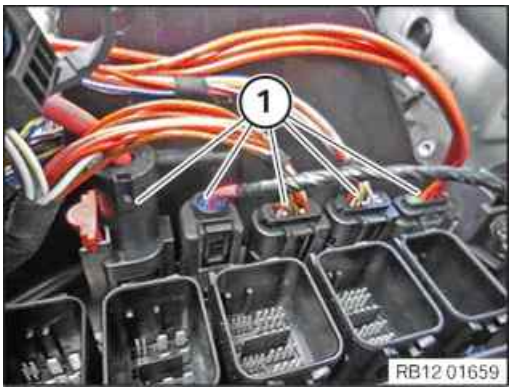


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

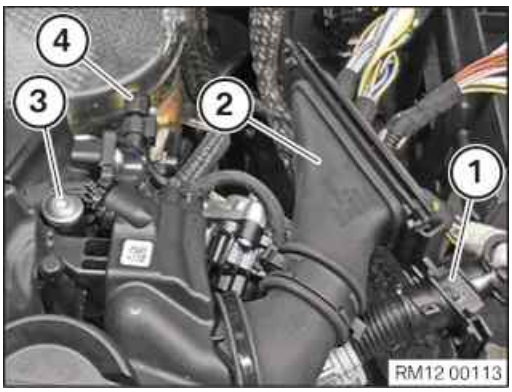
cardiagn.com



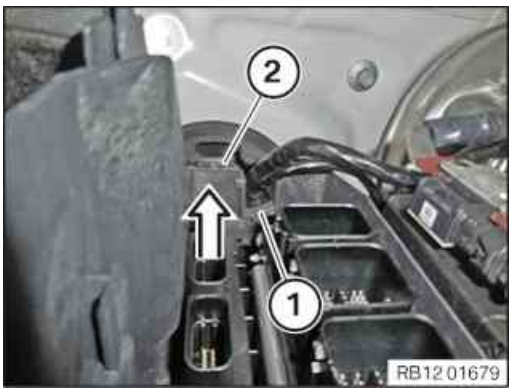
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



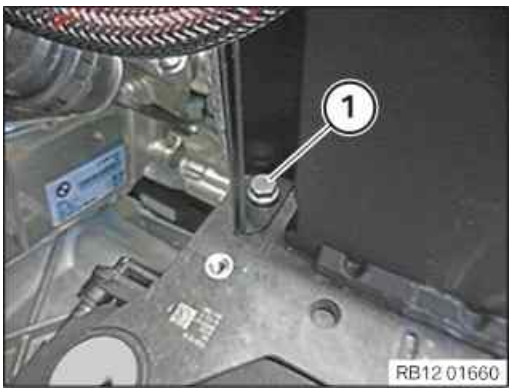
- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

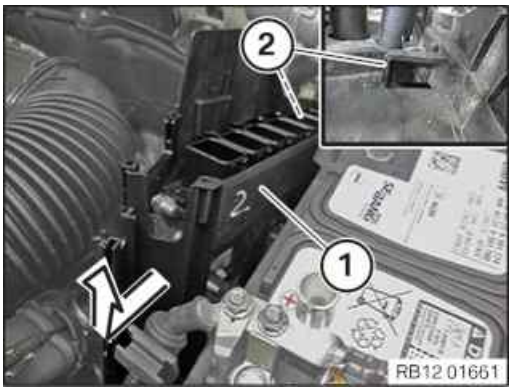


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



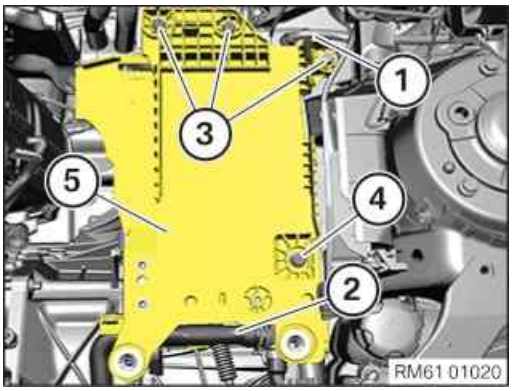
- Loosen screw (1).

cardiagn.com



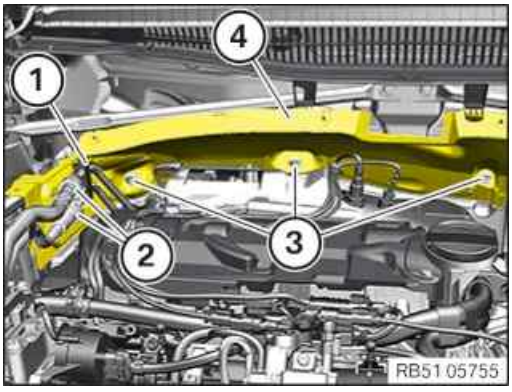
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

13 – Remove battery holder



- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

14 – Remove the rear bulkhead upper part



- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

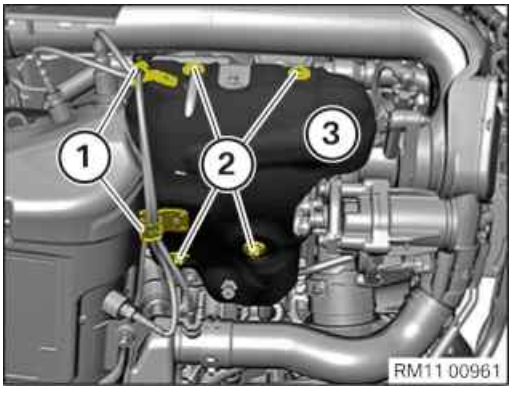
15 – Removing heat shield from top exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

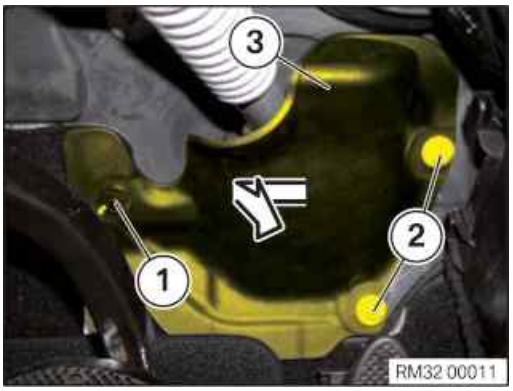
- Perform all work only on components that have cooled down.



- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).

cardiagn.com

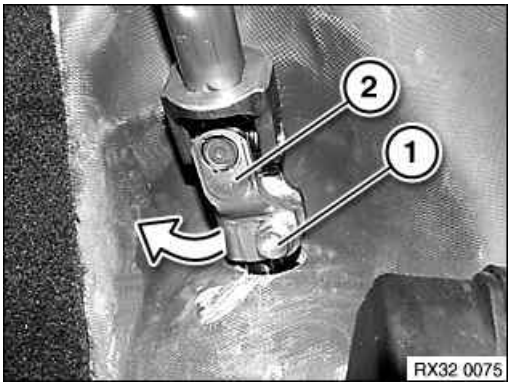
16 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

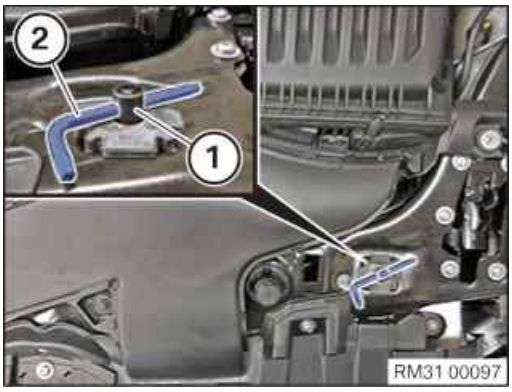
  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!



- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

17 – Securing radiator on left and right



NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

18 – Remove the front left and right wheel

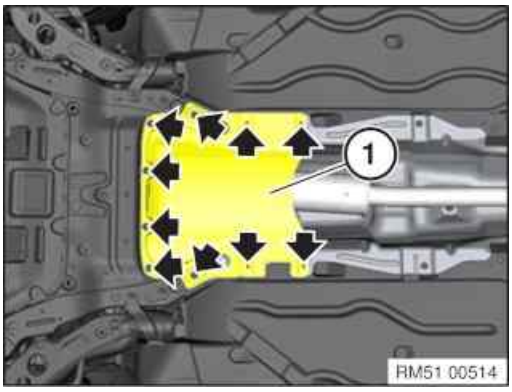
▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

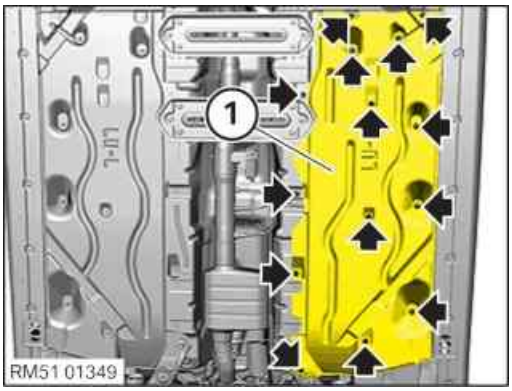
19 – If installed: Removing rear underbody protection

cardiagn.com



- Remove screws (arrows).
- Remove the rear underbody protection (1).

20 – Removing right underbody panelling



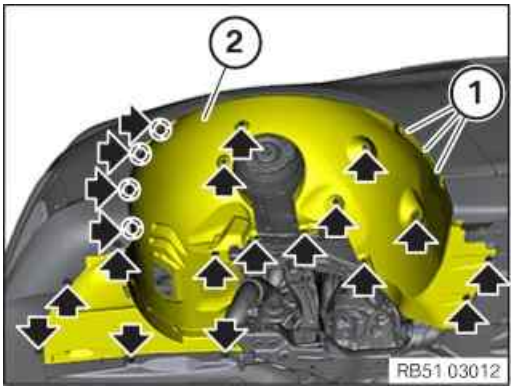
- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

21 – Removing front left and right wheel arch cover

NOTICE

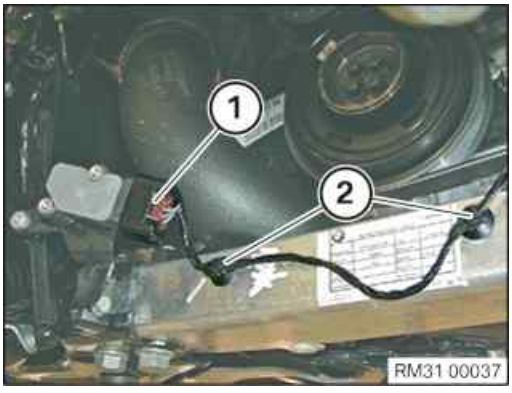
Perform the operations on the left and right side.

▸ **Remove front wheel arch cover**



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed out front wheel arch cover (2).

22 – With right installation: Detaching ride height sensor cable



- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

23 – Releasing anti-roll bar on left and right from anti-roll bar link

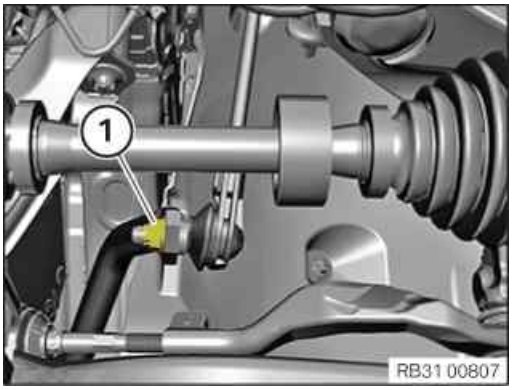
cardiagn.com

23 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**

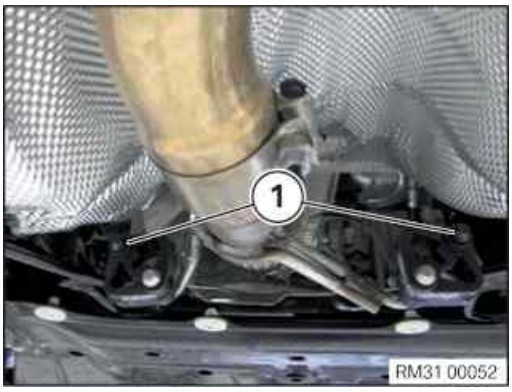


- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

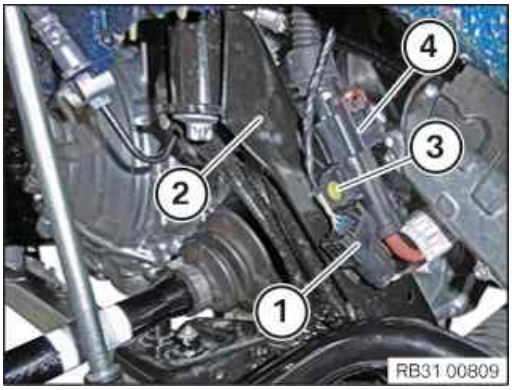
24 – Detaching rubber mount from front axle support



- Spray rubber mount (1) with lubricant and release from holder on front axle support.

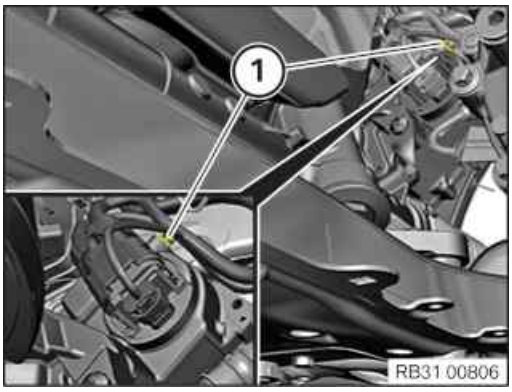
25 – Disconnecting plug connections from steering gear

▶ **If installed: Detach connectors from the front axle carrier**



- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).

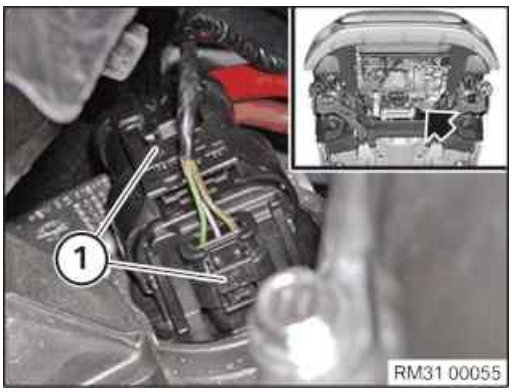
cardiagn.com



- Disconnect wiring harness (1) from steering gear.

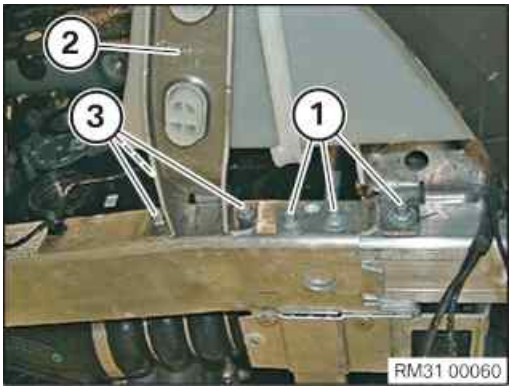
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.



- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

26 – Releasing the mounted part from the front axle support

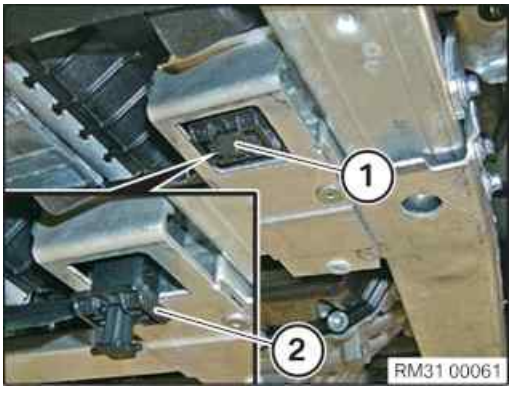


- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

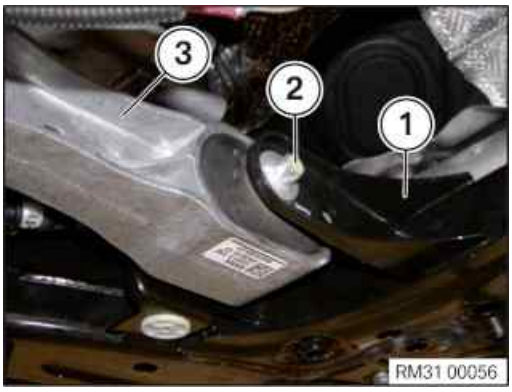


NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

cardiagn.com



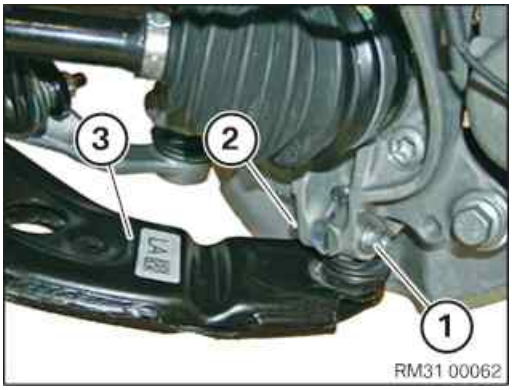
- Loosen screw (2) of the engine support (3) on the front axle (1).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

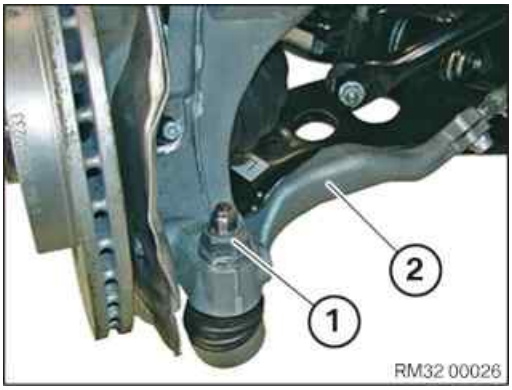
27 – Detaching and removing front axle completely



NOTICE

Perform the operations on the left and right side.

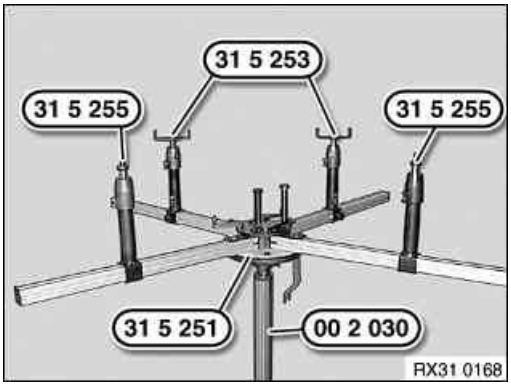
- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .



NOTICE

Perform the operations on the left and right side.

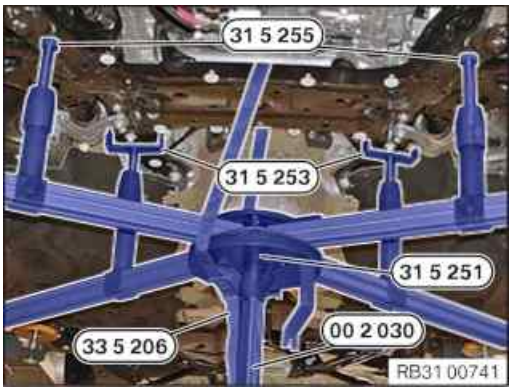
- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.



- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

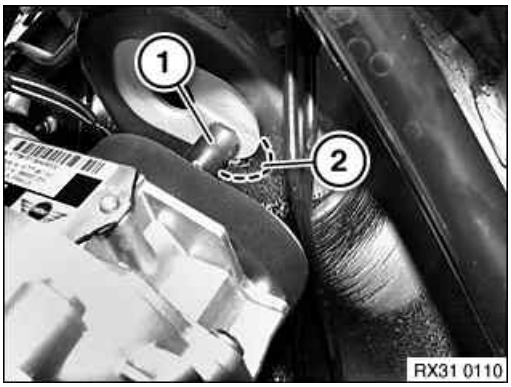
cardiagn.com



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

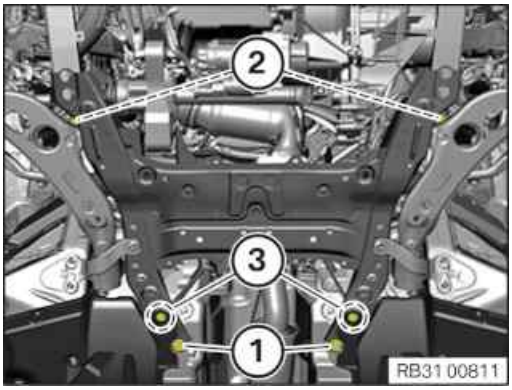


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

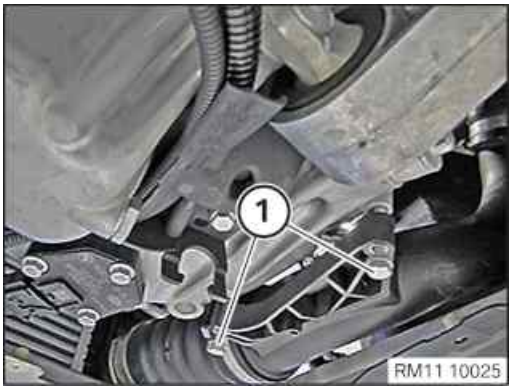
TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.

For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

28 – Remove right charge-air line

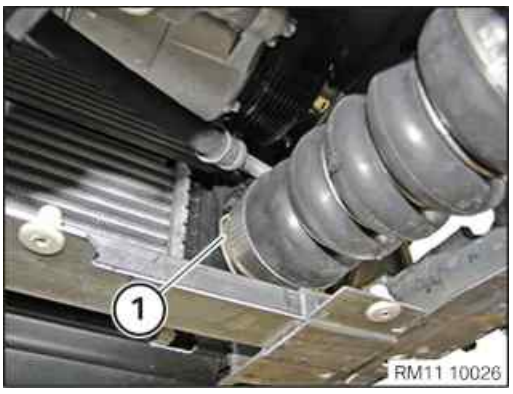


- Release charge air duct screws (1) on oil sump.

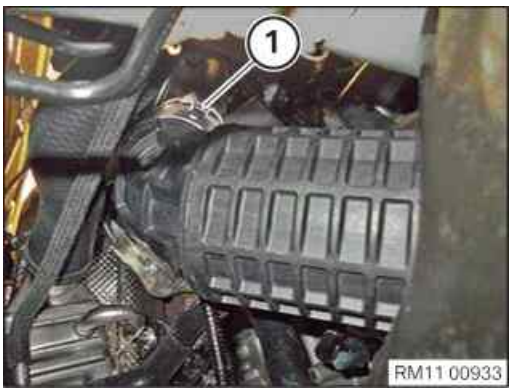
cardiagn.com

- Detach charge air duct screw connection (1) on crankcase.

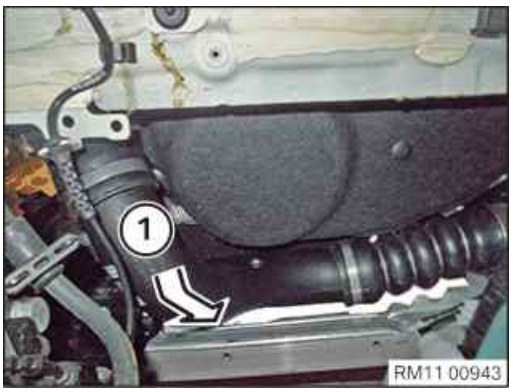
- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.



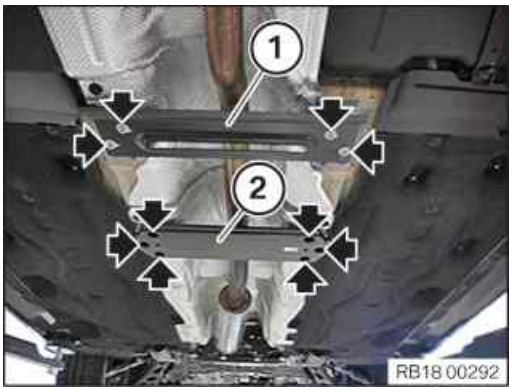
- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

29 – Removing the connecting support from the tunnel in front and back

cardiagn.com

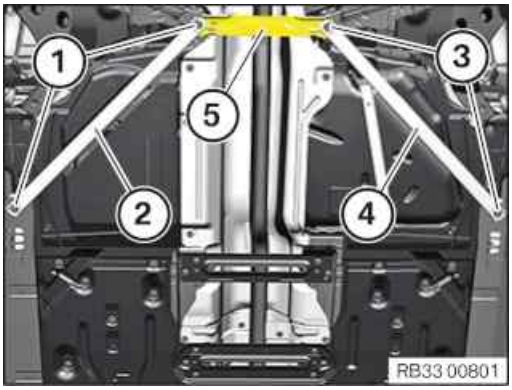


- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

30 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.



- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

31 – Remove exhaust system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

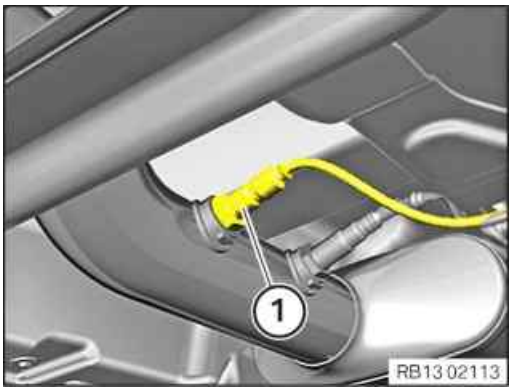
CAUTION

Heavy component.

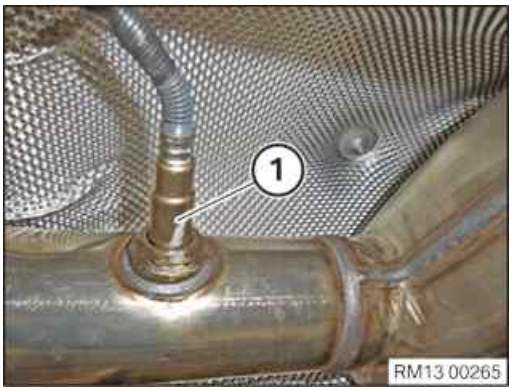
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

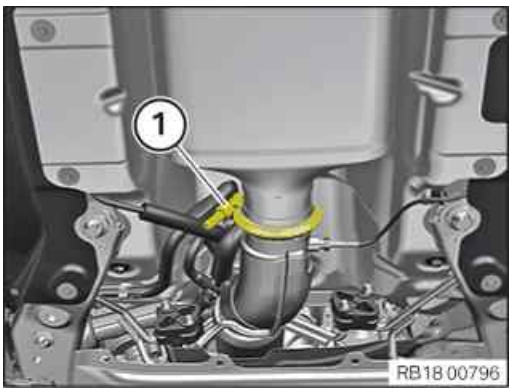
cardiagn.com



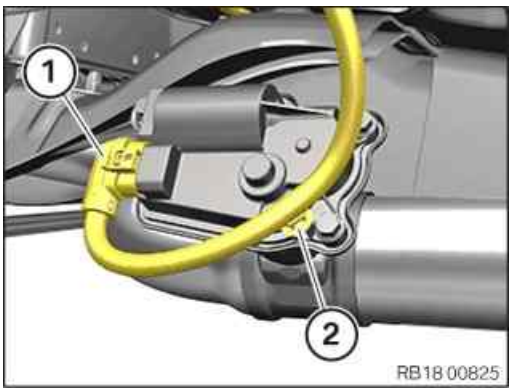
- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.



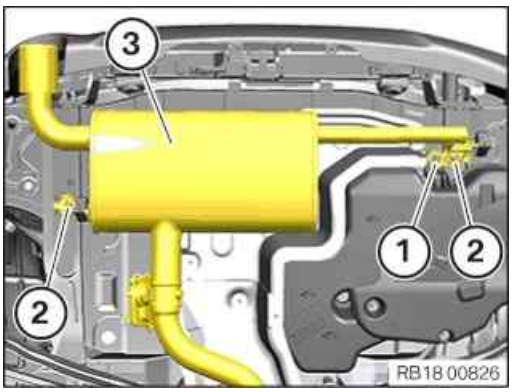
- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).



- Unlock and disconnect connector (1).
- Loosen clamp (2).



- Loosen screw (1).
- Loosen nuts (2).
- Lower the exhaust system (3) with an auxiliary person, guide out and remove.

32 – Removing starter motor

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

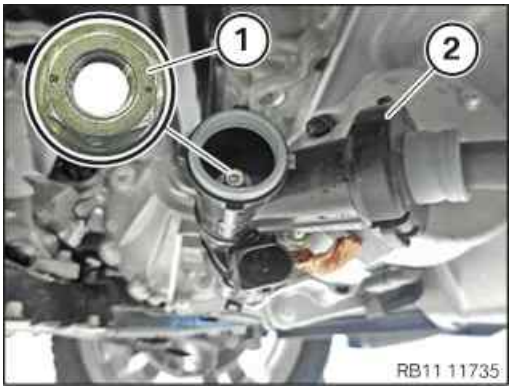
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

cardiagn.com

- Loosen screws (1).
- Feed out starter motor and remove.

33 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

Risk of burning!

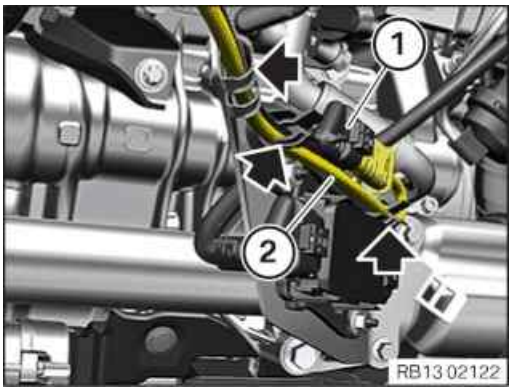
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

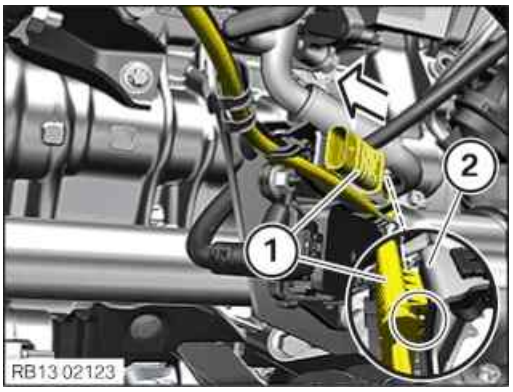
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

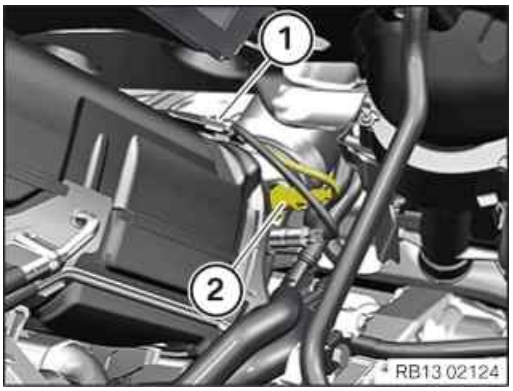


- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

cardiagn.com



- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.



- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

34 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

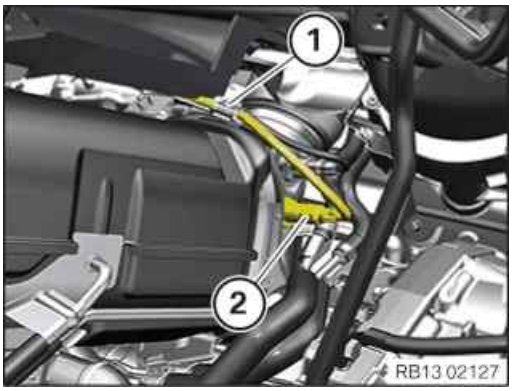
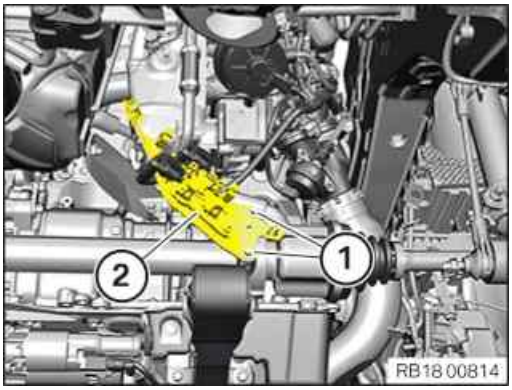
- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).



- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

35 – Remove holder for oxygen sensor



- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

36 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

41 – Removing the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

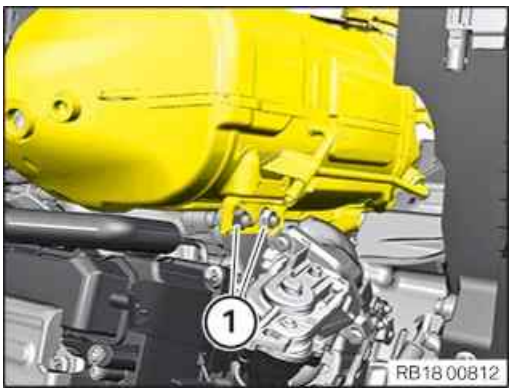
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

cardiagn.com

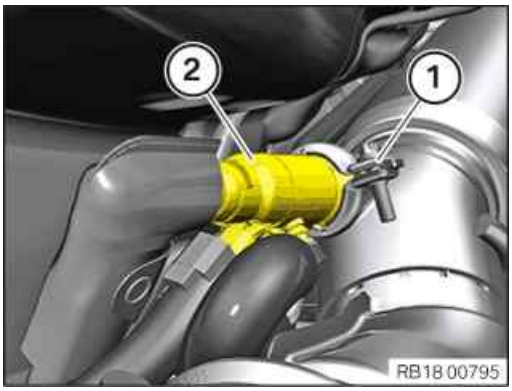
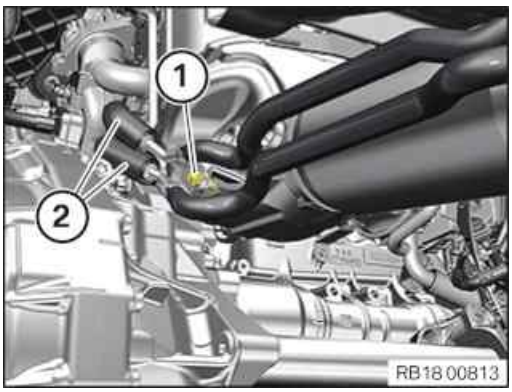
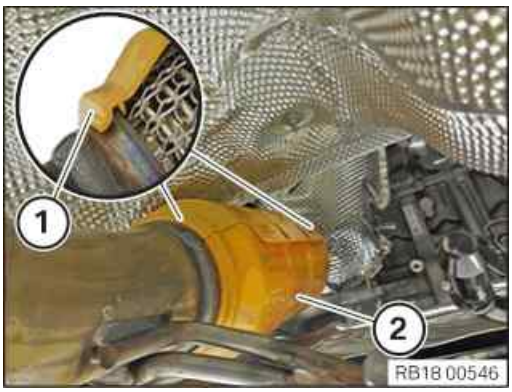
- Loosen screw (1).



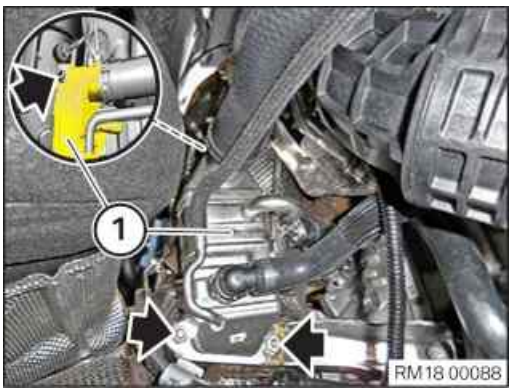
- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.



- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.



- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.



- Detach nuts (arrows) from low pressure exhaust-gas recirculation cooler (1).

cardiagn.com

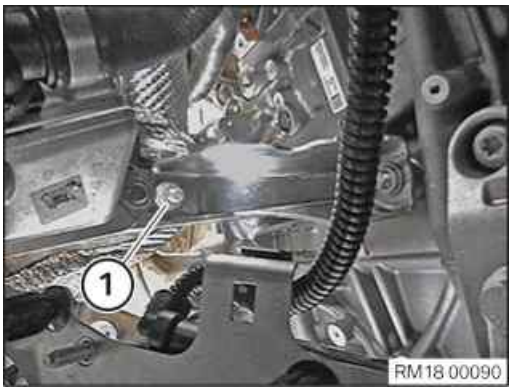
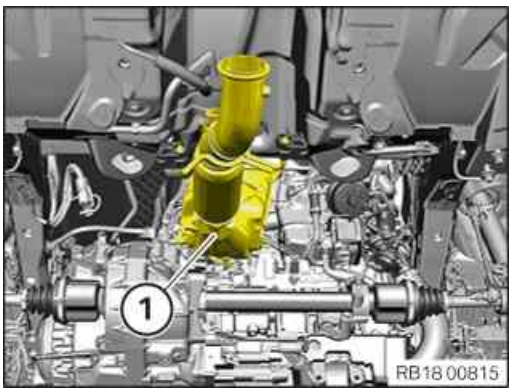
- Feed out low pressure exhaust-gas recirculation cooler (1) from diesel particulate filter (2) in direction of arrow and set aside.



- Unfasten nut (1).



- Feed out diesel particulate filter (1) toward the bottom and remove.

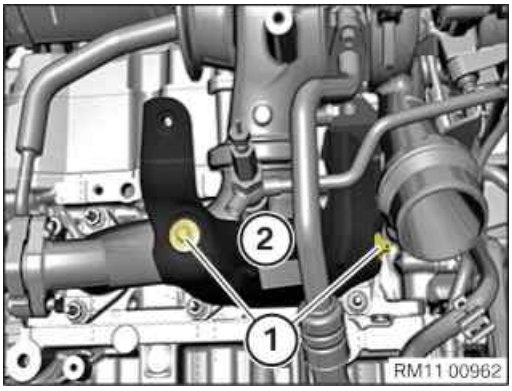
42 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

43 – Removing heat shield from rear exhaust turbocharger

cardiagn.com

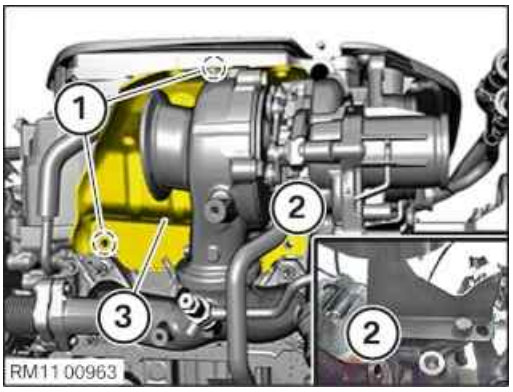
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Loosen screw (2).

  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

cardiagn.com

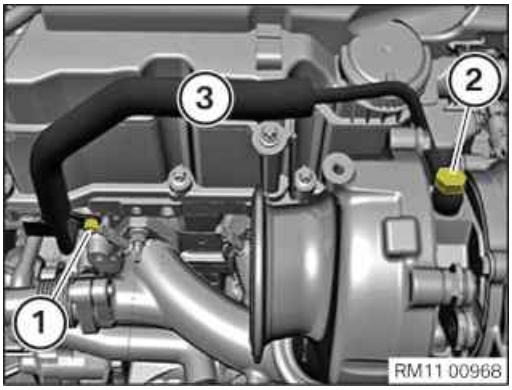
MAIN WORK

44 – Remove the oil feed line for the exhaust turbocharger

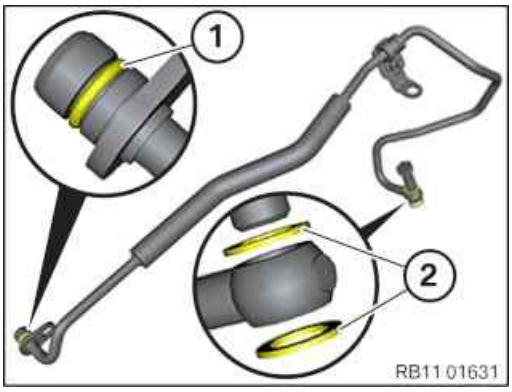
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Loosen screw (1).
- Unscrew the banjo bolt (2).
- Pull the oil feed line (3) out of the cylinder head, guide it out and remove it.

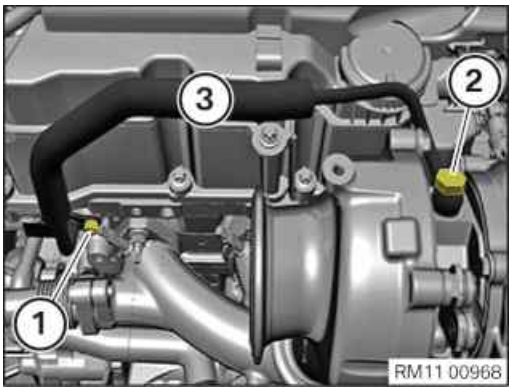
45 – Install the oil feed line for the exhaust turbocharger



- Check the O-ring (1) for damage and replace the oil feed line as needed.

  Parts: Oil feed line
- Renew the sealing rings (2).

  Parts: Sealing ring



- Feed in oil feed line (3) and position.
- Position and tighten the screw (1).

Oil feed line on cylinder head

M6x12		Tightening torque	8 Nm

- Fit and tighten the banjo bolt (2).

  The sealing rings must be positioned correctly.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

POSTPROCESSES

46 – Installing heat shield on exhaust turbocharger at the rear

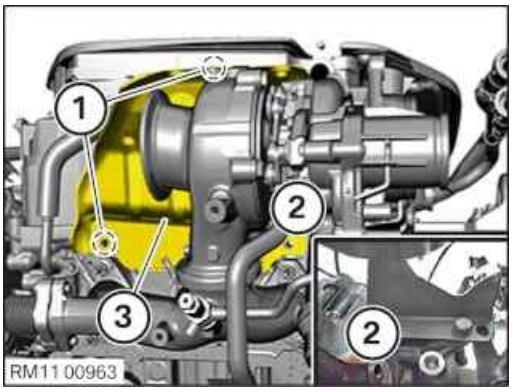
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

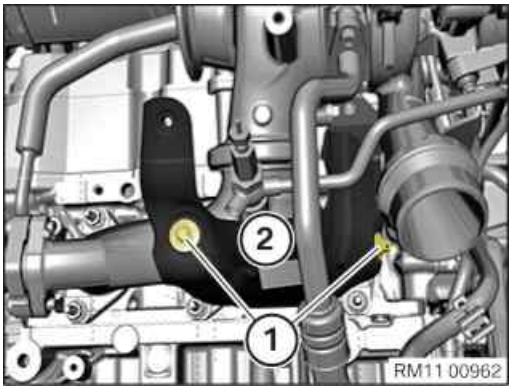
47 – Installing heat shield on exhaust turbocharger at bottom

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (2).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

48 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

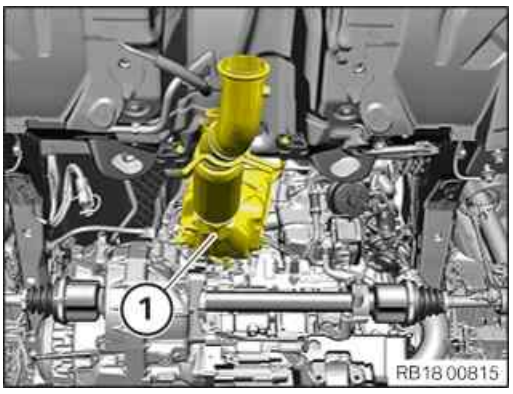
cardiagn.com

- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

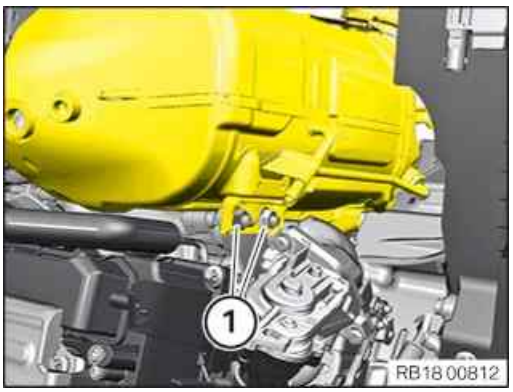
  Parts: Gasket

- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.



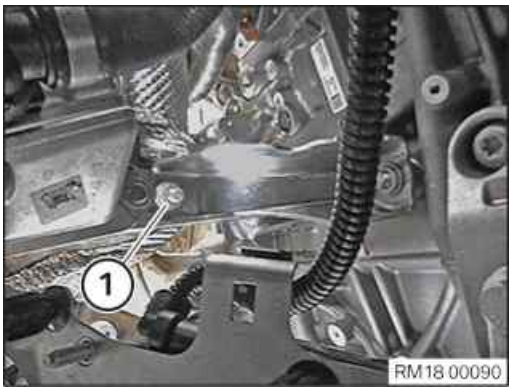
- Carefully insert and install the diesel particulate filter (1).

- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).



- Tighten nuts (1) by hand.

cardiagn.com



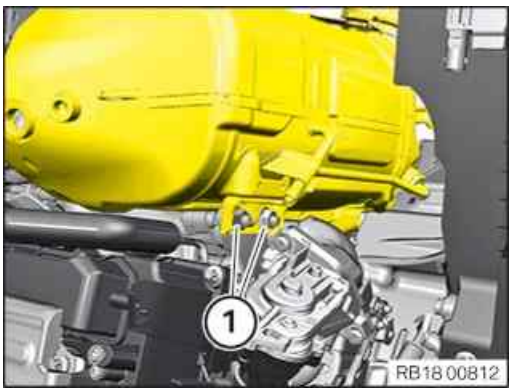
- Tighten the nut (1) hand-tight.

- Remove fitting aid (1) for the flexible tube.

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

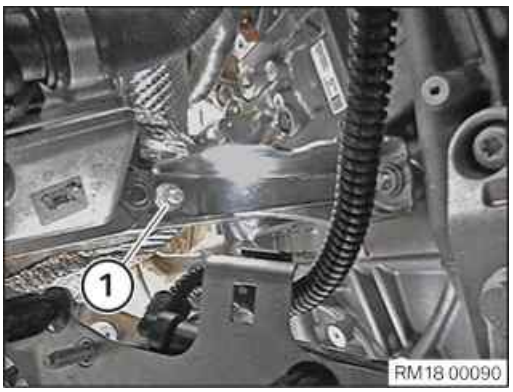
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

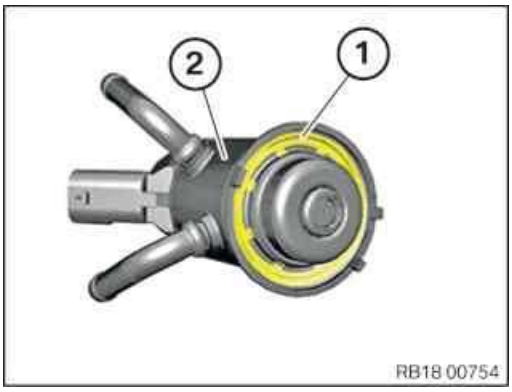


- Tighten nut (1).

Diesel particle filter to holder

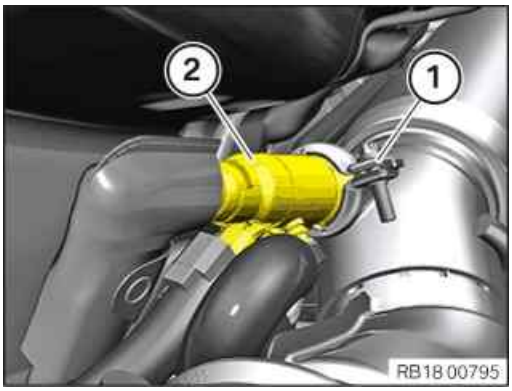
M8 hexagon nut		Tightening torque	19 Nm

cardiagn.com



- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

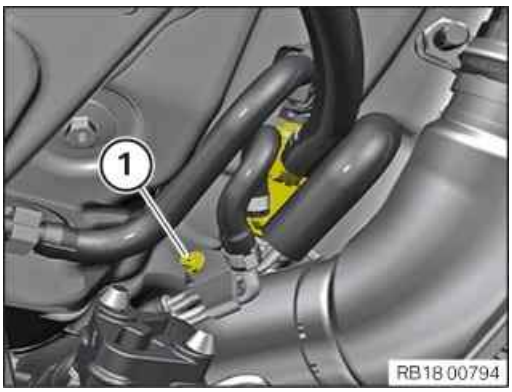


- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

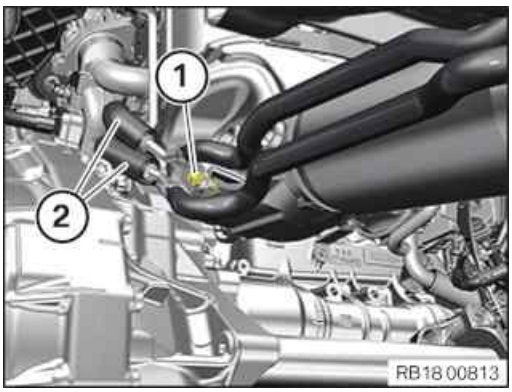
V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm



- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

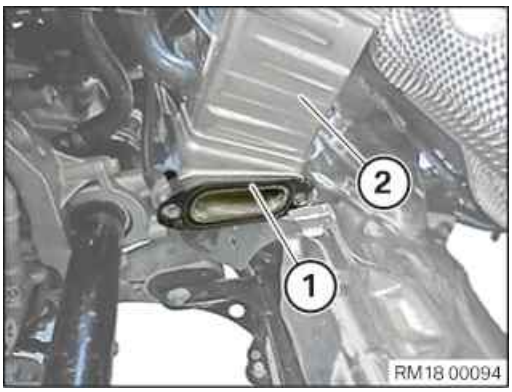
Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

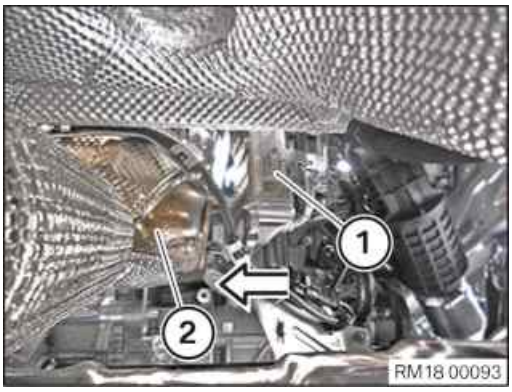
Torx bolt BM6x16		Tightening torque	8 Nm



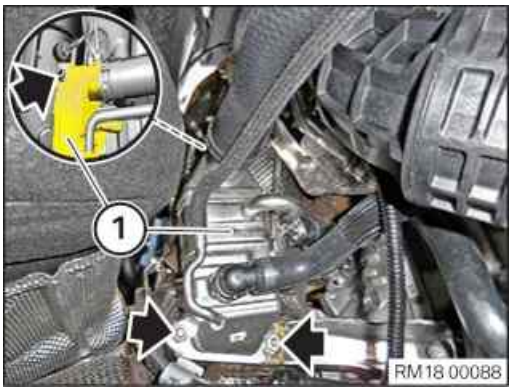
- Replace seal (1) of the low pressure exhaust-gas recirculation cooler (2).

  Parts: Gasket

cardiagn.com



- Feed in and install the low pressure exhaust-gas recirculation cooler (1) in at the diesel particulate filter (2) in the direction of arrow.

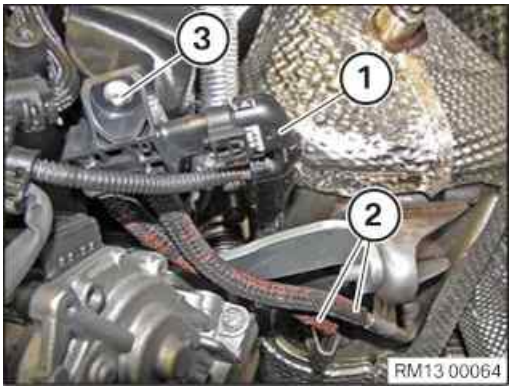


- Tighten nuts (arrows) of the low pressure exhaust-gas recirculation coolers (1).

Low-pressure exhaust-gas recirculation cooler to diesel particulate filter

Flange nutM8		Tightening torque	19 Nm

49 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

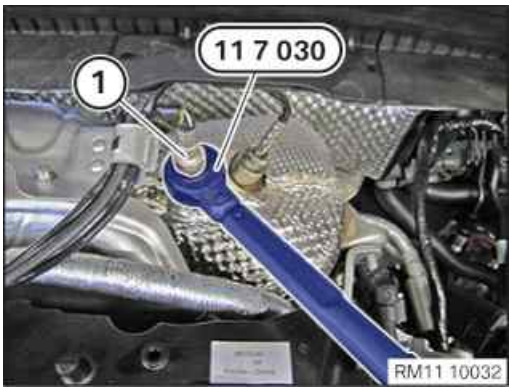
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

50 – Install the control sensor

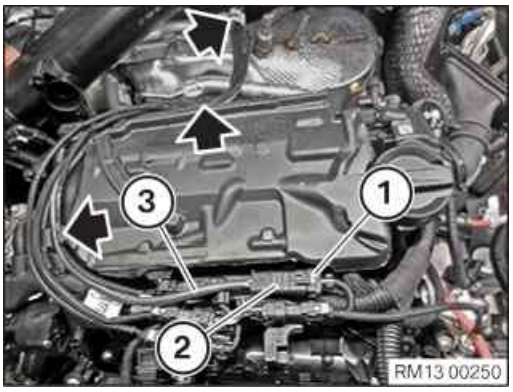


- Feed in front oxygen sensor (1) and install.
- Tighten the front oxygen sensor (1) with the special tool **0 491 075 (11 7 030)**.

Control sensor

Control sensor		Tightening torque	50 Nm

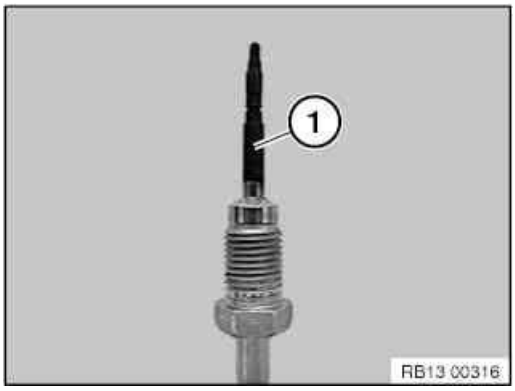
cardiagn.com



- Feed in and install cable (3) from the oxygen control sensor into the clamps (arrows).
- Secure connector (2) on holder.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

51 – Install the exhaust-gas temperature sensor on the diesel particulate filter



RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

52 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

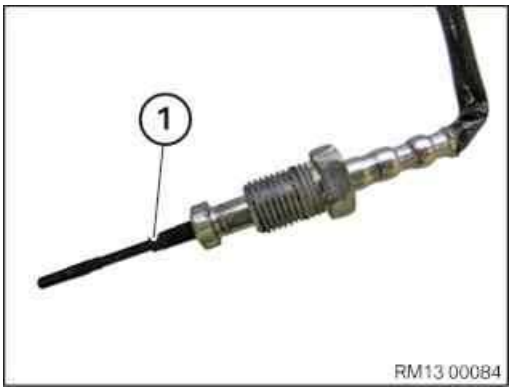
RISK OF DAMAGE

Damage of exhaust temperature sensor.

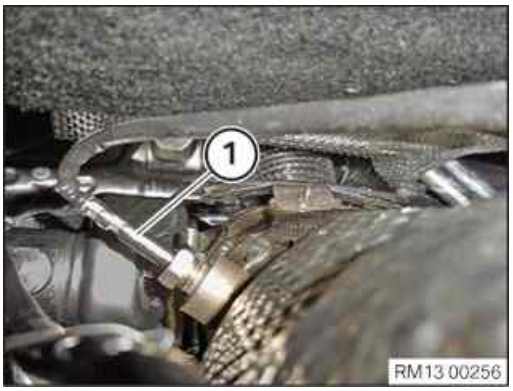
Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

cardiagn.com



- Make sure the gauge tip (1) is not damaged during installation.

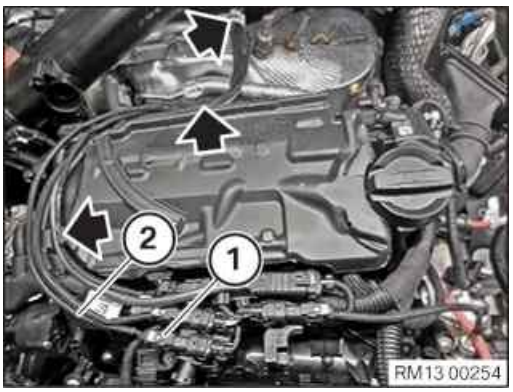


- Feed in and install the exhaust temperature sensor (1).

- Tighten the exhaust temperature sensor (1) with conventional tools (2).

Exhaust temperature sensor to diesel particulate filter

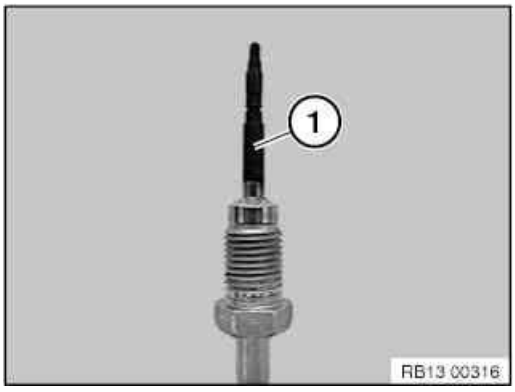
Exhaust-gas temperature sensor		Tightening torque	28 Nm



- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

53 – Installing exhaust temperature sensor on catalytic converter



RISK OF DAMAGE

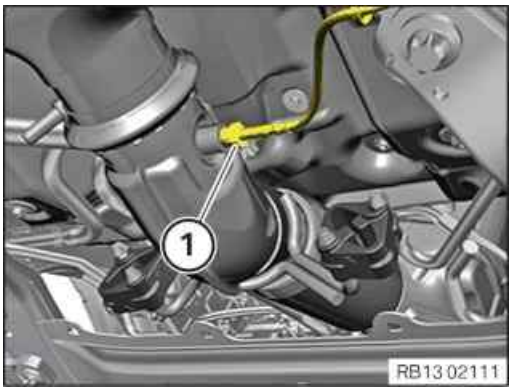
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

cardiagn.com

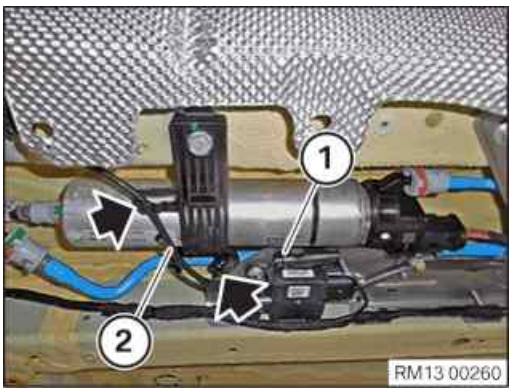


- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

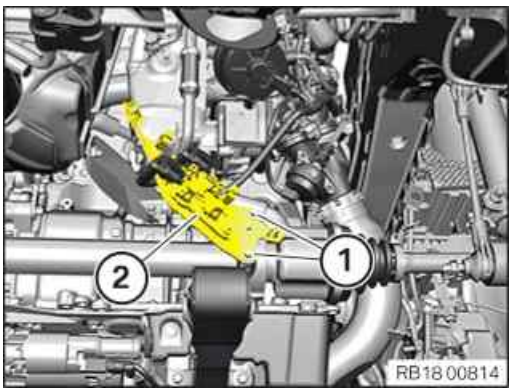
- Secure the cable clips (1).



- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

54 – Install holder for oxygen sensor

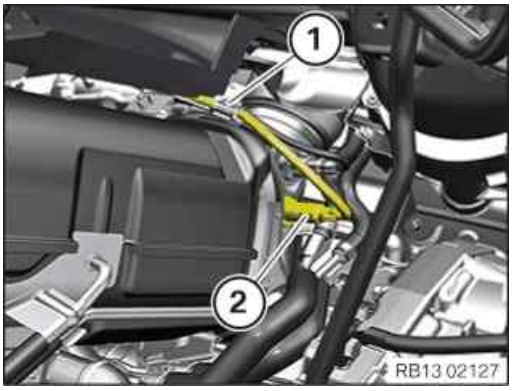


- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm

55 – Installing the nitrogen oxide sensor before SCR catalytic converter

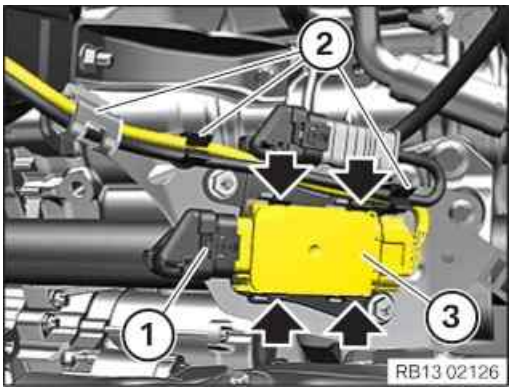


- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

Sensor		Tightening torque	50 Nm

cardiagn.com



- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

56 – Install the monitoring sensor

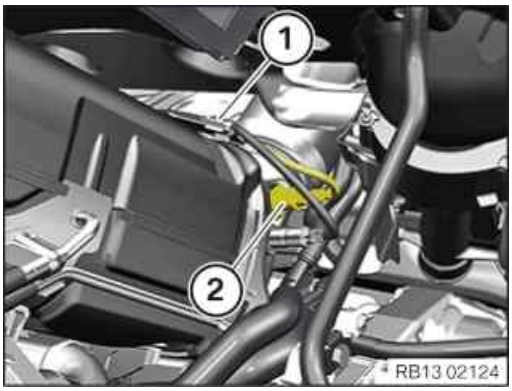
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

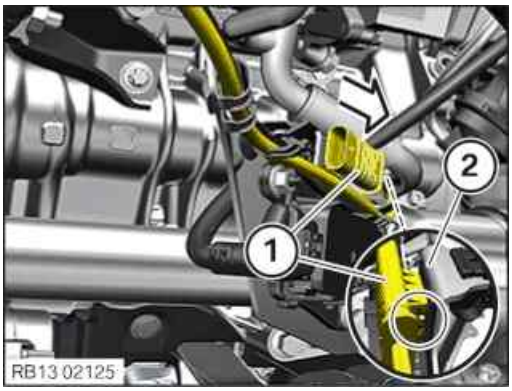


- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor

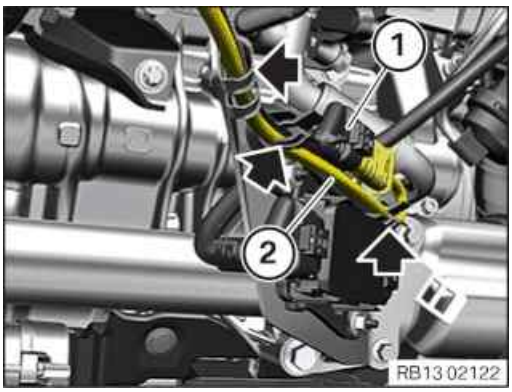
Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.



- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.



- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

57 – Installing starter motor

cardiagn.com

CAUTION

Improper routing of the positive battery cable.

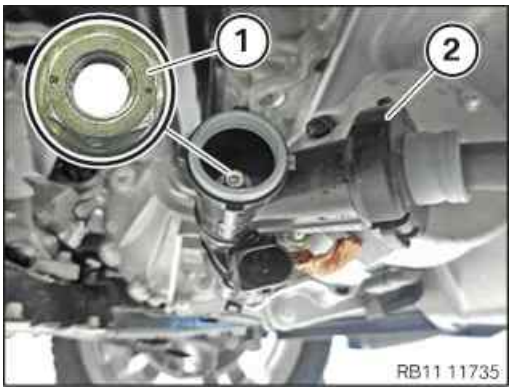
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm



- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

58 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

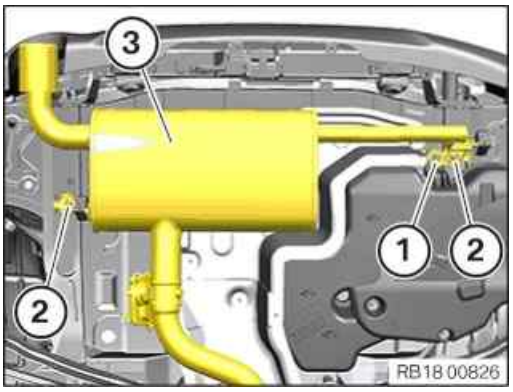
cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Insert and install the exhaust system (3) with the help of another person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

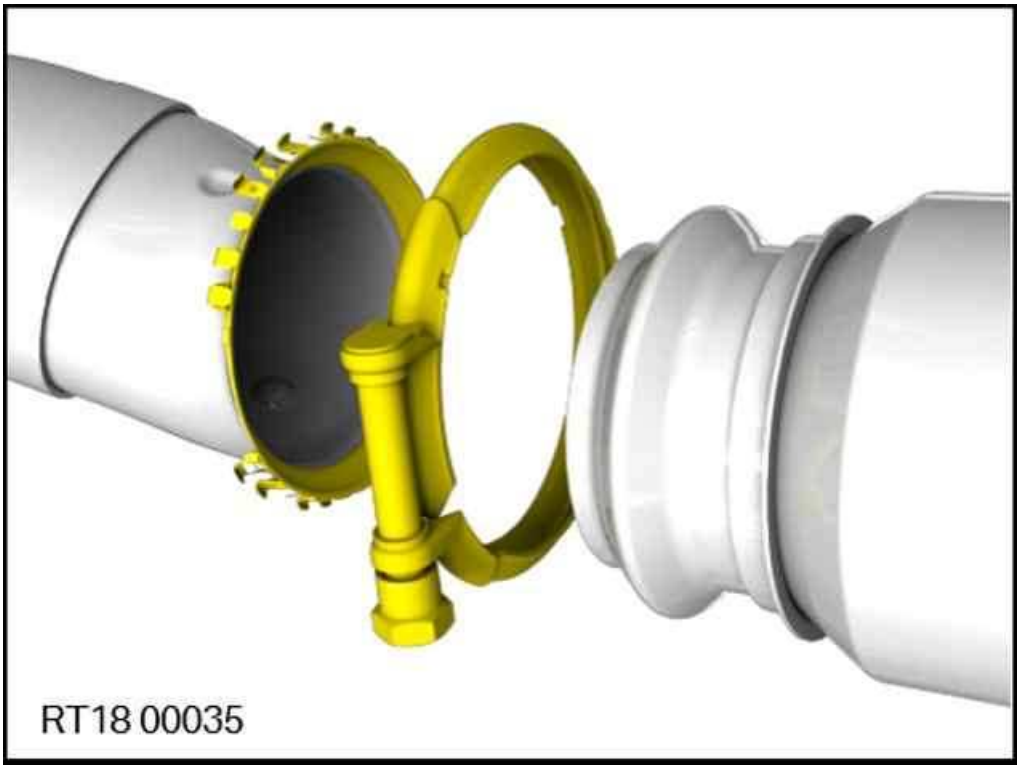
- Tighten down screw (1).

Exhaust bracket on body

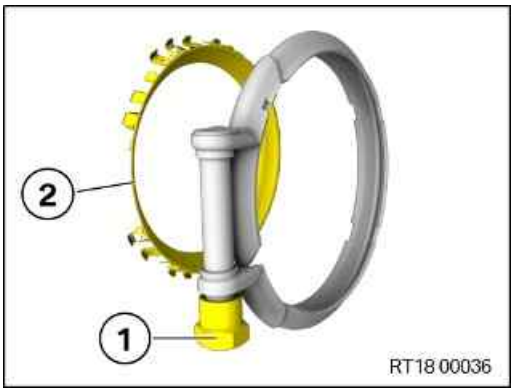
Hexagon screw M8x30		Tightening torque	19 Nm

▸ **Install the V-clip**

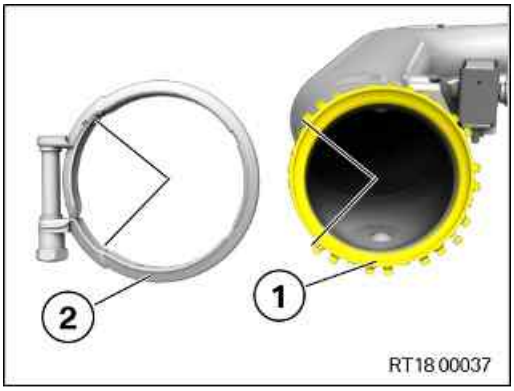
V-band clamp



cardiagn.com

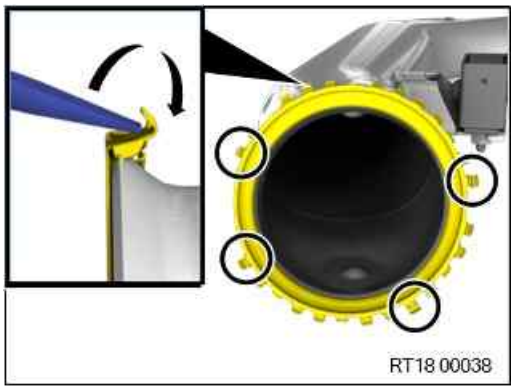


- Unscrew the nut (1) and remove the sealing ring (2).

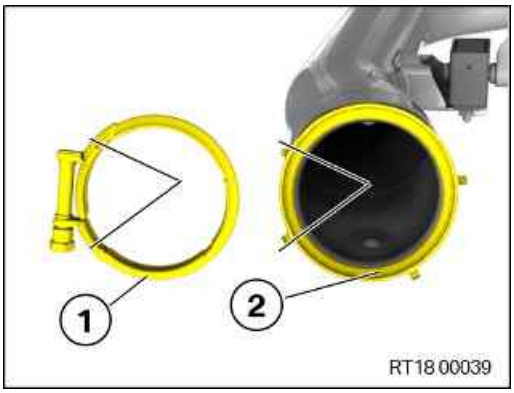


- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.



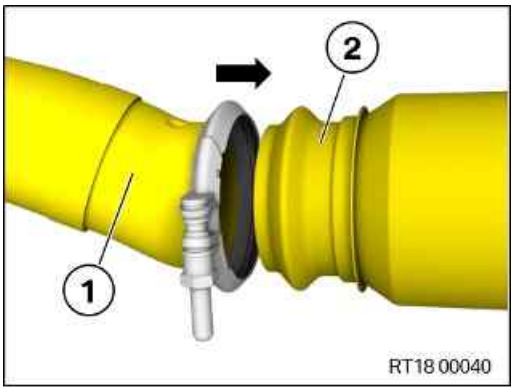
- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.



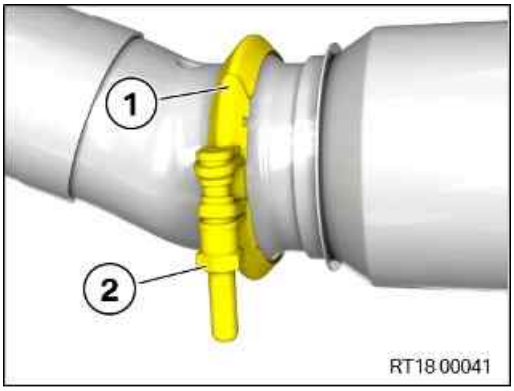
- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

cardiagn.com



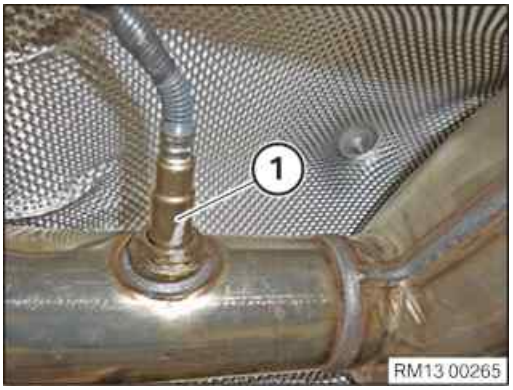
- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.



- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

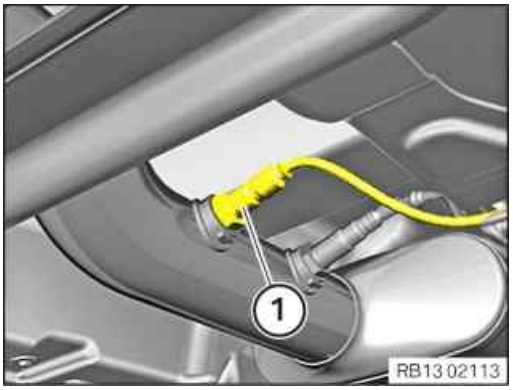
V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm



- Guide in, position and tighten the diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

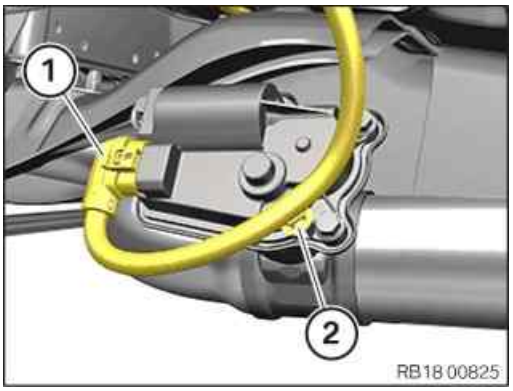
Sensor		Tightening torque	50 Nm



- Guide in, position and tighten the nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

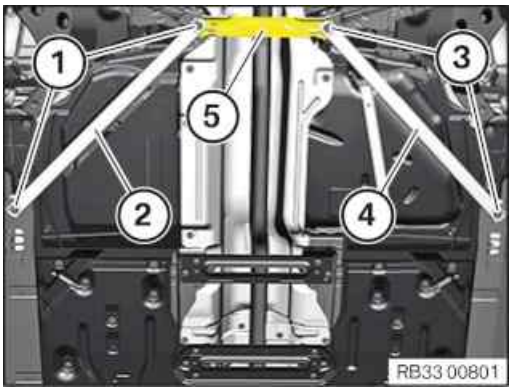


- Secure clamps (2).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

59 – Install the cross-member with torsion struts

cardiagn.com



- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

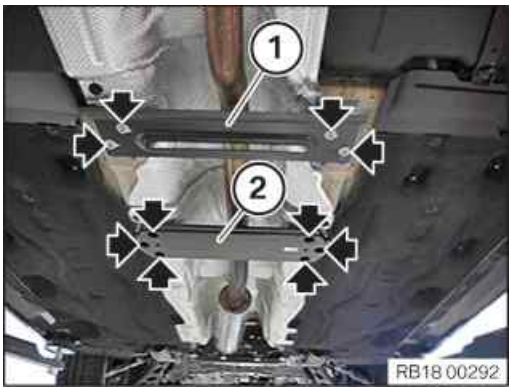
- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

60 – Install the connecting support on the tunnel in front and back



- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

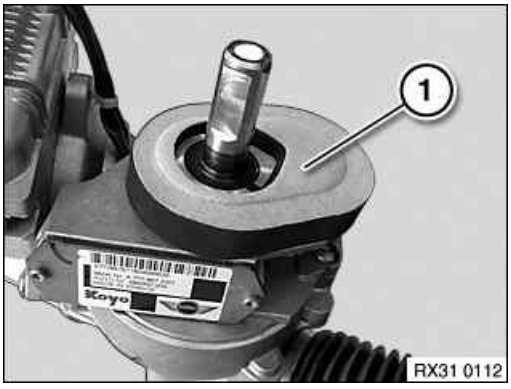
M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

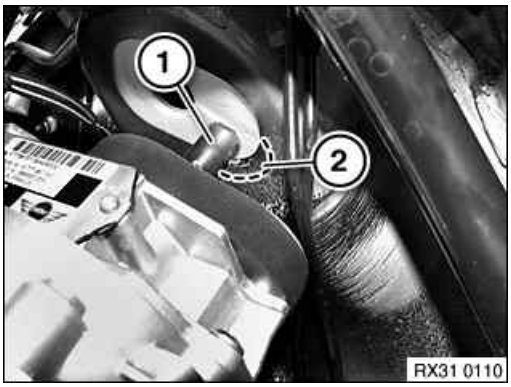
61 – Mount and secure the complete front axle



- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

cardiagn.com

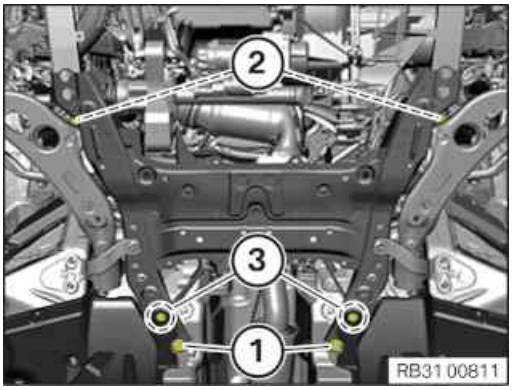


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

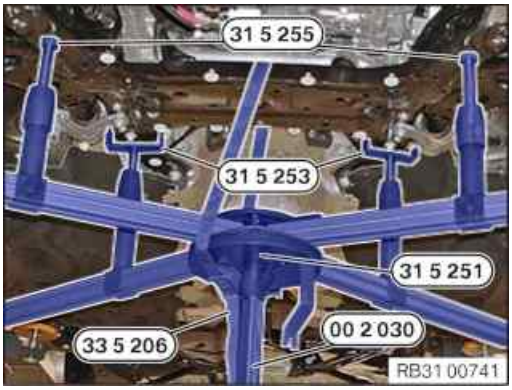
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).

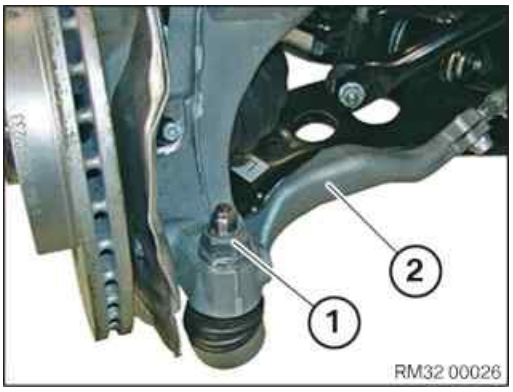
Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and place it to the side.

cardiagn.com



NOTICE

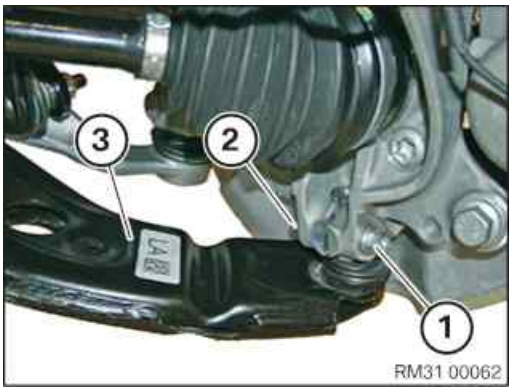
Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm



NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

62 – Install the mounted parts on the front axle support

NOTICE

Perform the operations on the left and right side.

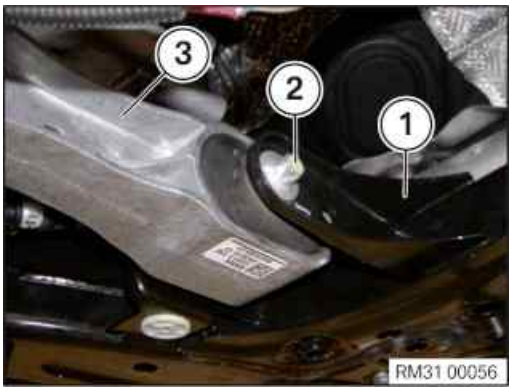
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

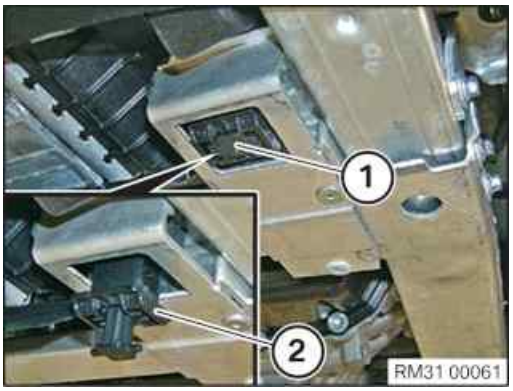
cardiagn.com



- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

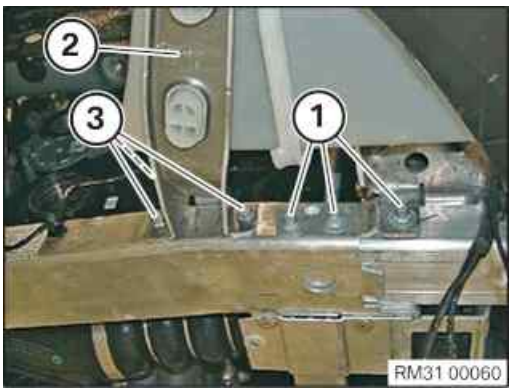
M12 screw		100 Nm



NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.



- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

Perform the operations on the left and right side.

- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

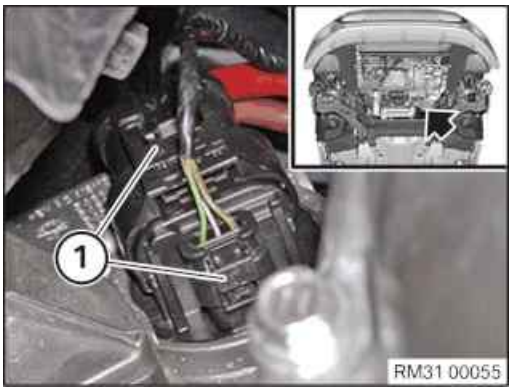
		Tightening torque	11,8 Nm

63 – Attaching connector at steering gear

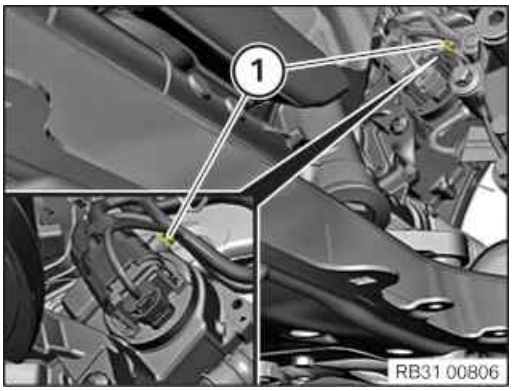
- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

cardiagn.com

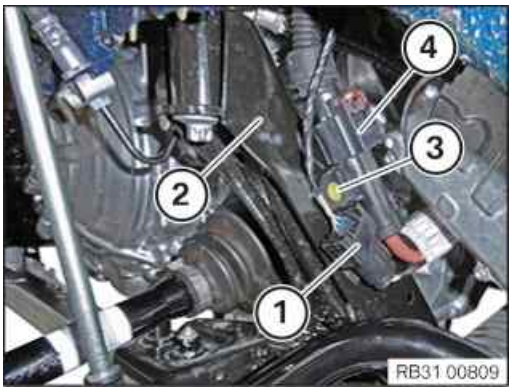


- Connect and lock connector (arrow) (1) with the steering gear.



- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

64 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

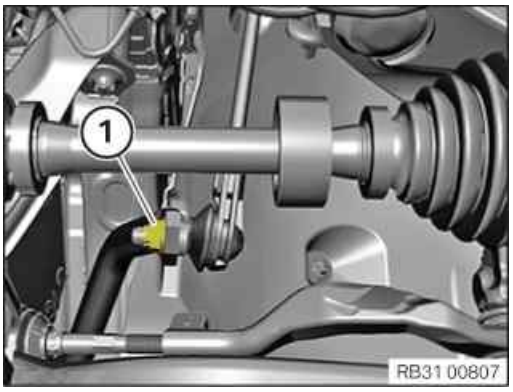
65 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**

cardiagn.com



- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

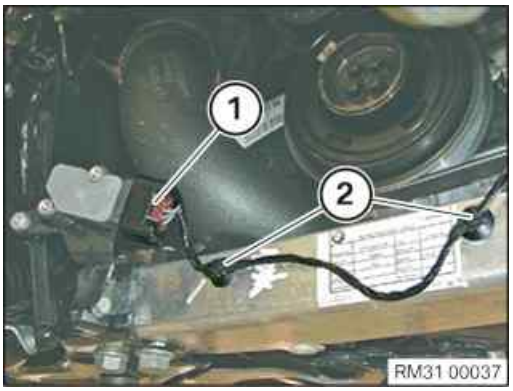
  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

66 – With right installation: Securing the cable for the ride height sensor



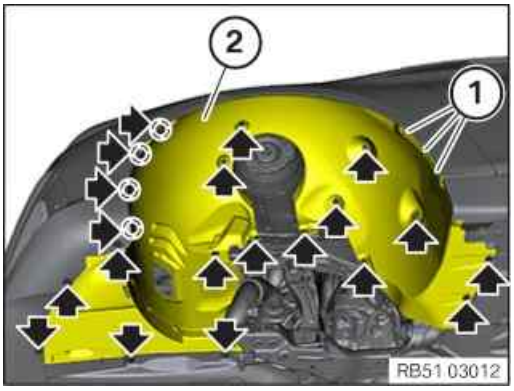
- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

67 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**



- Guide the wheel arch cover (2) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

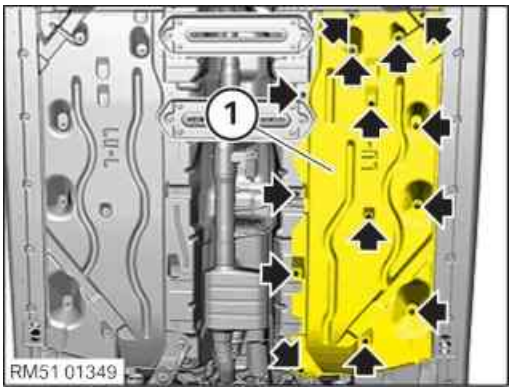
Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

- Secure expanding rivet (1).

68 – Installing underbody panelling , right



- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

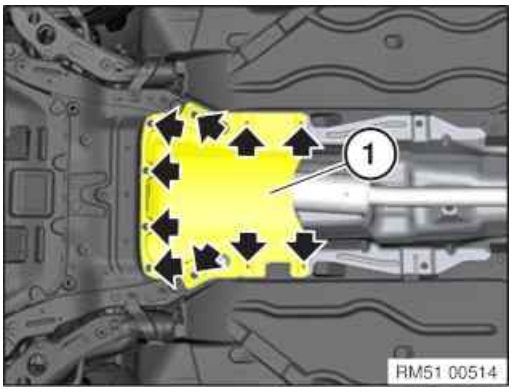
Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

69 – If installed: Installing underbody protection at rear

cardiagn.com

69 – If installed: installing underbody protection at rear



- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

70 – Mount the front left and right wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

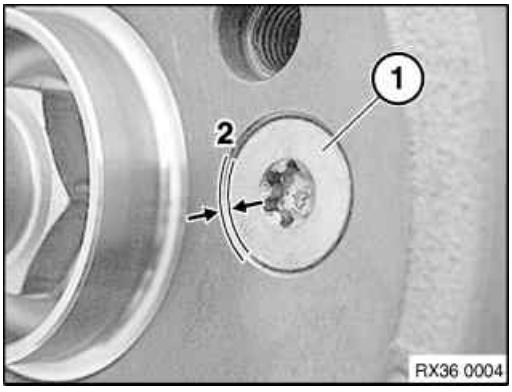
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

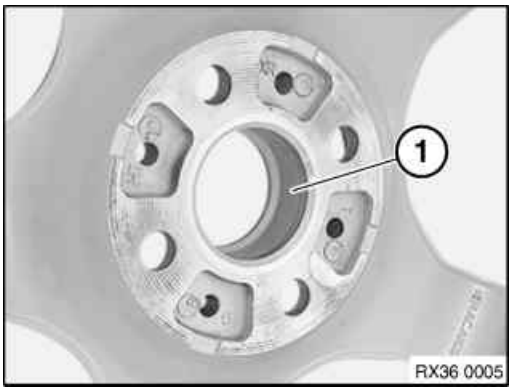
Brake disc to front wheel hub

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

M8	Renew screw.		16 Nm

cardiagn.com



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

◁

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

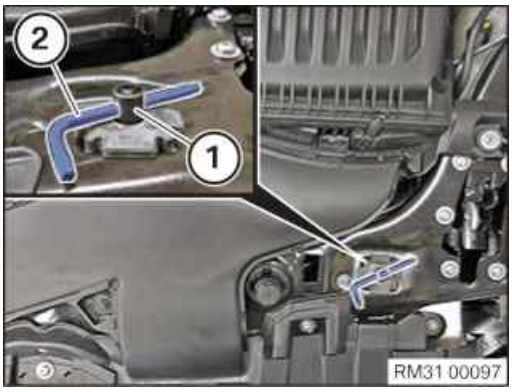
  Parts: Wheel bolts
- Clean the wheel bolts.
- Check wheel bolts (arrows) and threads for damage, renew the wheel bolts if necessary.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.		
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Check	140 Nm

71 – Removing fastener for left and right radiator

cardiagn.com

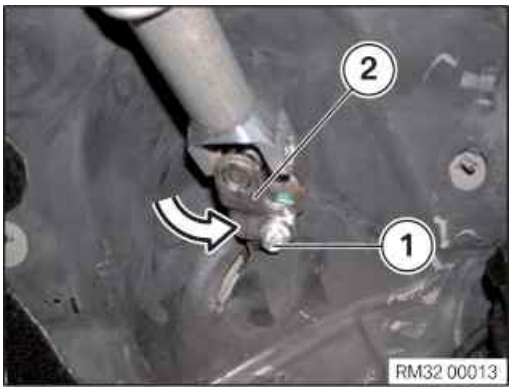


NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

72 – Secure the steering shaft at the bottom on the steering gear



- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

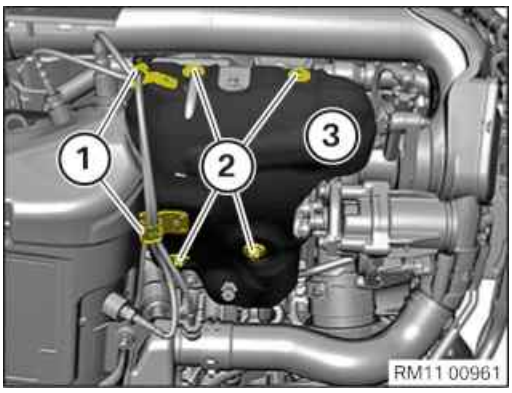
73 – Install the heat shield on the exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten down screws (2).

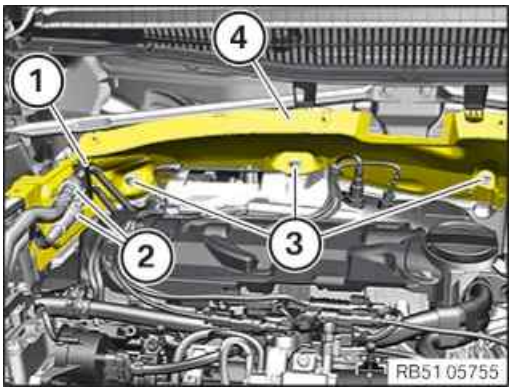
Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Secure cable in holders (1).

cardiagn.com

74 – Installing rear bulkhead upper part



- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

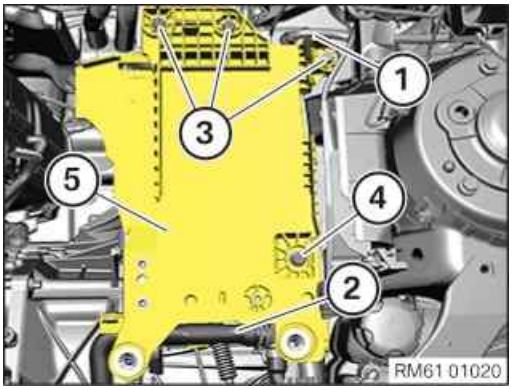
Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

75 – Install the battery holder



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

76 – Install electronics box

Prerequisite

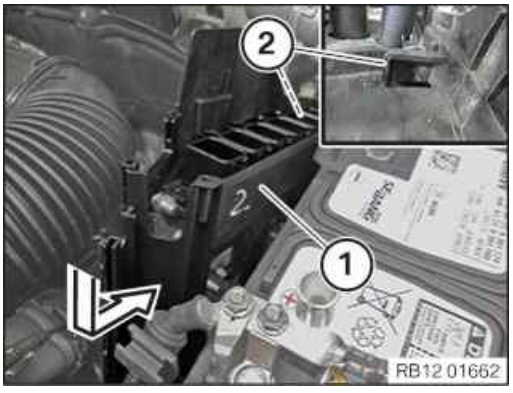
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

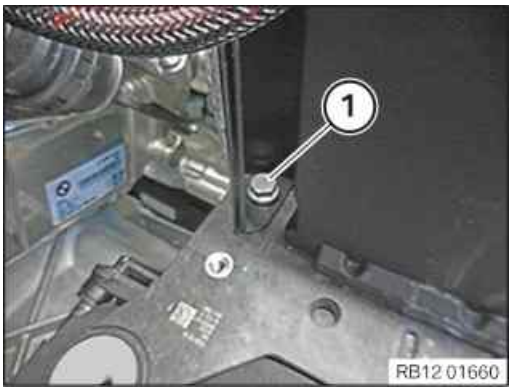
- Route all cables without abrasions, do not trap and crush.



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

cardiagn.com

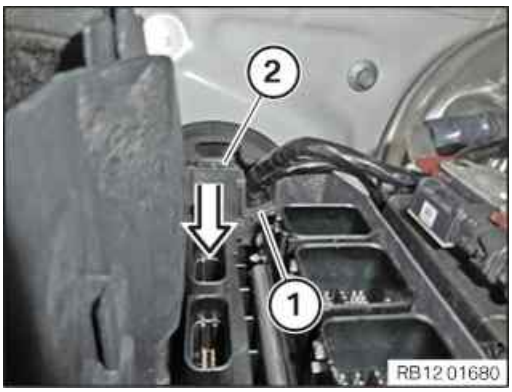
- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



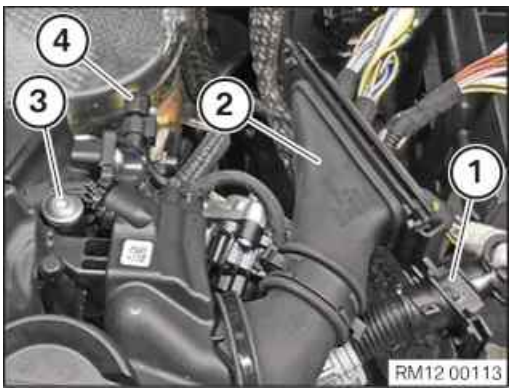
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

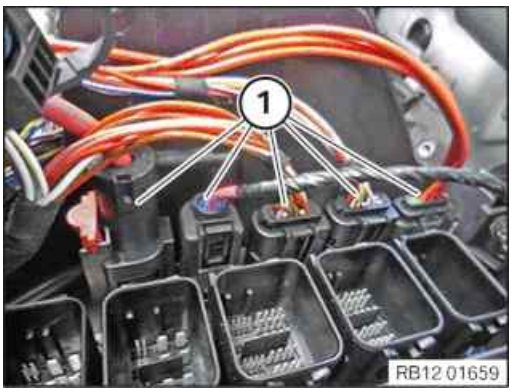


- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

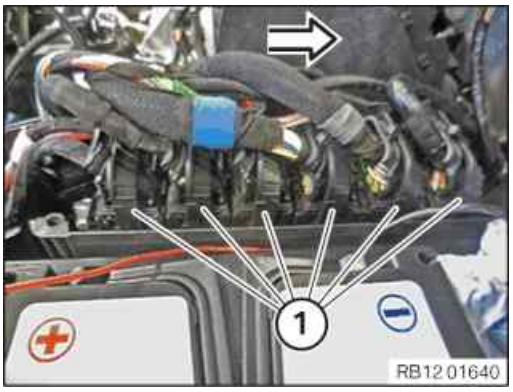
TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

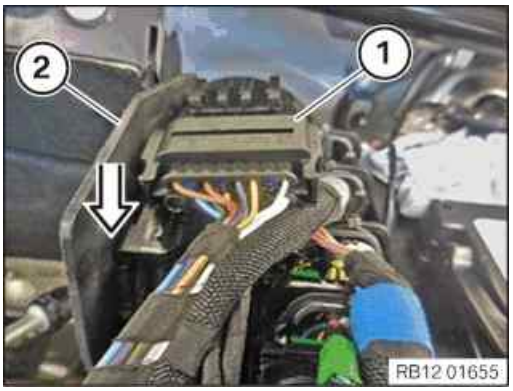


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

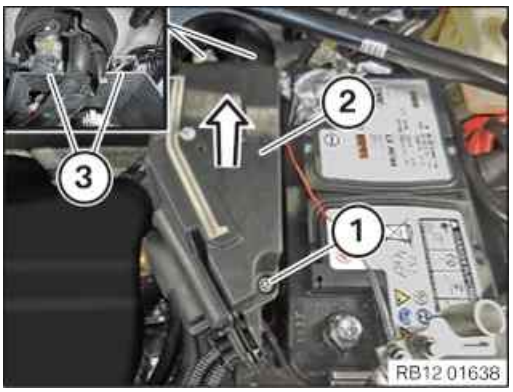
cardiagn.com



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



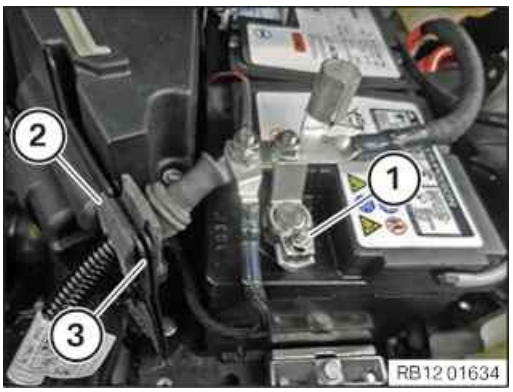
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

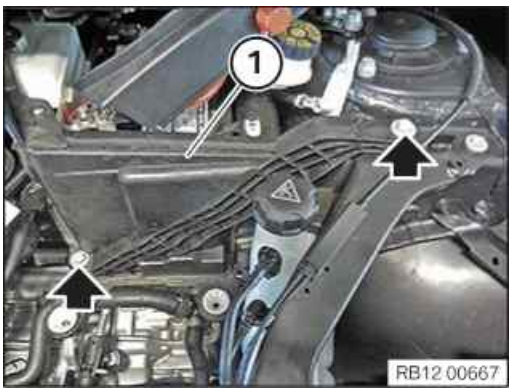
RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (1).
- Tighten screws (arrows).

Tension strut to spring strut dome/battery tray

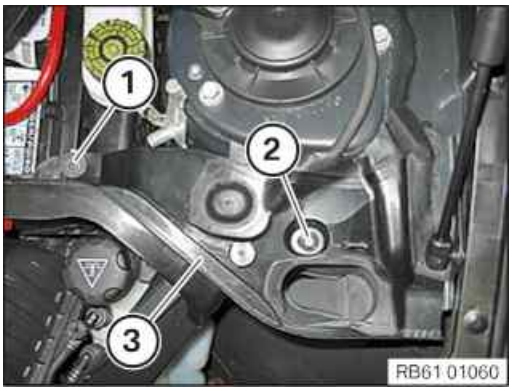
M8		Tightening torque	19 Nm

cardiagn.com

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

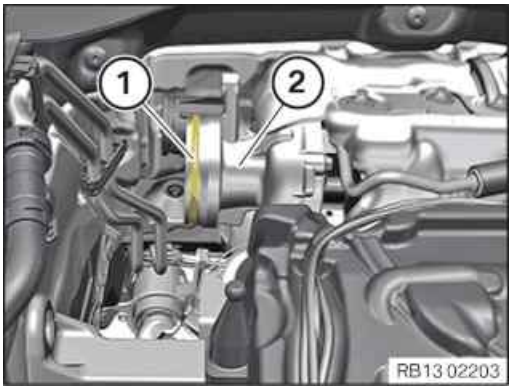


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

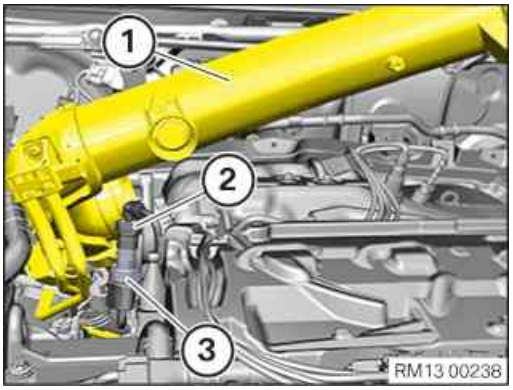
Battery cover

Screw		2,8 Nm

77 – Installing clean air pipe



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.



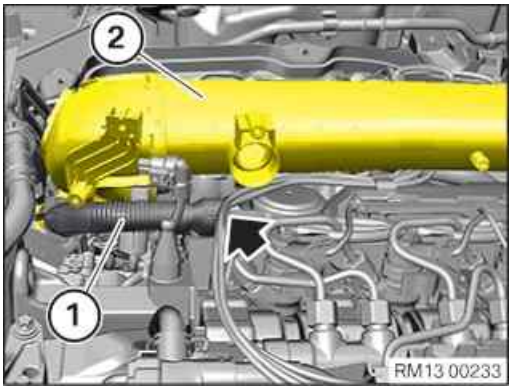
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

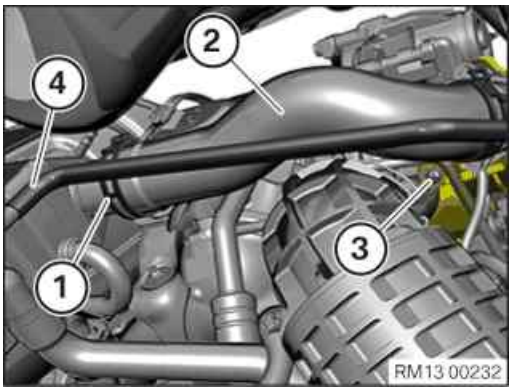
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.

cardiagn.com



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

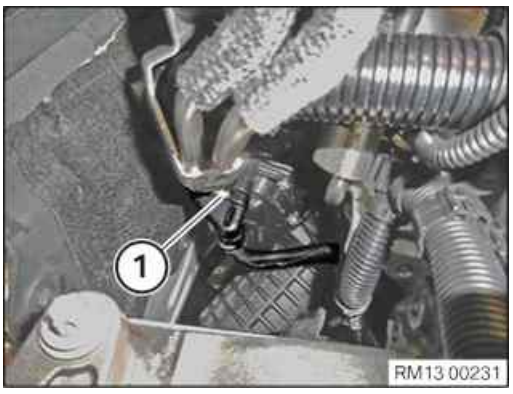
Torx bolt BM8x25		Tightening torque	8 Nm

- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

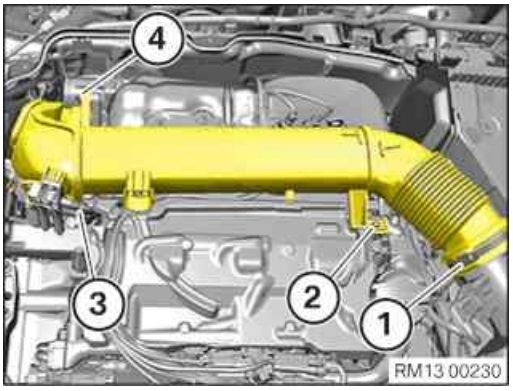
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm



- Connect and lock the connector (1).

  The connector (1) must lock audibly.



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

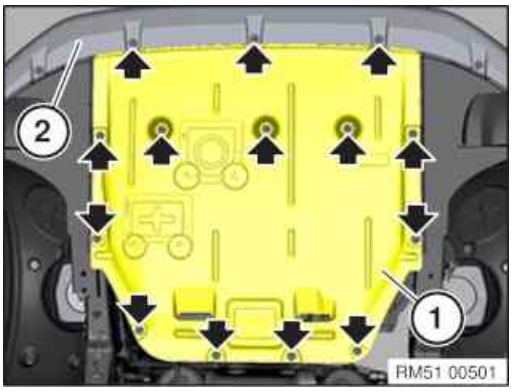
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

cardiagn.com

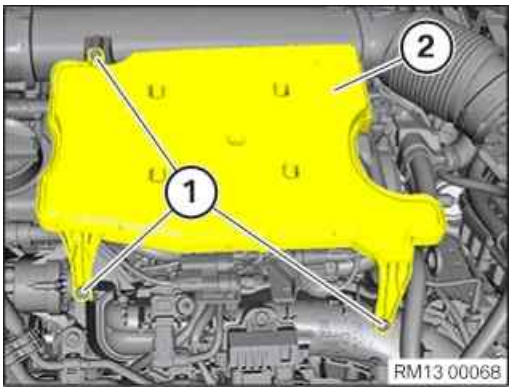


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

79 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

80 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

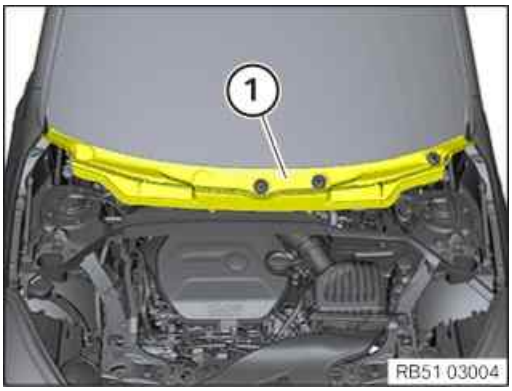
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

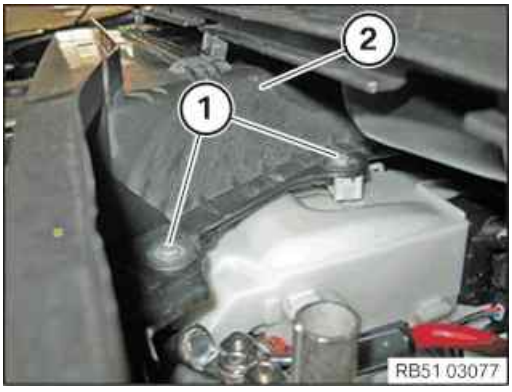
- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

81 – Install the rear cowl panel cover



- Feed in and engage the rear cowl panel cover (1).

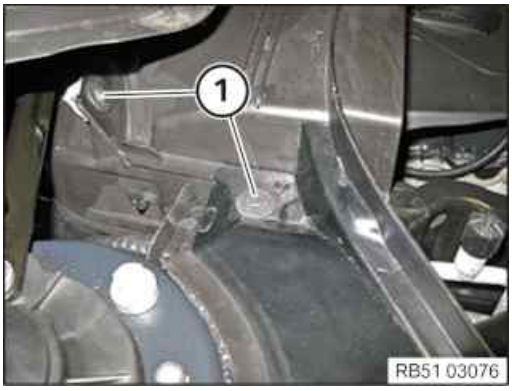
82 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

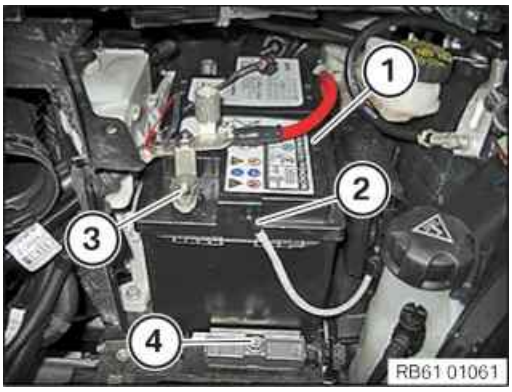
Screw		Tightening torque	3 Nm

cardiagn.com

83 – Install vehicle battery

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



- Install vehicle battery (1).
- Tighten the holder with the bolt (4).

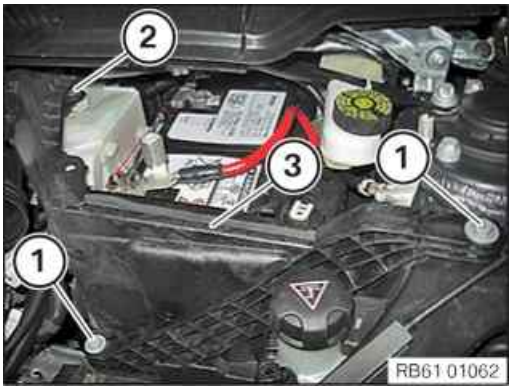
Battery terminal rail to battery tray

M8 screw		19 Nm

- Position the vent hose (2).
- Position the positive terminal.
- Tighten the nut (3) on the positive terminal.

Positive battery terminal

NutM6		5 Nm



- Insert the tension strut (3).
- Tighten down screw (2).

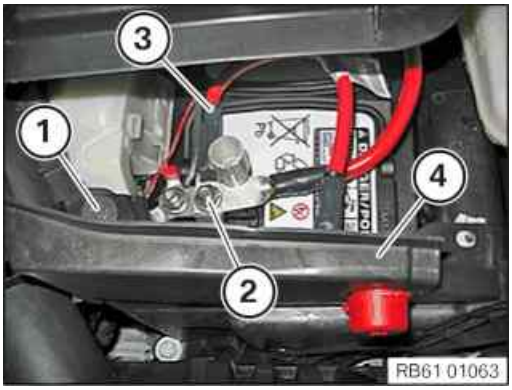
Battery cover

Screw		2,8 Nm

- Tighten the screws (1).

Trailing link

M8 screw		19 Nm



- Position the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten down screw (1).

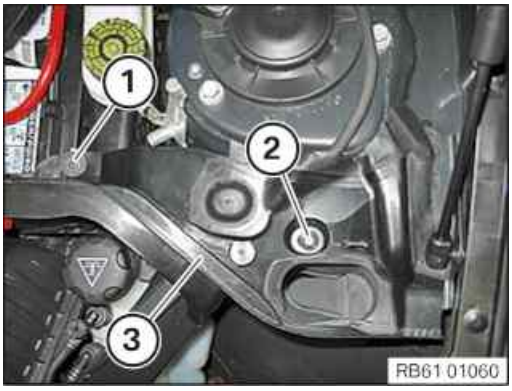
Battery cover

Screw		2,8 Nm

- Tighten the nut (2) on the positive terminal.

Positive battery cable to battery terminal

Nut M8		15,2 Nm

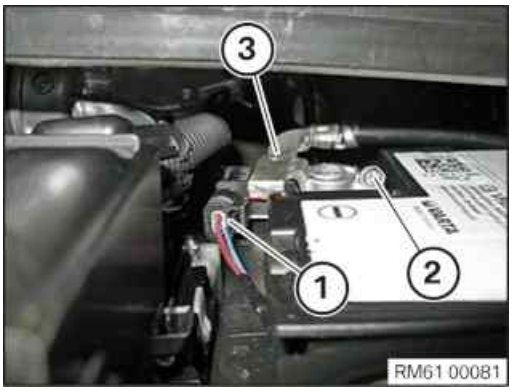


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

cardiagn.com

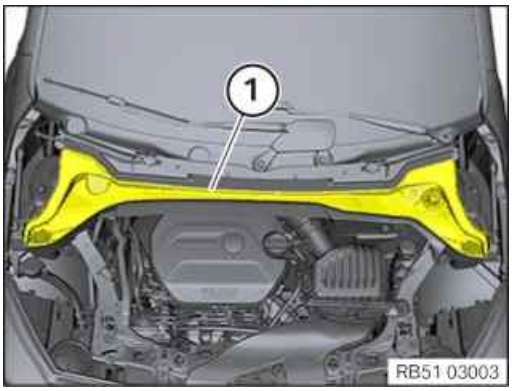


- Position the negative battery terminal (3).
- Tighten nut (2).

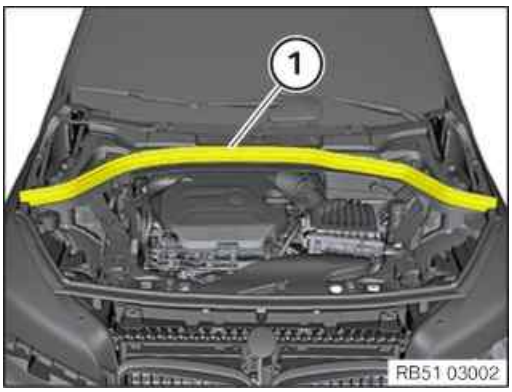
Negative battery terminal (with IBS)

NutM6		5 Nm

- Connect connectors (1) and lock.



- Feed in the cowl panel cover (1).



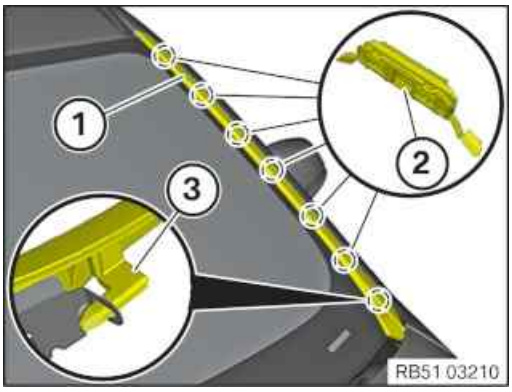
- Press the gasket (1) in a downwards direction.

84 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the gutter strip on the windscreen**



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

85 – Install left and right wiper arm

cardiagn.com

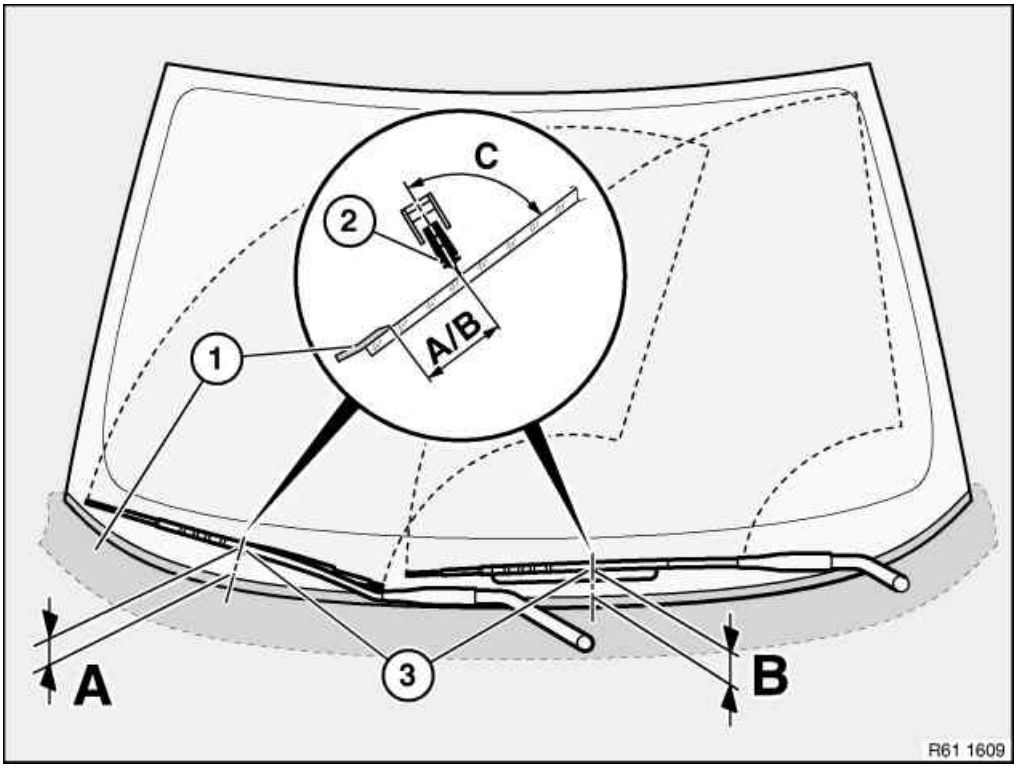
NOTICE

Description is for left component only. Procedure on the right side is identical.

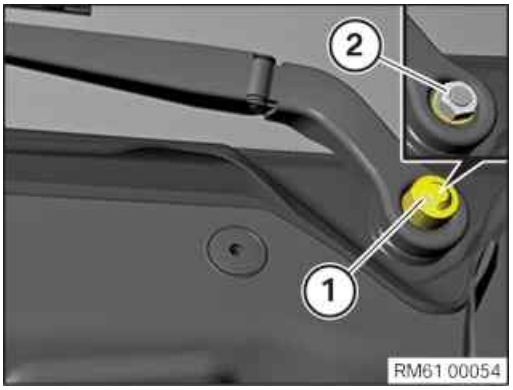
▸ **Install the wiper arm**

TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Tighten nut (2).

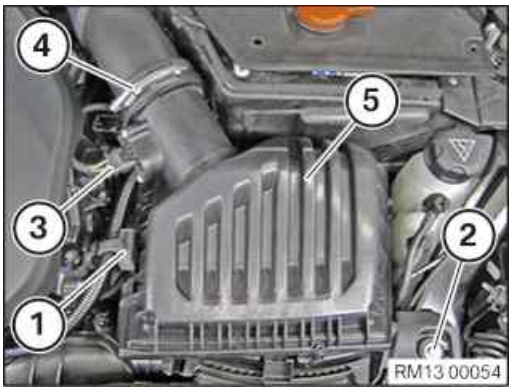
Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

86 – Installing intake silencer housing

cardiagn.com



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

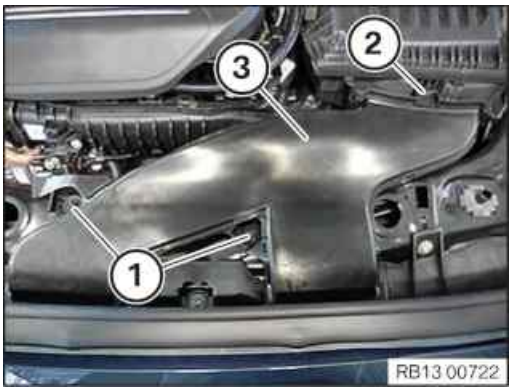
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

87 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

Additional Information

Overview of Tightening Torques

Oil feed line on cylinder head — Used in step 45

M6x12		Tightening torque	8 Nm

Oil feed line to exhaust turbocharger — Used in step 45

Hollow bolt	Renew sealing rings.	Jointing torque Angle of rotation	10 Nm 45 °

Heat shield for exhaust turbocharger — Used in step 46 47 73

Torx screw BM 6x12		Tightening torque	10 Nm

Exhaust turbocharger bracket to cylinder head — Used in step 46

Hexagon screw M 8x16		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger — Used in step 48

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Diesel particle filter to holder — Used in step 48

M8 hexagon nut		Tightening torque	19 Nm

SCR metering module V-clip to exhaust system — Used in step 48

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

cardiagn.com

Holder for coolant lines to diesel particulate filter — Used in step 48

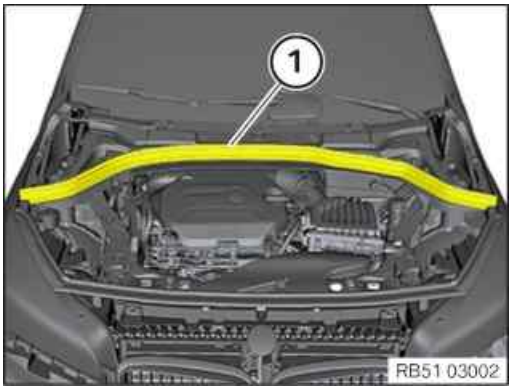
PRELIMINARY WORK

1 – Remove the seal for the rear bonnet

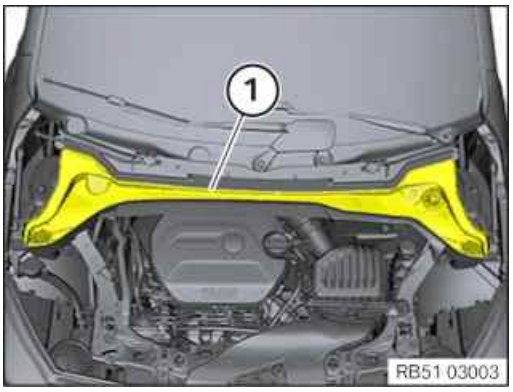
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

2 – Removing front cowl panel cover

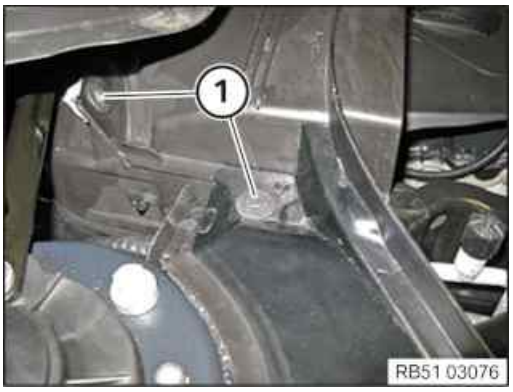


- Guide the front cowl panel cover (1) out toward the top and remove it.

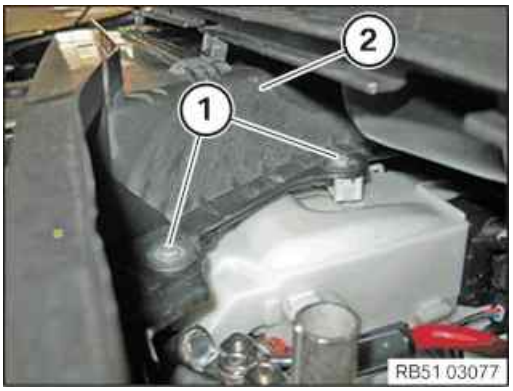
3 – Removing the upper bulkhead cover

- Loosen screws (1).

cardiagn.com



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

4 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

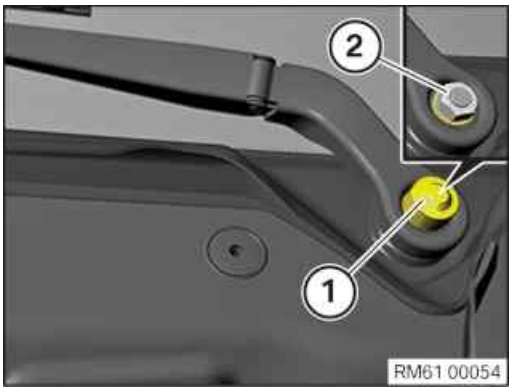
▶ **Remove the wiper arm**

RISK OF DAMAGE

Damage to wiper console

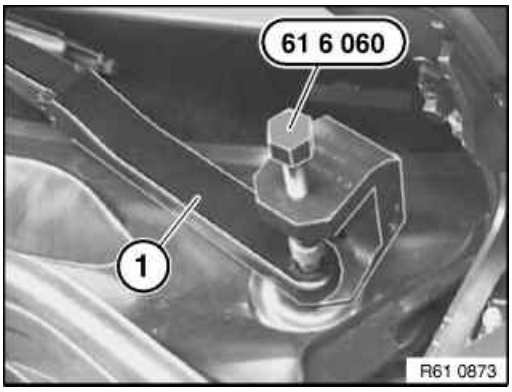
While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.



- Remove the protective cap (1).
- Loosen nut (2).

cardiagn.com



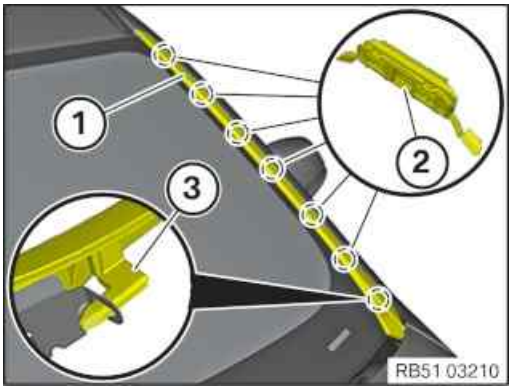
- Pull off the wiper arm (1) using special tool .

5 – Remove the gutter strip on the windscreen on the left and right

NOTICE

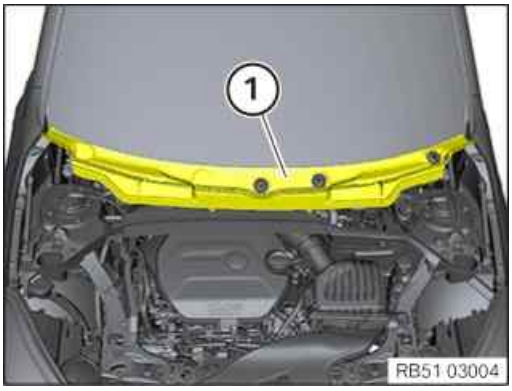
Description is for left component only. Procedure on the right side is identical.

▶ **Remove the gutter strip on the windscreen**



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

6 – Remove the rear cowl panel cover



- Disengage and guide out the rear cowl panel cover (1) towards the top.

7 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

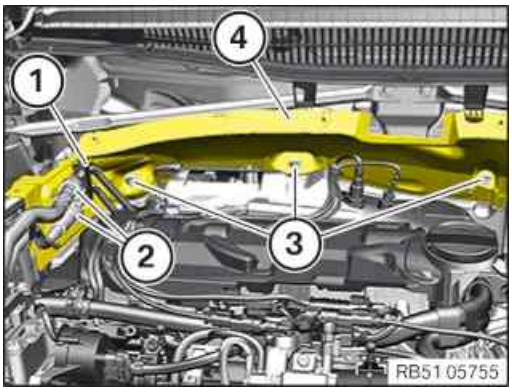
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

8 – Remove the rear bulkhead upper part



- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

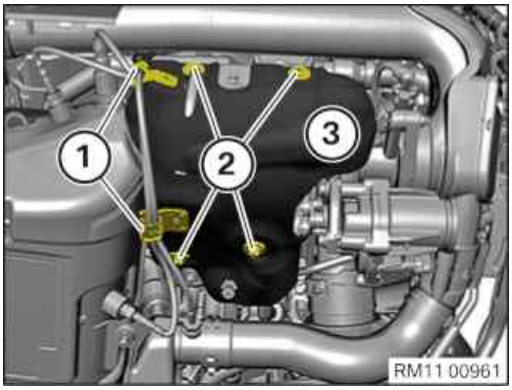
9 – Removing heat shield from top exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

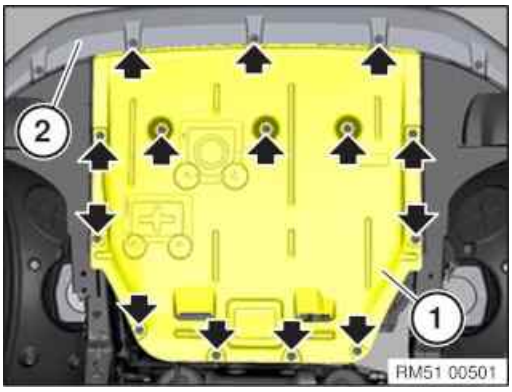
- Perform all work only on components that have cooled down.



- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).

10 – Removing the front underbody protection

cardiagn.com



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

MAIN WORK

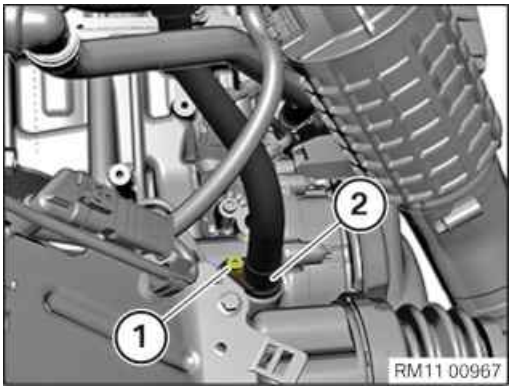
11 – Removing the oil return line for the exhaust turbocharger

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screw (1).
- Pull the oil return line (2) out of the crankcase.

- Loosen screws (1).
- Feed out and remove oil return line (2) downwards.

12 – Installing the oil return line for the exhaust turbocharger

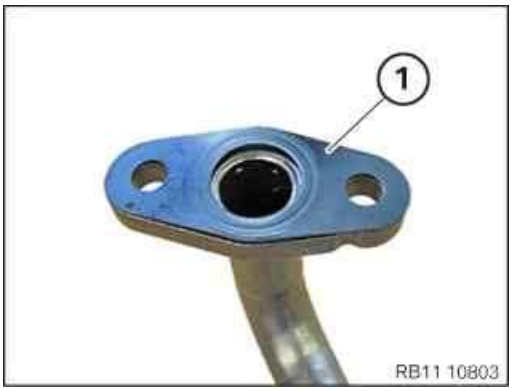
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

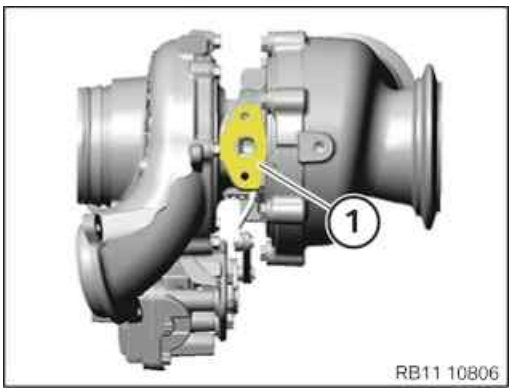
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Renew gasket (1).

  Parts: Gasket

- Check the O-ring (1) for damage and renew as needed.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean sealing surface (1).

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

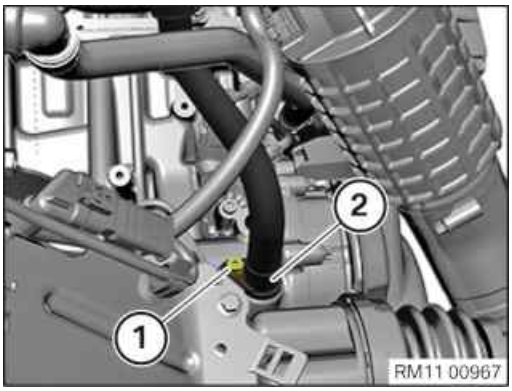
- Clean sealing surface.

cardiagn.com

- Feed in and install the oil return line (2) for the exhaust turbocharger.
- Ensure that gasket is correctly seated.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm



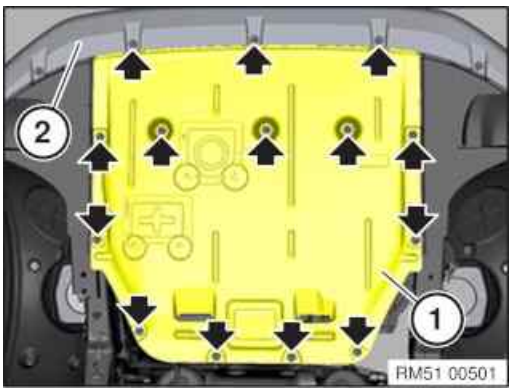
- Install oil return line (2) into crankcase.
- Make sure the O-ring is not damaged.
- Tighten down screw (1).

Oil return line to crankcase

M6x12		Tightening torque	8 Nm

POSTPROCESSES

13 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

14 – Install the heat shield on the exhaust turbocharger

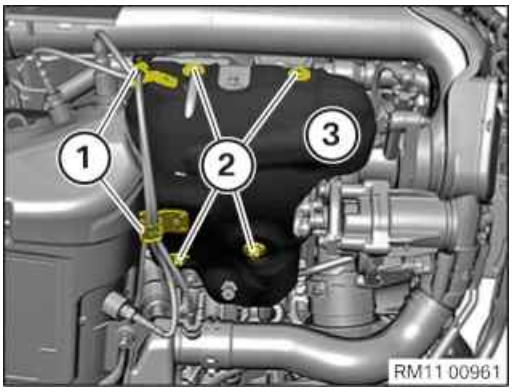
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Feed in and install the heat shield (3).
- Tighten down screws (2).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Secure cable in holders (1).

15 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

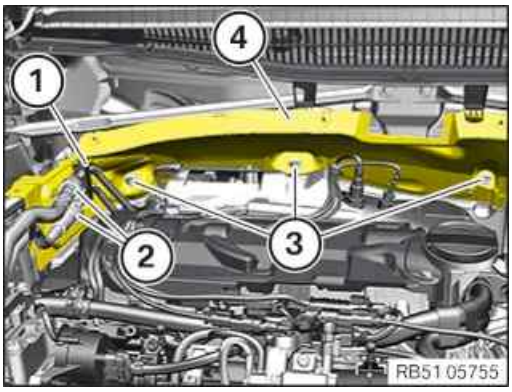
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

16 – Installing rear bulkhead upper part

cardiagn.com



- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

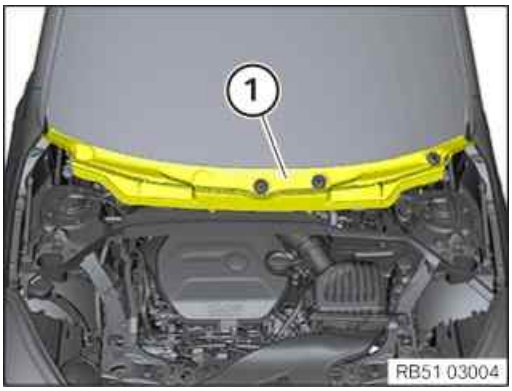
Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

17 – Install the rear cowl panel cover



- Feed in and engage the rear cowl panel cover (1).

18 – Install left and right wiper arm

NOTICE

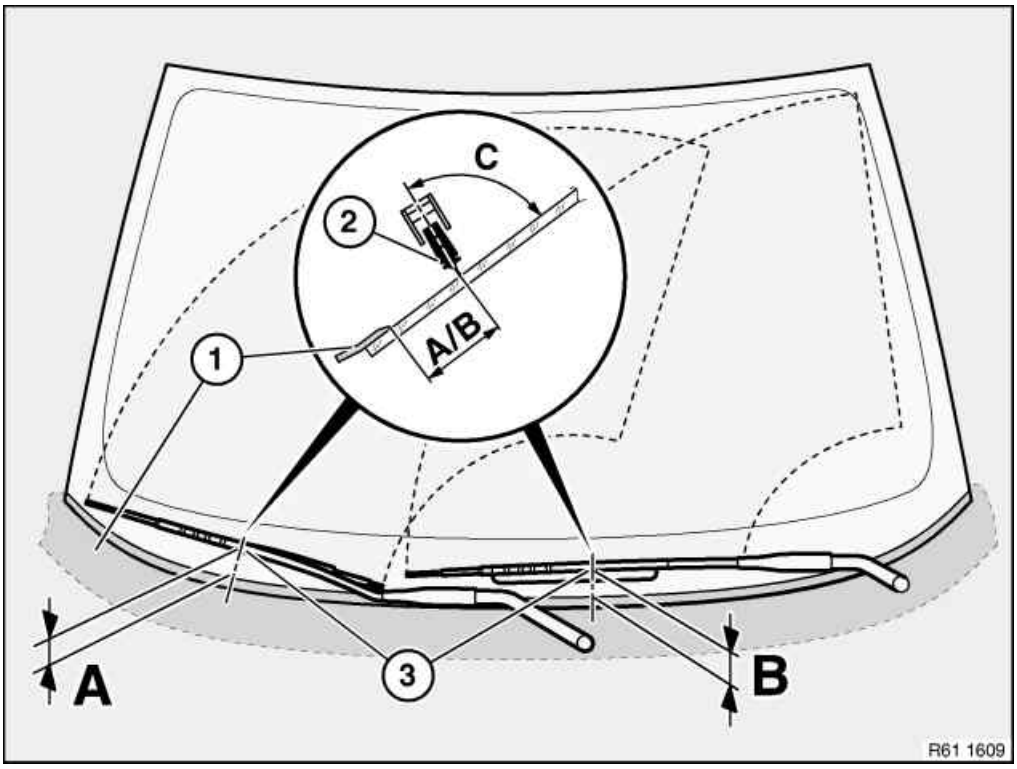
Description is for left component only. Procedure on the right side is identical.

▸ **Install the wiper arm**

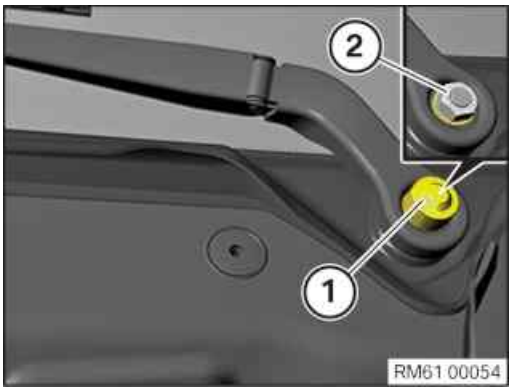
TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.

cardiagn.com



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

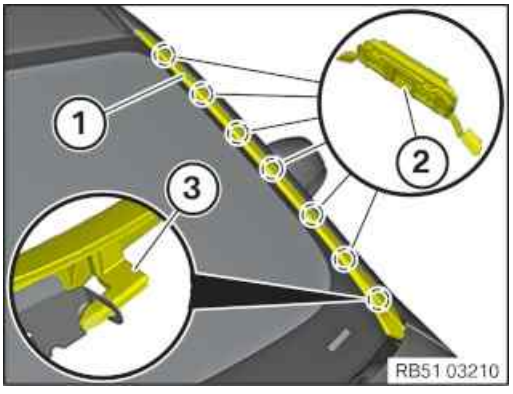
- Connect the protective cap (1).

19 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

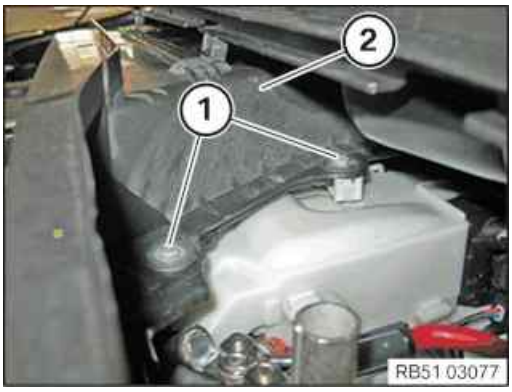
▸ **Install the gutter strip on the windscreen**



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

20 – Installing the upper bulkhead cover

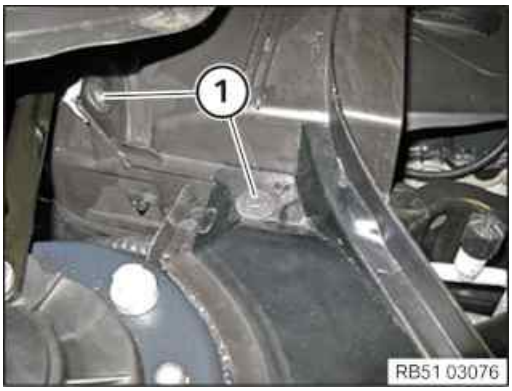
cardiagn.com



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

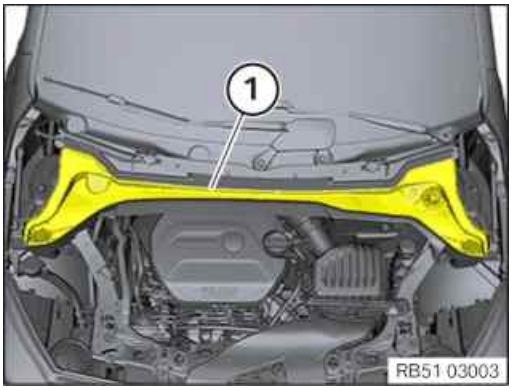
Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

21 – Installing front cowl panel cover



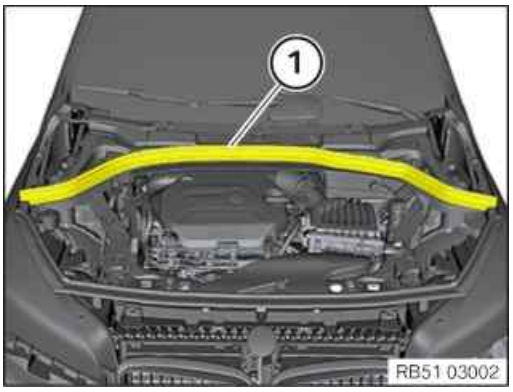
- Insert the cowl panel cover front (1) to the rear and install.
- Check cowl panel cover at front is correctly seated (1).

22 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

cardiagn.com

11 42 827 Replace control valve of central piston cooling

WARNING

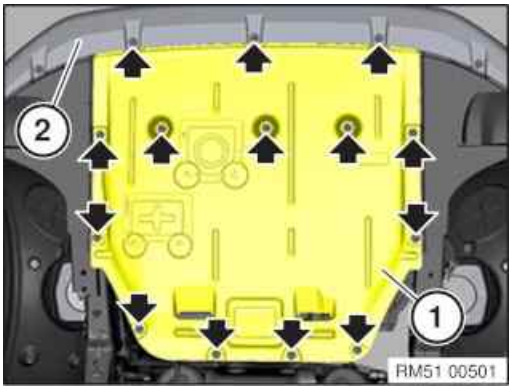
Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

PRELIMINARY WORK

1 – Removing the front underbody protection



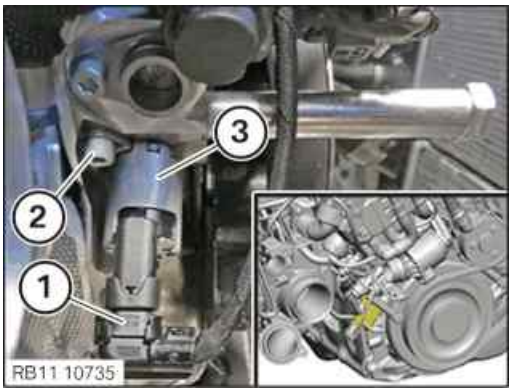
- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

MAIN WORK

2 – Removing the control valve for central piston cooling

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

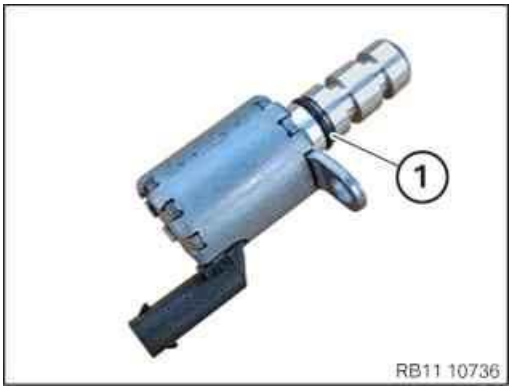
- Unlock plug connection (1) and disconnect.
- Loosen screw (2).
- Remove the control valve (3) for central piston cooling.

3 – Installing the control valve for central piston cooling

cardiagn.com

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Renew the gasket (1) using the special tool **0 496 714 (00 9 030)**.

  Parts: Gasket

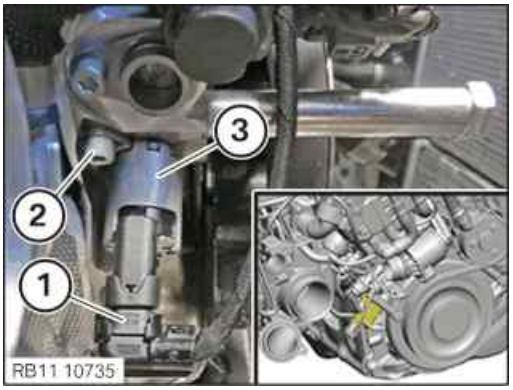
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Clean sealing surface.



- Install the control valve (3) for central piston cooling.
- Tighten down screw (2).

Central piston cooling valve to crankcase

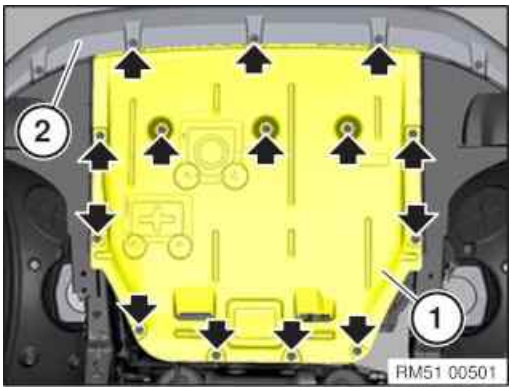
M6x16		Tightening torque	8 Nm

- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

POSTPROCESSES

4 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

5 – Check engine oil level

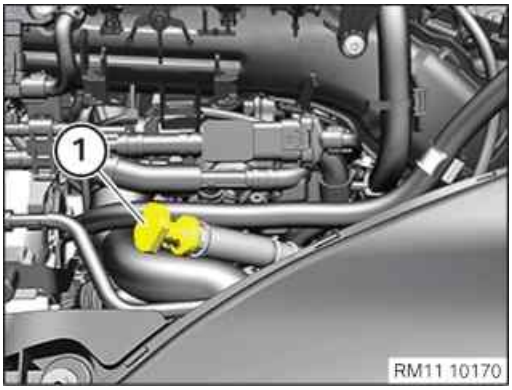
cardiagn.com

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▸ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

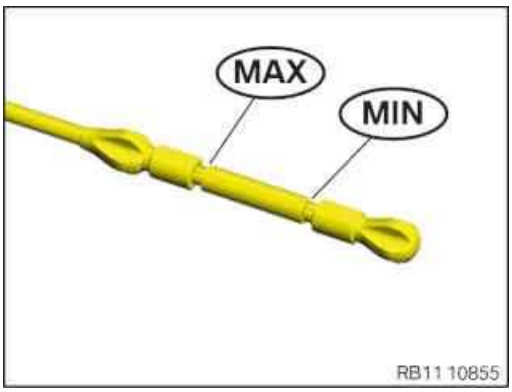


- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.



TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

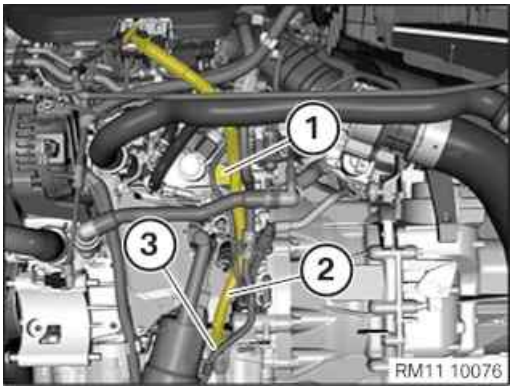
11 43 000 Removing and installing or replacing guide tube for dipstick (B37C)

Necessary preliminary tasks:

- Remove fan cowl.

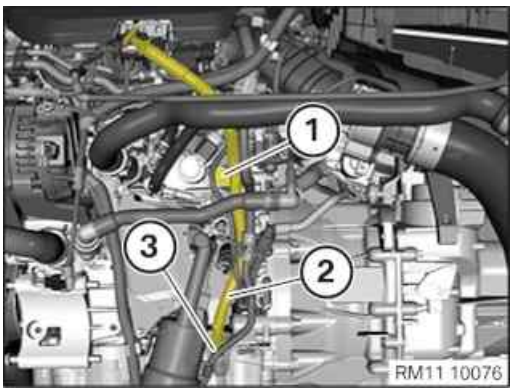
Removal:



Release screw (1).

Remove guide tube (2) in an upward direction.

Installation:



Mount new O-ring (3) on guide tube.

Part: Replace O-ring.

Install guide tube (2).

Tighten screw (1).

Required follow-up work:

- Install fan cowl.

cardiagn.com

11 43 000 Removing and installing/sealing the oil dipstick guide tube

TECHNICAL INFORMATION

- When the engine is stopped after the end of the journey, it may be necessary to run the electric fan. In rare cases, operation of the electric fan can last up to 11 min. This protects the components. In this case, replacing the electric fan will not remedy the problem!

PRELIMINARY WORK

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

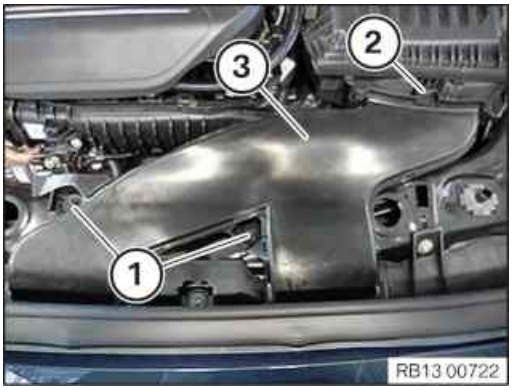
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

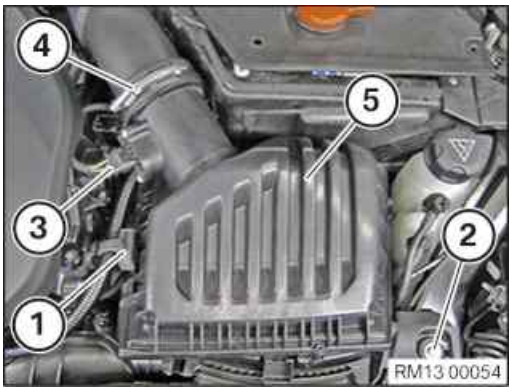
2 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

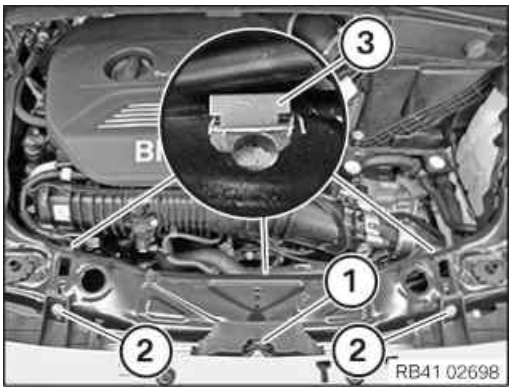
3 – Removing intake silencer housing

cardiagn.com

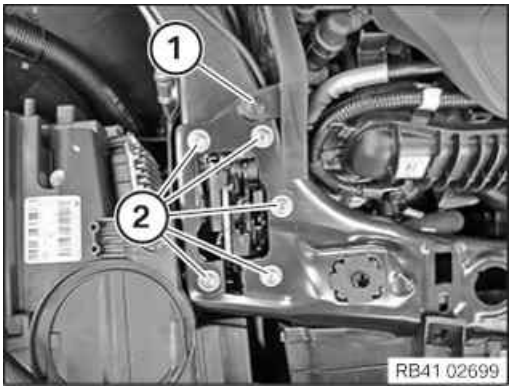


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

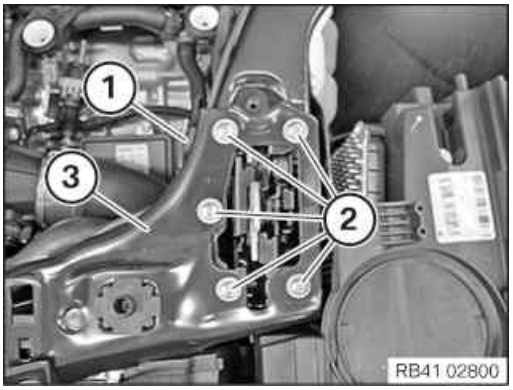
4 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

5 – Removing the fan cowl with electric fan

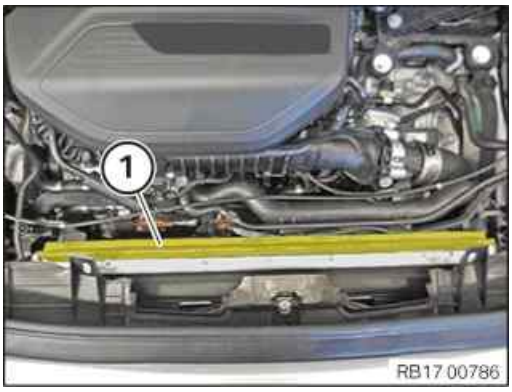
WARNING

Hot surfaces.

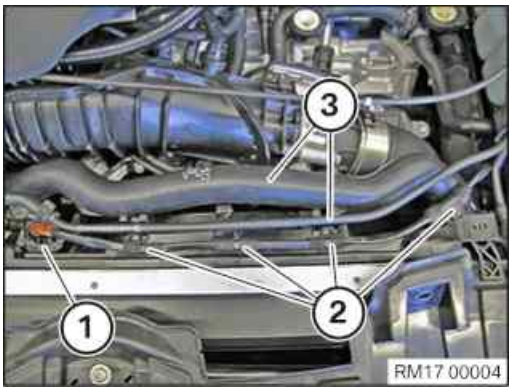
Risk of burning!

- Perform all work only on components that have cooled down.

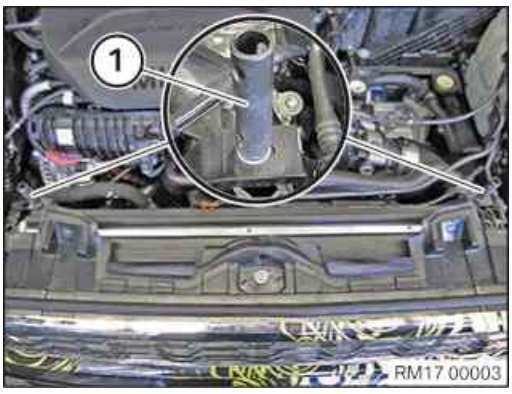
cardiagn.com



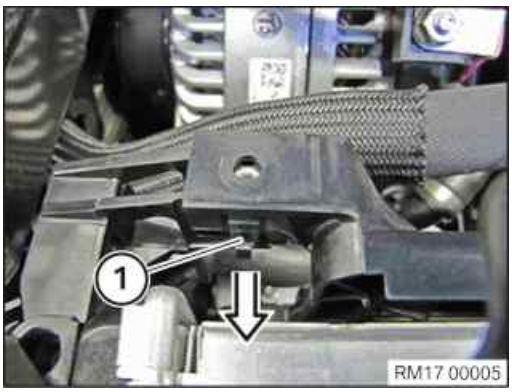
- Feed out and remove the sealing (1) from the radiator.



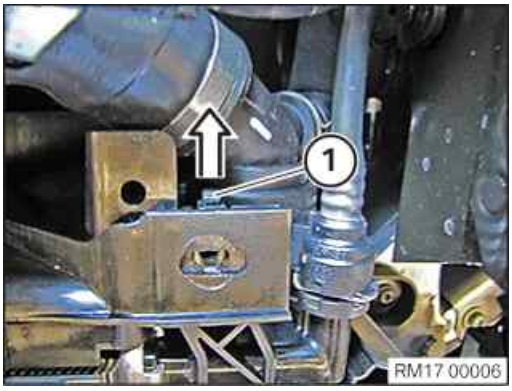
- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.



- Loosen screws (1).

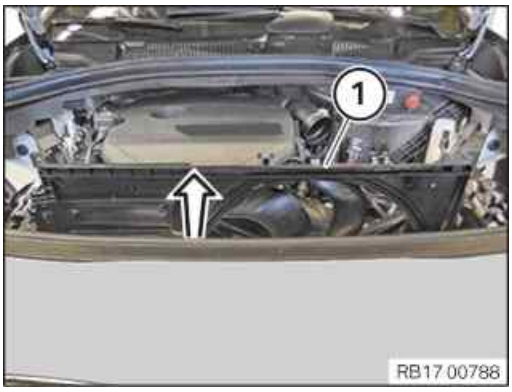


- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



- Unlock the left lock (1) on the fan cowl in the direction of the arrow.

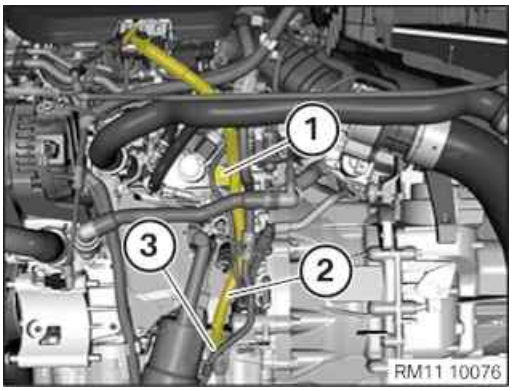
cardiagn.com



- Guide out fan cowl (1) in direction of arrow and remove.

MAIN WORK

6 – Removing the guide tube for the oil dipstick



- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

7 – Installing guide tube for oil dipstick

RISK OF DAMAGE

Contaminant or foreign body.

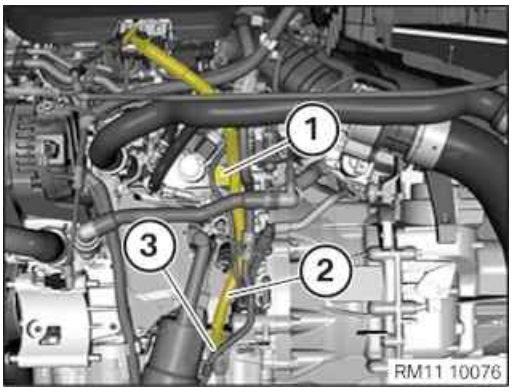
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Renew O-ring (1).

  Parts: O-ring

cardiagn.com



- Guide in guide tube (2) for oil dipstick and slide it into the oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

- Fasten expanding rivet (1).

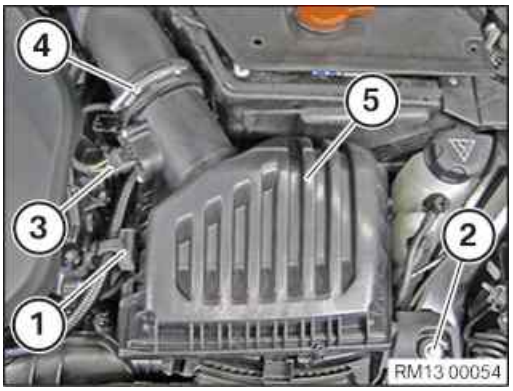
10 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

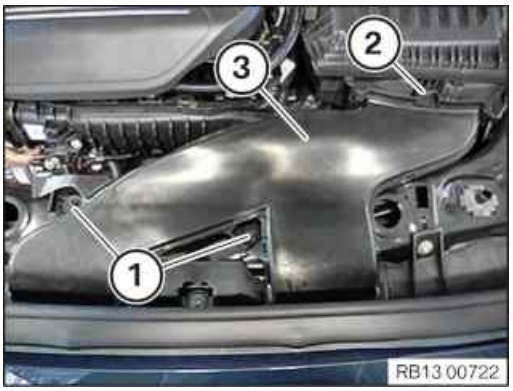
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

11 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

12 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

Additional Information

Parts

Parts required

Designation	Used in step
Seal, guide tube for oil dipstick on oil sump	7

cardiagn.com

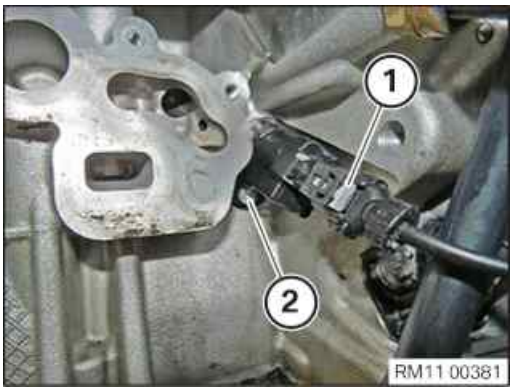
11 41 115 Removing and installing/replacing hydraulic valve (B37C)

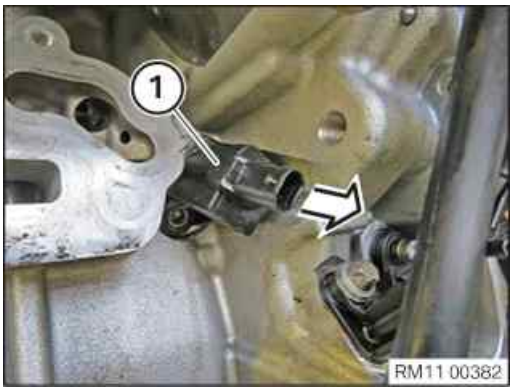
Necessary preliminary tasks:

- Remove full-flow oil filter.

Removal:

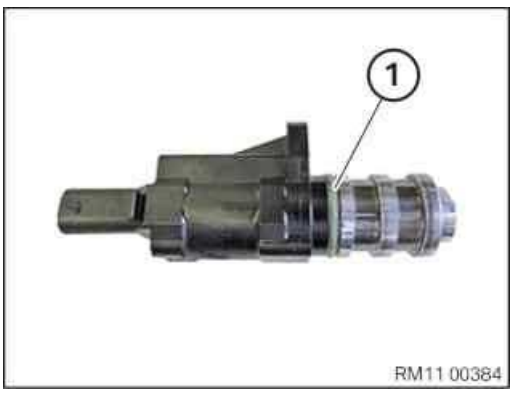


Unlock and disconnect the connector (1).
Release screw (2).



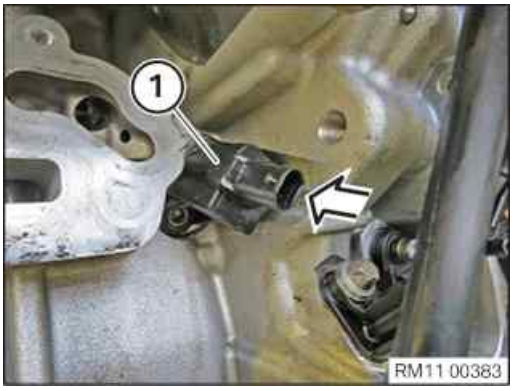
Remove hydraulic valve (1) in direction of arrow.

Installation:

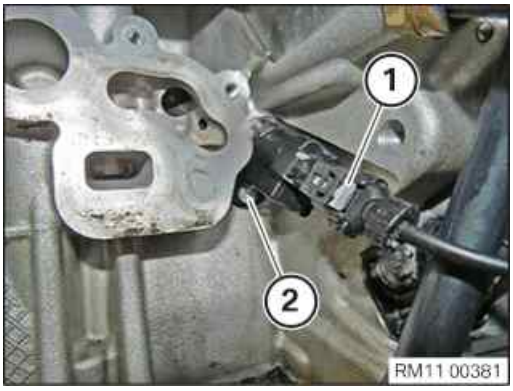


Parts: Replace O-ring (1).
Oil O-ring (1).

cardiagn.com



Install hydraulic valve (1) in direction of arrow.



Tighten screw (2).
Tightening torque: 11 00 2AZ.
Connect the plug (1).

Required follow-up work:

- Install full-flow oil filter.
- Assemble engine.

cardiagn.com

11 44 000 Removing and installing/replacing oil-to-water heat exchanger (B37C)

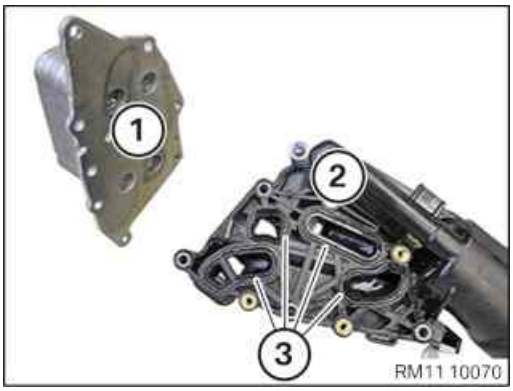
Necessary preliminary tasks:

- Remove full-flow oil filter.

Removal:

Release screws (1).

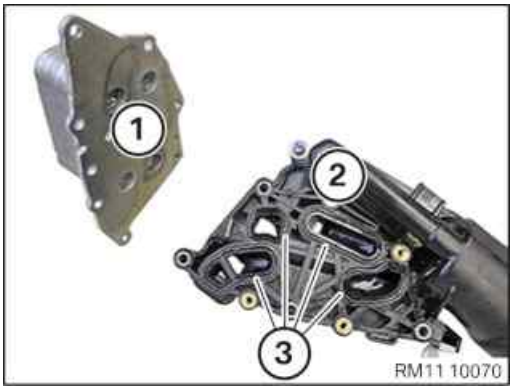
Remove heat exchanger.



Replace gaskets (3) on full-flow oil filter (2).

Installation:

cardiagn.com



Installation note:
All sealing surfaces and gaskets must be cleaned and free of oil.

Replace gaskets (3).

Place oil-to-water heat exchanger (1) on full-flow oil filter (2).

Tighten down screws (1).

Tightening torque: 11 42 8AZ.

Required follow-up work:

- Install full-flow oil filter

cardiagn.com

11 42 020 Removing and installing/replacing the full-flow oil filter (B37C)

Special tools required:

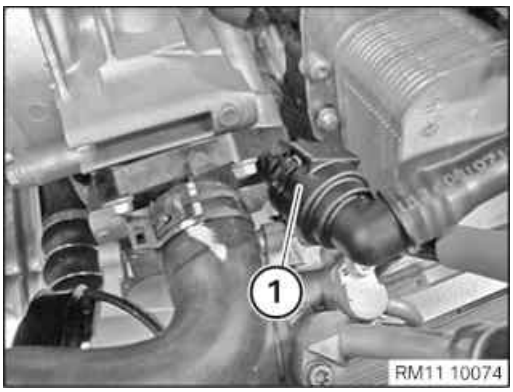
- 11 4 470
- 11 6 480

Necessary preliminary tasks:

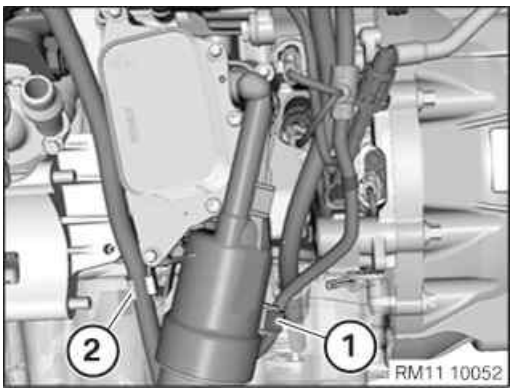
- Disconnect battery negative lead.
- Drain off oil.
- Remove fan cowl.
- Remove underbody protection
- Drain coolant.
- Release A/C compressor and place to one side.

Removal:

Unlock and detach coolant hose (1).

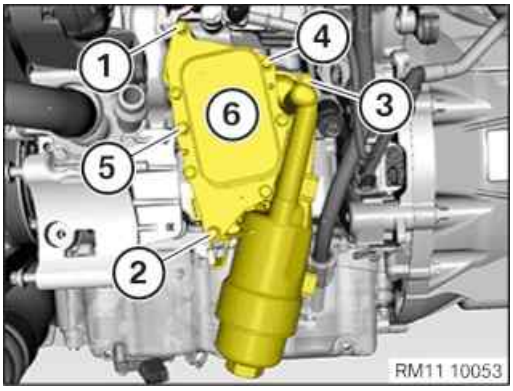


Unlock and detach coolant hose (1).



Unclip wiring harness (1).
Unclip positive wire (2).

cardiagn.com



Release screws in the sequence **5 - 1**.

Remove full-flow oil filter (6).

Installation:

Important!

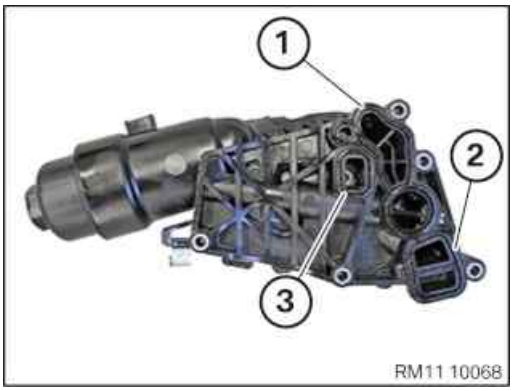
Clean away gasket residues from the crankcase and full-flow oil filter with the special tool 11 4 470 .

Do not use any metal-cutting tools (e.g. emery cloth).

No particles/foreign material may enter the media openings.

Foreign particles in the oil cause damage to the connecting rod bearing/engine.

Crank engine with special tool11 6 480 until engine oil exits from the oil channels in the area of the full-flow oil filter.

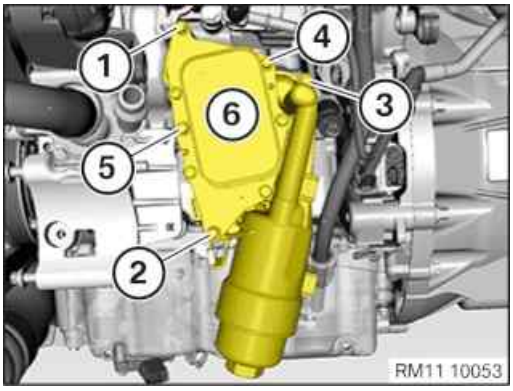


Note:
All sealing surfaces and gaskets must be cleaned and free of oil.

Replace gaskets (1, 2 and 3).

When replacing, remount oil-to-water heat exchanger.

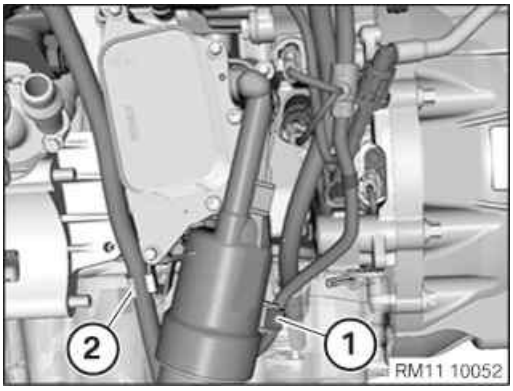
cardiagn.com



Position full-flow oil filter (6).

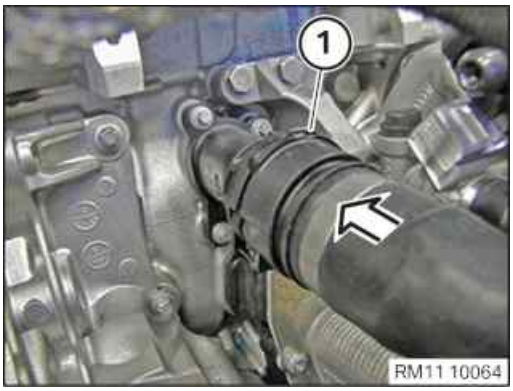
Tighten screws in the sequence **1 - 5**.

Tightening torque: 11 42 7AZ.



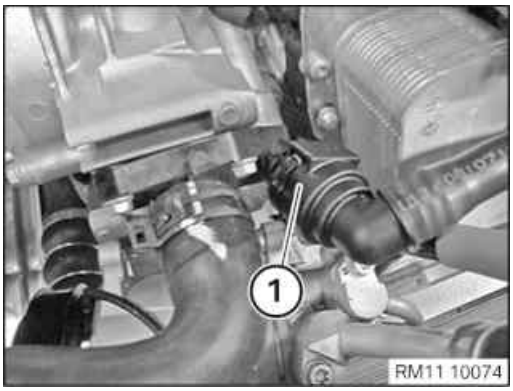
Clip in wiring harness (1).

Clip in positive wire (2).



Connect coolant hose (1).

Lock must snap audibly into place.



Connect coolant hose (1).

Lock must snap audibly into place.

cardiagn.com

Required follow-up work:

- Secure air conditioning compressor.
- Install fan cowl.
- Install underbody protection.
- Top up coolant.
- Top up oil.
- Connect battery earth lead.

cardiagn.com

11 16 550 Removing and installing/replacing alternator support (B37C)

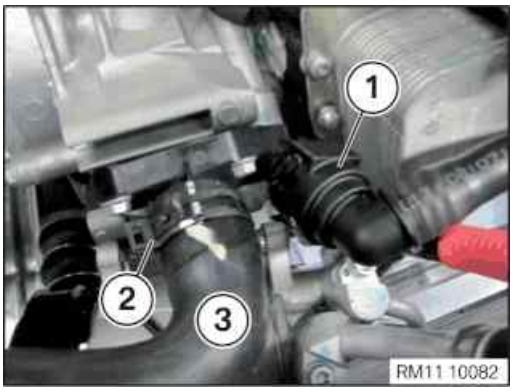
Special tools required:

- 11 4 470

Necessary preliminary tasks:

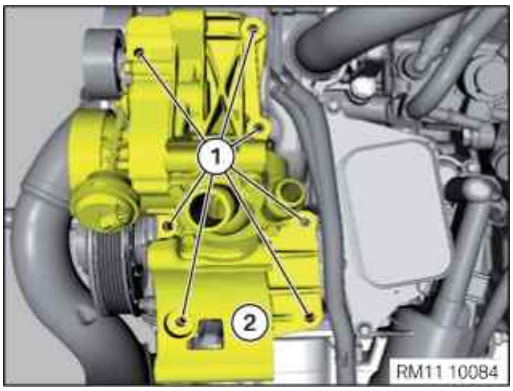
- Remove alternator.
- Remove fan cowl.
- Only release air conditioning compressor for air conditioning and secure to prevent falling down. (Air conditioning does not have to be drawn off.)
- Drain coolant.

Removal:



Unlock and detach coolant hose (1).

Release clamp (2) and pull off coolant hose (3).

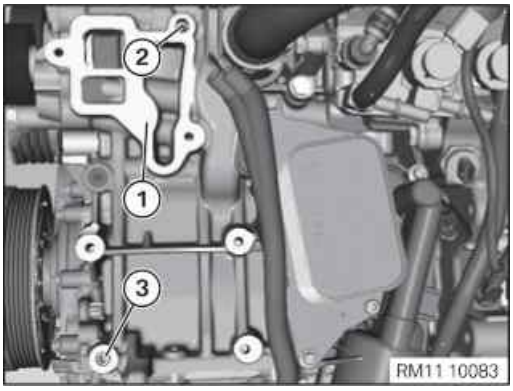


Release screws (1).

Remove alternator support (2).

Installation:

cardiagn.com



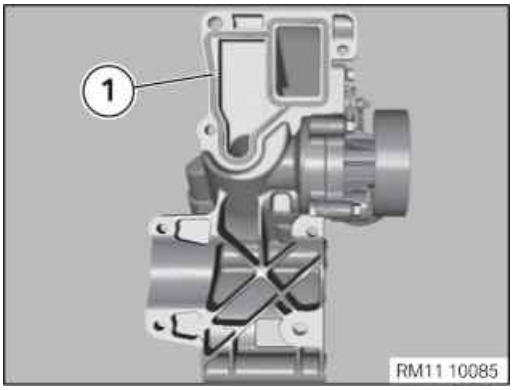
Clean sealing surface (1) with special tool 11 4 470 .

Check centring bushes (2 and 3) for damage, replace if necessary.

Replacement:

Remounting the coolant pump.

Remounting the coolant thermostat.



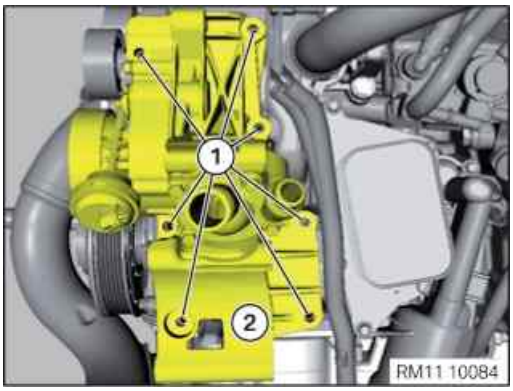
Note:
Sealing bead (1) is bonded to housing of the new alternator support.

Installation note:
If the sealing bead (1) protrudes slightly and if the sealing bead (1) is not damaged, the alternator support can be reinstalled.

If damaged: remove sealing bead (1) using suitable tool.

Replacing the sealing bead (1) sealant 2 2 (Loctite 5970).

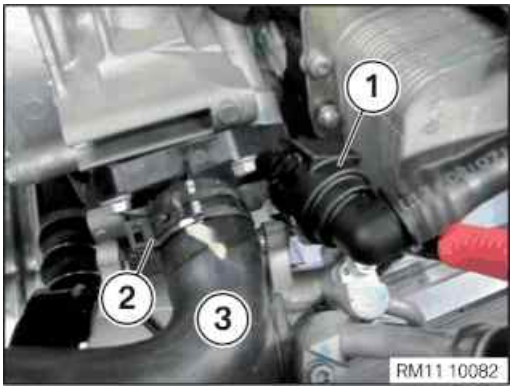
Sealant height approximately 2 to 2.5 mm.



Mount alternator support (2).

Tighten down screws (1).

Tightening torque 11 51 3AZ.



Mount coolant hose (1) (must audibly engage).

Mount coolant hose (3).

cardiagn.com

Required follow-up work:

- Mount air conditioning compressor for air conditioning.
- Install fan cowl.
- Install alternator.
- Top up coolant.

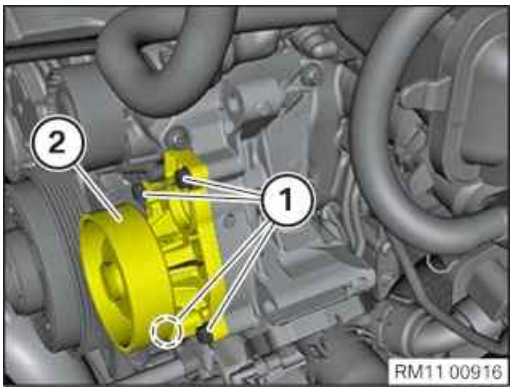
cardiagn.com

11 51 000 Removing and installing/replacing coolant pump (B37C)

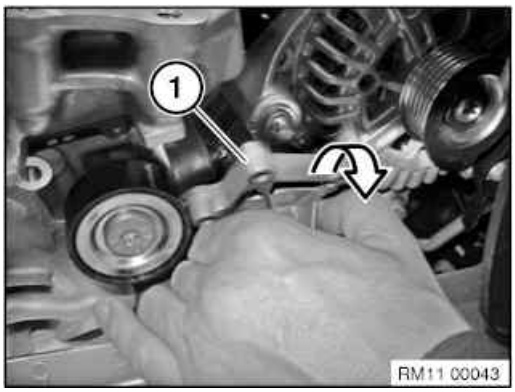
Necessary preliminary tasks:

- Remove front underbody protection.
- Remove alternator.
- Drain coolant.

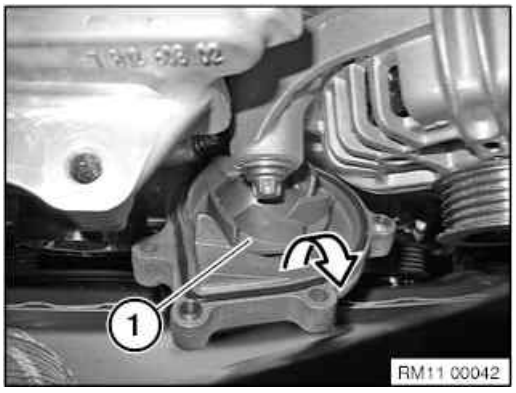
Removal:



Release screws (2 and 3) from coolant pump (1).*Note:* Graphic B38.



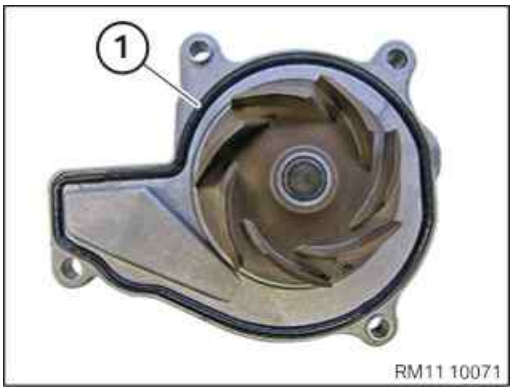
Lift out coolant pump (1) upwards.



Remove coolant pump (1).

cardiagn.com

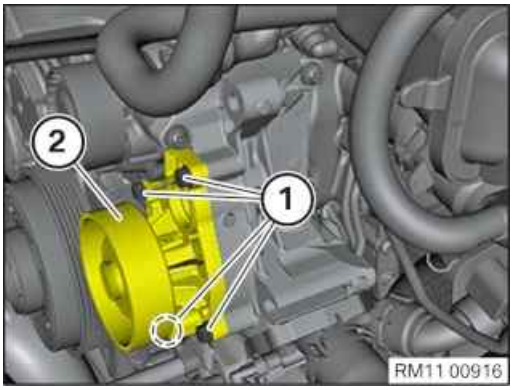
Installation:



Sealing bead (1) is applied to housing of coolant pump.*Installation note:*
If the sealing bead (1) protrudes slightly and if the sealing bead (1) is not damaged, the coolant pump can be reinstalled.

If the sealing bead (1) is damaged, remove sealing bead (1) with a suitable tool and replace with sealing compound 2.2 (Loctite 5970).

Sealant height approximately 2 to 2.5 mm.



Tighten screws (2 and 3) on coolant pump (1).

Tightening torque: 11 51 2AZ.

Note:
Graphic B38.

Required follow-up work:

- Install alternator.
- Install front underbody protection.
- Top up coolant.

cardiagn.com

11 51 000 Removing and installing/replacing the coolant pump

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.
For additional information see:
Main group 17
17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Filling **without** the vacuum filler device (watering can filling) is **not permitted**.
Non-compliance will result in danger of component damage and/or engine damage.
Filling specification **absolutely must** be adhered to.
The operation of the vehicle is not permitted unless the filling procedure has been completed. Otherwise, functional limitations (degradation) and/or overheating may occur.
A bleeding procedure is required after a part has been exchanged in the cooling system and/or after refilling the cooling system.

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

cardiagn.com

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

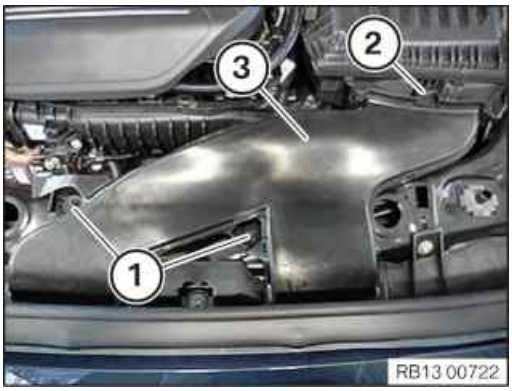
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

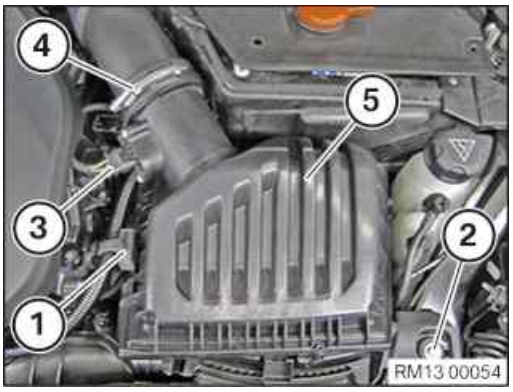
3 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

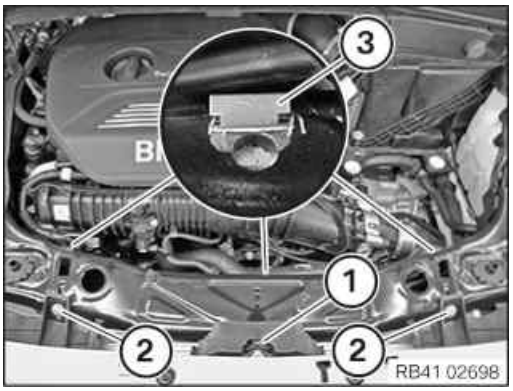
4 – Removing intake silencer housing

cardiagn.com

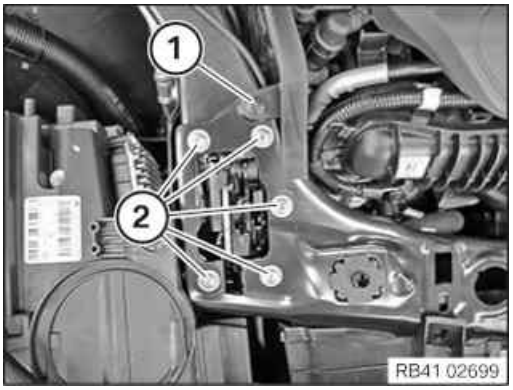


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

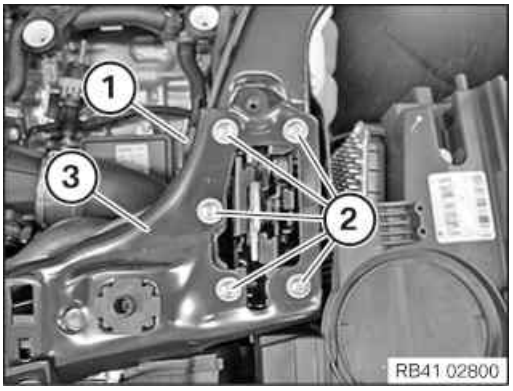
5 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.

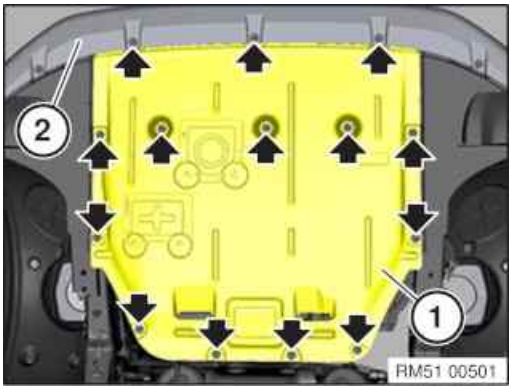


- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

6 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

cardiagn.com

7 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

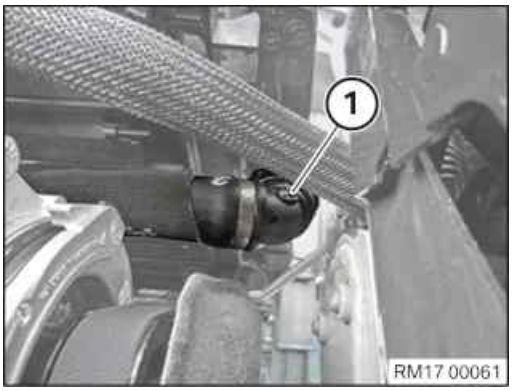
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

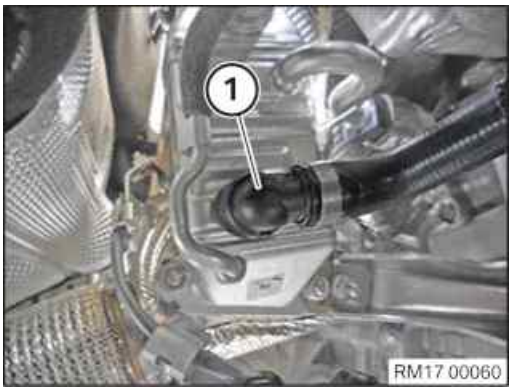
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

cardiagn.com



- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

8 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

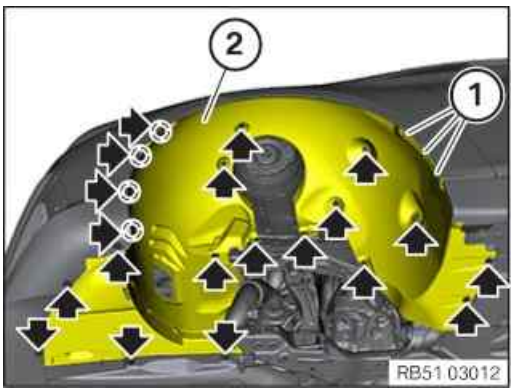
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

9 – Removing the front right wheel arch cover



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

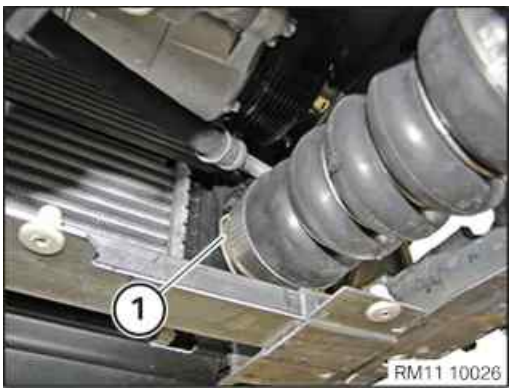
10 – Remove right charge-air line

cardiagn.com

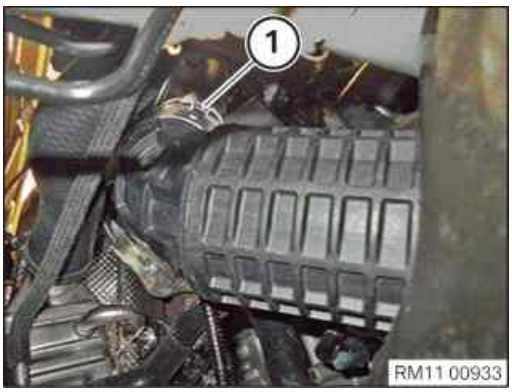
- Release charge air duct screws (1) on oil sump.

- Detach charge air duct screw connection (1) on crankcase.

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).

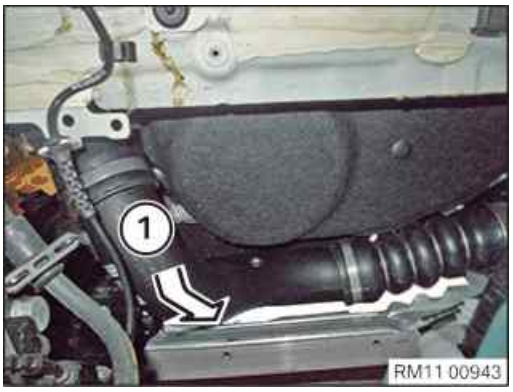


- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.



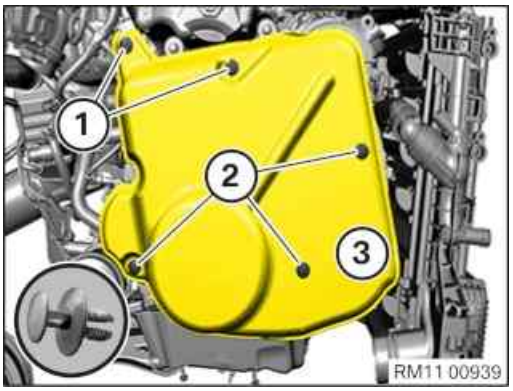
- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

cardiagn.com



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

11 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

12 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION

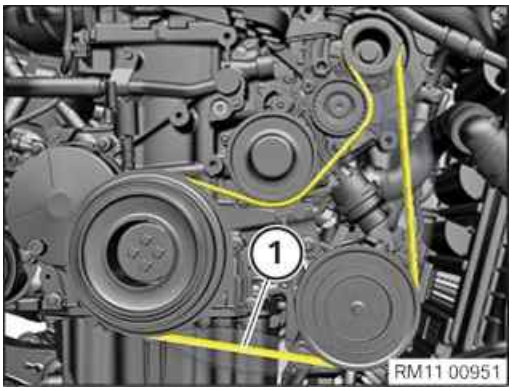
If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .

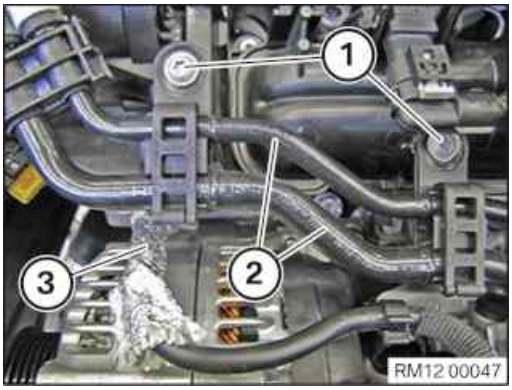


- Guide out the drive belt for the alternator (1) and remove it.

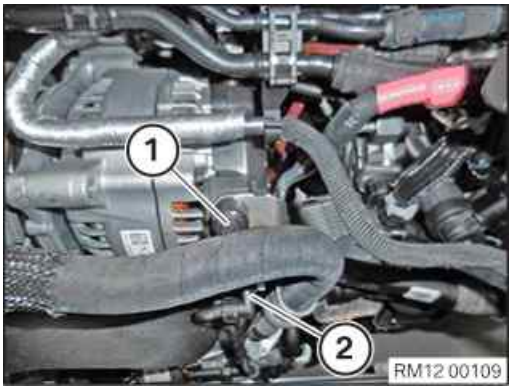
13 – Removing the alternator

Prerequisite

Battery earth lead is disconnected.



- Loosen screws (1).
- Place fuel feed and return line (2) to one side.
- Unlock the coolant ventilation line (3) and pull it off the cylinder head.
- Catch and dispose of escaping coolant.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock the plug connection (2) and pull off from the alternator.

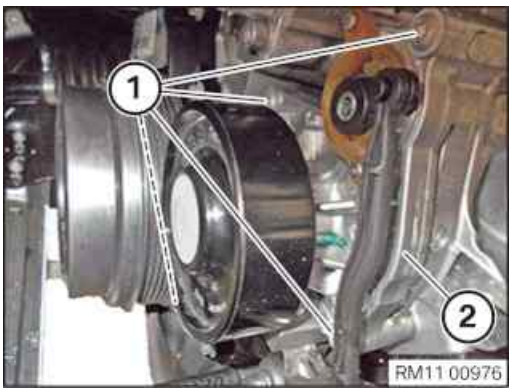
cardiagn.com

- Loosen screws (1).

- Feed the alternator (1) out toward the top and remove it.

MAIN WORK

14 – Removing the coolant pump



- Loosen screws (1).

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Feed out and remove the coolant pump (2).

15 – Installing coolant pumps

RISK OF DAMAGE

Contaminant or foreign body.

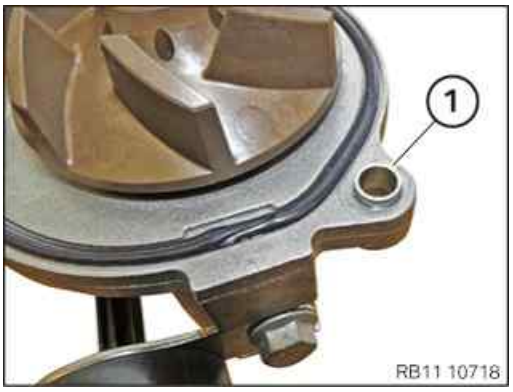
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Clean sealing surfaces.

Check

cardiagn.com



- Check the fitting sleeve (1) for damage.

desired state

- Fitting sleeve must not be scratched or deformed.

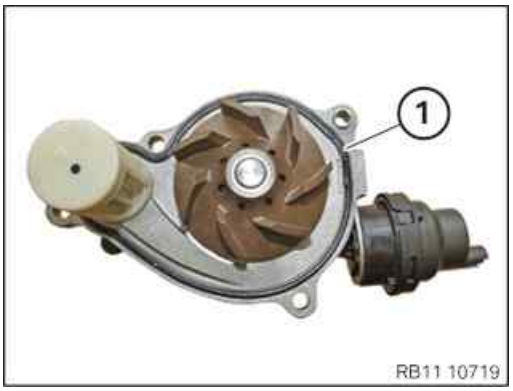
Result

» Fitting sleeve is damaged.

Measure

- Completely renew the coolant pump.

  Parts: Coolant pump



Check

- Check the sealing bead for damage.
- Measure the height of the sealing bead in reference to the surface.

Height of the sealing bead

	2,0 mm ... 2,5 mm

Result

» The sealing bead is damaged or the measured dimension deviates.

Measure

- Remove sealing bead.
- Reapply sealing bead.

Sealing compound

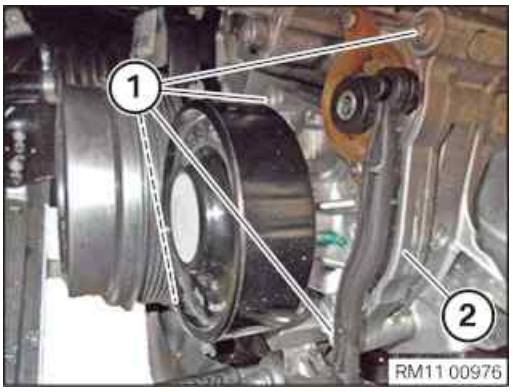
Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

Processing time of liquid sealing compound

	< 12 min

cardiagn.com



- Insert and install the coolant pump (2).
- Tighten the screws (1).

Coolant pump to crankcase

M6	If reusing the coolant pump: Apply Loctite 5970 For additional information see: 11 00 ... Overview of consumables in EPC (Electronic Parts Catalogue) sealing compound 2.2	Tightening torque	8 Nm

POSTPROCESSES

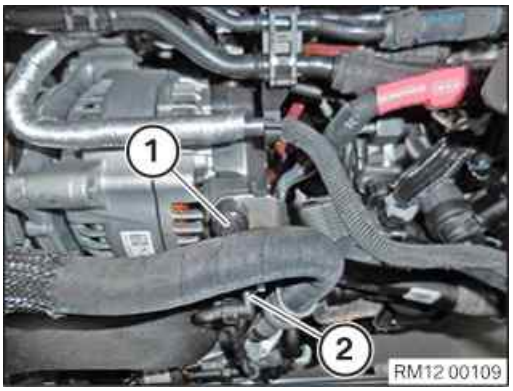
16 – Installing the alternator

- Insert and install the alternator (1).

- Tighten the screws (1).

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm



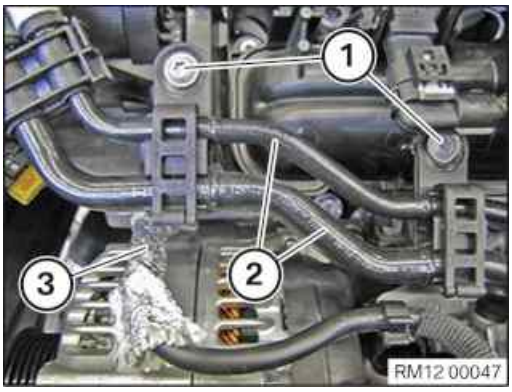
- Mount the positive battery cable to the alternator and secure it with the nut.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

- Mount the cover (1) on the nut.
- Connect the connector (2) to the alternator and lock audibly.

cardiagn.com



- Mount fuel supply and return line (2).
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

- Connect the coolant ventilation line (3) to the cylinder head and audibly lock.

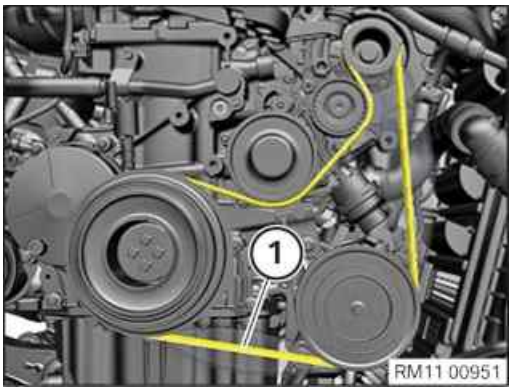
17 – Installing the drive belt for alternator

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

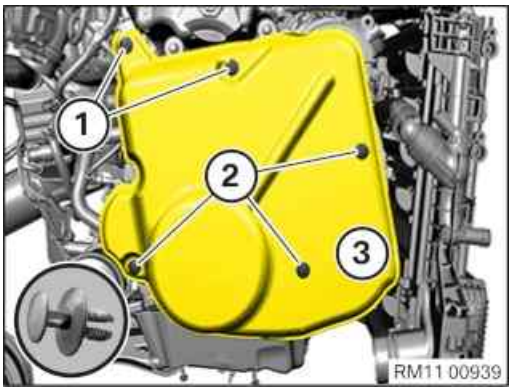


- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

18 – Install the acoustic cover for the engine at the front

cardiagn.com



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

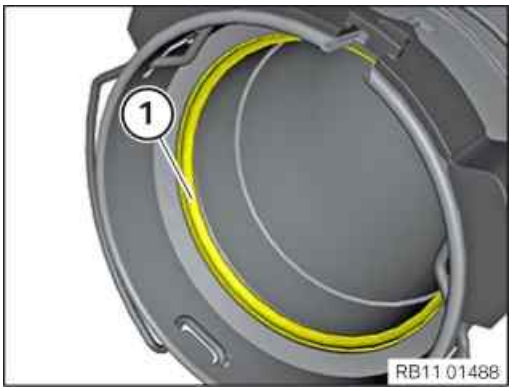
19 – Install right charge air duct

RISK OF DAMAGE

Damage to the exhaust turbocharger.

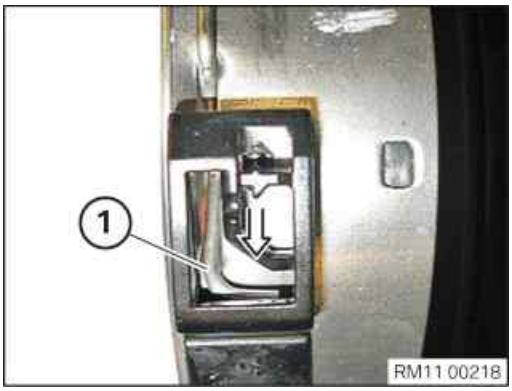
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

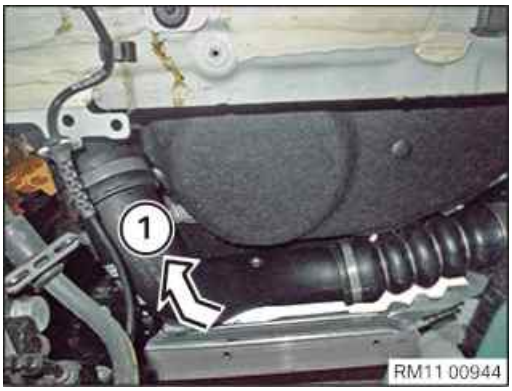


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

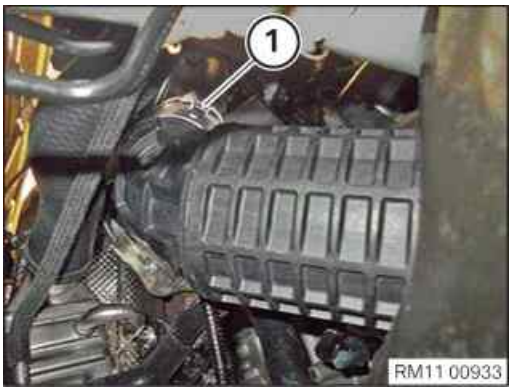


- Let the lock (1) engage at the holder (arrow).



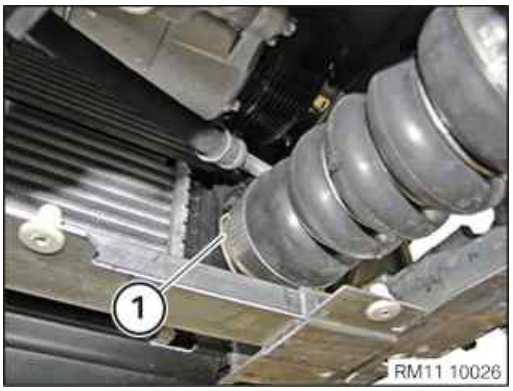
- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.

cardiagn.com



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

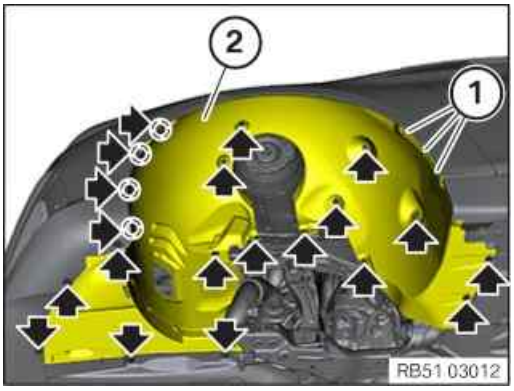
M6x25		Tightening torque	5 Nm

- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

20 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

21 – Installing the front right wheel

cardiagn.com

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

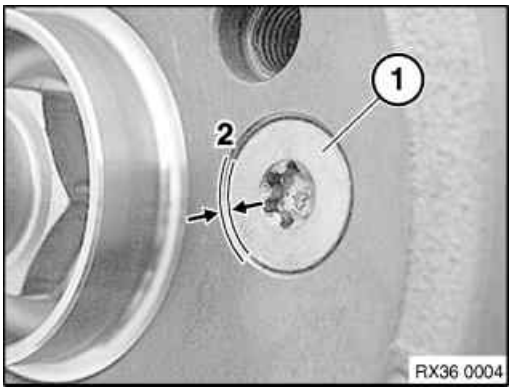
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

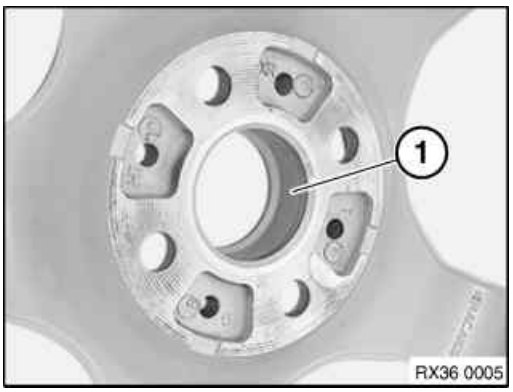


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

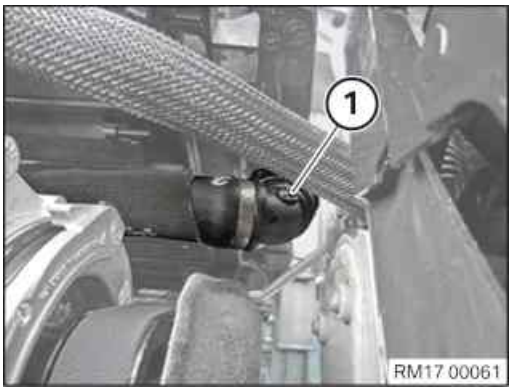
M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

cardiagn.com

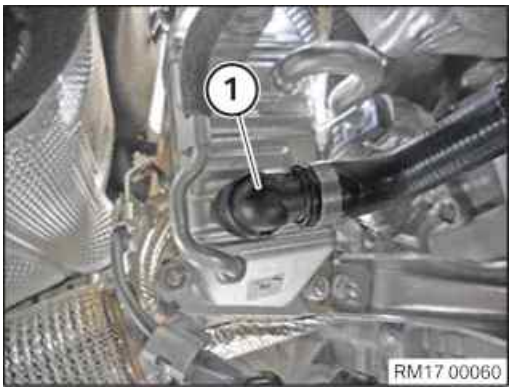
22 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

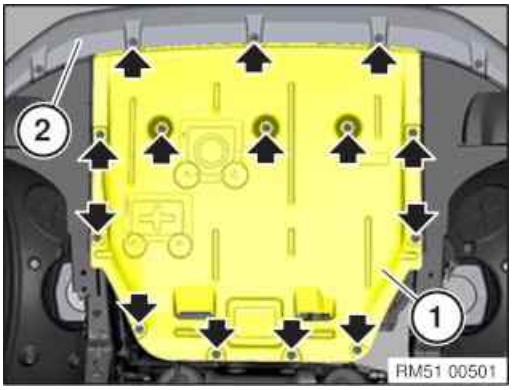


- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

23 – Installing the front underbody protection

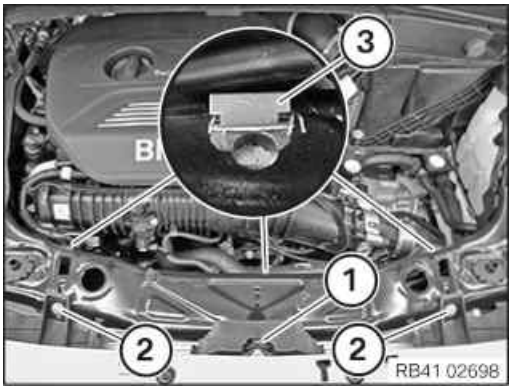


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

24 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

M8		Tightening torque	25 Nm

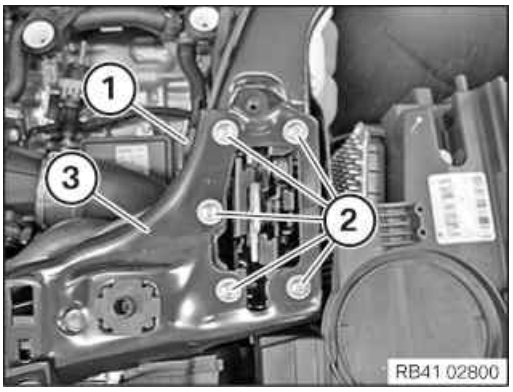
- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

cardiagn.com

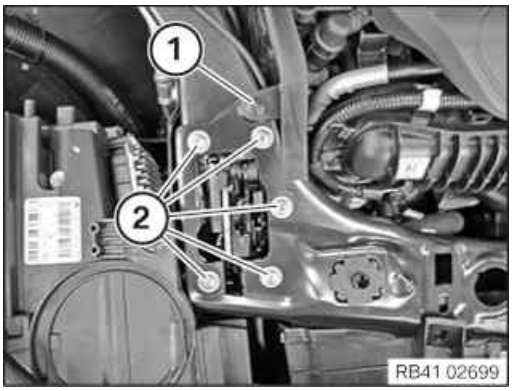


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



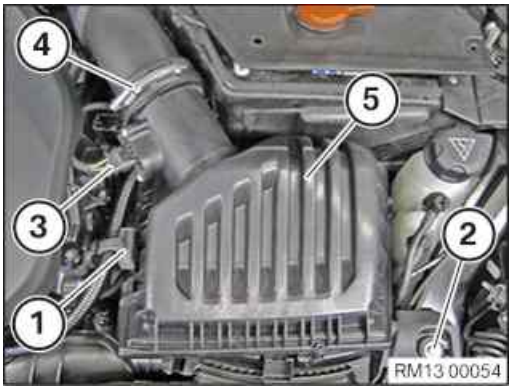
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

25 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

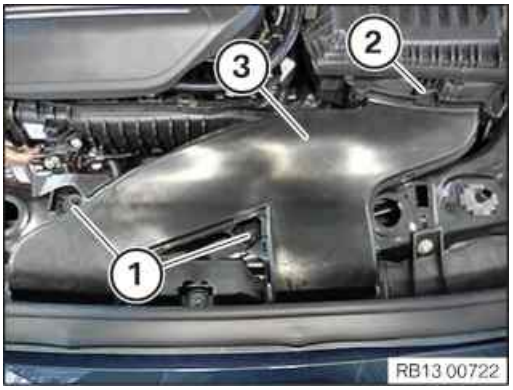
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

26 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

27 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

28 – Disconnecting all battery earth leads

- See additional information.

29 – Fill and bleed the coolant circuit

▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

11 53 942 Removing and installing (replacing) the connecting branch on the engine block (Draining and topping up coolant, see 17 00 ...)

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.

For additional information see:

Main group 17

17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

Filling **without** the vacuum filler device (watering can filling) is **not permitted**.

Non-compliance will result in danger of component damage and/or engine damage.

Filling specification **absolutely must** be adhered to.

The operation of the vehicle is not permitted unless the filling procedure has been completed. Otherwise, functional limitations (degradation) and/or overheating may occur.

A bleeding procedure is required after a part has been exchanged in the cooling system and/or after refilling the cooling system.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

1 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

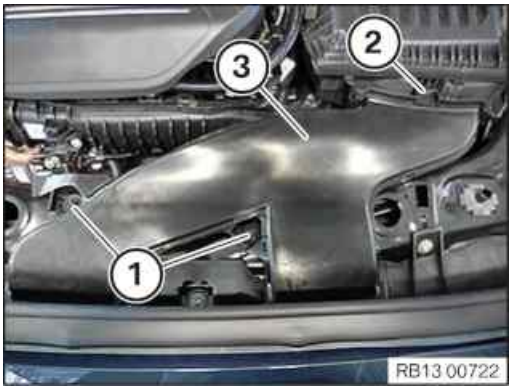
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

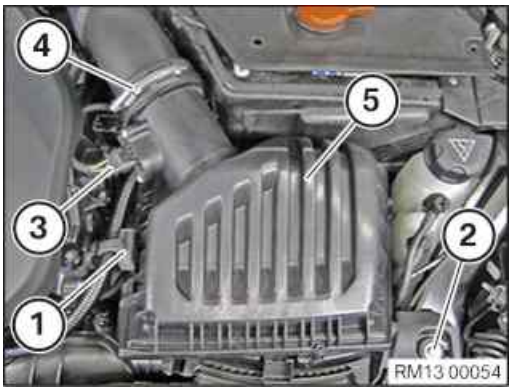
2 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

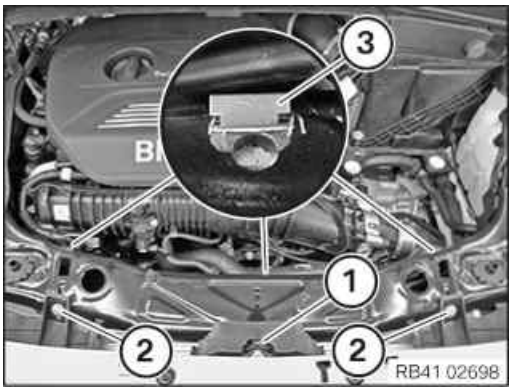
3 – Removing intake silencer housing

cardiagn.com

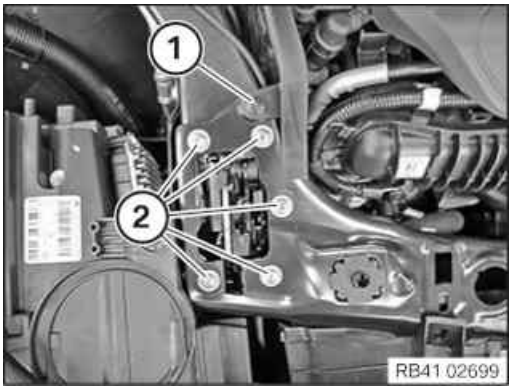


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

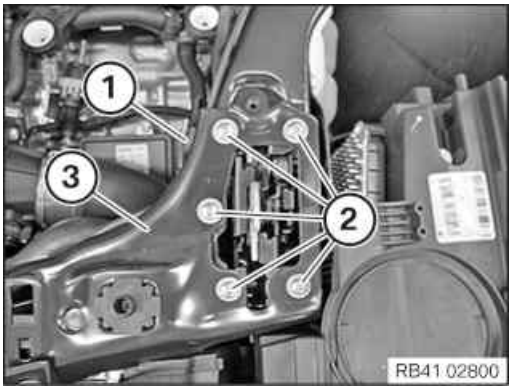
4 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.

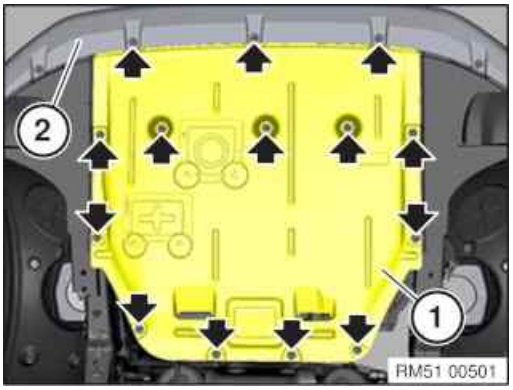


- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

5 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

cardiagn.com

6 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

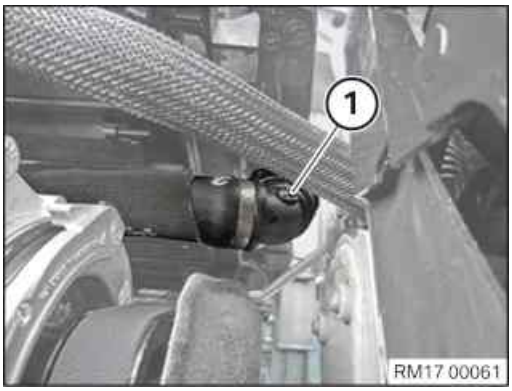
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

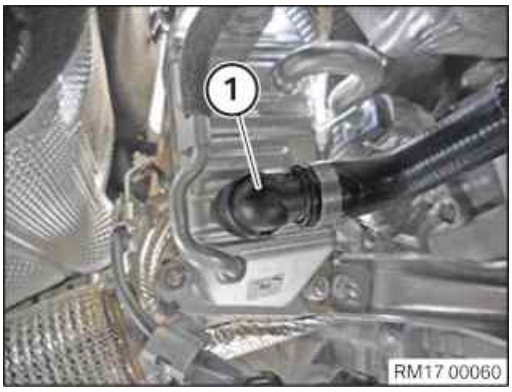
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

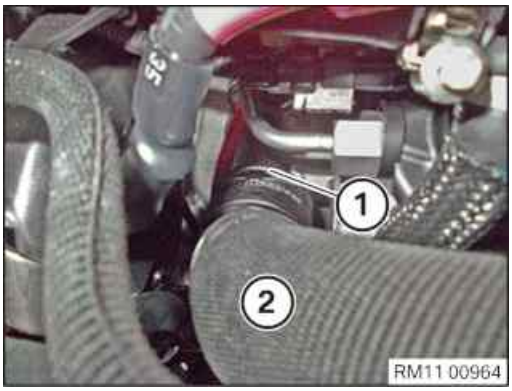
cardiagn.com



- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

MAIN WORK

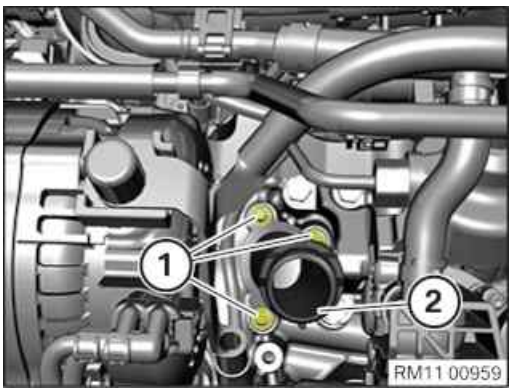
7 – Remove connecting branch on the engine block



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1) upward.
- Pull off the coolant hose (2).
- Catch and dispose of escaping coolant.

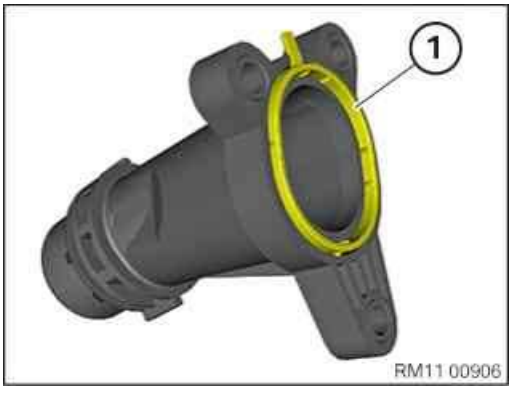


- Loosen screws (1).
- Guide out and remove the connecting branch (2).

8 – Install connecting branch on the engine block

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

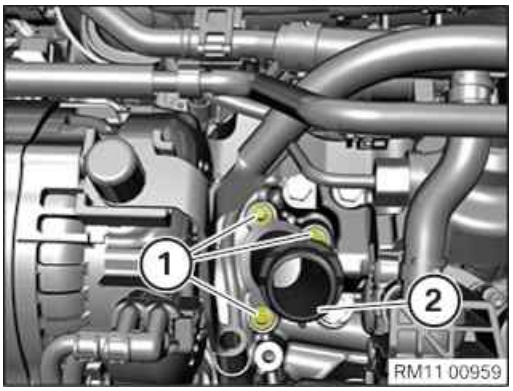


- Renew gasket (1).

  Parts: Gasket

cardiagn.com

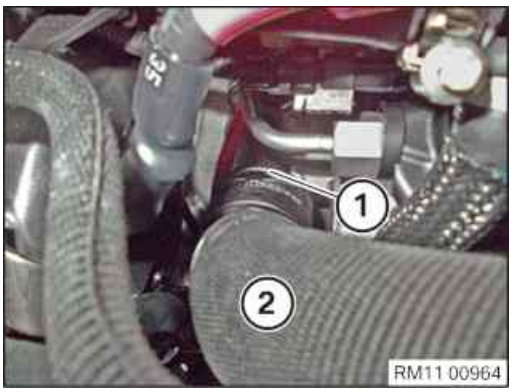
- Clean the sealing surface (1) on the engine block with the special tool **0 495 102 (11 4 470)**.



- Insert and position the connecting branch (2).
- Tighten the screws (1).

Connecting branch to engine block

M6x25		Tightening torque	8 Nm



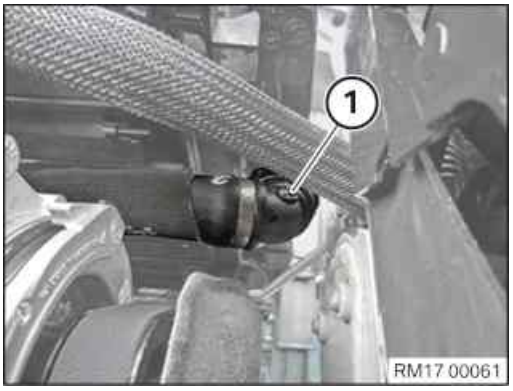
- Connect and lock coolant hose (2).
- Ensure that the lock (1)engages audibly.

POSTPROCESSES

9 – Connect the coolant line

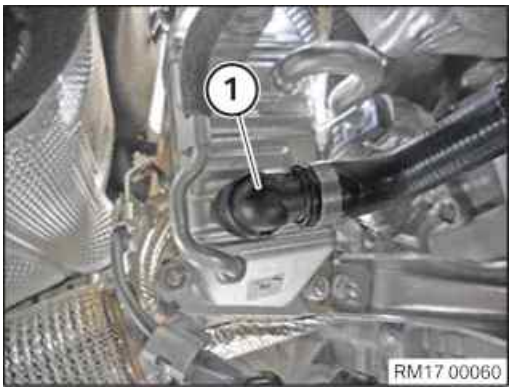
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



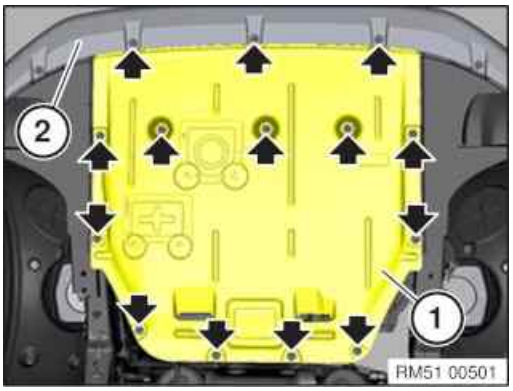
- Connect the right coolant line (1) to the radiator and lock audibly.

cardiagn.com



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

10 – Installing the front underbody protection

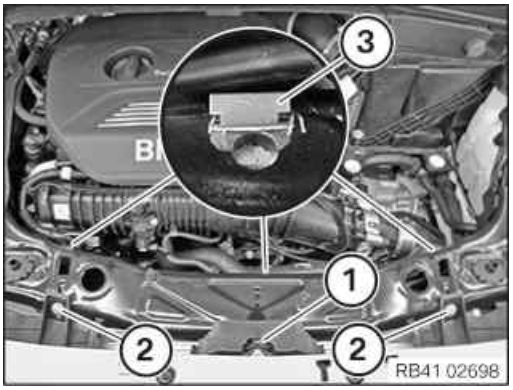


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

11 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

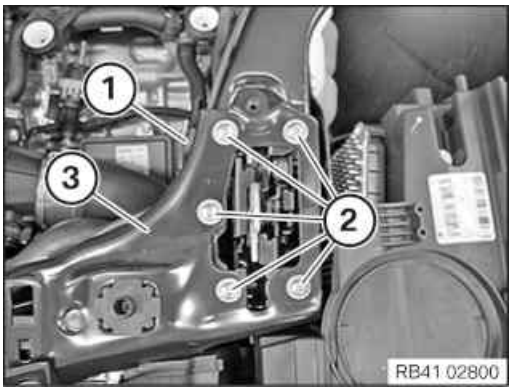
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.



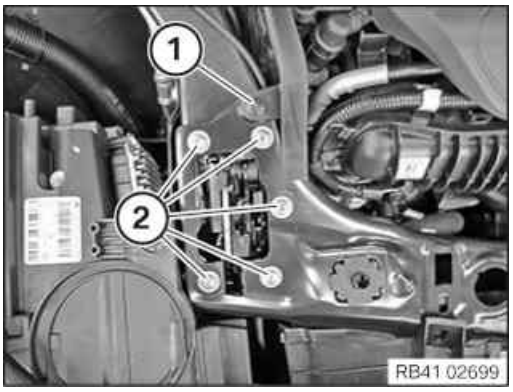
- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

cardiagn.com



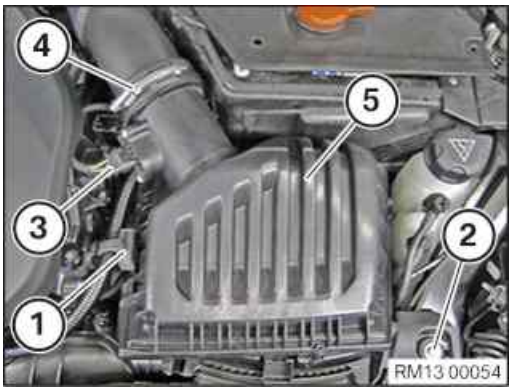
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

12 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

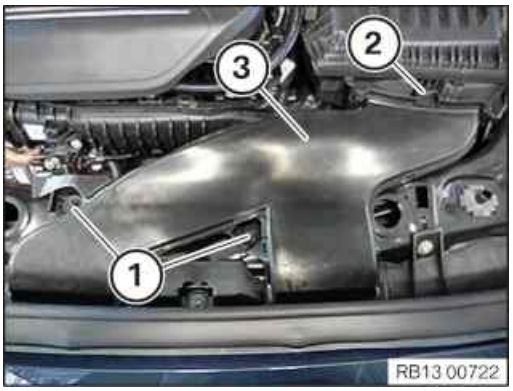
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

13 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

14 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

15 – Filling and bleed the high-temperature coolant circuit

- See additional information.

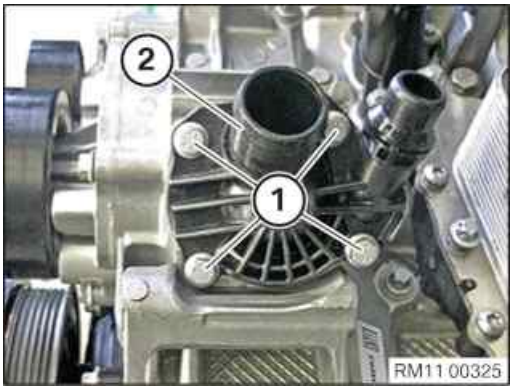
11 53 000 Removing and installing or replacing coolant thermostat (B37C)

Necessary preliminary work:

- Remove fan cowl.
- Drain coolant.
- Only loosen compressor for air conditioning and secure to prevent falling (air conditioning does not have to be bled).

Note: Until production date 10/2015, the coolant thermostat can only be replaced after a technical change in conjunction with the coolant pump.

Removal:



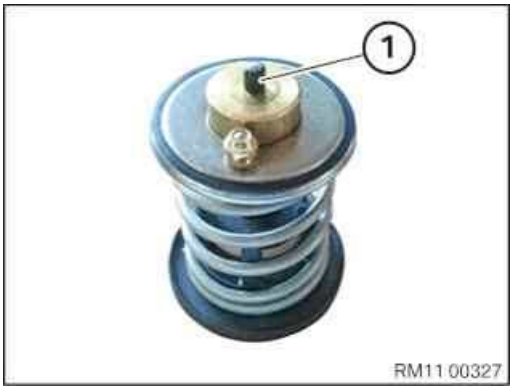
Release screws (1).

Remove thermostat housing (2).

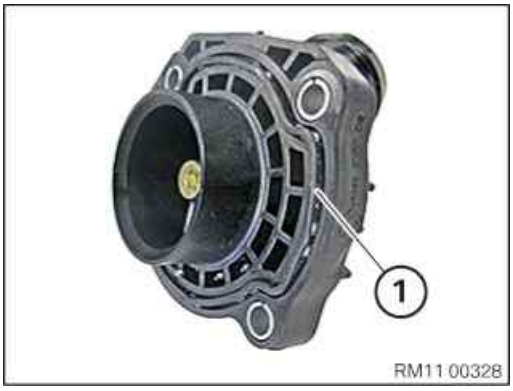
Remove thermostat (1) from housing in direction of arrow.

Installation:

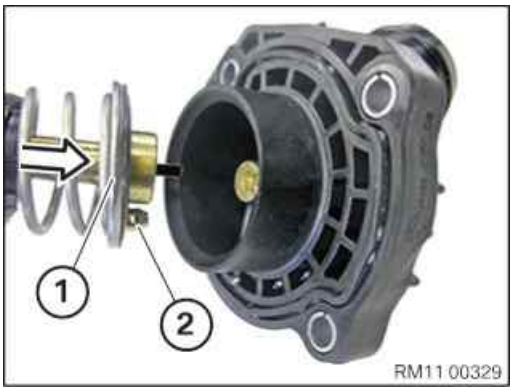
cardiagn.com



Installation note:
Guide sleeve (1) must not be damaged or missing.

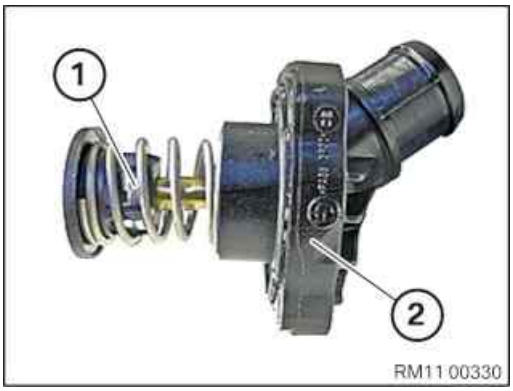


Parts: Replace profile seal (1).



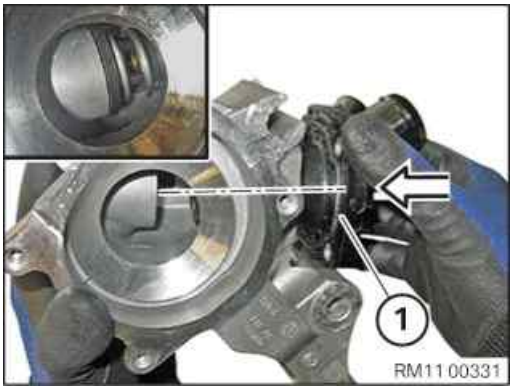
Installation note:
Valve (2) must be positioned at bottom.

Insert thermostat (1) in housing.



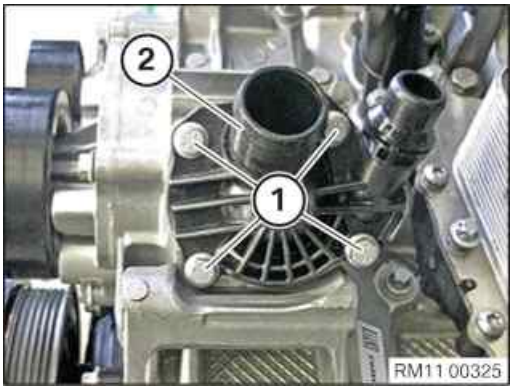
Caution!
Thermostat (1) must not tilt out of housing (2) during installation.

cardiagn.com



Note:
Alternator bracket dismantled for improved clarity.

Install thermostat housing (1) with thermostat in a straight line and free from stress.



Tighten screws (1).

Tightening torque: 11 00 2AZ.

Required follow-up work:

- Install compressor for air conditioning.
- Top up coolant.
- Install fan cowl.

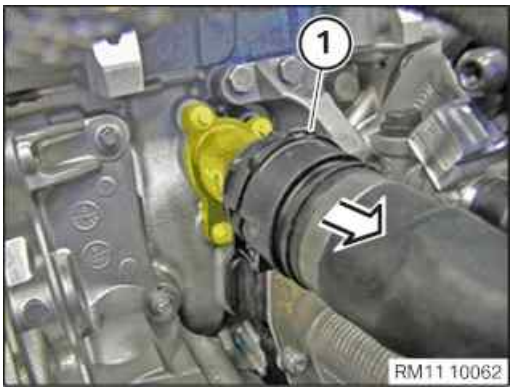
cardiagn.com

11 53 942 Removing and installing/replacing connecting branch (B37C)

Necessary preliminary tasks:

- Drain coolant

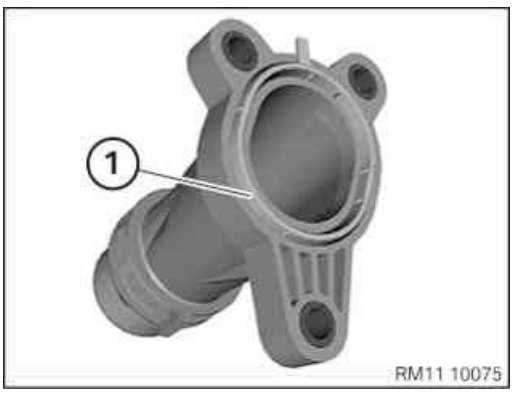
Removal:



Unlock coolant hose (1) and disconnect from connecting branch.

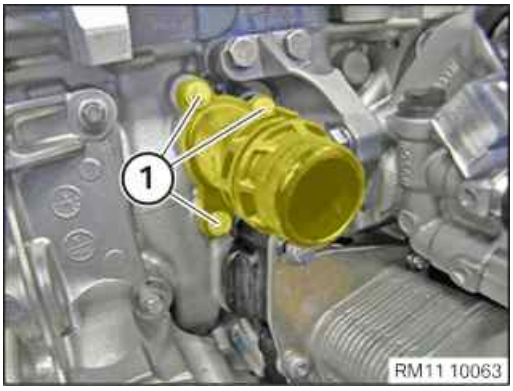
Release screws (1) on connecting branch.
Remove connecting branch.

Installation:



Install gasket (1).
Part: Replace sealing ring.

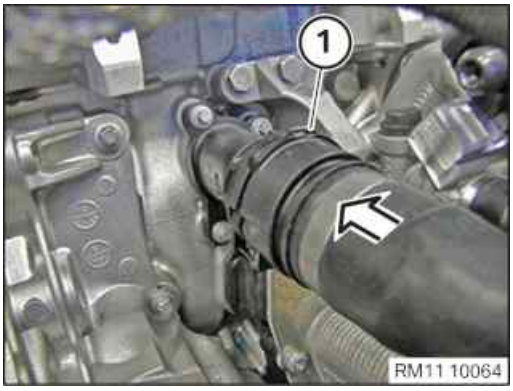
cardiagn.com



Position connecting branch.

Tighten screws (1) on connecting branch.

Tightening torque 11 51 1AZ.



Mount coolant hose on connecting branch (1).

Lock must snap audibly into place.

Required follow-up work:

- Add coolant

cardiagn.com

11 53 000 Removing and installing/replacing coolant thermostat

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Up to production date 10/2015 the coolant thermostat can after a technical alteration only be replaced in conjunction with the coolant pump.

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.

For additional information see:

Main group 17

17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Filling **without** the vacuum filler device (watering can filling) is **not permitted**.

Non-compliance will result in danger of component damage and/or engine damage.

Filling specification **absolutely must** be adhered to.

The operation of the vehicle is not permitted unless the filling procedure has been completed. Otherwise, functional limitations (degradation) and/or overheating may occur.

A bleeding procedure is required after a part has been exchanged in the cooling system and/or after refilling the cooling system.

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

cardiagn.com

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

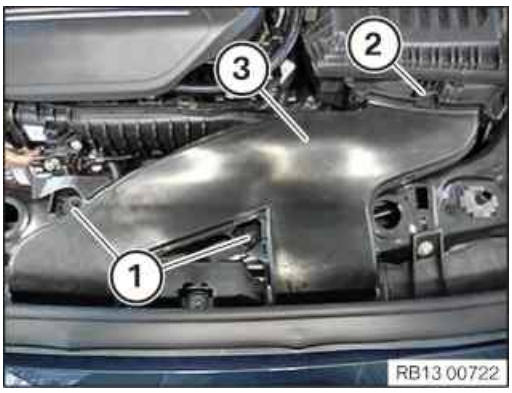
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

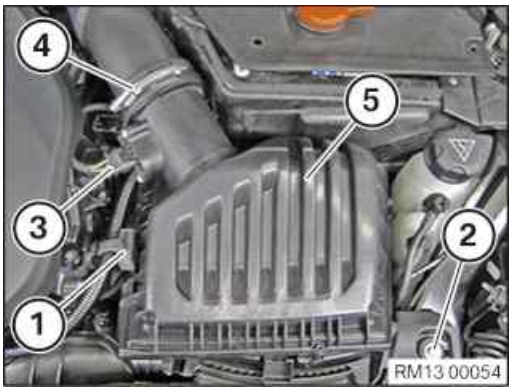
3 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

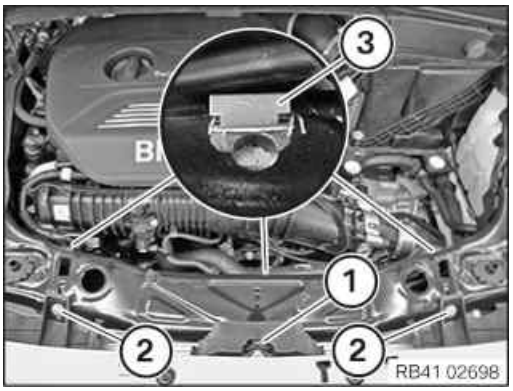
4 – Removing intake silencer housing

cardiagn.com

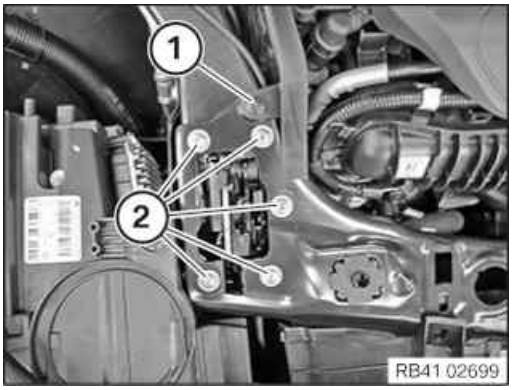


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

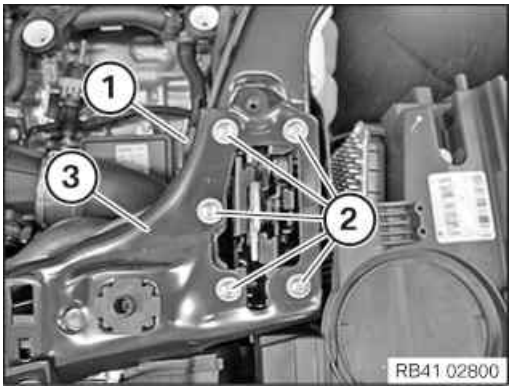
5 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.

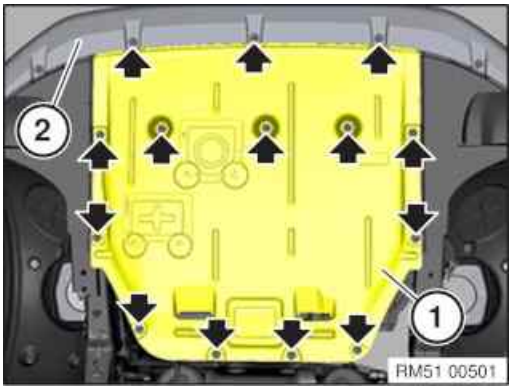


- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

6 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

cardiagn.com

7 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

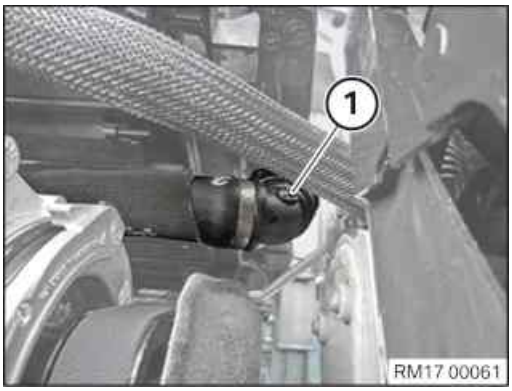
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

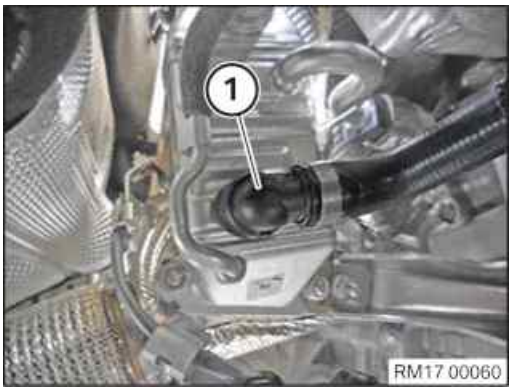
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

cardiagn.com



- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

8 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

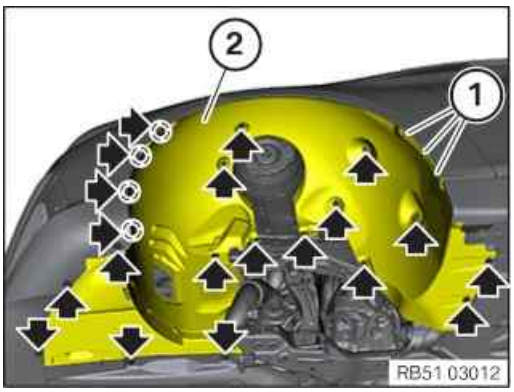
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

9 – Removing the front right wheel arch cover



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

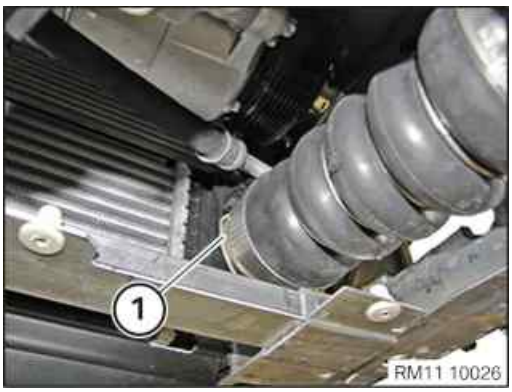
10 – Remove right charge-air line

cardiagn.com

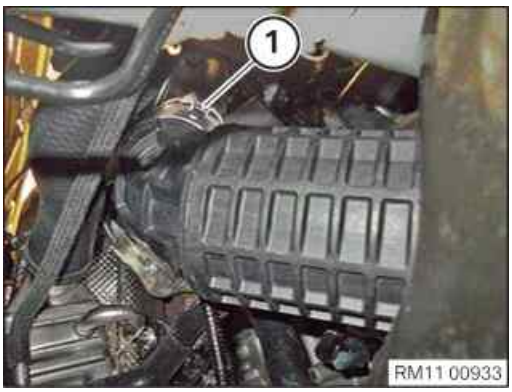
- Release charge air duct screws (1) on oil sump.

- Detach charge air duct screw connection (1) on crankcase.

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).

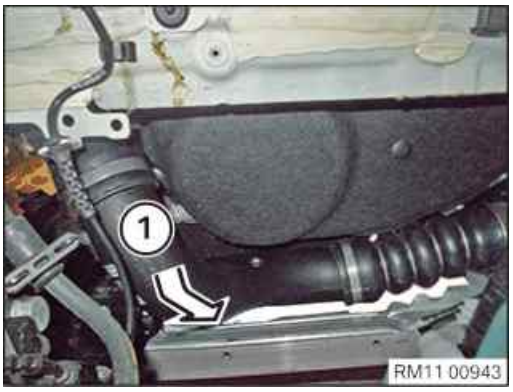


- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.



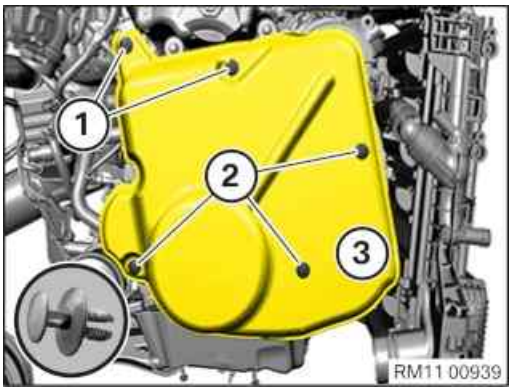
- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

cardiagn.com



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

11 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

12 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION

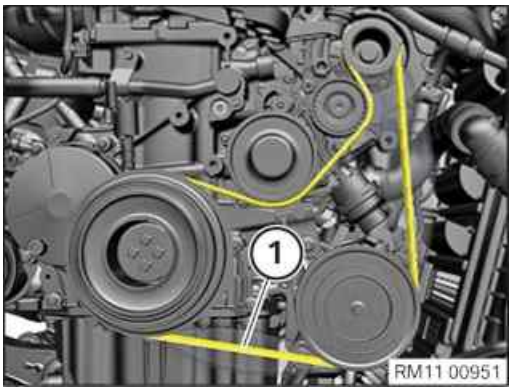
If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .

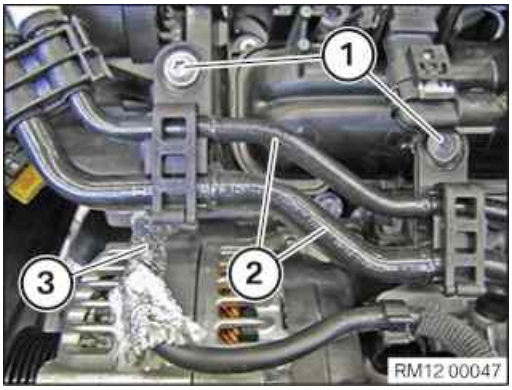


- Guide out the drive belt for the alternator (1) and remove it.

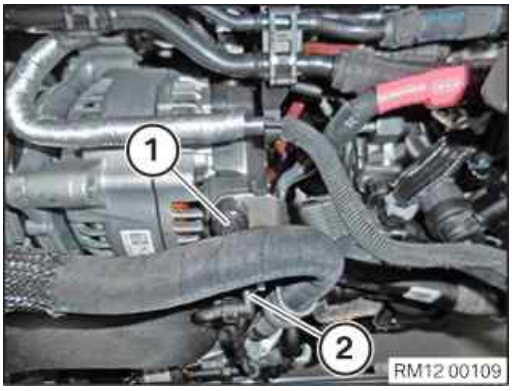
13 – Removing the alternator

Prerequisite

Battery earth lead is disconnected.



- Loosen screws (1).
- Place fuel feed and return line (2) to one side.
- Unlock the coolant ventilation line (3) and pull it off the cylinder head.
- Catch and dispose of escaping coolant.



- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock the plug connection (2) and pull off from the alternator.

cardiagn.com

- Loosen screws (1).

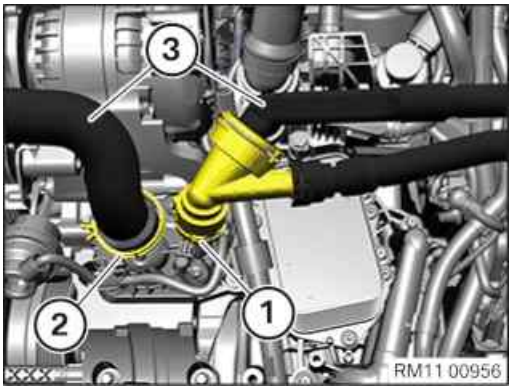
- Feed the alternator (1) out toward the top and remove it.

MAIN WORK

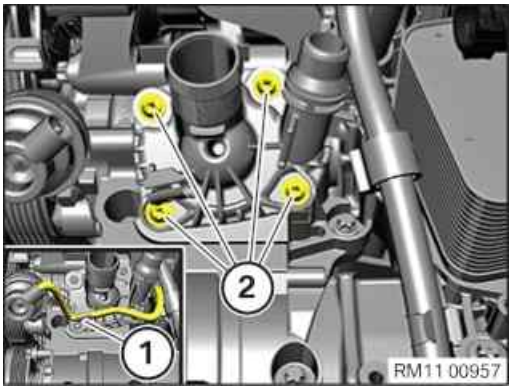
14 – Removing the coolant thermostat

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock of the coolant pipe on the thermostat housing (1).
- Loosen hose clamp (2).
- Disconnect the coolant pipe and coolant hose (3) from the thermostat housing and set aside.
- Catch and dispose of escaping coolant.



- Take the vacuum hose (1) out of the holder.
- Unscrew the bolts (2) on the thermostat housing.
- Thread out and remove the thermostat housing.
- Catch and dispose of escaping coolant.

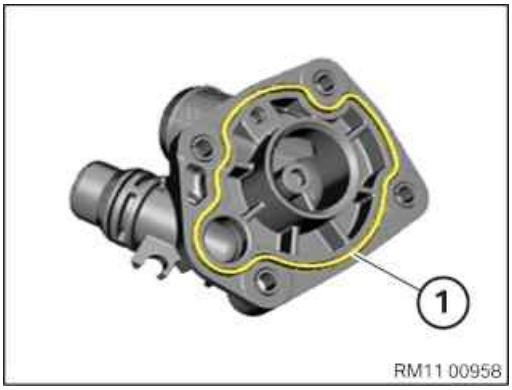
cardiagn.com

- Remove the coolant thermostat (1) from the thermostat housing in the direction of the arrow.

15 – Installing the coolant thermostat

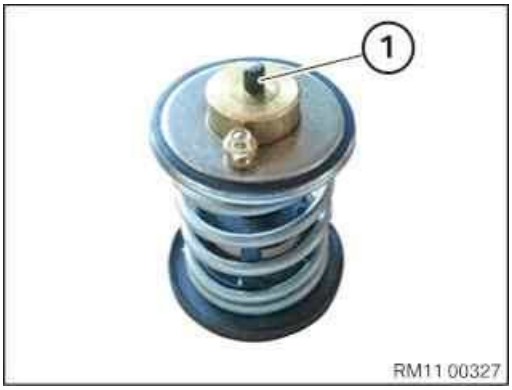
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



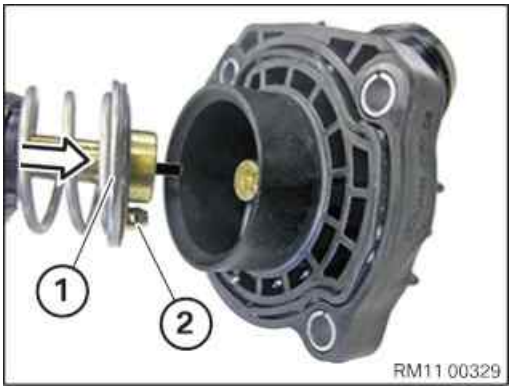
- Renew seal (1) from thermostat housing.

  Parts: Gasket



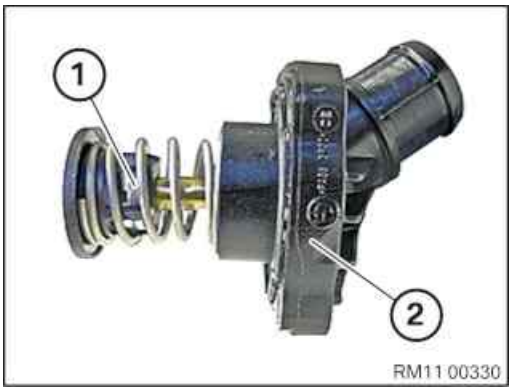
- Check the guide sleeve (1) for damage and renew if necessary.

  The guide sleeve (1) must not be damaged or missing.

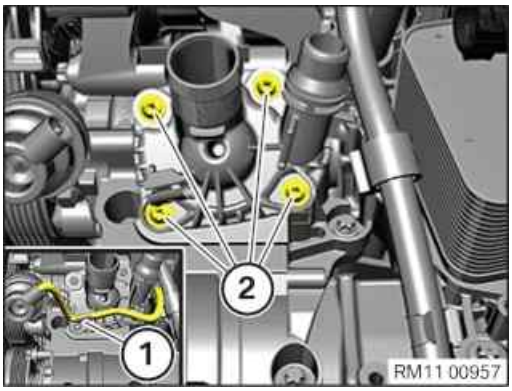


- Insert the coolant thermostat (1) into the thermostat housing so that the valve (2) is on the bottom.

cardiagn.com



- Make sure that the coolant thermostat (1) does not fall out of the thermostat housing (2) during the installation.

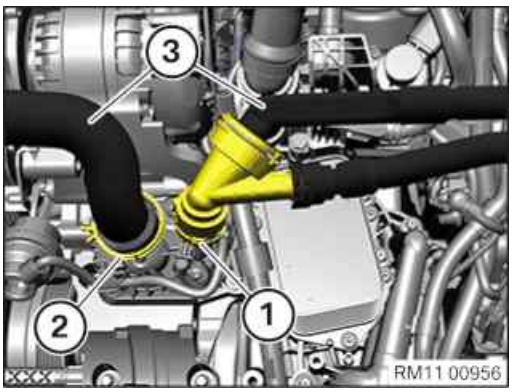


- Install the thermostat housing with the coolant thermostat.
- Tighten down screws (2).

Thermostat housing to component carrier

M6		Tightening torque	8 Nm

- Secure vacuum hose (1) in holder on thermostat housing.



- Connect coolant line and coolant hose (3).
- Make sure that the coolant line (3) engages audibly on the thermostat housing.
- Secure coolant hose with hose clamp (2).

POSTPROCESSES

16 – Installing the alternator

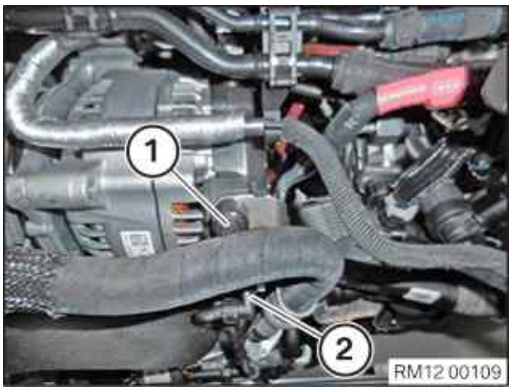
- Insert and install the alternator (1).

cardiagn.com

- Tighten the screws (1).

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

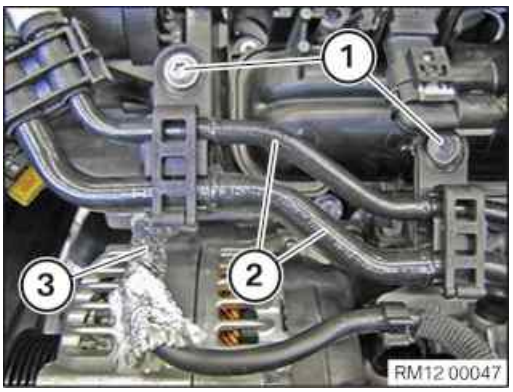


- Mount the positive battery cable to the alternator and secure it with the nut.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

- Mount the cover (1) on the nut.
- Connect the connector (2) to the alternator and lock audibly.



- Mount fuel supply and return line (2).
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

- Connect the coolant ventilation line (3) to the cylinder head and audibly lock.

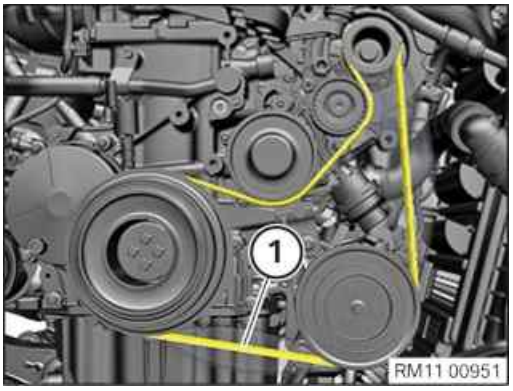
17 – Installing the drive belt for alternator

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

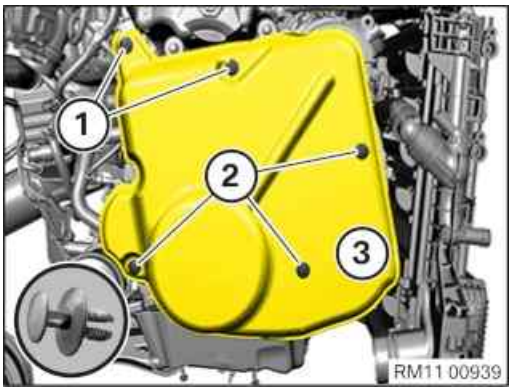


- Feed in the drive belt for the alternator (1) and install it.

cardiagn.com

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

18 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

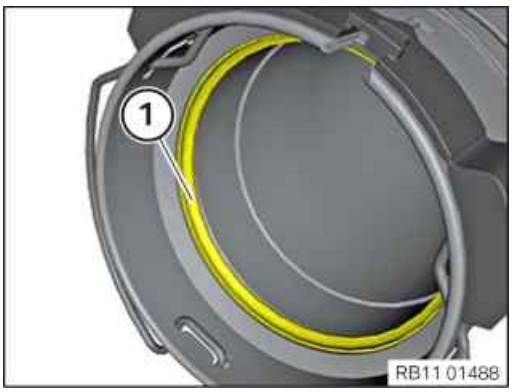
19 – Install right charge air duct

RISK OF DAMAGE

Damage to the exhaust turbocharger.

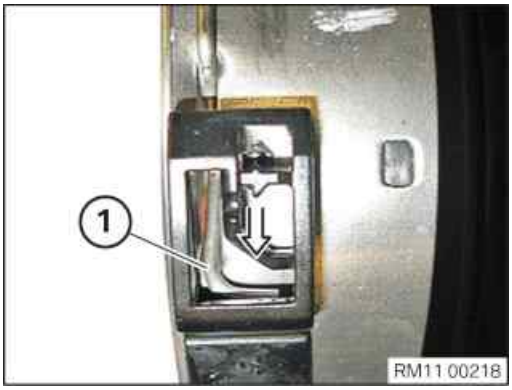
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.



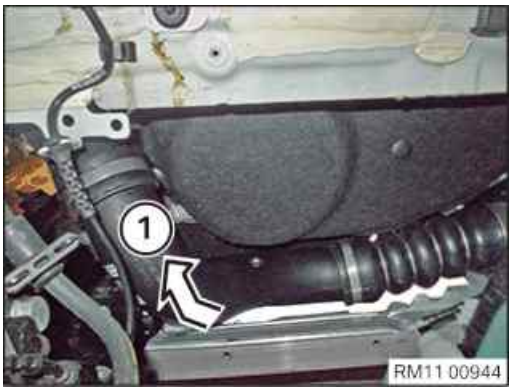
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

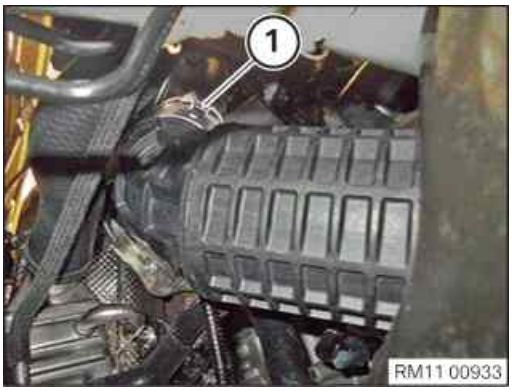


- Let the lock (1) engage at the holder (arrow).

cardiagn.com

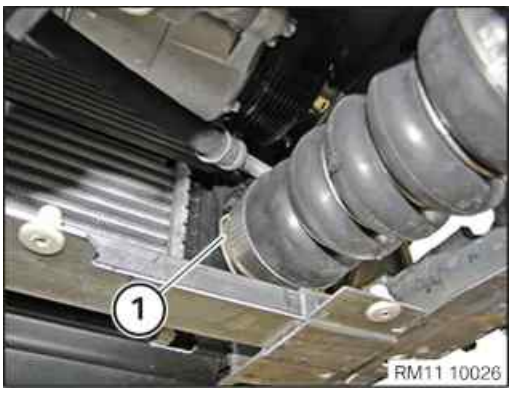


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm

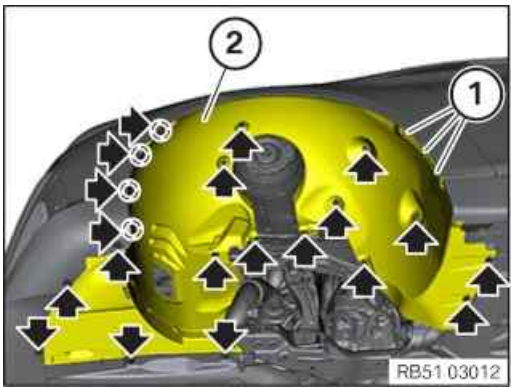
- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

20 – Installing the front right wheel arch cover

cardiagn.com



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

21 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

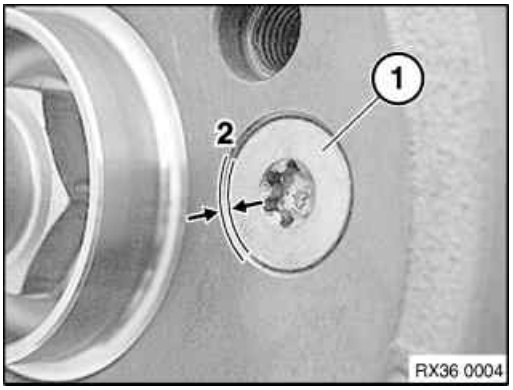
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



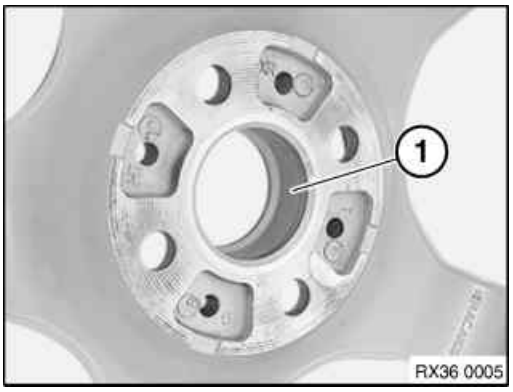
- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

cardiagn.com



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts

- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

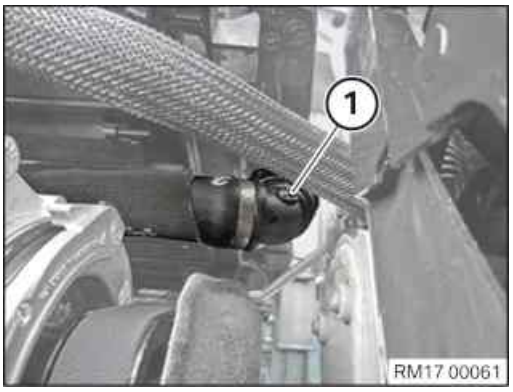
M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

22 – Connect the coolant line

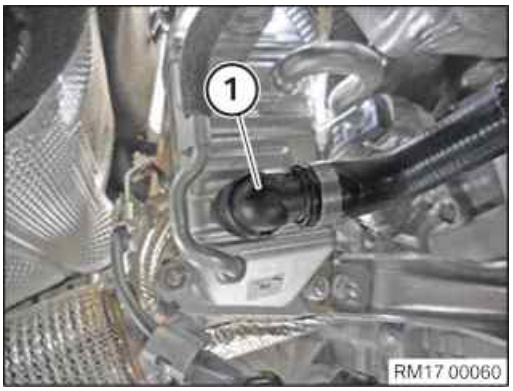
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

cardiagn.com

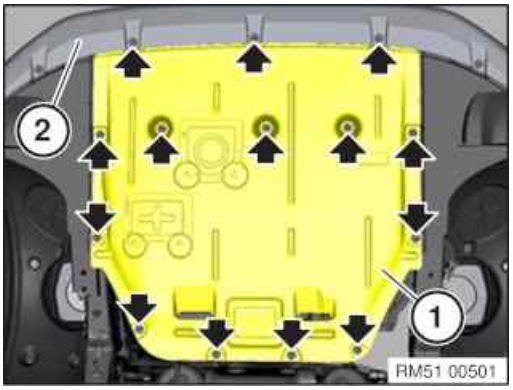


- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

23 – Installing the front underbody protection

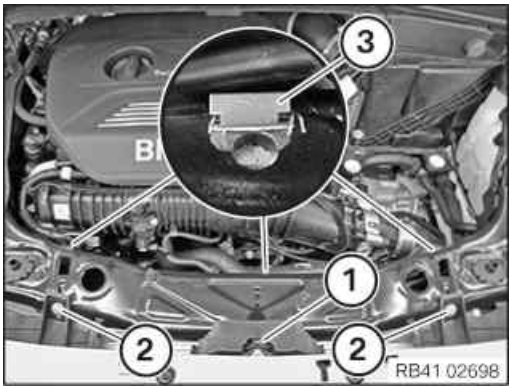


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

24 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

M8		Tightening torque	25 Nm

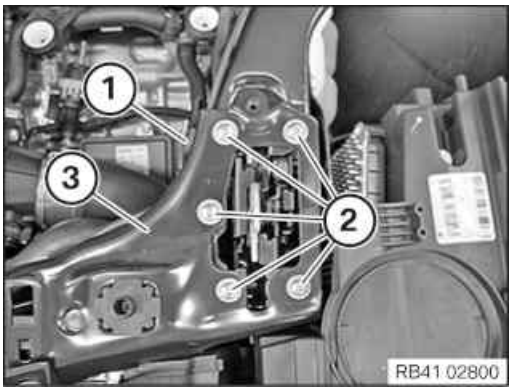
- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

cardiagn.com

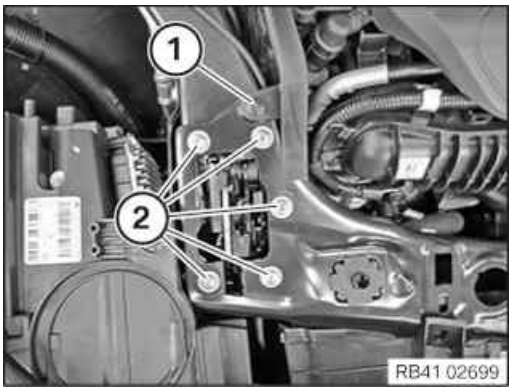


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



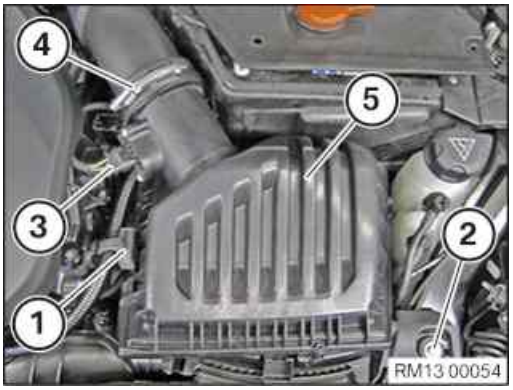
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

25 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

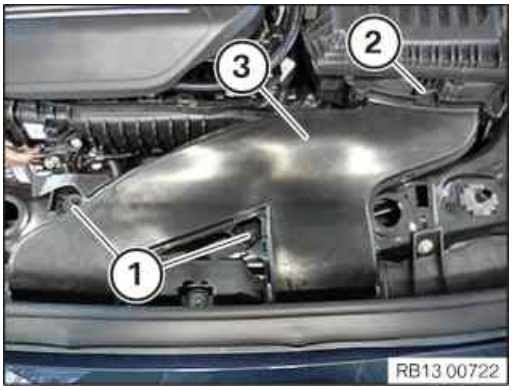
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

26 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

27 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

28 – Disconnecting all battery earth leads

- See additional information.

29 – Fill and bleed the coolant circuit

▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

11 61 730 BMW leakage test for differentiated intake system

Special tools required:

- 81 29 0 426 464
- 81 31 2 353 954
- 2 409 665
- 2 358 459
- 0 426 464
- 81 31 2 357 800
- 2 353 954

Caution!

Excess pressure and vacuum lines can be recognised by the size of their fasteners and are colour-coded blue and red respectively.

Identification:

- Pressure line blue
- Vacuum line red

Excess pressure and vacuum lines must not be mixed up.

Mixing up the lines will result in engine damage.

Necessary preliminary work:

- Release the intake filter housing.
- Prepare BMW diagnosis system
- Start diagnosis program
  1. Power train
  2. Engine electronics
  3. Air supply
  4. Charging pressure control system or perception of lack of power

Ordering information:

- Workshop Equipment - Start BMW
- Workshop equipment catalogue
- Measuring and test equipment
- Service and diagnosis
- Order number 81 29 0 426 464
- Order number 81 31 2 353 954

cardiagn.com

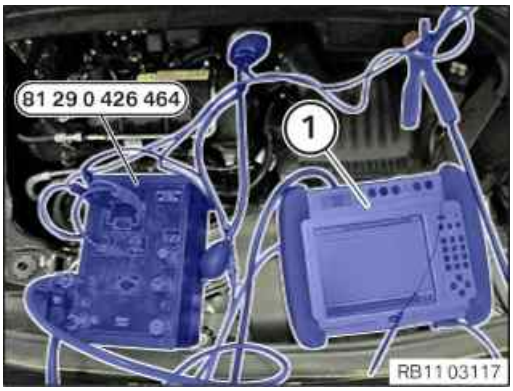
Check intake system for leaks:

For a precise leakage test, both clean air pipes must be closed with the special tool 2 409 665 .

Connect the pressure hose (1) with special tool 2 358 459 .

Insert the blue excess pressure line (2) into the pneumatic coupling (1) up to the limit position.

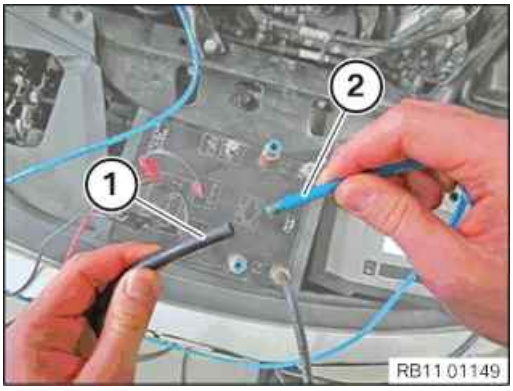
Connect the pressure lines with the diagnosis system and the IMIB.



Insert the blue overpressure lines on the diagnosis auxiliary device 0 426 464 on the connector (1).

Connect Integrated Measurement Interface Box (1 via the hose 81 31 2 357 800 (previously: 81 38 2 201 924) with the connection piece of the diagnostics aid.

Installation note:
Follow diagnosis instruction.



Leak detection with BMW smoke tester:

Disconnect the overpressure line (2) on the diagnosis auxiliary device.

Connect pressure line (1) from the BMW smoke tester 2 353 954 with the overpressure line (2).

cardiagn.com

Put the BMW smoke tester 2 353 954 into operation according to the operating instructions.

Observe BMW diagnosis instructions.

Leaks on the air intake duct are detected by escaping smoke.

cardiagn.com

11 12 800 Clean cylinder head intake channels and intake plenums

Special tools required:

- 11 8 880
- 11 0 235
- 2 302 630
- 11 6 480
- 11 6 050
- 2 356 969
- 2 356 966
- 2 356 967

Necessary preliminary work:

- Disconnect negative battery lead
- Removing intake plenum
- Remove front right wheel arch panel

Dismantle intake plenum:

- Remove throttle body
- Remove adjuster
- Remove charging pressure sensor
- Remove the temperature sensor for the exhaust-gas recirculation
- If applicable, remove preheating control unit

Wear protective goggles and gloves.

Caution!
Never place electrical components in cleaning agent!

Cleaning intake plenum:

- Wear personal protective clothing/equipment
- Prepare cleaning agent: Mix 2 parts water with 1 part BMW universal cleaner (see Section 3.2)
- Place intake plenum in cleaning agent
- Observe application time of at least 1 hour

cardiagn.com

Cleaning intake ports: Caution!

Risk of engine damage!

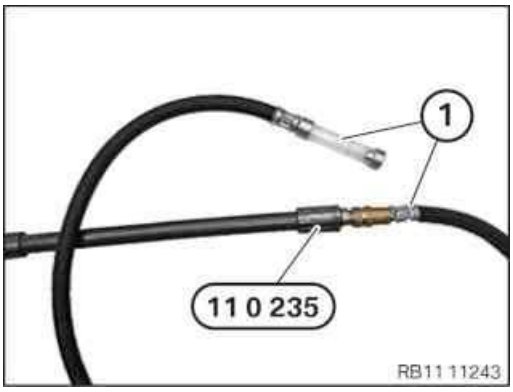
When cleaning the intake ports, it must be ensured that the intake valves of the corresponding cylinder are closed.

Determine the TDC (intake valves closed) using a TDC determination unit via the glow-plug hole.

Start with the 1st cylinder when cleaning the intake ports.

Remove glow-plug cylinder 1.

Screw in special tools 11 8 880 and 11 0 235 .

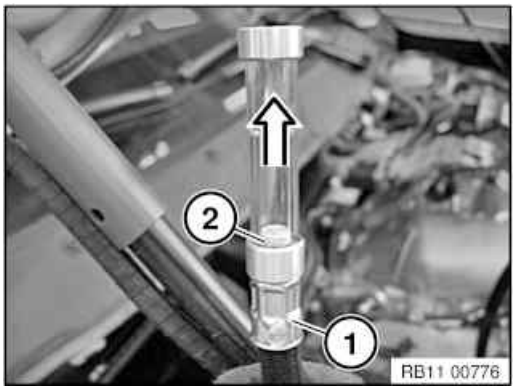


Connect TDC determination unit (1) from special tool 2 302 630 with special tool 11 0 235 .

Turn the engine with special tool 11 6 480 on the central bolt till cylinder 1 is in TDC position.**Caution!**

Do not crank engine in reverse direction.

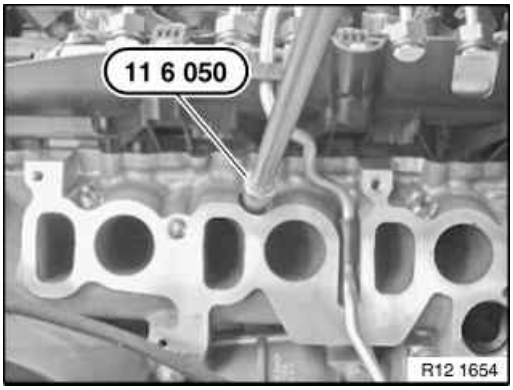
cardiagn.com



Caution!

Determine the TDC (intake valves closed) using a TDC determination unit (1) via the glow-plug hole.

Turn the engine on the central bolt until cylinder 1 is in TDC position.

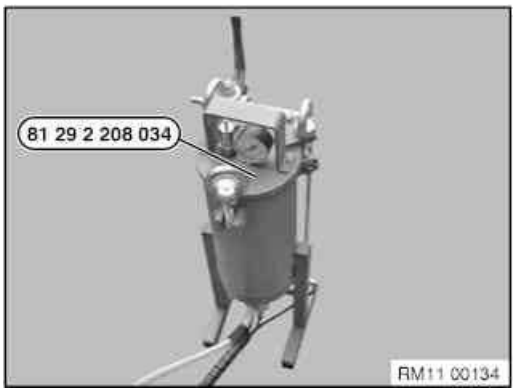


Remove special tools.

Reinstall glow-plug using special tool 11 6 050 .

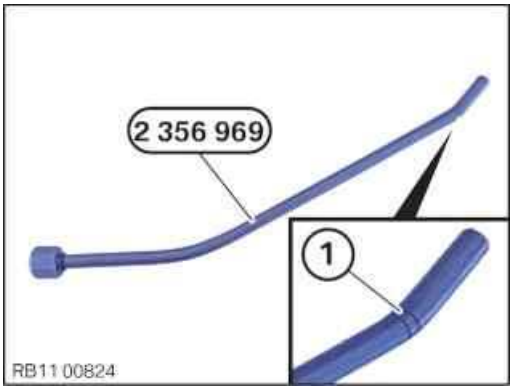
Installation note:

Tightening torque 12 23 1AZ.



The following are required:

- Blasting tool 81 29 2 208 034
- Walnut shell granulate
- Vacuum cleaner



Caution!

Front area of sensors is marked with two notches. These can additionally be highlighted in colour.

During the blasting process, only pull the wands out of the vacuum adapter until the mark becomes visible.

Blasting wand for swirl ports:

- 2 356 969

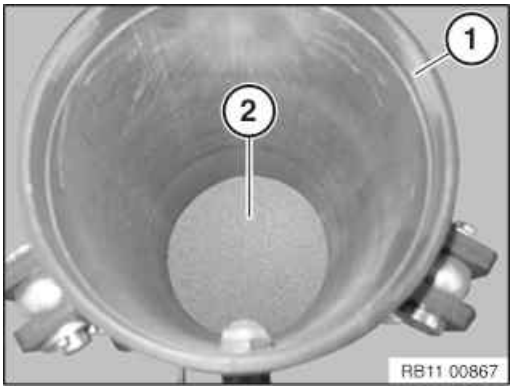
cardiagn.com

Vacuum adapter for tangential swirl port:

- 2 356 966

Vacuum adapter for swirl port:

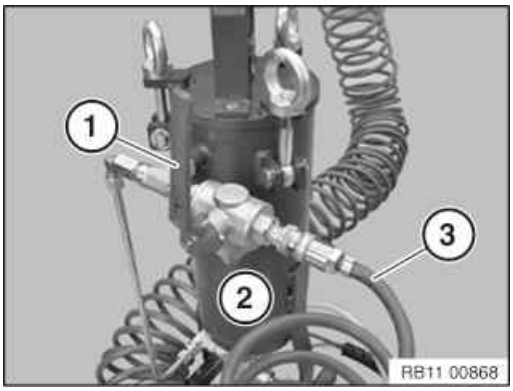
- 2 356 967



Note:
Use 2 litres of granulate per cleaning operation; this corresponds to a blasting duration of approx. 20 seconds.

Open blasting tool (1) and pour in 2 litres of granulate (2).

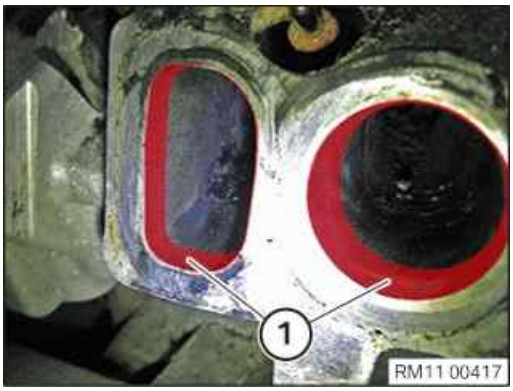
Close the device again.



Note:
Operating pressure 6 - 8 bar.

Close main valve (1) on blasting tool (2).

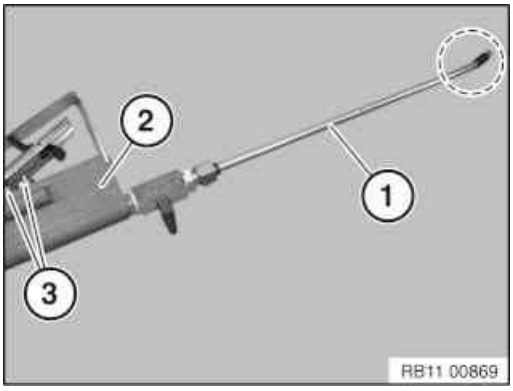
Connect compressed air (3).



Cleaning the swirl port of 1st cylinder:

Prior to the blasting process, clean the front area of both intake ports (1) of first cylinder with a suitable tool (e.g. plastic scraper, brushes 83 19 2 298 237).

cardiagn.com



Screw together blasting wand 2 356 969 (1) and actuator (2).

Open blasting tool and pour in 2 l granulate.

Close the device again.

Note:
Actuator (3) has two stages!

In stage one, only compressed air flows through the blasting wand.

In stage two (operation is fully pressed), granulate is added (blasting process).

Connect vacuum adapter 2 356 967 to vacuum cleaner. Hold vacuum adapter 2 356 967 against swirl port at no. 1 cylinder.

Open the main valve on the blasting tool and switch the vacuum cleaner on.

Caution!

Danger of injury!

Risk of damage!

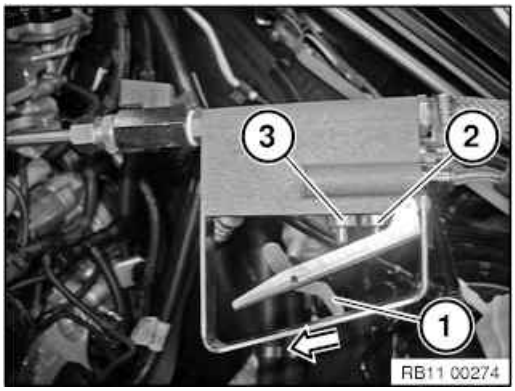
Second person required to assist.

Blasting wand may only be pulled out until the mark becomes visible.

Wear safety goggles.

Insert blasting wand 2 356 969 in the adapter 2 356 967 .

Open the actuator valve (1).



Slide locking lever (1) to the front in direction of arrow.

Operate compressed-air valve (2) at stage one; compressed air can now flow in.

Fully operate valve (3) at stage two; walnut shell granulate is now injected.

Clean intake port, rotating the blasting wand and moving it vertically up and down.

Blasting wand may only be pulled out until the mark becomes visible.

When you notice that the collection container is becoming empty, continue operation for at least 10 seconds at stage one in order to swirl up and draw off the remaining granulate.

Close operation valve. Close main valve, check pressure drop at the pressure gauge.

Evaluate result if necessary.

If necessary, repeat procedure.

cardiagn.com

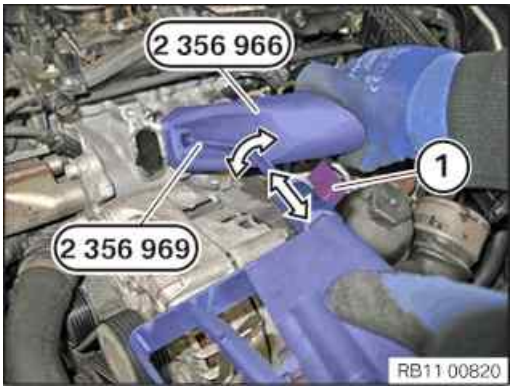
Cleaning the tangential swirl port of 1st cylinder:

Open blasting tool and pour in 2 l granulate.

Close the device again.

Connect vacuum adapter 2 356 966 to vacuum cleaner. Hold vacuum adapter 2 356 966 on swirl port of first cylinder.

Open the main valve on the blasting tool and switch the vacuum cleaner on.



Caution!

Danger of injury!

Risk of damage!

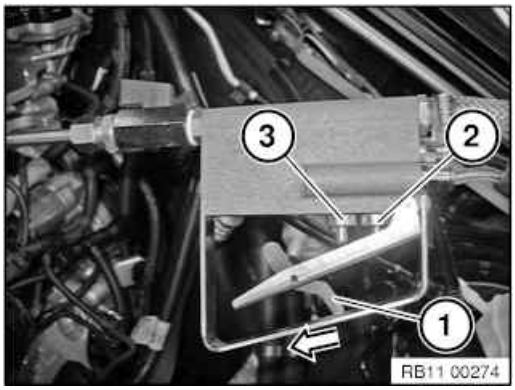
Second person required to assist.

Blasting wand may only be pulled out until the mark becomes visible.

Wear safety goggles.

Insert blasting wand 2 356 969 in the adapter 2 356 966 .

Open the actuator valve (1).



Slide locking lever (1) to the front in direction of arrow.

Operate compressed-air valve (2) at stage one; compressed air can now flow in.

Fully operate valve (3) at stage two; walnut shell granulate is now injected.

Clean intake port, rotating the blasting wand and moving it vertically up and down.

Blasting wand may only be pulled out until the mark becomes visible.

When you notice that the collection container is becoming empty, continue operation for at least 10 seconds at stage one in order to swirl up and draw off the remaining granulate.

Close operation valve. Close main valve, check pressure drop at the pressure gauge.

Evaluate result if necessary.

If necessary, repeat procedure.

Cleaning the other cylinders:

Clean the tangential ports and swirl ports of the next cylinder using the same procedure.

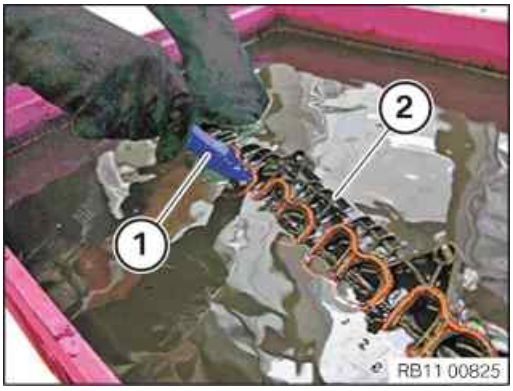
Caution!

When cleaning the intake ports, it must be ensured that the intake valves of the corresponding cylinder are closed.

Determine the TDC (intake valves closed) using a TDC determination unit via the glow-plug hole.

Do not crank engine in reverse direction.

cardiagn.com



Wear protective goggles and gloves.

Caution!

Do not clean electrical components with a parts cleaning unit or high pressure cleaner!

Cleaning intake plenum:

- Remove the intake plenum (2) from the cleaning agent
- Clean the openings on intake plenum (2) and swirl flap using the brush (1)

  (Part number: 83 19 2 298 237)
- Clean throttle valve, exhaust-gas recirculation valve, mixing tube and mounted parts with the brush (1) if necessary
- Then clean intake plenum (2) with a parts cleaning unit or a high-pressure cleaner
- Check all seals for damage and renew, if applicable

Observe country-specific waste disposal regulations.

Required follow-up work:

Assemble intake plenum:

- Installing the throttle body
- Install adjuster
- Install the charging pressure sensor
- Install the temperature sensor for the exhaust-gas recirculation
- If applicable, install preheating control unit

- Crank the engine at the central bolt at minimum twice
- Install front right wheel arch panel trim
- Install intake plenum
- Connect battery earth lead

- Reset the quantity correction under:
  - Service functions
  - 01 Drive
  - Digital Diesel Electronics
  - Reset correction values of injectors

cardiagn.com

11 12 ... Clean intake plenum (B37, B47)

Necessary preliminary work:

- Remove intake plenum

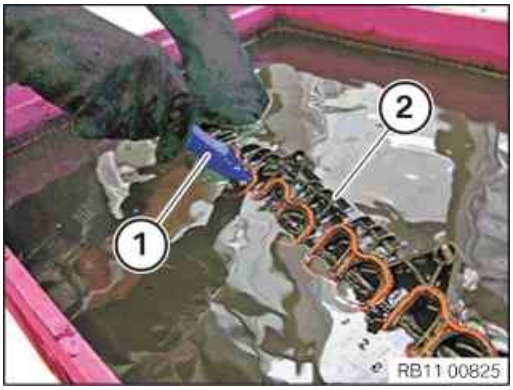
Dismantle intake plenum:

- Remove throttle body
- Remove adjuster
- Remove charging pressure sensor
- Remove the temperature sensor for the exhaust-gas recirculation .
- If applicable, remove preheating control unit

Wear protective goggles and gloves.

Caution!
Never place electrical components in cleaning agent!

- Put on personal protective clothing/equipment!
- Prepare cleaning agent: Mix 2 parts water with 1 part BMW universal cleaner (part number: 83 19 2 360 981) mixed
- Place intake plenum in cleaning agent
- Adhere to an application time of at least 1 h



Wear protective goggles and gloves.

Caution!
Do not clean electrical components with a parts cleaning unit or high pressure cleaner.

- Remove the intake plenum (2) from the cleaning agent
- Clean the openings of the intake plenum (2) and swirl flaps using the brush (1)

  (Part number: 83 19 2 298 237)
- Clean throttle valve, exhaust-gas recirculation valve, mixing tube and mounted parts with brush (1) if necessary
- Clean the intake plenum (2) with a parts cleaning unit or a high-pressure cleaner.
- Check all seals for damage and renew, if applicable.

Pay attention to country specific instructions for disposal.

cardiagn.com

Required follow-up work:

Assemble intake plenum:

- Installing the throttle body
- Install adjuster
- Install the charging pressure sensor
- Install the temperature sensor for the exhaust-gas recirculation.
- If applicable, install preheating control unit

- Install intake plenum

cardiagn.com

11 61 050 Removing and installing the intake plenum.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

PRELIMINARY WORK

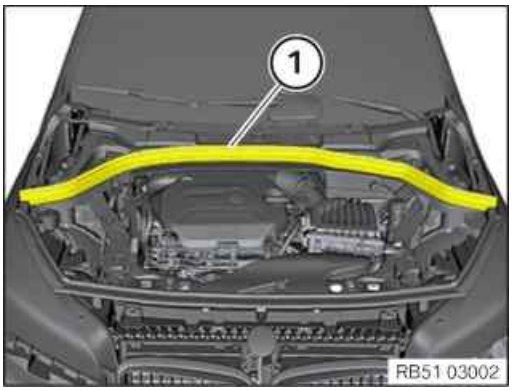
1 – Disconnecting all battery earth leads

- See additional information.

2 – Remove the seal for the rear bonnet

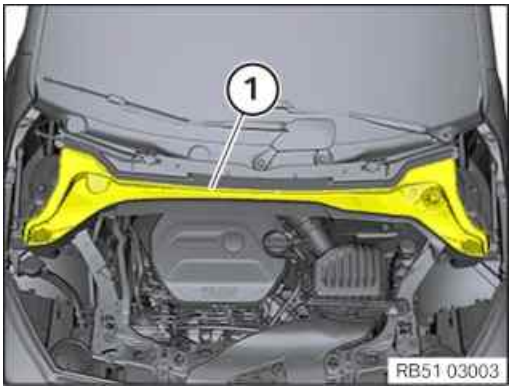
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

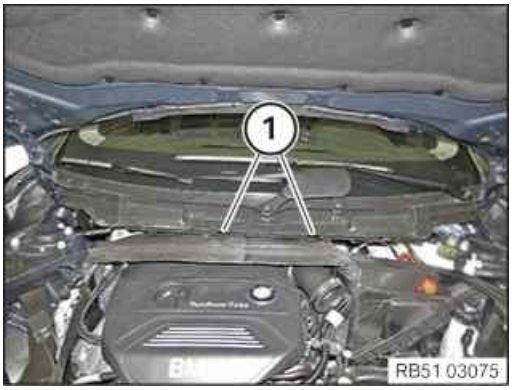
3 – Removing front cowl panel cover



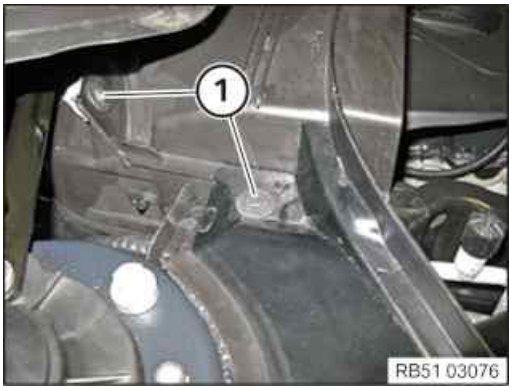
- Guide the front cowl panel cover (1) out toward the top and remove it.

cardiagn.com

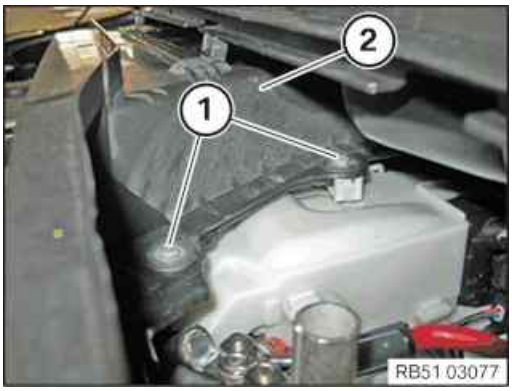
4 – Removing the upper bulkhead cover



- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

5 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Remove the wiper arm**

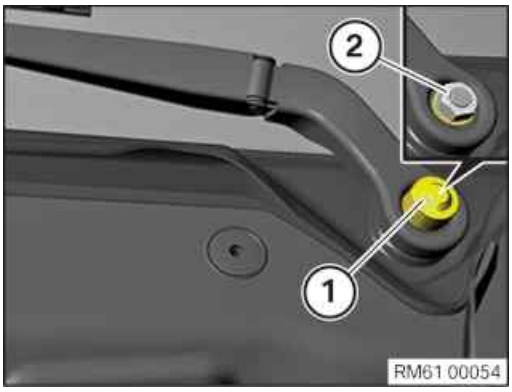
RISK OF DAMAGE

Damage to wiper console

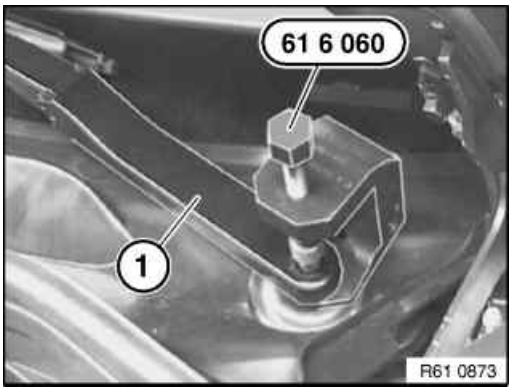
While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.

cardiagn.com



- Remove the protective cap (1).
- Loosen nut (2).



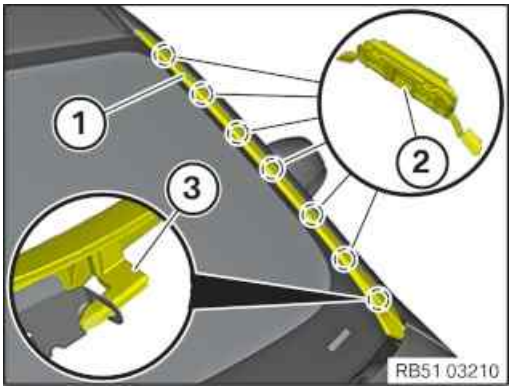
- Pull off the wiper arm (1) using special tool .

6 – Remove the gutter strip on the windscreen on the left and right

NOTICE

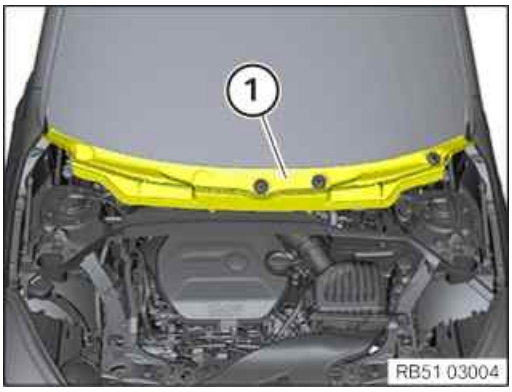
Description is for left component only. Procedure on the right side is identical.

▶ **Remove the gutter strip on the windscreen**



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

7 – Remove the rear cowl panel cover



- Disengage and guide out the rear cowl panel cover (1) towards the top.

8 – Removing the acoustic cover

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

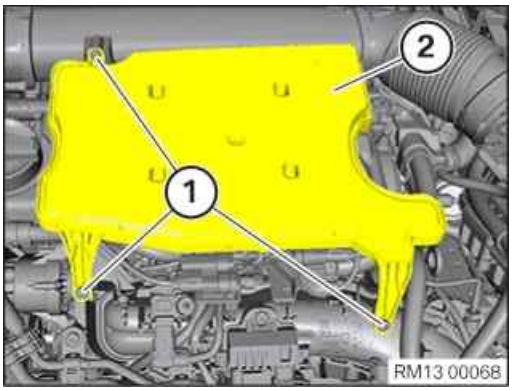
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

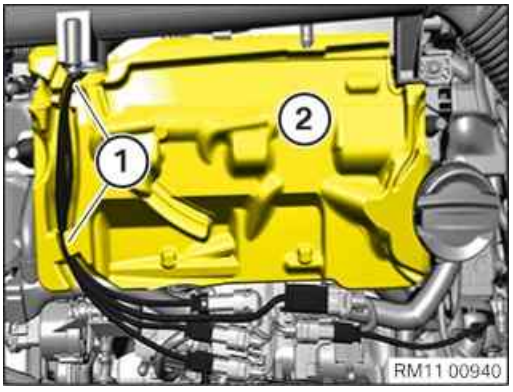
- Unclip the acoustic cover from the marked areas towards the top.

9 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

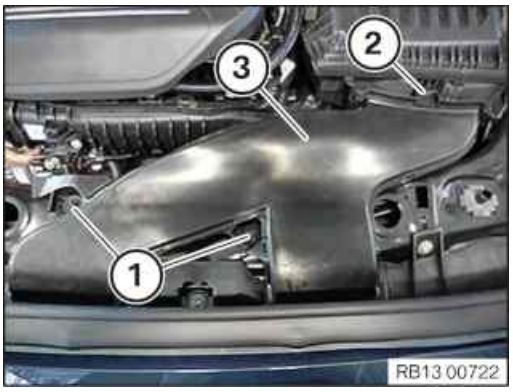
10 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

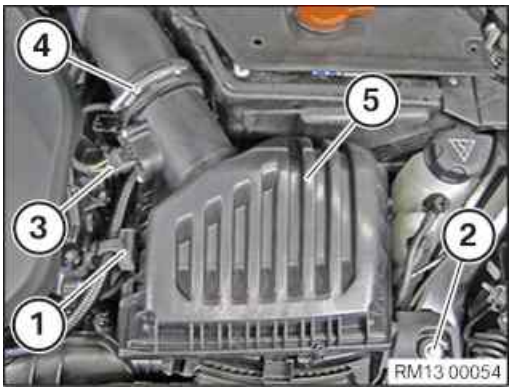
11 – Remove the intake neck for intake silencer housing

cardiagn.com



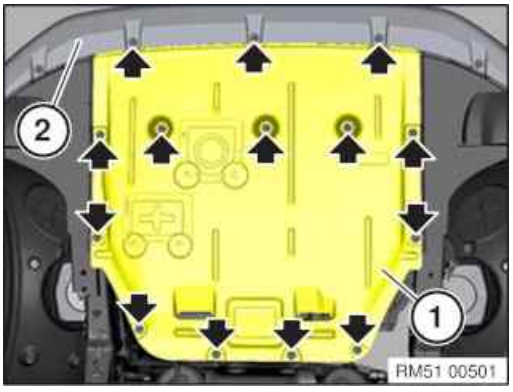
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

12 – Removing intake silencer housing



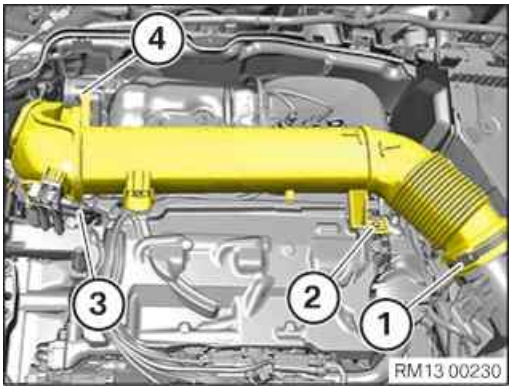
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

13 – Removing the front underbody protection



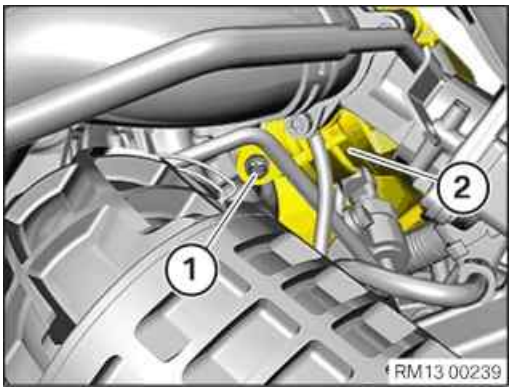
- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

14 – Partially detach the clean air pipe

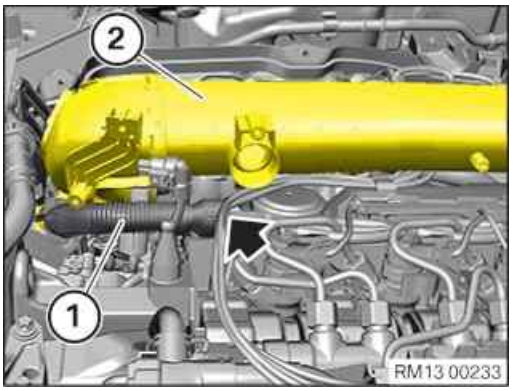


- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).

cardiagn.com



- Unscrew the screw (1) from the clean air pipe (2).

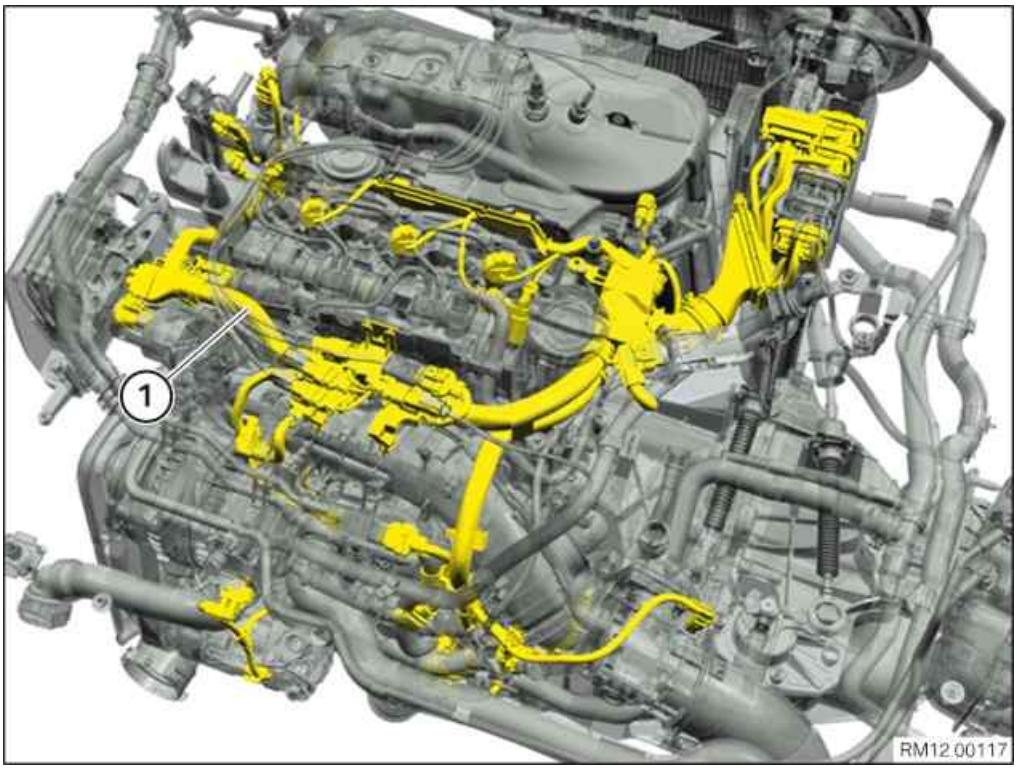


- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

- Thread out the clean air pipe (1) and set it aside as shown.

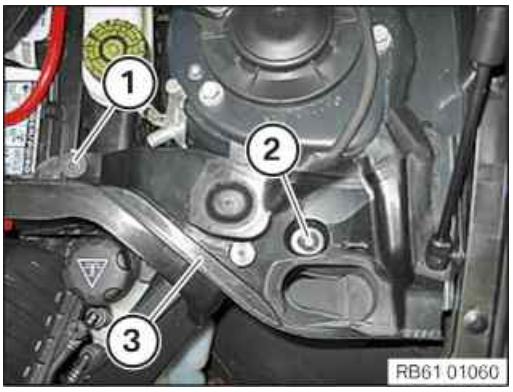
15 – Releasing the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine



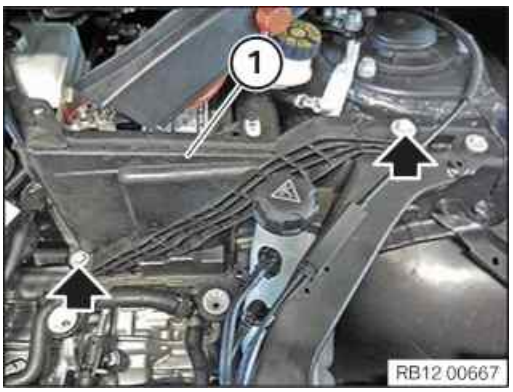
1 Wiring harness section for the engine

cardiagn.com

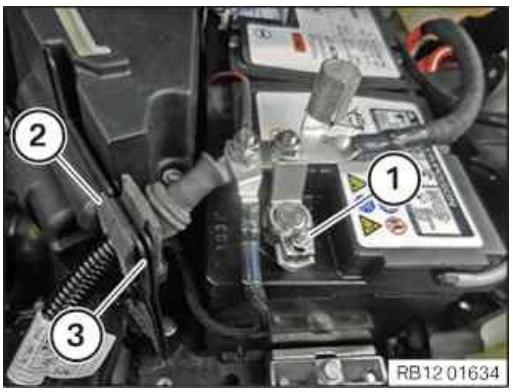


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

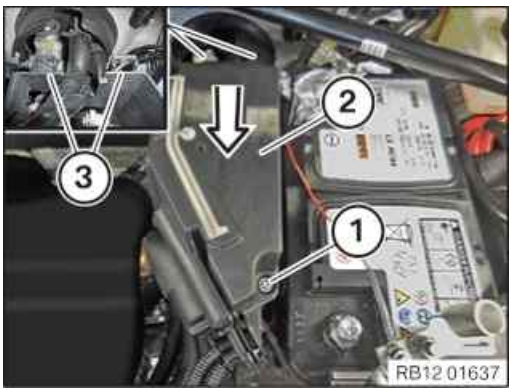
- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.



- Remove screws (arrows).
- Guide out tension strut (1) and remove.

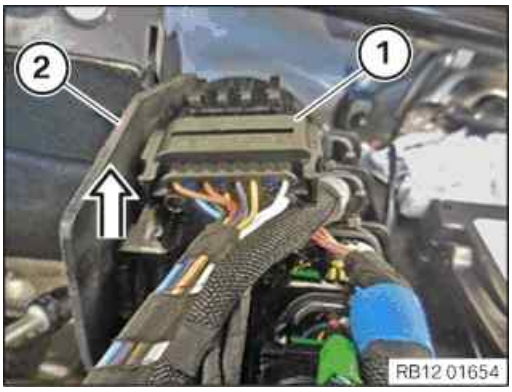


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

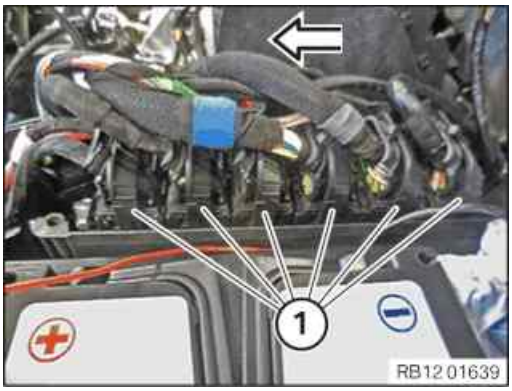


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

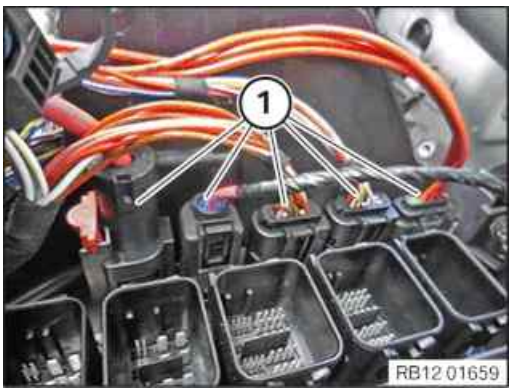
cardiagn.com



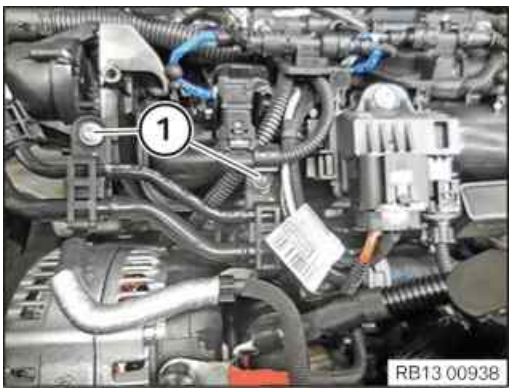
- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).



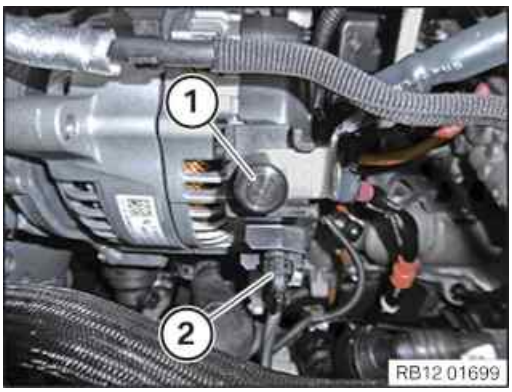
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

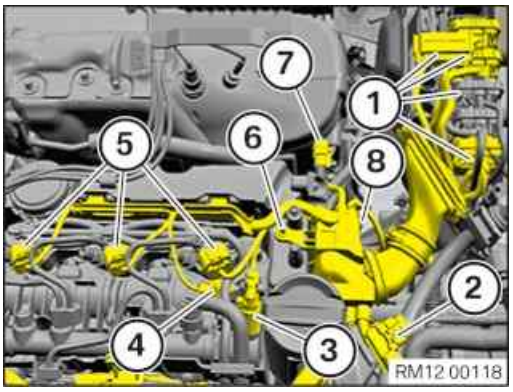


- Loosen screws (1).

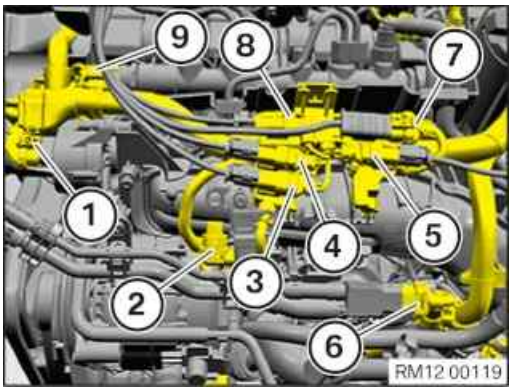


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.

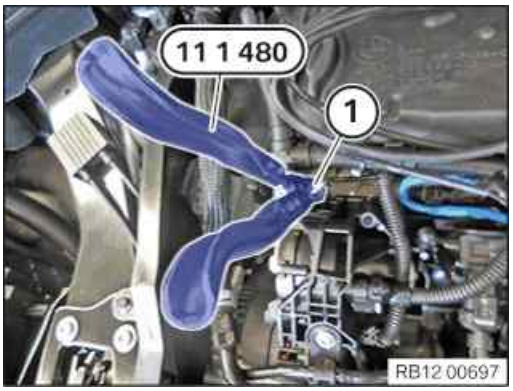
cardiagn.com



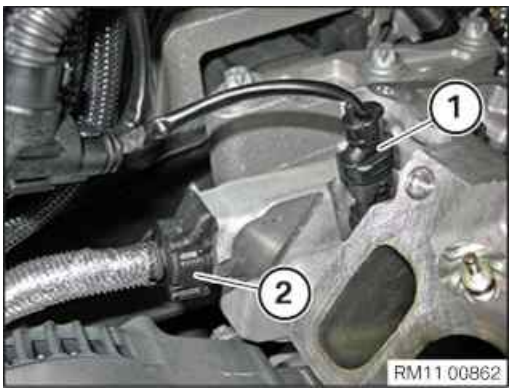
- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock connector (3) and pull off from fuel pressure regulator.
- Unlock connector (4) and disconnect from camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock connector (7) and disconnect from differential pressure sensor.



- Unlock connector (1) and pull it off the servomotor for the swirl flap.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock connector (3) and pull off from exhaust temperature sensor downstream from the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock connector (6) and pull off from the fuel pressure and temperature sensor.
- Unlock and disconnect the connector (7) from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.



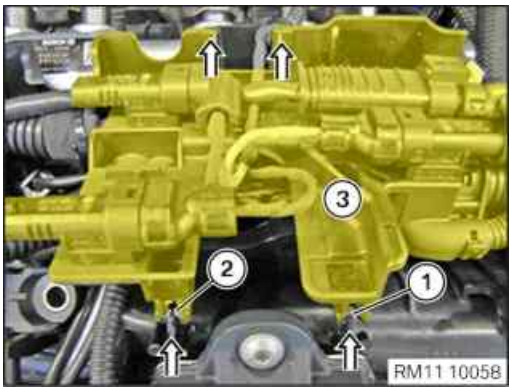
- Unlock connector (1) at all glow elements using special tool **0 490 796 (11 1 480)** and release.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.



- Unlock and loosen connector (1).
- Unlock the clamp of the coolant line (2) and release the coolant line.

16 – Removing the cable clips from the intake plenum

cardiagn.com



- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.

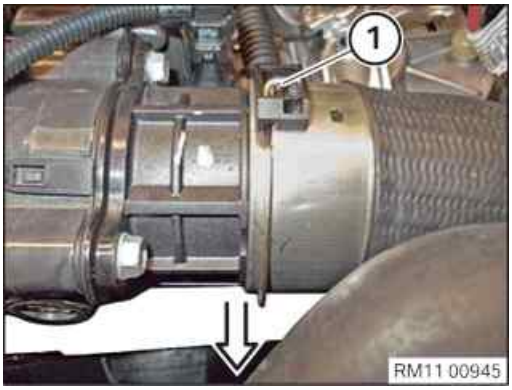
MAIN WORK

17 – Removing the intake plenum

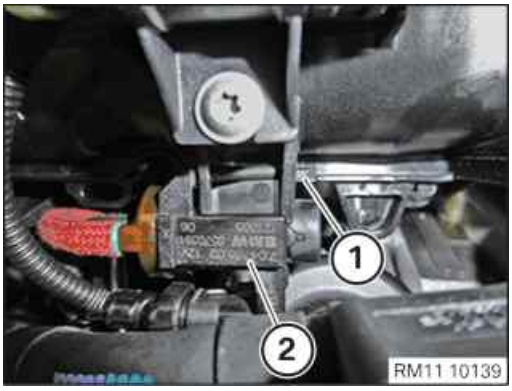
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).

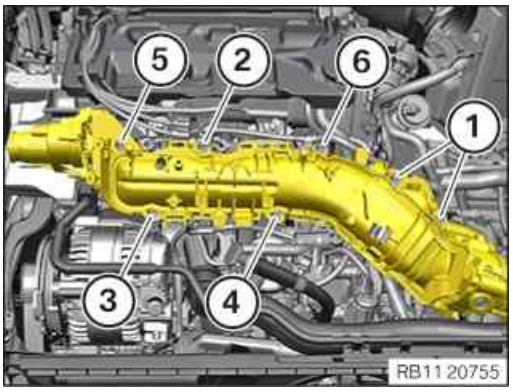


- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

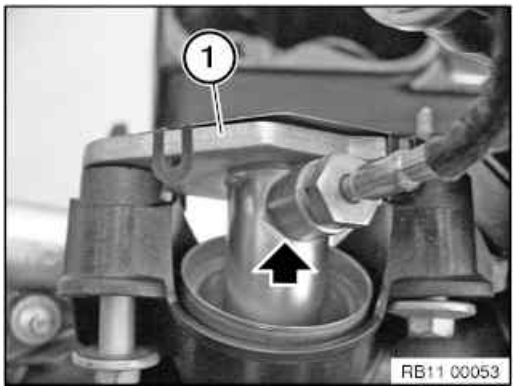


- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com

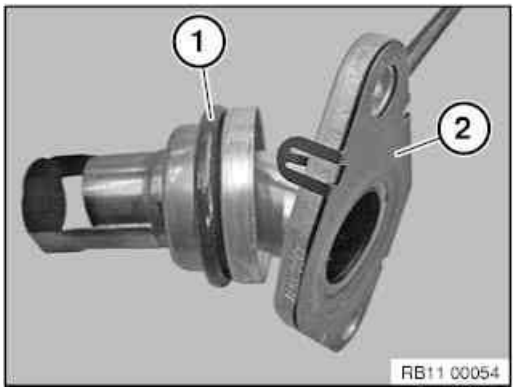


- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

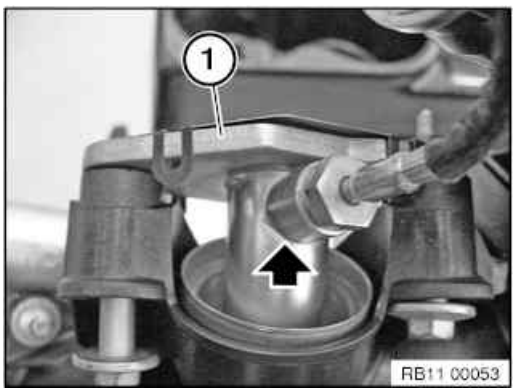
18 – Installing the intake plenum



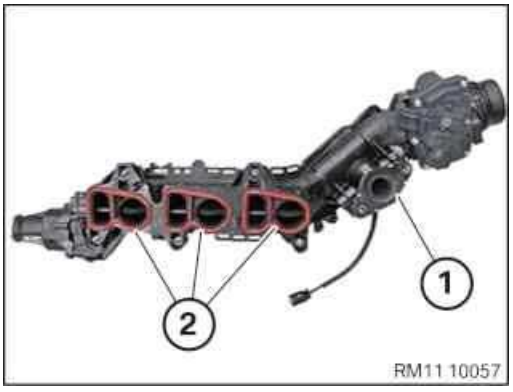
- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.



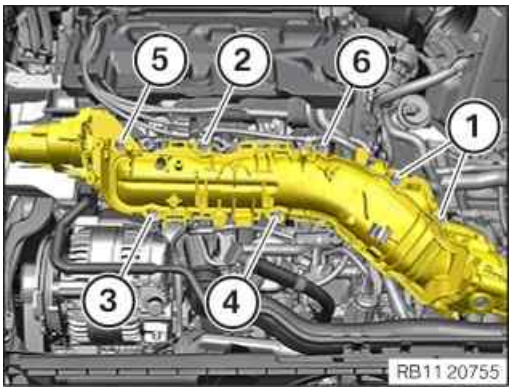
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.

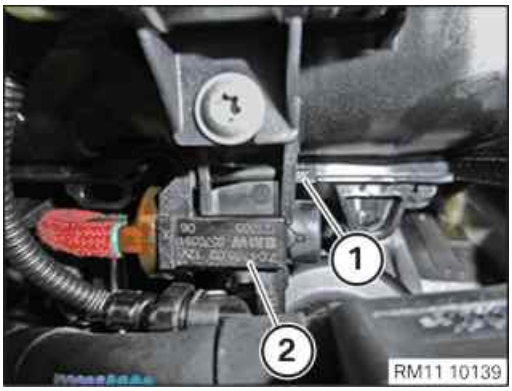
cardiagn.com



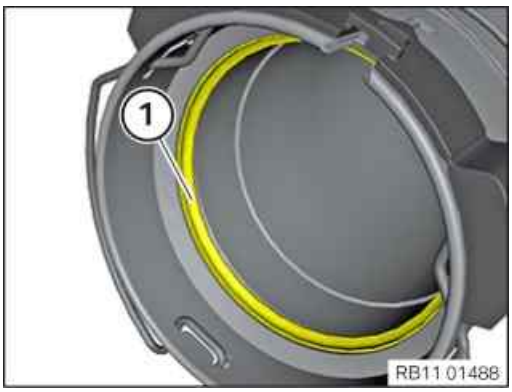
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm

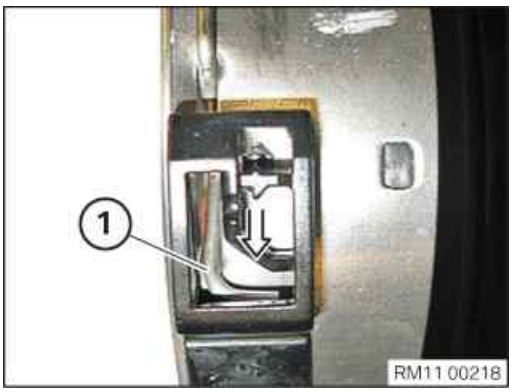


- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.

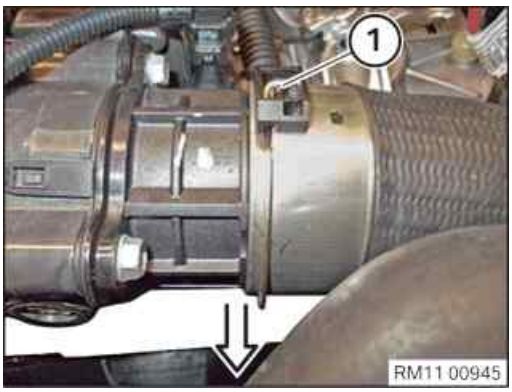


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring



- Engage the lock (1) on the bracket (arrow).



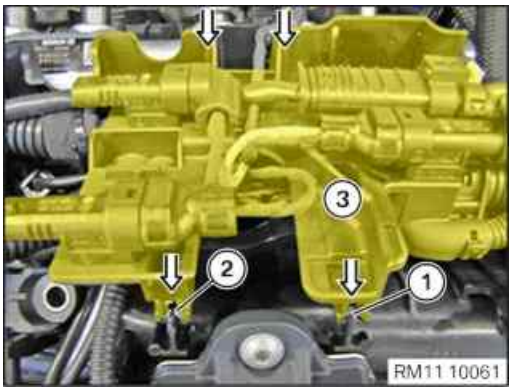
- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

POSTPROCESSES

19 – Installing the cable clip for the intake plenum

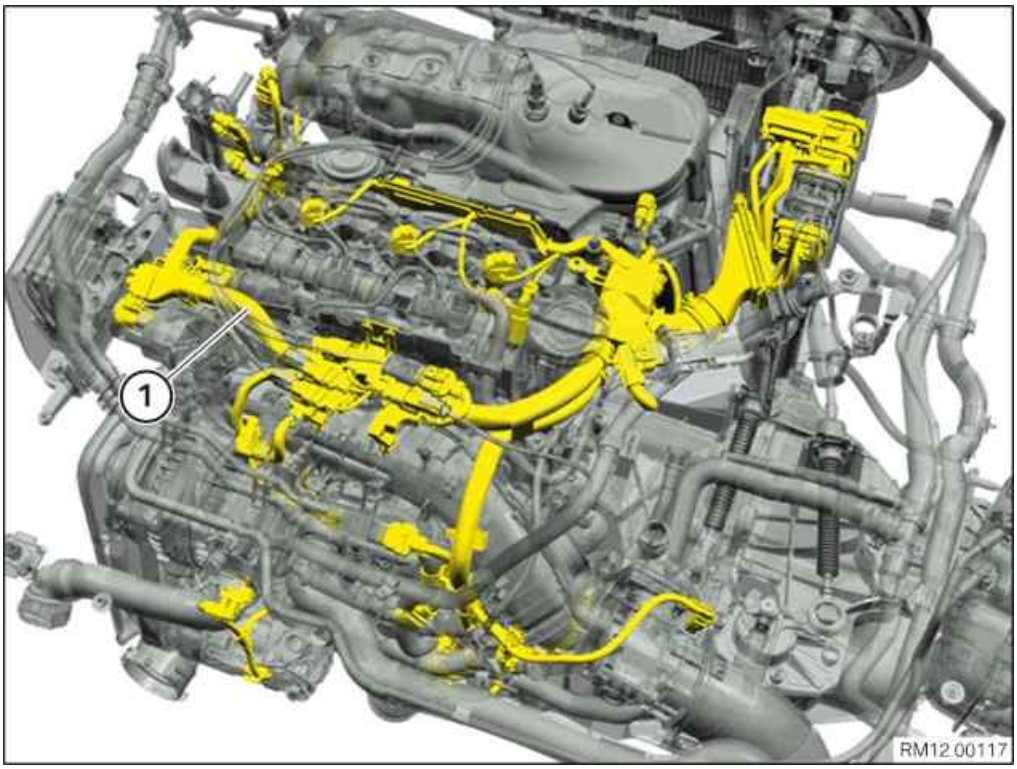
cardiagn.com



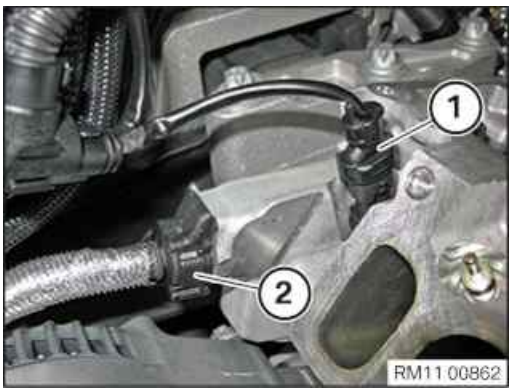
- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).

20 – Fastening the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine

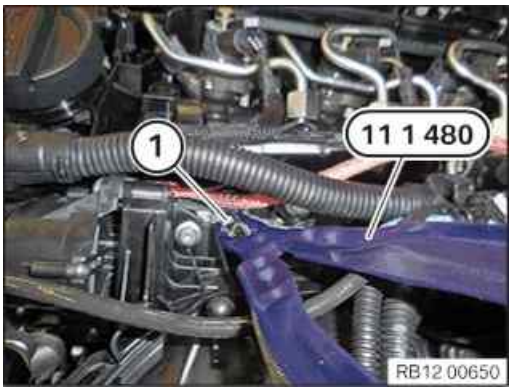


1 Wiring harness section for the engine



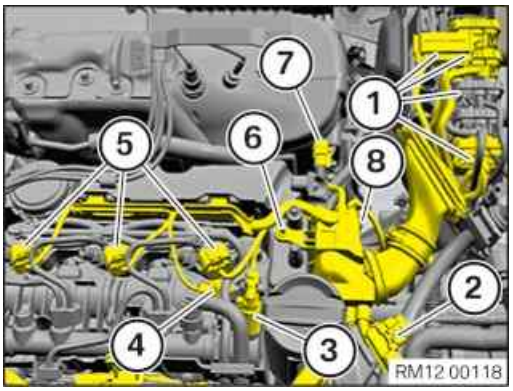
- Connect the coolant line (2) and lock the clamp.
- Connect and lock the connector (1).
- The locks must engage audibly.

cardiagn.com



- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

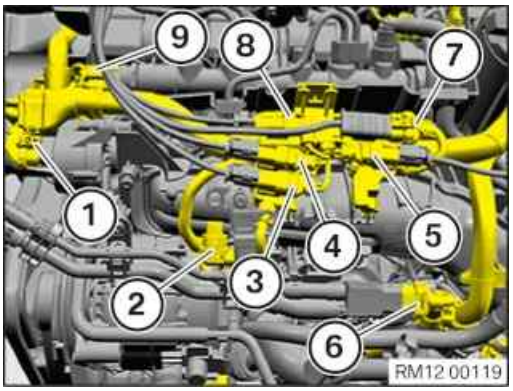


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

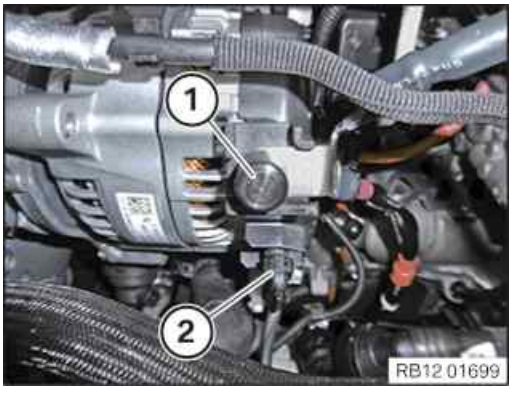
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.



- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.



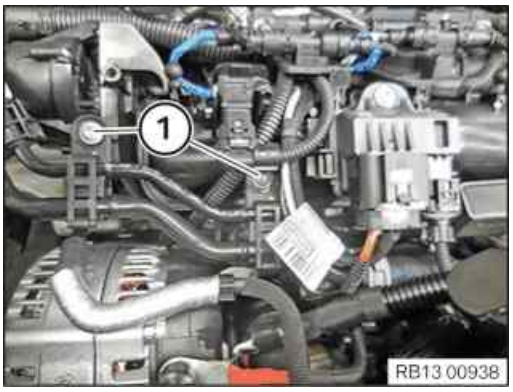
- Connect and lock the connector (2).

  Lock must audibly engage.
- Connect positive battery cable (1) on alternator and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

cardiagn.com

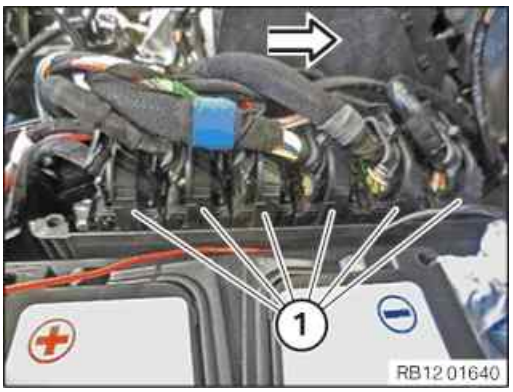


- Position fuel lines.
- Tighten the screws (1).

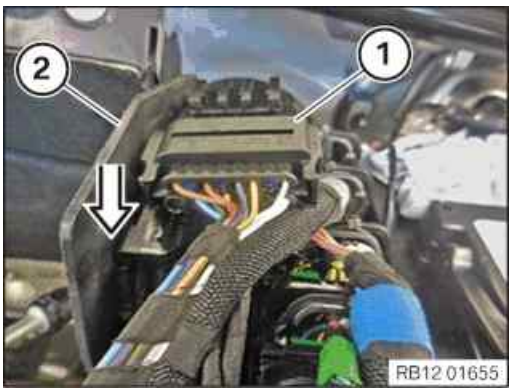
Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

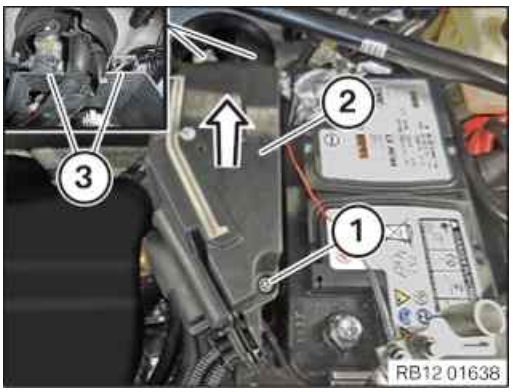
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

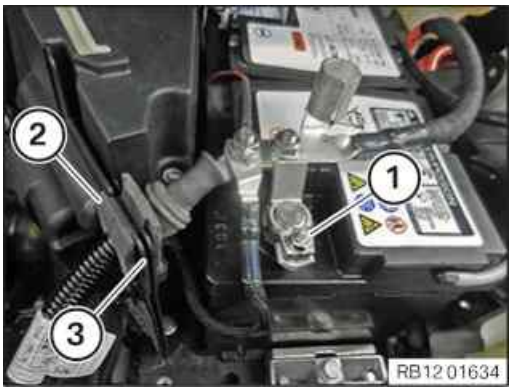


- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

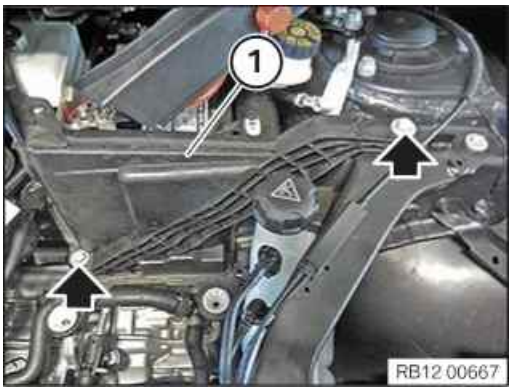
cardiagn.com



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (1).
- Tighten screws (arrows).

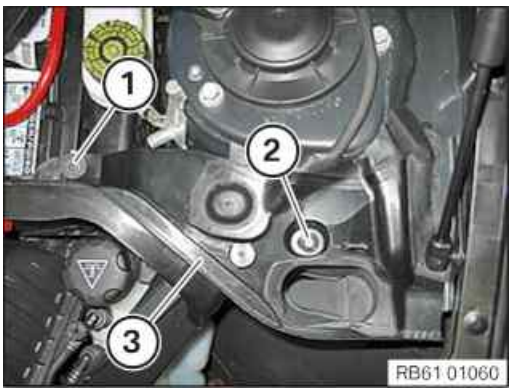
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

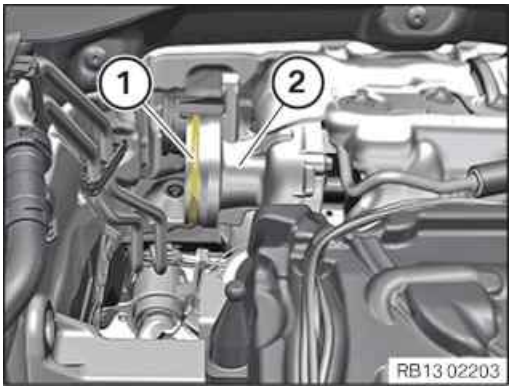


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

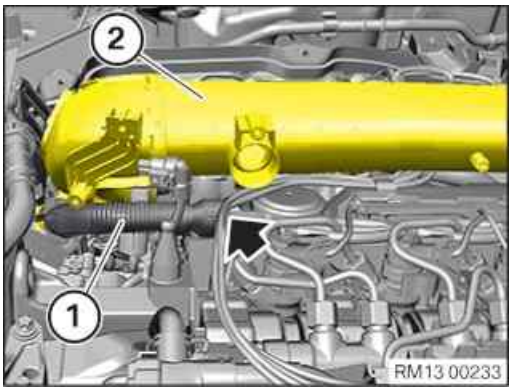
21 – Partially securing clean air pipe



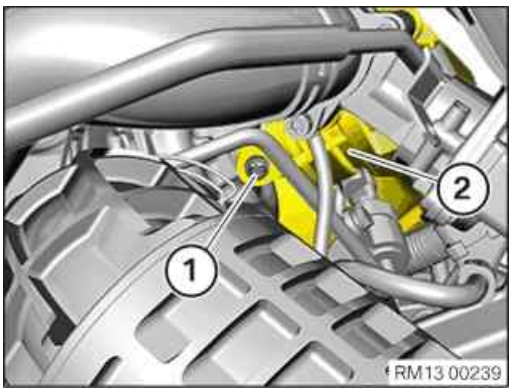
- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com

- Feed in clean air pipe (1) and install.



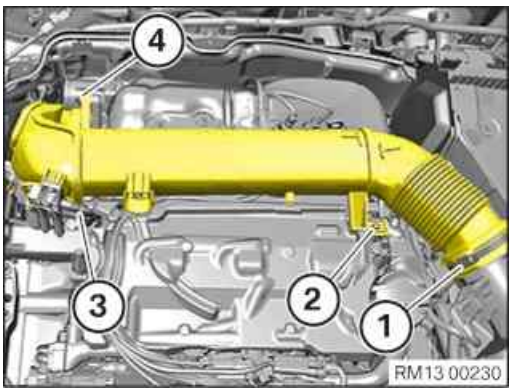
- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten screw (1) from clean air pipe (2).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

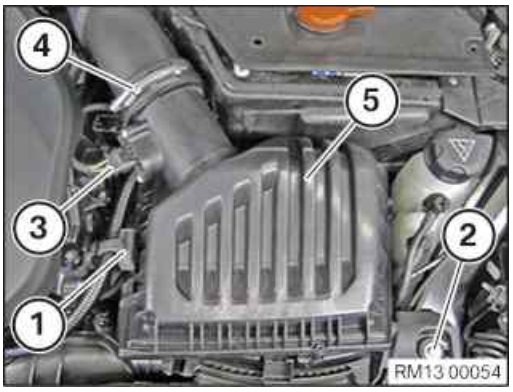
- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

22 – Installing intake silencer housing

cardiagn.com



- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

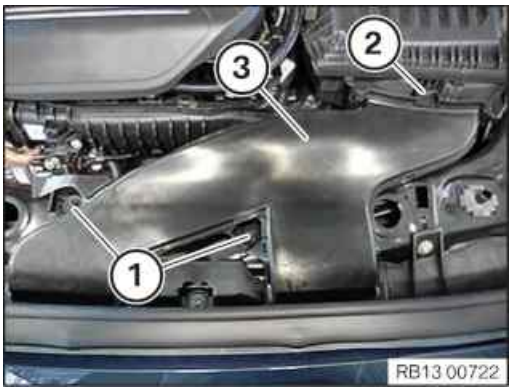
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

23 – Install the intake neck for the intake filter housing



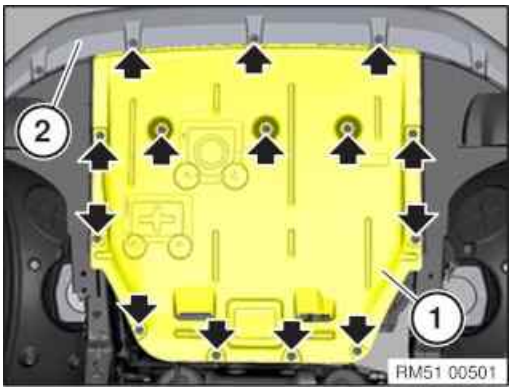
- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

24 – Installing the front underbody protection

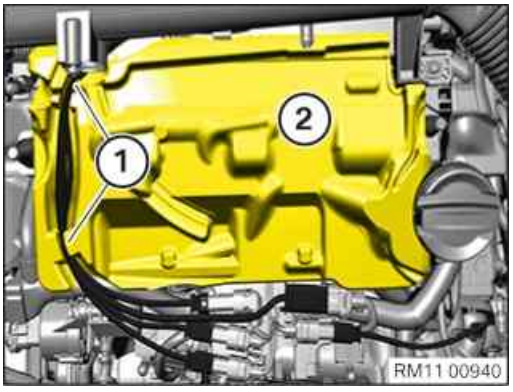


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

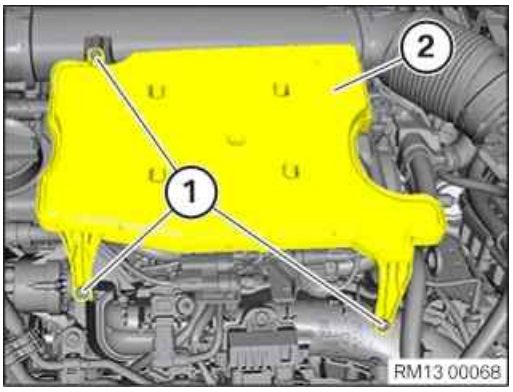
25 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

26 – Install resonator

cardiagn.com



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

27 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

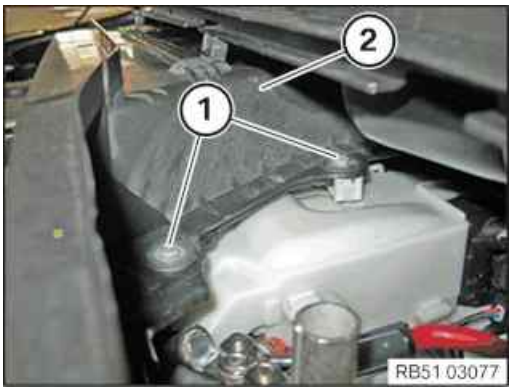
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

28 – Installing the upper bulkhead cover

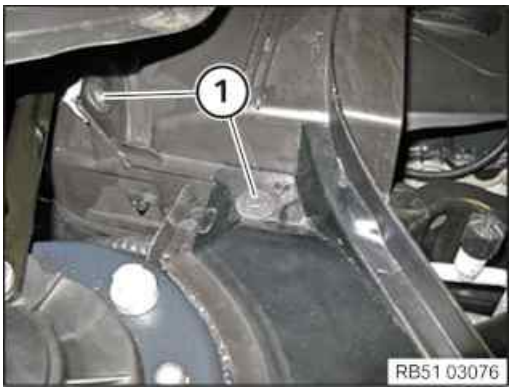
cardiagn.com



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

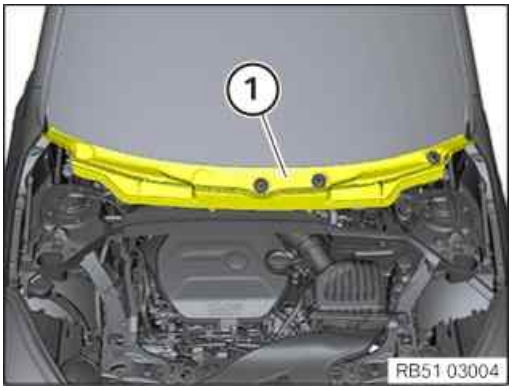
Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

29 – Install the rear cowl panel cover



- Feed in and engage the rear cowl panel cover (1).

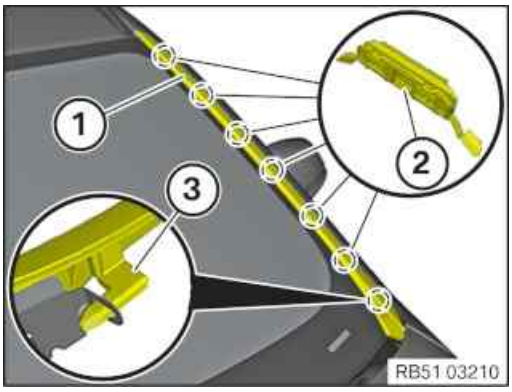
30 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the gutter strip on the windscreen**

cardiagn.com



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

31 – Install left and right wiper arm

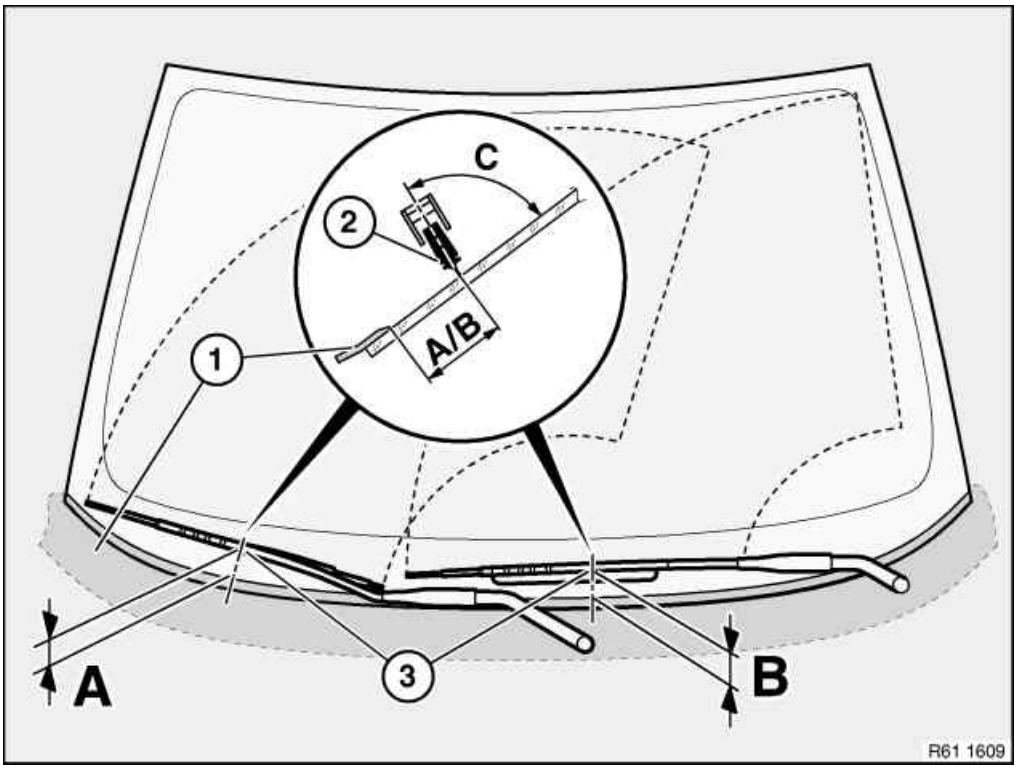
NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the wiper arm**

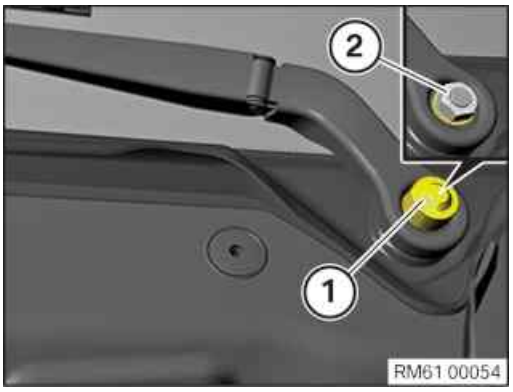
TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).

cardiagn.com



NOTICE

Description is for left component only. Procedure on the right side is identical.

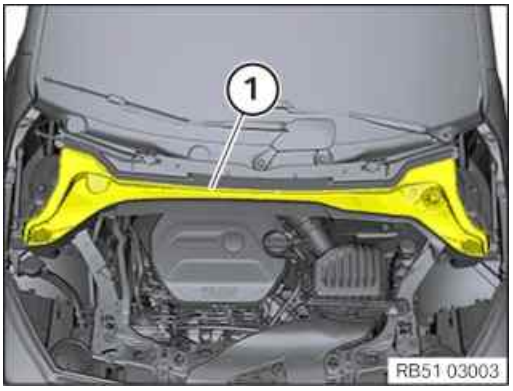
- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

32 – Installing front cowl panel cover

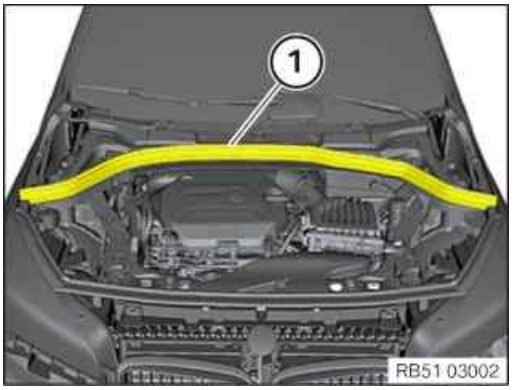


- Insert the cowl panel cover front (1) to the rear and install.
- Check cowl panel cover at front is correctly seated (1).

33 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

34 – Disconnecting all battery earth leads

- See additional information.

11 61 085 Removing and installing/replacing adjuster (B37C)

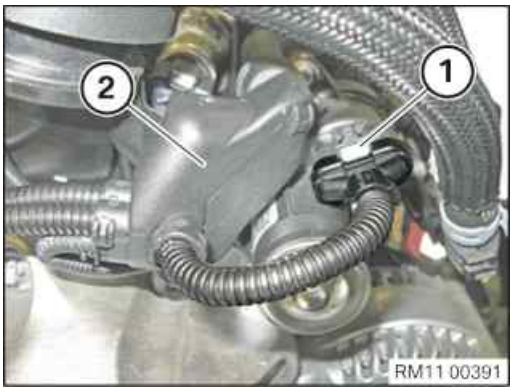
Important!

The adaptation values must be reset before the adjuster is replaced.

Necessary preliminary tasks:

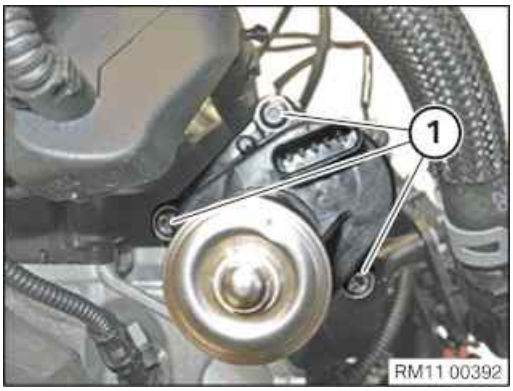
- Reset adaptation values with diagnosis system
- Remove acoustic cover

Removal:



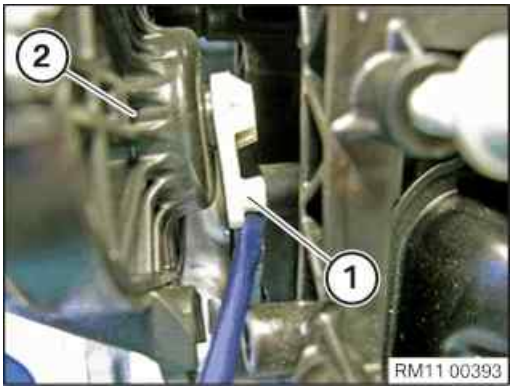
Unlock and disconnect the connector (1).

Unclip wiring harness (2) and raise.



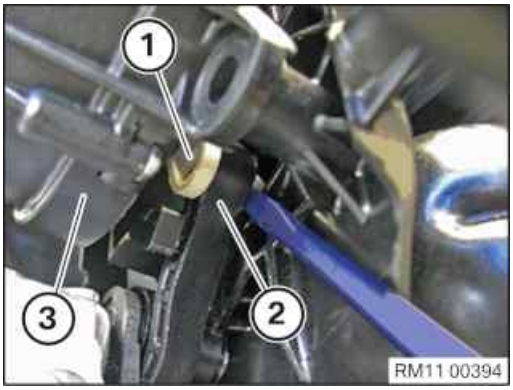
Release screws (1).

cardiagn.com

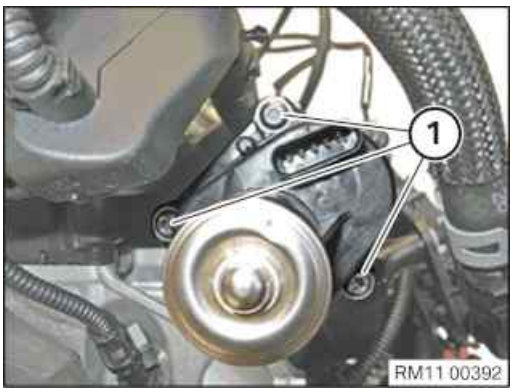


Unclip drive arm (1).
Remove adjuster.

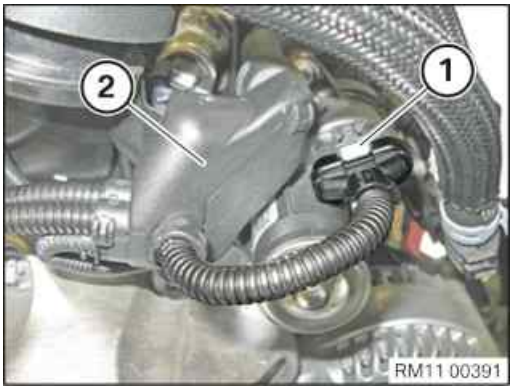
Installation:



Clip drive arm (1) into connecting rod (2).
Install adjuster (3).



Secure screws (1).
Tightening torque 11 61 5AZ.



Connect the plug (1).
Clip in wiring harness (2).

cardiagn.com

Required follow-up work:

- Install acoustic cover.

cardiagn.com

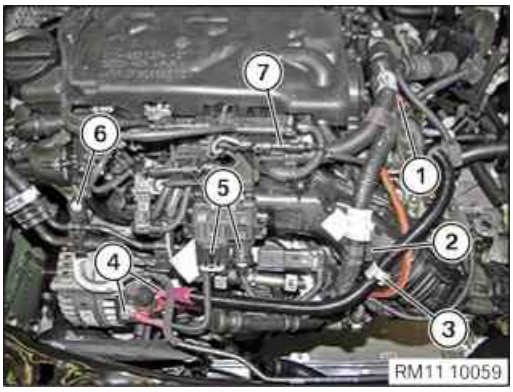
11 61 550 Removing and installing/replacing air intake manifold (B37C)

Installation note:
Follow diagnosis instruction.

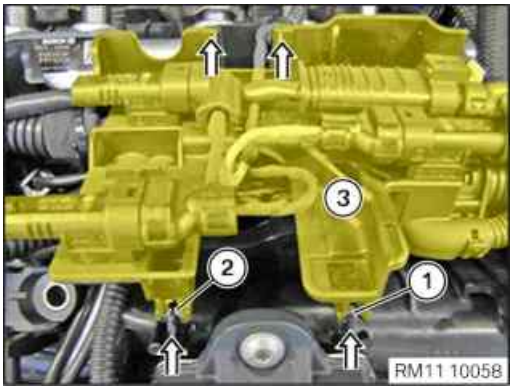
Necessary preliminary tasks:

- Disconnect negative battery lead.
- Remove acoustic cover
- Remove fan cowl.
- Remove underbody protection
- Partially release cable channel.
- Partially release pressure pipe.

Removal:

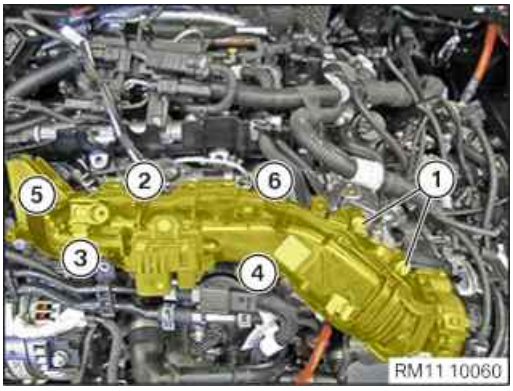


Pull off vacuum hose (1) from exhaust-gas recirculation valve.
Release wiring harness on holder (2) of intake plenum.
Release positive battery cable (3) from holder.
Unscrew positive battery cables (4) from alternator.
Release screw (6) on holder of diesel lines.
Detach connector (5) from preheating control unit.
Unlock plug connection (7) of temperature sensor and disconnect.



Release clip (1 and 2).
Remove cable clip (3) upwards in direction of arrow and place to one side.

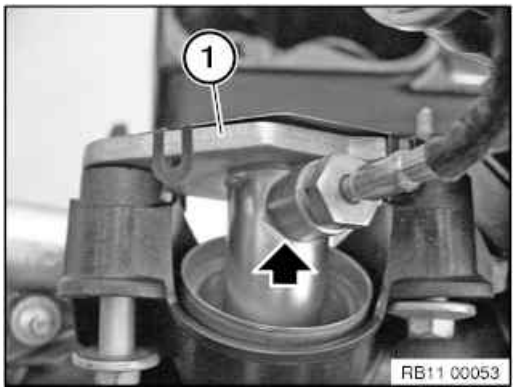
cardiagn.com



Release screws (1) on exhaust-gas recirculation cooler.

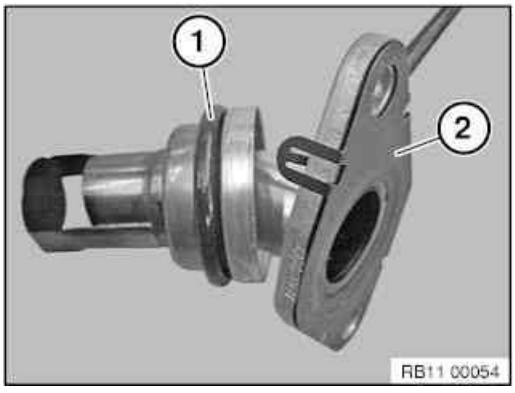
Release bolts (2-6).

Remove intake plenum towards front.



Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

Installation:

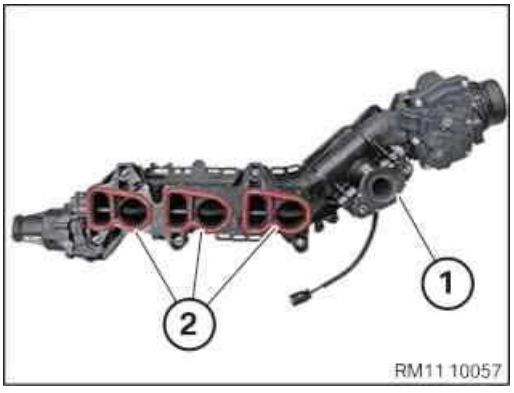


Installation note:
Install O-ring (1).

Part: Replace O-ring.

Clip in beaded metal gasket (2).

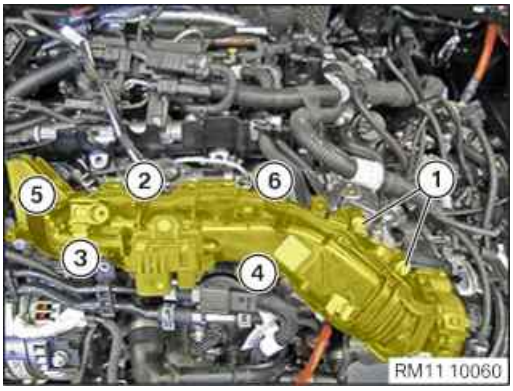
Part: Replace beaded metal gasket.



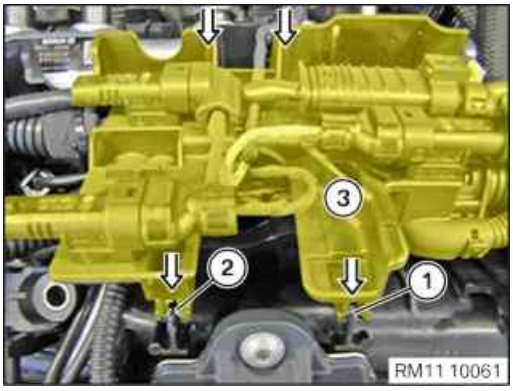
Install all sealing rings (2).

Parts: Replace gaskets.

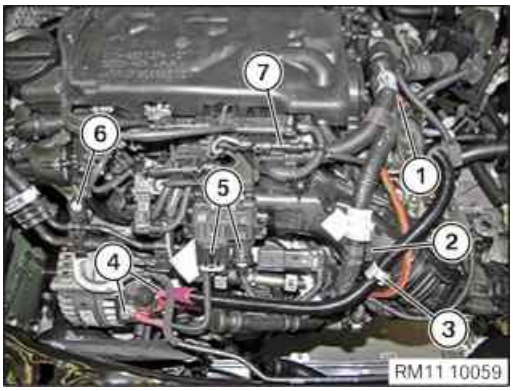
cardiagn.com



Tighten screws in order (2-6).
Tightening torque 11 61 1AZ.
Tighten screws (1) on exhaust-gas recirculation cooler.
Tightening torque 11 61 2AZ.



Connect cable clip (3) in direction of arrow.
Clip in clip (1 and 2).



Connect vacuum hose (1) of exhaust-gas recirculation valve.
Clip in wiring harness on holder (2) of intake plenum.
Clip in positive battery cable into holder (3).
Screw tight positive battery cables (4) to alternator.
Screw tight screw (6) on holder of diesel lines.
Connect connector (5) of preheating control unit.
Connect plug connection (7) of temperature sensor.

Required follow-up work:

- Install cable channel.
- Connect battery ground cable.
- Install acoustic cover.
- Remove fan cowl.
- Remove underbody protection

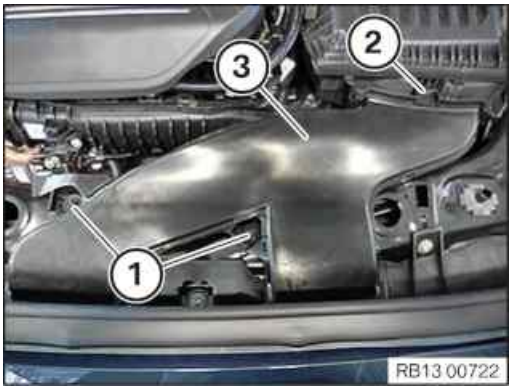
Assemble engine.
Check air intake system for leaks.
Check function of DDE Digital Diesel Electronics.

cardiagn.com

11 61 365 Removing and installing/replacing left charge air duct

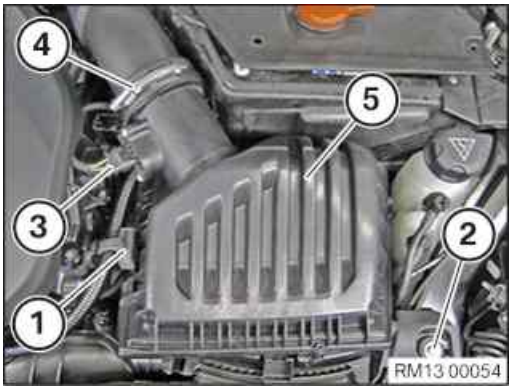
PRELIMINARY WORK

1 – Remove the intake neck for intake silencer housing



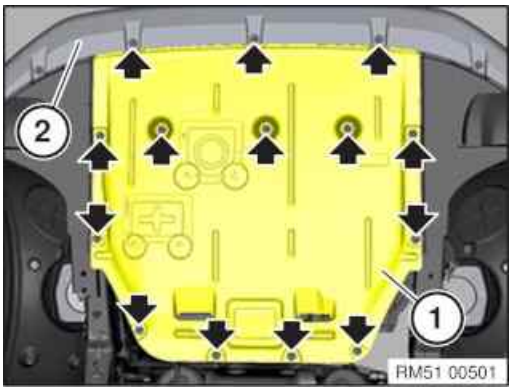
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

2 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

3 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

MAIN WORK

4 – Remove the pressure pipe between the throttle body and the charge air cooler

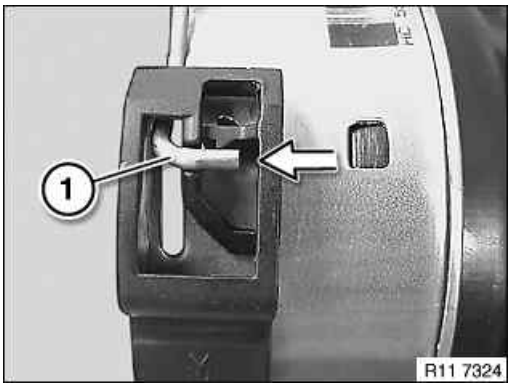
WARNING

Hot surfaces.

Risk of burning!

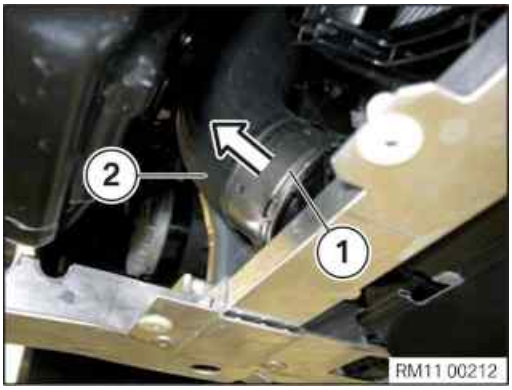
- Perform all work only on components that have cooled down.

cardiagn.com

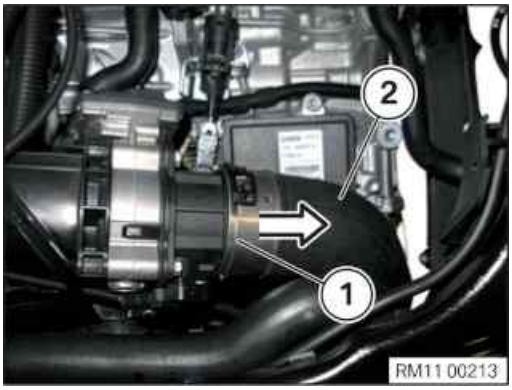


- Unlock the lock (1).

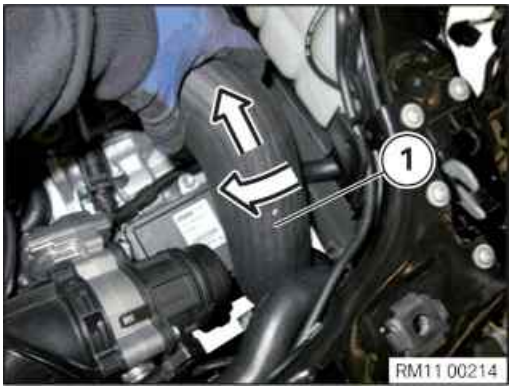
  The lock (1) must engage in the bracket (arrow).



- Unlock and detach the locks (1) on both sides.
- Guide out the pressure pipe (2) in the direction of the arrow and set it aside.



- Unlock and detach the locks (1) on both sides.
- Guide out the pressure pipe (2) in the direction of the arrow and set it aside.



- Remove the pressure pipe (1) in the direction of the arrow.

5 – Installing pressure pipe between throttle body and charge air cooler

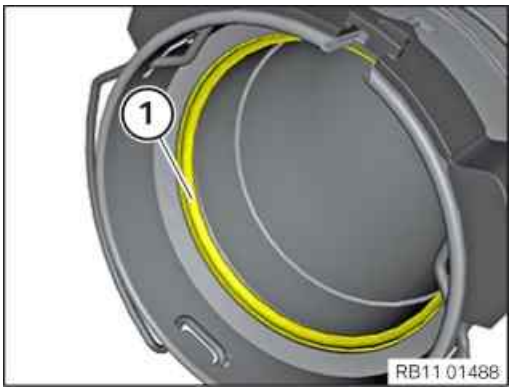
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

cardiagn.com



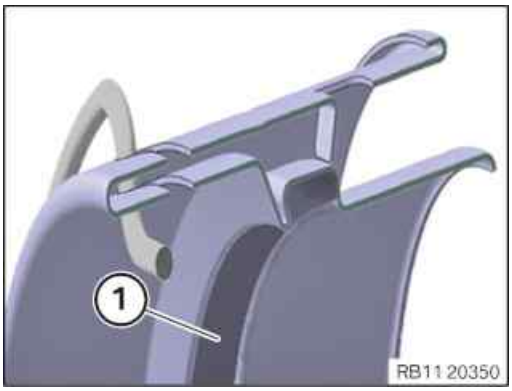
- Check seal (1) for damage and renew seal (1) as needed.

  Parts: Gasket

▶ **Replace damaged gasket**

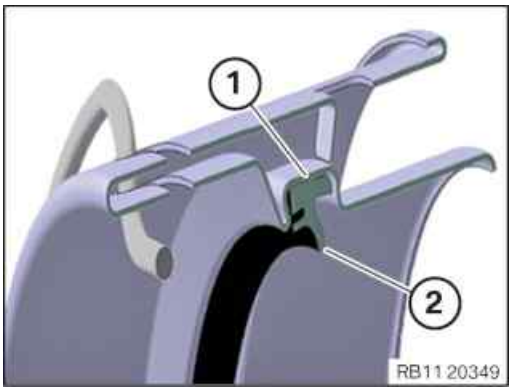
TECHNICAL INFORMATION

Do not use pointed or sharp-edged tools for the installation and/or removal.



- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.



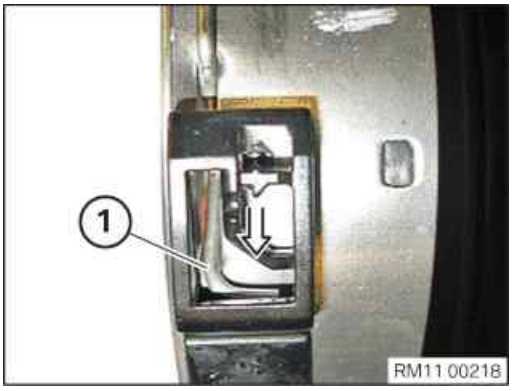
- Renew gasket.

  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

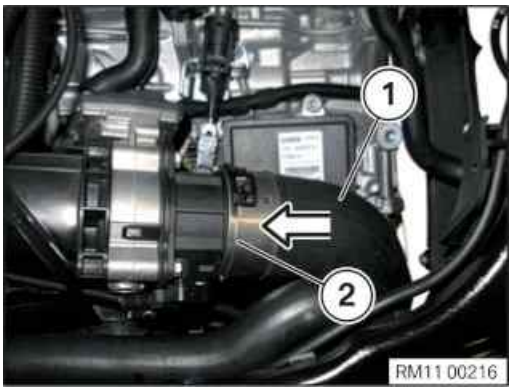
- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).



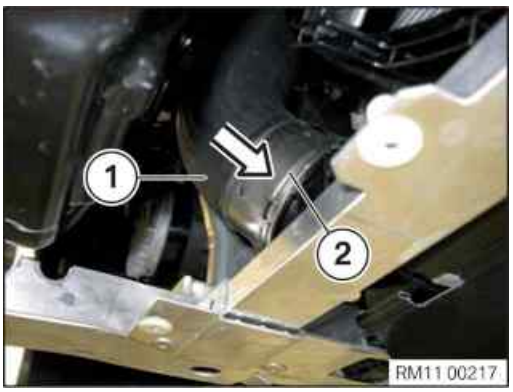
- Detach the locks (1) in the direction of the arrow from the brackets.

cardiagn.com

- Insert and install the pressure pipe (1) in the direction of the arrow.



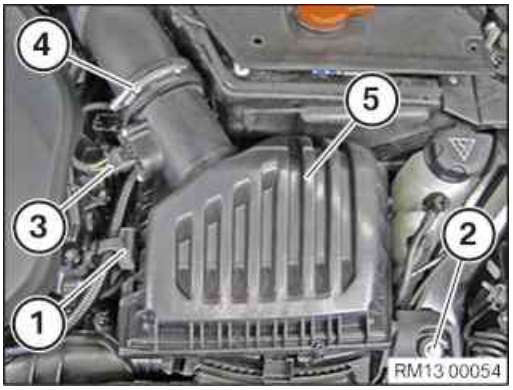
- Insert and install the pressure pipe (1) in the direction of the arrow.
- Ensure that the locks (1) engage audibly.



- Insert and install the pressure pipe (1) in the direction of the arrow.
- Ensure that the locks (2)engage audibly.

cardiagn.com

6 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

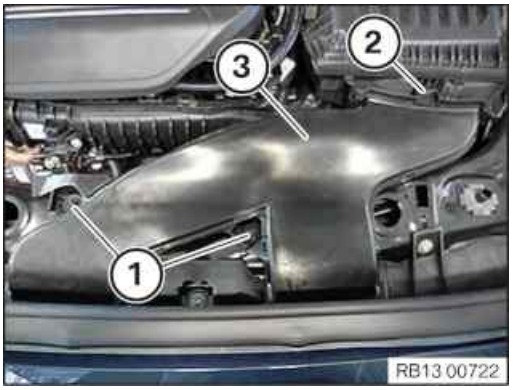
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

7 – Install the intake neck for the intake filter housing



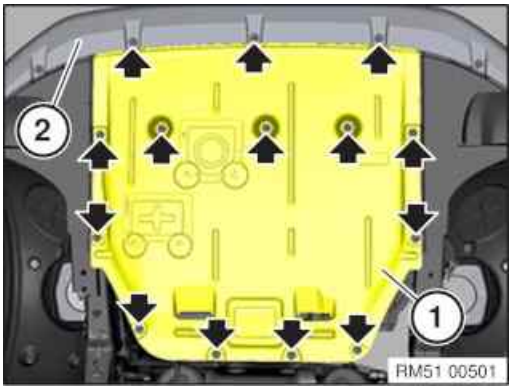
- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

8 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

11 61 365 Removing and installing/replacing left charge air line (B37C)

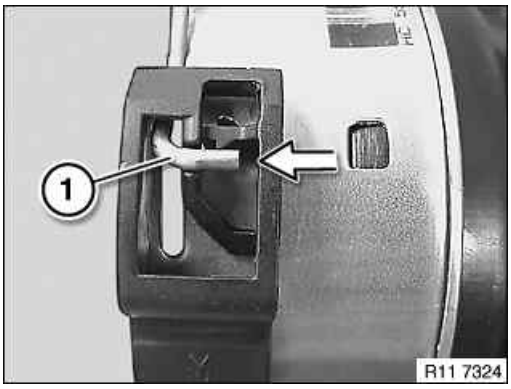
Safety information:

- In the event of a leak at the pressure pipe, there is a **risk of damage** to the exhaust turbocharger.

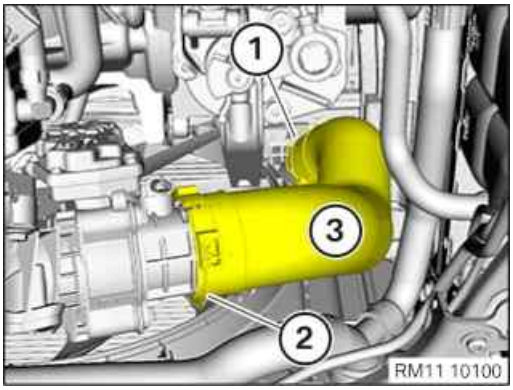
Necessary preliminary tasks:

- Remove front underbody protection
- Remove intake silencer housing

Removal:



Unlock lock of charge air line.*Note:*
Lock (1) must engage during unlocking (see arrow).



Unlock lock (1) on charge air cooler.

Unlock lock (2) on throttle body.

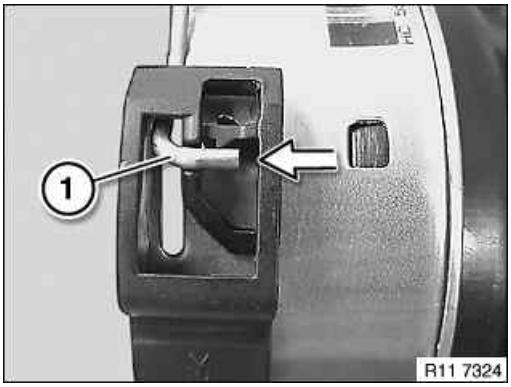
Pull off charge air line (3) from charge air cooler and exhaust turbocharger.

Preparation:

Release lock (1) of charge air line on both sides out of retaining lug.

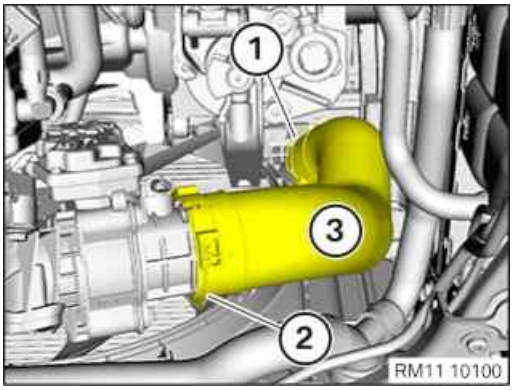
Installation:

cardiagn.com



Note:
Release lock (1) of charge air line on both sides out of retaining lug (see arrow).

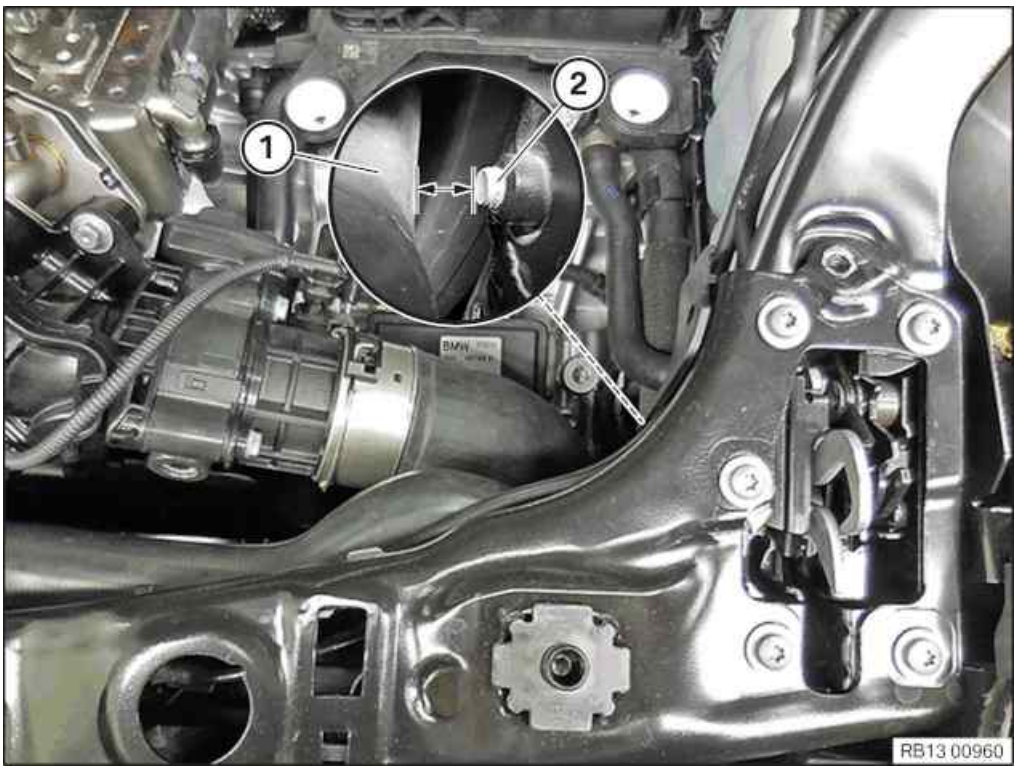
Lock must snap audibly into place.



Connect charge air line to charge air cooler and throttle body.

Lock (1) on charge air cooler must audibly engage.

Lock (2) on throttle body must audibly engage.



After installing charge air line (1), check, whether distance from screw connection (2) on side member is available.

If necessary, install chafe protection.

Required follow-up work:

- Install front underbody protection
- Install intake silencer housing

cardiagn.com

cardiagn.com

11 61 362 Removing and installing/replacing right charge air line (B37C)

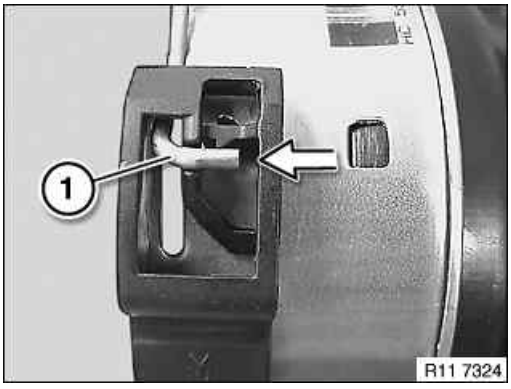
Safety information:

- In the event of a leak at the pressure pipe, there is a **risk of damage** to the exhaust turbocharger.

Necessary preliminary tasks:

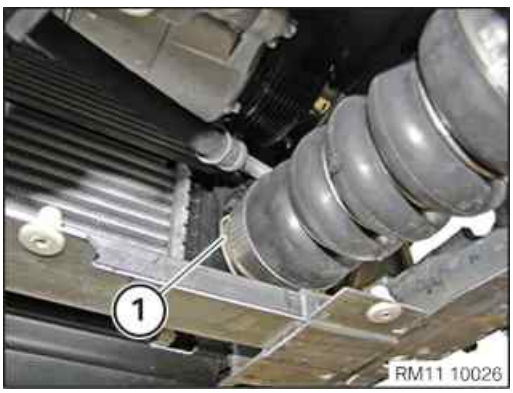
- Remove front underbody protection.

Removal:



Unlock lock of charge air line at exhaust turbocharger.*Note:*
Lock (1) between charge air line and exhaust turbocharger must engage during unlocking (see arrow).

Release screws (1).



Unlock lock (1) on charge air cooler.

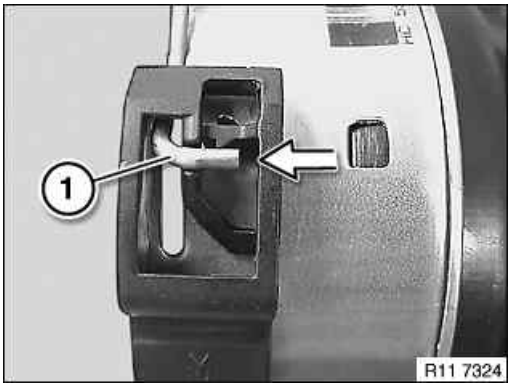
Pull off charge air line from charge air cooler and exhaust turbocharger.

cardiagn.com

Preparation:

Release lock (1) of charge air line on both sides out of retaining lug.

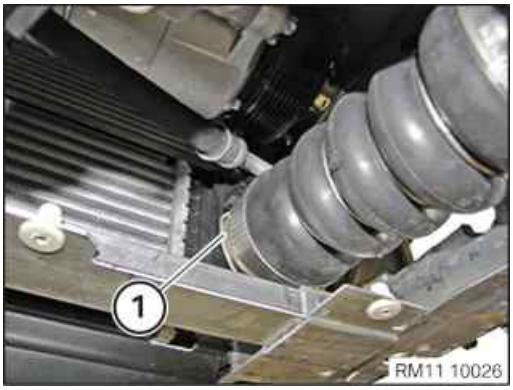
Installation:



Note:
Release lock (1) of charge air line on both sides out of retaining lug (see arrow).

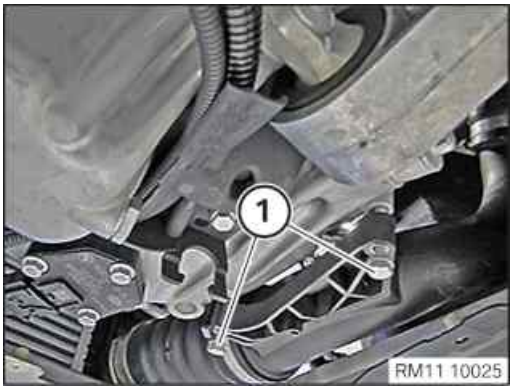
Connect charge air line to exhaust turbocharger.

Lock must snap audibly into place.



Connect charge air line to charge air cooler.

Lock (1) must snap audibly into place.



Tighten down screws (1).

Required follow-up work:

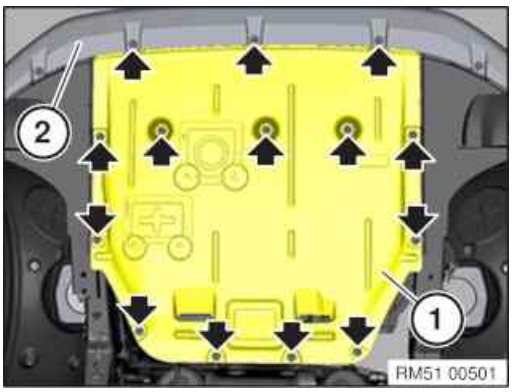
- Install front underbody protection.

cardiagn.com

11 61 362 Removing and installing/replacing the right charge-air duct

PRELIMINARY WORK

1 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

2 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

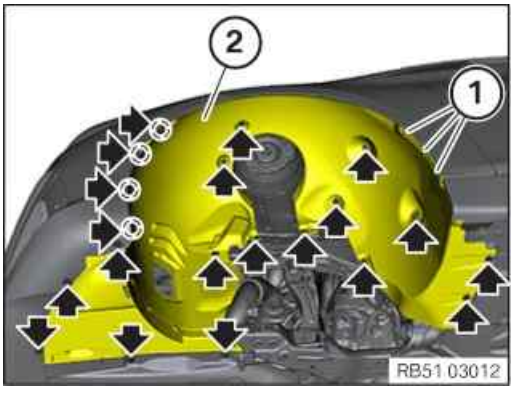
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

3 – Removing the front right wheel arch cover



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

MAIN WORK

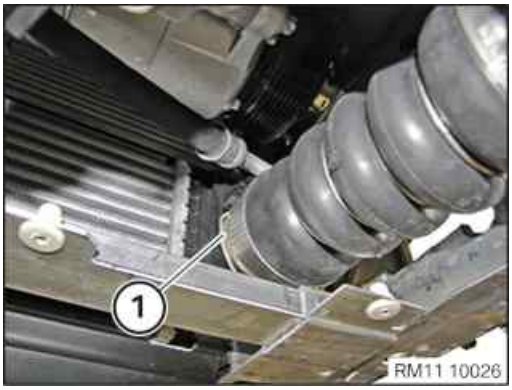
cardiagn.com

4 – Remove right charge-air line

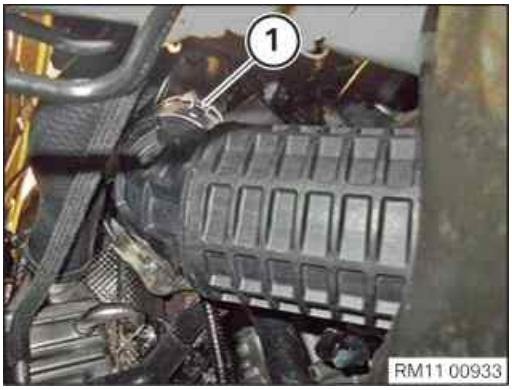
- Release charge air duct screws (1) on oil sump.

- Detach charge air duct screw connection (1) on crankcase.

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).

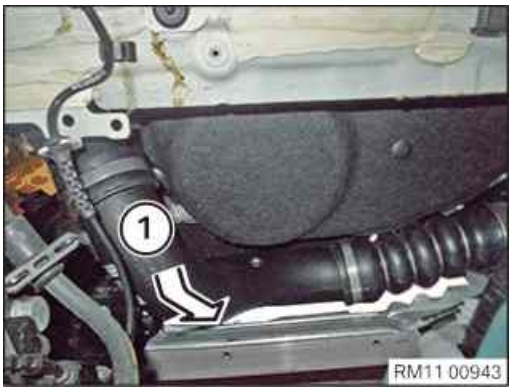


- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.



- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

cardiagn.com



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

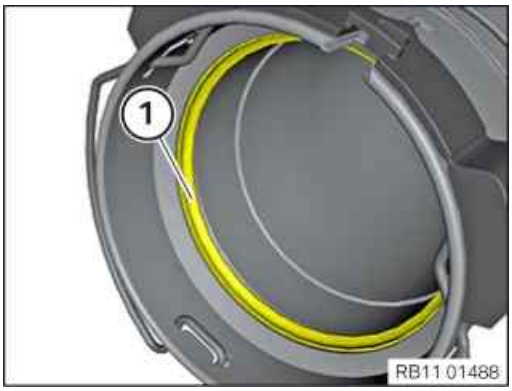
5 – Install right charge air duct

RISK OF DAMAGE

Damage to the exhaust turbocharger.

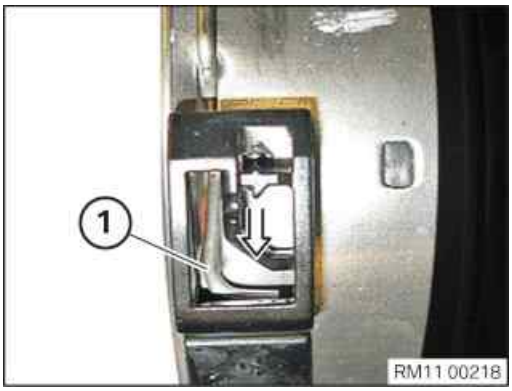
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

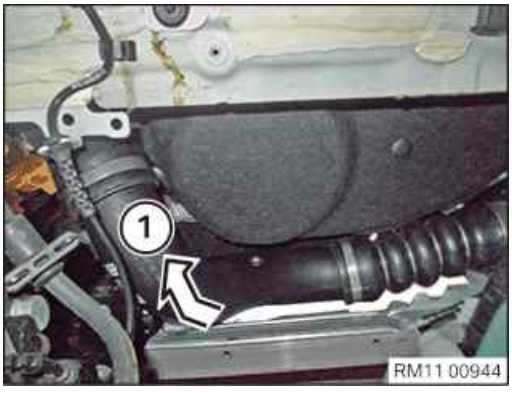


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

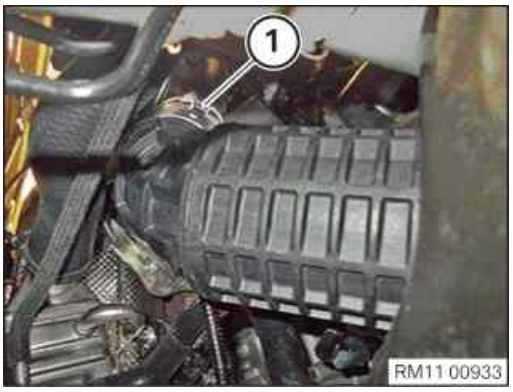


- Let the lock (1) engage at the holder (arrow).



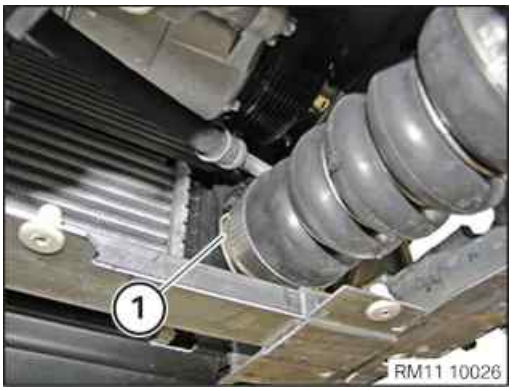
- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.

cardiagn.com



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm

- Tighten charge air duct screws (1) on oil sump.

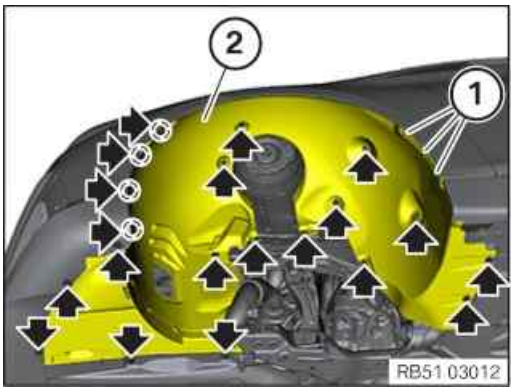
Charge air duct to oil sump

M6		Tightening torque	8 Nm

POSTPROCESSES

6 – Installing the front right wheel arch cover

cardiagn.com



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

7 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

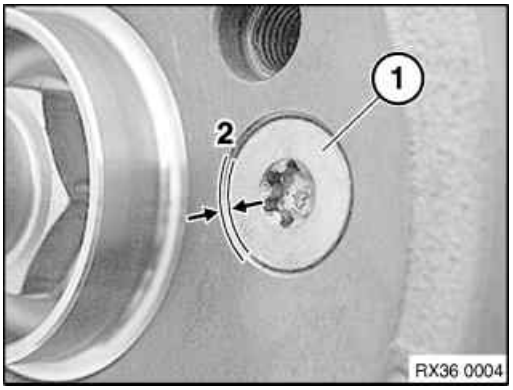
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



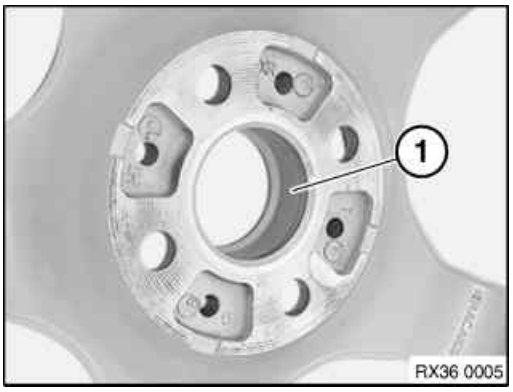
- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

cardiagn.com



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

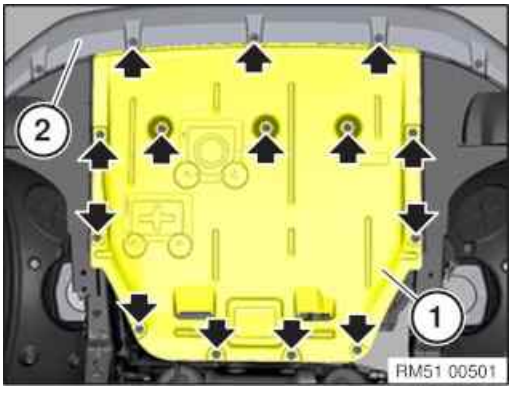
  Parts: Wheel bolts

- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

8 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

11 61 085 Removing and installing/replacing the swirl-flap controller

PRELIMINARY WORK

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.

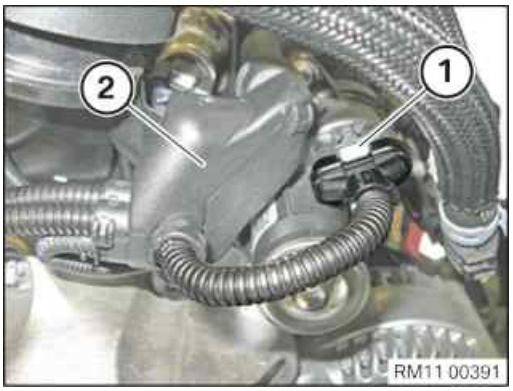
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

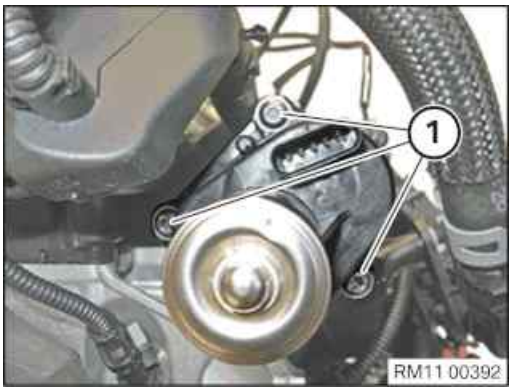
- Unclip the acoustic cover from the marked areas towards the top.

MAIN WORK

2 – Remove swirl-flap controller

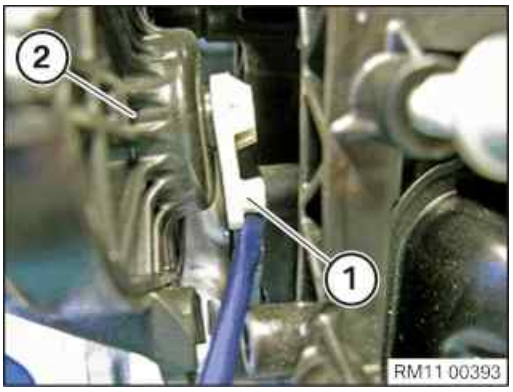


- Unlock and disconnect connector (1).
- Release the wiring harness (2) from the holder and lift until the screws are accessible.



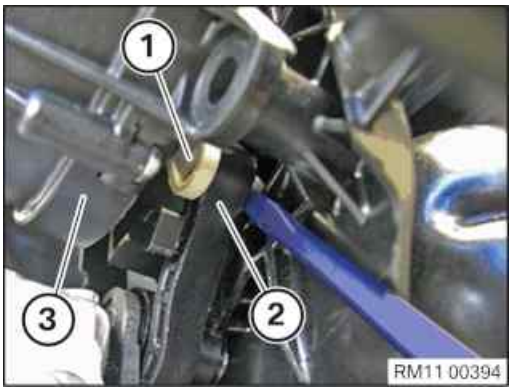
- Release the screws (1) with a suitable tool.

cardiagn.com

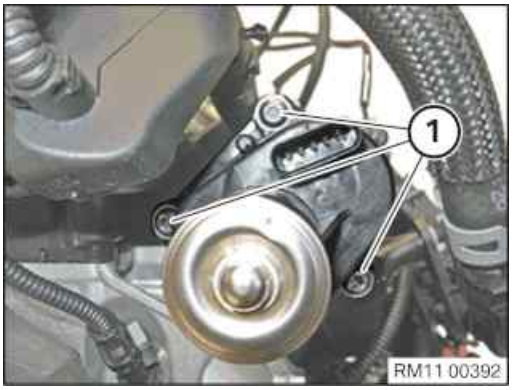


- Carefully release the drive arm (1) from the adjustment lever.
- Remove the swirl-flap controller (2).

3 – Install swirl-flap controller



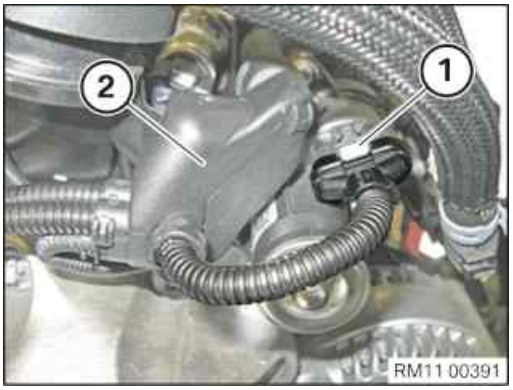
- Position the swirl-flap controller.
- Carefully engage the drive arm (1) in the adjustment lever (2).
- Install the swirl-flap controller (3).



- Tighten the screws (1).

Swirl-flap controller to intake plenum

M6 x 16	Tighten the bolts in alternating order until flush.	4 Nm



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.
- Secure the vehicle wiring harness (2) in the holder.

POSTPROCESSES

4 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

5 – When replacing the swirl-flap controller: Delete adaptations

- Replace swirl-flap actuator.

  Parts: Swirl-flap controller

▶ **Delete adaptations**

- Connect diagnosis system.
  - Power train
  - Digital Diesel Electronics
  - Reset adaptations
  - Delete adaptations

Additional Information

11 61 051 Replace intake plenum

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

PRELIMINARY WORK

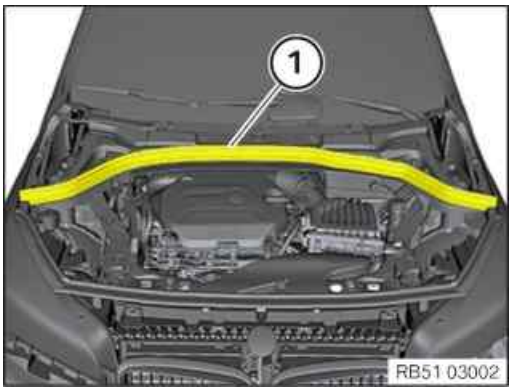
1 – Disconnecting all battery earth leads

- See additional information.

2 – Remove the seal for the rear bonnet

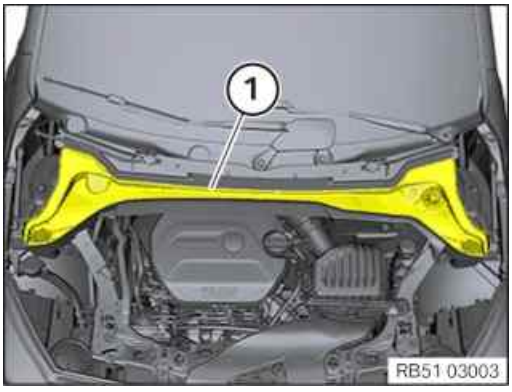
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

3 – Removing front cowl panel cover



- Guide the front cowl panel cover (1) out toward the top and remove it.

cardiagn.com

4 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

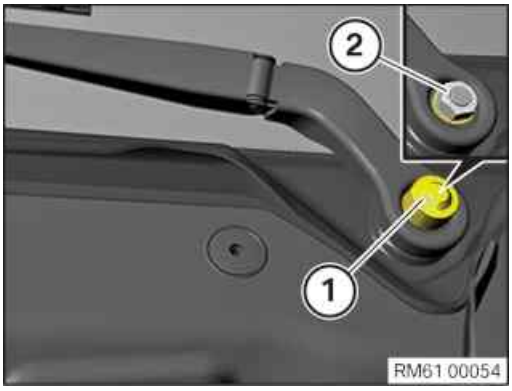
▸ **Remove the wiper arm**

RISK OF DAMAGE

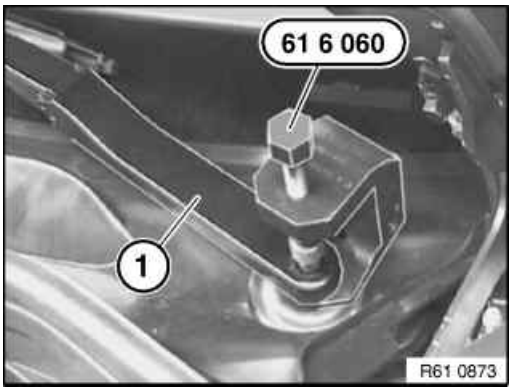
Damage to wiper console

While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.



- Remove the protective cap (1).
- Loosen nut (2).



- Pull off the wiper arm (1) using special tool .

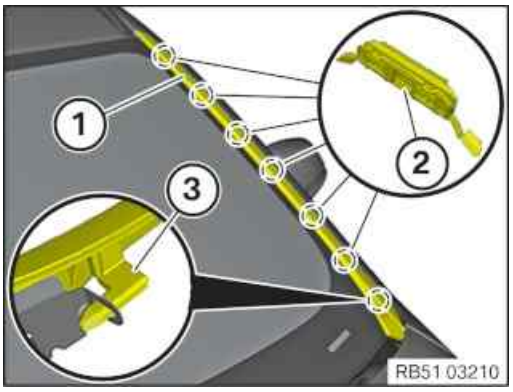
5 – Remove the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

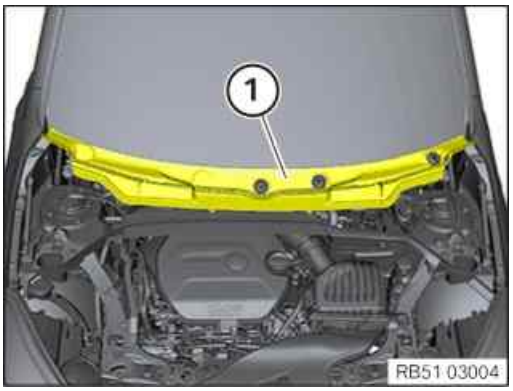
▸ **Remove the gutter strip on the windscreen**

cardiagn.com



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

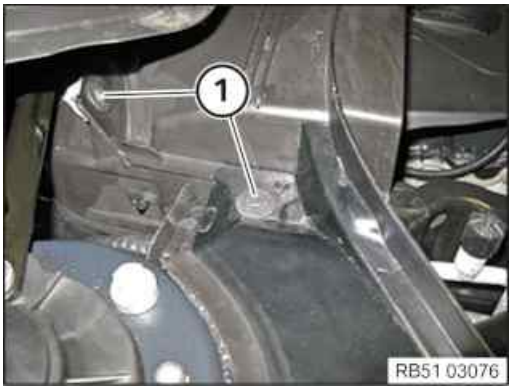
6 – Remove the rear cowl panel cover



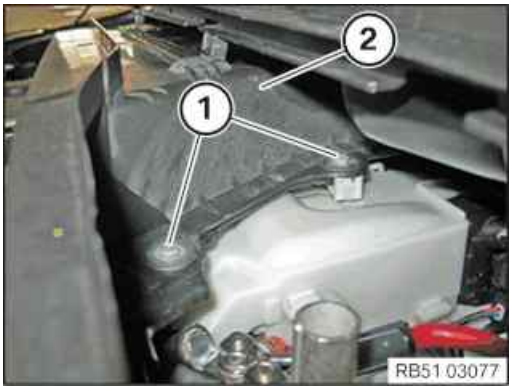
- Disengage and guide out the rear cowl panel cover (1) towards the top.

7 – Removing the upper bulkhead cover

- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

cardiagn.com

8 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

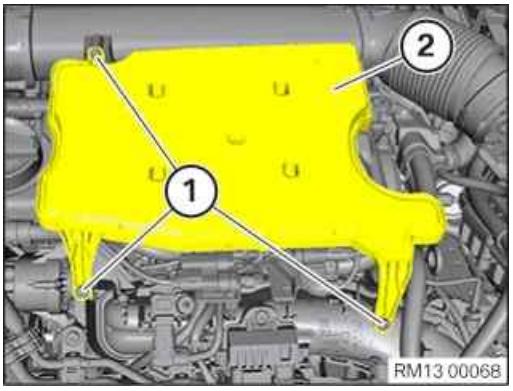
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

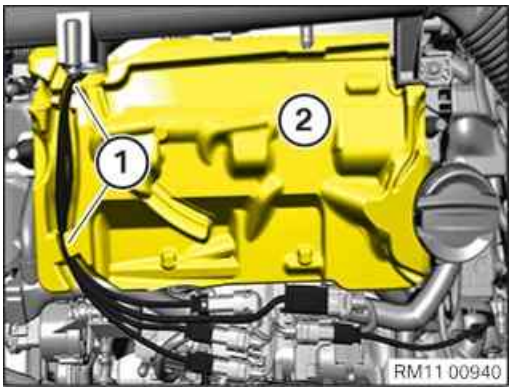
- Unclip the acoustic cover from the marked areas towards the top.

9 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

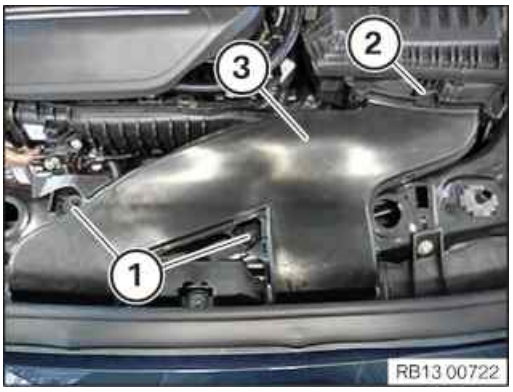
10 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

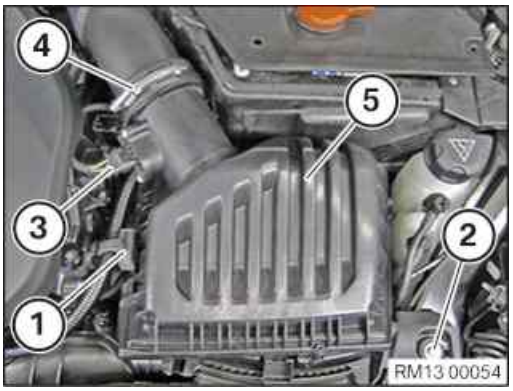
11 – Remove the intake neck for intake silencer housing

cardiagn.com



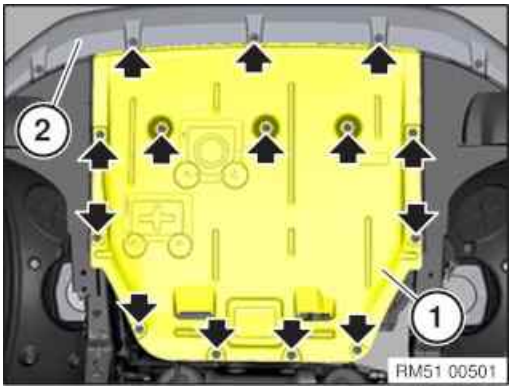
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

12 – Removing intake silencer housing



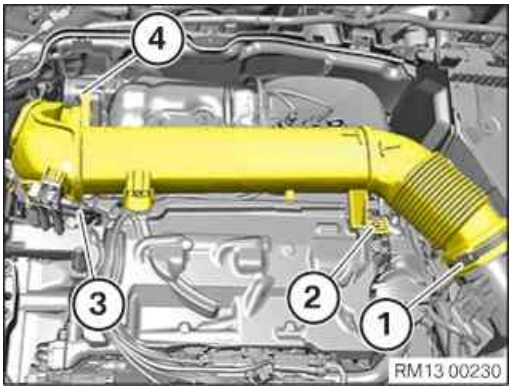
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

13 – Removing the front underbody protection



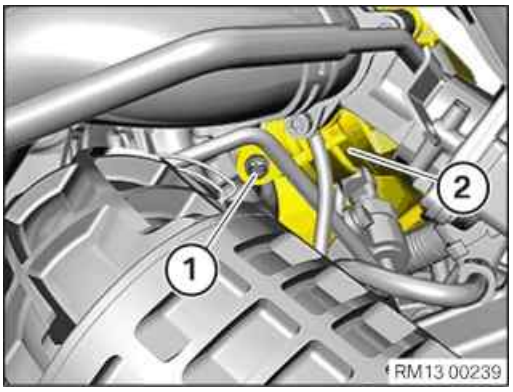
- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

14 – Partially detach the clean air pipe

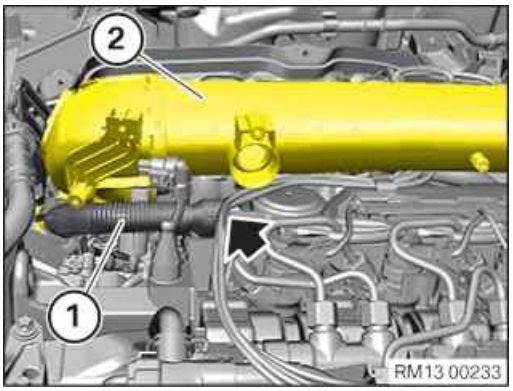


- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).

cardiagn.com



- Unscrew the screw (1) from the clean air pipe (2).

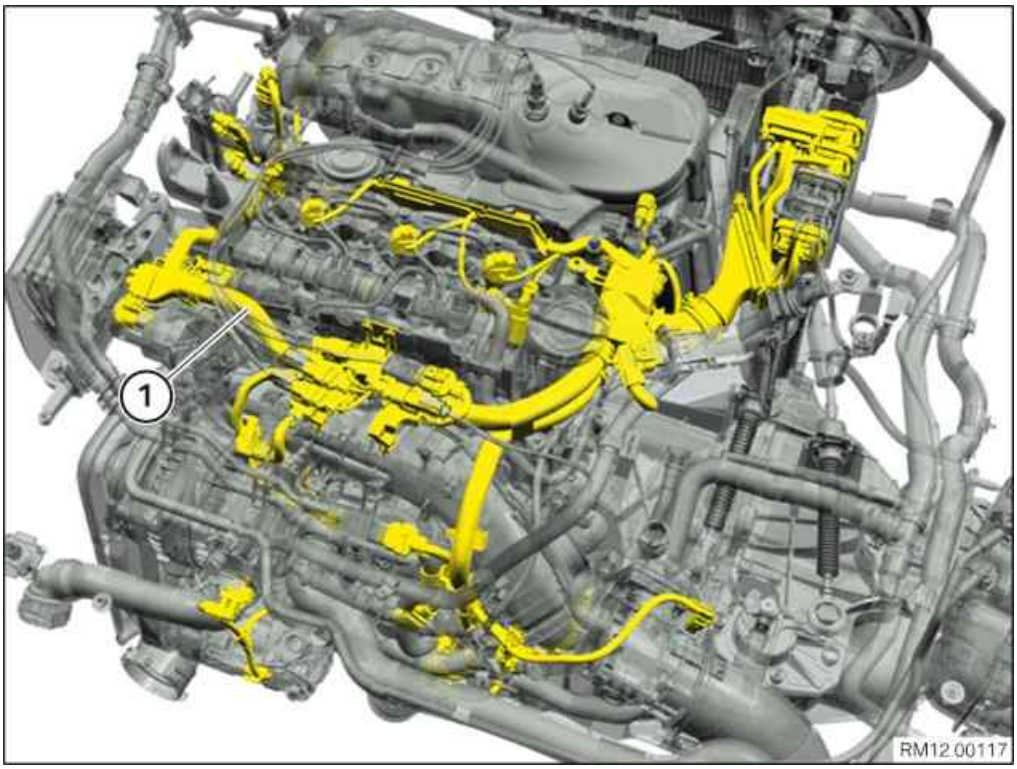


- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

- Thread out the clean air pipe (1) and set it aside as shown.

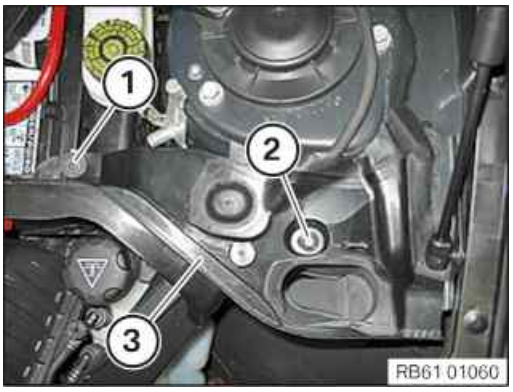
15 – Releasing the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine



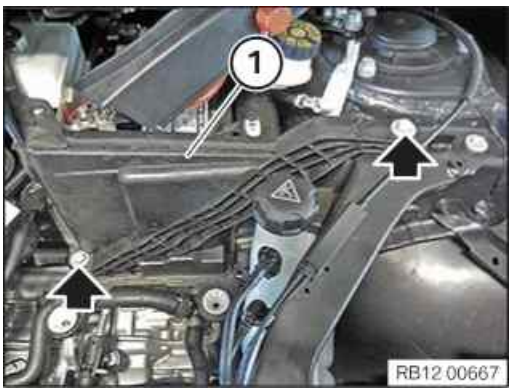
1 Wiring harness section for the engine

cardiagn.com

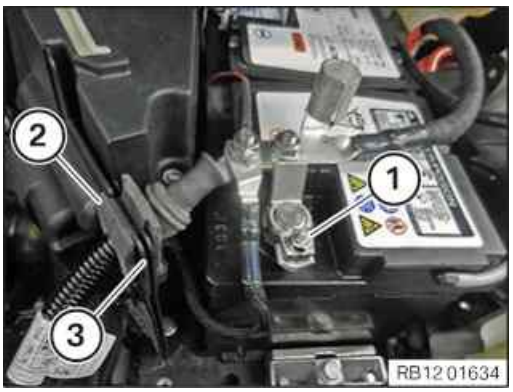


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

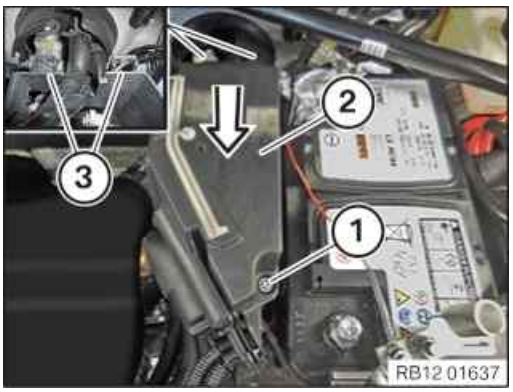
- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.



- Remove screws (arrows).
- Guide out tension strut (1) and remove.

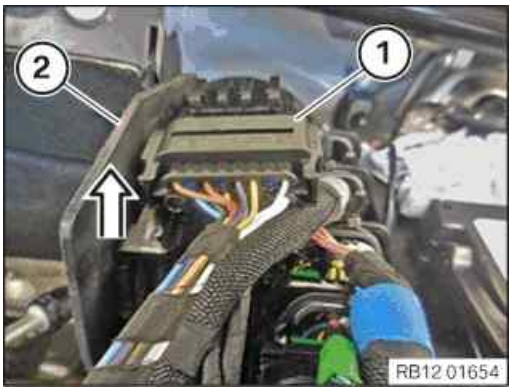


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

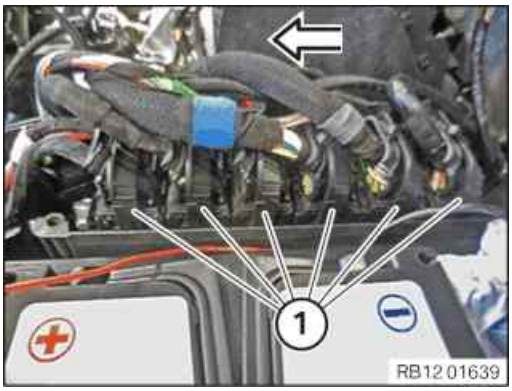


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

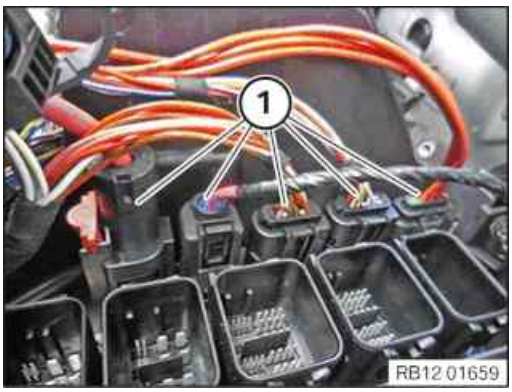
cardiagn.com



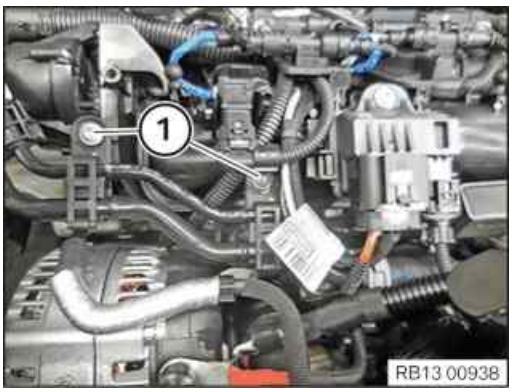
- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).



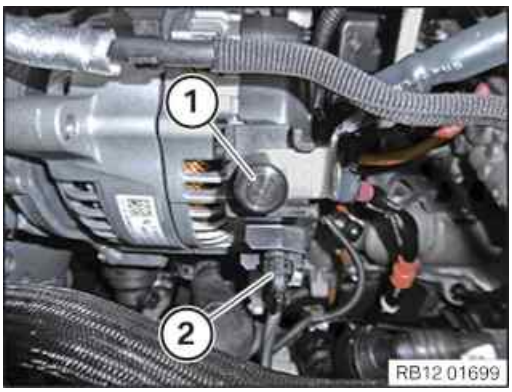
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

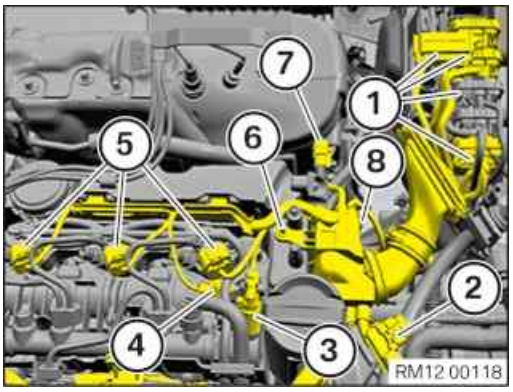


- Loosen screws (1).

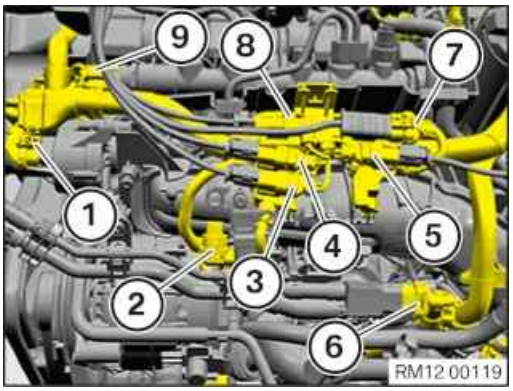


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.

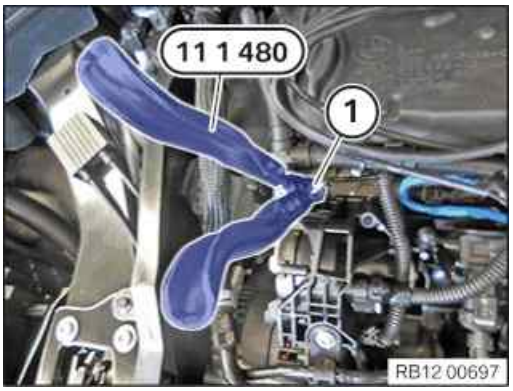
cardiagn.com



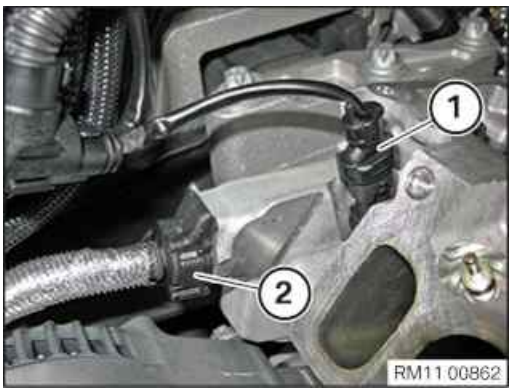
- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock connector (3) and pull off from fuel pressure regulator.
- Unlock connector (4) and disconnect from camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock connector (7) and disconnect from differential pressure sensor.



- Unlock connector (1) and pull it off the servomotor for the swirl flap.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock connector (3) and pull off from exhaust temperature sensor downstream from the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock connector (6) and pull off from the fuel pressure and temperature sensor.
- Unlock and disconnect the connector (7) from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.



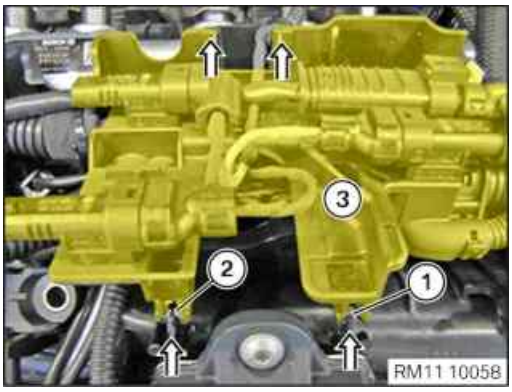
- Unlock connector (1) at all glow elements using special tool **0 490 796 (11 1 480)** and release.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.



- Unlock and loosen connector (1).
- Unlock the clamp of the coolant line (2) and release the coolant line.

16 – Removing the cable clips from the intake plenum

cardiagn.com



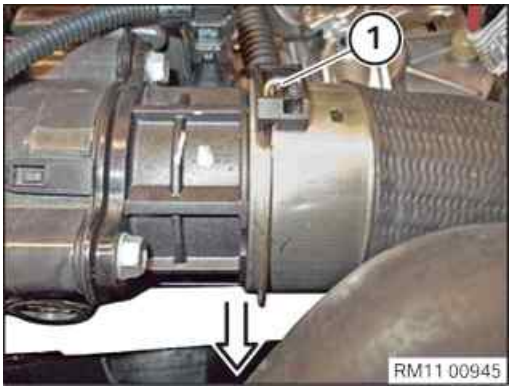
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.

17 – Removing the intake plenum

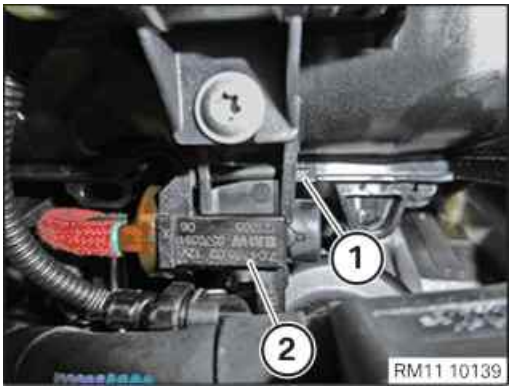
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).

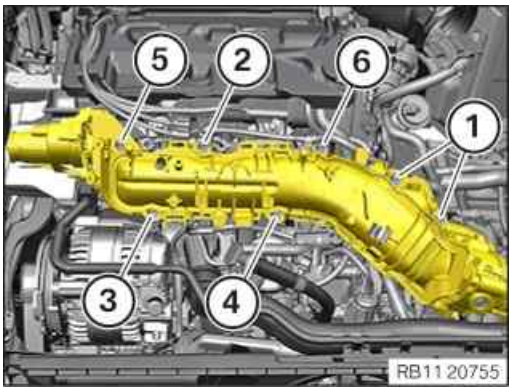


- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

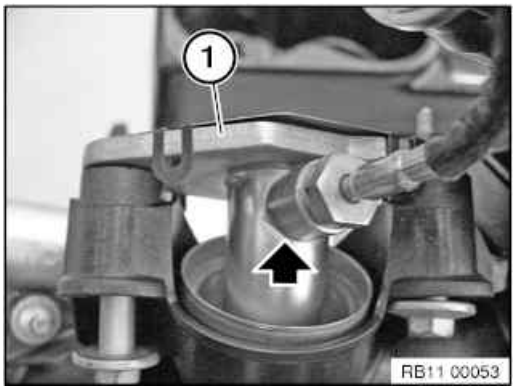


- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

MAIN WORK

18 – Replacement: Checking part number of the intake plenum

NOTICE

For vehicles with Real Driving Emissions (RDE) with a production date from 03/2019:

The intake plenum and the exhaust-gas recirculation cooler vary.

When replacing the intake plenum or the exhaust-gas recirculation cooler: Make sure the part number is correct. Note the part number of the removed component and assign the corresponding, suitable part number.

In the electronic Parts Catalogue (EPC), components with the auxiliary "RDE" and components without the auxiliary "RDE" will be provided. Only the following combinations are permitted:

Intake plenum **with** the auxiliary **"RDE"** and exhaust-gas recirculation cooler **with** the auxiliary **"RDE"**.

Intake plenum **without** the auxiliary **"RDE"** and exhaust-gas recirculation cooler **without** the auxiliary **"RDE"**.

Components without the auxiliary "RDE" must not be installed with components with auxiliary "RDE".

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Note down part number (1).
- Select new part using the part number from the Electronic Parts Catalogue (EPC).

19 – When replacing the intake plenum: Remount components

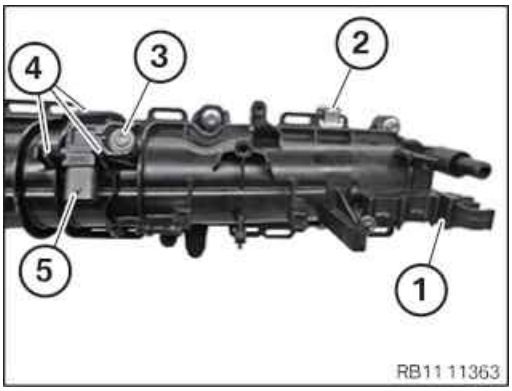
cardiagn.com

RISK OF DAMAGE

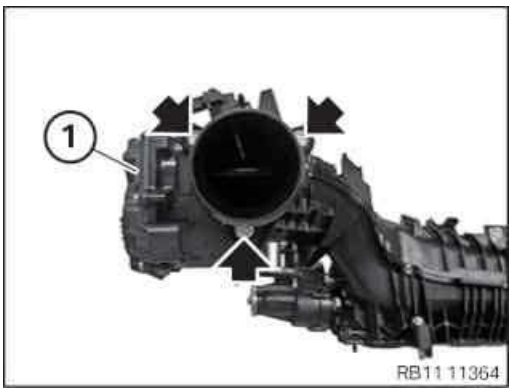
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Guide out and remove holder (1).
- Feed out and remove the clamp (2).
- Loosen screw (3).
- Unlock the locks (4).
- Remove the charging pressure sensor (5).



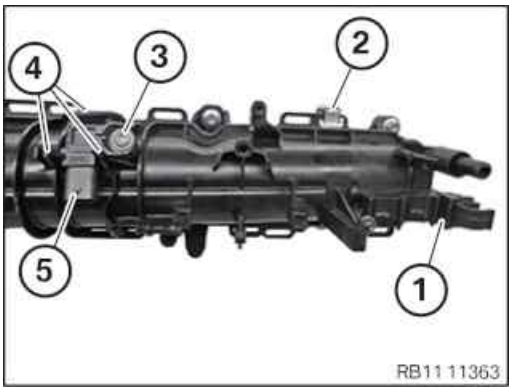
- Remove screws (arrows).
- Remove the throttle bodies (1).

- Release exhaust temperature sensor (1) using special tool .
- Feed out and remove exhaust temperature sensor (1).
- Replace intake plenum.

  Parts: Plenum

- Check the sealing ring (1) for damage and renew where required.
- Lightly coat the sealing ring (1) on the charging pressure sensor with lubricant for the installation.

cardiagn.com



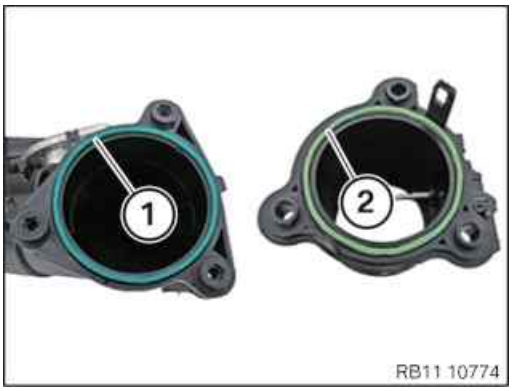
- Insert and install the charging pressure sensor (5).
- Lock the locks (4).

  The locks (4) must engage audibly.
- Tighten down screw (3).

Charging pressure sensor to intake plenum

6x20		Tightening torque	5 Nm

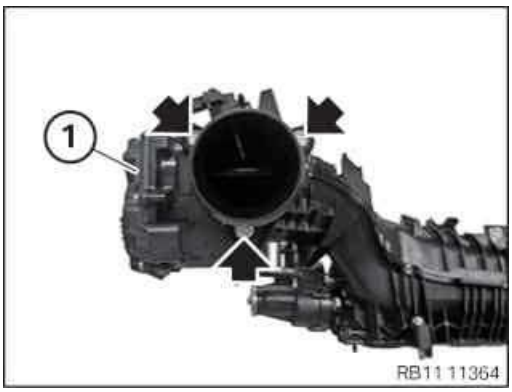
- Feed in and install the clamp (2).
- Insert and install the holder (1).



- Renew the gasket (1) between the intake system and the throttle body.

  Parts: Gasket.
- Renew gasket (2) between throttle body and charge air pipe.

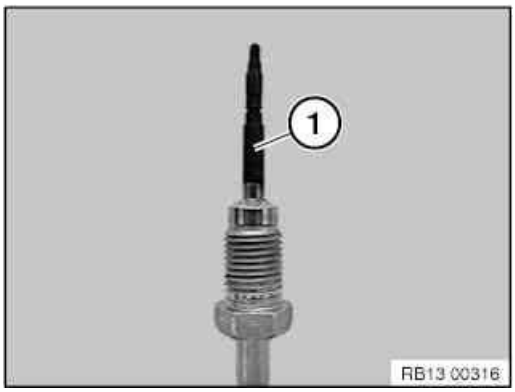
  Parts: Gasket.



- Feed in and install the throttle body (1).
- Tighten screws (arrows).

Throttle body to intake plenum

6x50		Tightening torque	7 Nm



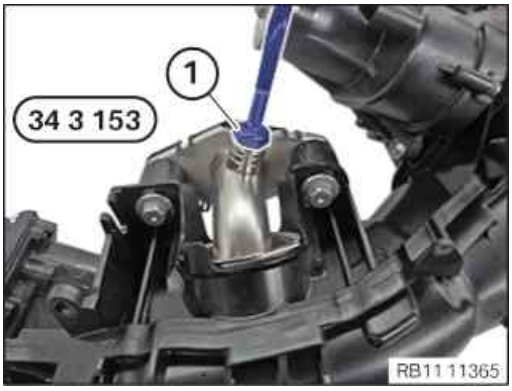
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and the exhaust temperature sensor as needed.



- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1) with the special tool .

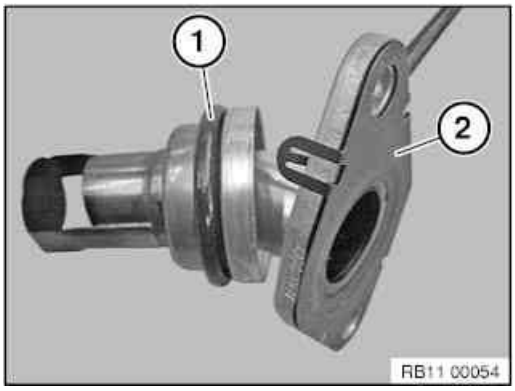
Exhaust temperature sensor for EGR

Sensor		Tightening torque	21,7 Nm

POSTPROCESSES

cardiagn.com

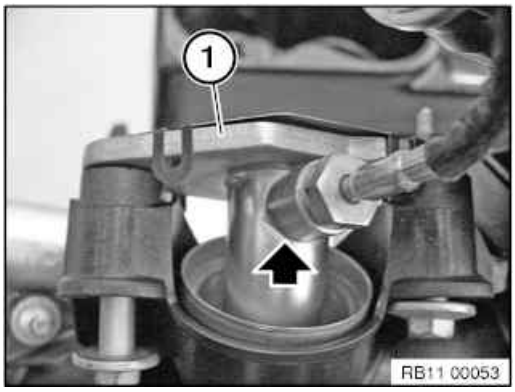
20 – Installing the intake plenum



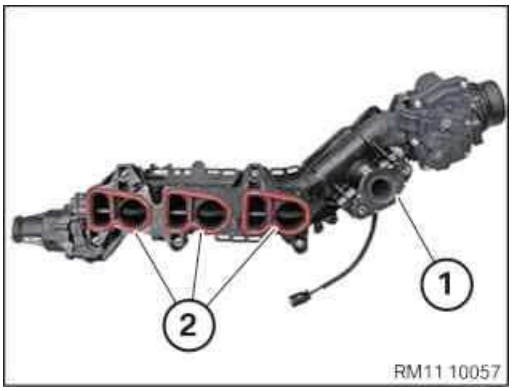
- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.

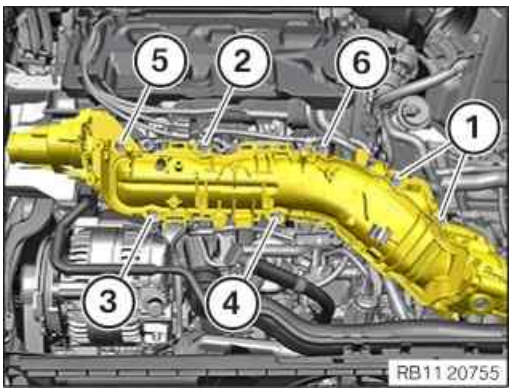


- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

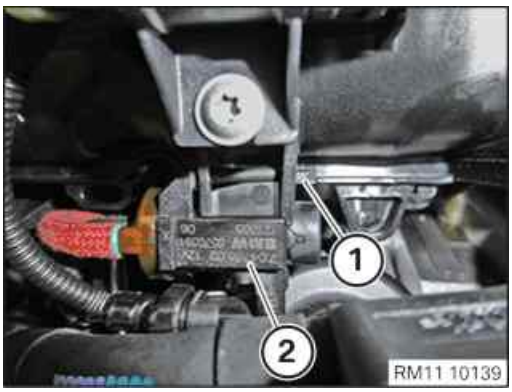
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

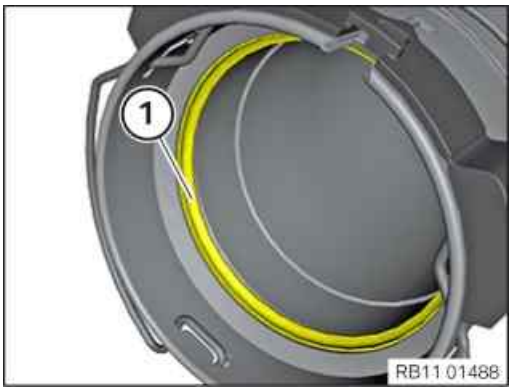
Intake plenum to cylinder head

M6		Tightening torque	11 Nm



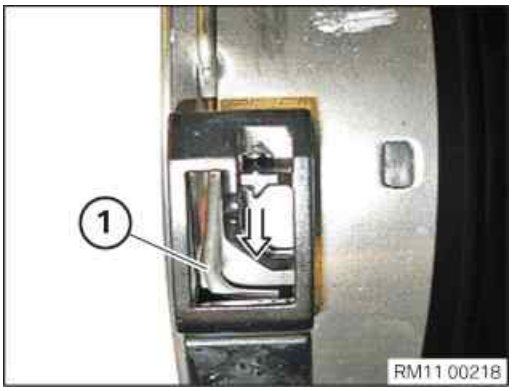
- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.

cardiagn.com

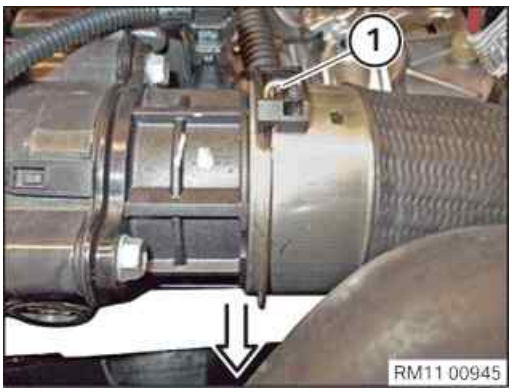


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring



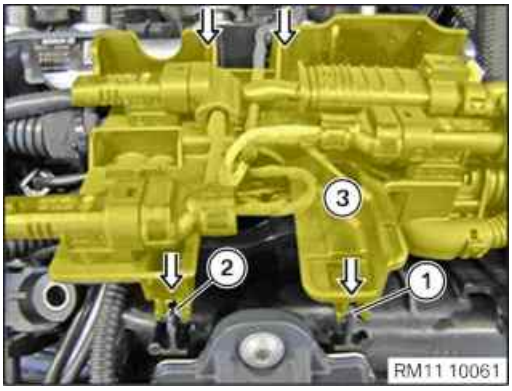
- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

21 – Installing the cable clip for the intake plenum

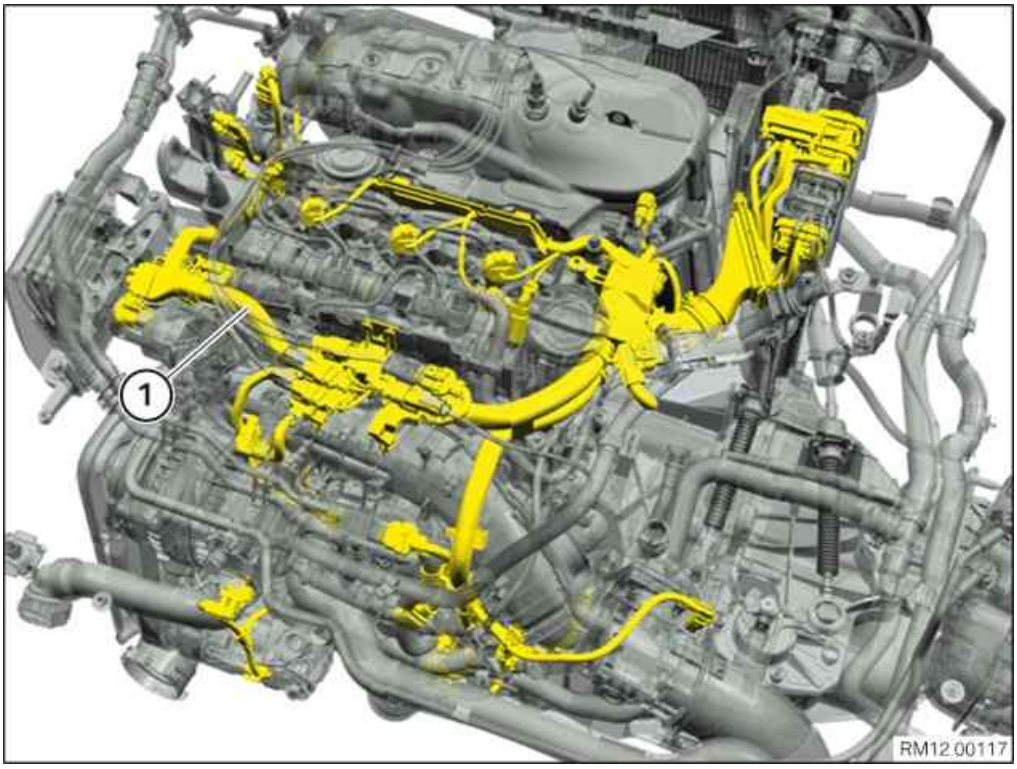


- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).

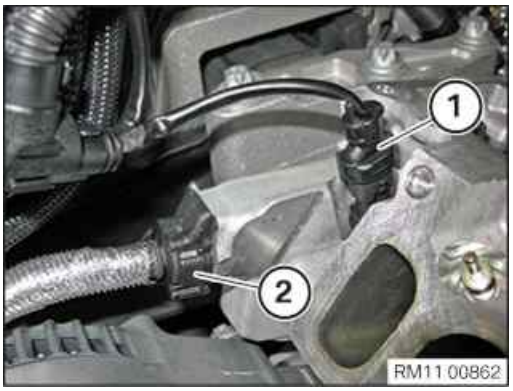
22 – Fastening the wiring harness section for the intake plenum

cardiagn.com

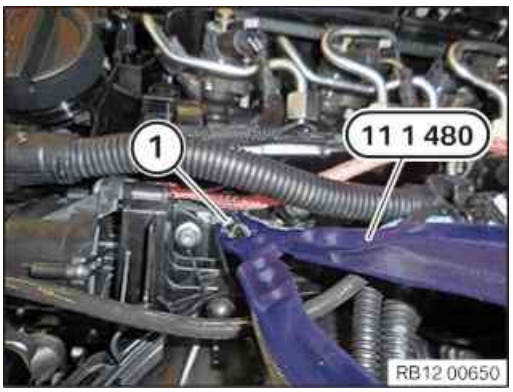
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine

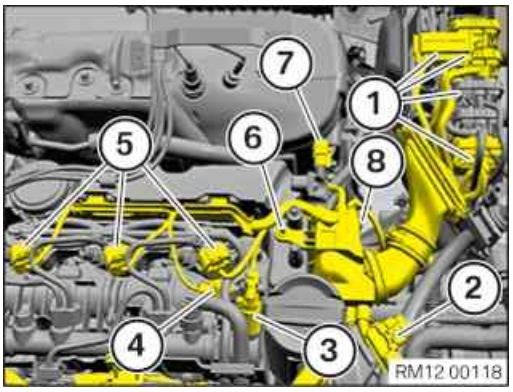


- Connect the coolant line (2) and lock the clamp.
- Connect and lock the connector (1).
- The locks must engage audibly.



- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

cardiagn.com

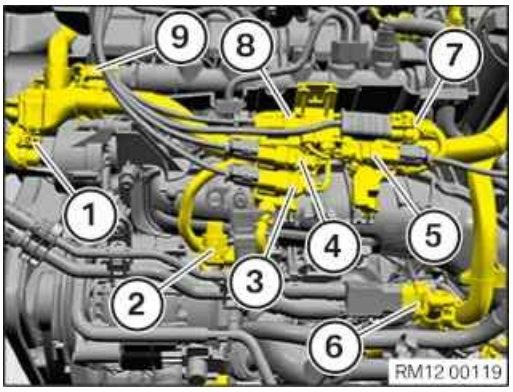


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

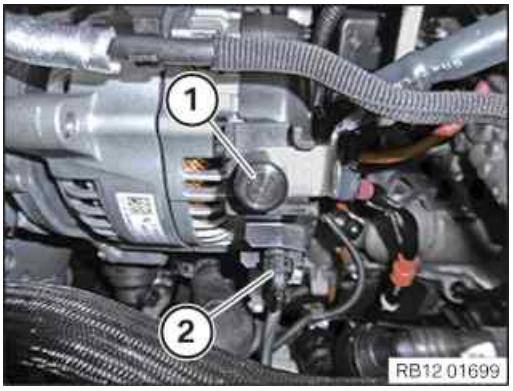
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.



- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.

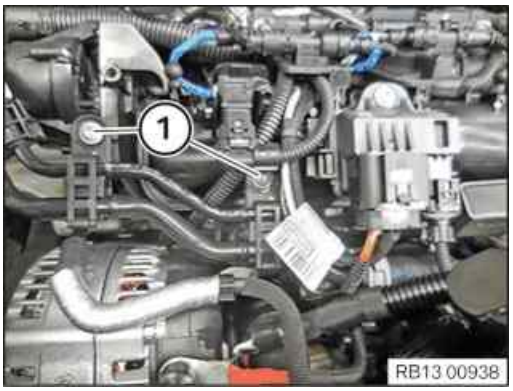


- Connect and lock the connector (2).

  Lock must audibly engage.
- Connect positive battery cable (1) on alternator and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

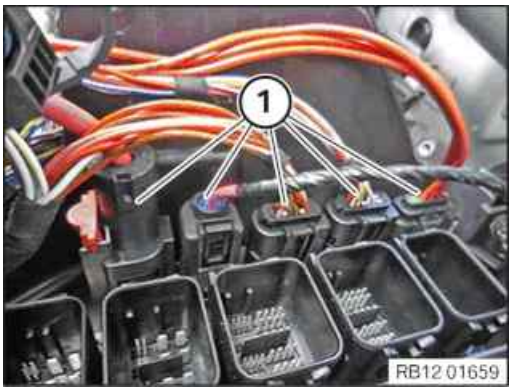


- Position fuel lines.
- Tighten the screws (1).

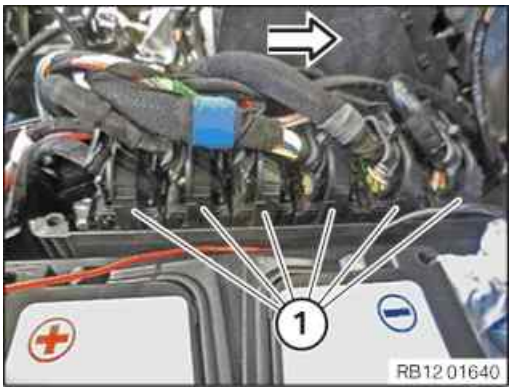
Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

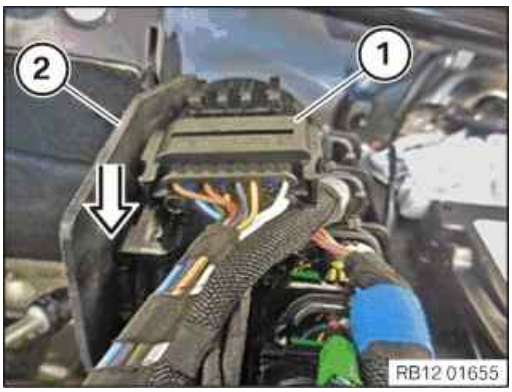
cardiagn.com



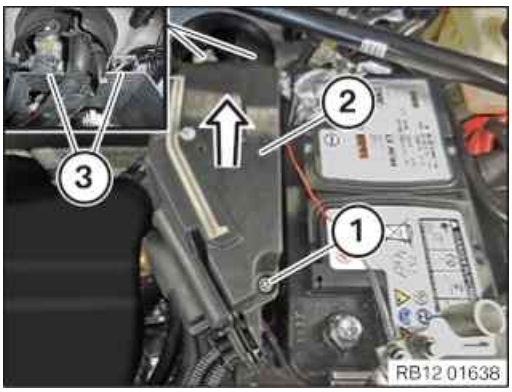
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



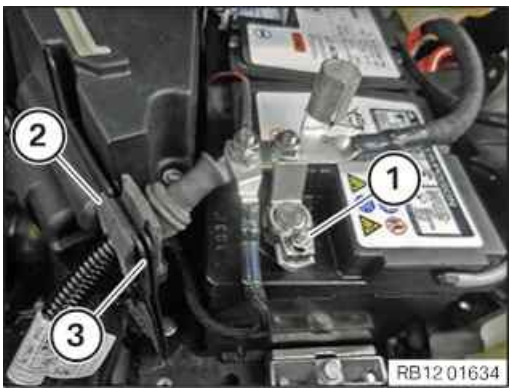
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

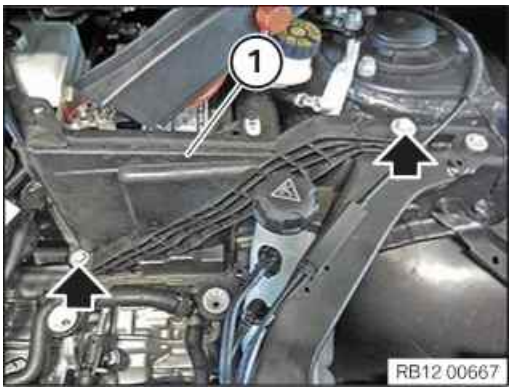


- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (1).
- Tighten screws (arrows).

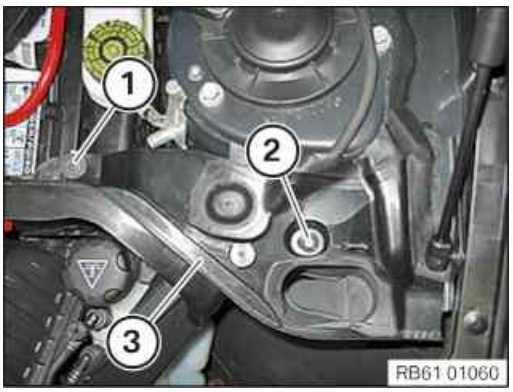
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

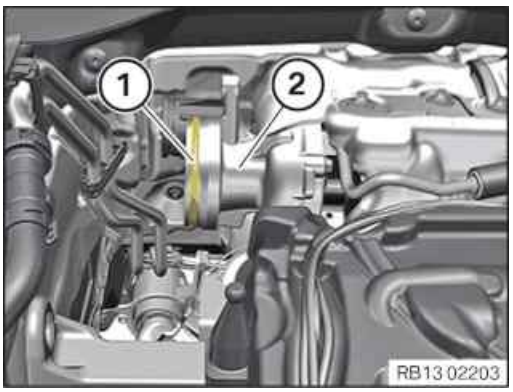


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

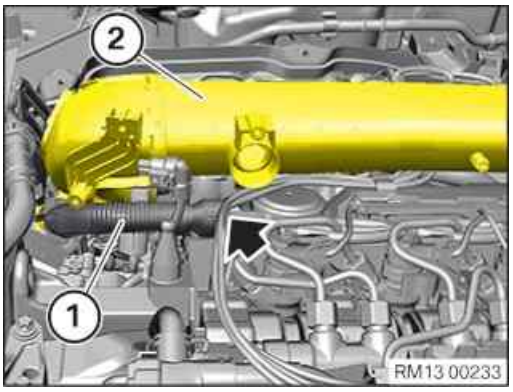
23 – Partially securing clean air pipe



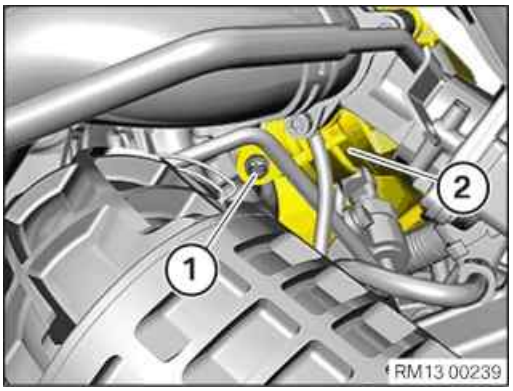
- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

- Feed in clean air pipe (1) and install.

cardiagn.com



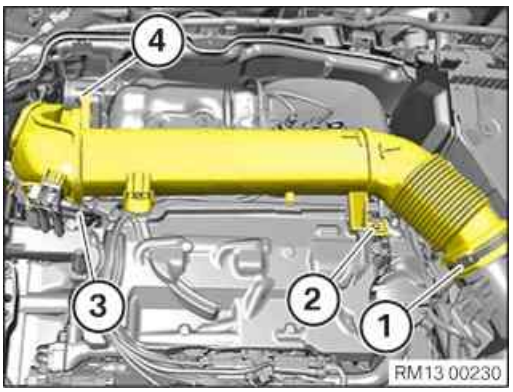
- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten screw (1) from clean air pipe (2).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

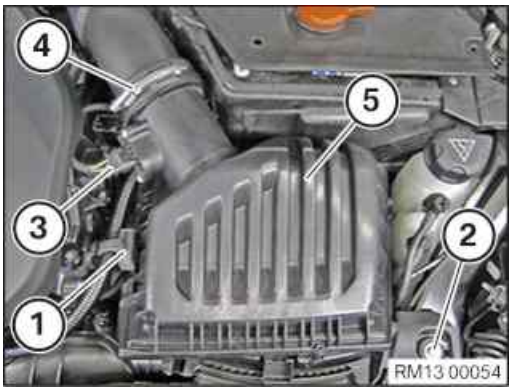
- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

24 – Installing intake silencer housing

cardiagn.com



- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

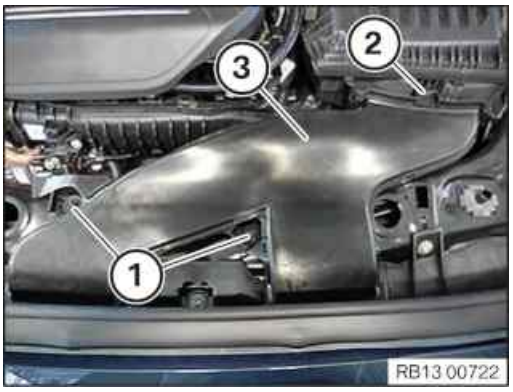
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

25 – Install the intake neck for the intake filter housing



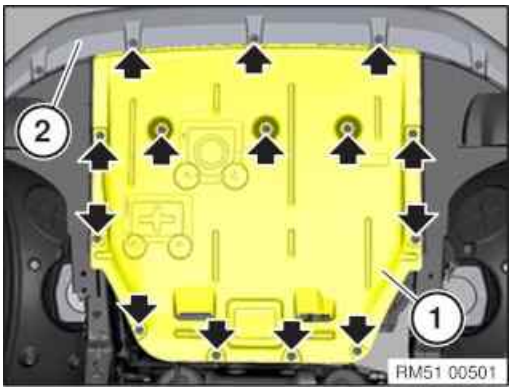
- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

26 – Installing the front underbody protection

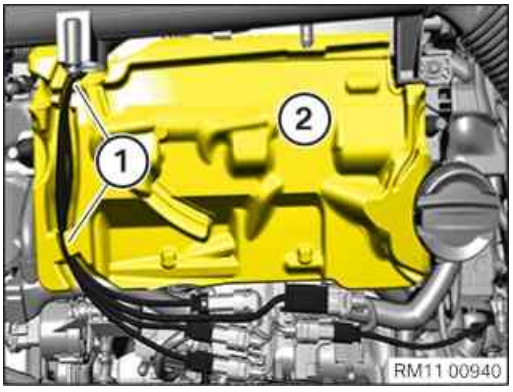


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

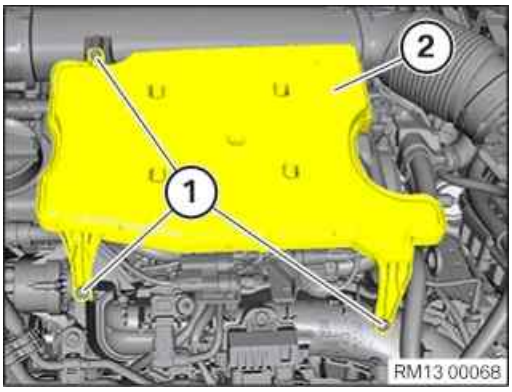
27 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

28 – Install resonator

cardiagn.com



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

29 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

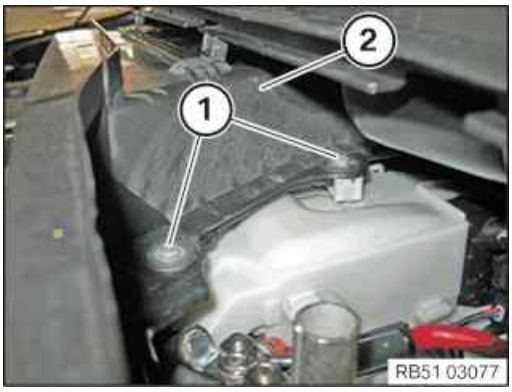
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

30 – Installing the upper bulkhead cover

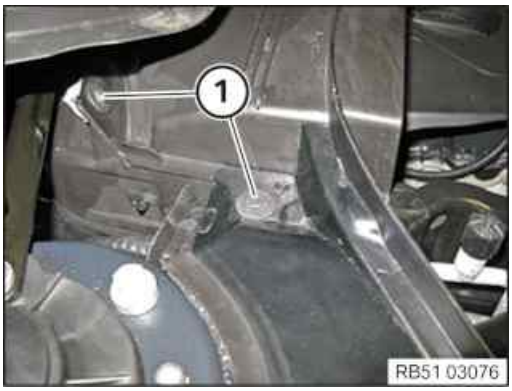
cardiagn.com



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

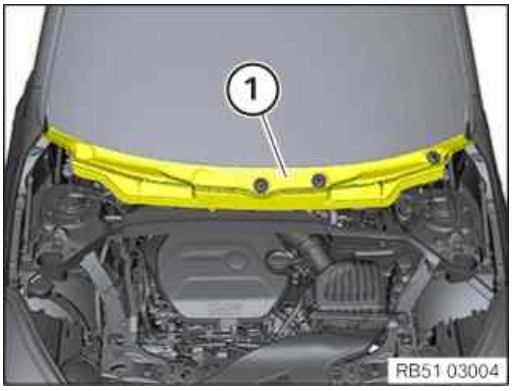
Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

31 – Install the rear cowl panel cover



- Feed in and engage the rear cowl panel cover (1).

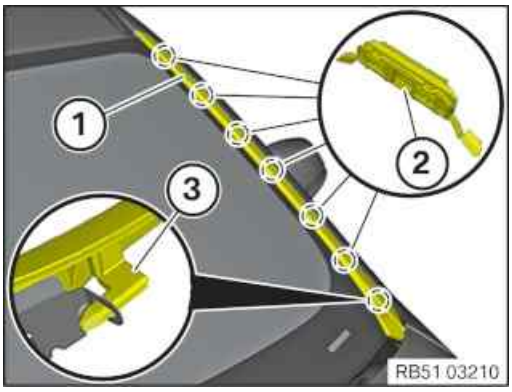
32 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the gutter strip on the windscreen**

cardiagn.com



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

33 – Install left and right wiper arm

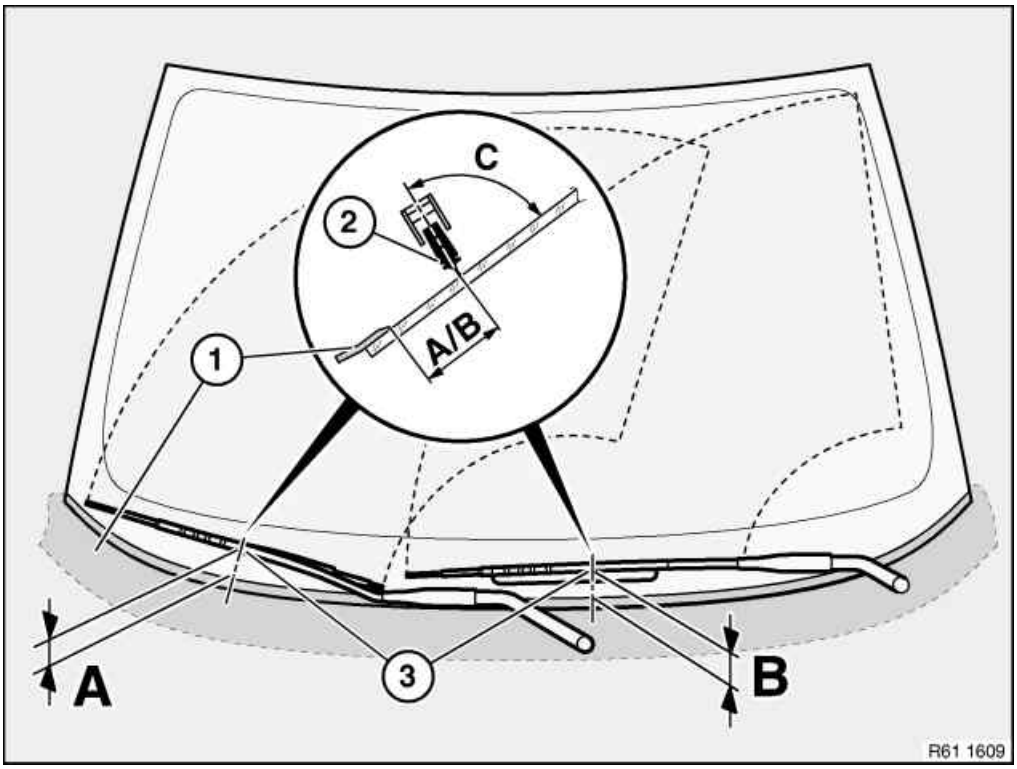
NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the wiper arm**

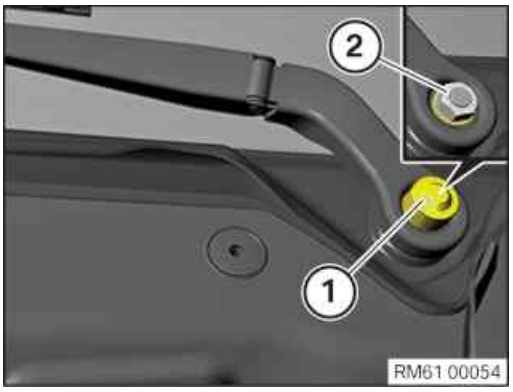
TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).

cardiagn.com



NOTICE

Description is for left component only. Procedure on the right side is identical.

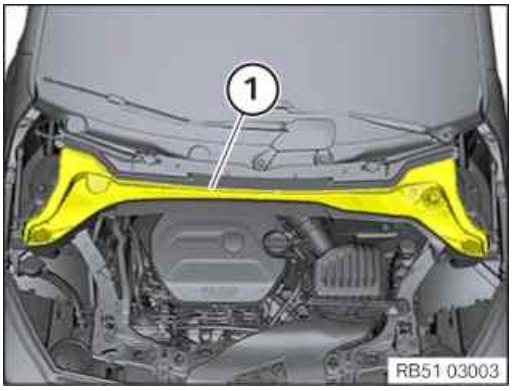
- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

34 – Installing front cowl panel cover

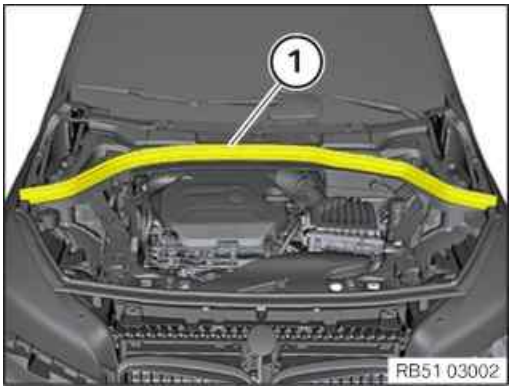


- Insert the cowl panel cover front (1) to the rear and install.
- Check cowl panel cover at front is correctly seated (1).

35 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

36 – Disconnecting all battery earth leads

- See additional information.

cardiagn.com

37 – Reset the adaptations for the swirl-flap controller

- Connect the diagnosis system and reset the adaptations:
  - Power train
  - Digital Diesel Electronics
  - Reset adaptations
  - Delete adaptations

18 40 040 Removing and installing, sealing/replacing exhaust manifold (B37)

Warning!

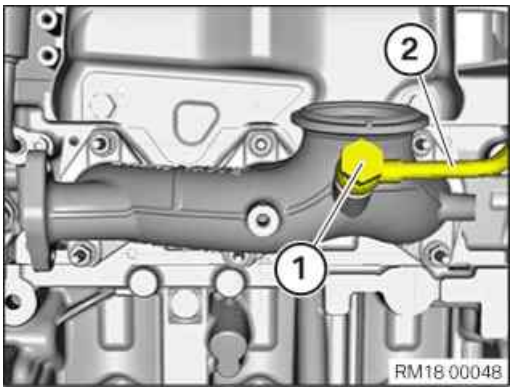
Risk of burning!

Only perform this repair work on an engine that has cooled down.

Necessary preliminary tasks:

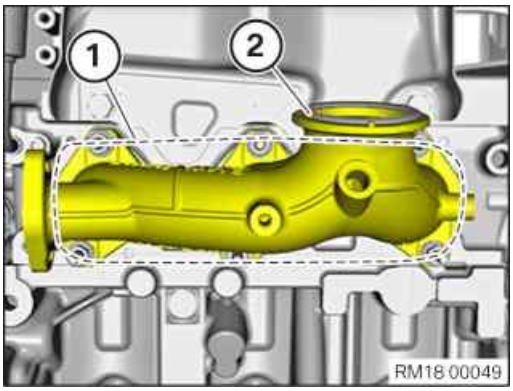
- Remove exhaust turbocharger.
- Remove diesel particulate filter.

Removal:



Release banjo bolt (1).

Place exhaust pressure pipe (2) on one side.



Release nuts along dashed line (1).

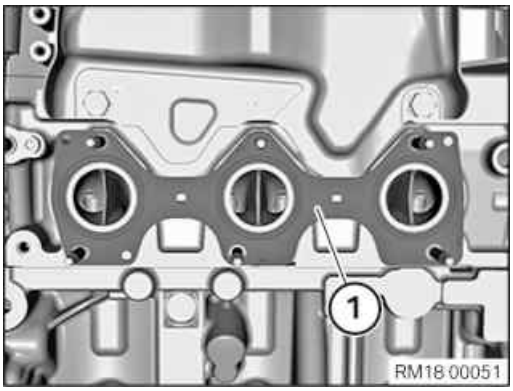
Release exhaust manifold (2) from cylinder head and remove.

Preparation for installation:

Clean connection points.

cardiagn.com

Installation:



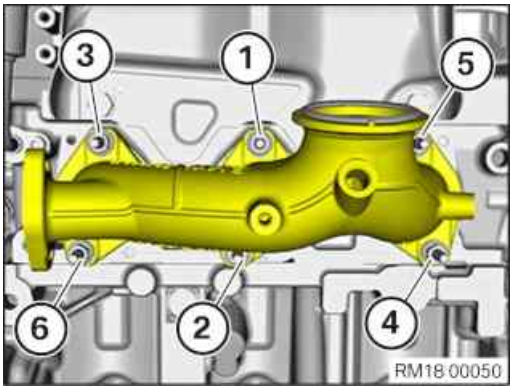
Replace gasket (1).

Part: Gasket

Important!

Gasket (1) is coated with graphite on one side.

The graphite coating must be fitted on the exhaust manifold side.

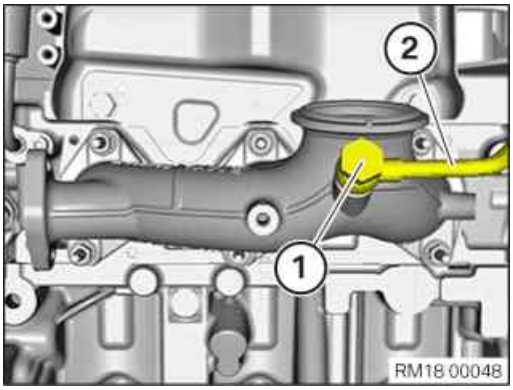


Mount exhaust manifold.

Position nuts and tighten in sequence.

Observe tightening specification!

Tightening torque 18 30 9AZ.



Renew sealing rings.

Parts: Sealing rings

Important!

To ensure operational reliability, use stainless steel sealing washers.

Mount exhaust pressure pipe (2).

Tighten banjo bolt (1).

Tightening torque 18 30 8AZ.

Required follow-up work:

- Install exhaust turbocharger.
- Install diesel particulate filter.

cardiagn.com

11 65 020 Damage on the exhaust turbocharger due to obstructed oil supply lines

Caution!

If there is damage on the exhaust turbocharger:

- **Complaint:**

  Power loss, malfunction indicator lamp on

  Damage to the exhaust turbocharger.

  After damage to the exhaust turbochargers, the oil supply lines are often not replaced and the oil is not changed, this can lead to damage to the exhaust turbocharger again.

  Further, fault code entries in the preheating system or to the charging pressure controller (variable turbine geometry) are not considered.

  For N57X, additionally the following faults can be stored: 292200 Charging pressure controller (variable turbine geometry): Position sensor in charging pressure controller faulty or undervoltage 48F6 in charging pressure controller (variable turbine geometry)

  Attention: Subsequent damage is not covered by the warranty!

- **Cause**

  The oil supply lines for the exhaust turbocharger are clogged or blocked by oil sludge/coking. Due to that, oil supply to the exhaust turbocharger may be inadequate and can cause damage to the exhaust turbocharger again.

  Malfunctions in the preheating system can lead to clogging of the diesel particulate filter and thus to problems with the charging pressure control or the charging pressure build-up. Consequence: Problems at cold start or the engine does not start due to a faulty preheating system. Power loss or overheating of the exhaust branch.

  If the new exhaust turbocharger is not filled with enough oil prior to installation, the shaft bearings can be damaged at the first starting operation itself.

- **Solution**

  Proceed as follows in response to a customer complaint:

  If fault code entries are available for the preheating system, the preheating system must be repaired. Then delete the fault memory.

  Caution!

  If the engine does not heat up or only heats up very slowly because of a defective thermostat, this can result in premature or repeated damage to the exhaust turbocharger. **Always** check the coolant thermostat and thermostat for the EGR cooling if there is a complaint, and repair if applicable.

  Engine oil and filter exchange must be carried out on the engine absolutely, so as to guarantee operation of the changed exhaust turbocharger with fresh oil!

  Since the oil feed line as well as the oil return line may coke with increased mileage especially in the cable connection area of the exhaust turbocharger, the followings rules are applicable:

  Engines with one exhaust turbocharger:

  - Exhaust turbocharger exchange due to electrical fault on the exhaust turbocharger (vehicle mileage/km up to 100,000

cardiagn.com

km):

- Check the oil feed line, oil return line and the associated banjo bolts for coking, **replace if applicable**.
- If the oil return line is replaced, the connecting pipe on the crankcase must **always** be cleaned, as it is also subject to coking!
- If a replacement is not necessary: If the exhaust turbocharger is offered only along with the oil return line and oil feed line in the Electronic Parts Catalogue (EPC), it can be removed from the order list again.

- Exhaust turbocharger exchange due to electrical fault on the exhaust turbocharger (vehicle mileage/km starting at 100,000 km):
  - Replace the oil feed line, oil return line and the associated banjo bolts.
  - If the oil return line is replaced, the connecting pipe on the crankcase must **always** be cleaned, as it is also subject to coking!
- Exchanging the exhaust turbocharger if there is mechanical damage on the exhaust turbocharger:
  - Always replace the oil feed line, oil return line and the associated banjo bolts.
  - If the oil return line is replaced, the connecting pipe on the crankcase must **always** be cleaned, as it is also subject to coking!

Engines with several exhaust turbochargers:

- Exchanging one or several exhaust turbochargers due to electrical faults on the exhaust turbocharger (vehicle mileage/km up to 100,000 km):
  - Check the oil feed lines, oil return lines and the associated banjo bolts of **all** exhaust turbochargers (including the intact exhaust turbocharger) for coking, **replace if applicable**.
  - If all the oil return lines are replaced, all the connecting pipes on the crankcase must **always** be cleaned, as they are also subject to coking!
  - If a replacement is not necessary: If the exhaust turbocharger is offered only along with the oil return line and oil feed line in the Electronic Parts Catalogue (EPC), it can be removed from the order list again.
- Exchanging one or several exhaust turbochargers due to electrical faults on the exhaust turbocharger (vehicle mileage/km starting at 100,000 km):
  - Replace the oil feed lines, oil return lines and the associated banjo bolts of **all** exhaust turbochargers (including the intact exhaust turbocharger).
  - If all the oil return lines are replaced, all the connecting pipes on the crankcase must **always** be cleaned, as they are also subject to coking!
- Exchanging one or several exhaust turbochargers if there is mechanical damage on the exhaust turbocharger:
  - Always replace the oil feed lines, oil return lines and the associated banjo bolts of **all** exhaust turbochargers (including the intact exhaust turbocharger).
  - If all the oil return lines are replaced, all the connecting pipes on the crankcase must **always** be cleaned, as they are also subject to coking!

In case the diesel particulate filter is foul with oil, clean or replace it, if necessary.

In order to exclude that the oil supply to the exhaust turbocharger is

cardiagn.com

not impaired due to faulty crankcase ventilation, carry out a function check of the crankcase ventilation in this regard. The corresponding test module can be found in ISTA at:

- Power train
- Digital Diesel Electronics
- Engine ventilation
- Internal engine pressure

When installing the exhaust turbocharger, the exhaust turbocharger itself needs to be filled to capacity with fresh engine oil through the oil intake hole before the oil feed line is mounted. Important: Never use liquid sealing compounds when connecting the engine oil pipe as they can block the oil ducts.

After installing the exhaust turbocharger, start the engine and let it run at idle for 2 to 3 minutes before increasing the speed.

If required, initiate a regeneration of the diesel particulate filter

Important: For vehicles with N57x engines that have fault memory entries that are at the top, a successful diesel particulate filter regeneration must be carried out.

Then delete the fault memory.

cardiagn.com

11 65 020 Removing and installing or replacing exhaust turbocharger (B37)

Warning!

Risk of burning!

Carry out this repair only when the engine has cooled down.

Note:

Troubleshooting on exhaust turbocharger.

Attention!

For exhaust turbocharger damage:

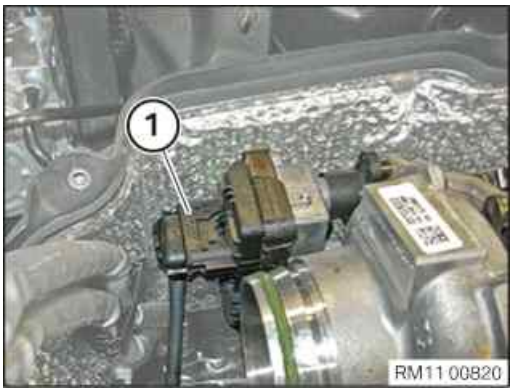
In order to avoid subsequent damage, the following notes and test steps must be followed absolutely.

Necessary preliminary tasks:

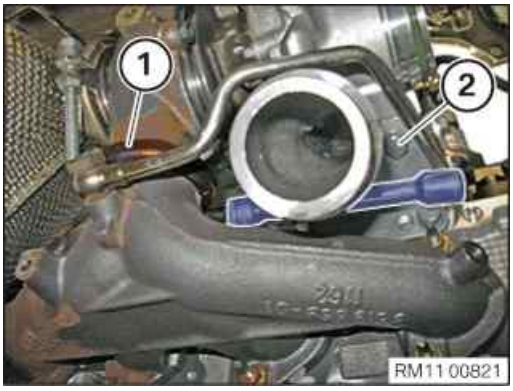
- Remove top bulkhead cover.
- Remove right charge-air duct.
- Remove clean air pipe.
- Loosen the diesel particulate filter. (Do not remove)

Removal:

Disconnect plug connection (1).

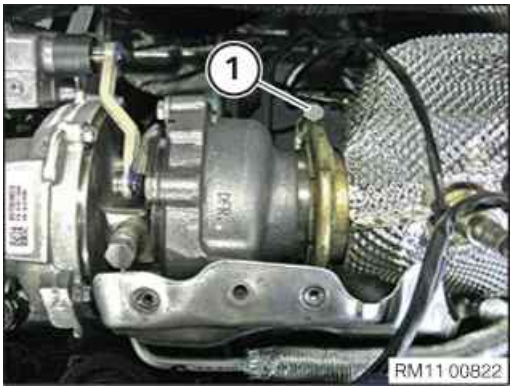


cardiagn.com



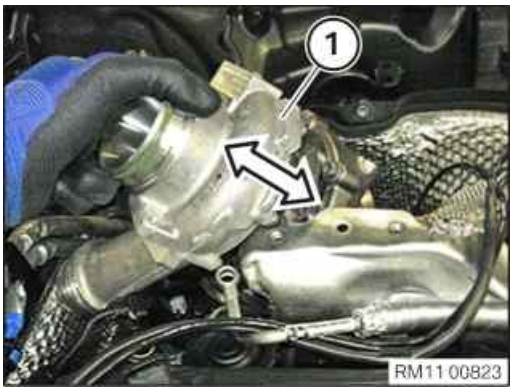
Release V-band clamp (1) between exhaust turbocharger and exhaust manifold.

Loosen screw (2) from the holder of the exhaust turbocharger.



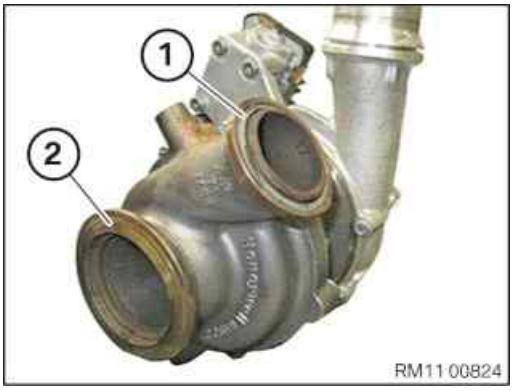
Loosen oil feed line on exhaust turbocharger.

Release V-band clamp (1) between exhaust turbocharger and diesel particulate filter.



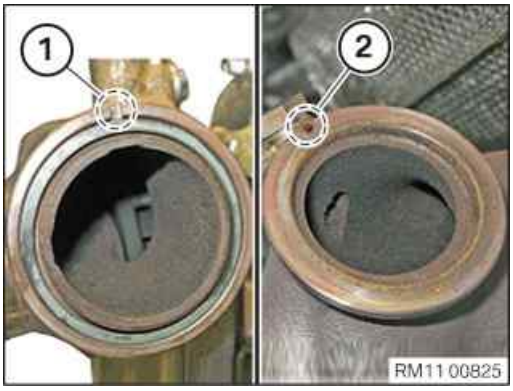
Remove exhaust turbocharger (1) towards the top.

Installation:

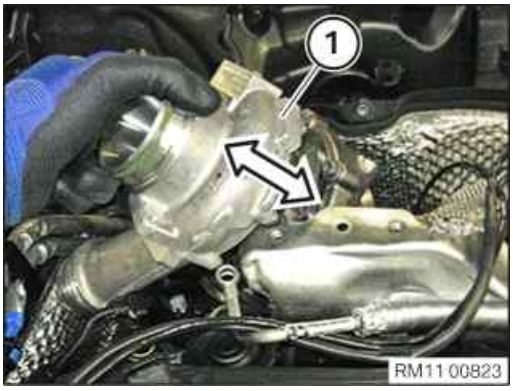


Parts: Replace seals (1 and 2).

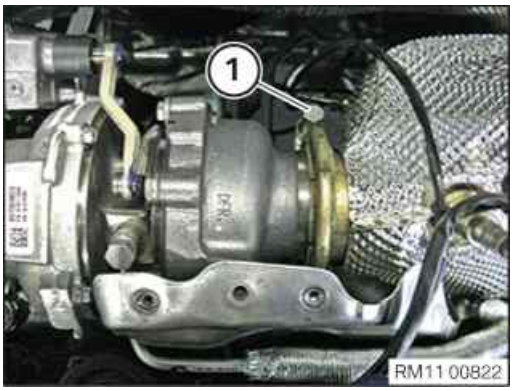
cardiagn.com



Note:
Recess (1) on exhaust turbocharger must be correctly positioned on the guide (2) on the exhaust manifold.



Install exhaust turbocharger (1) from above.

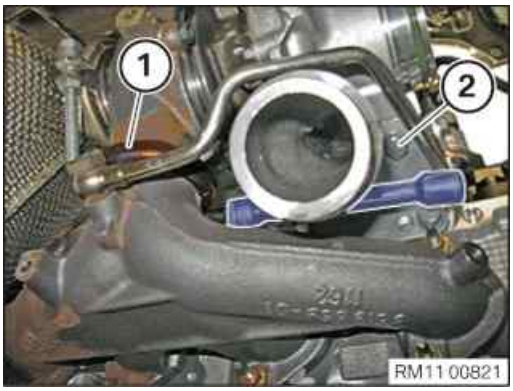


Parts: Renew V-band clamp (1).

Position exhaust turbocharger correctly.

Mount V-band clamp (1) between exhaust turbocharger and diesel particulate filter.

Tightening torque 11 65 4AZ.



Parts: Renew V-band clamp (1).

Mount V-band clamp (1) between exhaust turbocharger and exhaust manifold.

Tighten both V-band clamps.

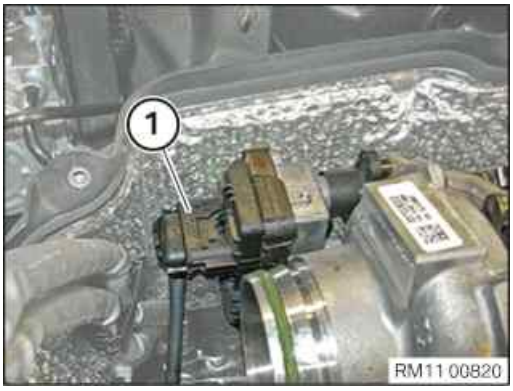
Tightening torque 11 65 1AZ.

Tighten screw (2) on exhaust turbocharger holder on crankcase.

Tightening torque 11 65 2AZ.

Tighten oil feed line on exhaust turbocharger.

cardiagn.com



Connect the connector (1).

Required follow-up work:

- Install oil return line.
- Attach diesel particulate filter.
- Install right charge air duct.
- Install clean air pipe.
- Check engine for tightness.

cardiagn.com

11 65 020 Removing and installing/replacing exhaust turbocharger

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.

For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

TECHNICAL INFORMATION

Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger

TECHNICAL INFORMATION

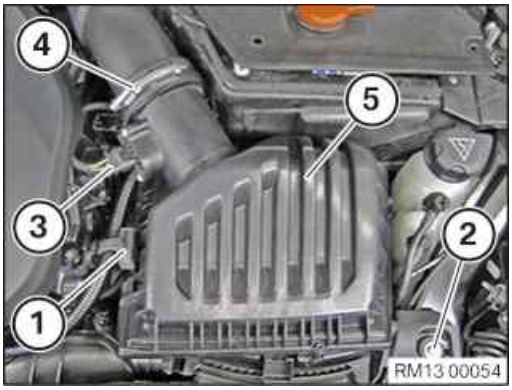
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Maintain conditions of absolute cleanliness.

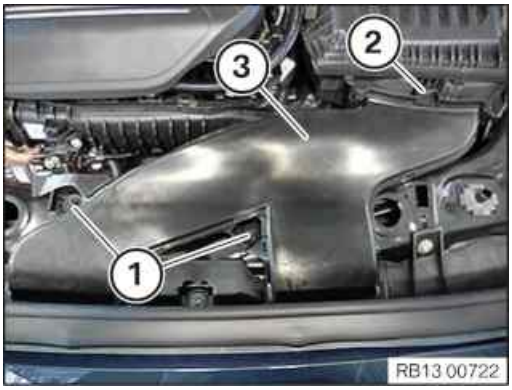
cardiagn.com

1 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

2 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

3 – Remove vehicle battery

WARNING

Working on 12 V vehicle electrical system.

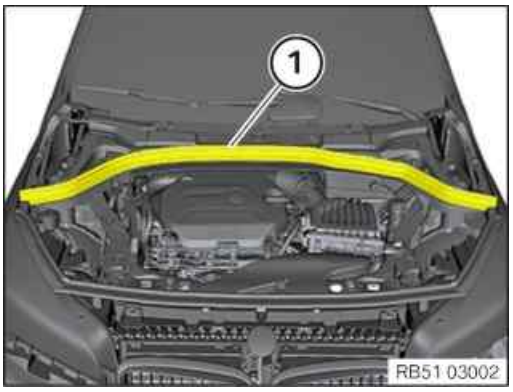
Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

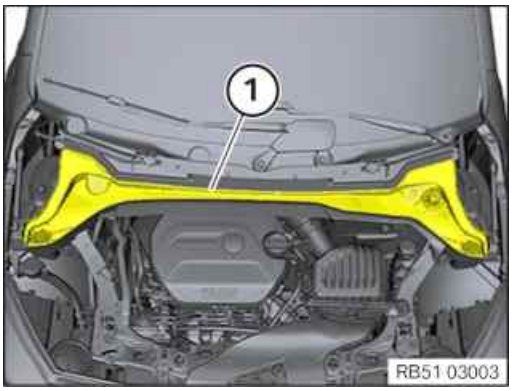
TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

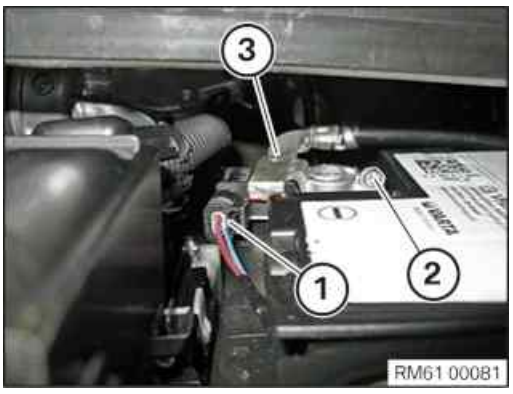
cardiagn.com



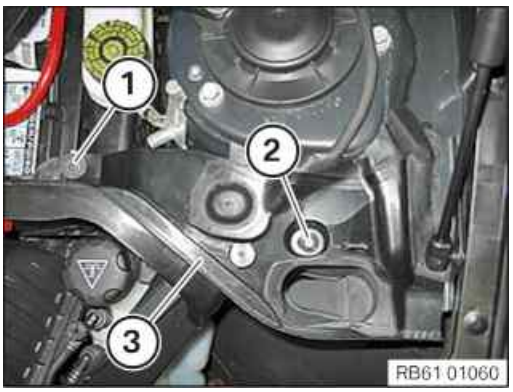
- pull off gasket (1) upwards.



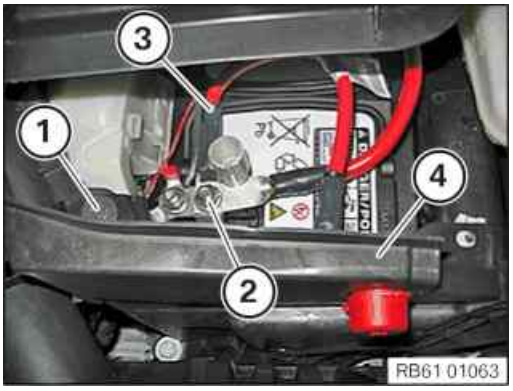
- Remove the cowl panel cover (1) to the top.



- Unlock and disconnect connector (1).
- Slacken nut (2).
- Disconnect the negative battery terminal (3).

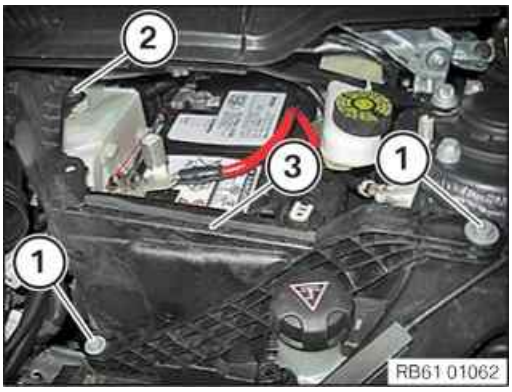


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

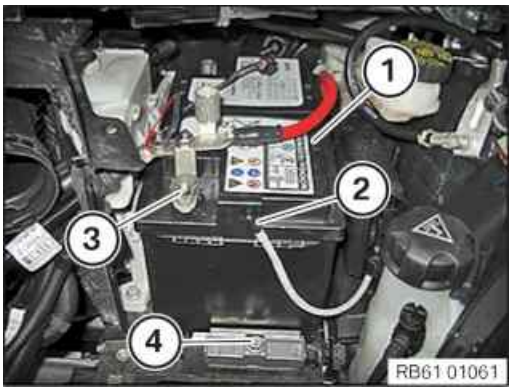


- Loosen screw (1).
- Unscrew the nut (2) and remove the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten nuts (2) on the positive terminal hand-tight.

cardiagn.com



- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.



- Pull off the vent hose (2).
- Slacken the nut (3) on the positive terminal and remove the positive terminal.

WARNING

Unprotected battery terminals.

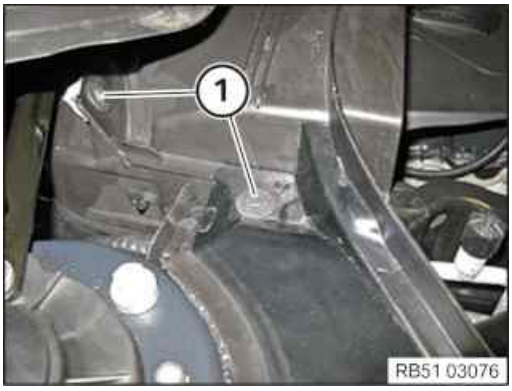
Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

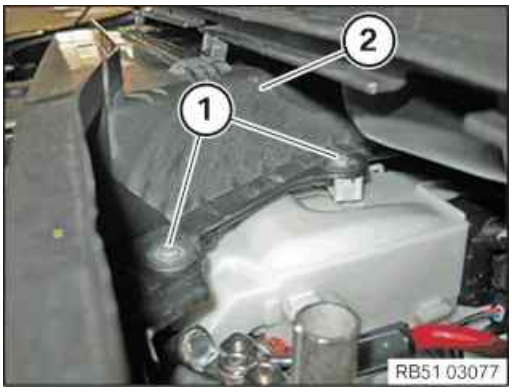
4 – Removing the upper bulkhead cover

- Loosen screws (1).



- Loosen screws (1).

cardiagn.com



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

5 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

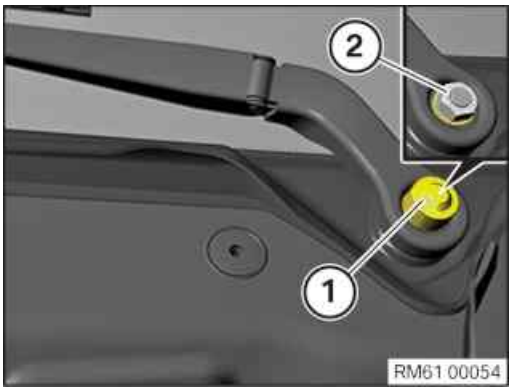
▶ **Remove the wiper arm**

RISK OF DAMAGE

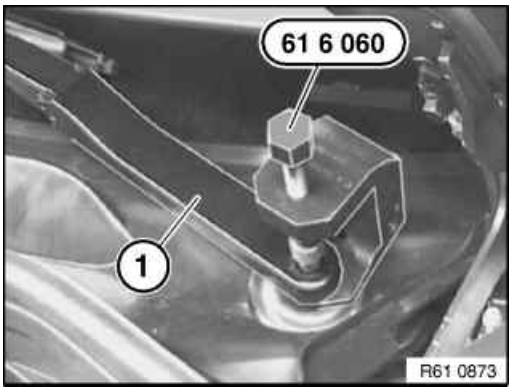
Damage to wiper console

While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.



- Remove the protective cap (1).
- Loosen nut (2).



- Pull off the wiper arm (1) using special tool .

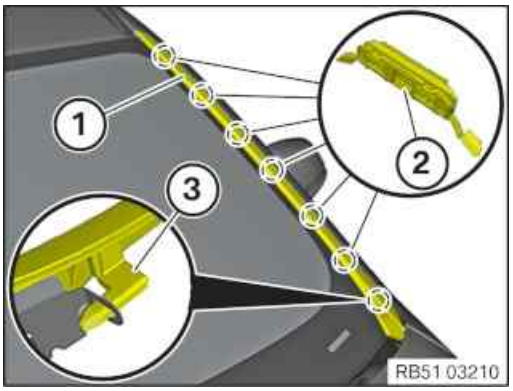
6 – Remove the gutter strip on the windscreen on the left and right

cardiagn.com

NOTICE

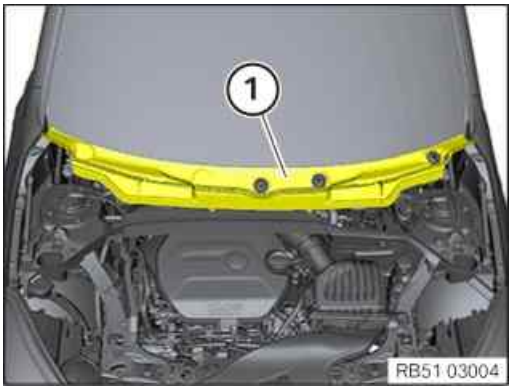
Description is for left component only. Procedure on the right side is identical.

▶ **Remove the gutter strip on the windscreen**



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

7 – Remove the rear cowl panel cover



- Disengage and guide out the rear cowl panel cover (1) towards the top.

8 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

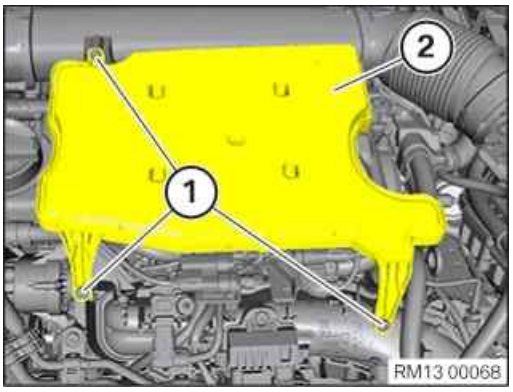
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

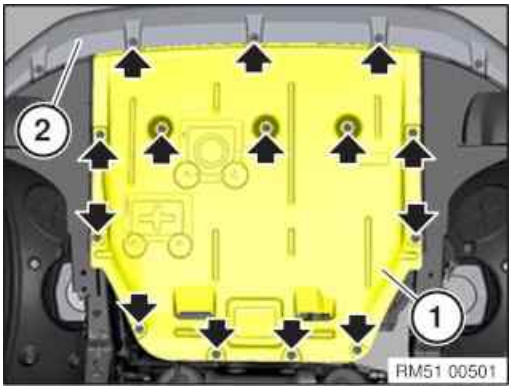
- Unclip the acoustic cover from the marked areas towards the top.

9 – Remove resonator



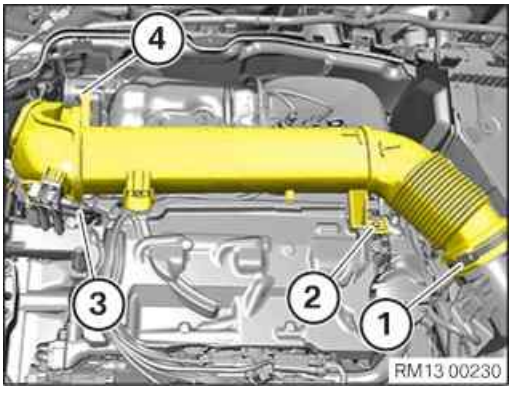
- Loosen screws (1).
- Guide out and remove the resonator (2).

10 – Removing the front underbody protection



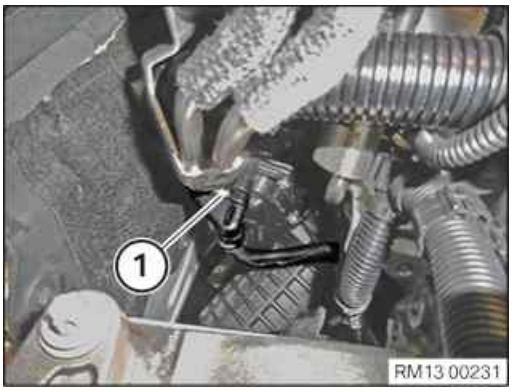
- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

11 – Removing clean air pipe

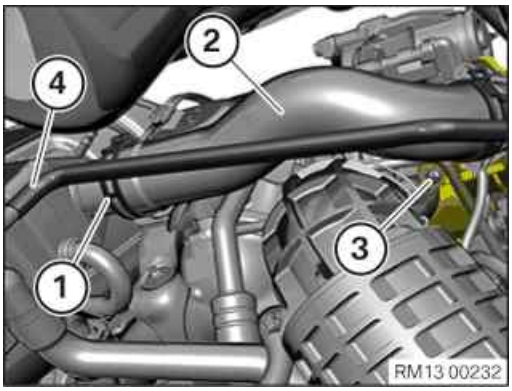


- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).

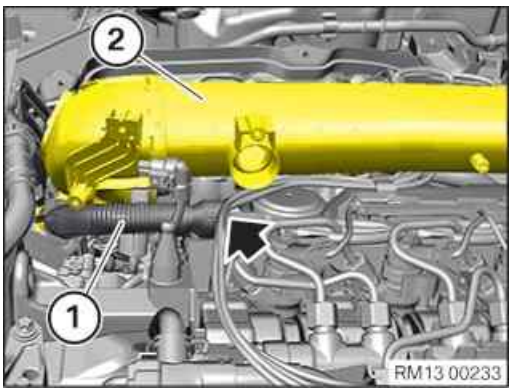
cardiagn.com



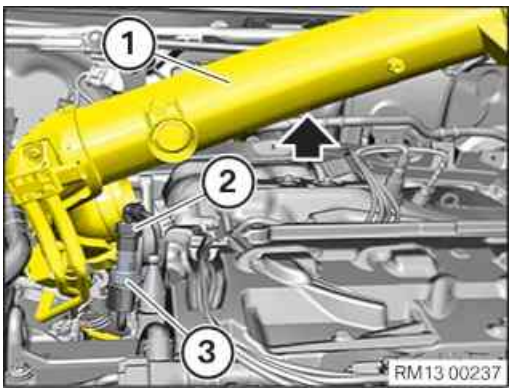
- Unlock and loosen connector (1).



- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

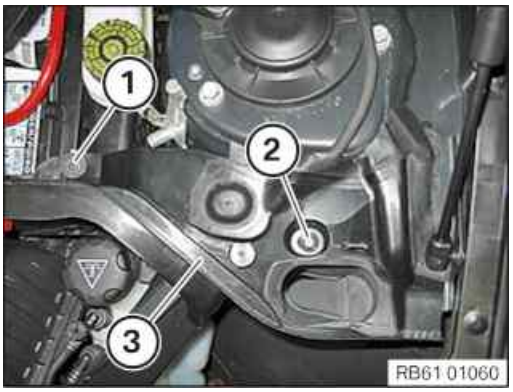
- Do not pull on the wires when disconnecting connectors and plug connections.

TECHNICAL INFORMATION

Follow instructions for removing and installing control units.
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

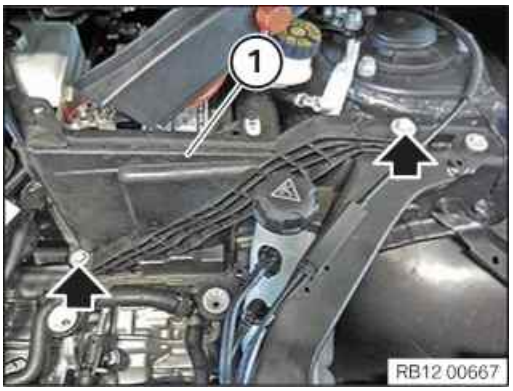
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



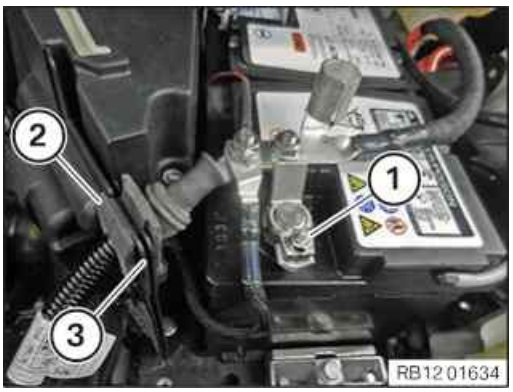
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

cardiagn.com

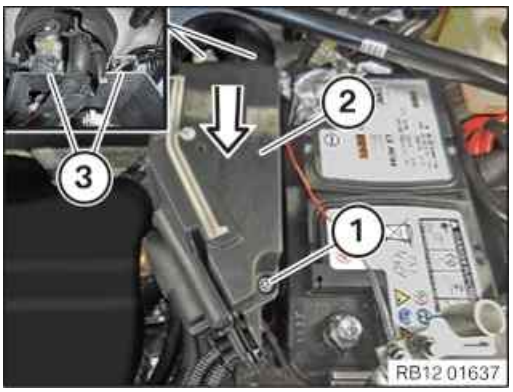
- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.



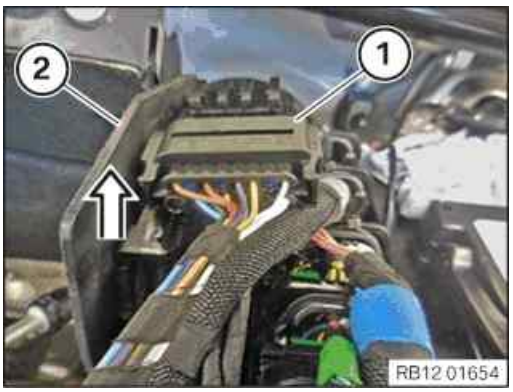
- Remove screws (arrows).
- Guide out tension strut (1) and remove.



- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

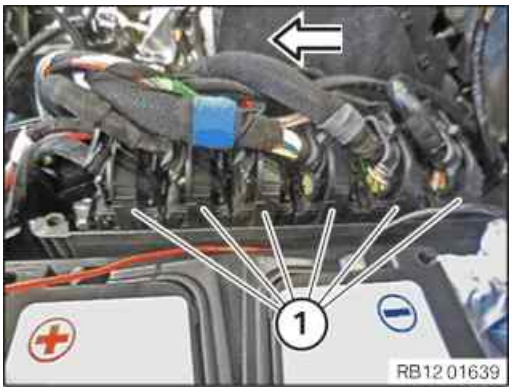


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

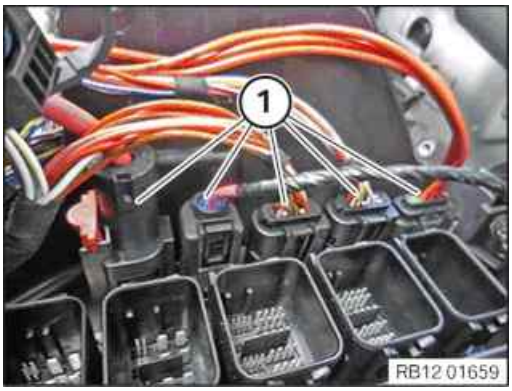


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

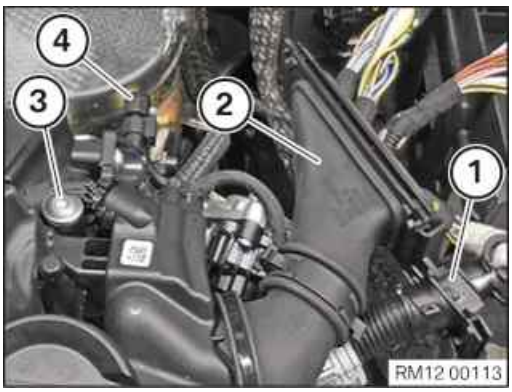
cardiagn.com



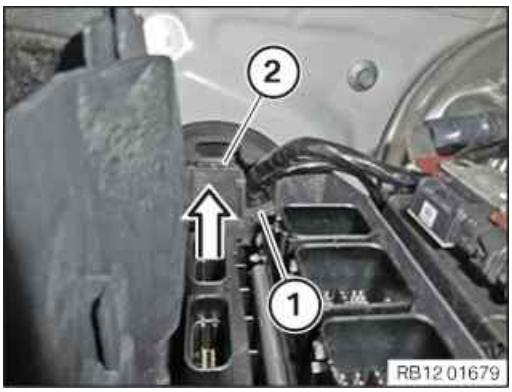
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



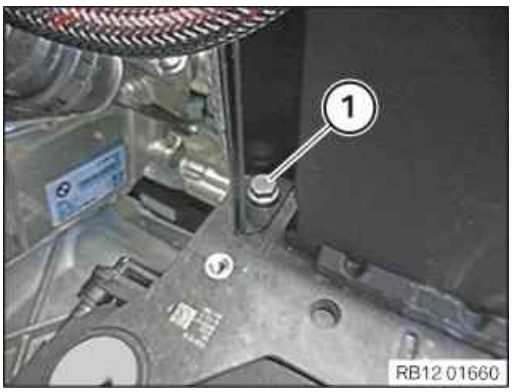
- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

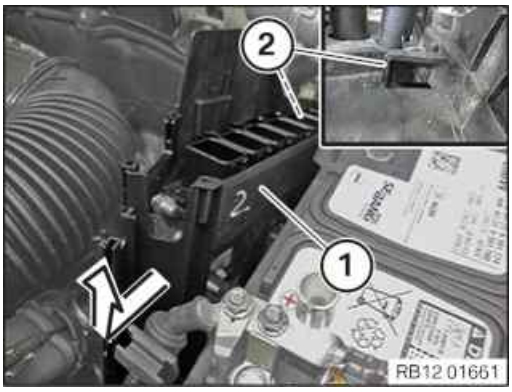


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



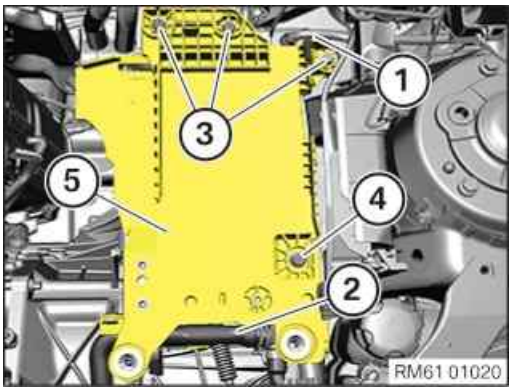
- Loosen screw (1).

cardiagn.com



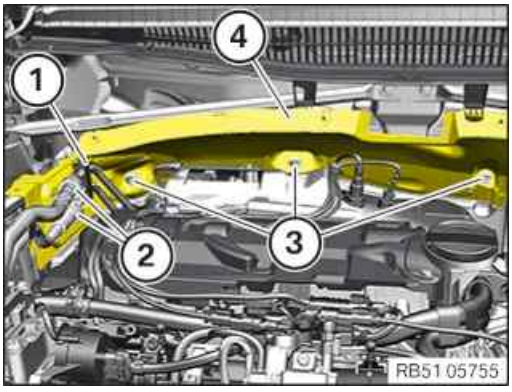
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

13 – Remove battery holder



- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

14 – Remove the rear bulkhead upper part



- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

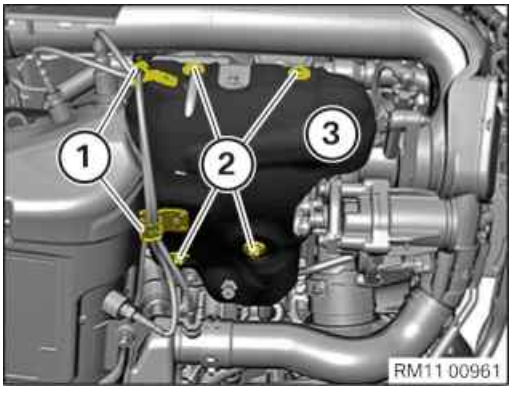
15 – Removing heat shield from top exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

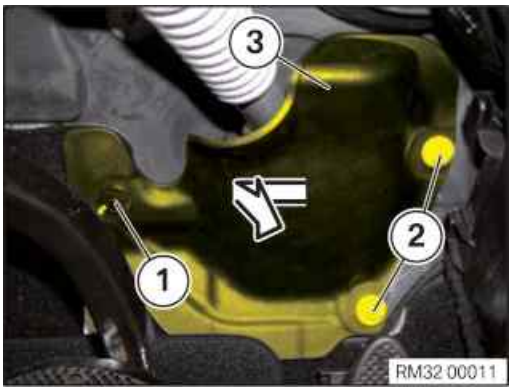
- Perform all work only on components that have cooled down.



- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).

cardiagn.com

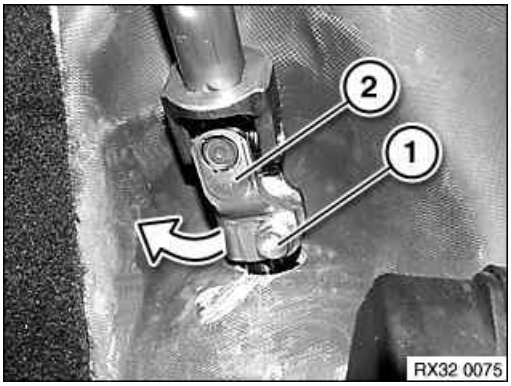
16 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

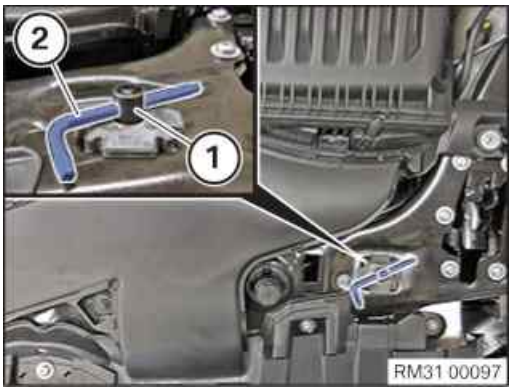
  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!



- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

17 – Securing radiator on left and right



NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

18 – Remove the front left and right wheel

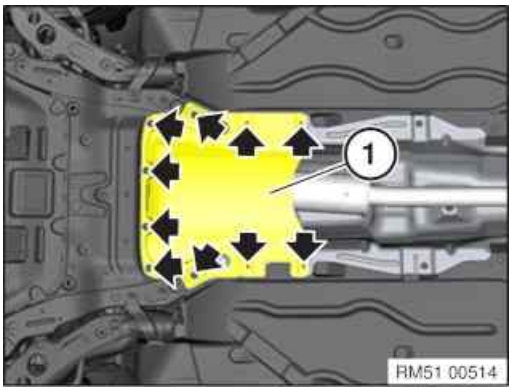
▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

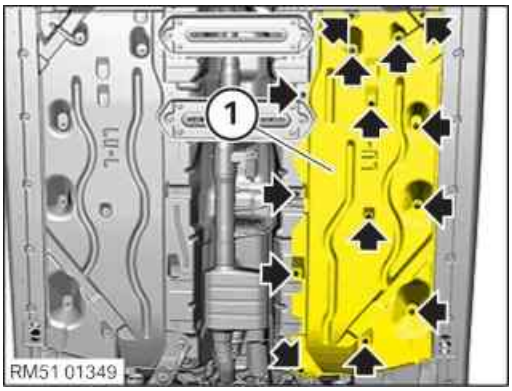
19 – If installed: Removing rear underbody protection

cardiagn.com



- Remove screws (arrows).
- Remove the rear underbody protection (1).

20 – Removing right underbody panelling



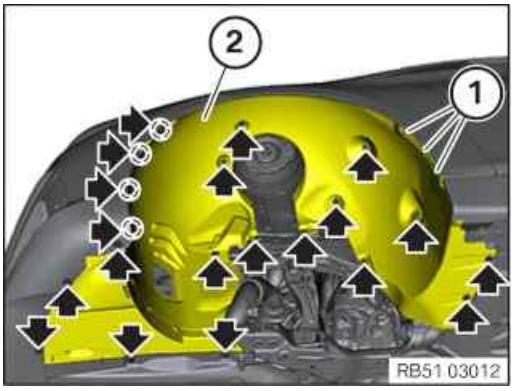
- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

21 – Removing front left and right wheel arch cover

NOTICE

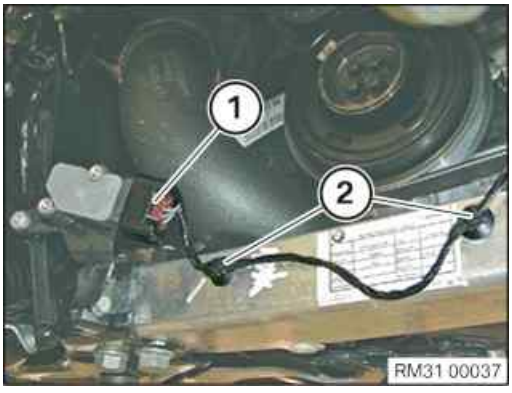
Perform the operations on the left and right side.

▸ **Remove front wheel arch cover**



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed out front wheel arch cover (2).

22 – With right installation: Detaching ride height sensor cable



- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

23 – Releasing anti-roll bar on left and right from anti-roll bar link

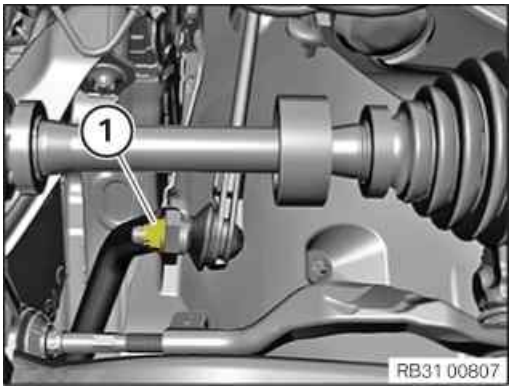
cardiagn.com

23 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**

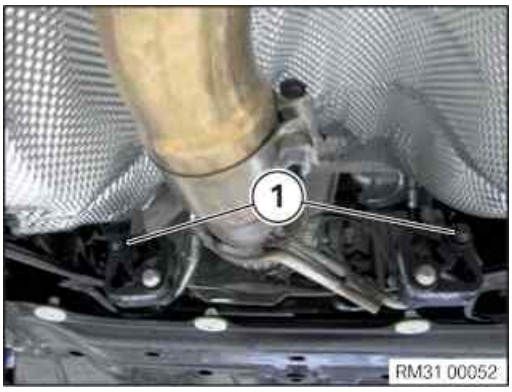


- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

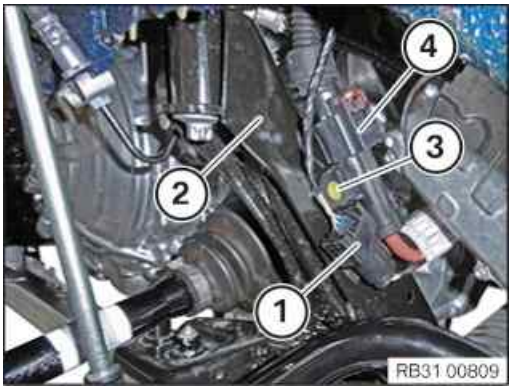
24 – Detaching rubber mount from front axle support



- Spray rubber mount (1) with lubricant and release from holder on front axle support.

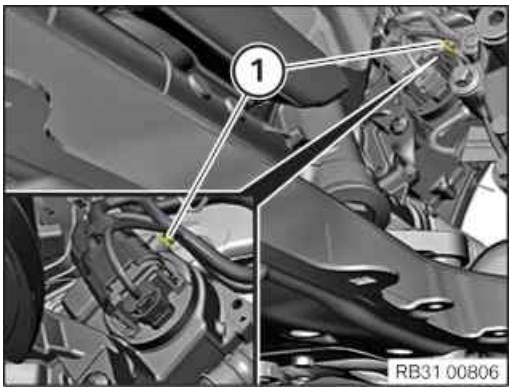
25 – Disconnecting plug connections from steering gear

▶ **If installed: Detach connectors from the front axle carrier**



- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).

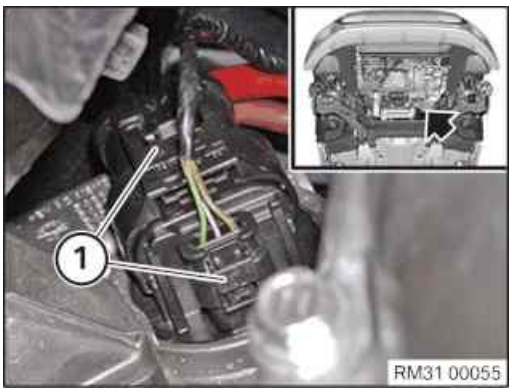
cardiagn.com



- Disconnect wiring harness (1) from steering gear.

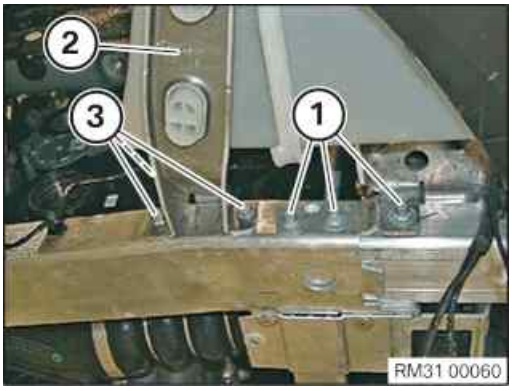
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.



- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

26 – Releasing the mounted part from the front axle support

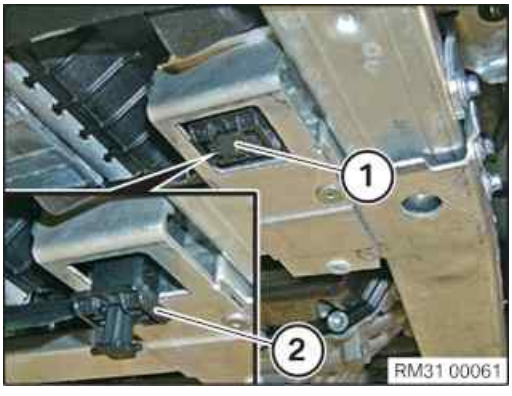


- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

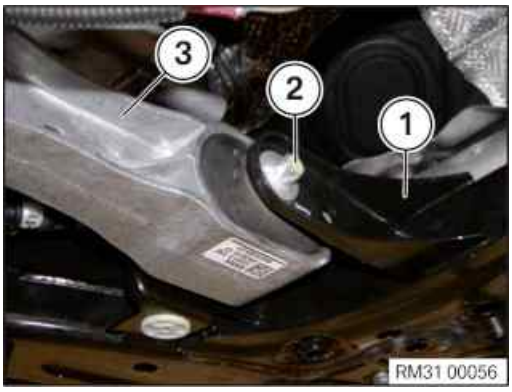


NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).

cardiagn.com



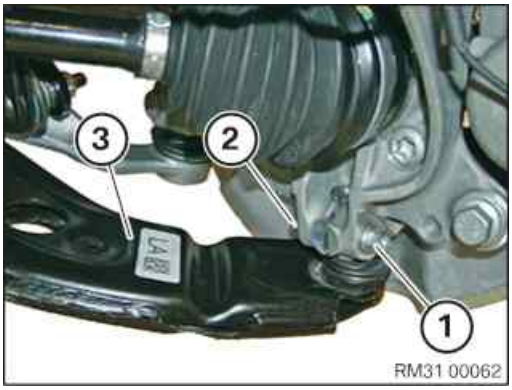
- Loosen screw (2) of the engine support (3) on the front axle (1).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

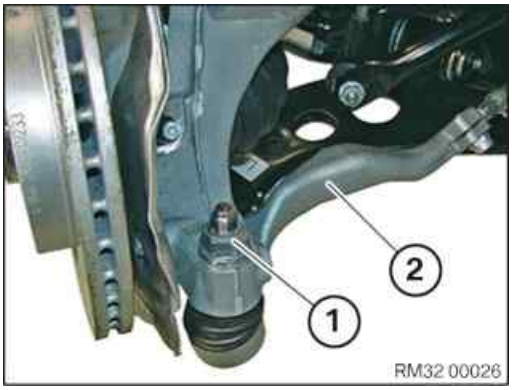
27 – Detaching and removing front axle completely



NOTICE

Perform the operations on the left and right side.

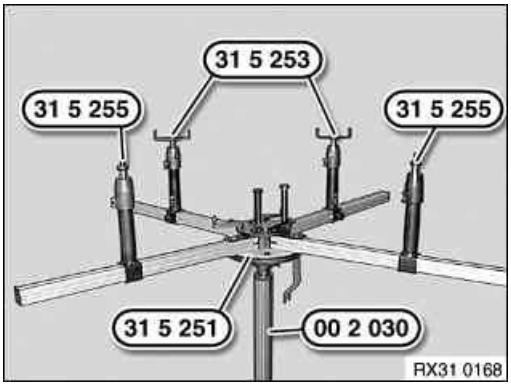
- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .



NOTICE

Perform the operations on the left and right side.

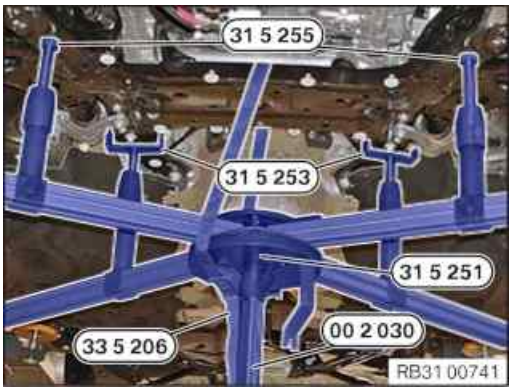
- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.



- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

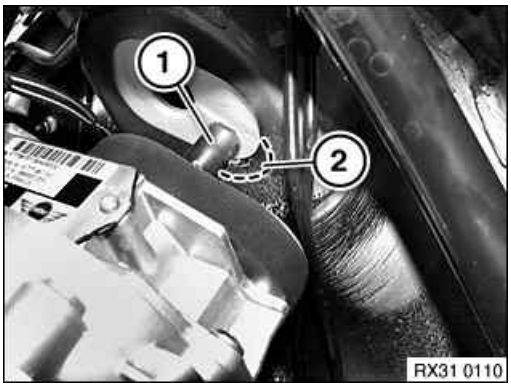
cardiagn.com



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

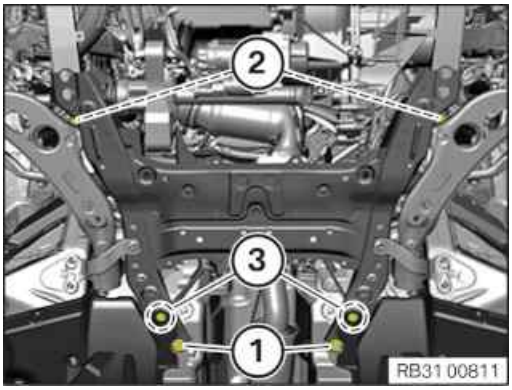


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

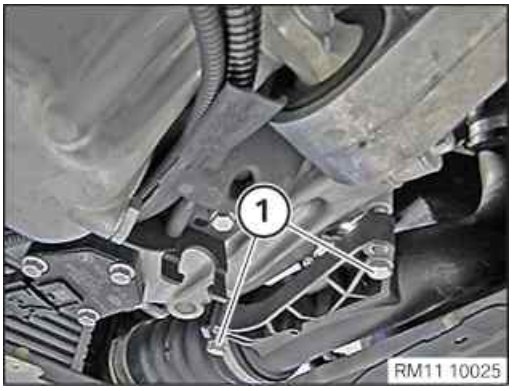
TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.

For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

28 – Remove right charge-air line

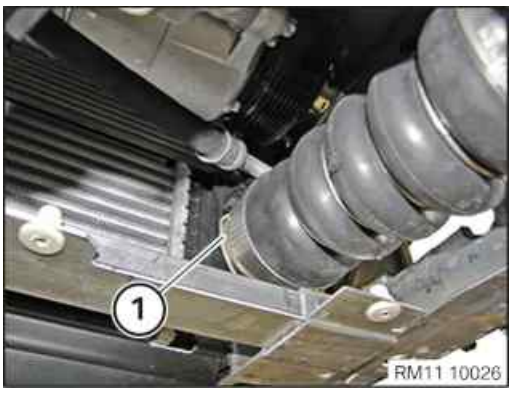


- Release charge air duct screws (1) on oil sump.

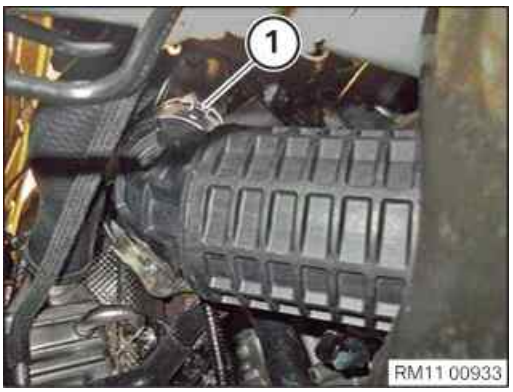
cardiagn.com

- Detach charge air duct screw connection (1) on crankcase.

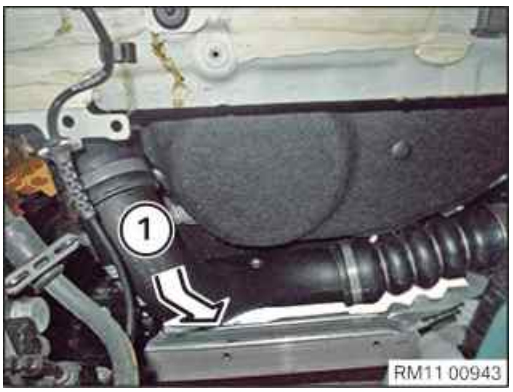
- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.



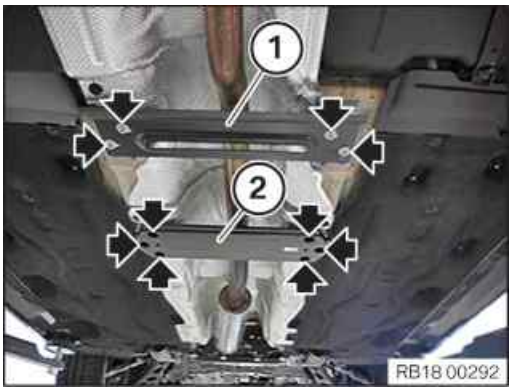
- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

29 – Removing the connecting support from the tunnel in front and back

cardiagn.com

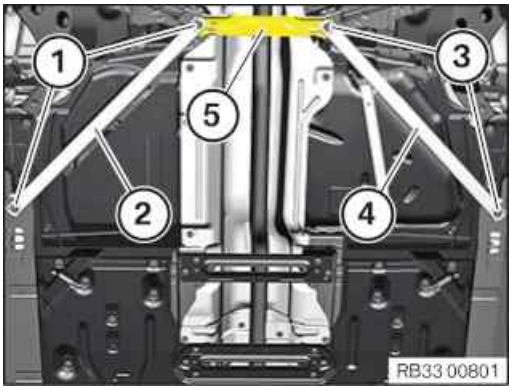


- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

30 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.



- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

31 – Remove exhaust system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

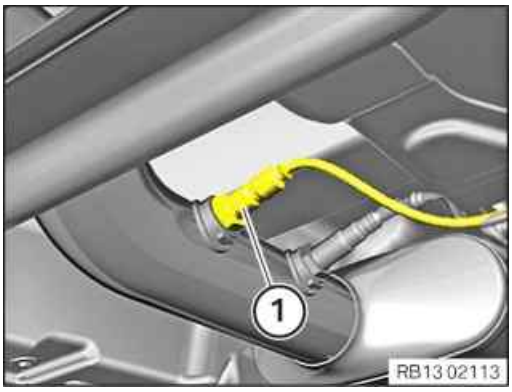
CAUTION

Heavy component.

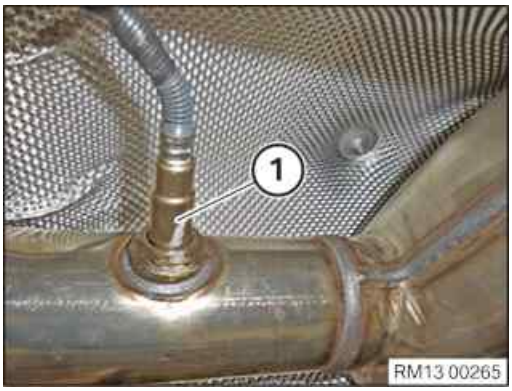
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

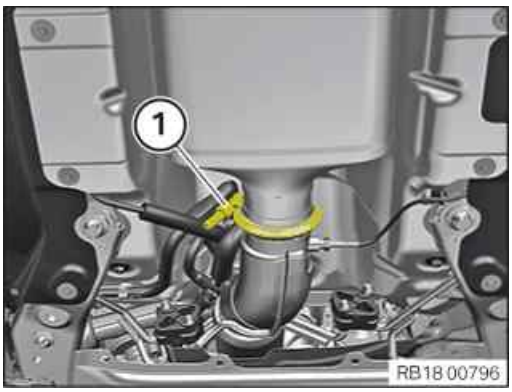
cardiagn.com



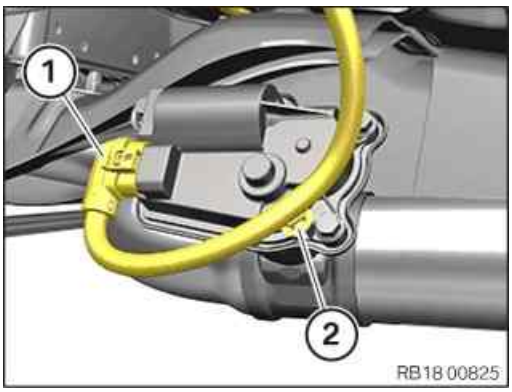
- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.



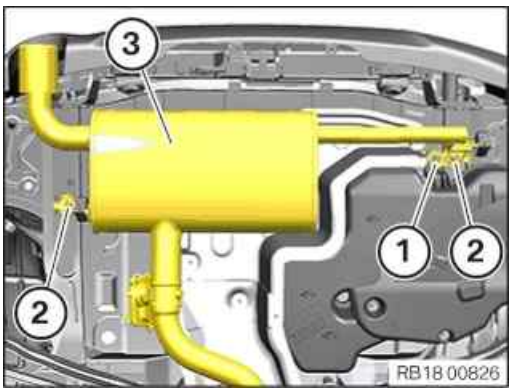
- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).



- Unlock and disconnect connector (1).
- Loosen clamp (2).



- Loosen screw (1).
- Loosen nuts (2).
- Lower the exhaust system (3) with an auxiliary person, guide out and remove.

32 – Removing starter motor

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

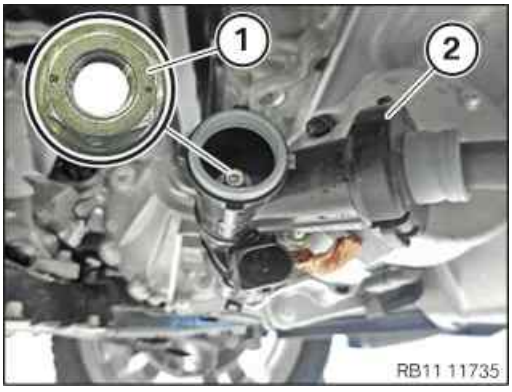
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

cardiagn.com

- Loosen screws (1).
- Feed out starter motor and remove.

33 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

Risk of burning!

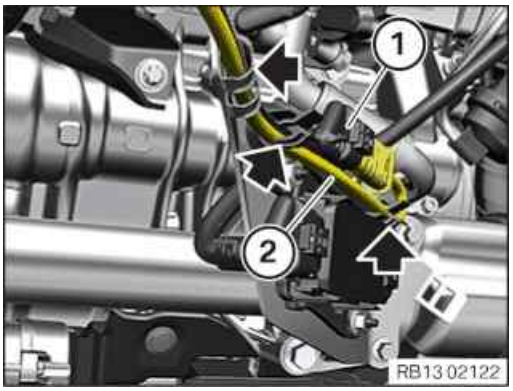
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

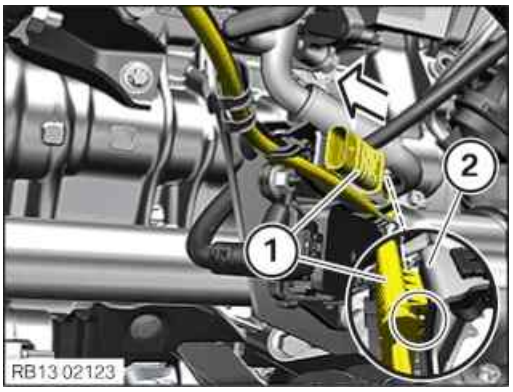
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

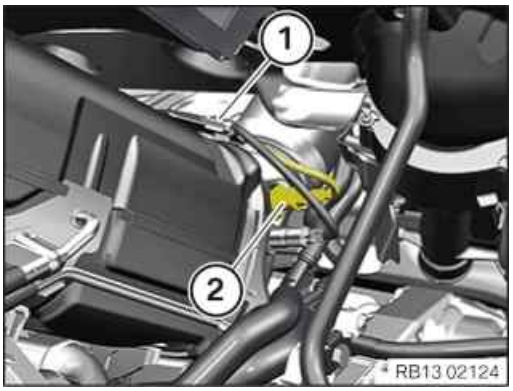


- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).

cardiagn.com



- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.



- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

34 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

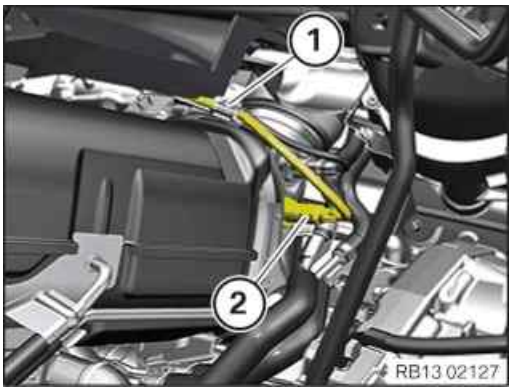
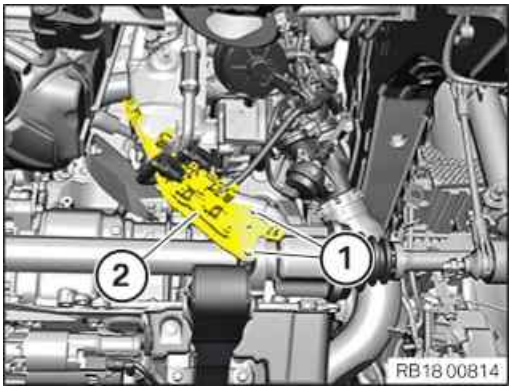
- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).



- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

35 – Remove holder for oxygen sensor



- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

36 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

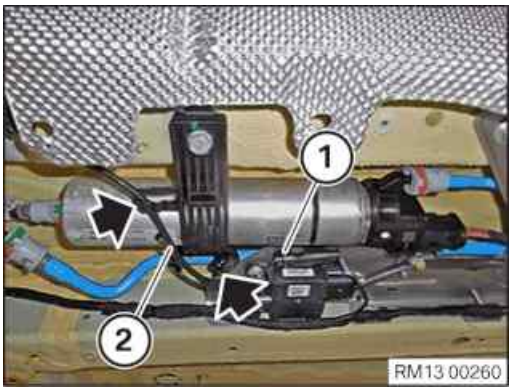
RISK OF DAMAGE

Electrostatic discharge.

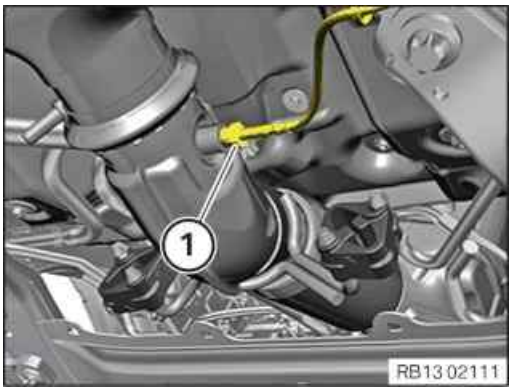
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Loosen the cable clip (1).



- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

37 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

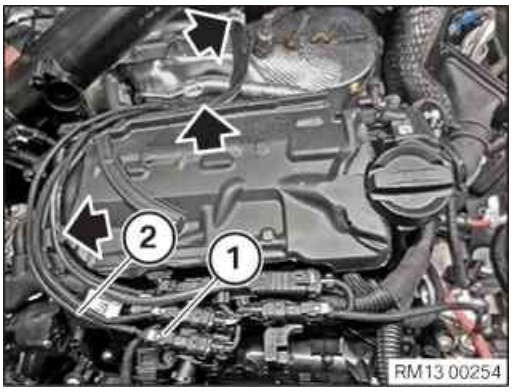
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect the plug connection (1).
- Feed the cable (2) from the temperature sensor out of the clamps (arrows) and remove it.

- Release the exhaust temperature sensor (1) with conventional tools (2).

- Feed out and remove exhaust temperature sensor (1).

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect the plug connection (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

39 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

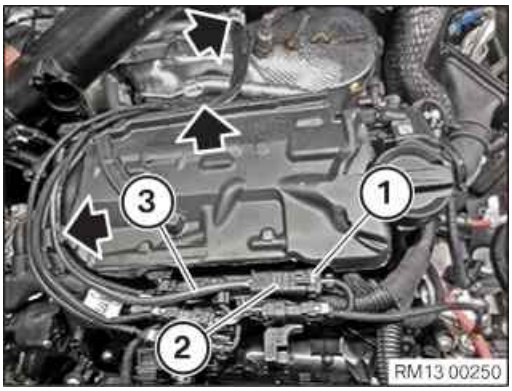
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect the plug connection (1).
- Detach the connector (2) from the holder .
- Feed out and remove cable (3) out of the oxygen control sensor from the clamps (arrows).

- Release the front oxygen control sensor (1) using special tool **0 491 075 (11 7 030)**.
- Feed out and remove the control sensor (1).

40 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

41 – Removing the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

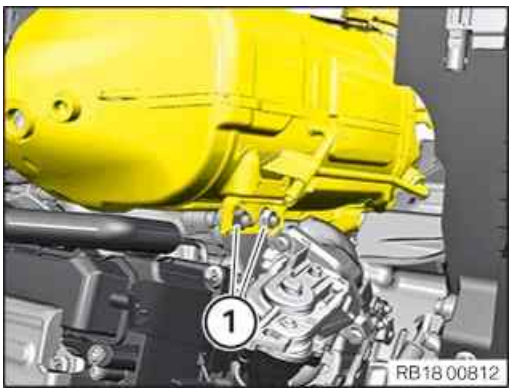
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).

cardiagn.com

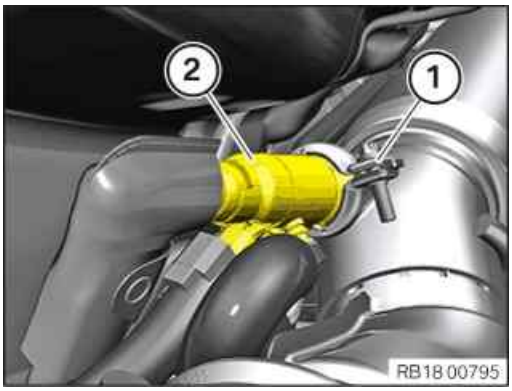
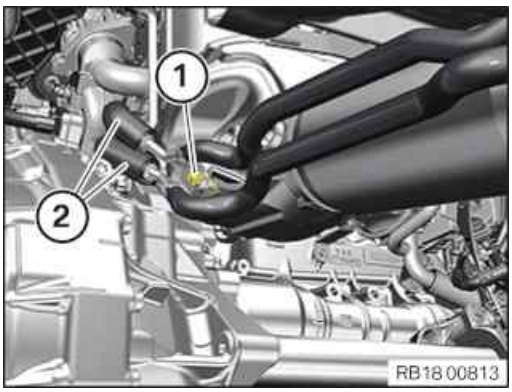
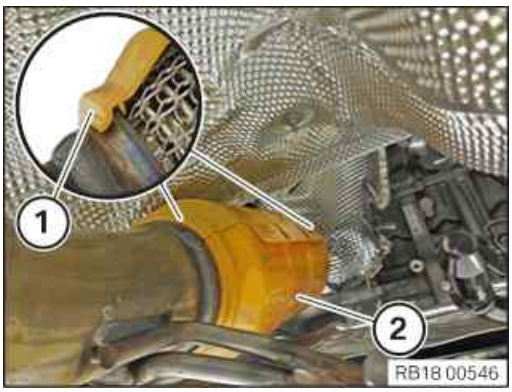
- Loosen screw (1).



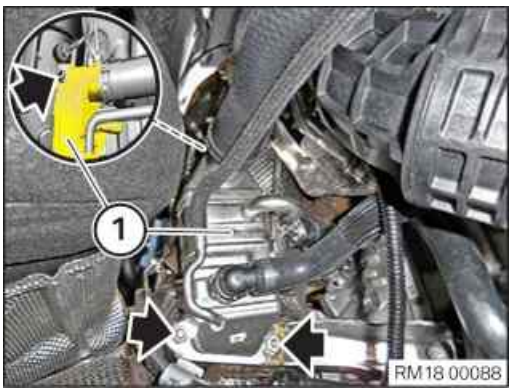
- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.



- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.



- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.



- Detach nuts (arrows) from low pressure exhaust-gas recirculation cooler (1).

cardiagn.com

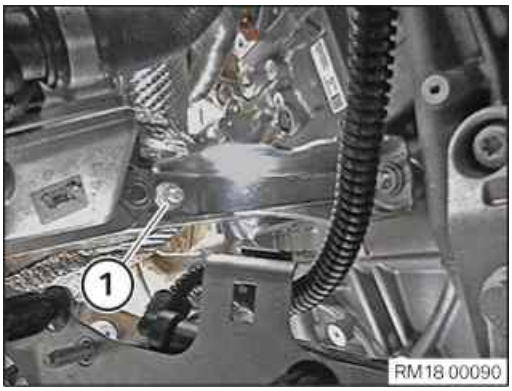
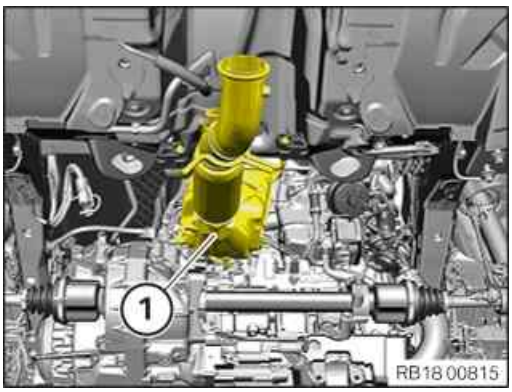
- Feed out low pressure exhaust-gas recirculation cooler (1) from diesel particulate filter (2) in direction of arrow and set aside.



- Unfasten nut (1).



- Feed out diesel particulate filter (1) toward the bottom and remove.

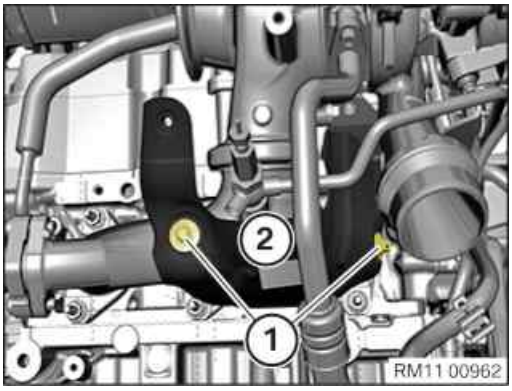
42 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

43 – Removing heat shield from rear exhaust turbocharger

cardiagn.com

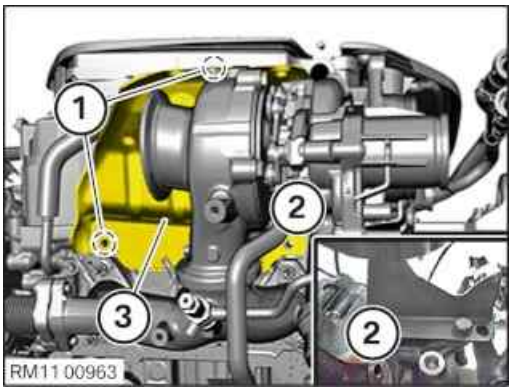
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Loosen screw (2).

  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

MAIN WORK

44 – Remove exhaust turbocharger

- Release screw (1) from beneath with a long extension.

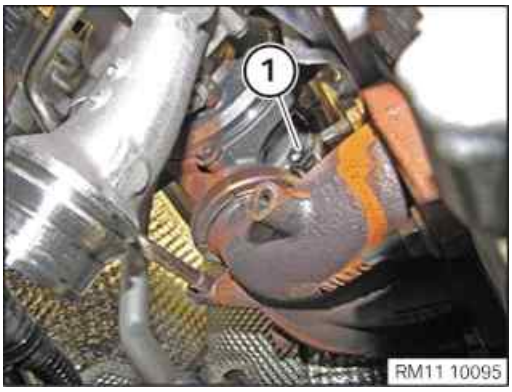
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).
- Disconnect the oil return line (2) toward the bottom and set it aside.

- Release banjo bolt (1) of oil feed line from exhaust turbocharger and place to one side.

cardiagn.com



- Release screw (1) and remove V-clip.
- Pull exhaust turbocharger up and remove.
- Remove seal between exhaust turbocharger and exhaust manifold.

45 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

46 – Installing exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

Damage to the exhaust turbocharger

Inadequate initial filling of exhaust turbocharger leads to dry running.

- Make sure the initial filling is correct when replacing exhaust turbocharger.
- Fill the exhaust turbocharger with the suitable additive (see electronic Parts Catalogue).

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.

For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

TECHNICAL INFORMATION

- It is imperative to perform certain test steps to prevent subsequent damage in the event of exhaust turbocharger damage. See further information.

TECHNICAL INFORMATION

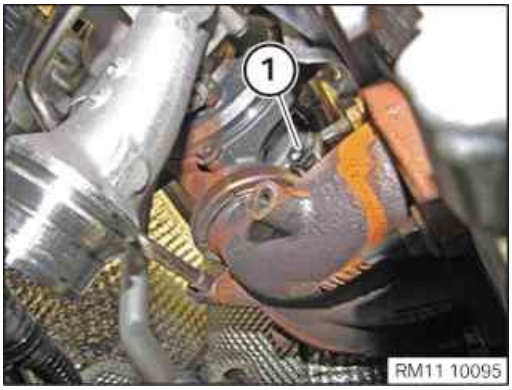
For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger



- Renew gasket.

  Parts: Gasket
- Position seal on exhaust manifold.
- Guide the exhaust turbocharger in from the top and position it.
- **Ensure that gasket is correctly seated.**
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

cardiagn.com

- Renew sealing rings.

  Parts: Sealing ring
- Position oil feed line with banjo bolt (1) and sealing rings and tighten hand-tight.

  There are 2 sealing rings fitted on the banjo bolt (1).
- Align oil feed line and tighten banjo bolt (1).

  The oil feed line must not sit on the exhaust turbocharger.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

- Renew gasket.

  Parts: Gasket
- Position oil return line (2) with **seal** on exhaust turbocharger.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Feed in and tighten screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

POSTPROCESSES

47 – Installing heat shield on exhaust turbocharger at the rear

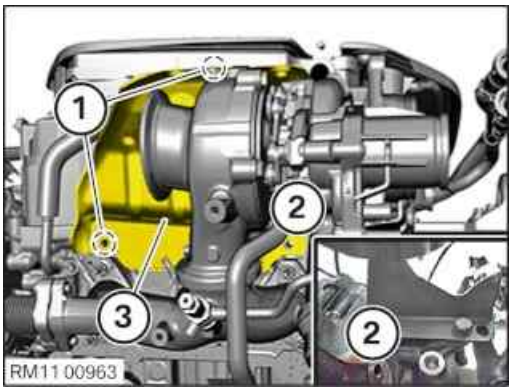
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

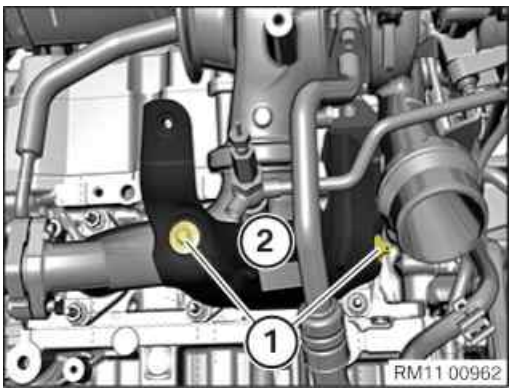
48 – Installing heat shield on exhaust turbocharger at bottom

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (2).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

49 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

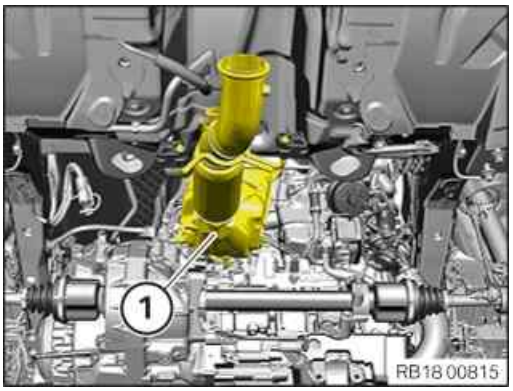
- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

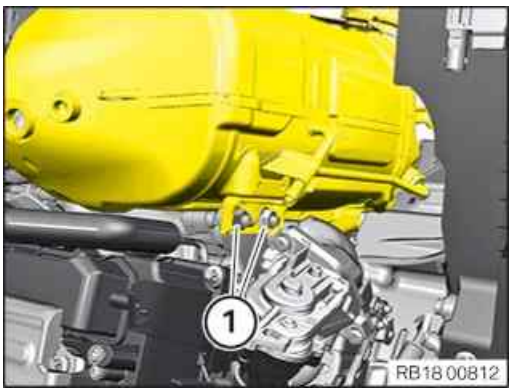
cardiagn.com

- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.

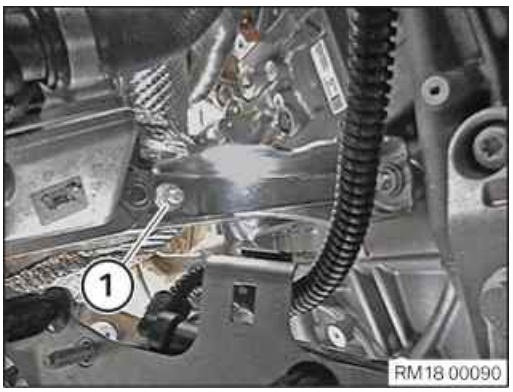


- Carefully insert and install the diesel particulate filter (1).

- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).



- Tighten nuts (1) by hand.



- Tighten the nut (1) hand-tight.

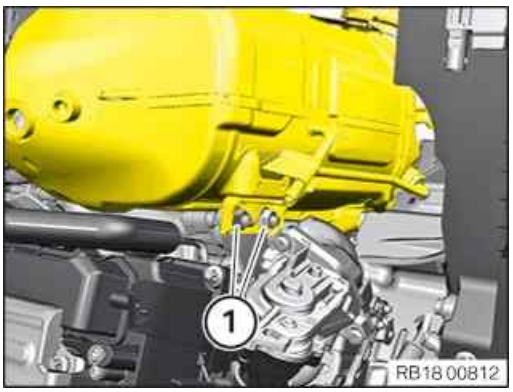
cardiagn.com

- Remove fitting aid (1) for the flexible tube.

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

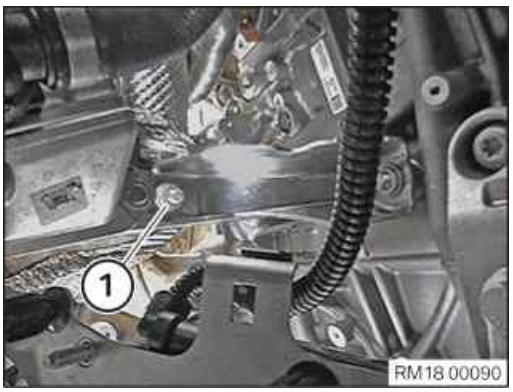
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



- Tighten nuts (1).

Diesel particle filter to holder

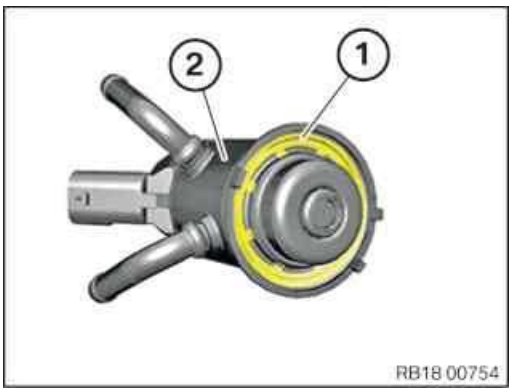
M8 hexagon nut		Tightening torque	19 Nm



- Tighten nut (1).

Diesel particle filter to holder

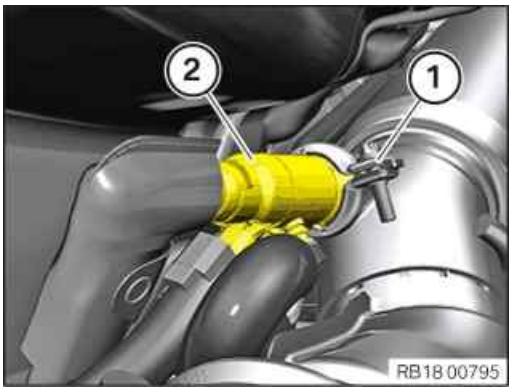
M8 hexagon nut		Tightening torque	19 Nm



- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

cardiagn.com

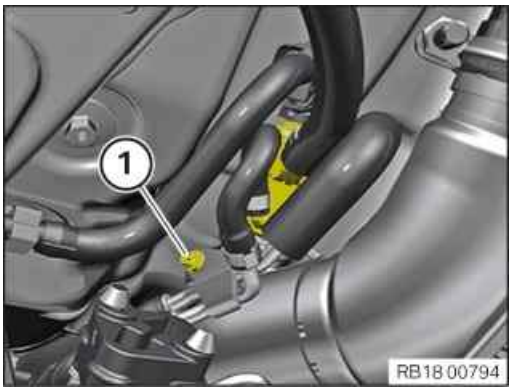


- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

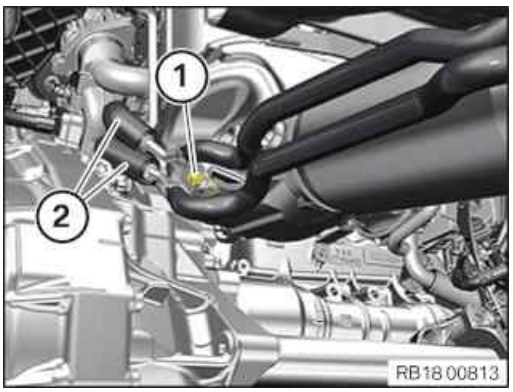
V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm



- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

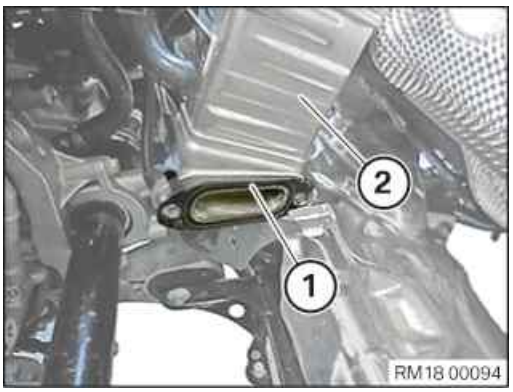
Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

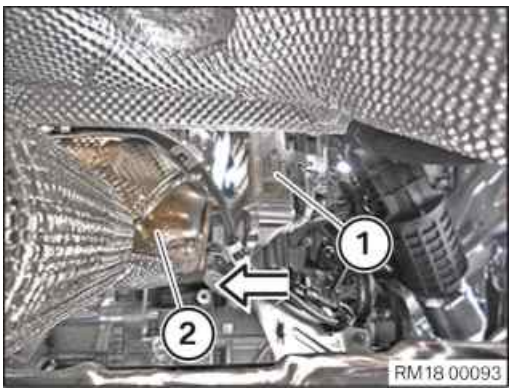
Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm



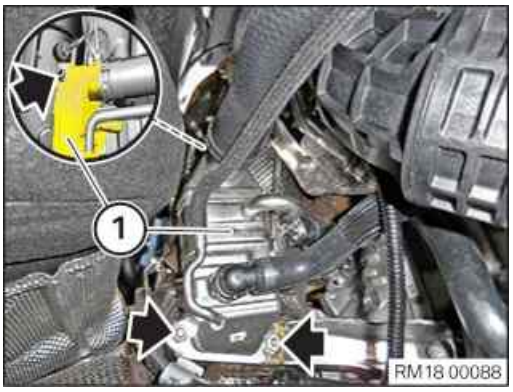
- Replace seal (1) of the low pressure exhaust-gas recirculation cooler (2).

  Parts: Gasket



- Feed in and install the low pressure exhaust-gas recirculation cooler (1) in at the diesel particulate filter (2) in the direction of arrow.

cardiagn.com

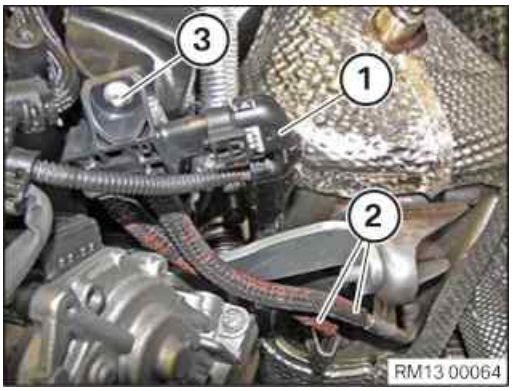


- Tighten nuts (arrows) of the low pressure exhaust-gas recirculation coolers (1).

Low-pressure exhaust-gas recirculation cooler to diesel particulate filter

Flange nutM8		Tightening torque	19 Nm

50 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

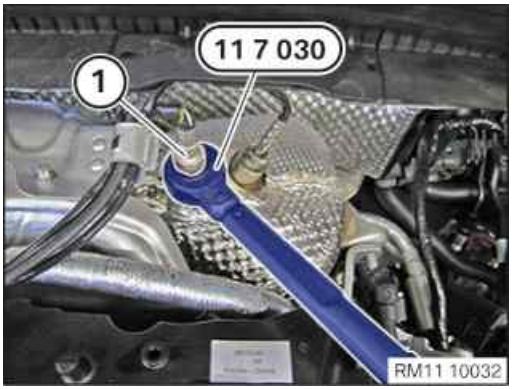
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

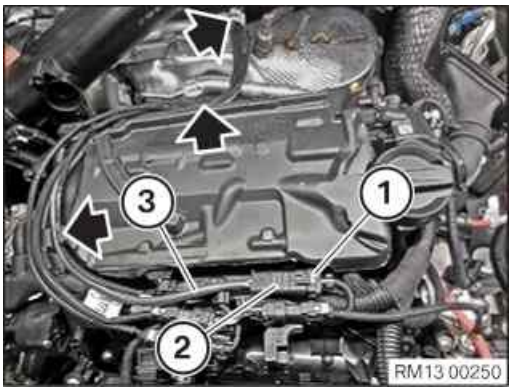
51 – Install the control sensor



- Feed in front oxygen sensor (1) and install.
- Tighten the front oxygen sensor (1) with the special tool **0 491 075 (11 7 030)**.

Control sensor

Control sensor		Tightening torque	50 Nm

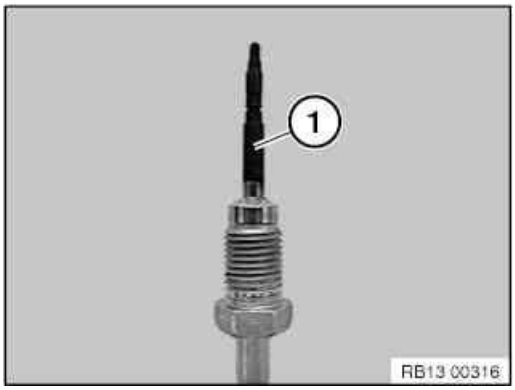


- Feed in and install cable (3) from the oxygen control sensor into the clamps (arrows).
- Secure connector (2) on holder.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

52 – Install the exhaust-gas temperature sensor on the diesel particulate filter

cardiagn.com



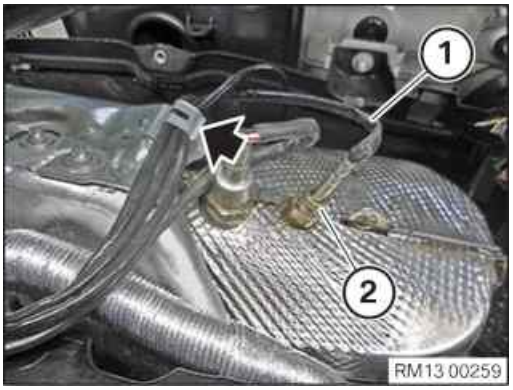
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.



- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).
- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

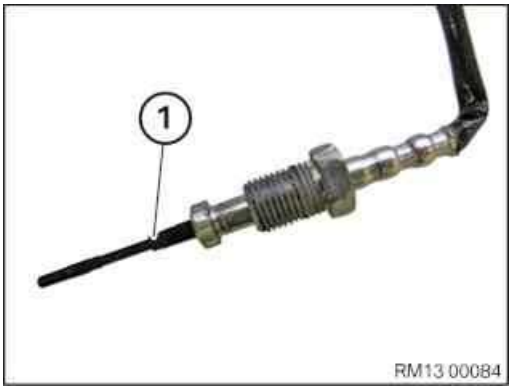
53 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

Damage of exhaust temperature sensor.

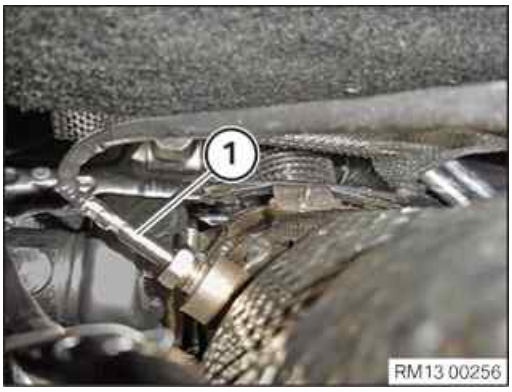
Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.



- Make sure the gauge tip (1) is not damaged during installation.

cardiagn.com

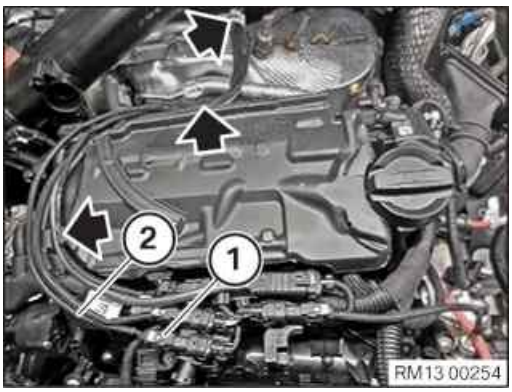


- Feed in and install the exhaust temperature sensor (1).

- Tighten the exhaust temperature sensor (1) with conventional tools (2).

Exhaust temperature sensor to diesel particulate filter

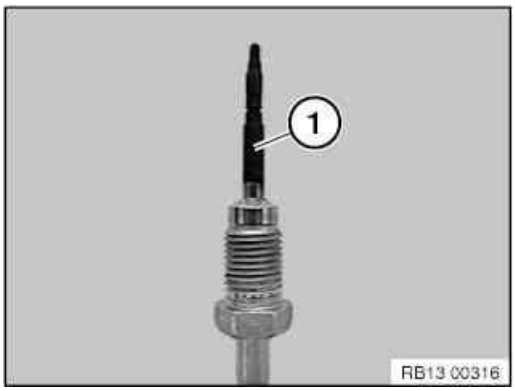
Exhaust-gas temperature sensor		Tightening torque	28 Nm



- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

54 – Installing exhaust temperature sensor on catalytic converter



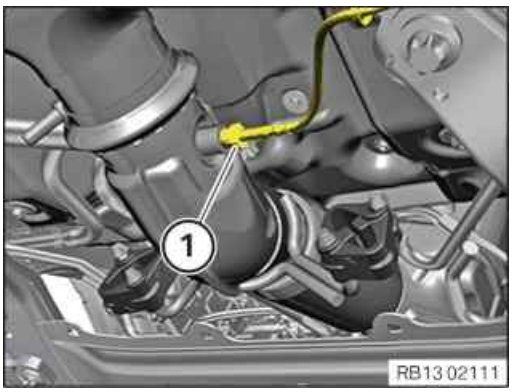
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.



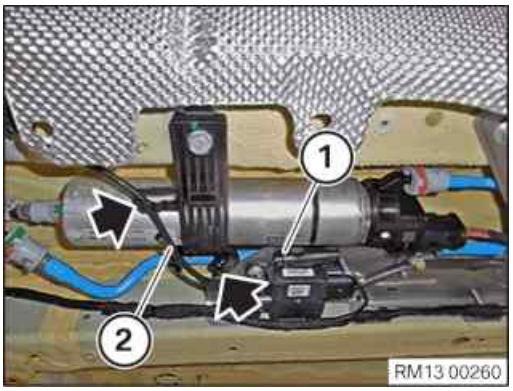
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

cardiagn.com

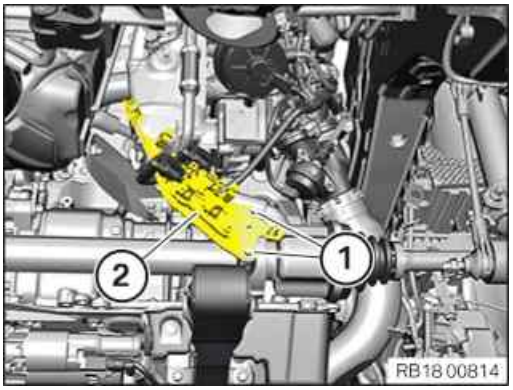
- Secure the cable clips (1).



- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

55 – Install holder for oxygen sensor

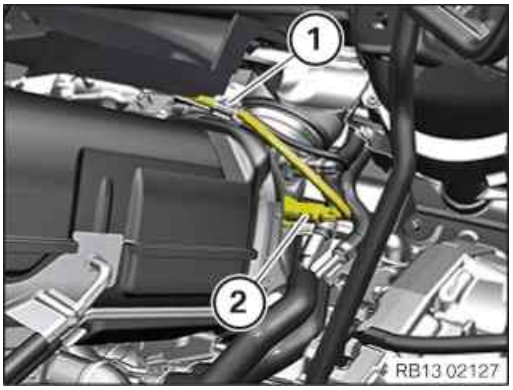


- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm

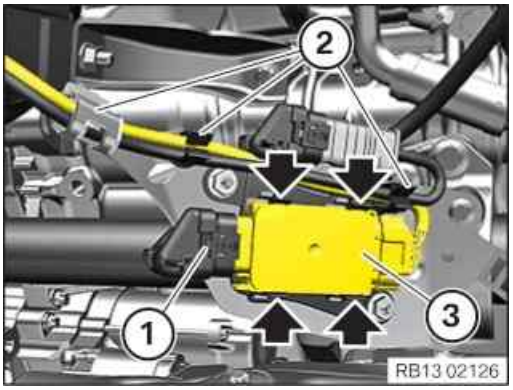
56 – Installing the nitrogen oxide sensor before SCR catalytic converter



- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

Sensor		Tightening torque	50 Nm



- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

cardiagn.com

57 – Install the monitoring sensor

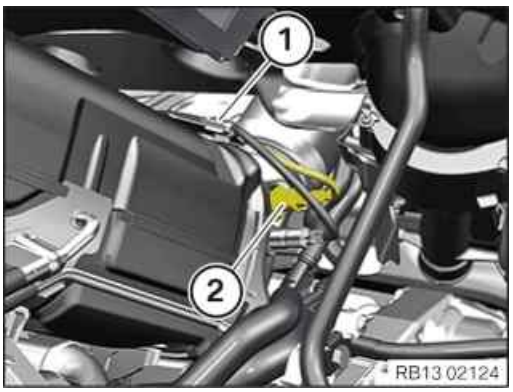
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

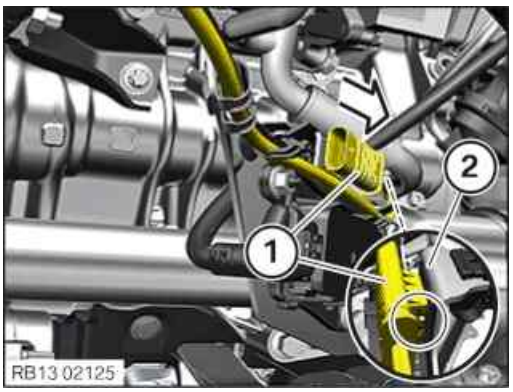


- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor

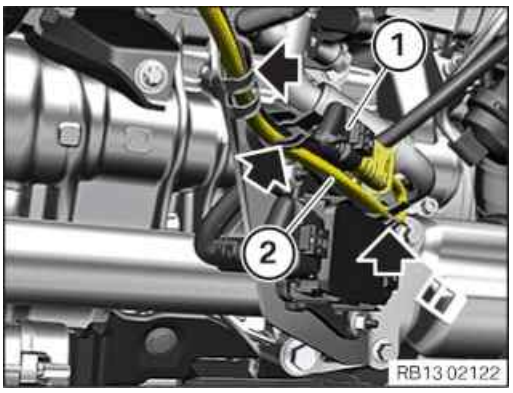
Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.



- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.



- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

58 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

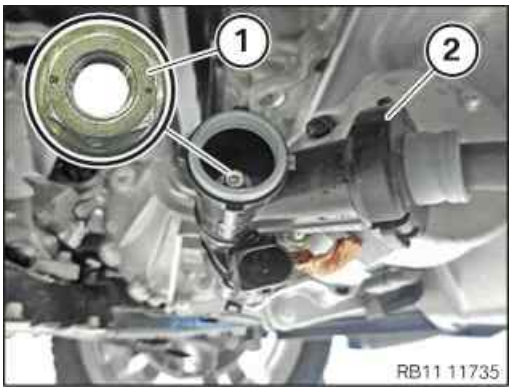
- Route the positive battery cable without abrasions and do not trap.

cardiagn.com

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm



- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

59 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

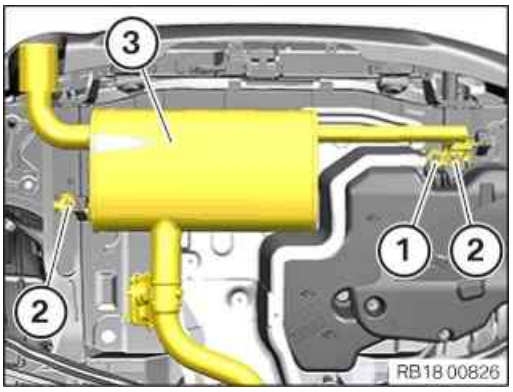
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com



- Insert and install the exhaust system (3) with the help of another person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

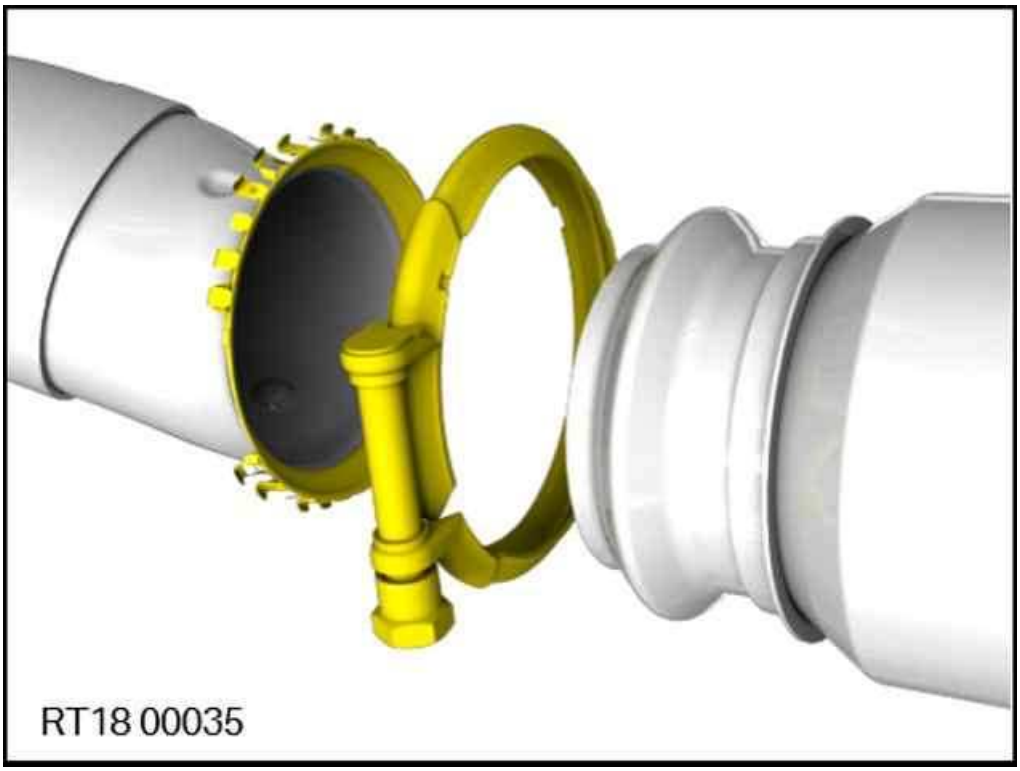
- Tighten down screw (1).

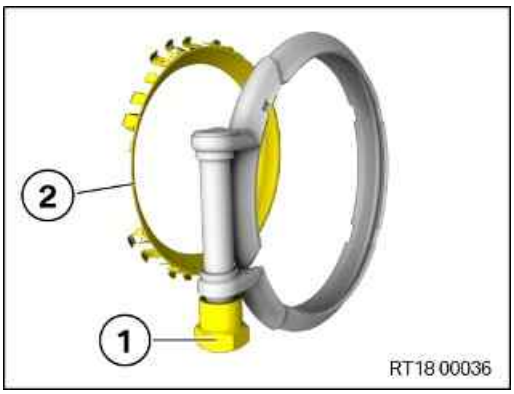
Exhaust bracket on body

Hexagon screw M8x30		Tightening torque	19 Nm

▸ **Install the V-clip**

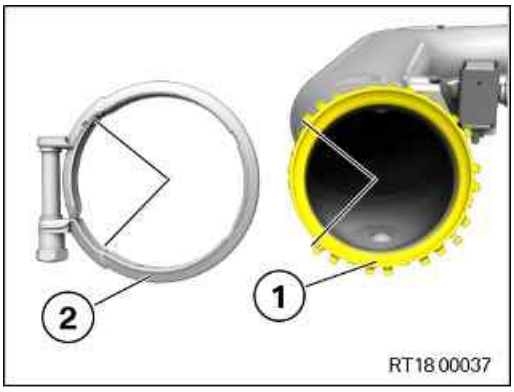
V-band clamp





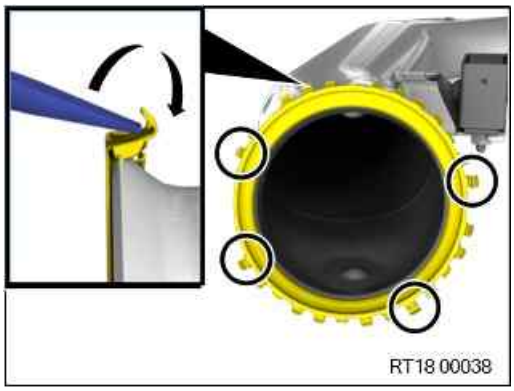
- Unscrew the nut (1) and remove the sealing ring (2).

cardiagn.com

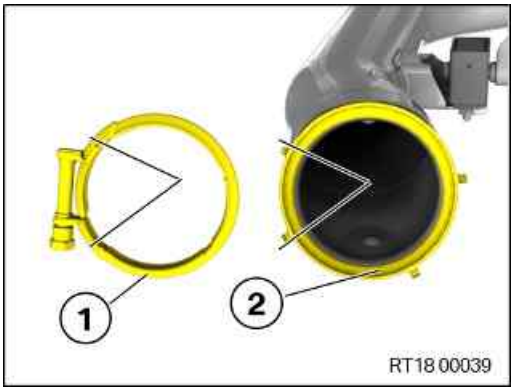


- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

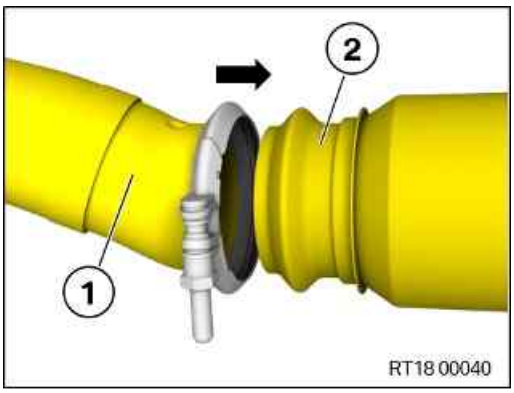


- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.



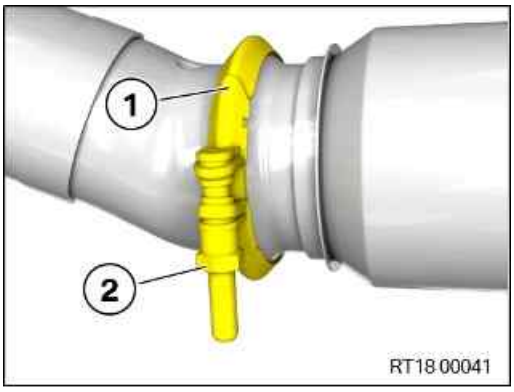
- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).



- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

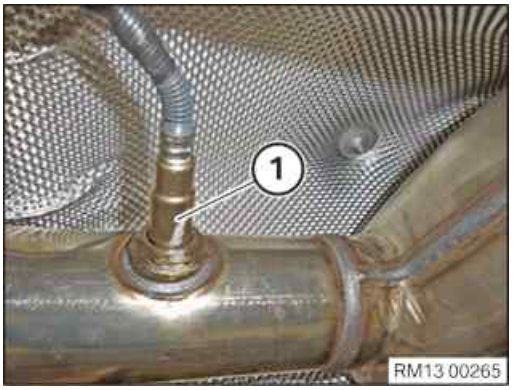
cardiagn.com



- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

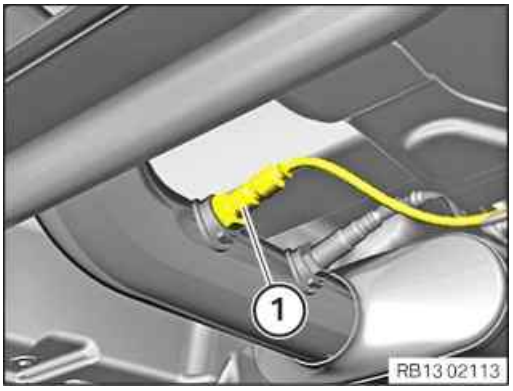
V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm



- Guide in, position and tighten the diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

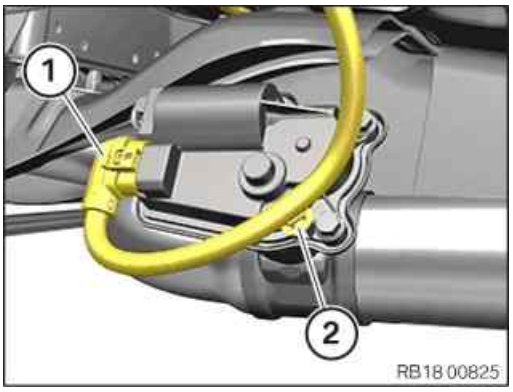
Sensor		Tightening torque	50 Nm



- Guide in, position and tighten the nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

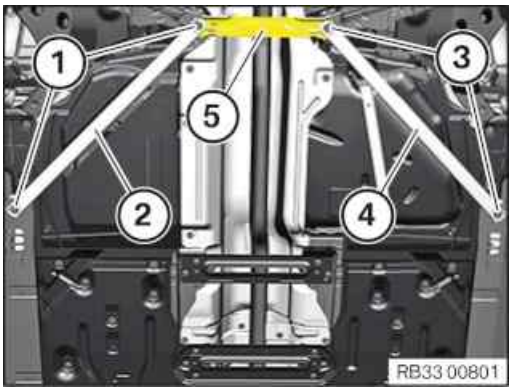


- Secure clamps (2).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

60 – Install the cross-member with torsion struts

cardiagn.com



- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

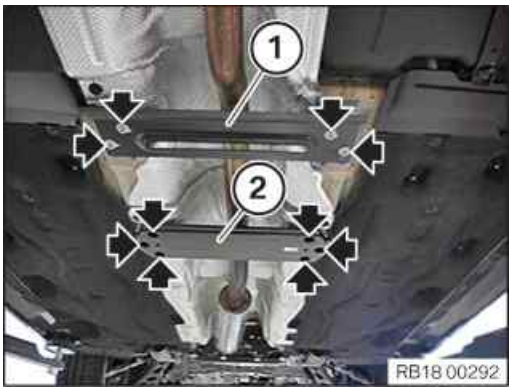
- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

61 – Install the connecting support on the tunnel in front and back



- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

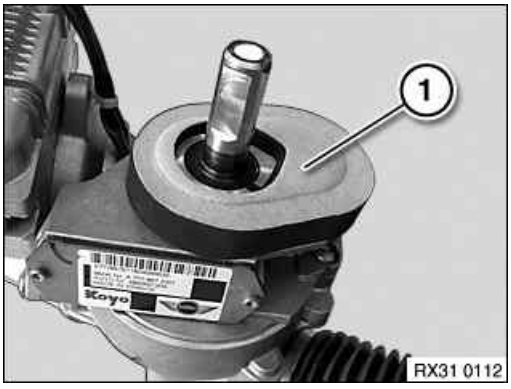
M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

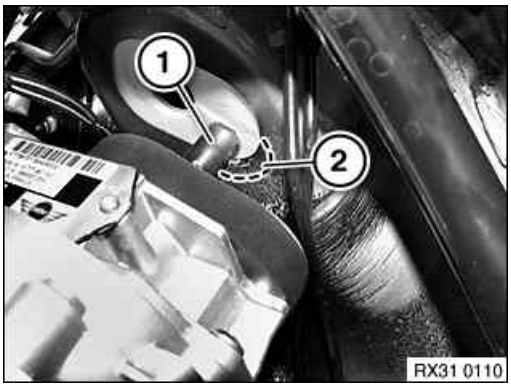
62 – Mount and secure the complete front axle



- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

cardiagn.com

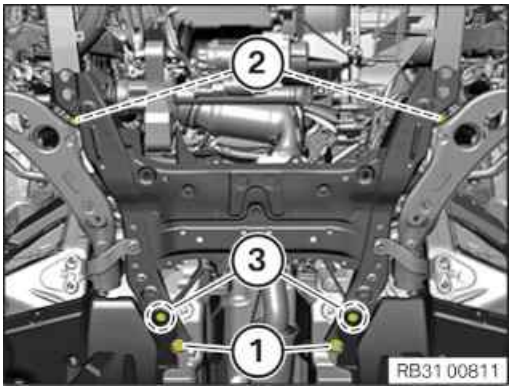


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

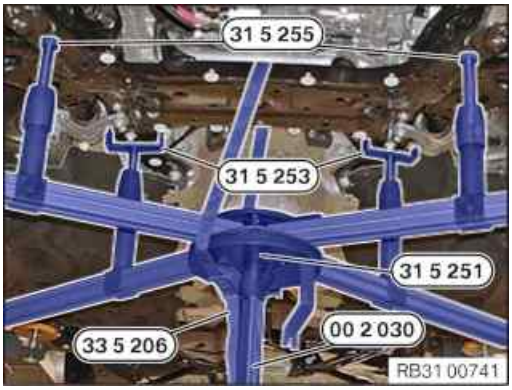
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).

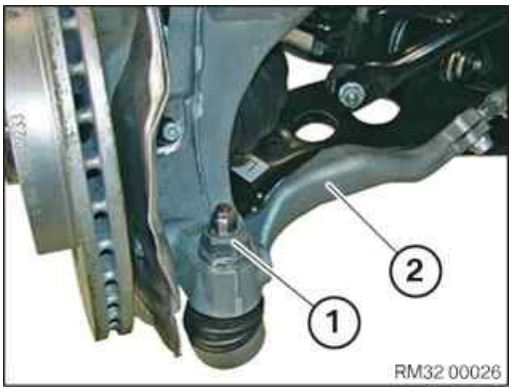
Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and place it to the side.

cardiagn.com



NOTICE

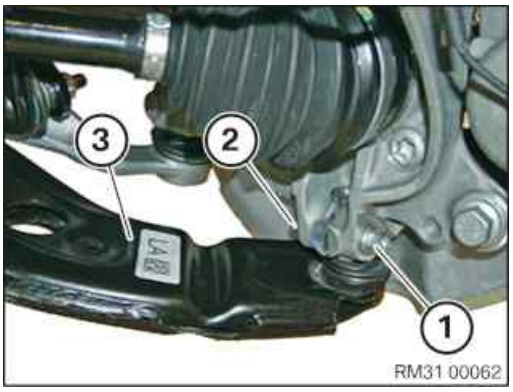
Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm



NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

63 – Install the mounted parts on the front axle support

NOTICE

Perform the operations on the left and right side.

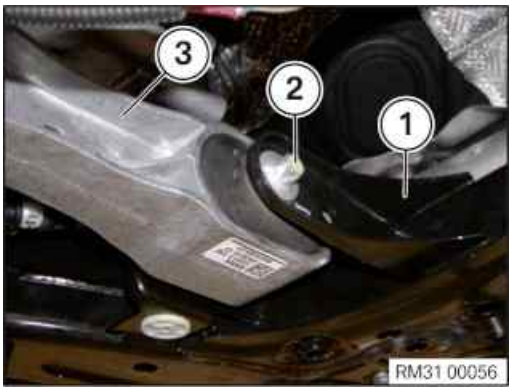
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

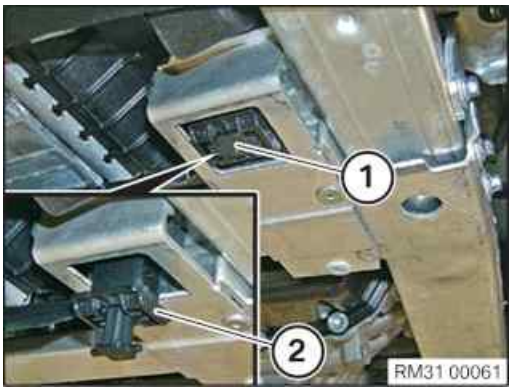
cardiagn.com



- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

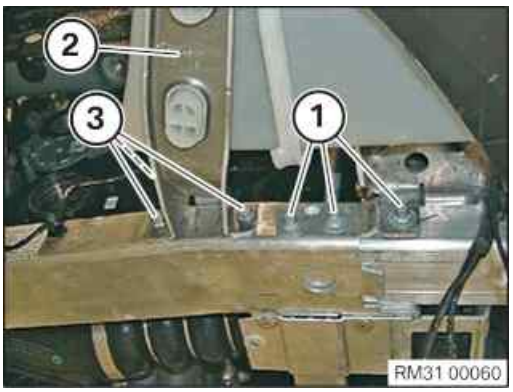
M12 screw		100 Nm



NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.



- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

Perform the operations on the left and right side.

- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

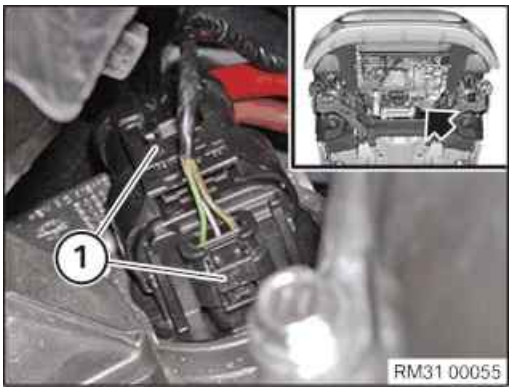
		Tightening torque	11,8 Nm

64 – Attaching connector at steering gear

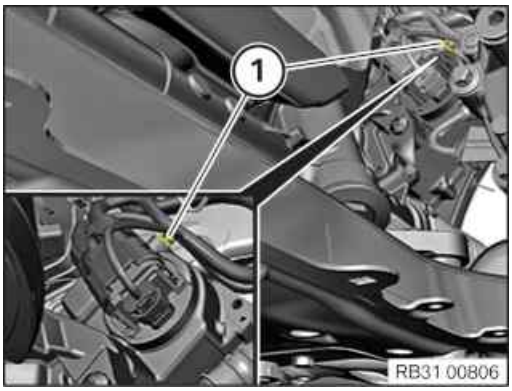
- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.

cardiagn.com

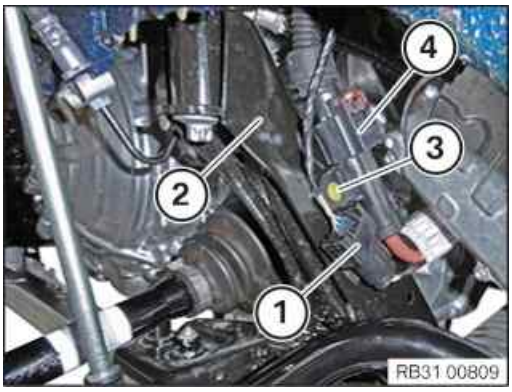


- Connect and lock connector (arrow) (1) with the steering gear.



- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

65 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

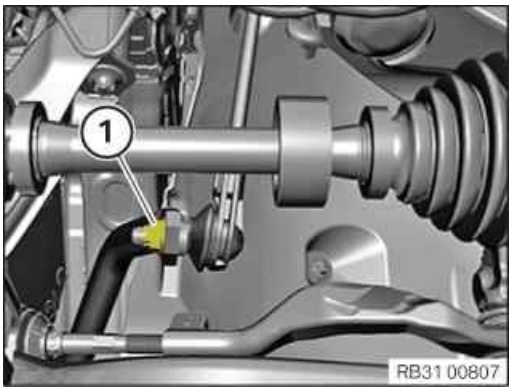
66 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Fastening anti-roll bar on the anti-roll bar link**

cardiagn.com



- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

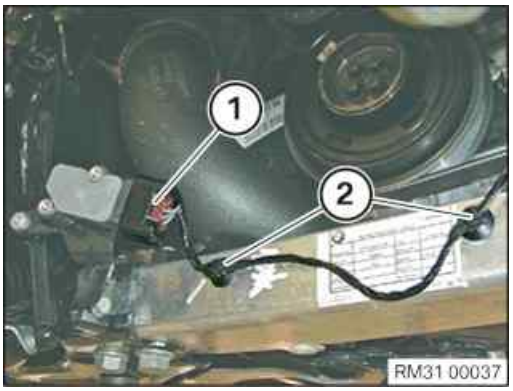
  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

67 – With right installation: Securing the cable for the ride height sensor



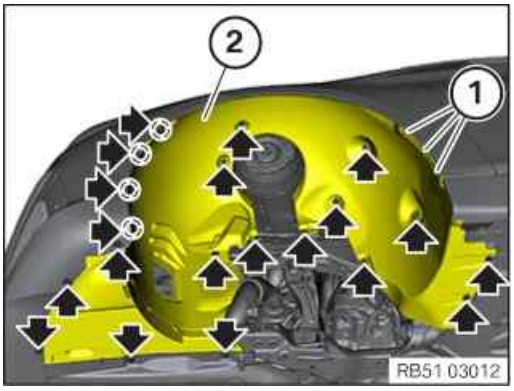
- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

68 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**



- Guide the wheel arch cover (2) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

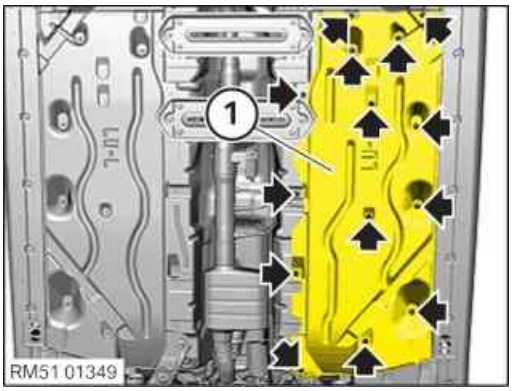
Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

- Secure expanding rivet (1).

69 – Installing underbody panelling , right



- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

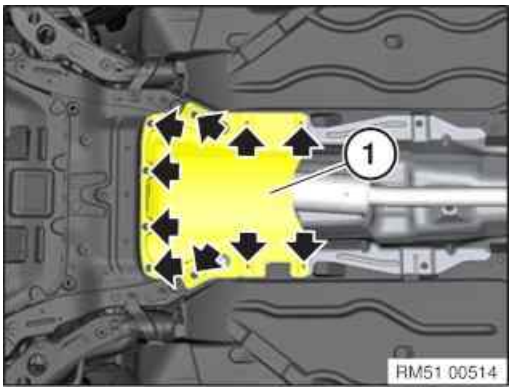
Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

70 – If installed: Installing underbody protection at rear

cardiagn.com

70 – If installed: installing underbody protection at rear



- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

71 – Mount the front left and right wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

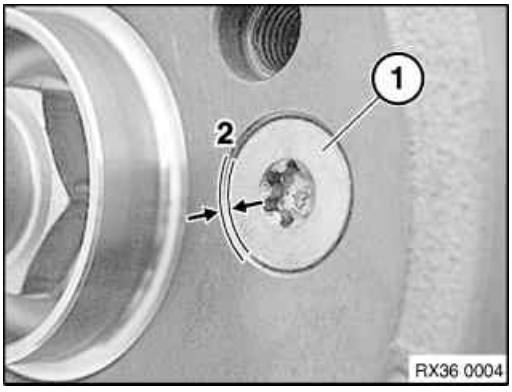
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

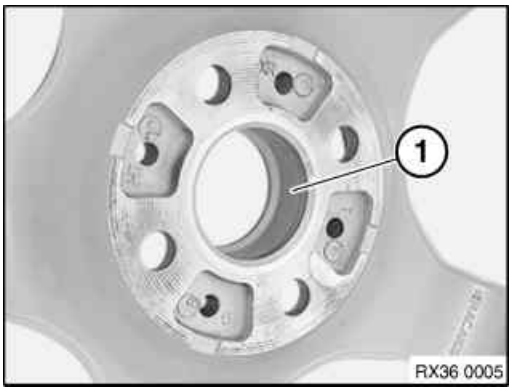
Brake disc to front wheel hub

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

M8	Renew screw.		16 Nm

cardiagn.com



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

◁

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

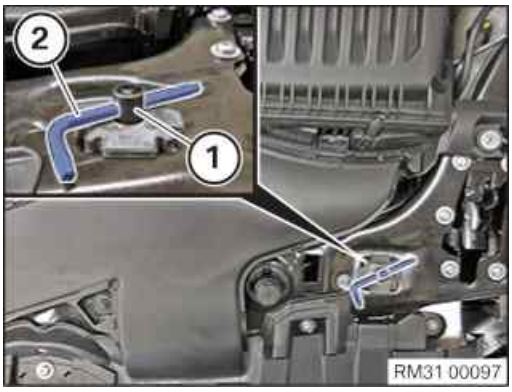
  Parts: Wheel bolts
- Clean the wheel bolts.
- Check wheel bolts (arrows) and threads for damage, renew the wheel bolts if necessary.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

72 – Removing fastener for left and right radiator

cardiagn.com

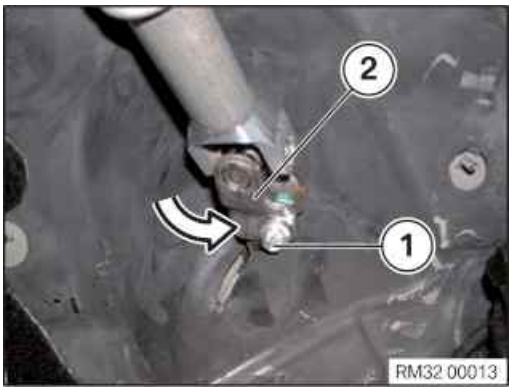


NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

73 – Secure the steering shaft at the bottom on the steering gear



- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

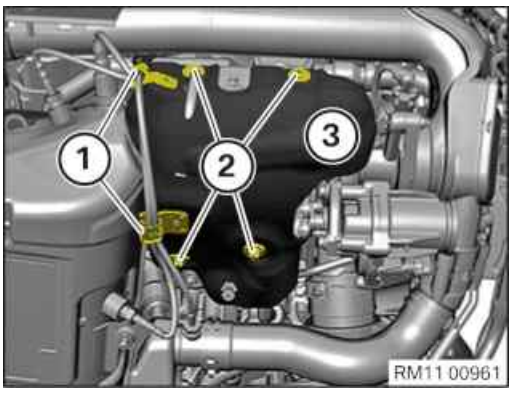
74 – Install the heat shield on the exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten down screws (2).

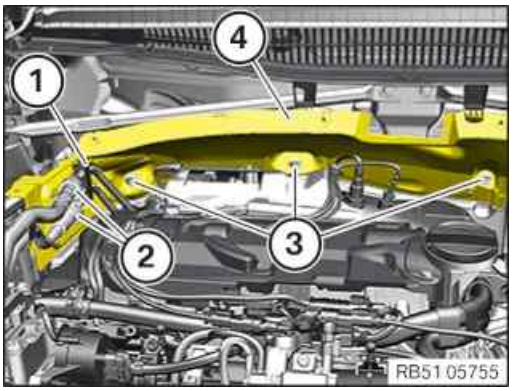
Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Secure cable in holders (1).

cardiagn.com

75 – Installing rear bulkhead upper part



- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

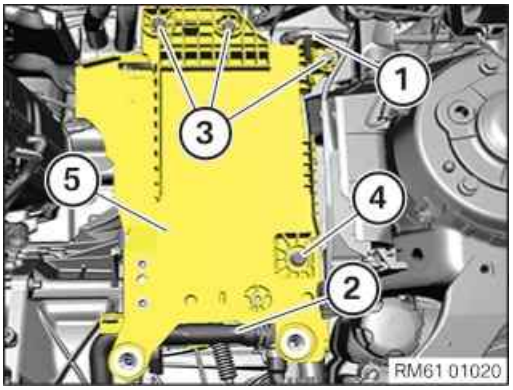
Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

76 – Install the battery holder



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

77 – Install electronics box

Prerequisite

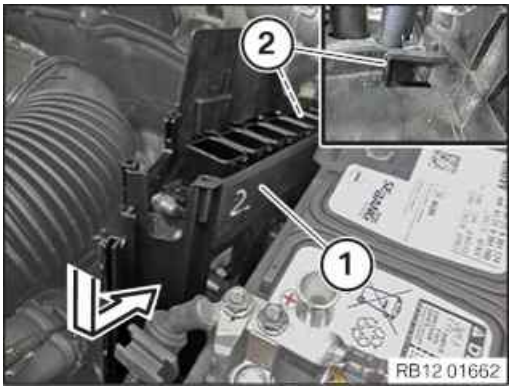
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

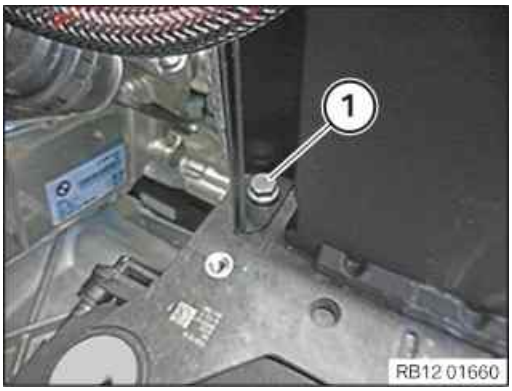
- Route all cables without abrasions, do not trap and crush.



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

cardiagn.com

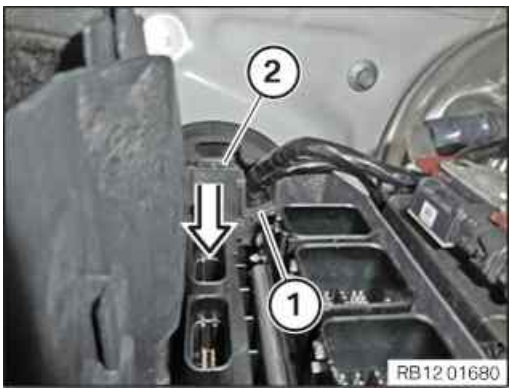
- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



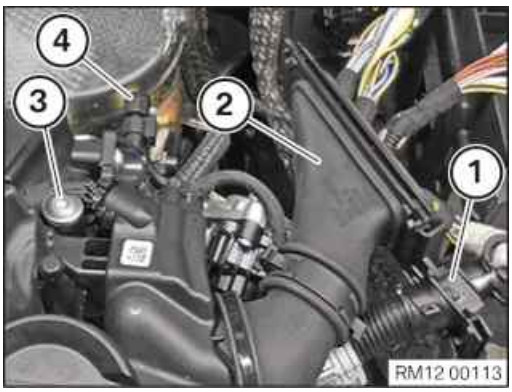
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

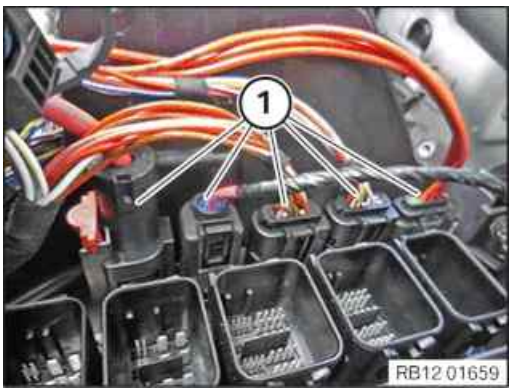


- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

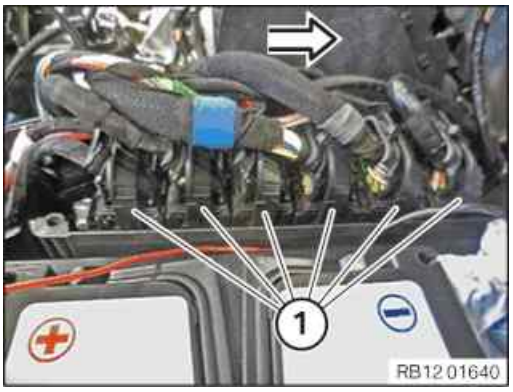
TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

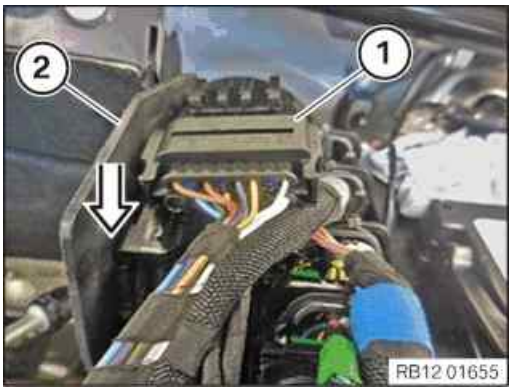


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

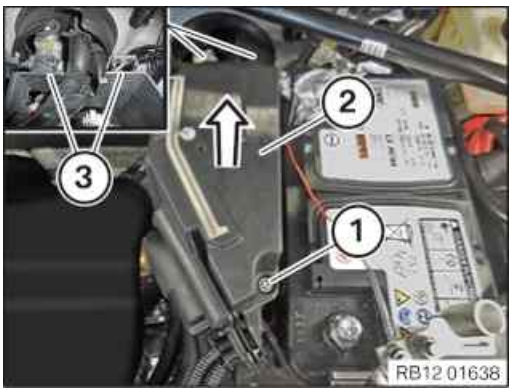
cardiagn.com



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



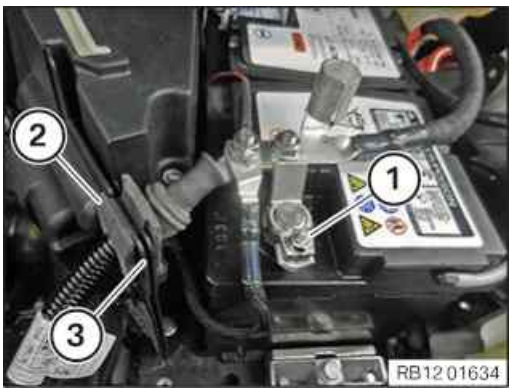
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

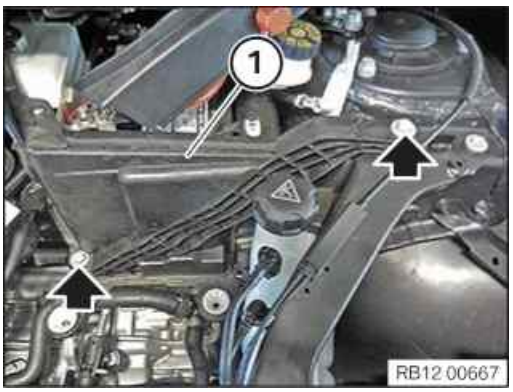
RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (1).
- Tighten screws (arrows).

Tension strut to spring strut dome/battery tray

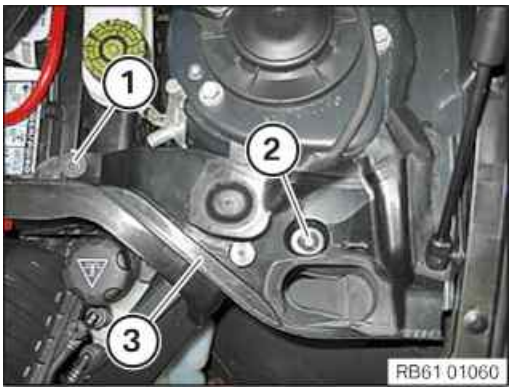
M8		Tightening torque	19 Nm

cardiagn.com

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

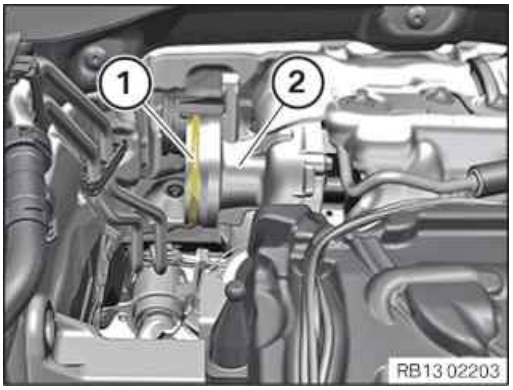


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

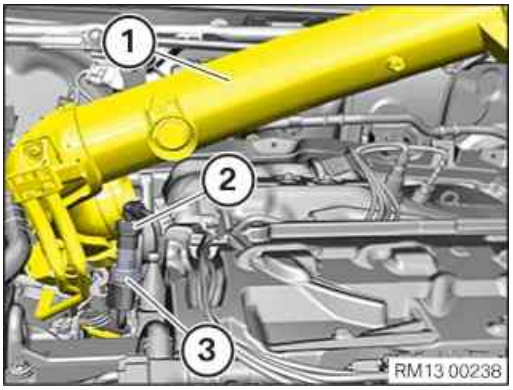
Battery cover

Screw		2,8 Nm

78 – Installing clean air pipe



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.



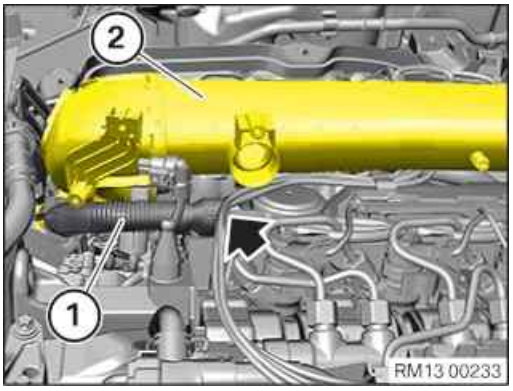
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

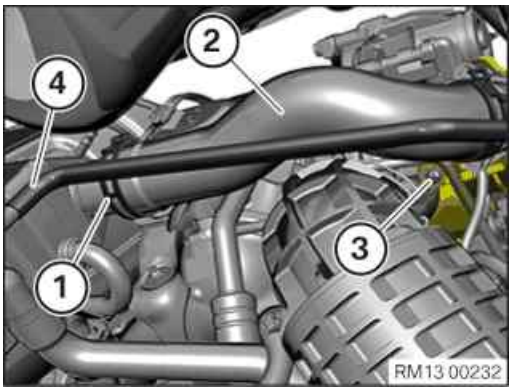
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.

cardiagn.com



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

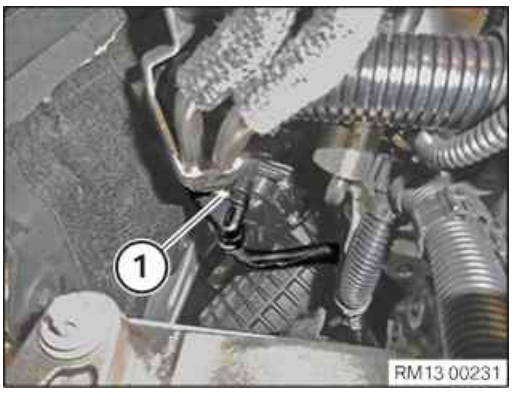
Torx bolt BM8x25		Tightening torque	8 Nm

- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

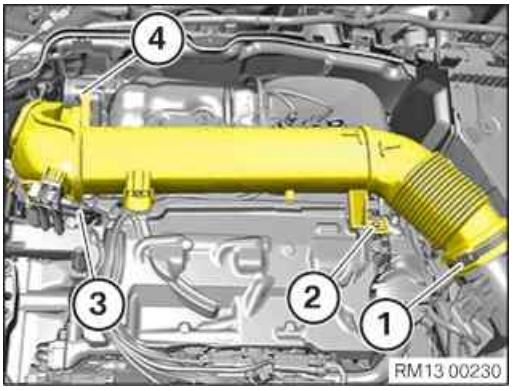
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm



- Connect and lock the connector (1).

  The connector (1) must lock audibly.



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

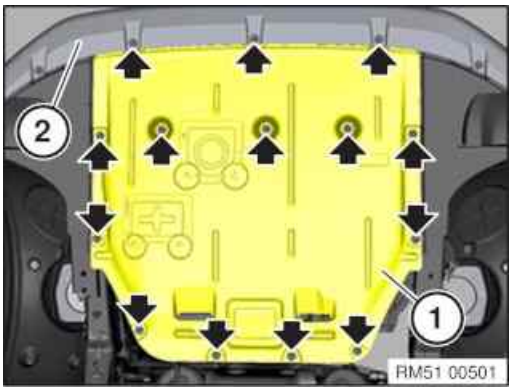
- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

79 – Installing the front underbody protection

cardiagn.com

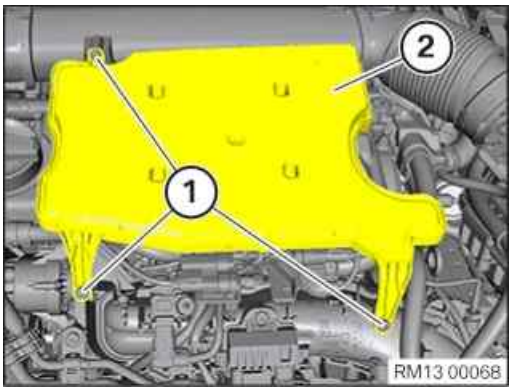


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

80 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

81 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

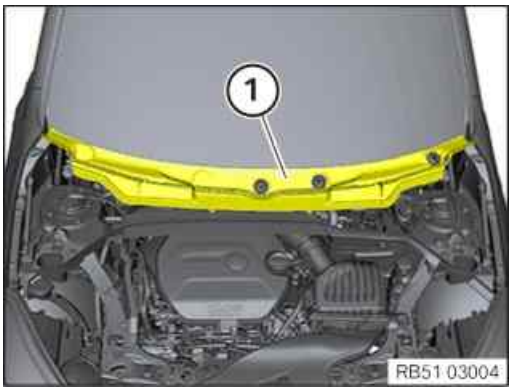
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

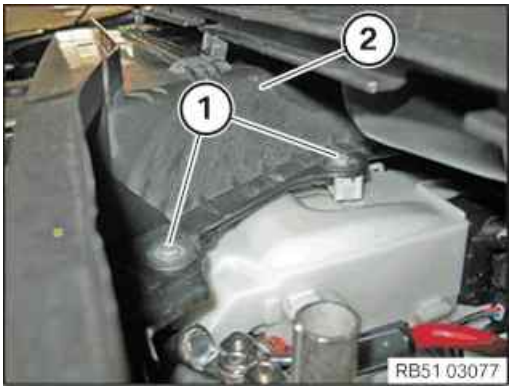
- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

82 – Install the rear cowl panel cover



- Feed in and engage the rear cowl panel cover (1).

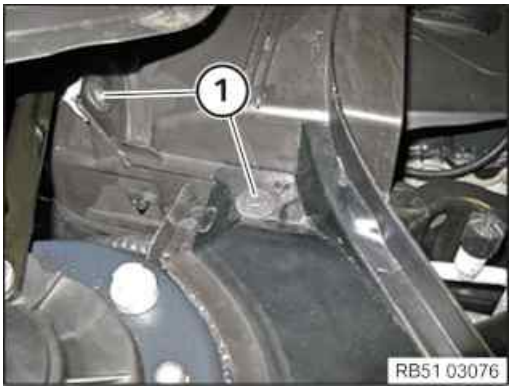
83 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

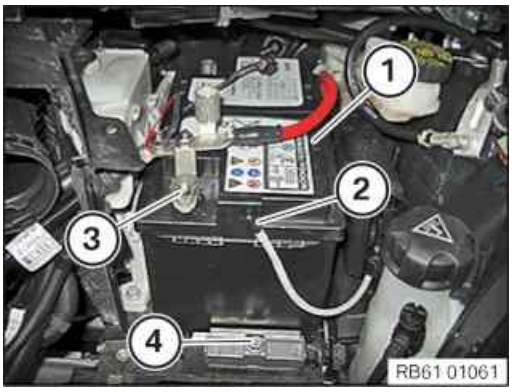
Screw		Tightening torque	3 Nm

cardiagn.com

84 – Install vehicle battery

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



- Install vehicle battery (1).
- Tighten the holder with the bolt (4).

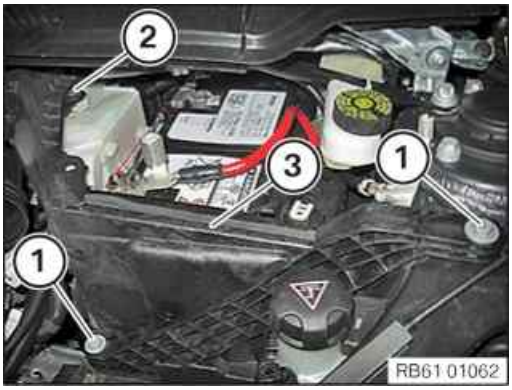
Battery terminal rail to battery tray

M8 screw		19 Nm

- Position the vent hose (2).
- Position the positive terminal.
- Tighten the nut (3) on the positive terminal.

Positive battery terminal

NutM6		5 Nm



- Insert the tension strut (3).
- Tighten down screw (2).

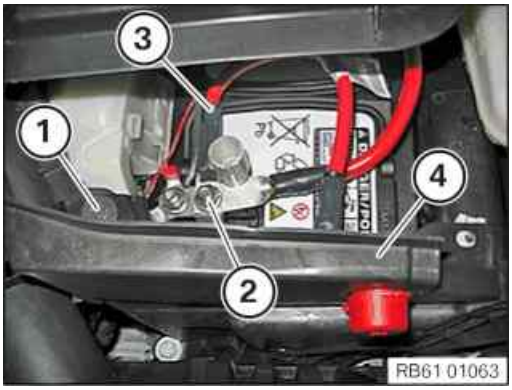
Battery cover

Screw		2,8 Nm

- Tighten the screws (1).

Trailing link

M8 screw		19 Nm



- Position the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten down screw (1).

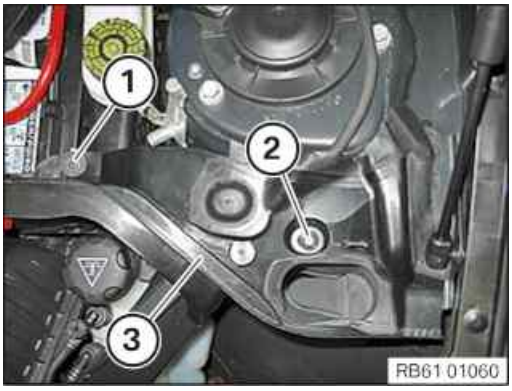
Battery cover

Screw		2,8 Nm

- Tighten the nut (2) on the positive terminal.

Positive battery cable to battery terminal

Nut M8		15,2 Nm

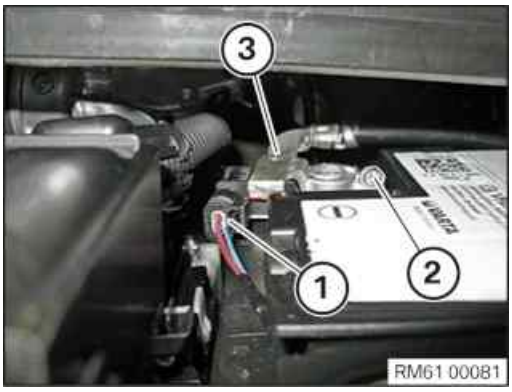


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

cardiagn.com

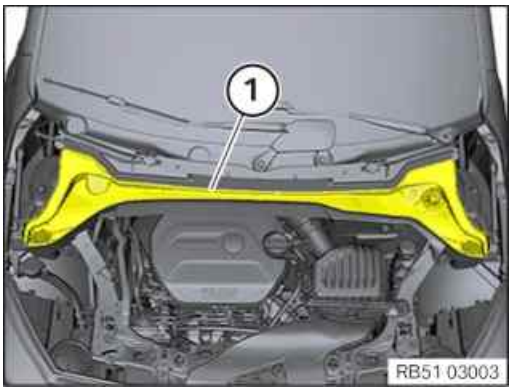


- Position the negative battery terminal (3).
- Tighten nut (2).

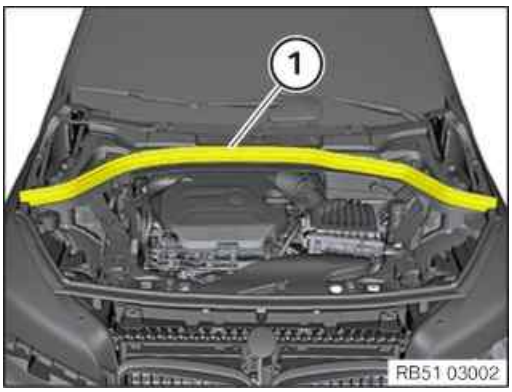
Negative battery terminal (with IBS)

NutM6		5 Nm

- Connect connectors (1) and lock.



- Feed in the cowl panel cover (1).



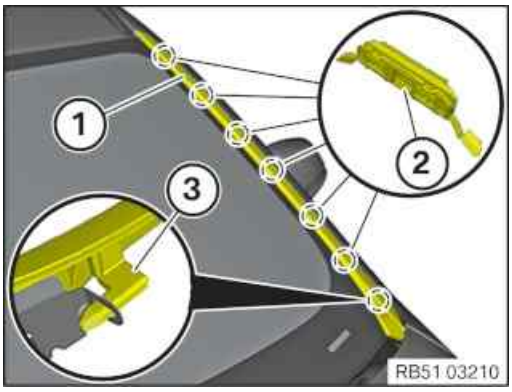
- Press the gasket (1) in a downwards direction.

85 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the gutter strip on the windscreen**



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

86 – Install left and right wiper arm

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

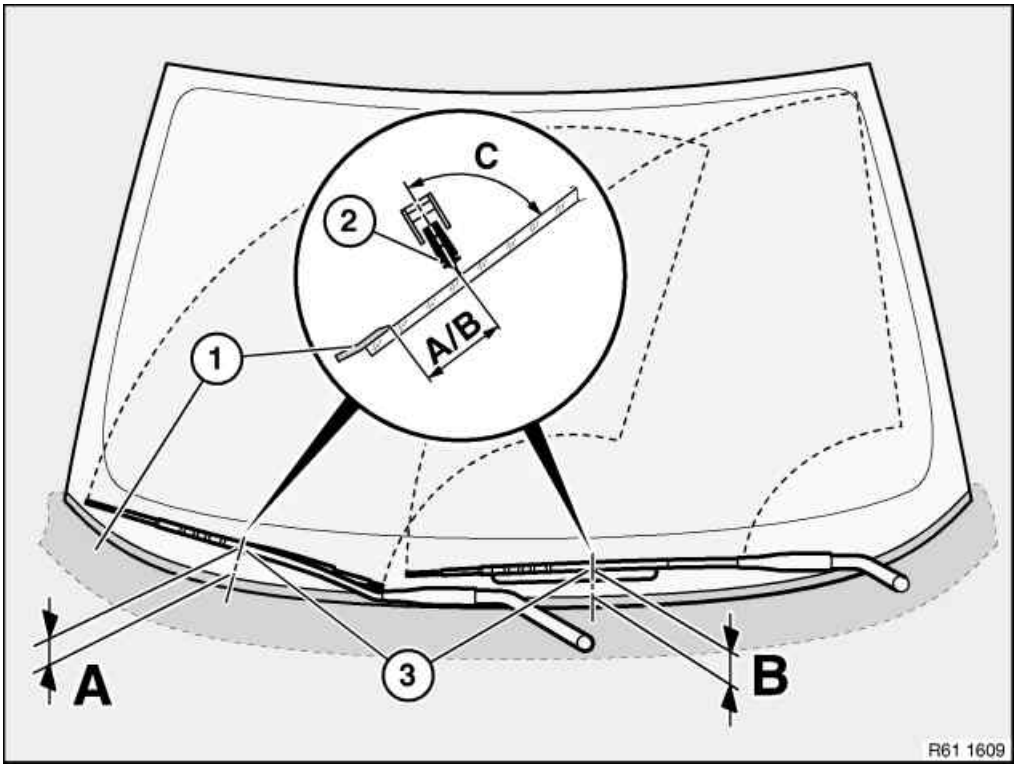
▸ **Install the wiper arm**

TECHNICAL INFORMATION

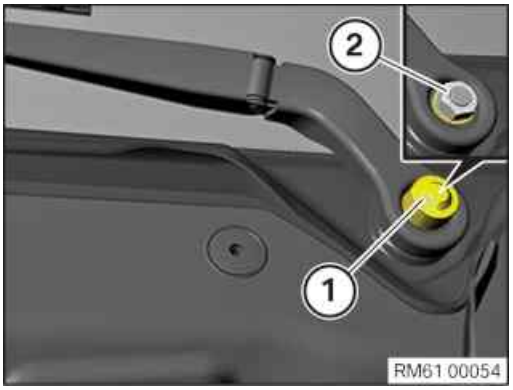
The wiper system must be in zero position.

After installing the cowl panel cover and before fitting the wiper arm:

Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Tighten nut (2).

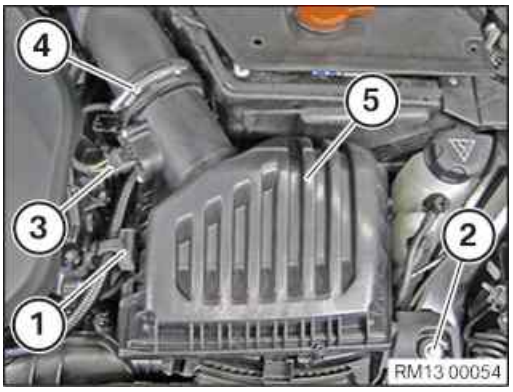
Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

87 – Installing intake silencer housing

cardiagn.com



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

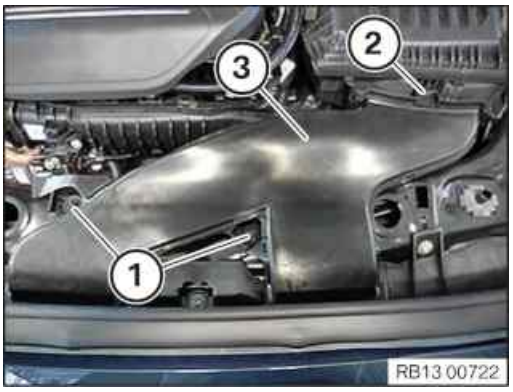
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

88 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

Hexagon screw M 8x16		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger Used in step 49

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

cardiagn.com

Diesel particle filter to holder — Used in step 49

M8 hexagon nut		Tightening torque	19 Nm

SCR metering module V-clip to exhaust system — Used in step 49

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

Holder for coolant lines to diesel particulate filter — Used in step 49

Torx bolt BM6x16		Tightening torque	8 Nm

Low-pressure exhaust-gas recirculation cooler to diesel particulate filter — Used in step 49

Flange nutM8		Tightening torque	19 Nm

Differential pressure sensor to holder — Used in step 50

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor — Used in step 50 78

Clamp 15–19mm		Tightening torque	3 Nm

Control sensor — Used in step 51

Control sensor		Tightening torque	50 Nm

Exhaust temperature sensor to diesel particulate filter — Used in step 52 53

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Exhaust-gas temperature sensor to exhaust system — Used in step 54

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Oxygen sensor holder to intermediate shaft — Used in step 55

Hexagon screw M6x16		Tightening torque	8 Nm

Nitrogen oxide sensor before SCR catalytic converter — Used in step 56

Sensor		Tightening torque	50 Nm

Monitoring sensor — Used in step 57

Sensor		Tightening torque	50 Nm

Starter motor to transmission — Used in step 58

M8x45		Tightening torque	19 Nm

Battery positive lead to starter — Used in step 58

M8		Tightening torque	13,5 Nm

Exhaust system to body — Used in step 59

M8	Replace nuts.	Tightening torque	19 Nm

Exhaust bracket on body — Used in step 59

Hexagon screw M8x30		Tightening torque	19 Nm

V-clip to catalytic converter — Used in step 59

cardiagn.com

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Diesel particulate sensor to exhaust system Used in step 59

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter Used in step 59

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting Used in step 60

M12x48	Renew screws.	Jointing torque Angle of rotation	100 Nm 90 °

Front connection carrier to body Used in step 61

M10x18		Tightening torque	56 Nm

Rear connection carrier to body Used in step 61

M8x18		Tightening torque	28 Nm

Rear end of front axle support to body Used in step 62

M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body Used in step 62

M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body Used in step 62 70

Screw		Tightening torque	3 Nm

Track rod end to swivel bearing Used in step 62

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing Used in step 62

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body Used in step 63

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

Holder with rubber mount to front axle support Used in step 63

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate Used in step 63

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier Used in step 63

		Tightening torque	11,8 Nm

Holder to front axle support Used in step 64

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

cardiagn.com

Anti-roll bar link to anti-roll bar — Used in step 66

M10	Renew nut.	Tightening torque	56 Nm

Wheel arch cover to body — Used in step 68

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body — Used in step 68

Plastic nut		Tightening torque	3 Nm

Underbody panelling, side — Used in step 69

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side — Used in step 69

Plastic nut		Tightening torque	2,6 Nm

Brake disc to front wheel hub — Used in step 71

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub — Used in step 71

M8	Renew screw.		16 Nm

Wheel bolts — Used in step 71

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear — Used in step 73

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead — Used in step 73

Plastic nut		Tightening torque	3 Nm

Rear bulkhead upper part to lower section of bulkhead — Used in step 75

Oval-head screw		Tightening torque	5 Nm

Battery holder to engine support — Used in step 76

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray — Used in step 77

M8X16		Tightening torque	15 Nm

Wiring harness to cylinder head cover — Used in step 77

TS5x20		Tightening torque	3,5 Nm

cardiagn.com

Cover to electronics box — Used in step 77

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery — Used in step 77

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray — Used in step 77

M8		Tightening torque	19 Nm

Positive battery connection point cover to engine compartment partition wall — Used in step 77

		Tightening torque	3 Nm

Battery cover — Used in step 77 84

Screw			2,8 Nm

Exhaust gas pressure sensor — Used in step 78

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

Clean air pipe to exhaust turbocharger — Used in step 78

Torx bolt BM8x25		Tightening torque	8 Nm

Clean air pipe to cylinder head cover — Used in step 78

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 78 87

Clamp		Tightening torque	3 Nm

Underbody protection front — Used in step 79

			3 Nm

Resonator to manifold and clean air pipe — Used in step 80

Screw TS6	Renew screw.	Tightening torque	5 Nm

Bulkhead cover, top — Used in step 83

Screw		Tightening torque	3 Nm

Battery terminal rail to battery tray — Used in step 84

M8 screw			19 Nm

Positive battery terminal — Used in step 84

NutM6			5 Nm

Trailing link — Used in step 84

M8 screw			19 Nm

Positive battery cable to battery terminal — Used in step 84

Nut M8			15,2 Nm

Negative battery terminal (with IBS) — Used in step 84

NutM6			5 Nm

cardiagn.com

Windscreen wiper arm Used in step 86

Combination hexagon nut		Tightening torque	35 Nm

Intake silencer housing to lock bridge Used in step 87

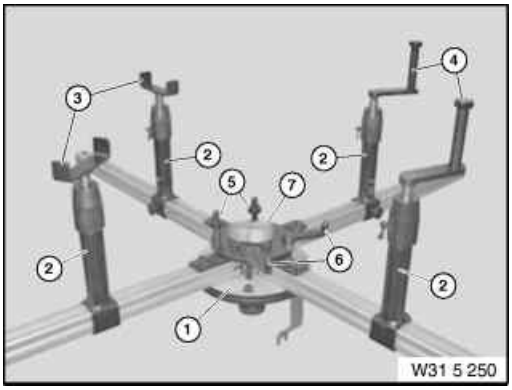
M6X30		Tightening torque	8 Nm

Intake neck to cross connection Used in step 88

M6		Tightening torque	8 Nm

Overview of Special Tools

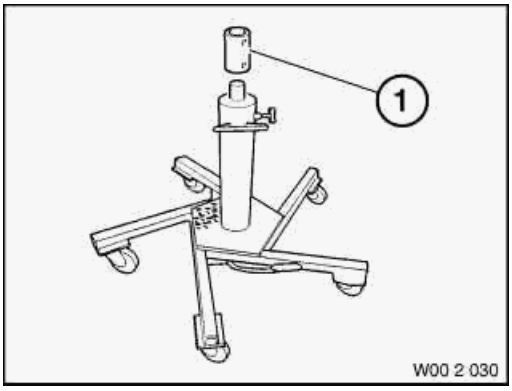
0 495 817 (31 5 251) Basic body



Common Used in step 27 62

Usage	(Basic body) No longer available separately, only via special tool set 31 5 250 (83 30 0 495 567)
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

0 490 133 (00 2 030) Device



Common Used in step 27 62

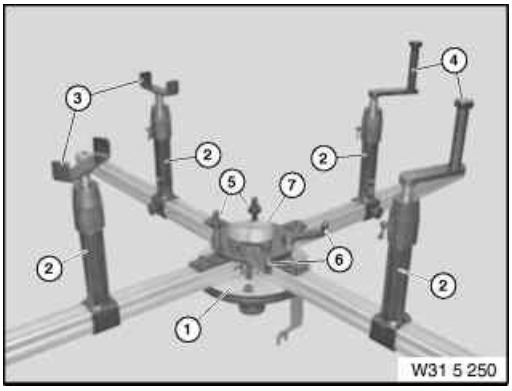
Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

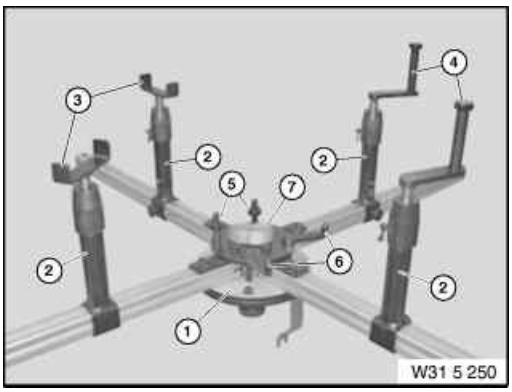
cardiagn.com

0 495 821 (31 5 255) Adapter



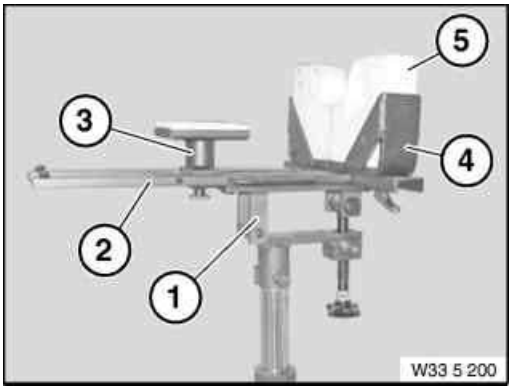
Common	Used in step 27
Usage	(take-up adapter for bore holes (2 x))
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

0 495 819 (31 5 253) Adapter



Common	Used in step 27
Usage	(take-up adapter U-section (2 x))
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

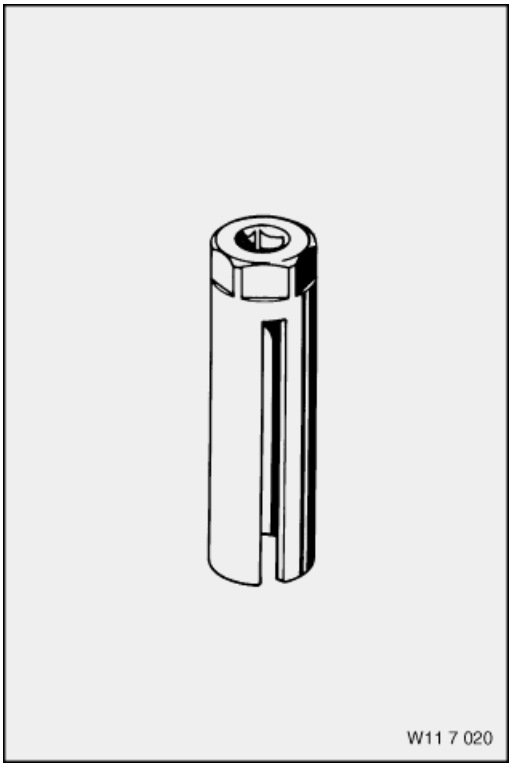
0 496 080 (33 5 206) Belt



Common	Used in step 27 62
Usage	(Tensioning strap)
Included in the tool or work	0 496 009
Storage location	
Replaced by	
In connection with	
SI-Number	

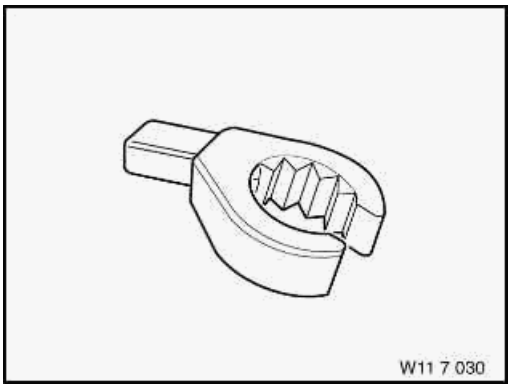
cardiagn.com

0 491 074 (11 7 020) Socket wrench insert



Common	Used in step 33 34 57
Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

0 491 075 (11 7 030) Socket wrench insert



Common	Used in step 39 51
Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	01 06 95 (963)

2 344 011 Tool

Common	Used in step 71
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

Replacement tools:

11 65 ... Test steps in the event of turbocharger damage

Attention!

The following components must always be checked for foreign bodies, damage and function before installing the new turbocharger.

- Pressure pipe and hoses
- Charge air cooler
- Intake plenum
- If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as this can even coke!

cardiagn.com

11 66 000 Removing and installing or replacing oil/vacuum pump (B37C)

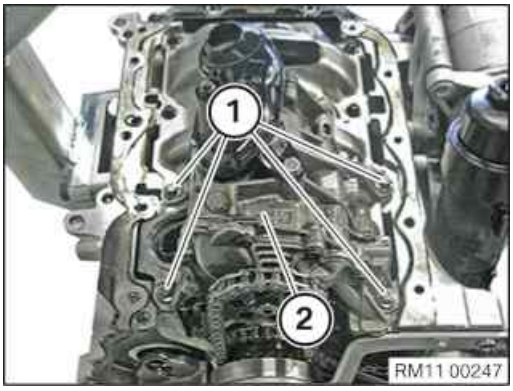
Important!

It is possible to remove and install the oil/vacuum pump **without** removing the transmission.

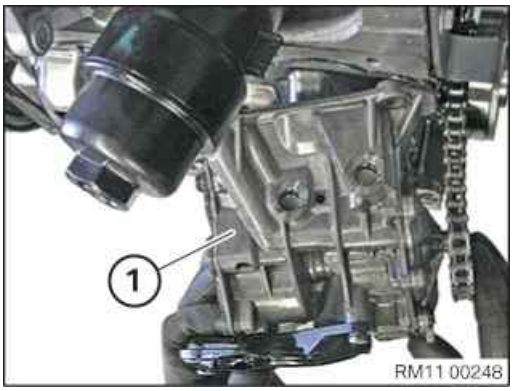
Necessary preliminary tasks:

- Remove oil sump.

REMOVAL:

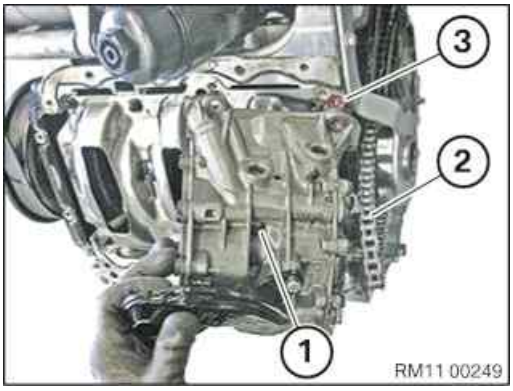


Release screws (1) of oil/vacuum pump (2).

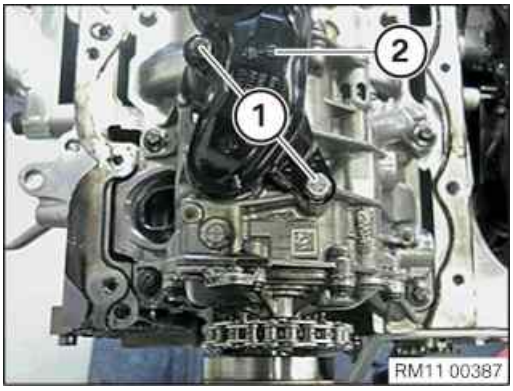


Remove oil/vacuum pump (1).

cardiagn.com



Feed oil/vacuum pump (1) out of drive chain (2) and remove.

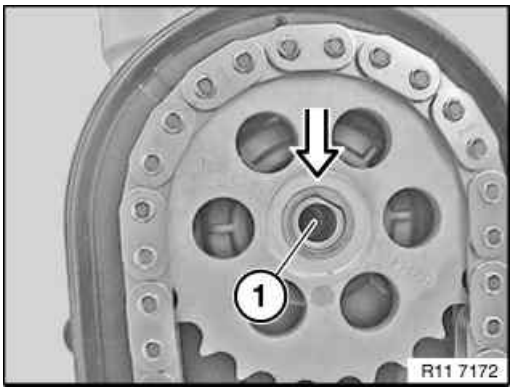


Replacement:

Release screws (1). Remount intake pipe (2).

Tighten down screws (1).

Tightening torque: 11 41 1AZ.

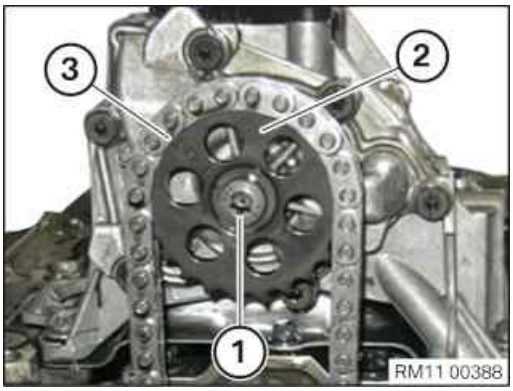


Replacement: Important!

Pay attention to mounting flats (1) on oil pump (see arrow).

The label "Front" must be visible.

Note:
Figure N47.



Replacement:

Important!

Screw (1) has left-hand thread.

"Front" (3) must be readable.

Hold down camshaft sprocket (2) with a suitable tool. Release screw (1). Remount camshaft sprocket.

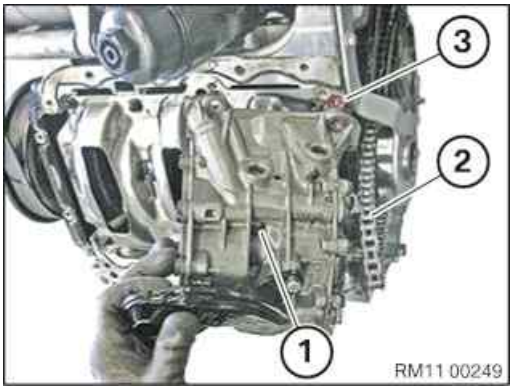
Parts: Replace screw (1).

Mount camshaft sprocket (2) and hold down with a suitable tool. Tighten screw (1).

Tightening torque: 11 41 4AZ.

INSTALLATION:

cardiagn.com

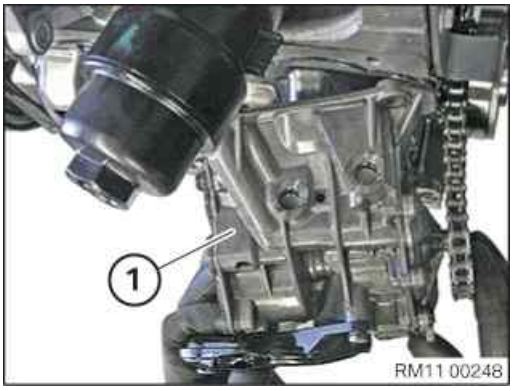


Important!

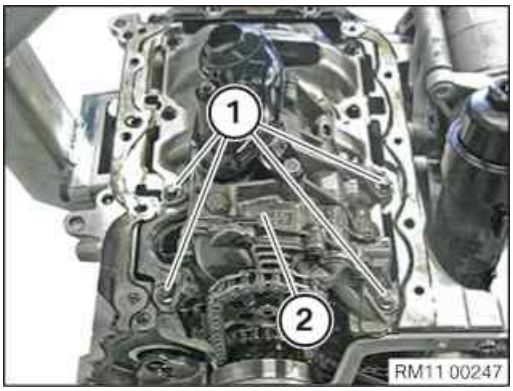
Sealing ring (3) must not be damaged or missing.

Check centring bushes for damage, replace if necessary.

Feed oil/vacuum pump (1) into drive chain (2).



Install oil/vacuum pump (1).



Tighten down screws (1) of oil/vacuum pump (2).

Tightening torque: 11 41 2AZ.

Required follow-up work:

- Install oil sump.

cardiagn.com

11 66 006 Removing and installing/replacing the non-return valve

TECHNICAL INFORMATION

- When the engine is stopped after the end of the journey, it may be necessary to run the electric fan. In rare cases, operation of the electric fan can last up to 11 min. This protects the components. In this case, replacing the electric fan will not remedy the problem!

PRELIMINARY WORK

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

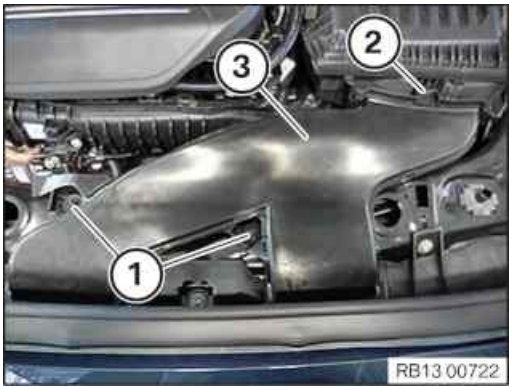
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

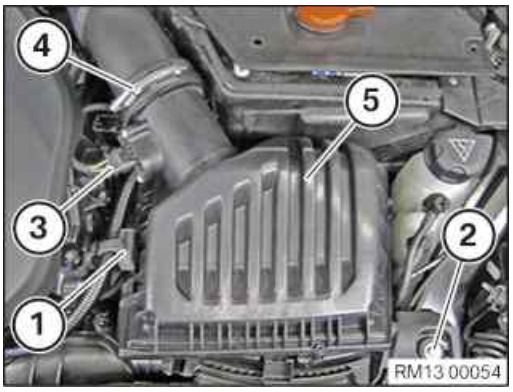
2 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

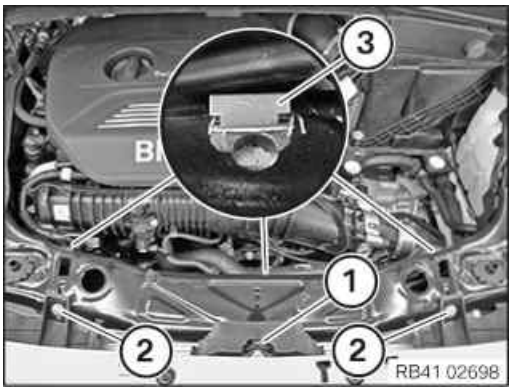
3 – Removing intake silencer housing

cardiagn.com

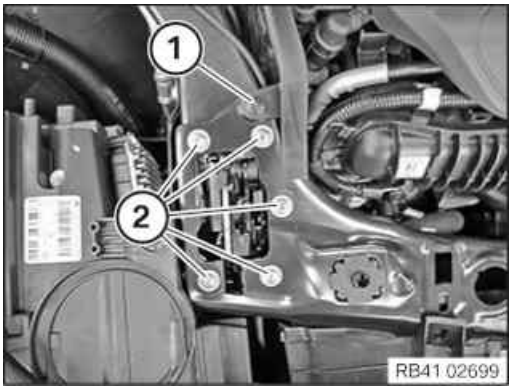


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

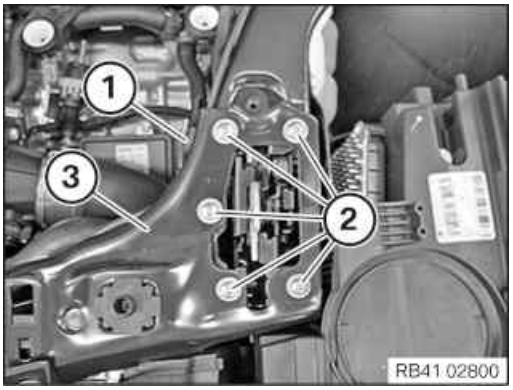
4 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

5 – Removing the fan cowl with electric fan

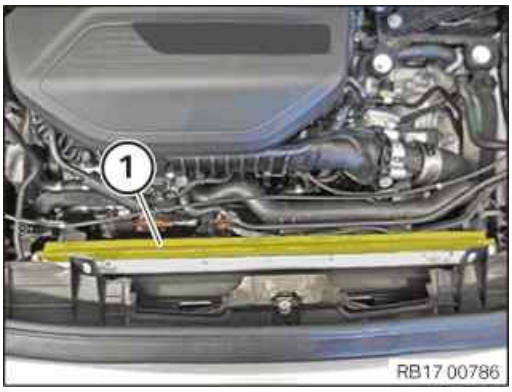
WARNING

Hot surfaces.

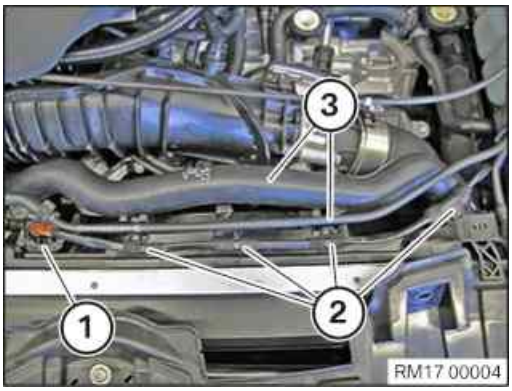
Risk of burning!

- Perform all work only on components that have cooled down.

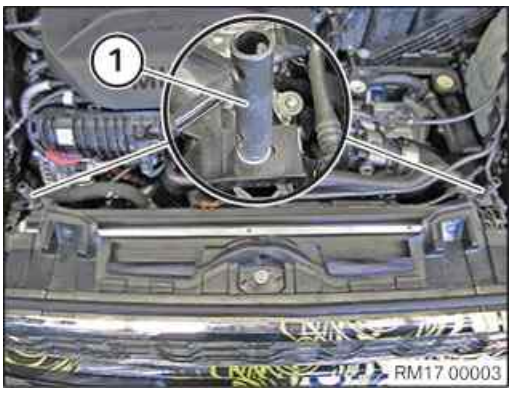
cardiagn.com



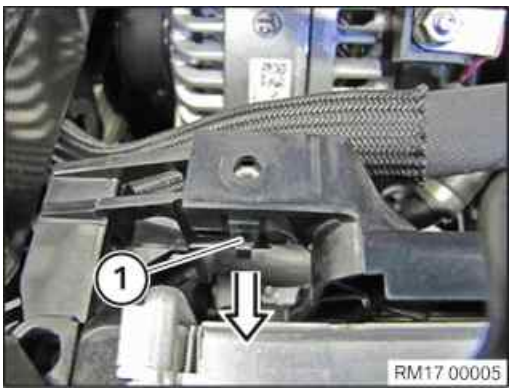
- Feed out and remove the sealing (1) from the radiator.



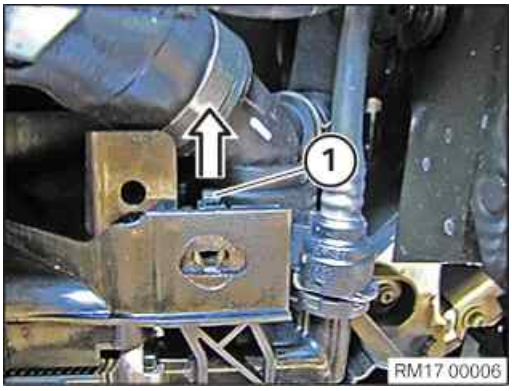
- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.



- Loosen screws (1).

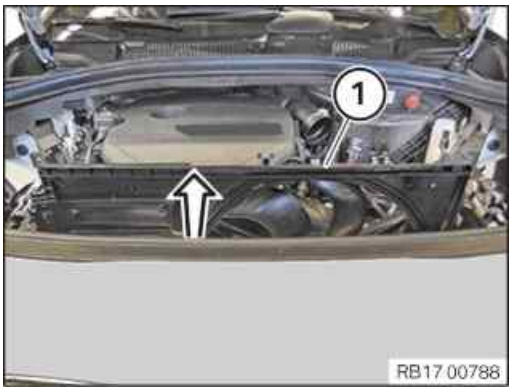


- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



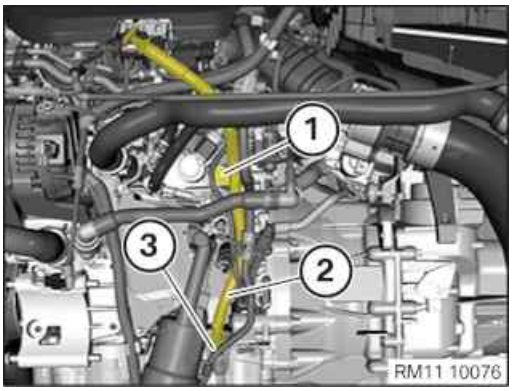
- Unlock the left lock (1) on the fan cowl in the direction of the arrow.

cardiagn.com



- Guide out fan cowl (1) in direction of arrow and remove.

6 – Removing the guide tube for the oil dipstick



- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

MAIN WORK

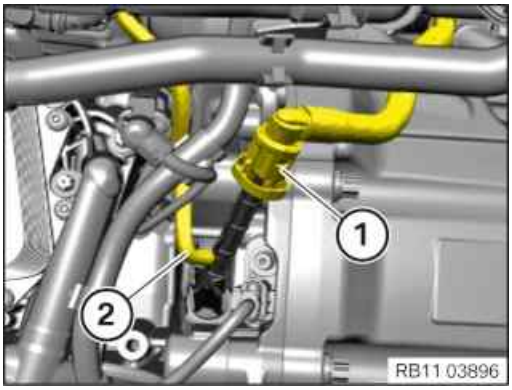
7 – Remove non-return valve

RISK OF DAMAGE

Contaminant or foreign body.

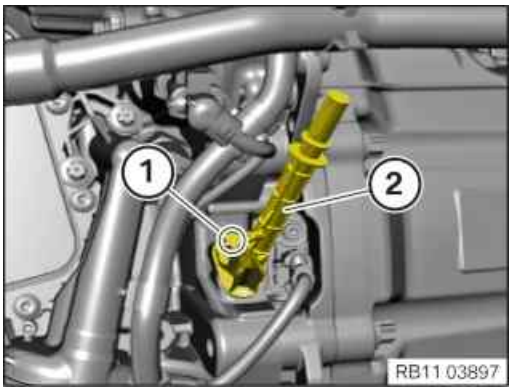
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unlock and pull off the vacuum line (1).
- Pull off the vacuum hose (2).

cardiagn.com



- Loosen screw (1).
- Feed out the non-return valve (2) and remove.

8 – Installing non-return valve

- Renew gasket (1) using special tool **0 496 714 (00 9 030)**.

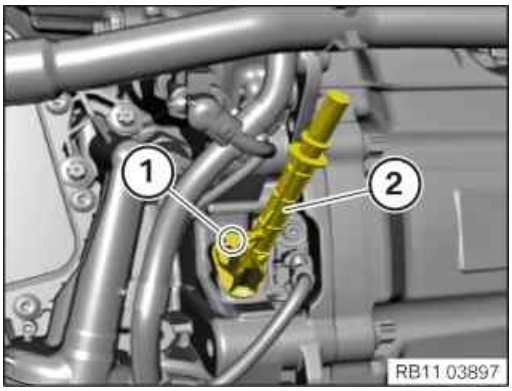
  Parts: Gasket

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

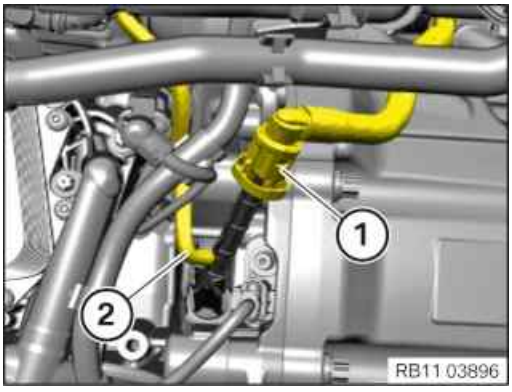
- Do not use any metal-cutting tools.
- Clean sealing surface.



- Feed in non-return valve (2) and install.
- Tighten down screw (1).

Vacuum line for oil vacuum pump to crankcase

M6x22		Tightening torque	8 Nm



TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect the vacuum line (1) and lock it audibly.
- Connect vacuum hose(2).

cardiagn.com

9 – Installing guide tube for oil dipstick

RISK OF DAMAGE

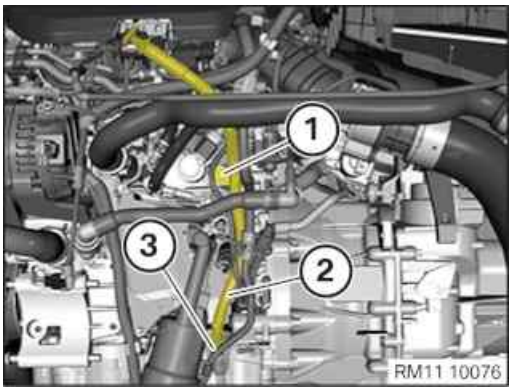
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Renew O-ring (1).

  Parts: O-ring



- Guide in guide tube (2) for oil dipstick and slide it into the oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

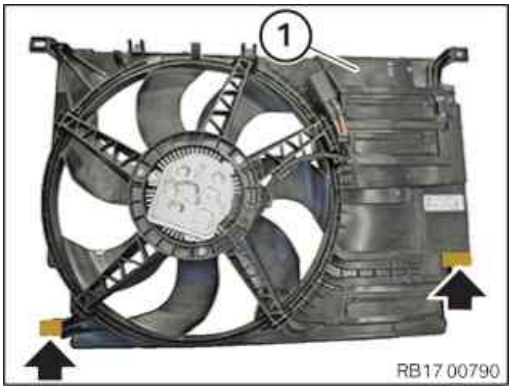
Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

10 – Installing fan cowl with electric fan

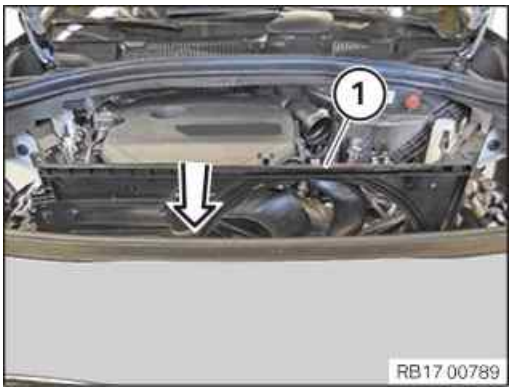
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



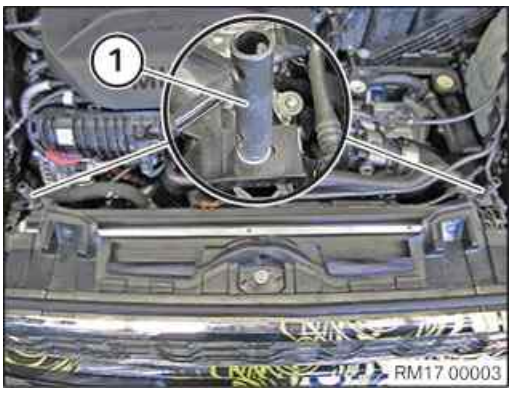
- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.

cardiagn.com



- Feed in and install the fan cowl (1) in the direction of the arrow.

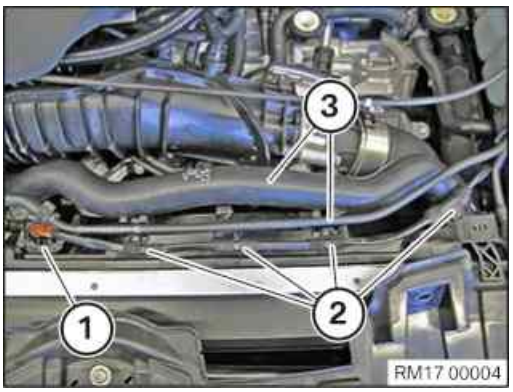
- Lock the left and right locks (arrows).



- Tighten the screws (1).

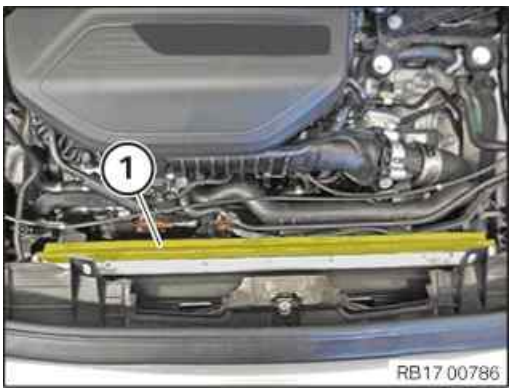
Fan cowl on radiator

M6X12		Tightening torque	6 Nm



- Connect connectors (1) and lock.

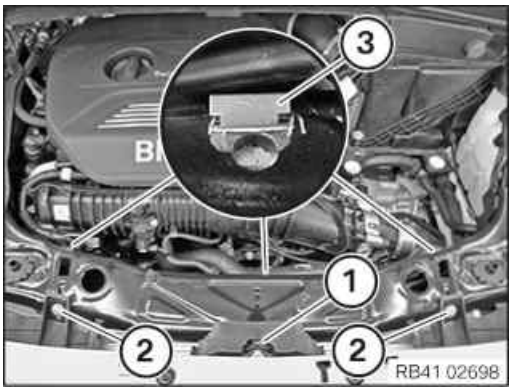
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).



- Guide the sealing (1) on the radiator in and install it.

11 – Install cross connection

cardiagn.com



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

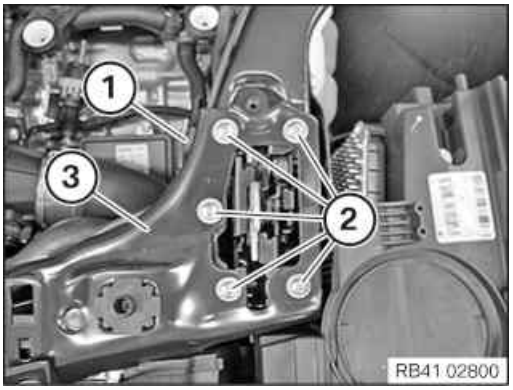
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

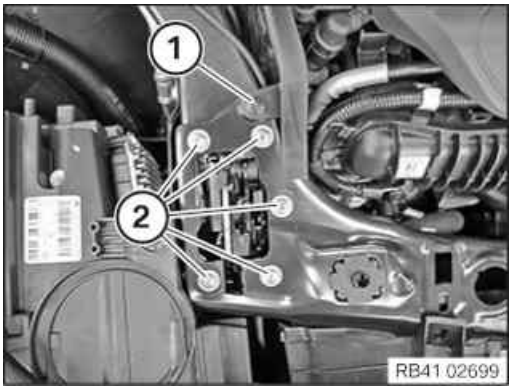


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



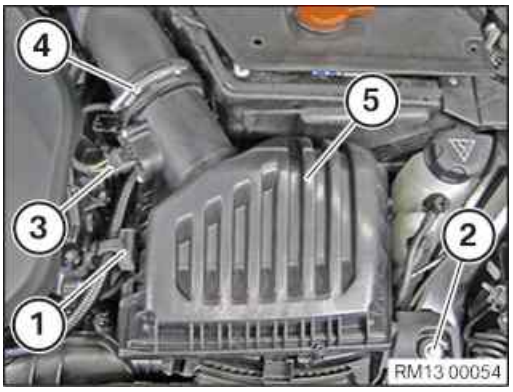
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

12 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

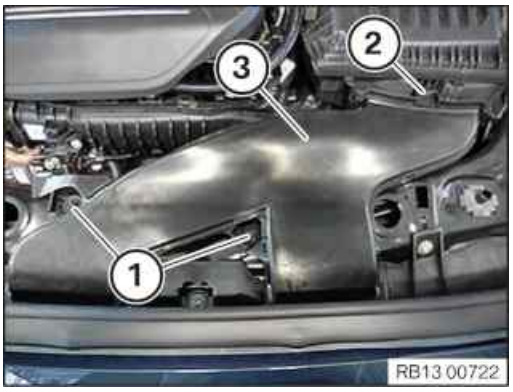
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

13 – Install the intake neck for the intake filter housing

cardiagn.com



- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

14 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

11 66 000 Removing and installing/replacing vacuum pump

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

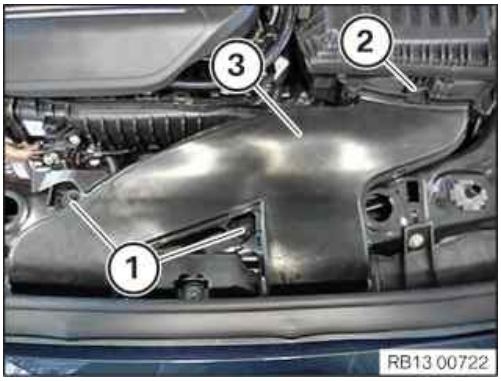
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

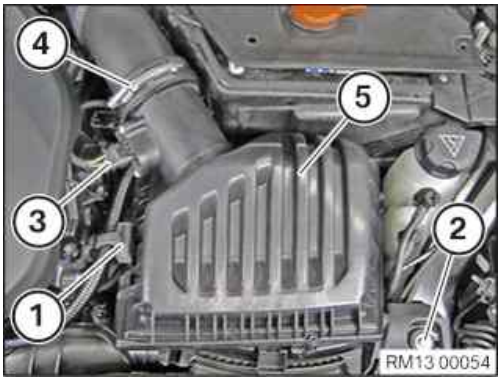
3 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

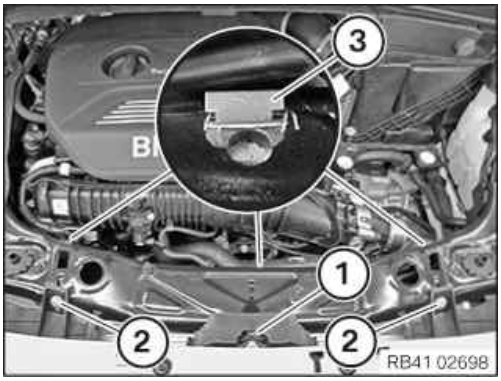
cardiagn.com

4 – Removing intake silencer housing

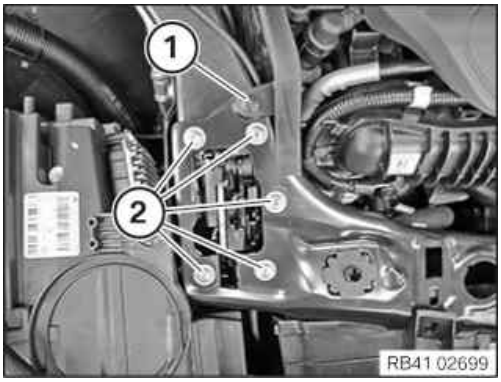


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

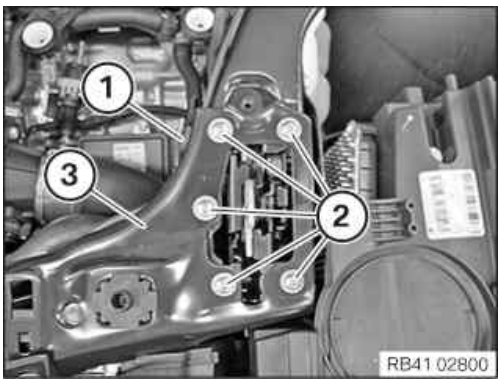
5 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

6 – Removing the fan cowl with electric fan

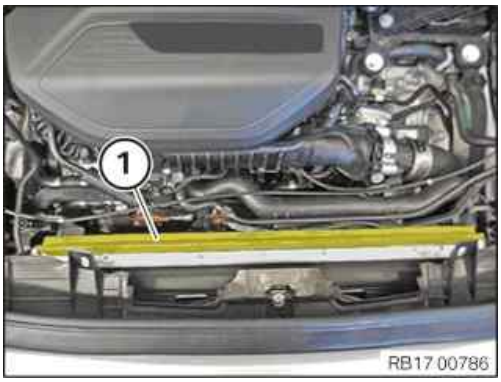
WARNING

Hot surfaces.

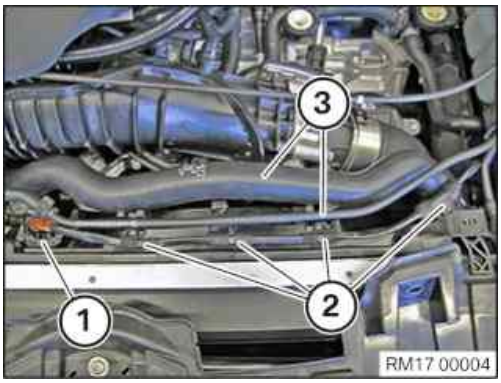
Risk of burning!

- Perform all work only on components that have cooled down.

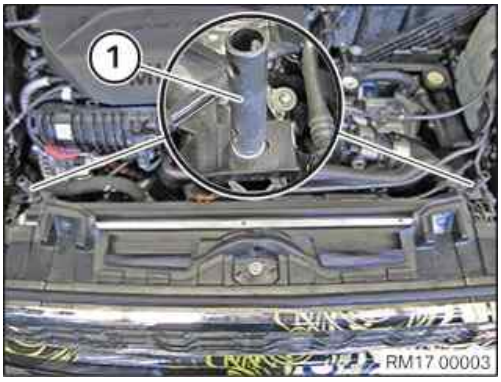
cardiagn.com



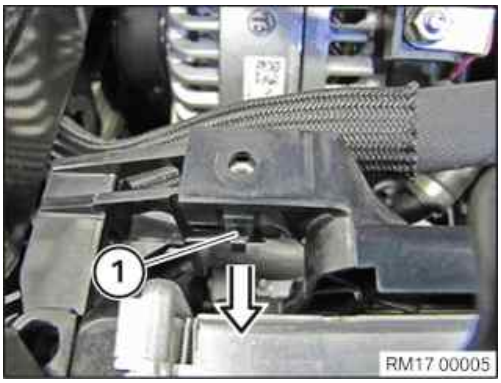
- Feed out and remove the sealing (1) from the radiator.



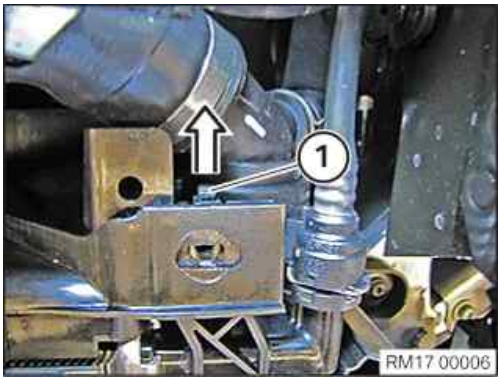
- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.



- Loosen screws (1).

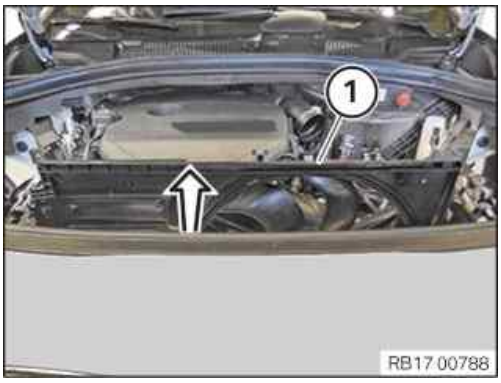


- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



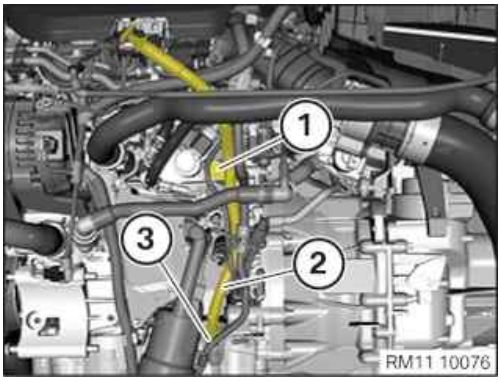
- Unlock the left lock (1) on the fan cowl in the direction of the arrow.

cardiagn.com



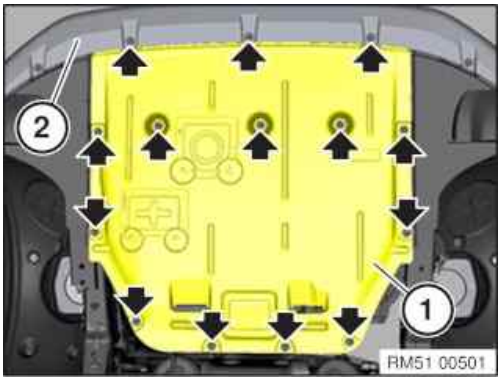
- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the guide tube for the oil dipstick



- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

8 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

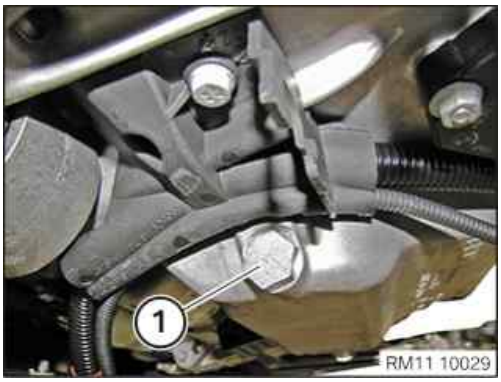
9 – Releasing the oil drain plug

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



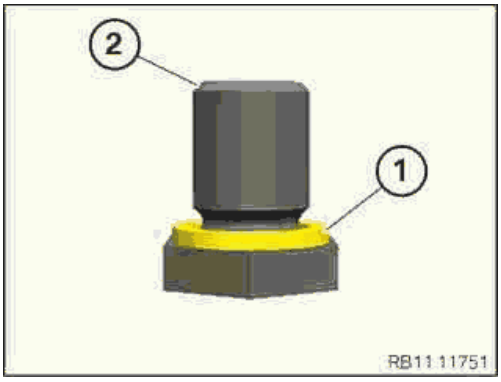
TECHNICAL INFORMATION

Catch and dispose of drained engine oil in a suitable collecting vessel.
Observe country-specific waste disposal regulations.

- Release oil drain plug (1).
- Drain engine oil.

cardiagn.com

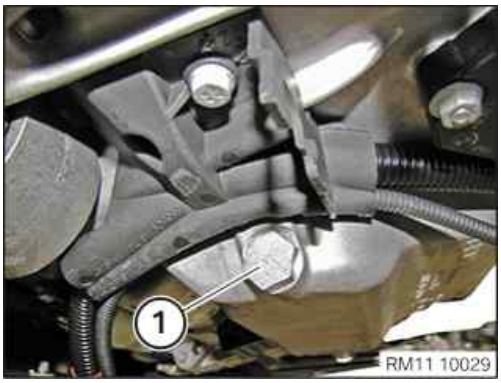
10 – Tightening the oil drain plug



- Renew sealing ring (1) on the oil drain plug (2).

  Parts: Sealing ring

- Guide in the sealing ring (1) on the oil drain plug (2) and install.



- Renew the sealing ring.

  Parts: Sealing ring

- Position oil drain plug (1) on the oil sump and tighten.

Oil drain plug on oil sump

M12x1.5	Renew the sealing ring.	Tightening torque	25 Nm

11 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

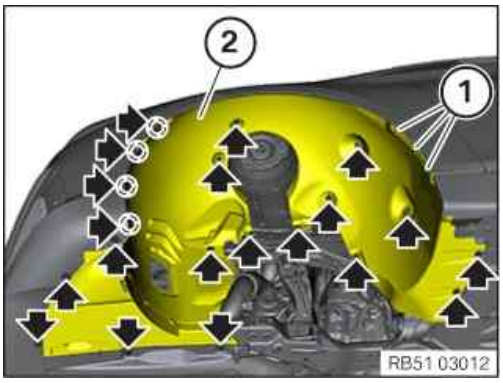
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

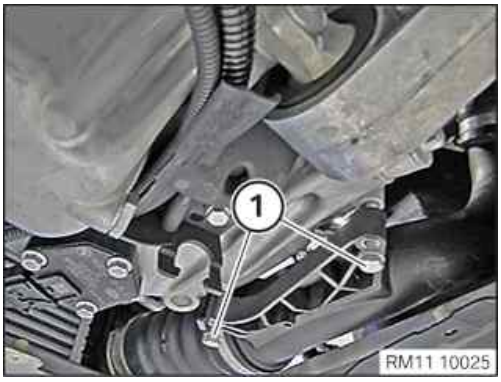
12 – Removing the front right wheel arch cover

cardiagn.com



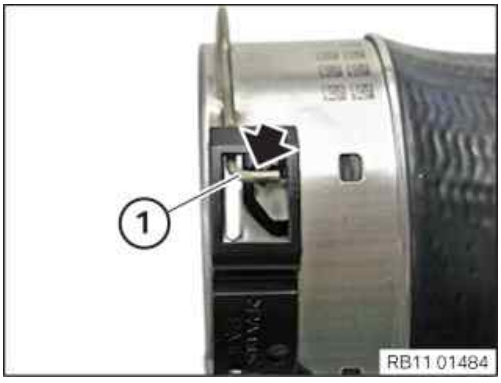
- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

13 – Remove right charge-air line

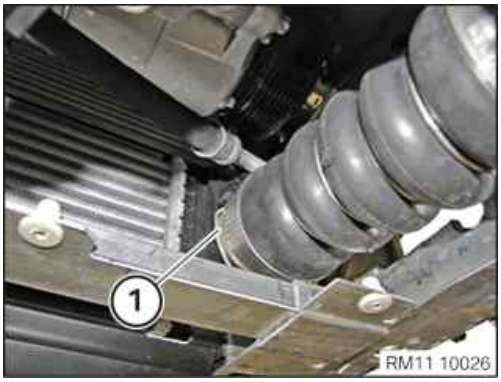


- Release charge air duct screws (1) on oil sump.

- Detach charge air duct screw connection (1) on crankcase.

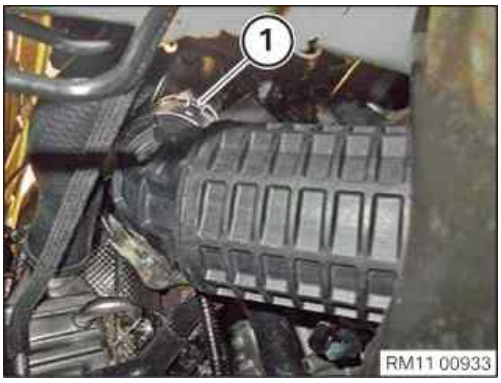


- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

cardiagn.com



- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

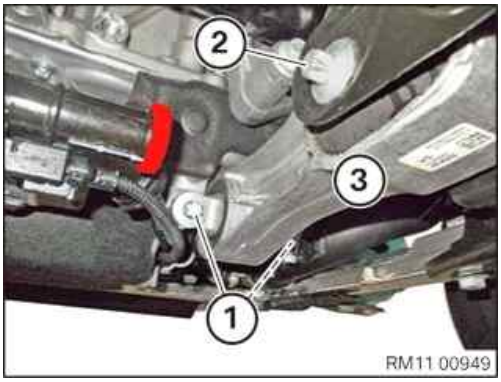
14 – Remove bracket with rubber mount

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

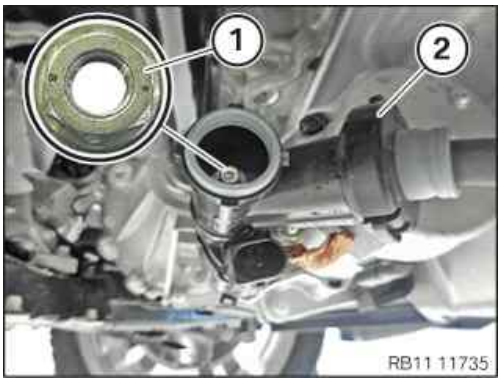


- Support the engine with the jack at a suitable point.
- Loosen screws (1) and (2).
- Guide out and remove holder (3).

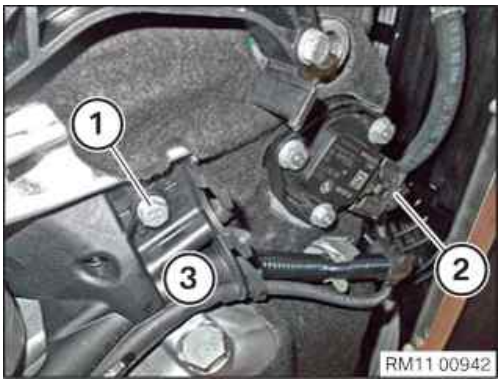
15 – Removing the acoustic cover of the oil sump

- Unlock connector (1) and pull off.
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).

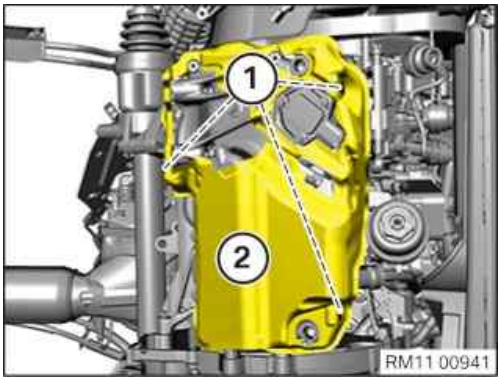
cardiagn.com



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.



- Unscrew the screw (1) on the wiring harness to the oil sump.
- Unlock and pull off connector (2) on the oil-level sensor.
- Place wiring harness (3) to one side.

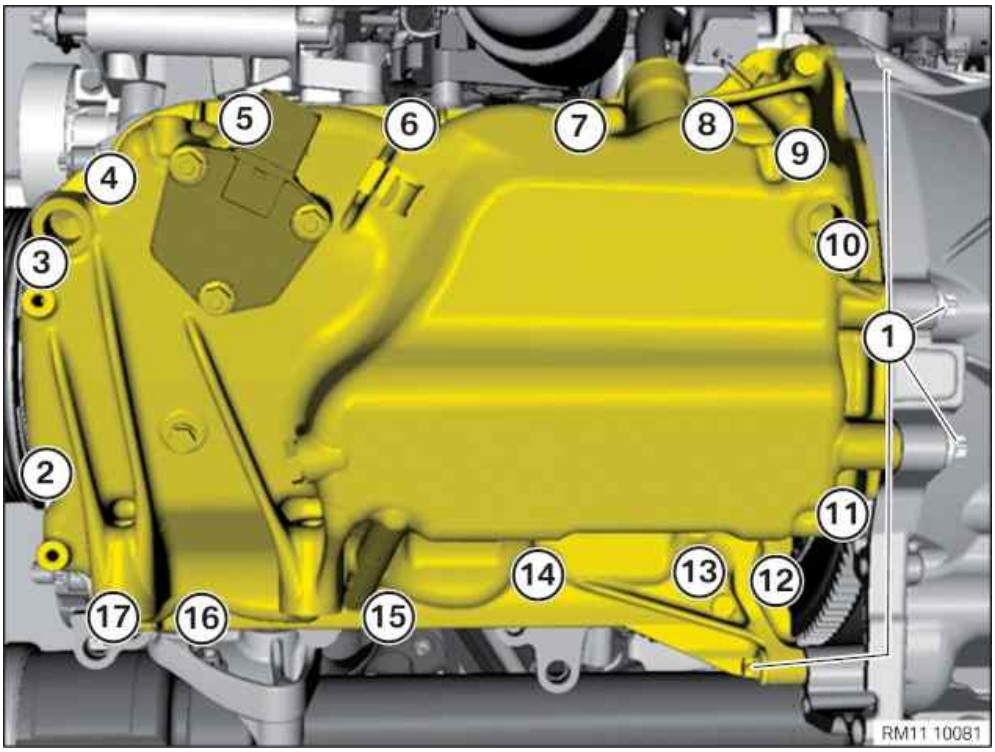


- Remove the expanding rivets (1) on both sides of the acoustic cover.
- Feed out and remove the acoustic cover (2).

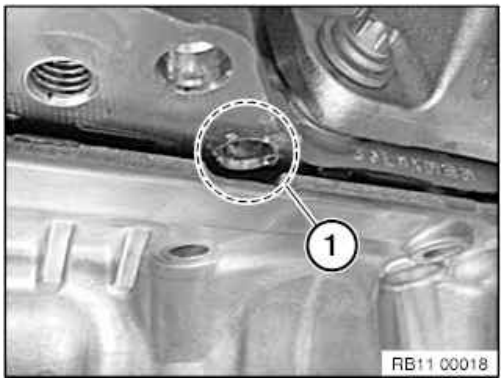
16 – Remove oil sump

- Loosen screws (1).
- Feed out starter motor and remove.

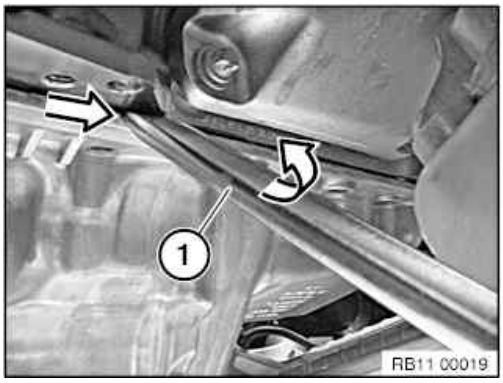
cardiagn.com



- Release transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).



- Release the oil sump only in area (1).



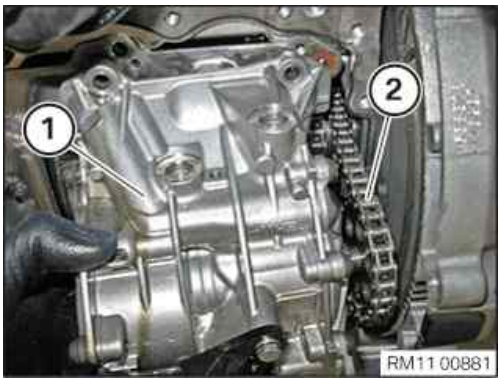
- Release the oil sump carefully using a suitable mounting lever (1) at the appropriate position in the direction of the arrow.
- Secure the oil sump to prevent it from falling.

MAIN WORK

17 – Remove the oil vacuum pump

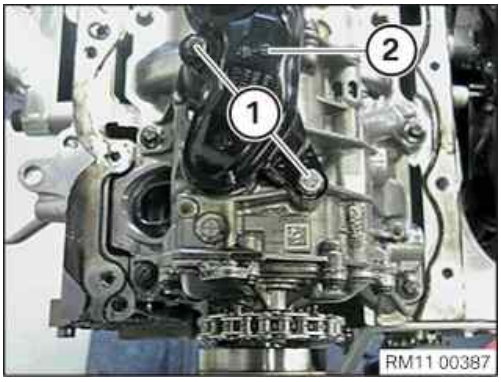
- Loosen screws (1) of the oil vacuum pump (2).

cardiagn.com



- Remove oil vacuum pump (1) and remove from the drive chain (2).

18 – Replacing the oil vacuum pump: Remount components

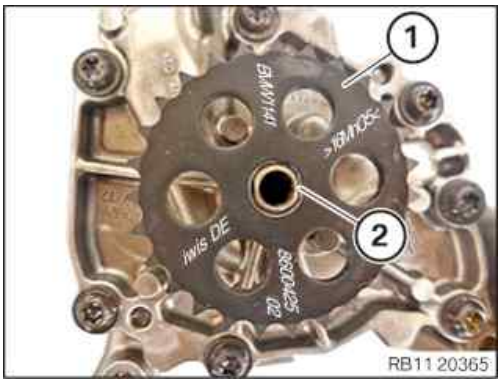


- Loosen screws (1).
- Renew the oil vacuum pump.

  Parts: Oil vacuum pump
- Remount the intake pipe (2).
- Tighten the screws (1).

Intake pipe to oil vacuum pump

M6x25		Tightening torque	8 Nm



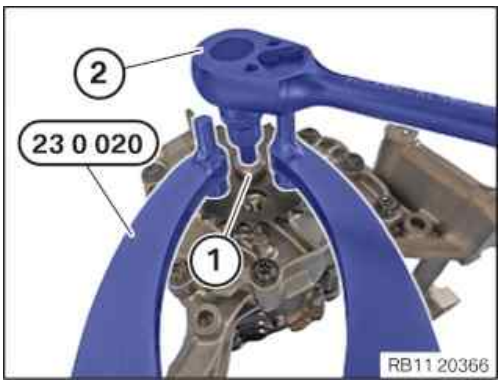
- Counterhold the camshaft sprocket with the special tool **(23 0 020)**.

TECHNICAL INFORMATION

The thread is a left-hand thread.

- Release the screw on the camshaft sprocket (1) and remove the camshaft sprocket.
- Position the camshaft sprocket on the new oil vacuum pump.

  The Front labelling on the camshaft sprocket must be legible.



- Counterhold the camshaft sprocket with the special tool **(23 0 020)**.
- Renew screw.

  Parts: Screw
- Tighten the screw (1) using a commercially available tool (2).

Camshaft sprocket to oil vacuum pump

M8x35 Left-hand thread	*Renew screws.*	Jointing torque Angle of rotation	5 Nm 90 °

19 – Install the oil vacuum pump

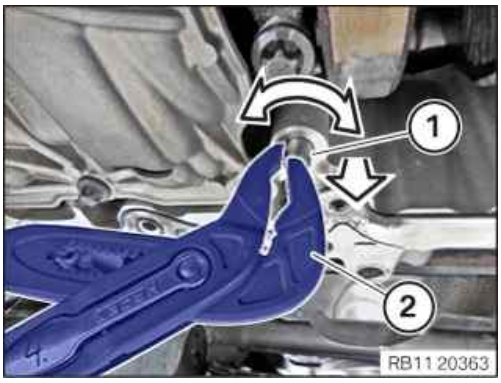
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

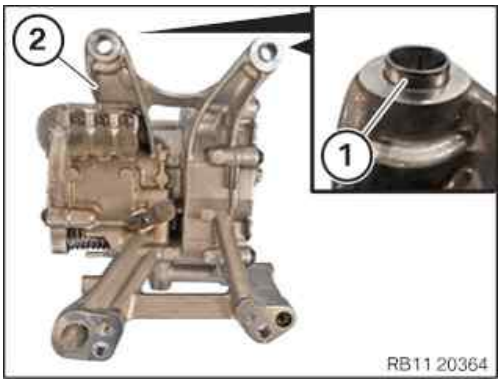
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

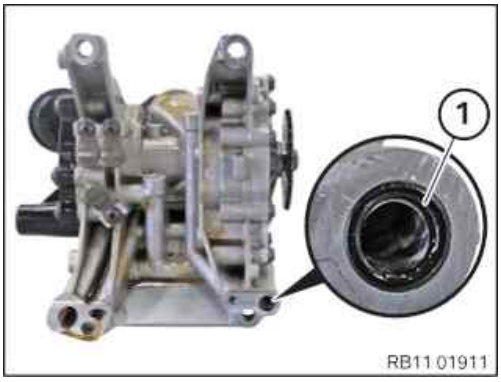


- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

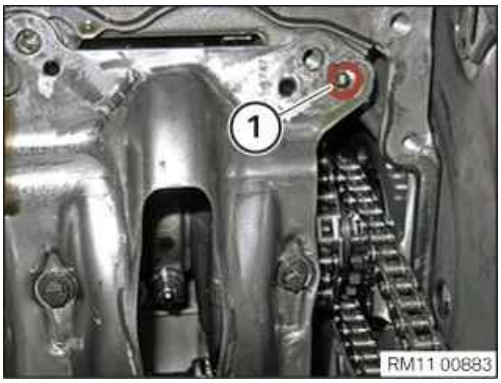
  Parts: Centring sleeves



- Install centering sleeves (1) in the oil vacuum pump (2).

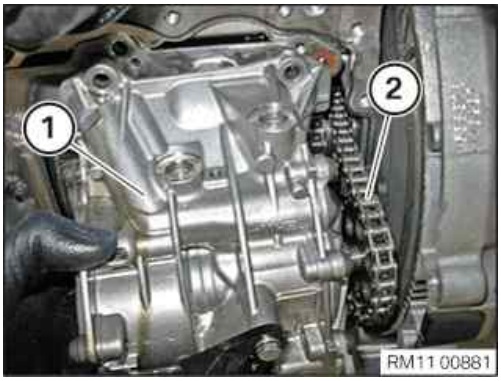


- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.



- Check sealing ring (1) for damage and replace oil deflector if necessary.

  Parts: Oil deflector



- Insert oil vacuum pump (1) into the drive chain (2).

cardiagn.com

- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1) of the oil vacuum pump (2).

Oil vacuum pump to crankcaseB37

M8x35	*Renew screws.*	Tightening torque	15 Nm
		Angle of rotation	45 °

POSTPROCESSES

20 – Refitting sump

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

cardiagn.com

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

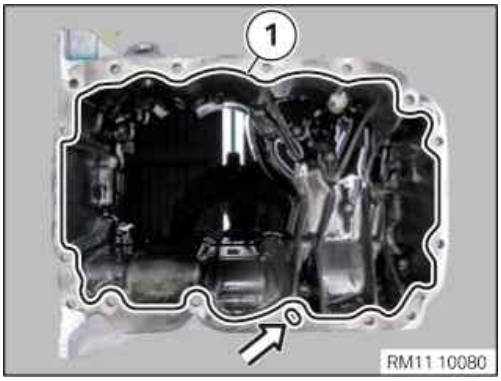
- Position the sealing compound (1) on special tool as shown.

  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)



TECHNICAL INFORMATION

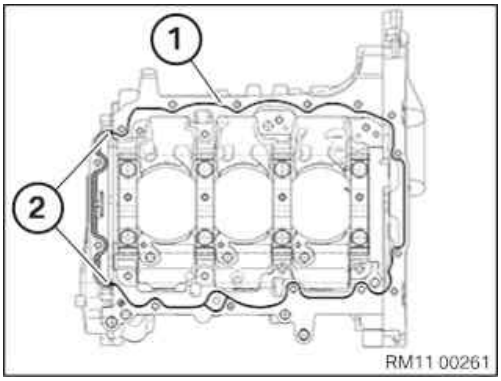
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound without replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

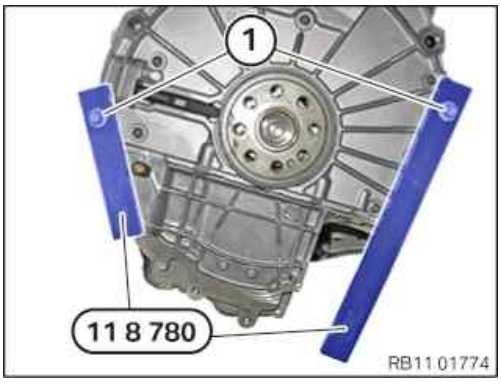
TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound after replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Sealing bead (1) must overlap the seal (2) of the timing case cover by approx. **5 mm**.
- Completely surround the oil return orifice (arrow) with sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.

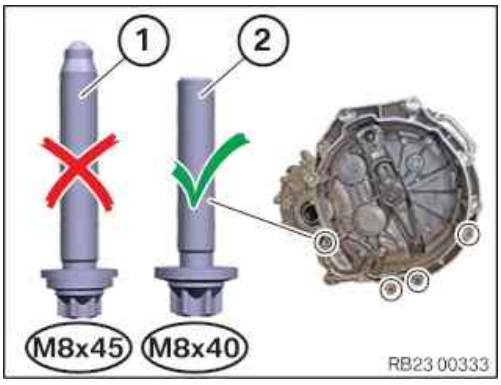
cardiagn.com



TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.



RISK OF DAMAGE

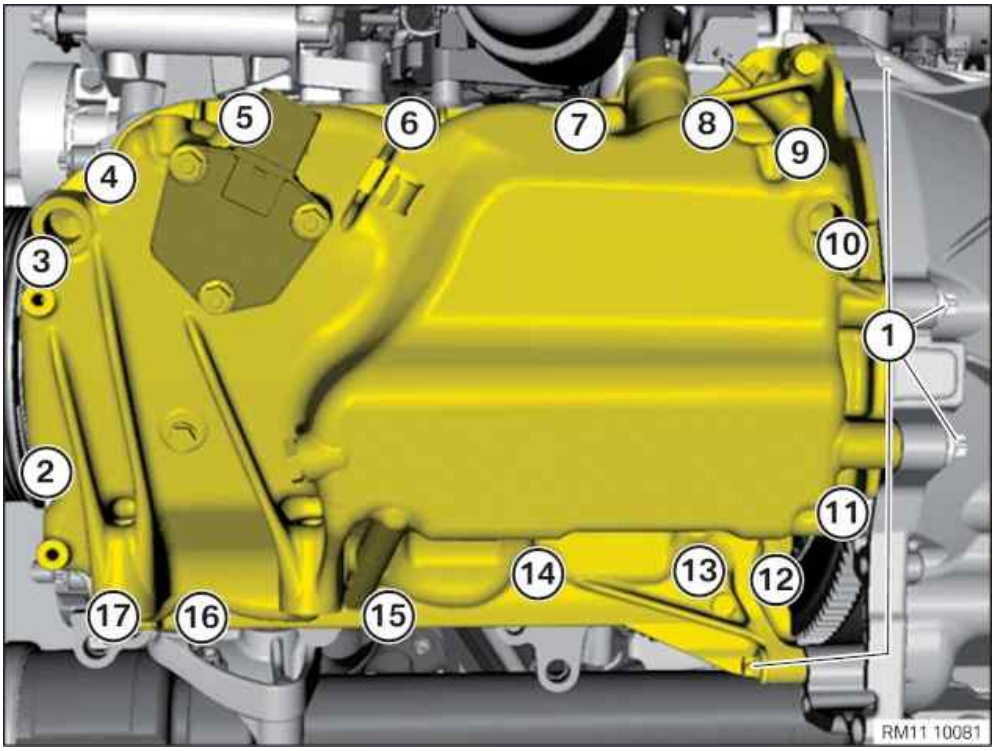
Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.



- Position and install the oil sump.
- Tighten screws (2) to (17) **hand-tight**, do **not** tighten fully.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws (2) to (17) on the oil sump.

Oil sump to crankcase

M8x30		Tightening torque	2 Nm
M8x110		Tightening torque	2 Nm

- Tighten the transmission bolts (1) on the oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nm

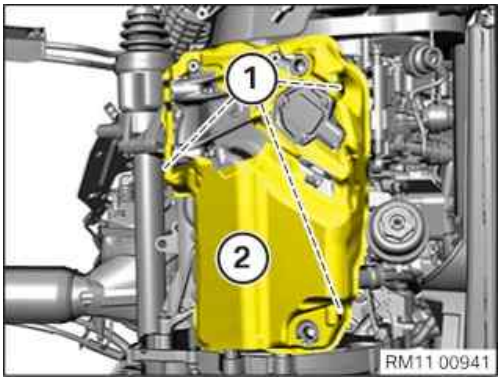
- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

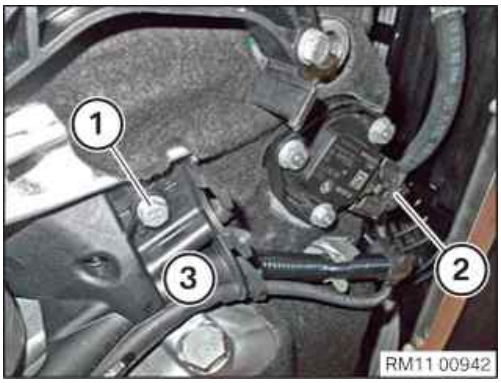
M8x45		Tightening torque	19 Nm

cardiagn.com

21 – Installing the acoustic cover for the oil sump



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).



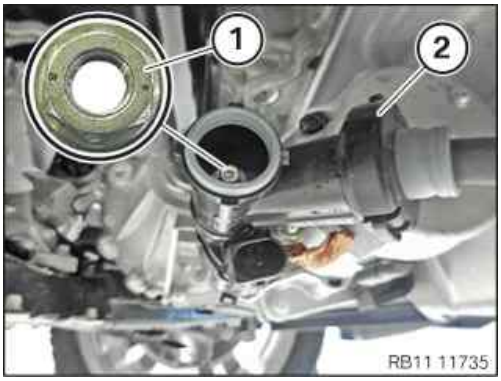
- Position wiring harness (3).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm

- Connect and lock the connector (2) on the oil-level sensor.

  The connector must lock audibly.



CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

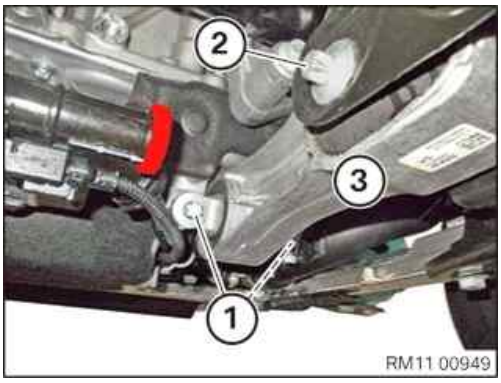
M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).

  The connector must engage audibly.

22 – Install the holder with the rubber mount

cardiagn.com



- Insert and install the holder (3).
- Tighten the screws (1) and (2) hand-tight.
- Release jack.
- Tighten down screw (2).

Holder to front axle support

M12		Tightening torque	100 Nm

- Tighten the screws (1).

Bracket to oil sump

M12		Tightening torque	100 Nm

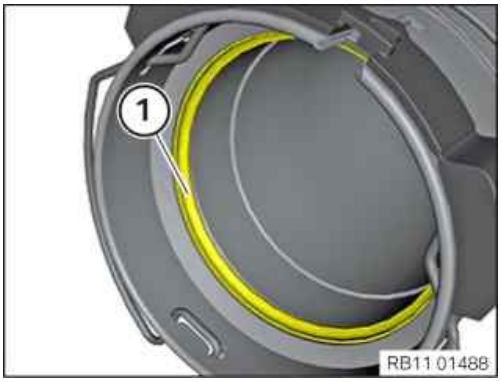
23 – Install right charge air duct

RISK OF DAMAGE

Damage to the exhaust turbocharger.

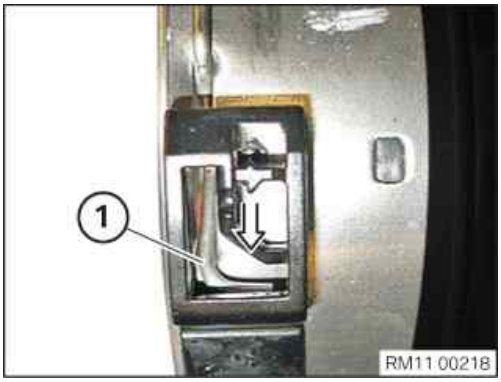
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

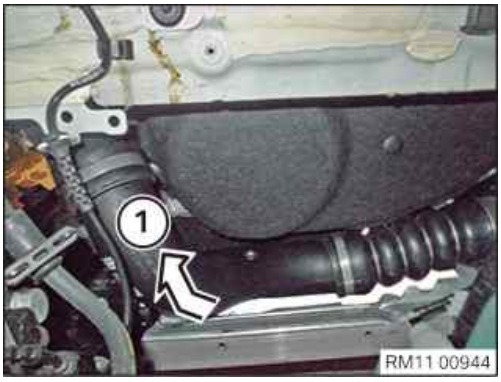


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

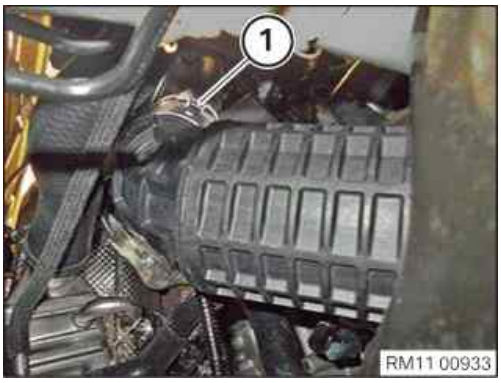


- Let the lock (1) engage at the holder (arrow).



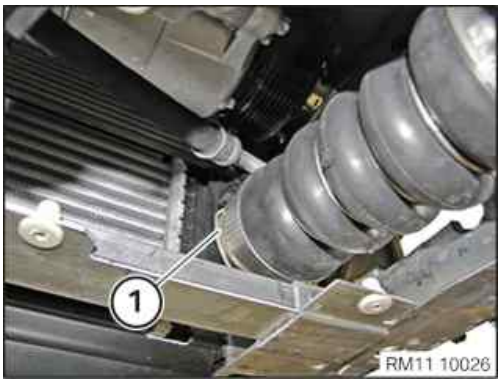
- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.

cardiagn.com



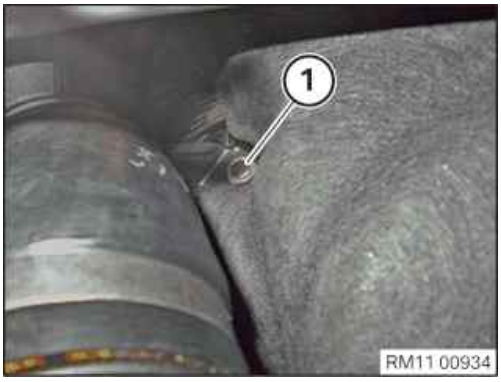
- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

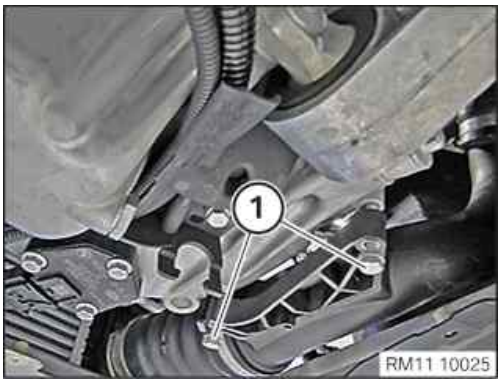
  The lock (1) must audibly engage.



- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm

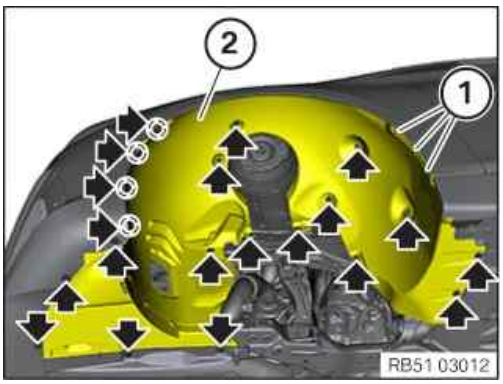


- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

24 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

25 – Installing the front right wheel

cardiagn.com

▶ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

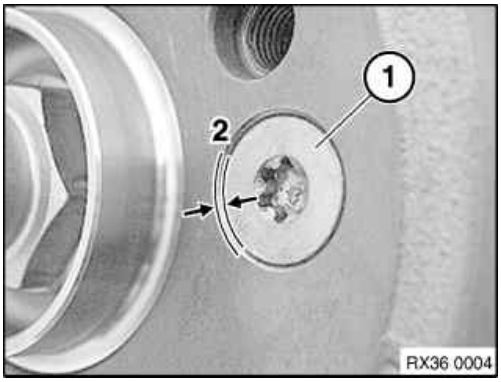
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

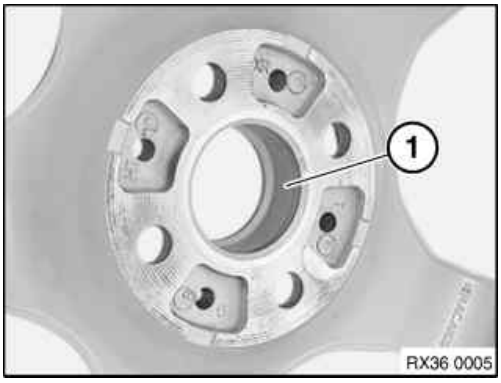


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

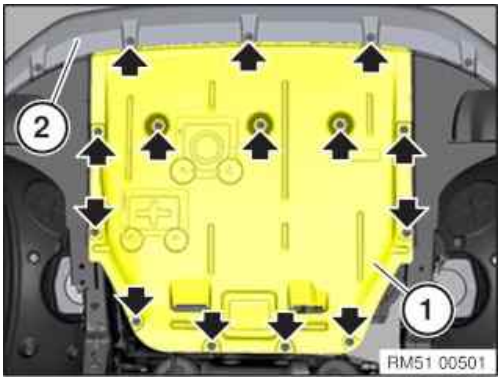
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

26 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

27 – Installing guide tube for oil dipstick

RISK OF DAMAGE

Contaminant or foreign body.

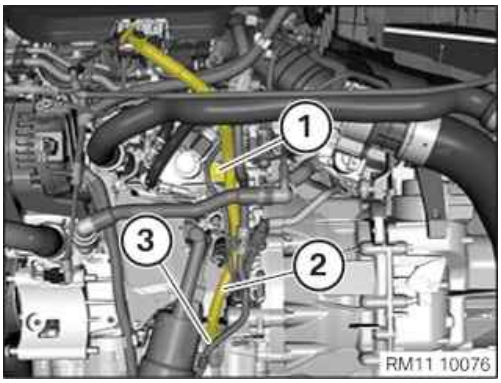
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Renew O-ring (1).

  Parts: O-ring



- Guide in guide tube (2) for oil dipstick and slide it into the oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

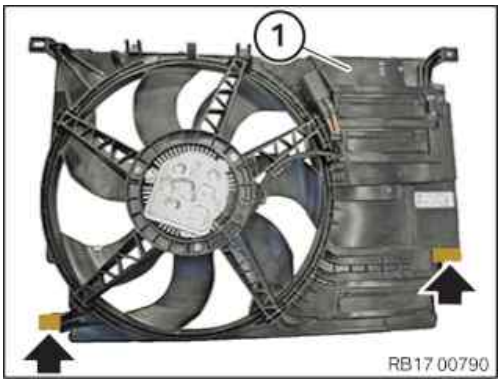
Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

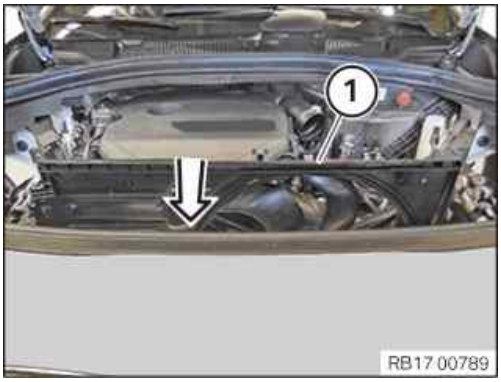
28 – Installing fan cowl with electric fan

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.



- Feed in and install the fan cowl (1) in the direction of the arrow.

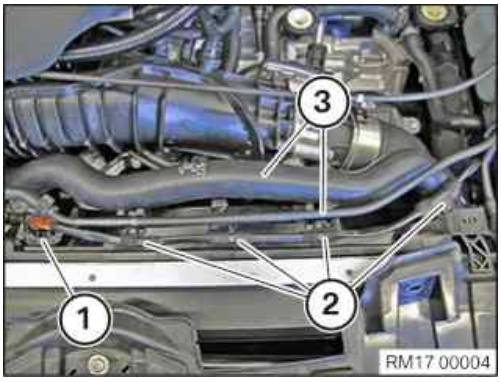
cardiagn.com

- Lock the left and right locks (arrows).

- Tighten the screws (1).

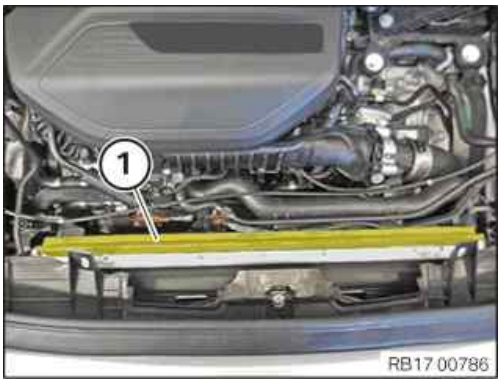
Fan cowl on radiator

M6X12		Tightening torque	6 Nm



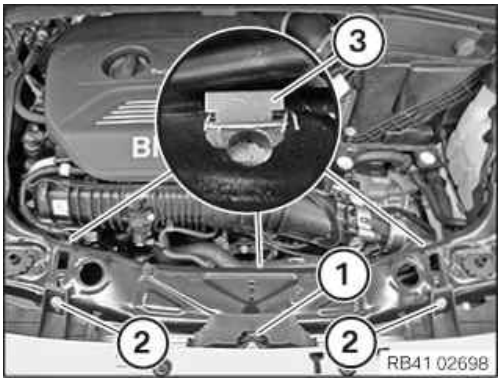
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).



- Guide the sealing (1) on the radiator in and install it.

29 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

M8		Tightening torque	25 Nm

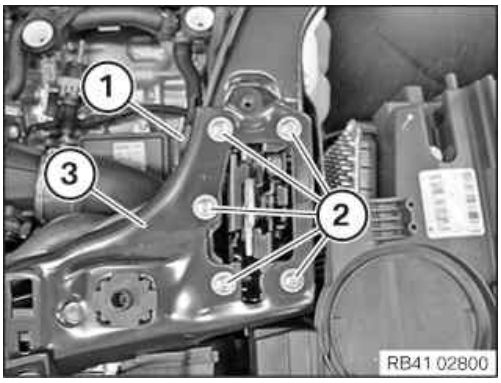
- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

cardiagn.com

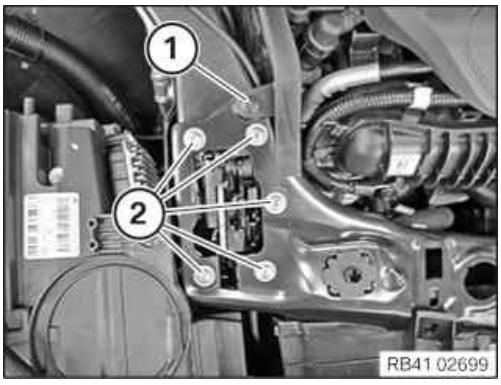


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



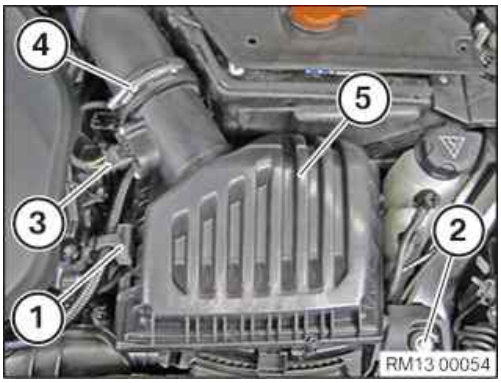
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

30 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

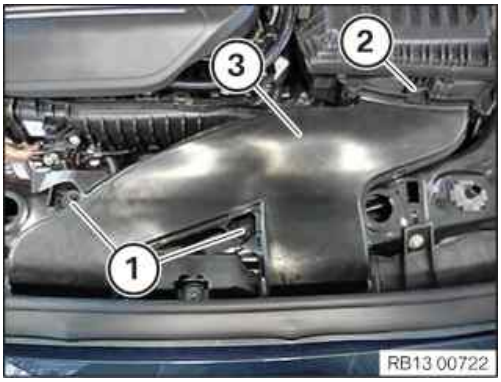
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

31 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

32 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

33 – Disconnecting all battery earth leads

- See additional information.

34 – Removing the oil filler cap

cardiagn.com

- Open oil filler cap (1).

35 – Topping up the engine oil

RISK OF DAMAGE

Damage to the petrol particulate filter.

Vehicles equipped with a petrol particulate filter must be operated with low-ash engine oil only.

- Use BMW Longlife-04 , BMW Longlife-12 FE or BMW Longlife-17 FE+ engine oils or engine oils approved by BMW matching the same specifications only.
- For additional information see: Overview of approved engine oils for BMW Group engines.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

- Pour in engine oil.

Engine oilB37C15U1

Capacity of engine oil	4,8 l

Engine oil: Technically suitable engine oils for BMW Group engines

36 – Installing the oil filler cap

- Close oil filler cap (1).

37 – Check engine oil level

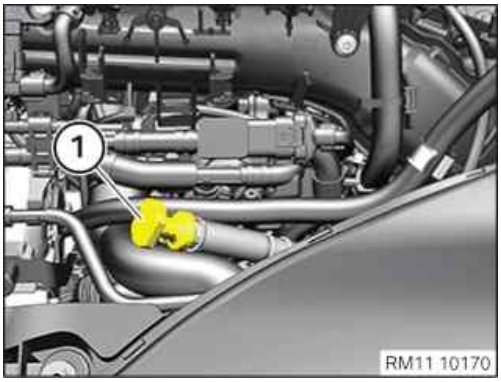
cardiagn.com

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▶ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

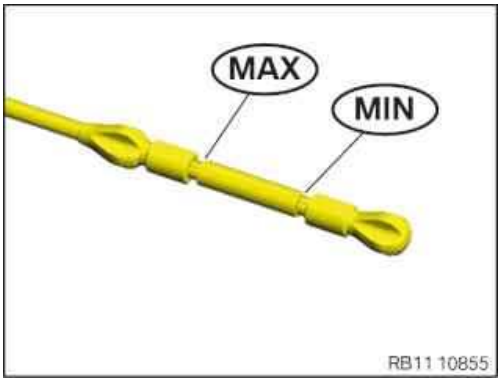


- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.



TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

11 71 100 Remove and install/replace the exhaust-gas recirculation cooler

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

TECHNICAL INFORMATION

Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.

For additional information see:

Main group 17

17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Filling **without** the vacuum filler device (watering can filling) is **not permitted**.

Non-compliance will result in danger of component damage and/or engine damage.

Filling specification **absolutely must** be adhered to.

The operation of the vehicle is not permitted unless the filling procedure has been completed. Otherwise, functional limitations (degradation) and/or overheating may occur.

A bleeding procedure is required after a part has been exchanged in the cooling system and/or after refilling the cooling system.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

PRELIMINARY WORK

1 – Remove vehicle battery

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

TECHNICAL INFORMATION

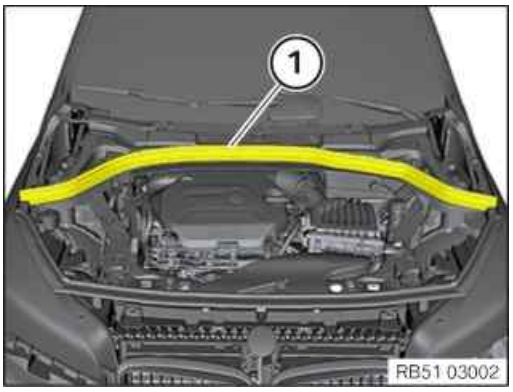
For additional information see:

61 00 ... Safety information on handling the vehicle battery

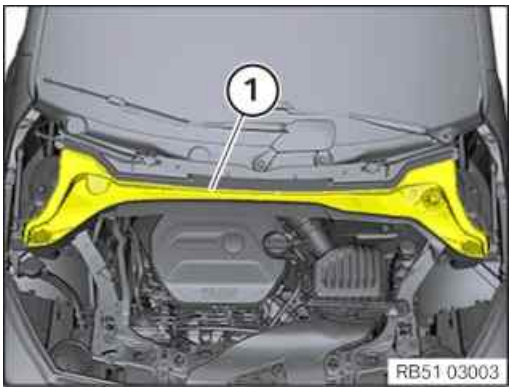
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery

61 12 ... Notes on the intelligent battery sensor (IBS)

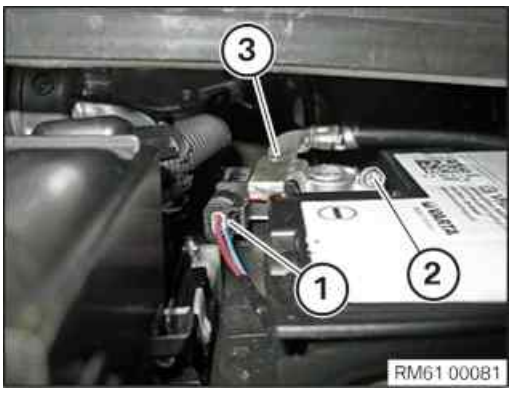
cardiagn.com



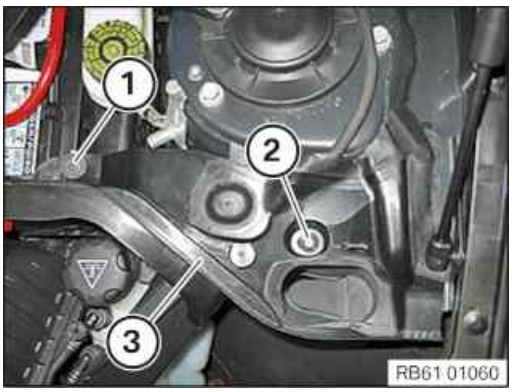
- pull off gasket (1) upwards.



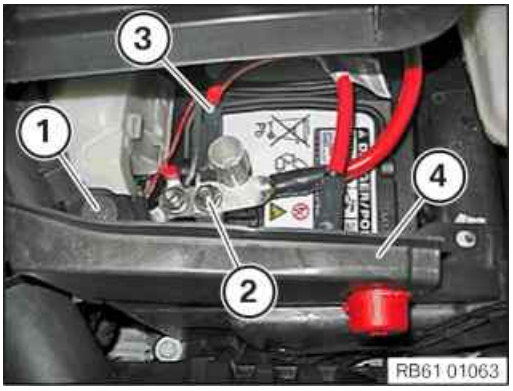
- Remove the cowl panel cover (1) to the top.



- Unlock and disconnect connector (1).
- Slacken nut (2).
- Disconnect the negative battery terminal (3).

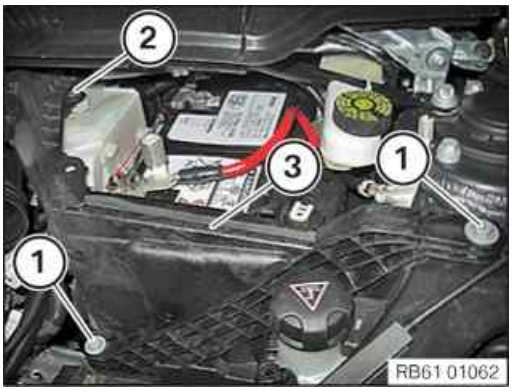


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

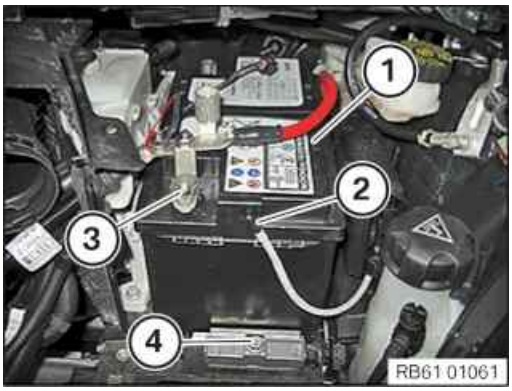


- Loosen screw (1).
- Unscrew the nut (2) and remove the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten nuts (2) on the positive terminal hand-tight.

cardiagn.com



- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.



- Pull off the vent hose (2).
- Slacken the nut (3) on the positive terminal and remove the positive terminal.

WARNING

Unprotected battery terminals.

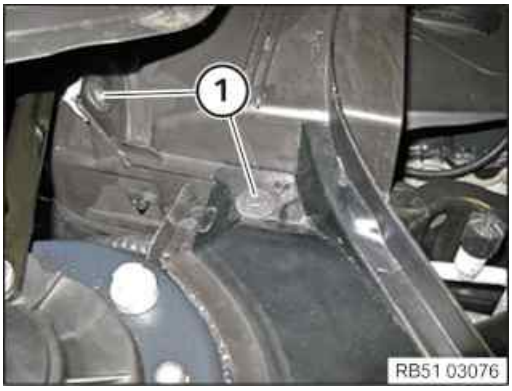
Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

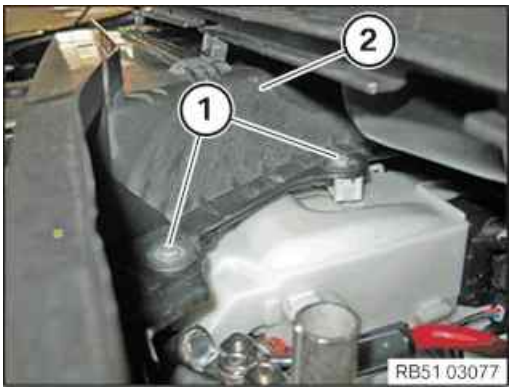
2 – Removing the upper bulkhead cover

- Loosen screws (1).



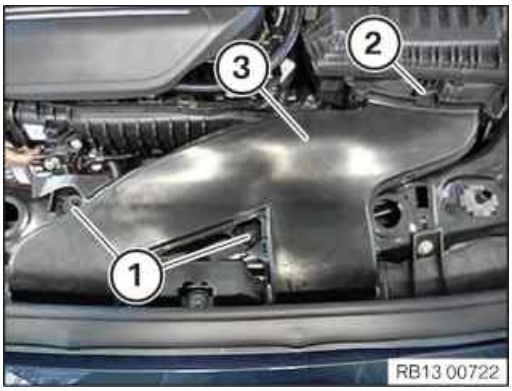
- Loosen screws (1).

cardiagn.com



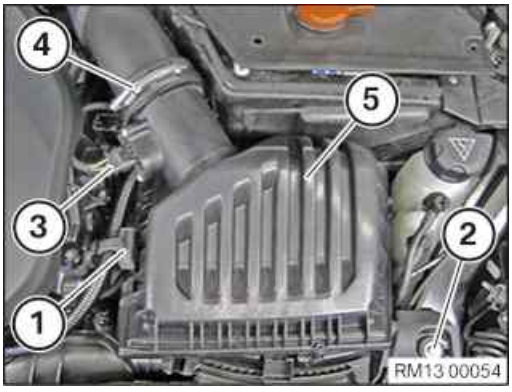
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

3 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

4 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

5 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

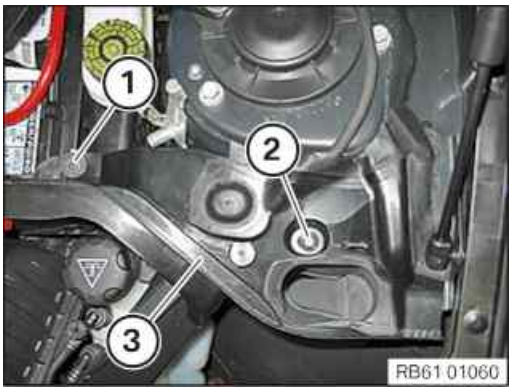
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

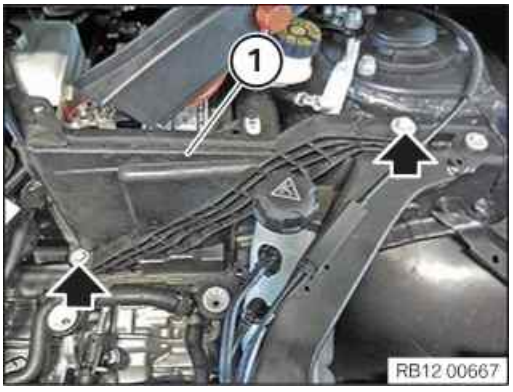
TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



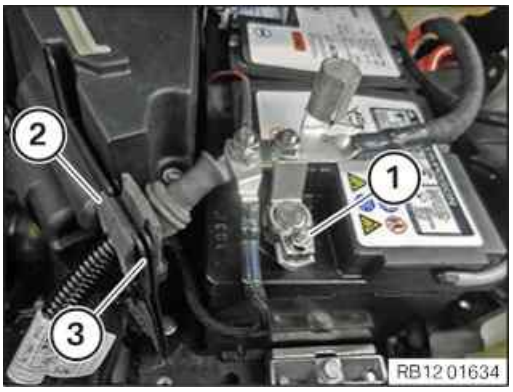
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.

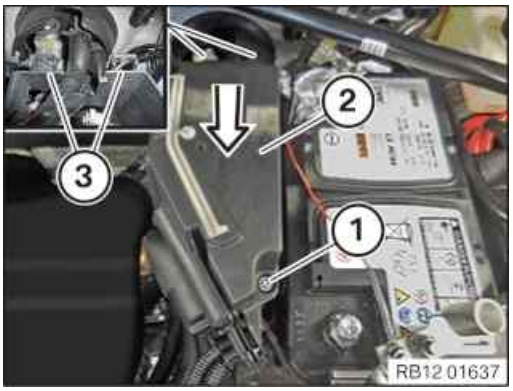


- Remove screws (arrows).
- Guide out tension strut (1) and remove.

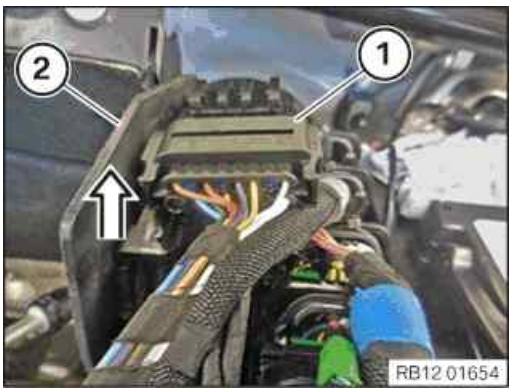
cardiagn.com



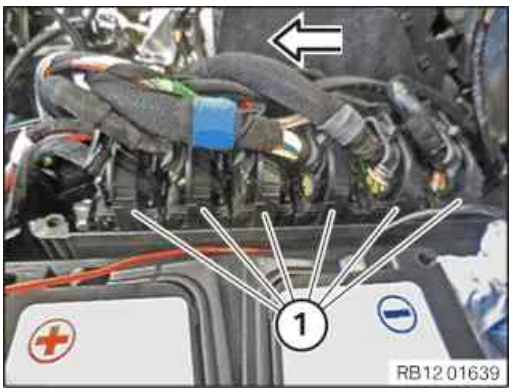
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



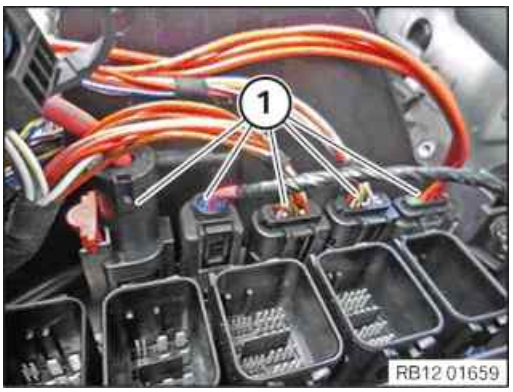
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

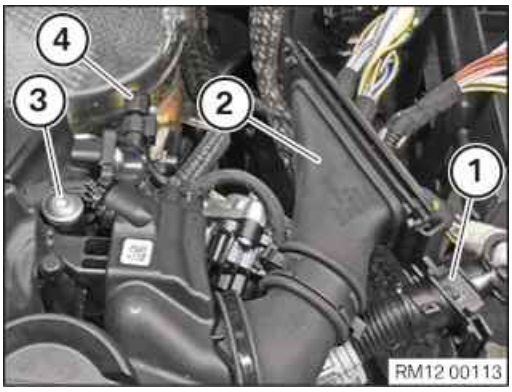


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

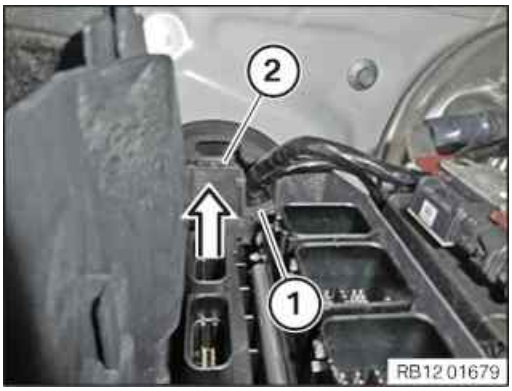


- Unlock and loosen connector (1).

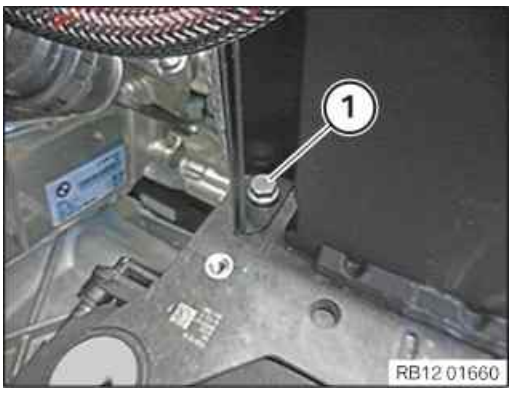
cardiagn.com



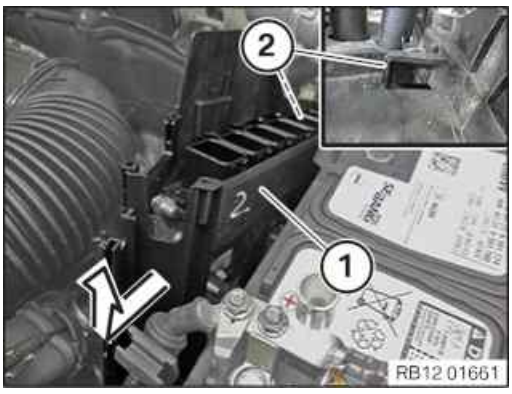
- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.



- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

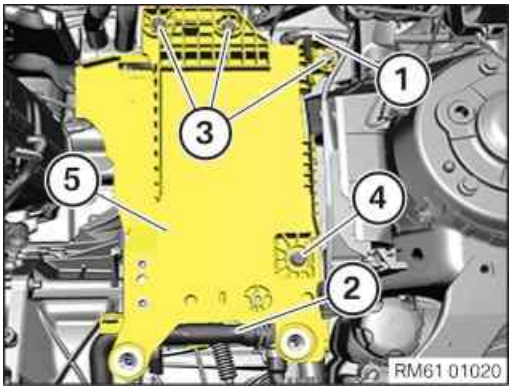


- Loosen screw (1).



- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

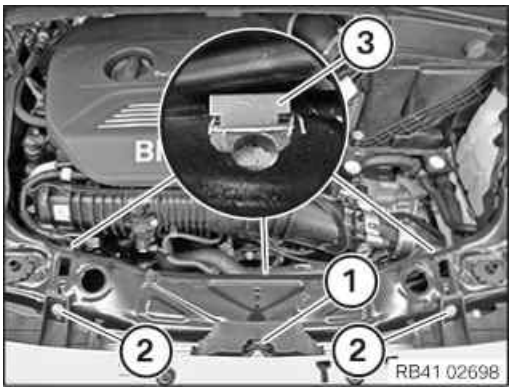
6 – Remove battery holder



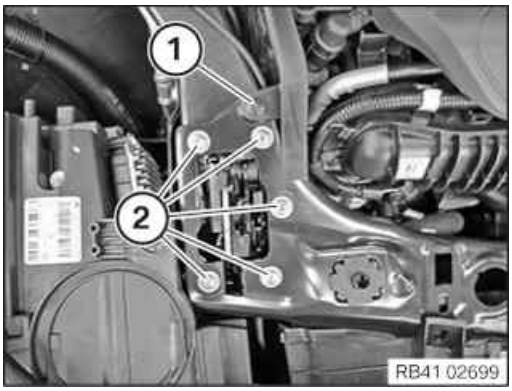
- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

7 – Remove cross connection

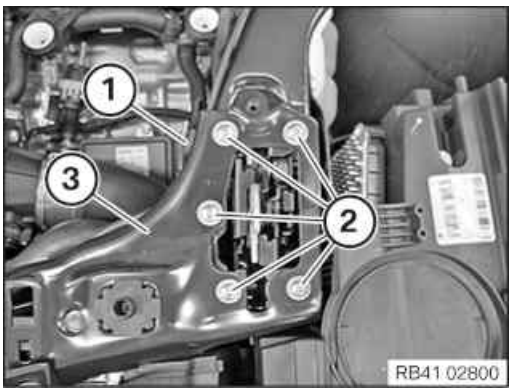
cardiagn.com



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.

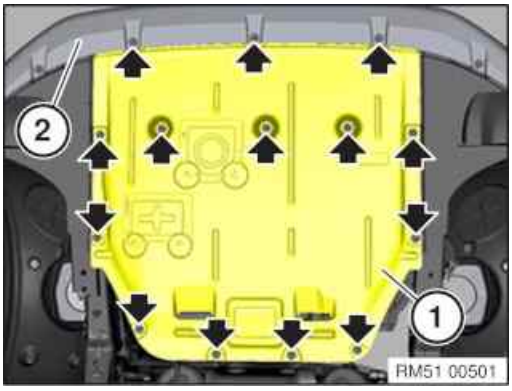


- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

8 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

9 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

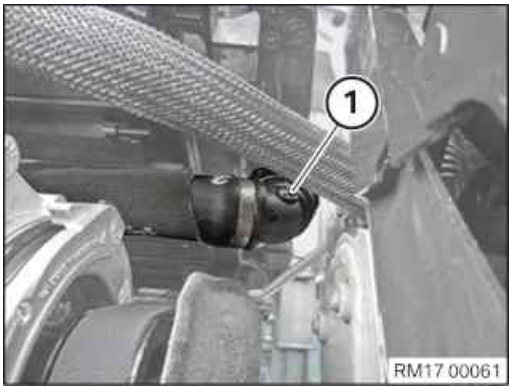
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

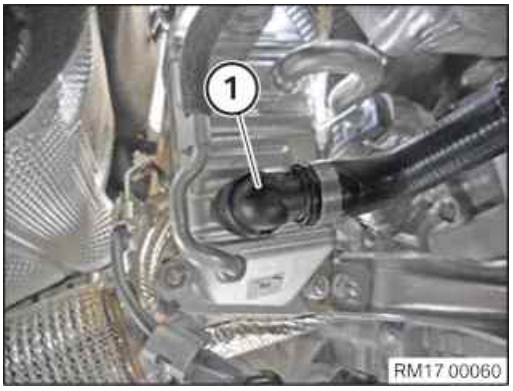
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

MAIN WORK

10 – Removing the exhaust-gas recirculation cooler

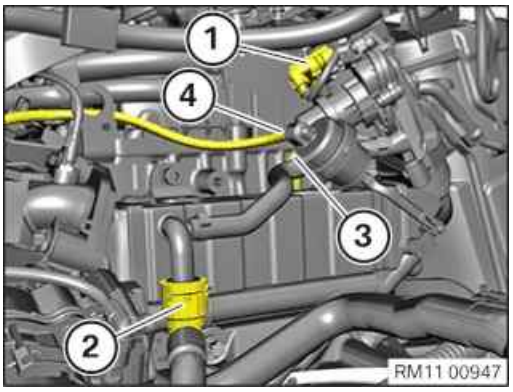
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

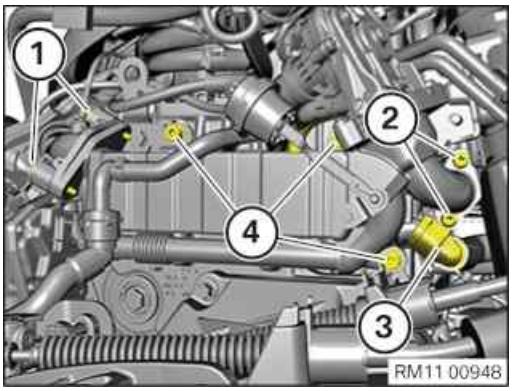
- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.



- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

11 – Replacement: Check part number of the exhaust-gas recirculation cooler

NOTICE

For vehicles with Real Driving Emissions (RDE) with a production date from 03/2019:

The intake plenum and the exhaust-gas recirculation cooler vary.

When replacing the intake plenum or the exhaust-gas recirculation cooler: Make sure the part number is correct. Note the part number of the removed component and assign the corresponding, suitable part number.

In the electronic Parts Catalogue (EPC), components with the auxiliary "RDE" and components without the auxiliary "RDE" will be provided. Only the following combinations are permitted:

Intake plenum **with** the auxiliary **"RDE"** and exhaust-gas recirculation cooler **with** the auxiliary **"RDE"**.

Intake plenum **without** the auxiliary **"RDE"** and exhaust-gas recirculation cooler **without** the auxiliary **"RDE"**.

Components without the auxiliary "RDE" must not be installed with components with auxiliary "RDE".

cardiagn.com

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Note the part number (1).
- Select new part using the noted part number from the Electronic Parts Catalogue (EPC).

12 – When replacing exhaust-gas recirculation cooler: Delete adaptations

- Replace exhaust-gas recirculation cooler.

  Parts: Exhaust-gas recirculation cooler

▶ **Delete adaptations**

- Connect diagnosis system.
  - Power train
  - Digital Diesel Electronics
  - Reset adaptations
  - Delete adaptations

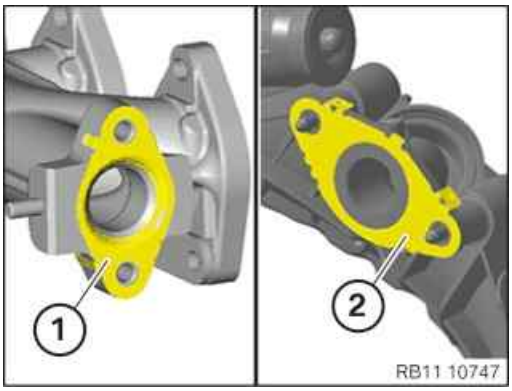
13 – Installing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



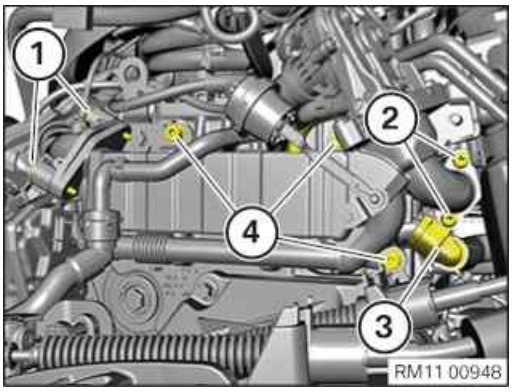
- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

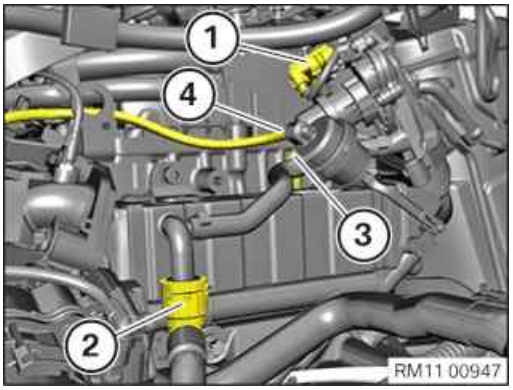
M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm



TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

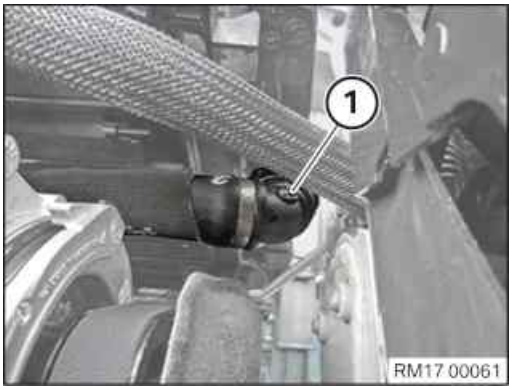
  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

cardiagn.com

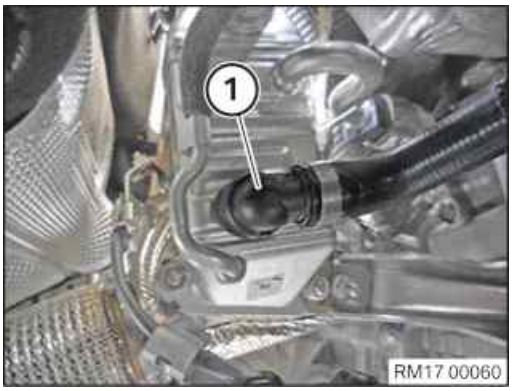
14 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

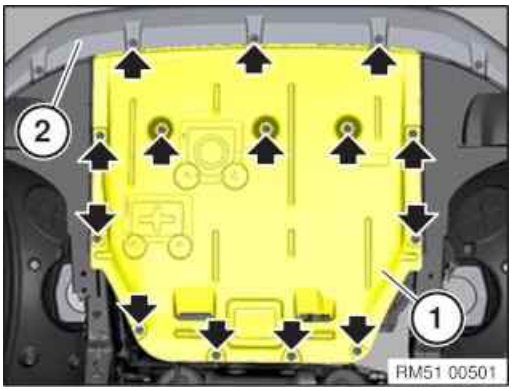


- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

15 – Installing the front underbody protection

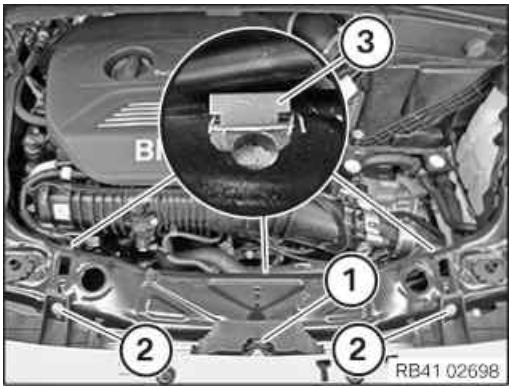


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

16 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

M8		Tightening torque	25 Nm

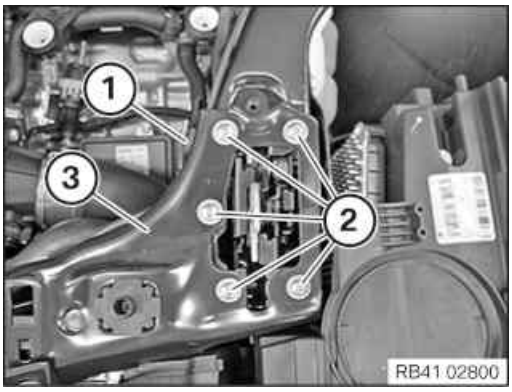
- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

cardiagn.com

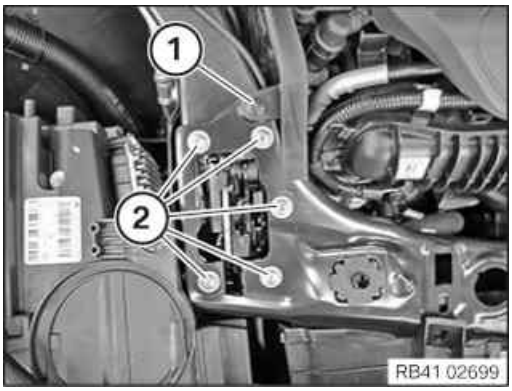


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



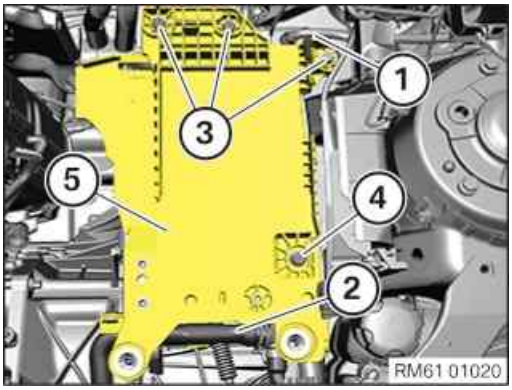
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

17 – Install the battery holder



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

18 – Install electronics box

Prerequisite

Battery earth lead is disconnected.

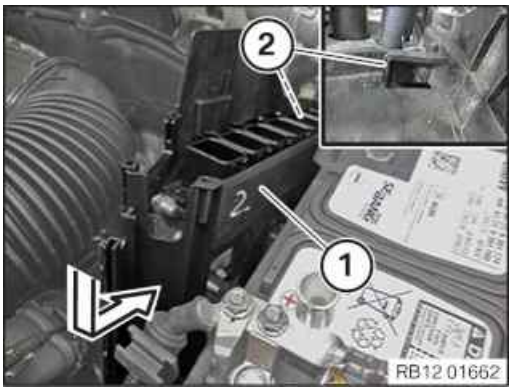
RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

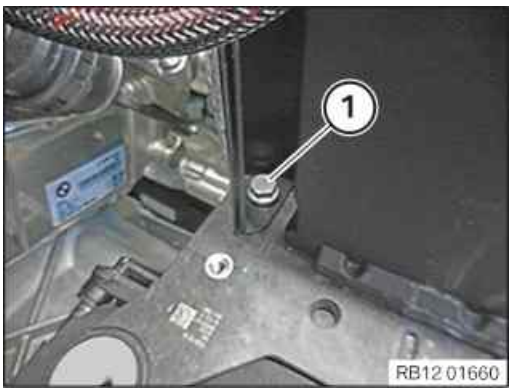
- Route all cables without abrasions, do not trap and crush.

cardiagn.com



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

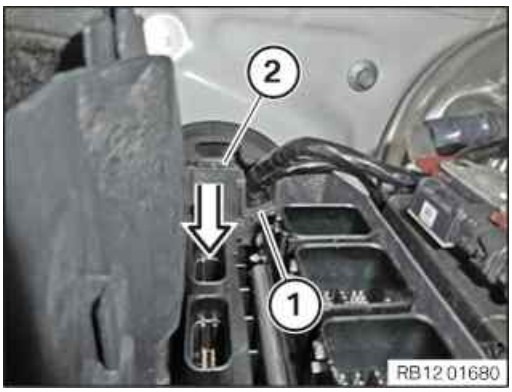
- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



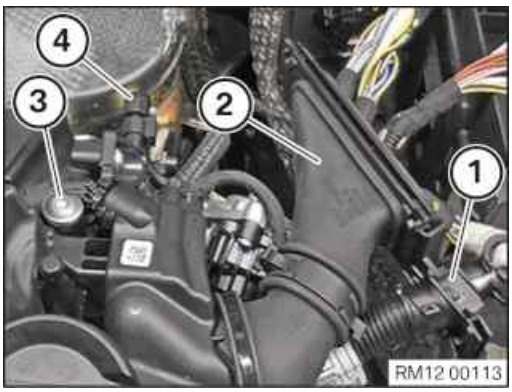
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



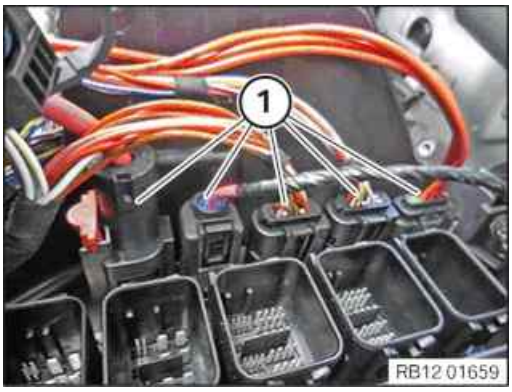
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

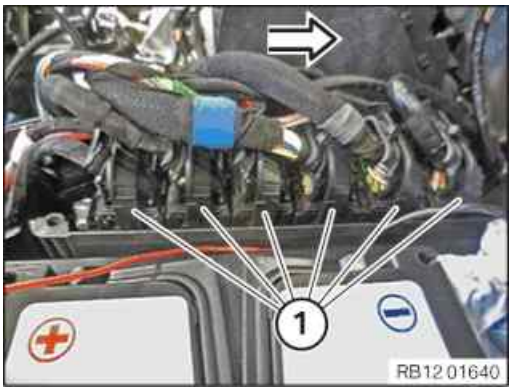
TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

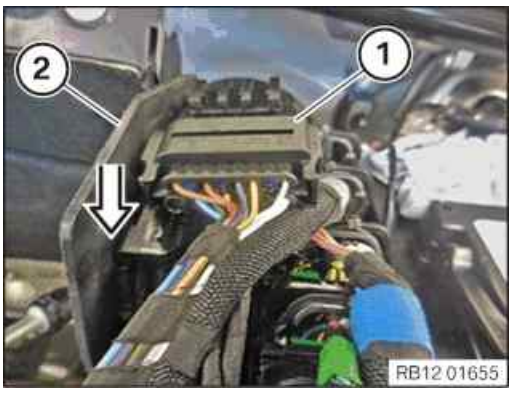
cardiagn.com



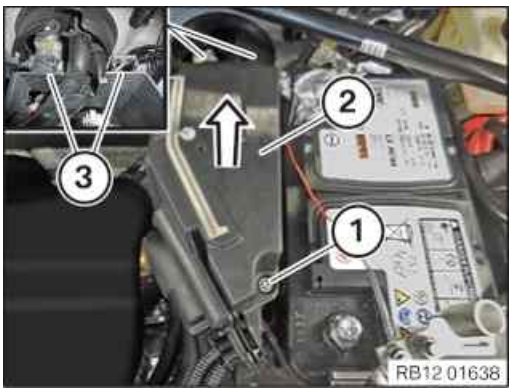
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



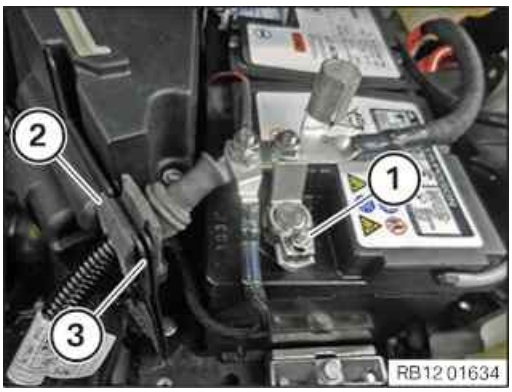
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

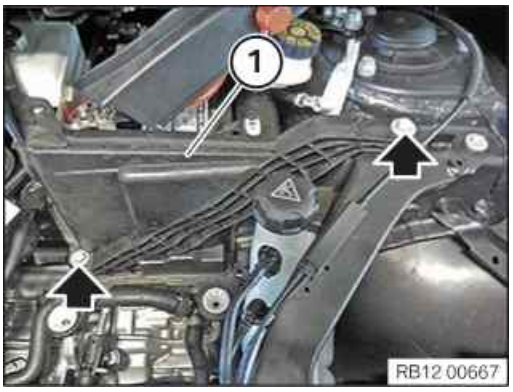


- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (1).
- Tighten screws (arrows).

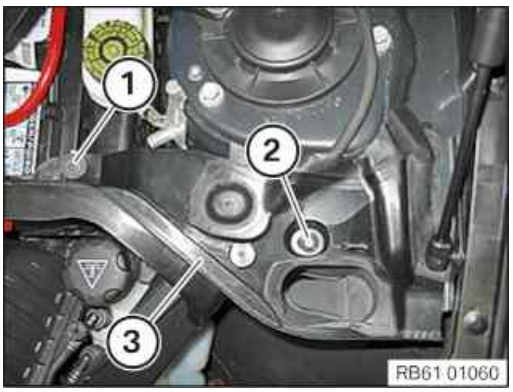
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

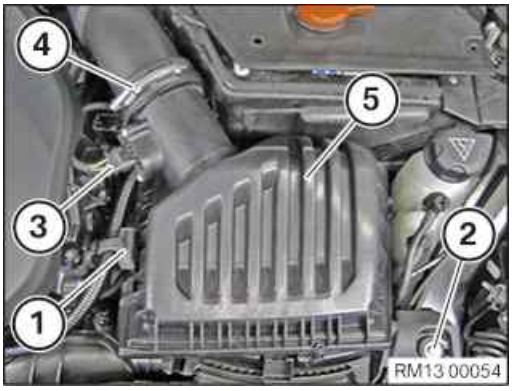


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

19 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing

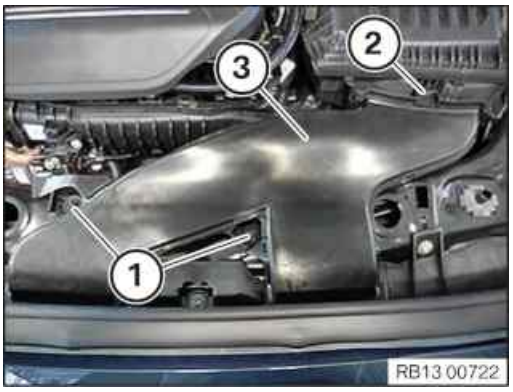
Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

20 – Install the intake neck for the intake filter housing

cardiagn.com



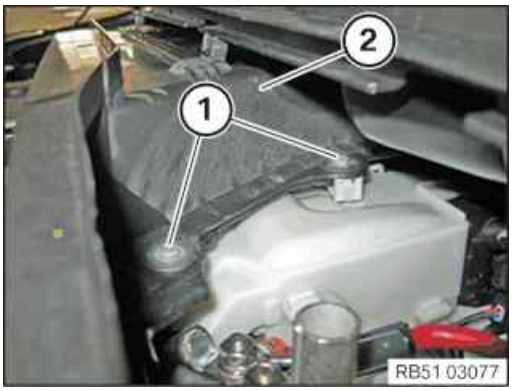
- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

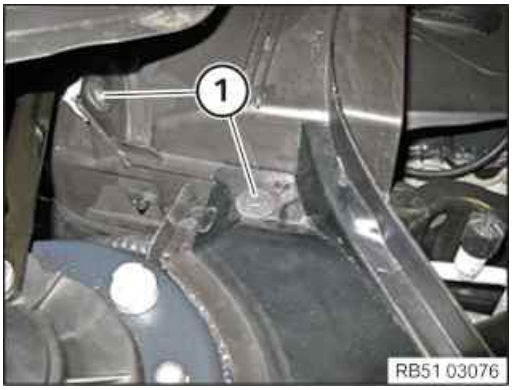
21 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

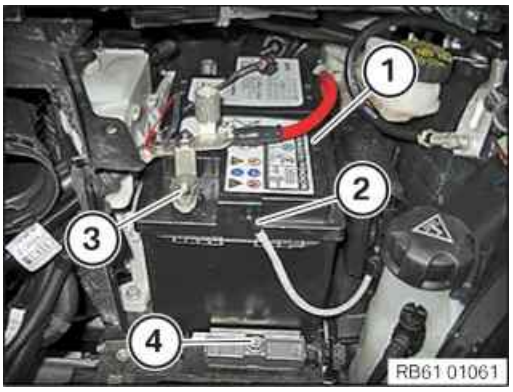
Screw		Tightening torque	3 Nm

22 – Install vehicle battery

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Install vehicle battery (1).
- Tighten the holder with the bolt (4).

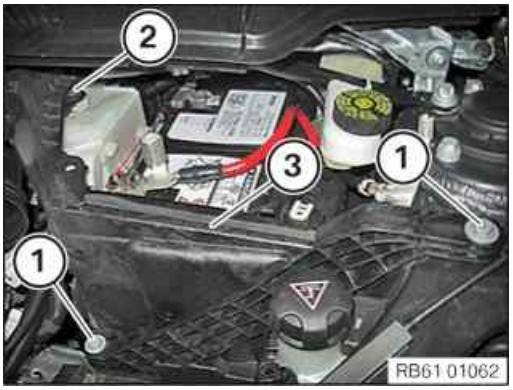
Battery terminal rail to battery tray

M8 screw		19 Nm

- Position the vent hose (2).
- Position the positive terminal.
- Tighten the nut (3) on the positive terminal.

Positive battery terminal

NutM6		5 Nm



- Insert the tension strut (3).
- Tighten down screw (2).

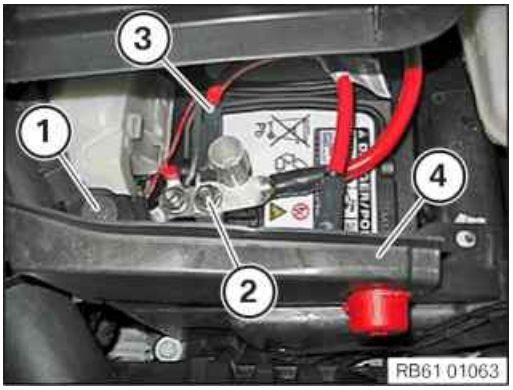
Battery cover

Screw		2,8 Nm

- Tighten the screws (1).

Trailing link

M8 screw		19 Nm



- Position the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten down screw (1).

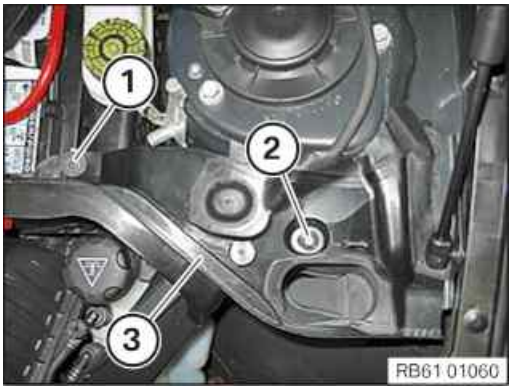
Battery cover

Screw		2,8 Nm

- Tighten the nut (2) on the positive terminal.

Positive battery cable to battery terminal

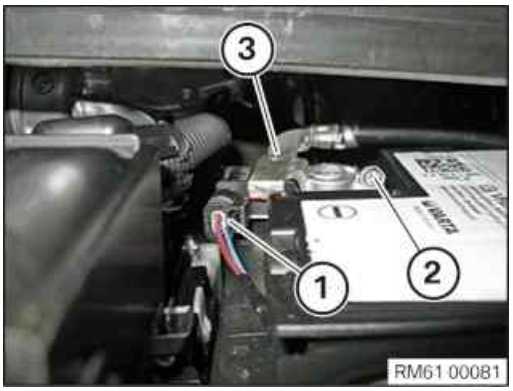
Nut M8		15,2 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm



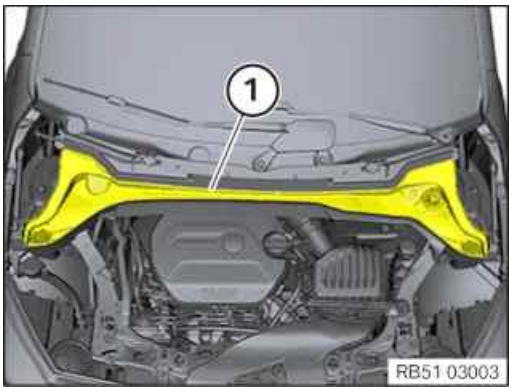
- Position the negative battery terminal (3).
- Tighten nut (2).

Negative battery terminal (with IBS)

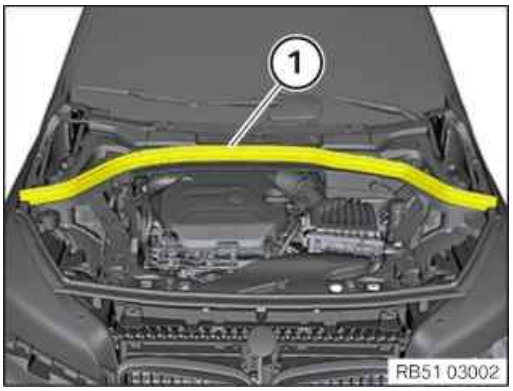
NutM6		5 Nm

- Connect connectors (1) and lock.

cardiagn.com



- Feed in the cowl panel cover (1).



- Press the gasket (1) in a downwards direction.

23 – If a new exhaust-gas recirculation valve is installed: Delete adaptations

Check

- Check if a new exhaust-gas recirculation valve is already installed on the new exhaust-gas recirculation cooler.

Result

» A new exhaust-gas recirculation valve is installed.

Measure

- Delete adaptations.

▸ **Delete adaptations**

- Connect diagnosis system.
  - Power train
  - Digital diesel electronics (DDE)
  - Reset adaptations
  - Delete adaptations

24 – Fill and bleed the coolant circuit

▸ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

Exhaust-gas recirculation cooler seal on intake plenum 13

cardiagn.com

11 71 501 Removing and installing/replacing exhaust-gas recirculation valve (B37C)

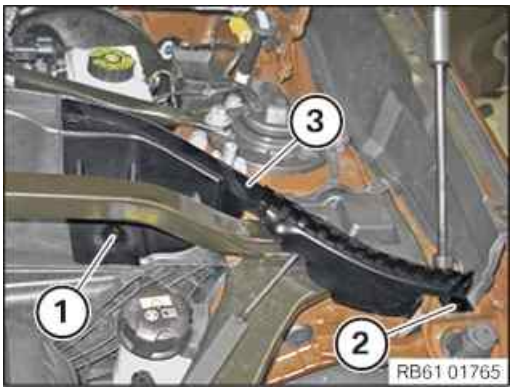
Attention!

Read and comply with notes on protection against electrostatic damage (ESD protection).

Necessary preliminary work:

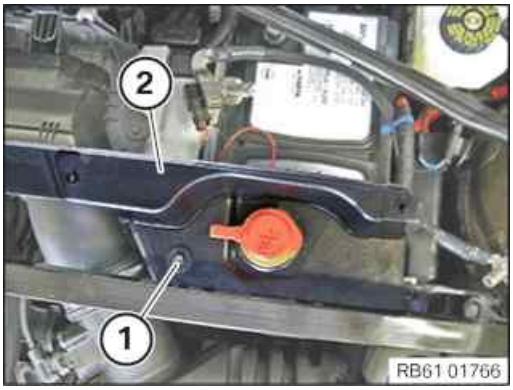
- Remove bulkhead upper section
- Remove intake silencer housing
- Remove clean air pipe
- Remove resonator
- Disconnect battery negative cable

Removal:



Release screw (1) and expanding rivet (2).

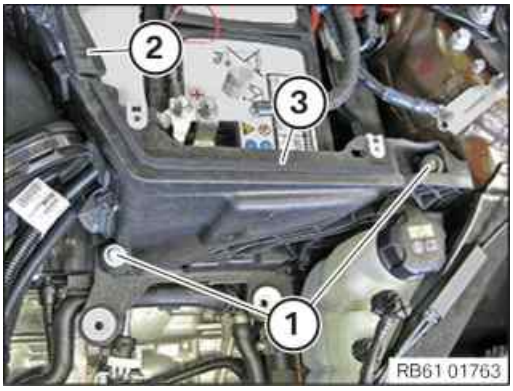
Remove the mounting for the gasket (3).



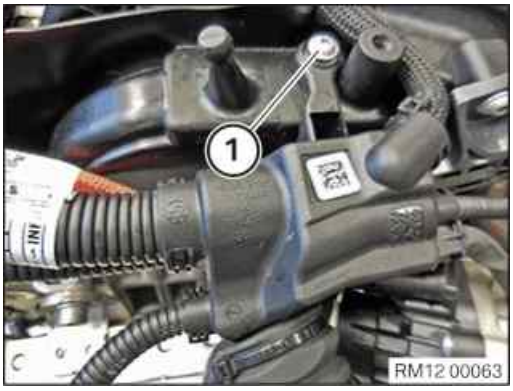
Release screw (1).

Remove cover (2).

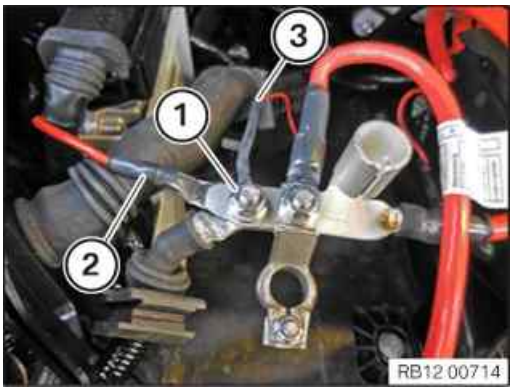
cardiagn.com



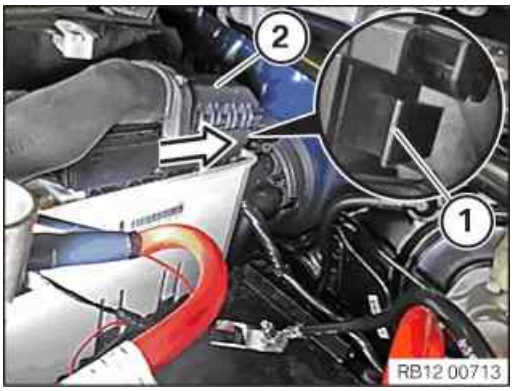
Release screws (1).
Lift cover (2) slightly and feed out tension strut (3).



Release screw (1). Remove the wiring harness from the cylinder head cover.

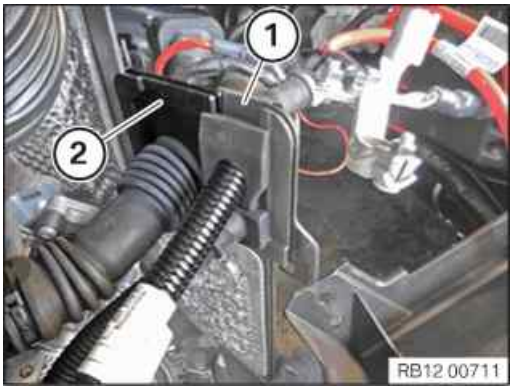


Slacken nut (1).
Feed out cables (2) and (3) and lay to one side.

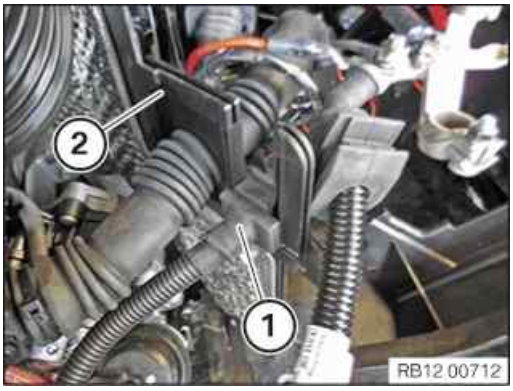


Undo lock (1) as shown by arrow.
Remove connector (2).

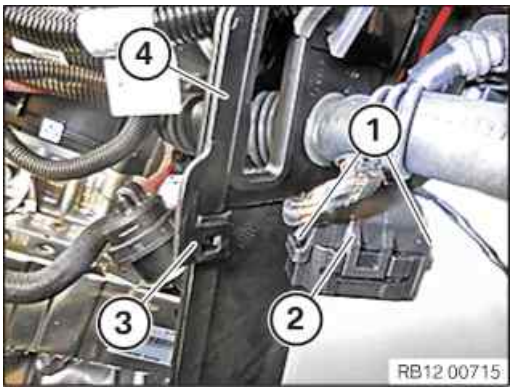
cardiagn.com



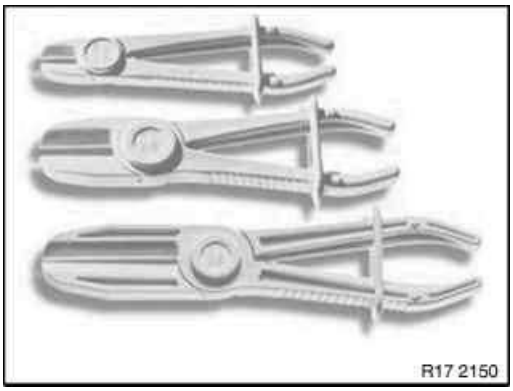
Remove cable (1) from cable clip (2).



Remove cable (1) from cable clip (2).

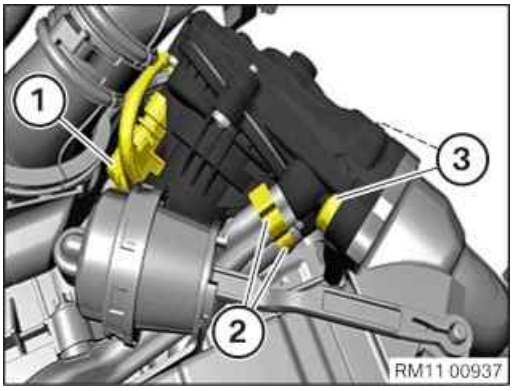


Release lock (1).
Remove connector (2).
Release lock (3).
Remove cable clip (4) with connector.



Use commercially available pinch-off tools to pinch off the coolant hoses.

cardiagn.com



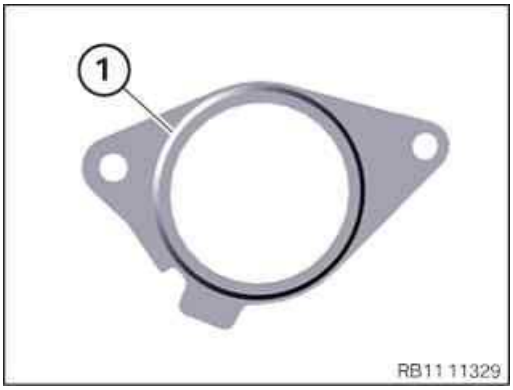
Unlock connector (1) and pull off.

Loosen screws (3).

Loosen hose clamps (2) and pull off coolant lines.

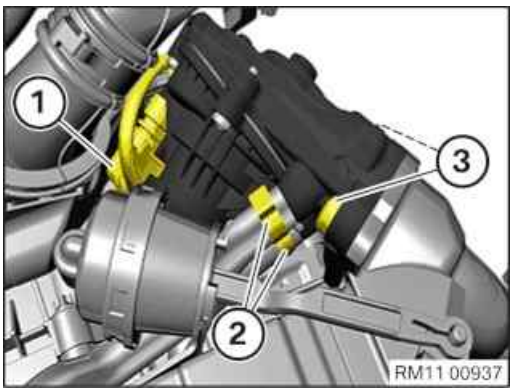
Remove the exhaust-gas recirculation valve .

Installation:



Replace gasket (1).

Parts: Gasket



Renew the hose clamps for the coolant lines (2).

Parts: Hose clamps.

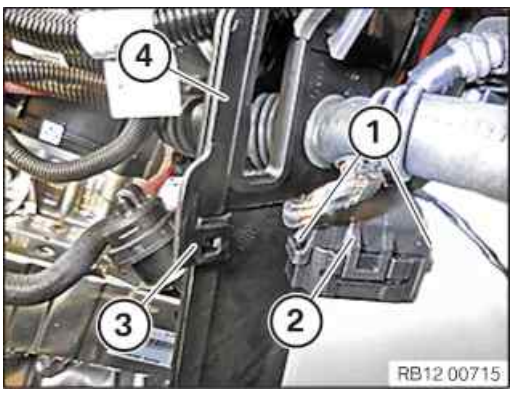
Slide coolant lines with hose clamps (2) onto the exhaust-gas recirculation valve.

Make sure the coolant lines are not mounted twisted.

Secure hose clamps (2).

Position the exhaust-gas recirculation valve with new seal.

Loosens screws (3) by **one turn**.



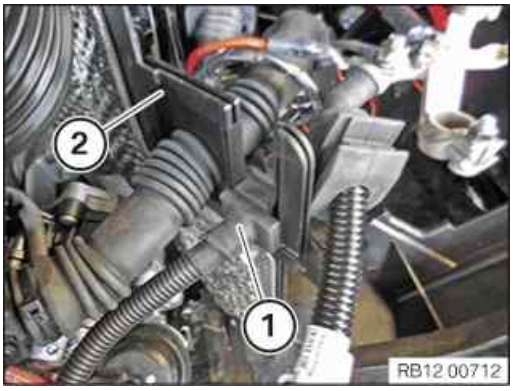
Connect connector (2) and lock.

Lock (1) must snap audibly into place.

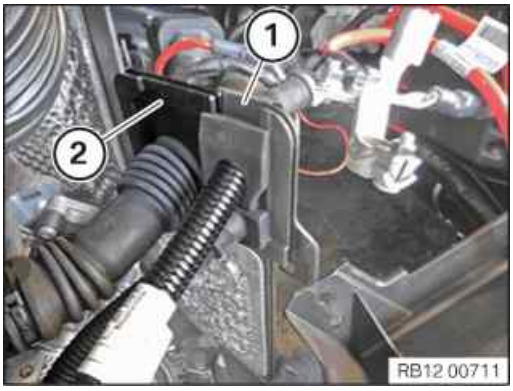
Install cable clip (4) with connector.

Lock (3) must snap audibly into place.

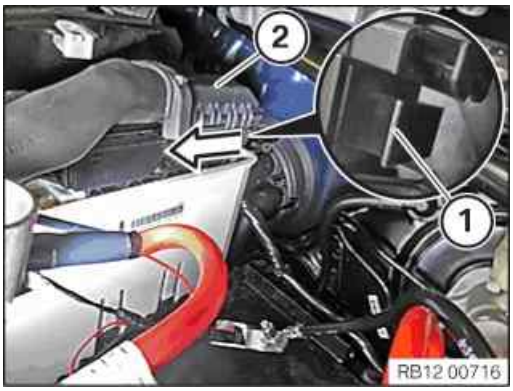
cardiagn.com



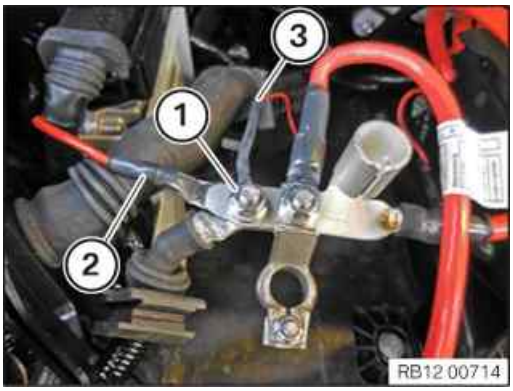
Feed cable (1) into the cable clip (2) and install.



Feed cable (1) into the cable clip (2) and install.

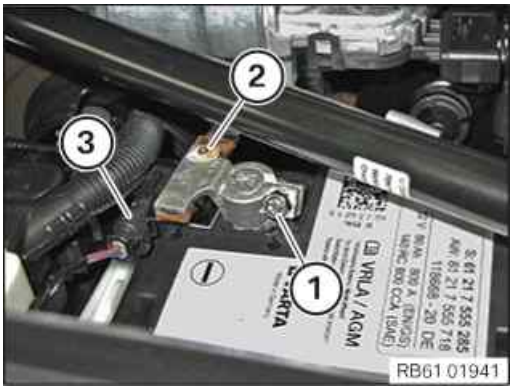


Fit connector (2).
Engage the lock (1) as shown by arrow.
Lock (1) must snap audibly into place.



Feed in and install cables (2) and (3).
Tighten nut (1).
Tightening torque 12 52 6AZ

cardiagn.com



Connect negative battery cable (2).

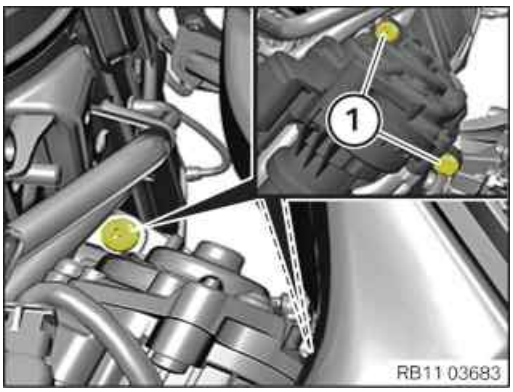
Tighten nut (1).

Tightening torque 61 21 2AZ.

Connect the connector (3) and audibly lock it.

Connect diagnosis system, Service function: Carry out "Setting the exhaust-gas recirculation valve installation position".

Diagnosis path: 01 Drive - Digital diesel electronics - Exchanging the exhaust-gas recirculation valve - Exhaust-gas recirculation valve installation position



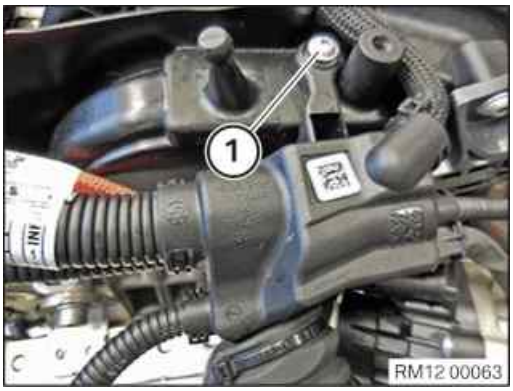
Tighten down screws (1).

Tightening torque 11 71 3 AZ.

Replacement.

Resetting adaptations.

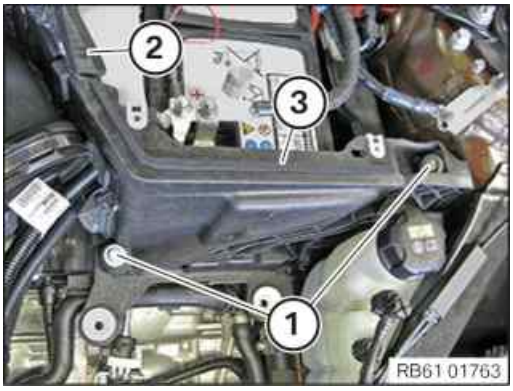
Diagnosis path: 01 Drive - DDE - Reset adaptation - Delete adaptations.



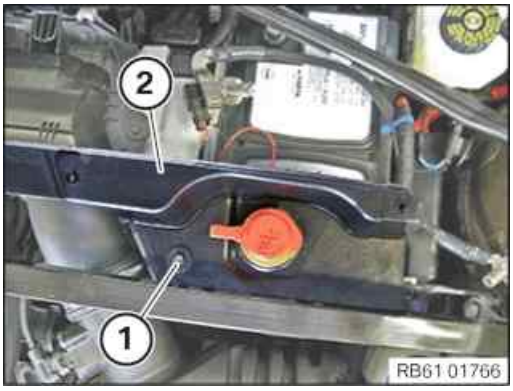
Install wiring harness on cylinder head cover.

Tighten screw (1).

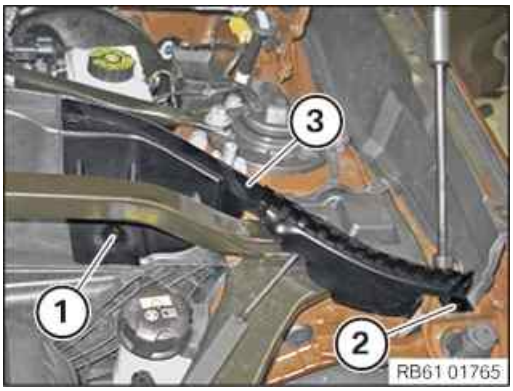
cardiagn.com



Lift cover (2) slightly and install tension strut (3).
Tighten screws (1).
Tightening torque 61 21 2AZ.



Install cover (2).
Tighten screw (1).



Install the mounting for the seal (3).
Tighten screw (1).
Install expanding rivet (2).

Required follow-up work:

- Install intake silencer housing
- Install clean air pipe
- Install resonator
- Install bulkhead upper section
- Add coolant

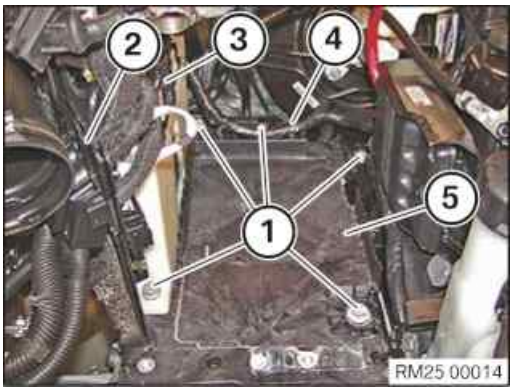
cardiagn.com

11 71 100 Removing and installing/replacing exhaust-gas recirculation cooler (B37C)

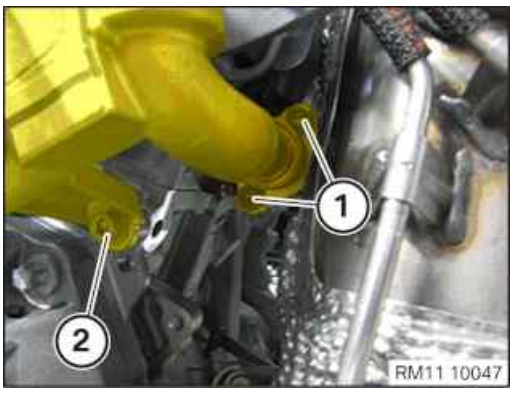
Necessary preliminary work:

- Remove acoustic cover
- Remove resonator.
- Remove clean air pipe.
- Remove battery.
- Drain coolant.

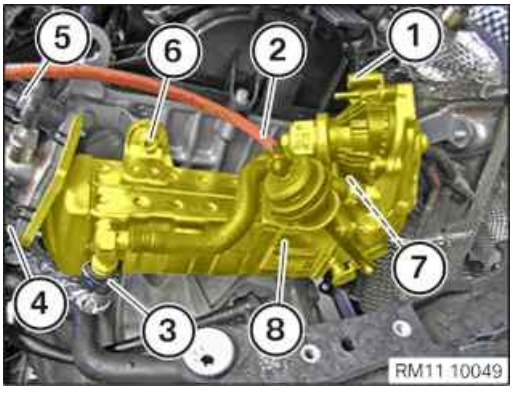
Removal:



Release screws (1).
Release battery housing (2) from bracket and remove.
Release control unit (3) from bracket.
Detach wiring harness (4) from battery tray (5).
Remove battery tray (5).



Loosen screws (1) on exhaust manifold.
Release screw (2).



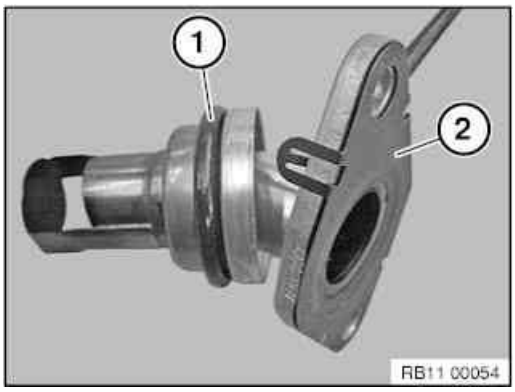
Unlock plug connection (1) and disconnect.
Pull off vacuum line (2).
Unlock coolant line (3) and pull off.
Release screws (4 and 5).
Release screws (6 and 7).
Remove exhaust-gas recirculation cooler (8) upwards.

cardiagn.com

Installation:

Install pipe neck (1).

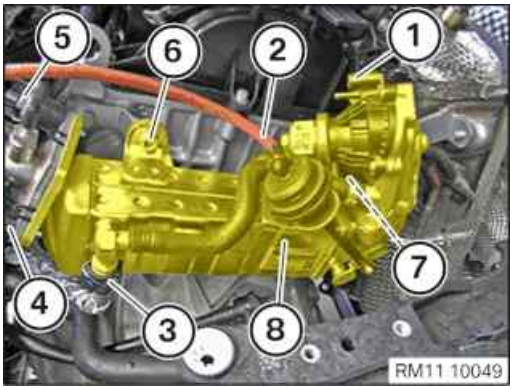
Part: Replace pipe neck.



Clip in beaded metal gasket (2).

Replace beaded metal gasket.

Parts: Beaded metal gasket



Installation note:
Make sure that the pipe neck (8) is correctly fitted in the cylinder head.

Tighten all screw connection.

Join screws (7) and (6).

Join screws (4) and (5).

Tighten screws (7) and (6).

Tightening torque: 11 71 2AZ.

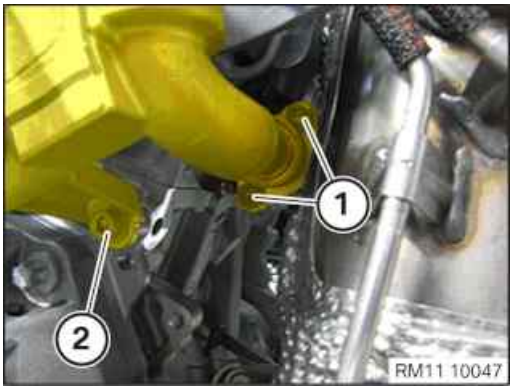
Tighten screws (4) and (5).

Tightening torque: 11 61 2AZ.

Connect vacuum line (2).

Connect and lock coolant line (3).

cardiagn.com



Installation note:
Renew screws (1) and seal.

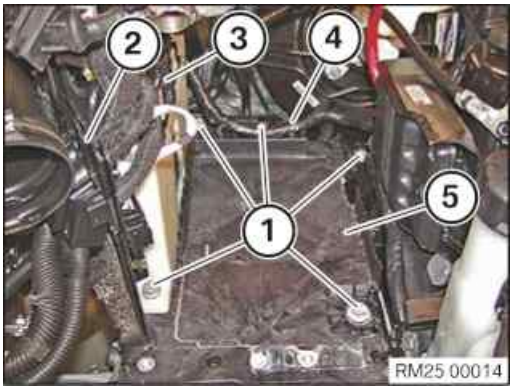
Grease screw thread (1) with assembly paste 4.2.

Tighten screws (1) on exhaust manifold.

Tightening torque: 11 71 1AZ.

Tighten screw (2).

Tightening torque: 11 71 2AZ.



Install battery tray (5).

Tighten screws (1).

Install wiring harness (4) on battery tray (5).

Insert control unit (3) in bracket.

Insert battery housing (2) in bracket.

Required follow-up work:

- Install acoustic cover.
- Install battery.
- Install clean air pipe.
- Install resonator.
- Top up coolant.

cardiagn.com

11 71 705 Replace EGR low pressure cooler

cardiagn.com

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.

For additional information see:

Main group 17

17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Filling **without** the vacuum filler device (watering can filling) is **not permitted**.

Non-compliance will result in danger of component damage and/or engine damage.

Filling specification **absolutely must** be adhered to.

The operation of the vehicle is not permitted unless the filling procedure has been completed. Otherwise, functional limitations (degradation) and/or overheating may occur.

A bleeding procedure is required after a part has been exchanged in the cooling system and/or after refilling the cooling system.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

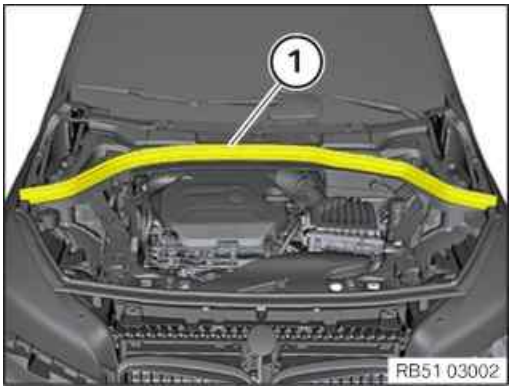
- When the engine is stopped after the end of the journey, it may be necessary to run the electric fan. In rare cases, operation of the electric fan can last up to 11 min. This protects the components. In this case, replacing the electric fan will not remedy the problem!

cardiagn.com

1 – Remove the seal for the rear bonnet

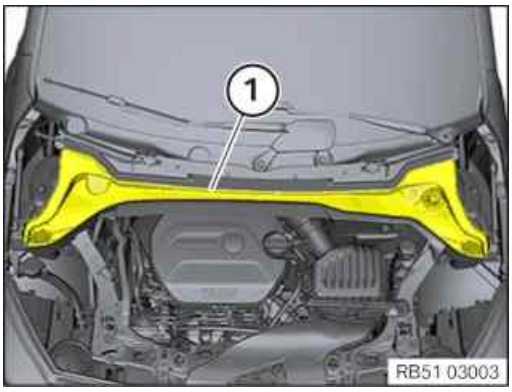
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

2 – Removing front cowl panel cover



- Guide the front cowl panel cover (1) out toward the top and remove it.

3 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Remove the wiper arm**

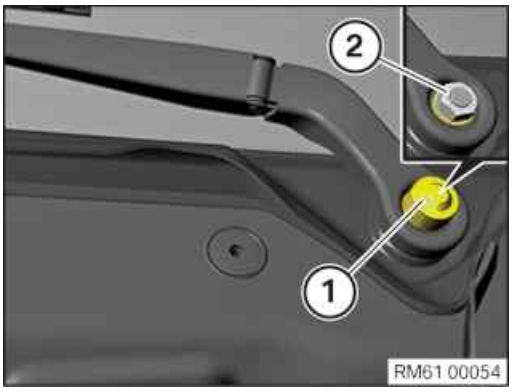
RISK OF DAMAGE

Damage to wiper console

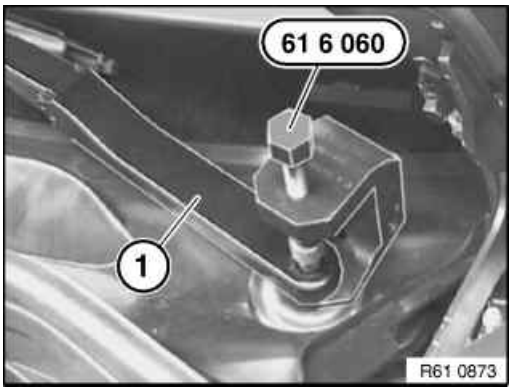
While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.

cardiagn.com



- Remove the protective cap (1).
- Loosen nut (2).



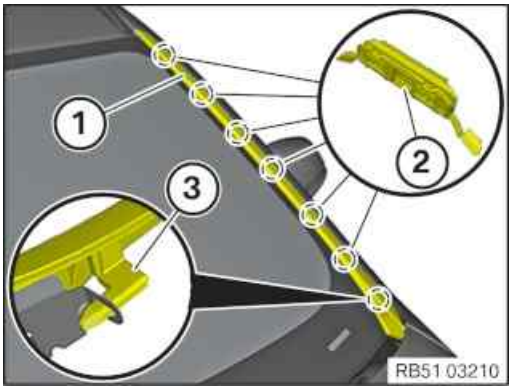
- Pull off the wiper arm (1) using special tool .

4 – Remove the gutter strip on the windscreen on the left and right

NOTICE

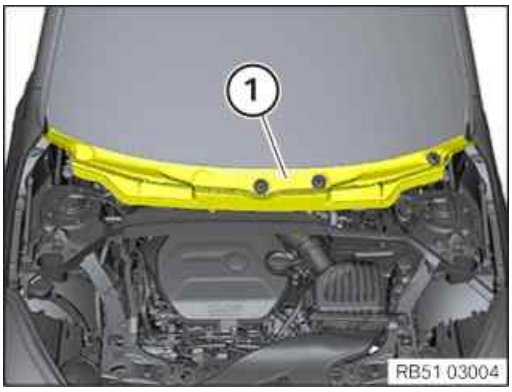
Description is for left component only. Procedure on the right side is identical.

▶ **Remove the gutter strip on the windscreen**



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

5 – Remove the rear cowl panel cover



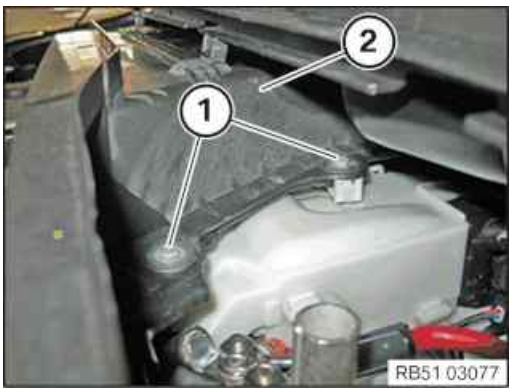
- Disengage and guide out the rear cowl panel cover (1) towards the top.

6 – Removing the upper bulkhead cover

cardiagn.com

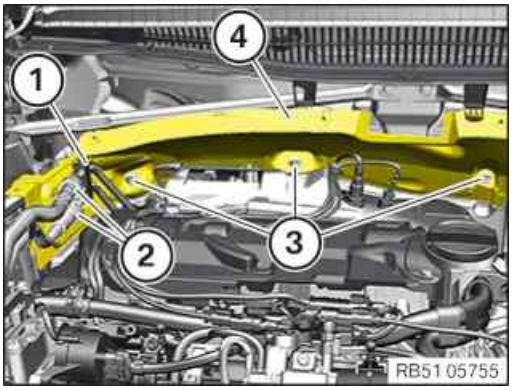
- Loosen screws (1).

- Loosen screws (1).



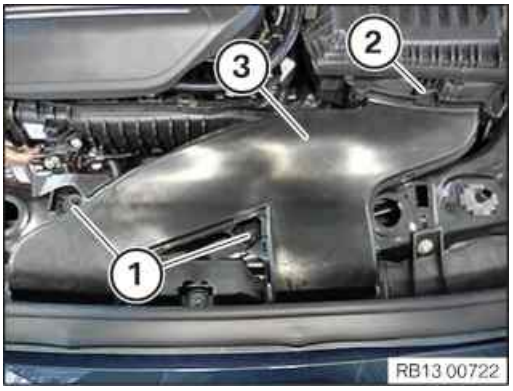
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

7 – Remove the rear bulkhead upper part



- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

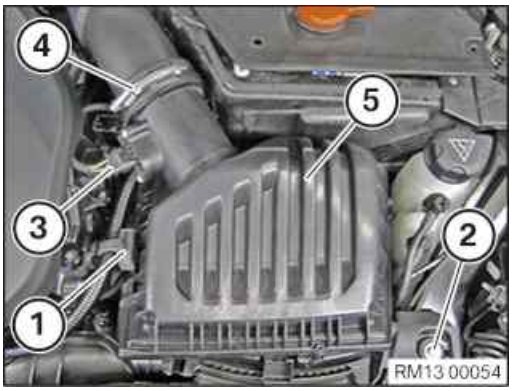
8 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

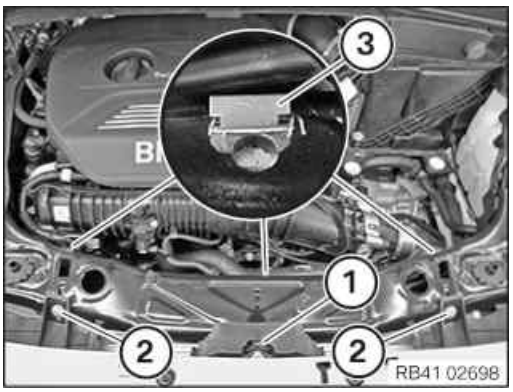
cardiagn.com

9 – Removing intake silencer housing

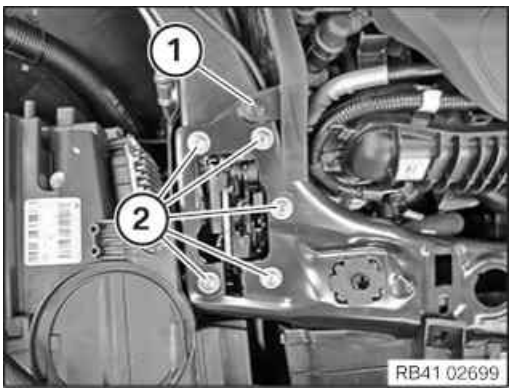


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

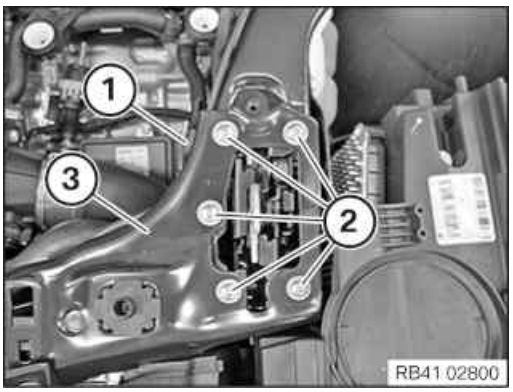
10 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



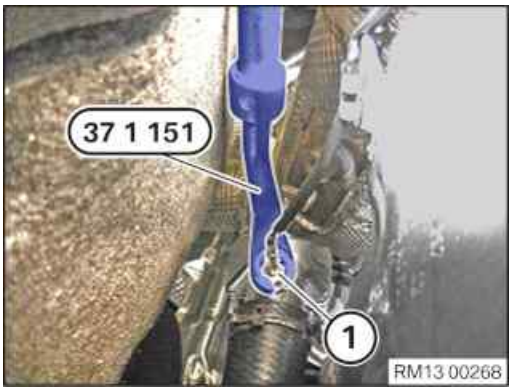
- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

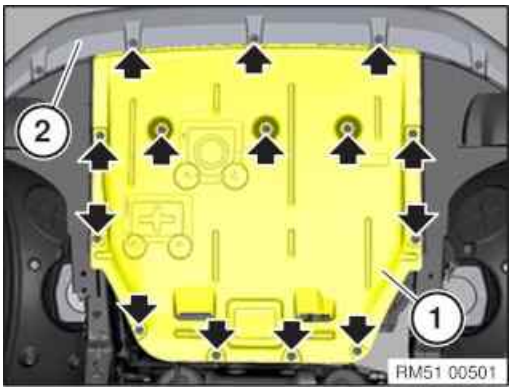
11 – Partially releasing the exhaust temperature sensor for low-pressure exhaust-gas recirculation

cardiagn.com



- Release the exhaust temperature sensor (1) using the special tool **0 495 909 (37 1 151)** and place it to one side.

12 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

13 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

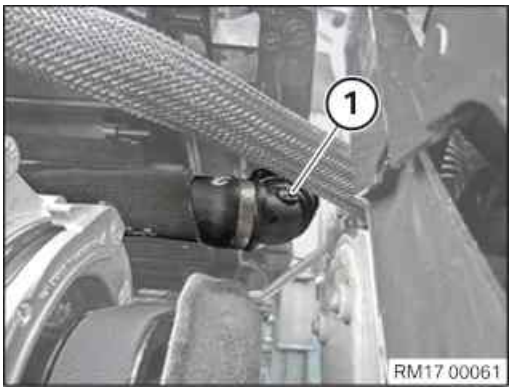
In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

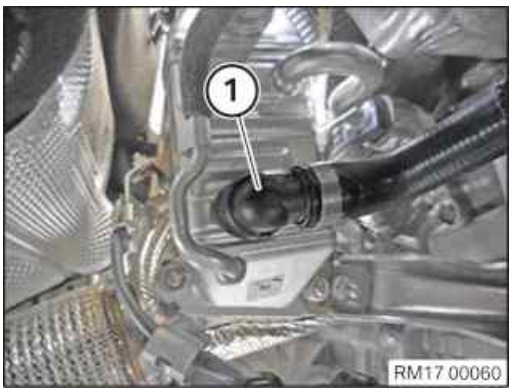
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Loosen sealing cap (1).



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

MAIN WORK

14 – Removing the low-pressure exhaust-gas recirculation cooler

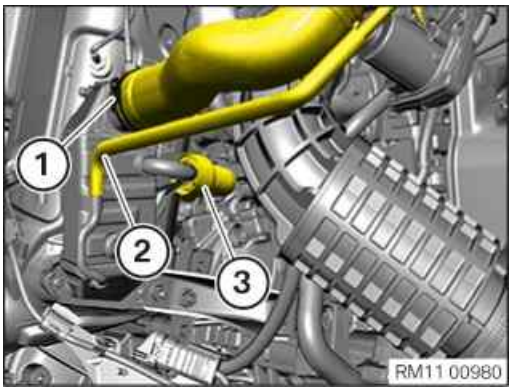
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

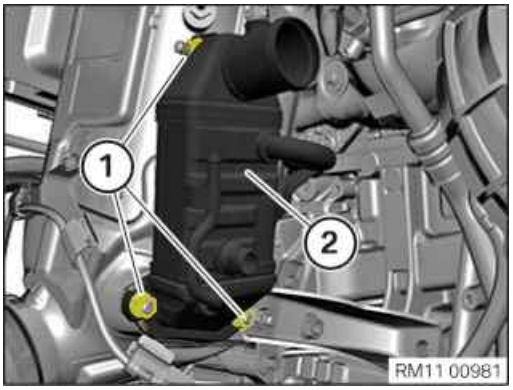
cardiagn.com



TECHNICAL INFORMATION

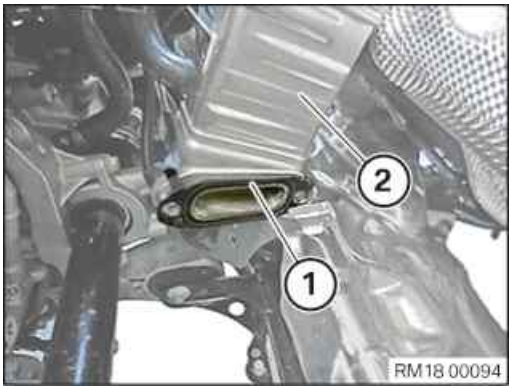
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Release the hose clamp (1) and pull the coolant hose off the low-pressure exhaust-gas recirculation cooler.
- Release the pressure hose (2) from the low-pressure exhaust-gas recirculation cooler and pull it off.
- Unlock and pull off the coolant hose (3) on the low pressure exhaust-gas recirculation cooler.



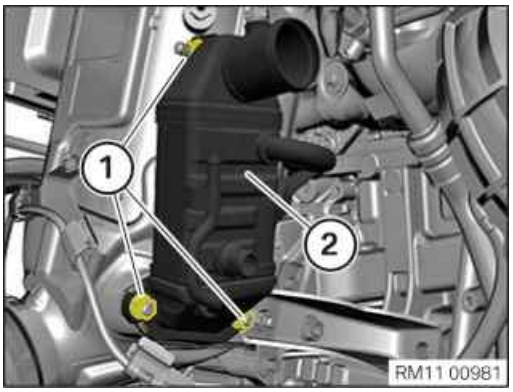
- Release the nuts (1) on the low-pressure exhaust-gas recirculation cooler.
- Feed out and remove the low pressure exhaust-gas recirculation cooler (2).

15 – Installing the low-pressure exhaust-gas recirculation cooler



- Renew the seal (1) on the low-pressure exhaust-gas recirculation cooler (2).

  Parts: Gasket

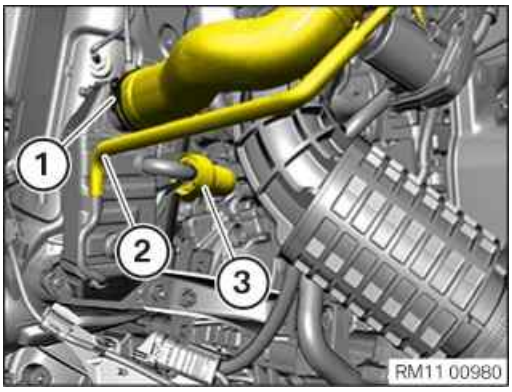


- Guide in and install the low-pressure exhaust-gas recirculation cooler (2).
- Tighten nuts (1).

Low-pressure exhaust-gas recirculation cooler to diesel particulate filter

Flange nutM8		Tightening torque	19 Nm

cardiagn.com



- Connect and lock coolant hose (3).

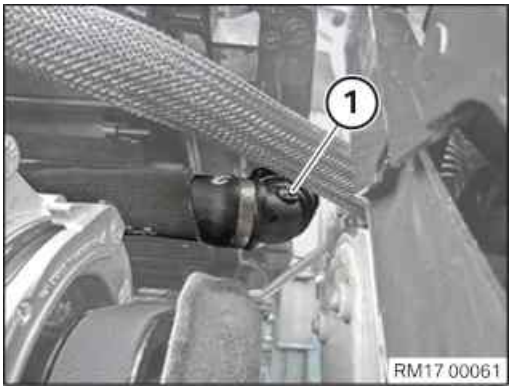
  The coolant hose (3) must audibly engage.
- Connect the pressure hose (2).
- Connect the coolant hose (1) to the exhaust-gas recirculation cooler.
- Position and secure the hose clamp.

POSTPROCESSES

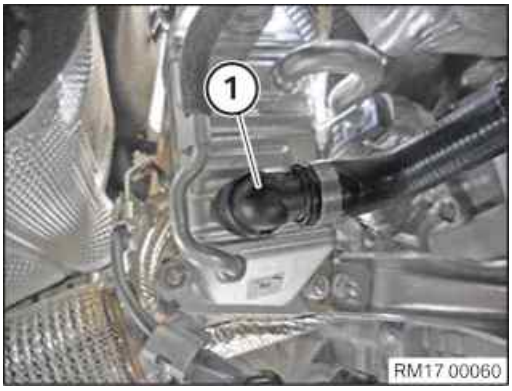
16 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

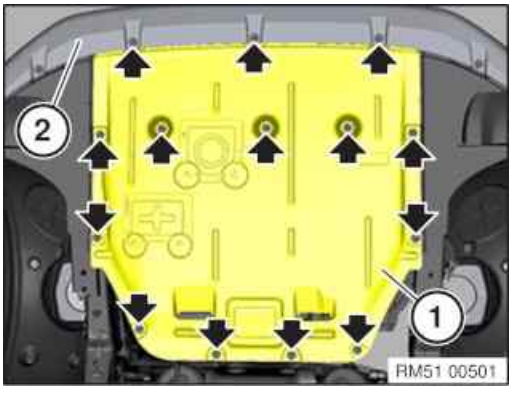


- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

17 – Installing the front underbody protection



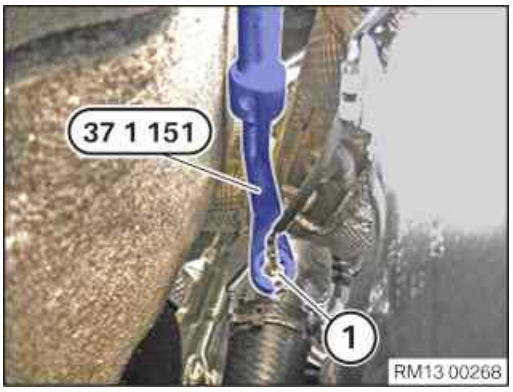
- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

18 – Partially secure the exhaust temperature sensor for the low-pressure exhaust-gas recirculation

cardiagn.com

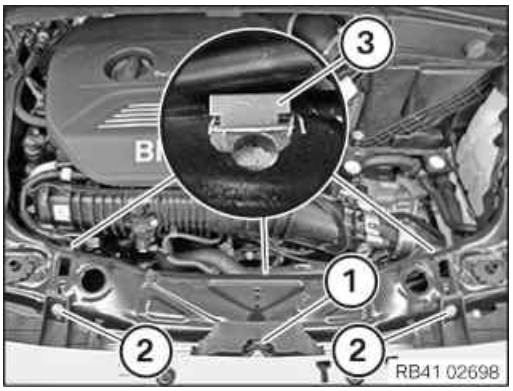


- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1) with the special tool **0 495 909 (37 1 151)**.

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

19 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

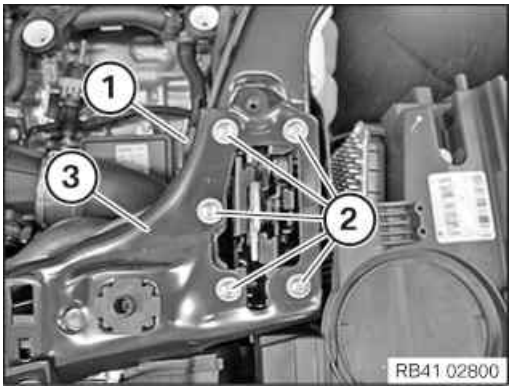
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

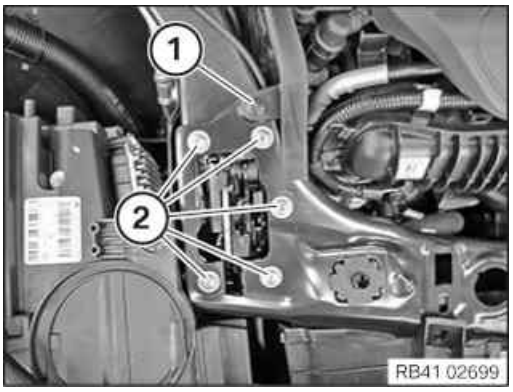
- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.
- Tighten screws (2) of cross connection (3).



Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



- Tighten down screws (2).

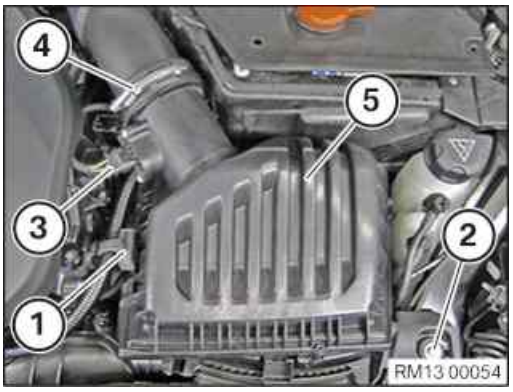
Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

20 – Installing intake silencer housing

cardiagn.com



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

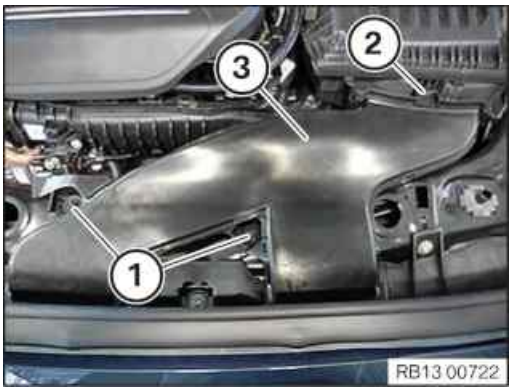
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

21 – Install the intake neck for the intake filter housing

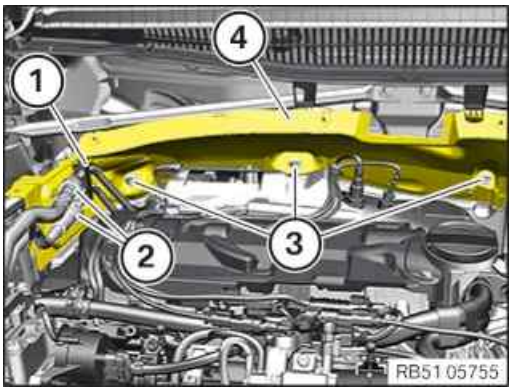


- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

22 – Installing rear bulkhead upper part



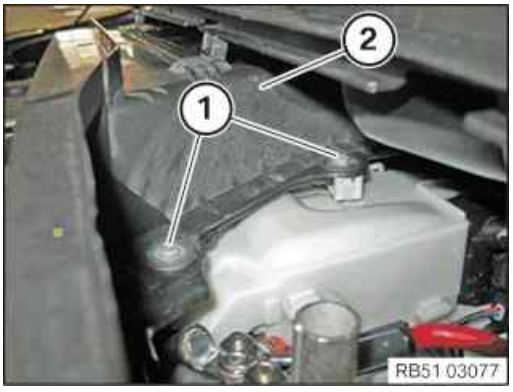
- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).
  The holder (1) must engage audibly.

23 – Installing the upper bulkhead cover

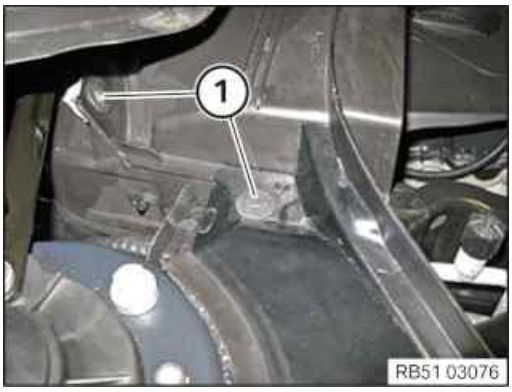


- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

cardiagn.com



- Tighten the screws (1).

Bulkhead cover, top

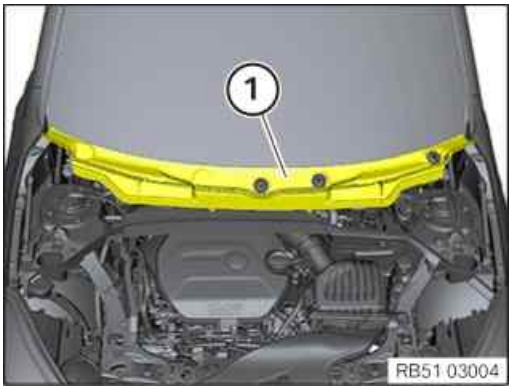
Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

24 – Install the rear cowl panel cover



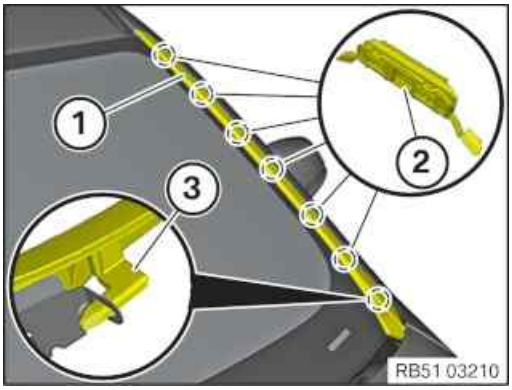
- Feed in and engage the rear cowl panel cover (1).

25 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▶ **Install the gutter strip on the windscreen**



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

26 – Install left and right wiper arm

cardiagn.com

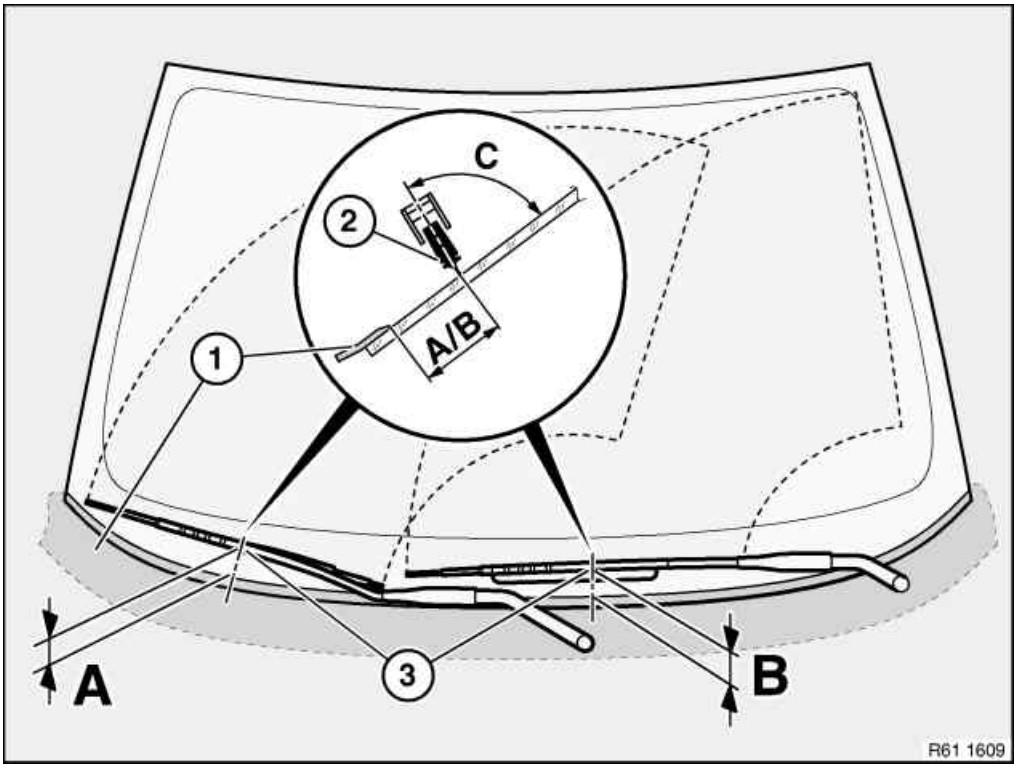
NOTICE

Description is for left component only. Procedure on the right side is identical.

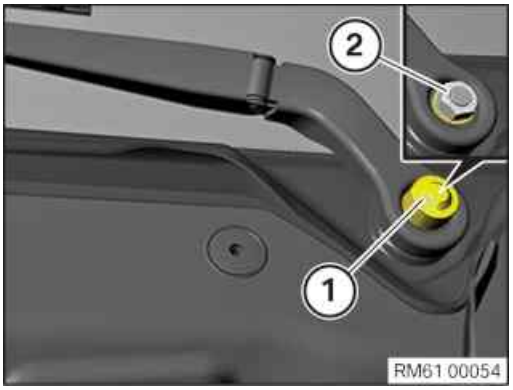
▸ **Install the wiper arm**

TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Tighten nut (2).

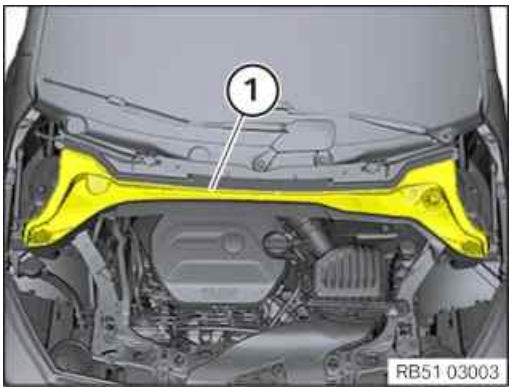
Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

27 – Installing front cowl panel cover

cardiagn.com

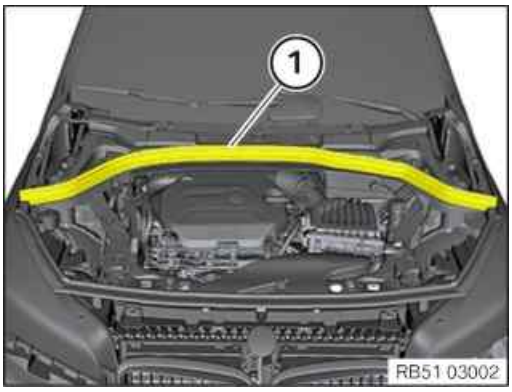


- Insert the cowl panel cover front (1) to the rear and install.
- Check cowl panel cover at front is correctly seated (1).

28 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

29 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

cardiagn.com

11 71 508 Replacing exhaust-gas recirculation valve for low pressure

WARNING

Hot surfaces.

Risk of burning!

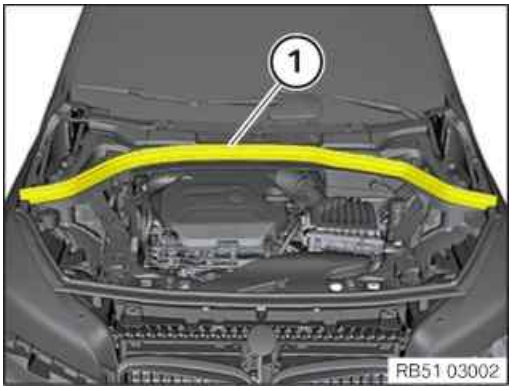
- Perform all work only on components that have cooled down.

PRELIMINARY WORK

1 – Remove the seal for the rear bonnet

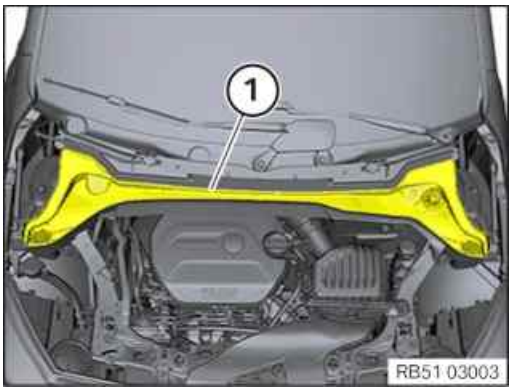
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

2 – Removing front cowl panel cover



- Guide the front cowl panel cover (1) out toward the top and remove it.

3 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Remove the wiper arm**

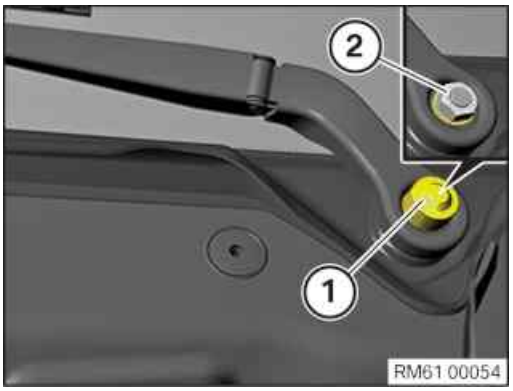
cardiagn.com

RISK OF DAMAGE

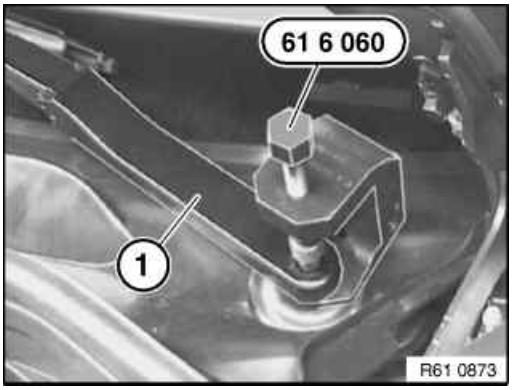
Damage to wiper console

While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.



- Remove the protective cap (1).
- Loosen nut (2).



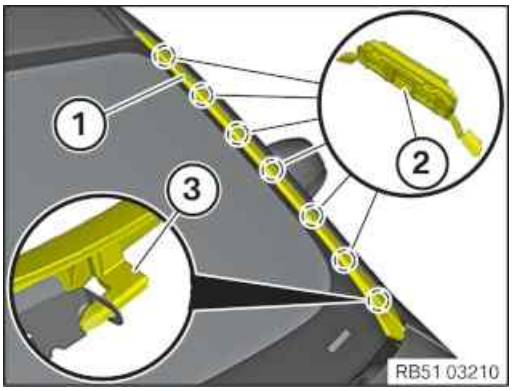
- Pull off the wiper arm (1) using special tool .

4 – Remove the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

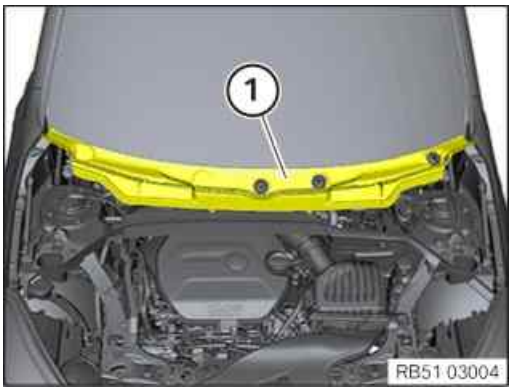
▶ **Remove the gutter strip on the windscreen**



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

5 – Remove the rear cowl panel cover

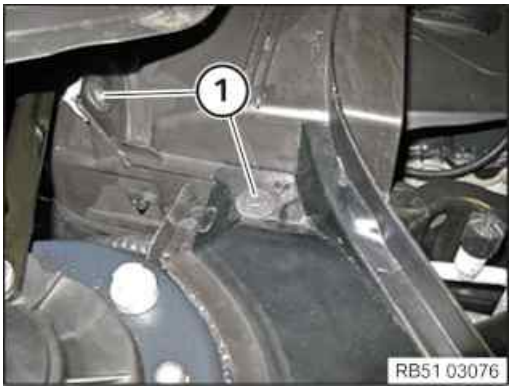
cardiagn.com



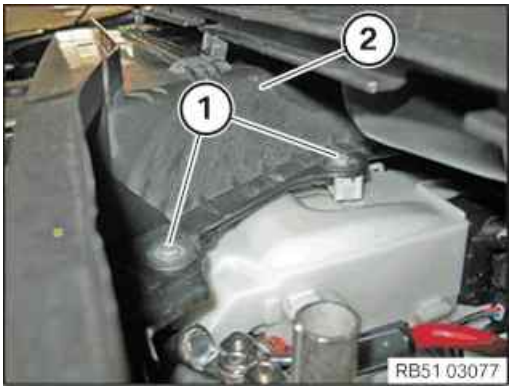
- Disengage and guide out the rear cowl panel cover (1) towards the top.

6 – Removing the upper bulkhead cover

- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

7 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

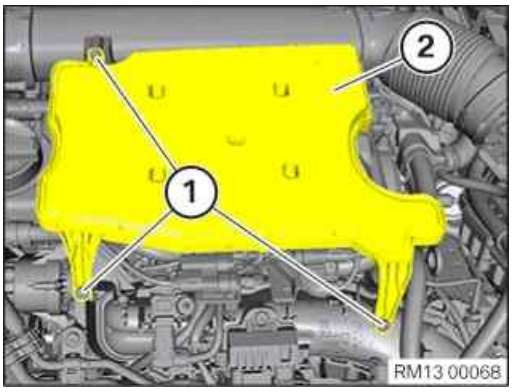
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

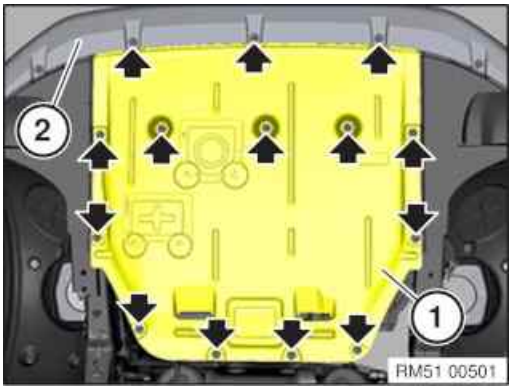
- Unclip the acoustic cover from the marked areas towards the top.

8 – Remove resonator



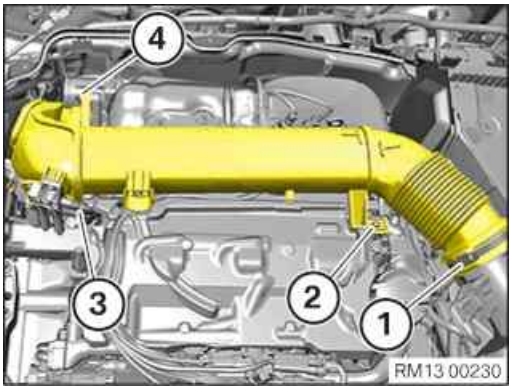
- Loosen screws (1).
- Guide out and remove the resonator (2).

9 – Removing the front underbody protection



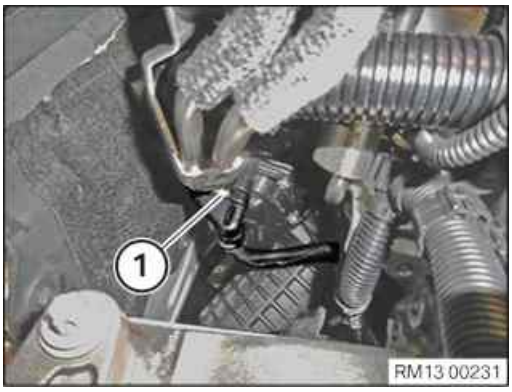
- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

10 – Removing clean air pipe

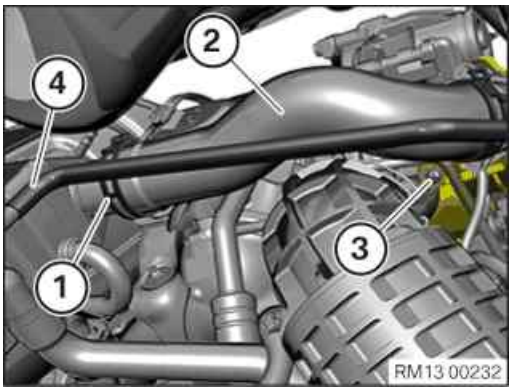


- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).

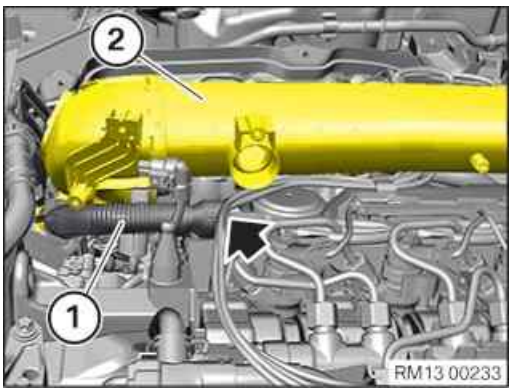
cardiagn.com



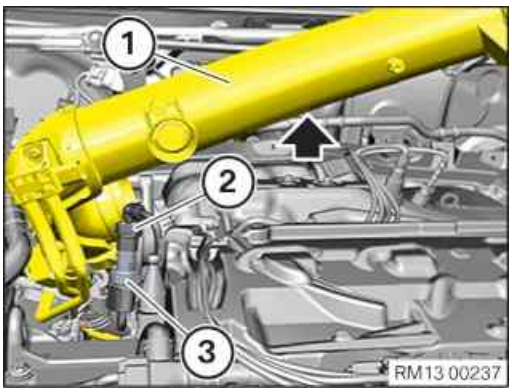
- Unlock and loosen connector (1).



- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

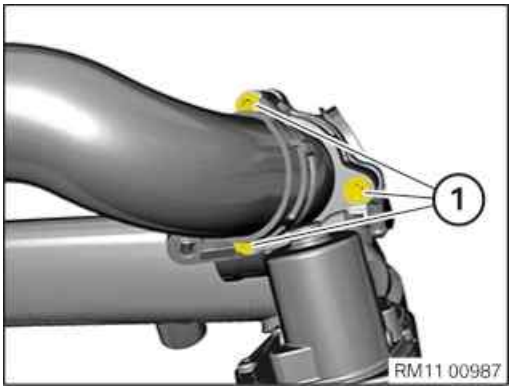


- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

cardiagn.com

MAIN WORK

11 – Removing the low pressure exhaust-gas recirculation valve

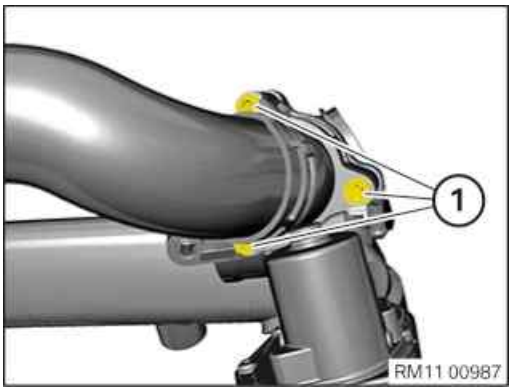


- Screws (1) loose.
- Remove connecting branch and low pressure exhaust-gas recirculation valve from clean air pipe.

12 – Installing the low pressure exhaust-gas recirculation valve

- The seals (1) on the clean air pipe and connecting branch must be renewed.

  Parts: Gaskets.



- Position low pressure exhaust-gas recirculation valve with connecting branch.
- Tighten the screws (1).

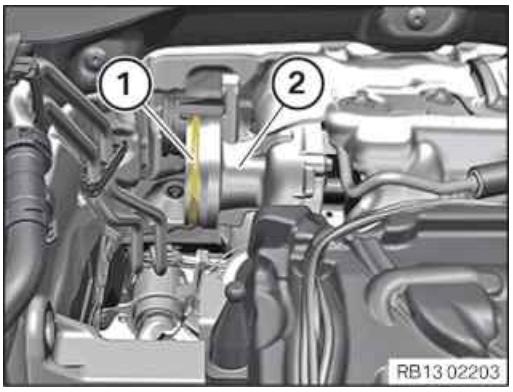
Low-pressure exhaust-gas recirculation valve to clean air pipe

M6x40		Tightening torque	8 Nm

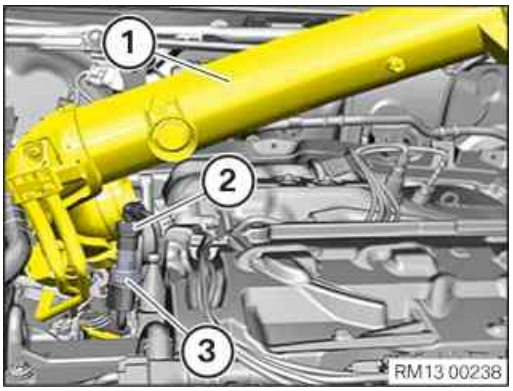
POSTPROCESSES

13 – Installing clean air pipe

cardiagn.com



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.



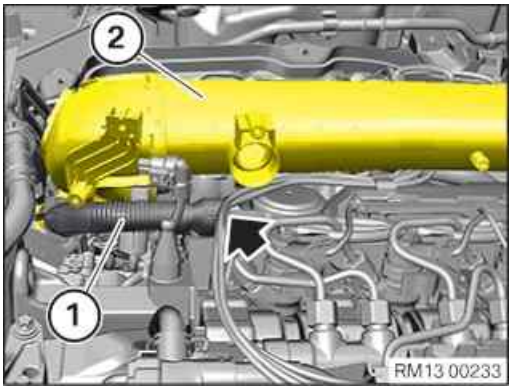
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

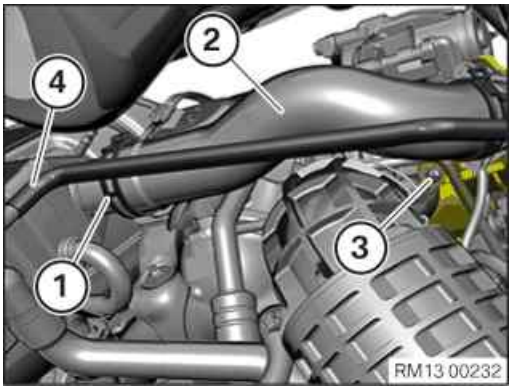
Exhaust gas pressure sensor		Tightening torque	13,5 Nm

- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

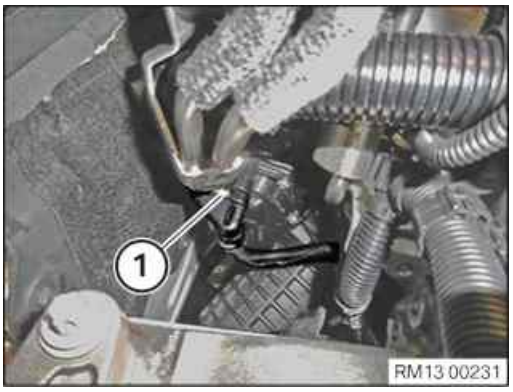
- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

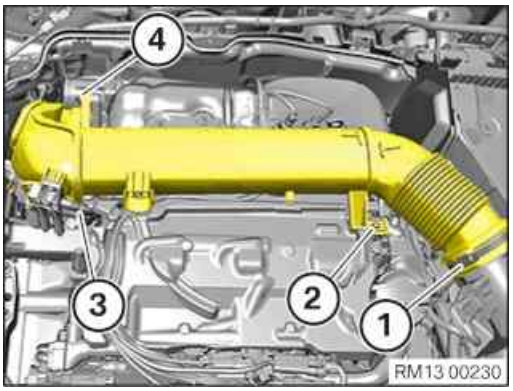
Clamp 15–19mm		Tightening torque	3 Nm

cardiagn.com



- Connect and lock the connector (1).

  The connector (1) must lock audibly.



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

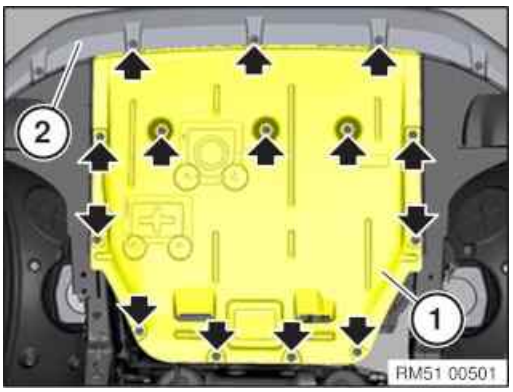
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

14 – Installing the front underbody protection

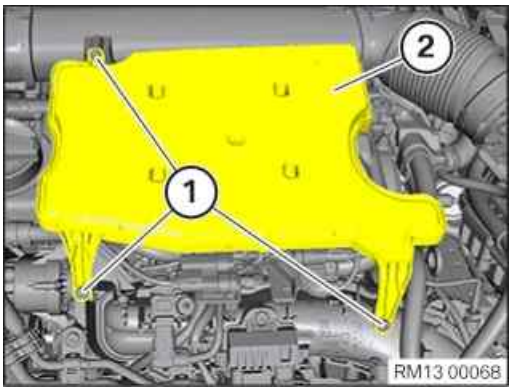


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

15 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

16 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

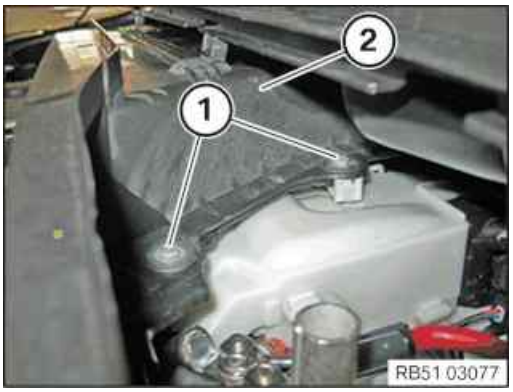
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

17 – Installing the upper bulkhead cover

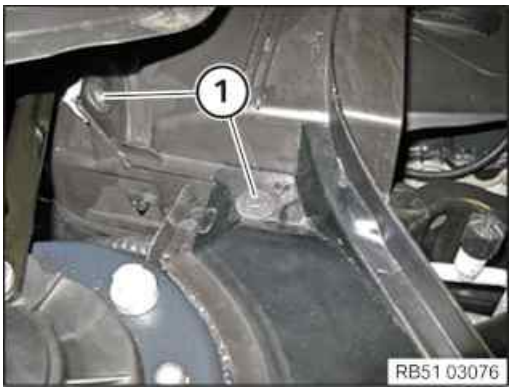


- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

cardiagn.com



- Tighten the screws (1).

Bulkhead cover, top

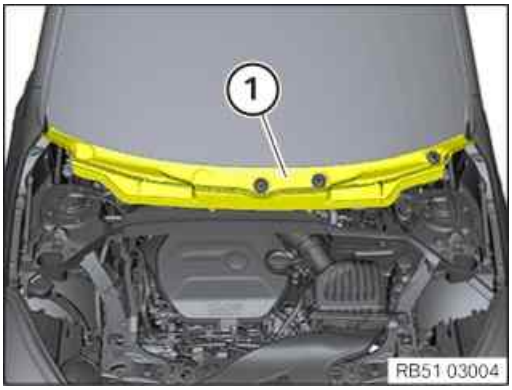
Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

18 – Install the rear cowl panel cover



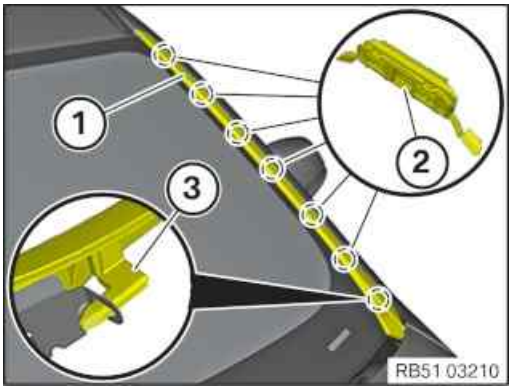
- Feed in and engage the rear cowl panel cover (1).

19 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▶ **Install the gutter strip on the windscreen**



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

20 – Install left and right wiper arm

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

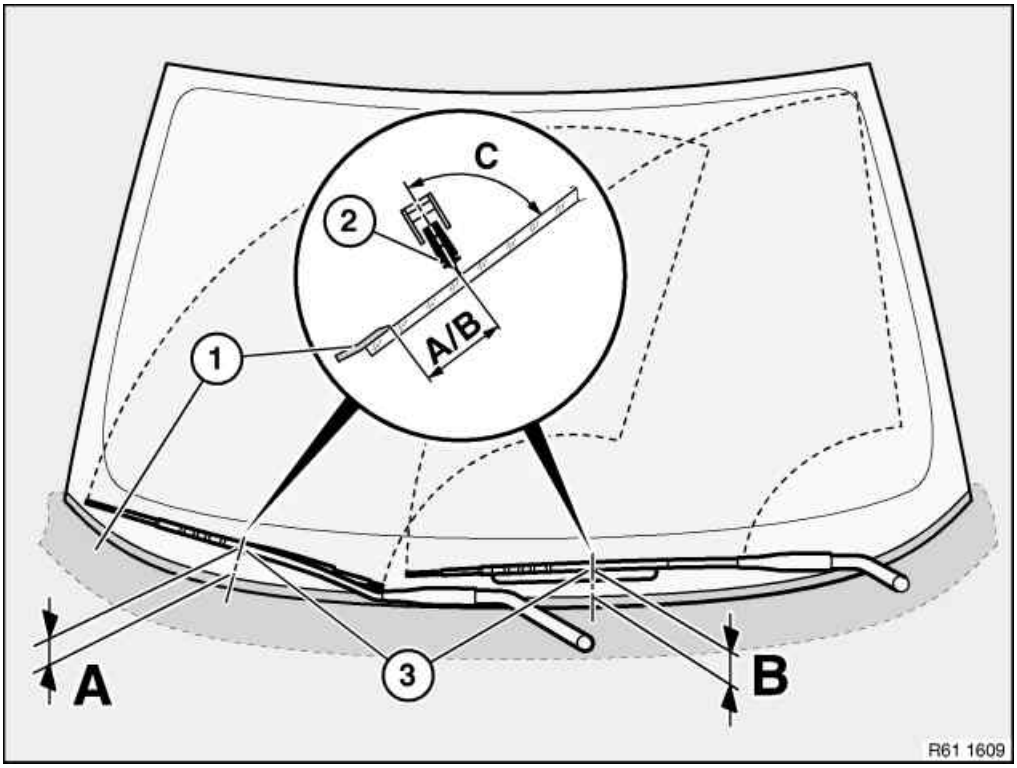
▸ **Install the wiper arm**

TECHNICAL INFORMATION

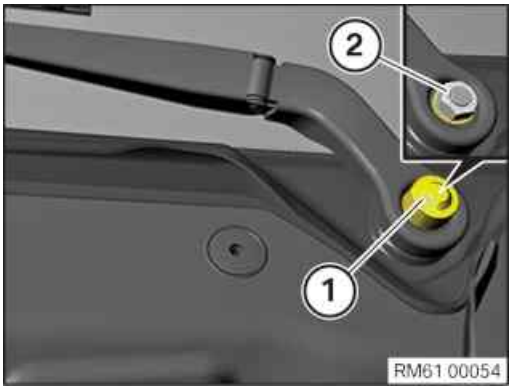
The wiper system must be in zero position.

After installing the cowl panel cover and before fitting the wiper arm:

Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Tighten nut (2).

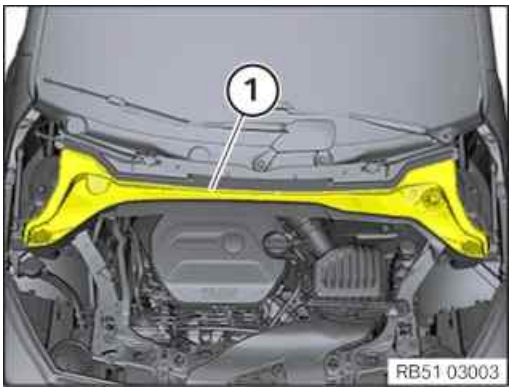
Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

21 – Installing front cowl panel cover

cardiagn.com

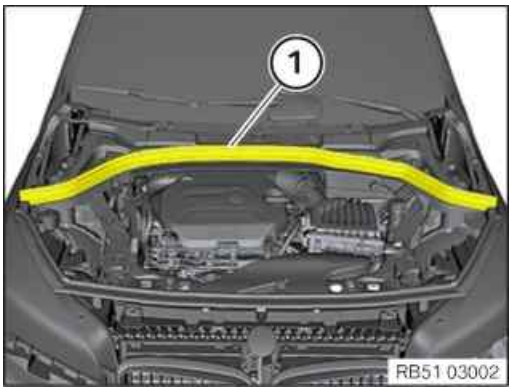


- Insert the cowl panel cover front (1) to the rear and install.
- Check cowl panel cover at front is correctly seated (1).

22 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

23 – Reset the adaptations of the exhaust-gas recirculation valve

TECHNICAL INFORMATION

- The **Reset adaptation** service function must be carried out when the exhaust-gas recirculation valve is renewed.

- Connect diagnosis system:
  - Service functions
  - Power train
  - Digital Diesel Electronics
  - Reset adaptations

11 71 501 Replacing the exhaust-gas recirculation valve

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

PRELIMINARY WORK

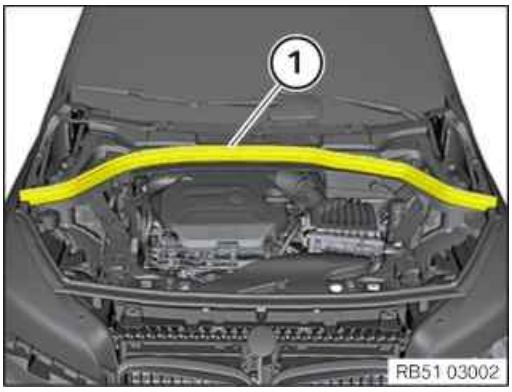
1 – Disconnecting all battery earth leads

- See additional information.

2 – Remove the seal for the rear bonnet

NOTICE

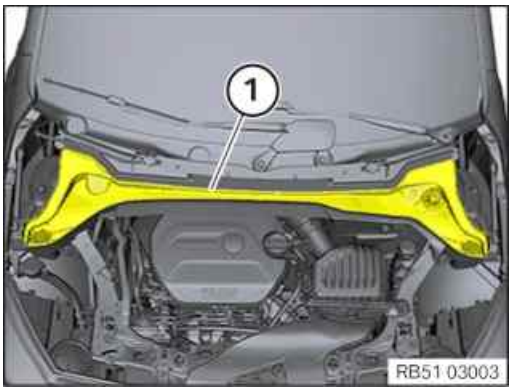
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

3 – Removing front cowl panel cover

cardiagn.com



- Guide the front cowl panel cover (1) out toward the top and remove it.

4 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

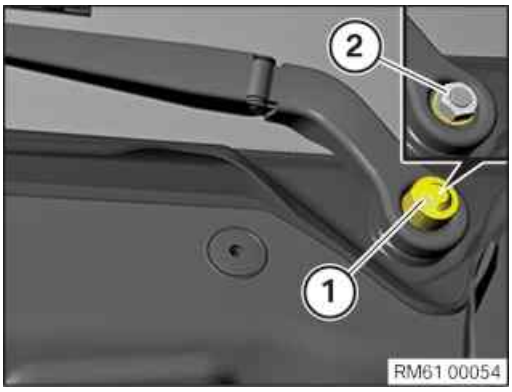
▶ **Remove the wiper arm**

RISK OF DAMAGE

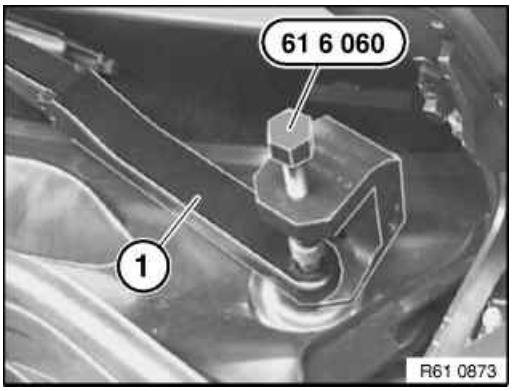
Damage to wiper console

While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.



- Remove the protective cap (1).
- Loosen nut (2).



- Pull off the wiper arm (1) using special tool .

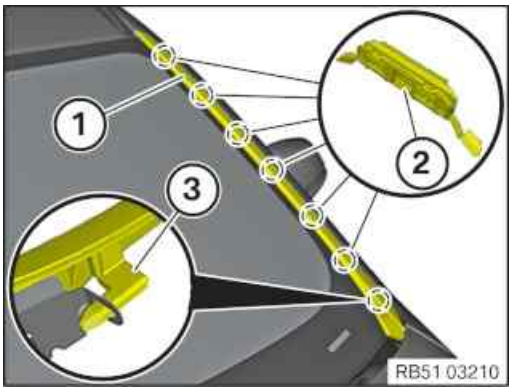
5 – Remove the gutter strip on the windscreen on the left and right

cardiagn.com

NOTICE

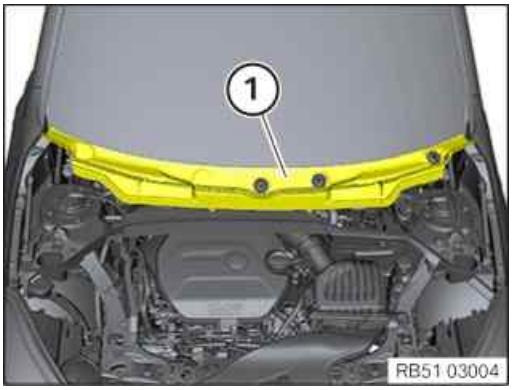
Description is for left component only. Procedure on the right side is identical.

▶ **Remove the gutter strip on the windscreen**



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

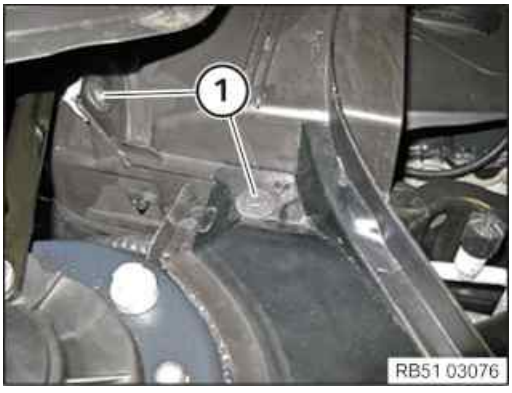
6 – Remove the rear cowl panel cover



- Disengage and guide out the rear cowl panel cover (1) towards the top.

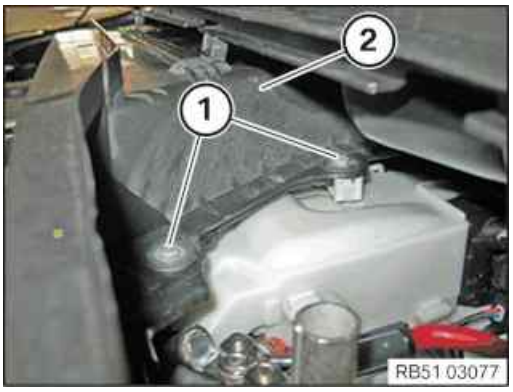
7 – Removing the upper bulkhead cover

- Loosen screws (1).



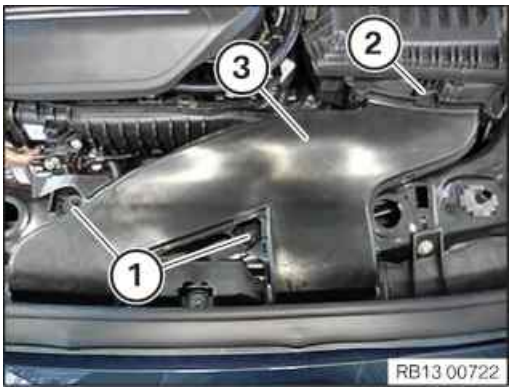
- Loosen screws (1).

cardiagn.com



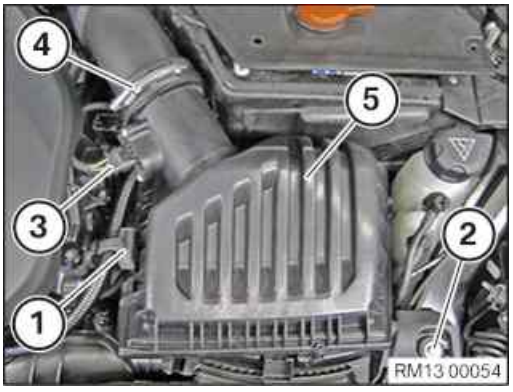
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

8 – Remove the intake neck for intake silencer housing



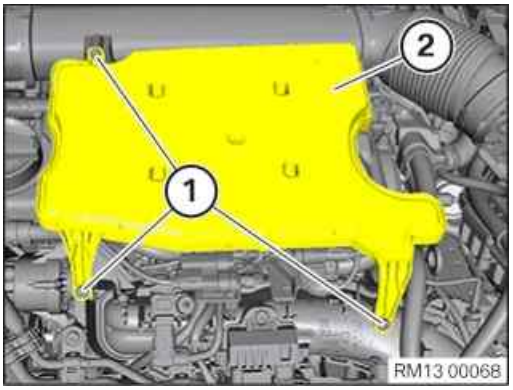
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

9 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

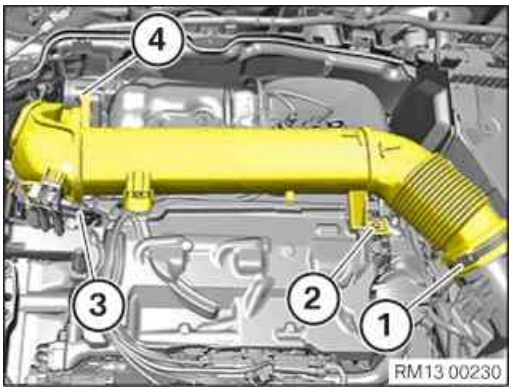
10 – Remove resonator



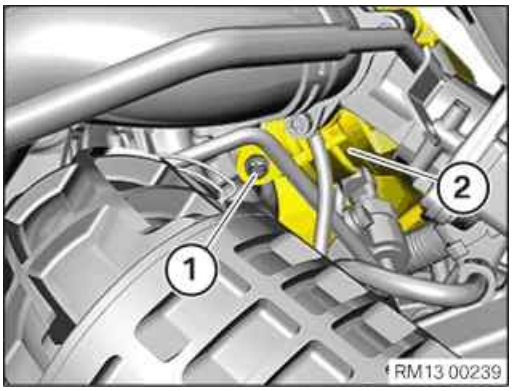
- Loosen screws (1).
- Guide out and remove the resonator (2).

11 – Partially detach the clean air pipe

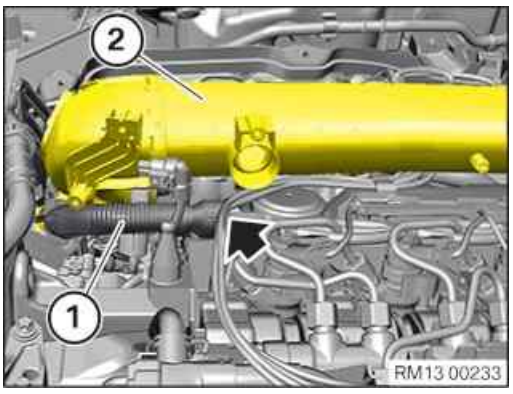
cardiagn.com



- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).



- Unscrew the screw (1) from the clean air pipe (2).



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

- Thread out the clean air pipe (1) and set it aside as shown.

12 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

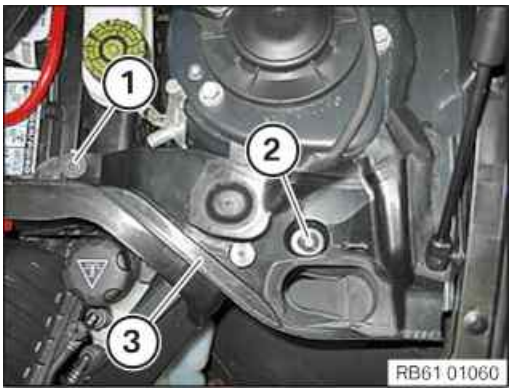
- Do not pull on the wires when disconnecting connectors and plug connections.

TECHNICAL INFORMATION

Follow instructions for removing and installing control units.
For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

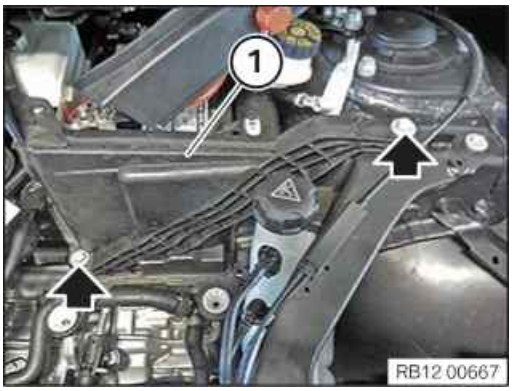
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



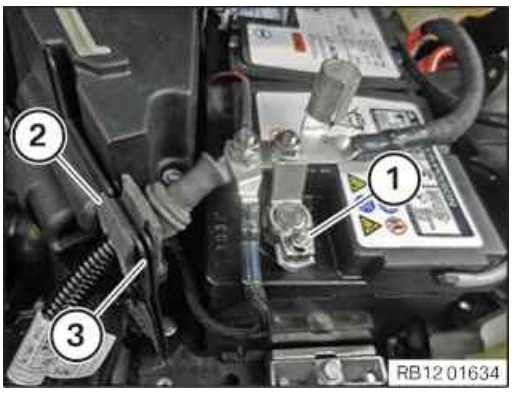
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

cardiagn.com

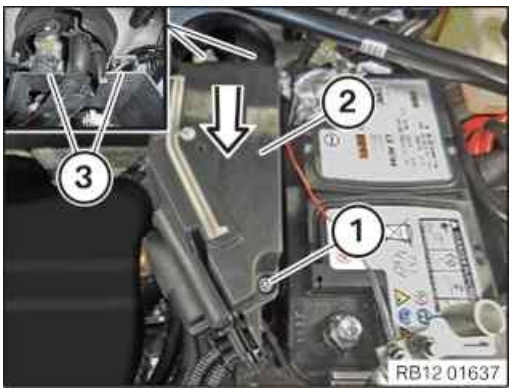
- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.



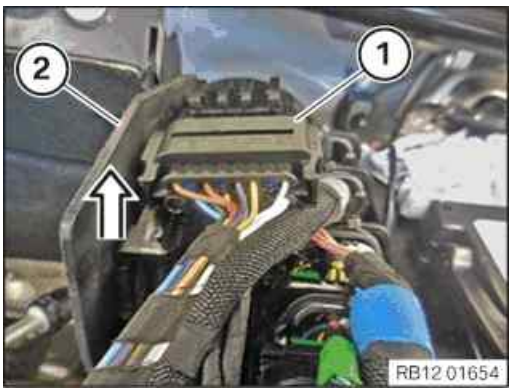
- Remove screws (arrows).
- Guide out tension strut (1) and remove.



- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

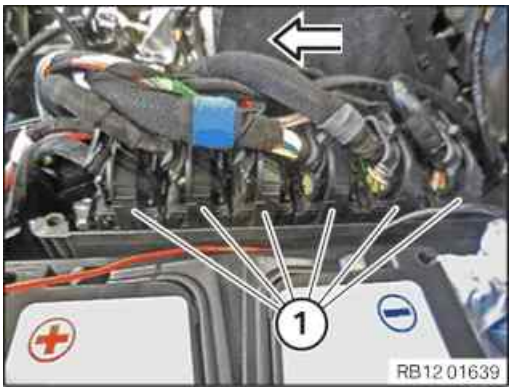


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

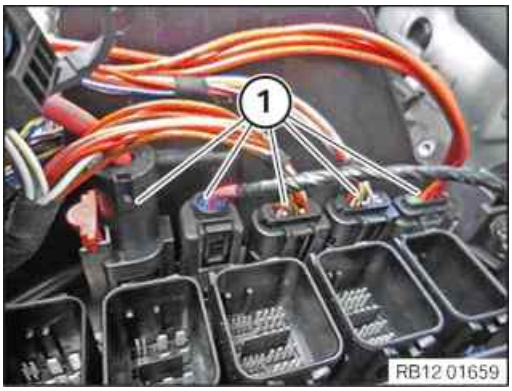


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

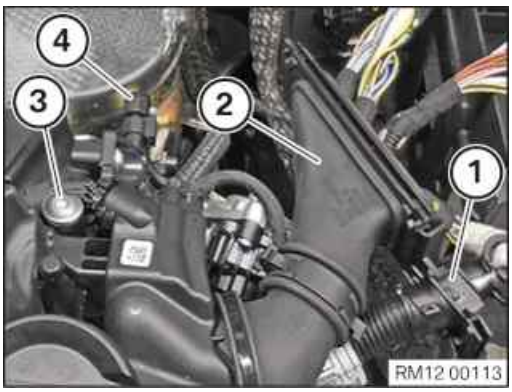
cardiagn.com



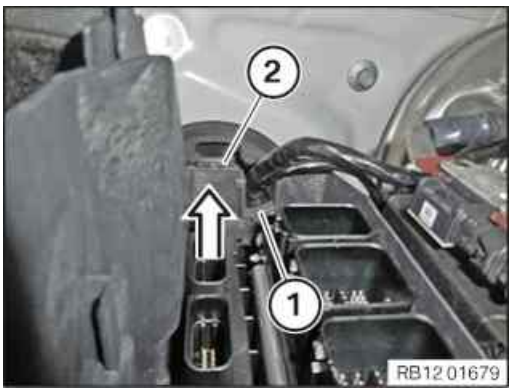
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



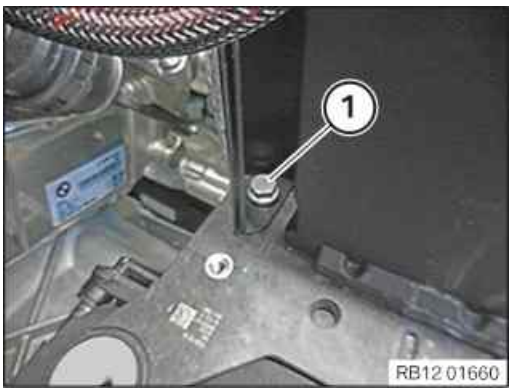
- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

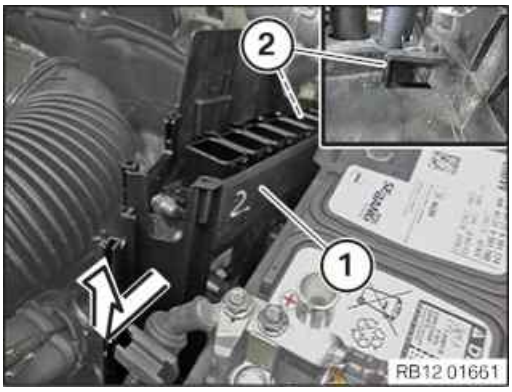


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



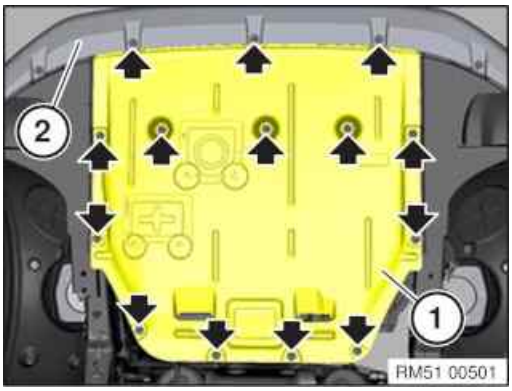
- Loosen screw (1).

cardiagn.com



- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

13 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

MAIN WORK

14 – Removing the exhaust-gas recirculation valve

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

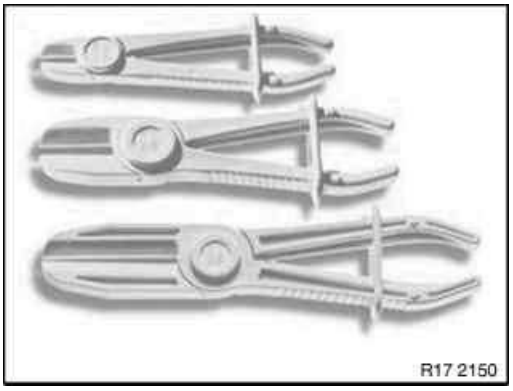
TECHNICAL INFORMATION

Use commercially available pinch-off tools to pinch off the coolant hoses.

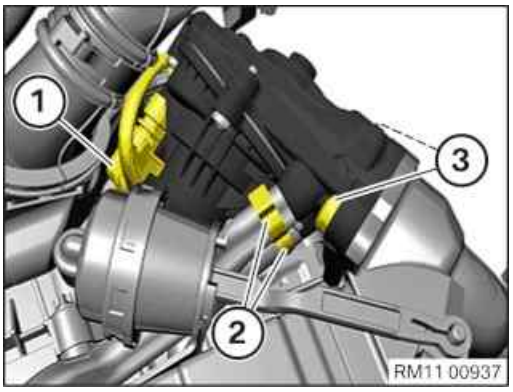
cardiagn.com

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

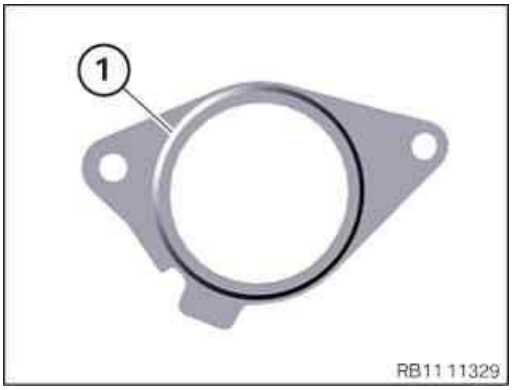


- Use commercially available disconnection tools to pinch off the coolant lines.



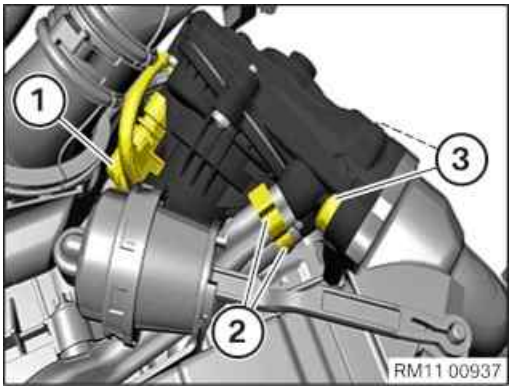
- Unlock and disconnect the plug connection (1).
- Loosen screws (3).
- Unfasten hose clamps (2).
- Detach coolant hoses.
- Remove the exhaust-gas recirculation valve .

15 – Installing the exhaust-gas recirculation valve



- Renew the gasket (1).

  Parts: Gasket
- Insert seal (1) on exhaust-gas recirculation cooler and install.

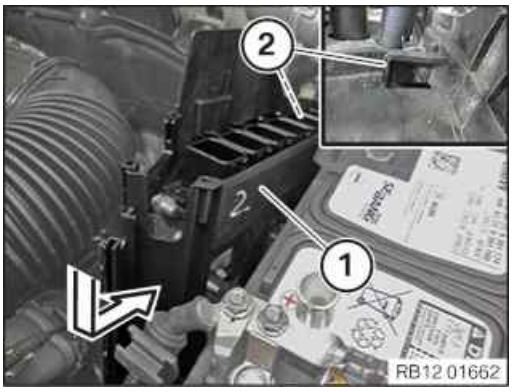


- Replace hose clamps.

  Parts: Hose clamps
- Slide coolant hoses (2) with hose clamps onto the exhaust-gas recirculation valve.
- Make sure that the coolant hoses (2) are not mounted twisted.
- Secure hose clamps.
- Ensure correct fitting of the seal on the exhaust-gas recirculation valve and on the exhaust-gas recirculation cooler.
- Install the exhaust-gas recirculation valve .
- Insert screws (3) by one turn.
- Connect and lock the connector (1).

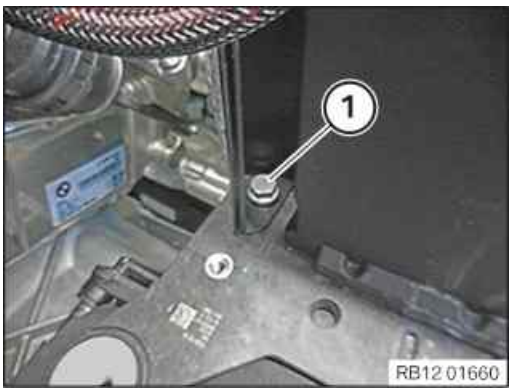
  The connector must lock audibly.

cardiagn.com



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

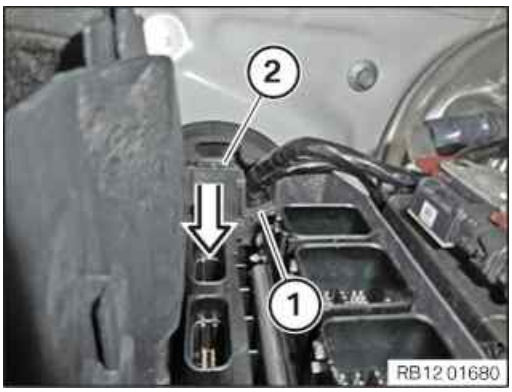
- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



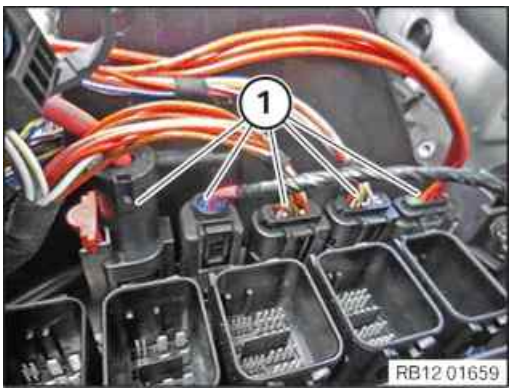
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm

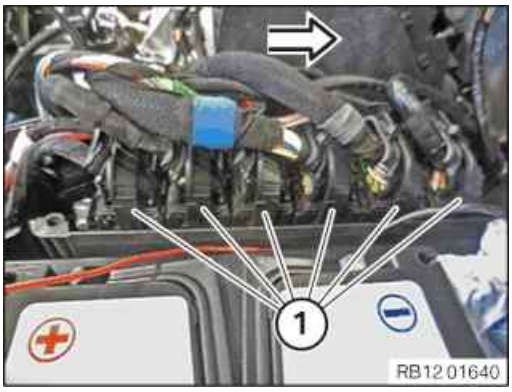


- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

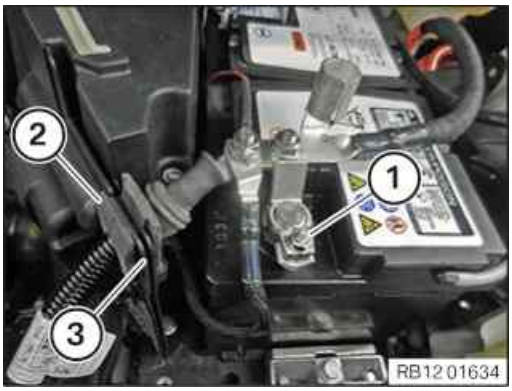


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

cardiagn.com



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

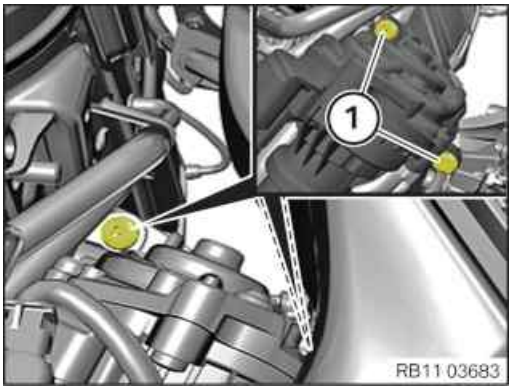


- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

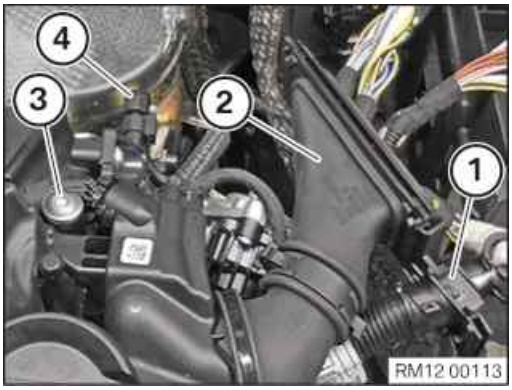
- Connect diagnosis system.
- Carry out the service function "Setting the exhaust-gas recirculation valve installation position":
  - Power train
  - Digital Diesel Electronics
  - Exchange the exhaust-gas recirculation valve
  - Exhaust-gas recirculation valve installation position



- Tighten the bolts (1) with conventional tools.
-

Exhaust-gas recirculation valve to exhaust-gas recirculation cooler

M6			10 Nm



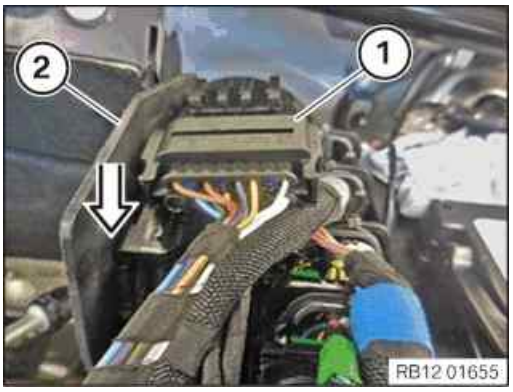
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

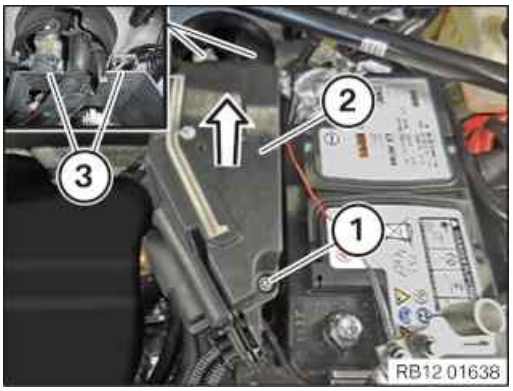
TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

cardiagn.com



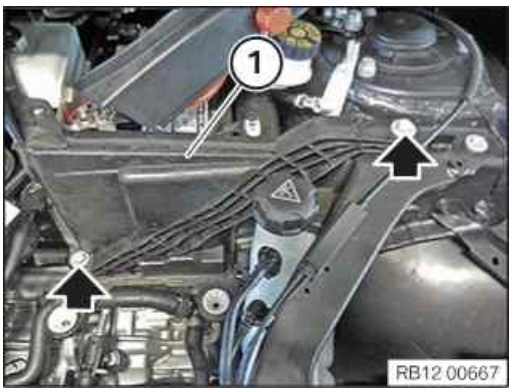
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides in the direction of arrow (3) and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm



- Feed in and install tension strut (1).
- Tighten screws (arrows).

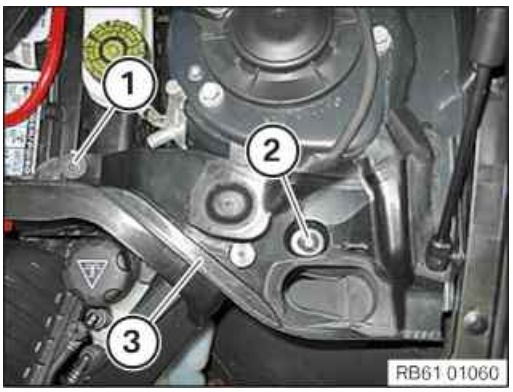
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

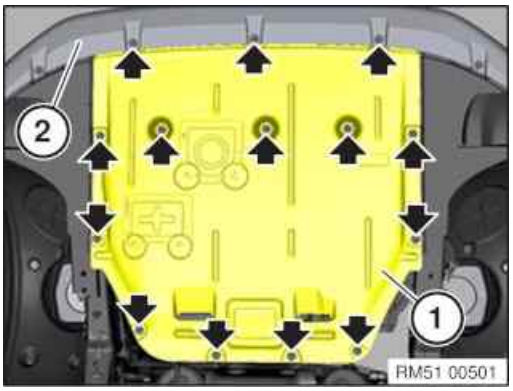
▸ **Delete adaptations**

cardiagn.com

- Connect diagnosis system.
  - Power train
  - Digital Diesel Electronics
  - Reset adaptations
  - Delete adaptations

POSTPROCESSES

16 – Installing the front underbody protection

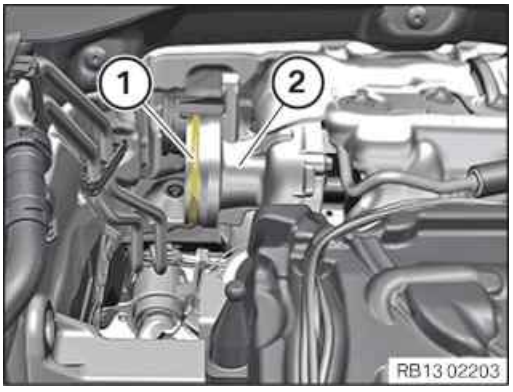


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

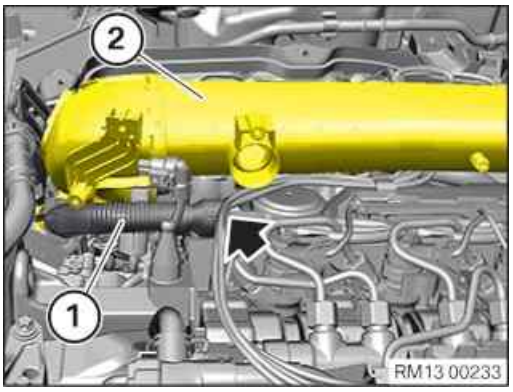
			3 Nm

17 – Partially securing clean air pipe



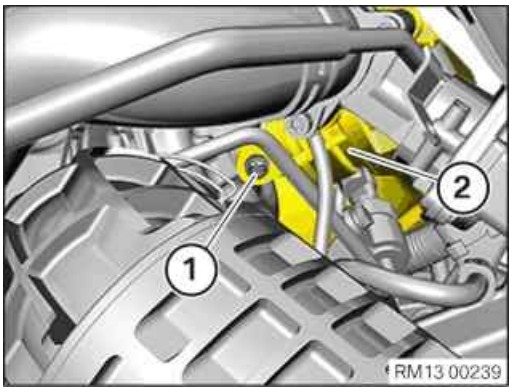
- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

- Feed in clean air pipe (1) and install.



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.

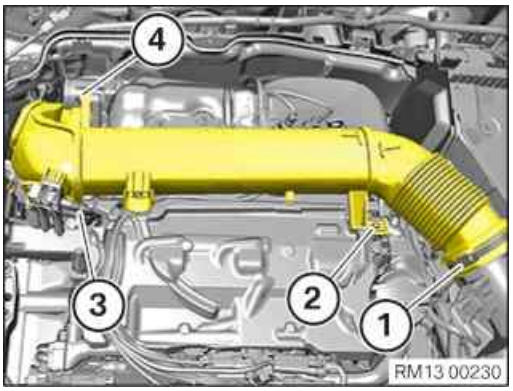
cardiagn.com



- Tighten screw (1) from clean air pipe (2).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

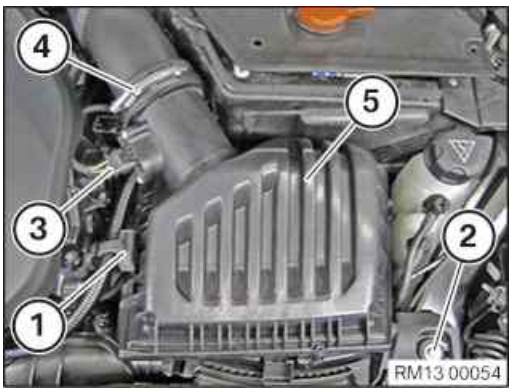
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

18 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing

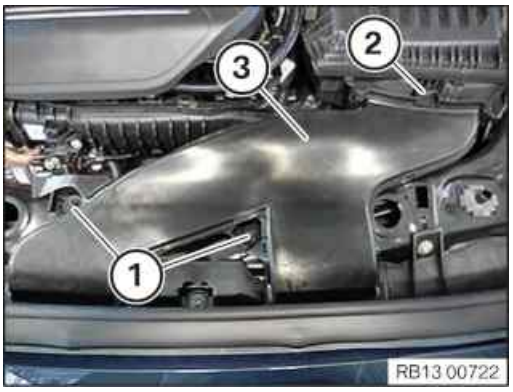
Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

19 – Install the intake neck for the intake filter housing

cardiagn.com



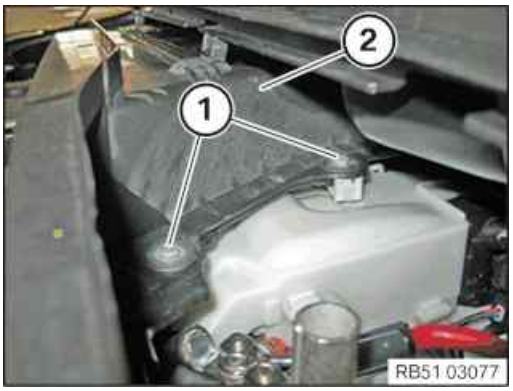
- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

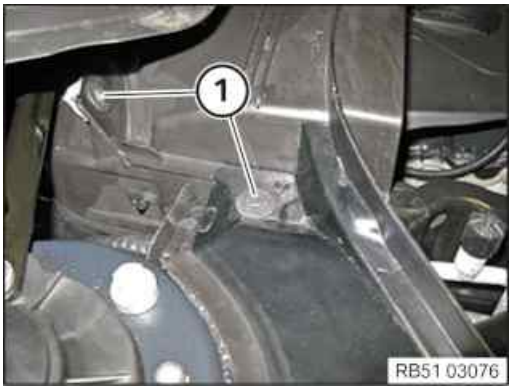
20 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

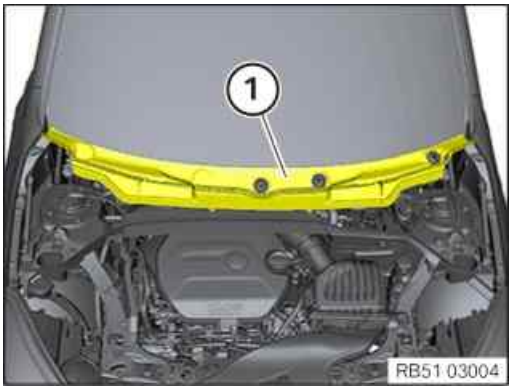
Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

21 – Install the rear cowl panel cover



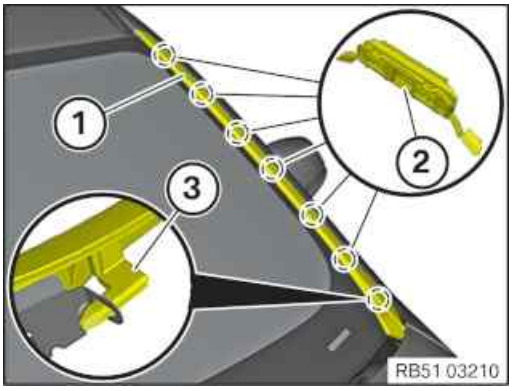
- Feed in and engage the rear cowl panel cover (1).

cardiagn.com

22 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.



▸ **Install the gutter strip on the windscreen**

- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

23 – Install left and right wiper arm

NOTICE

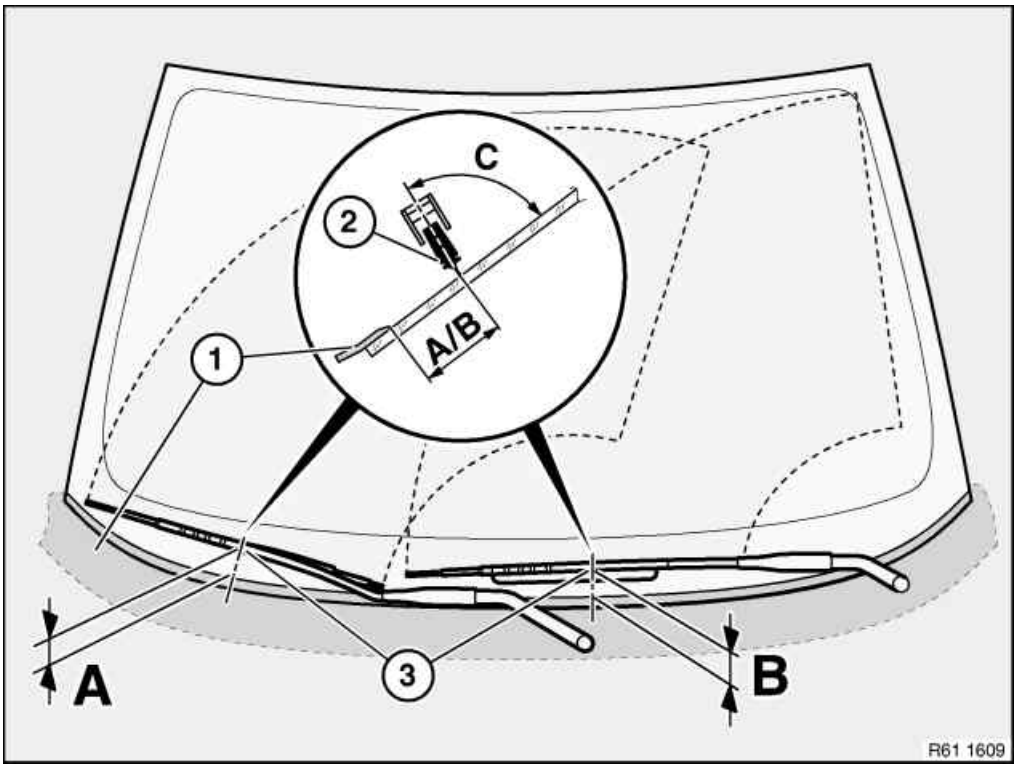
Description is for left component only. Procedure on the right side is identical.

▸ **Install the wiper arm**

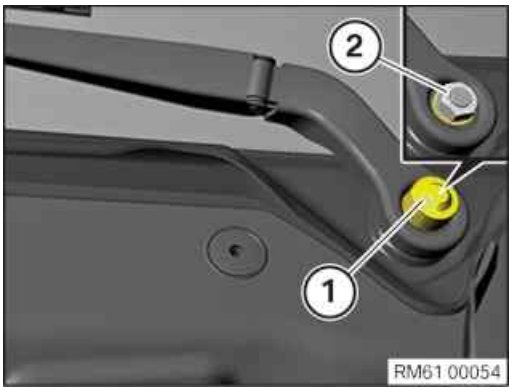
TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.

cardiagn.com



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

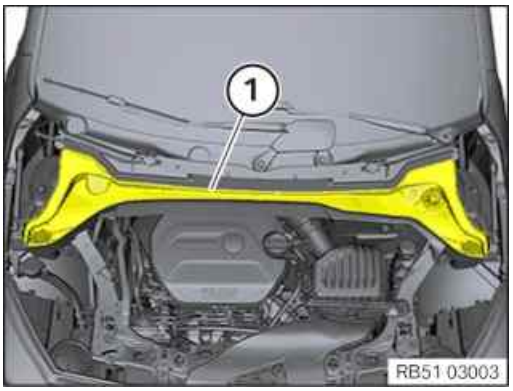
- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

24 – Installing front cowl panel cover



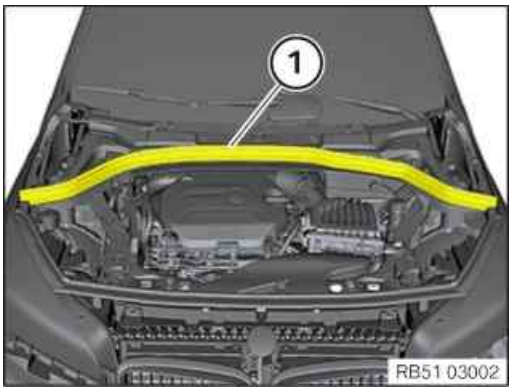
- Insert the cowl panel cover front (1) to the rear and install.
- Check cowl panel cover at front is correctly seated (1).

25 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

26 – Checking coolant level and topping up if needed

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.

For additional information see:

Main group 17

17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Check coolant level in coolant expansion tank (1) and adjust to the maximum if needed.

11 74 559 Replace electric valve for vacuum control of water pump

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com

PRELIMINARY WORK

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

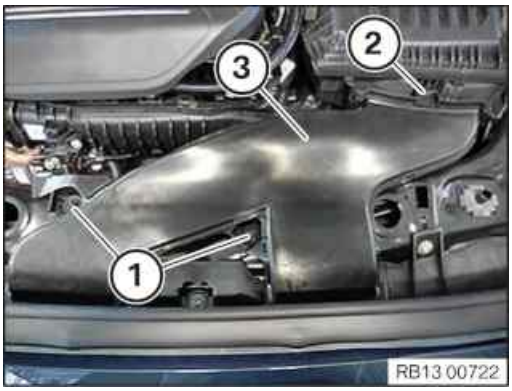
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

2 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

MAIN WORK

3 – Remove the electric changeover valve for the coolant pump vacuum control

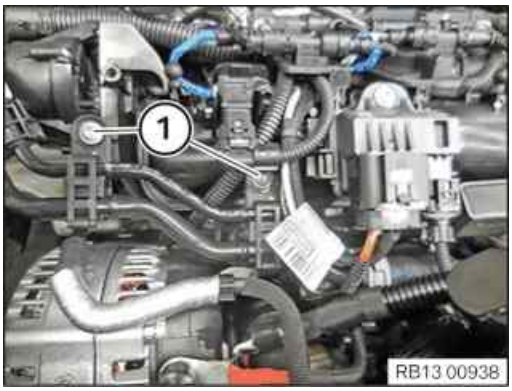
cardiagn.com

RISK OF DAMAGE

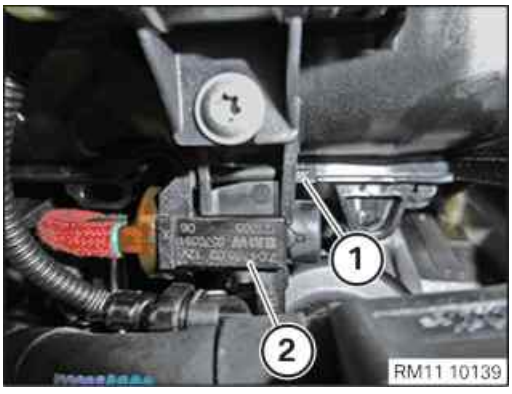
Electrostatic discharge.

Damage to or destruction of electrical components.

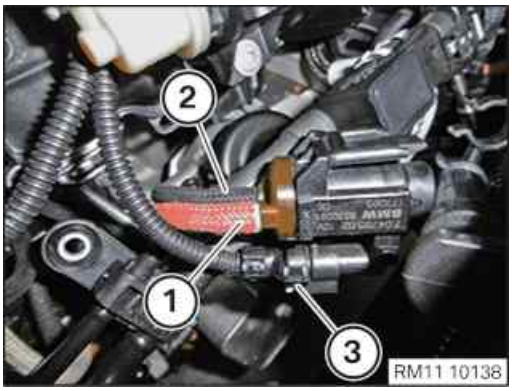
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Loosen screws (1).
- Release the fuel lines from the intake plenum.



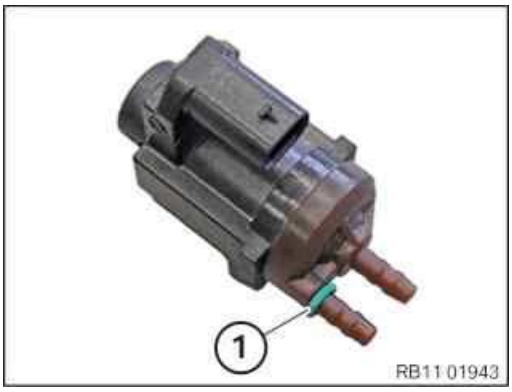
- Unlock the lock (1) on the electric changeover valve upward.
- Guide out the electric changeover valve (2) to the left and set it aside.



- Pull off vacuum hoses (1) and (2) from electric changeover valve .
- Make sure not to lose the green O-ring between the red vacuum hose (1) and the electric changeover valve.
- Unlock connector (3) and remove.

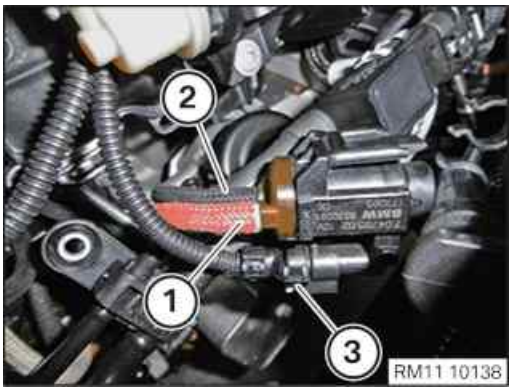
4 – Install the electric changeover valve for the vacuum control of the coolant pump

cardiagn.com



- Check whether the green O-ring (1) is present on the electric changeover valve.

  The green O-ring must **not** be missing.



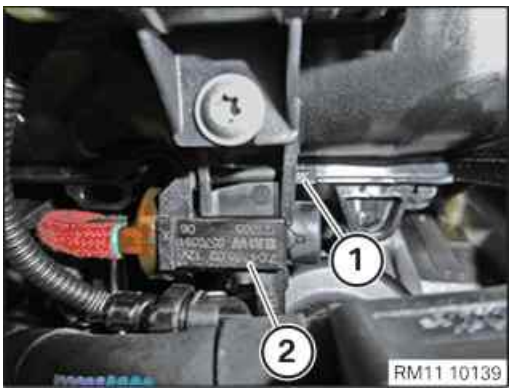
- Connect black vacuum hose (2) to the electric changeover valve.

Note: Unmarked connection.

- Connect red vacuum hose (1) to the electric changeover valve.

Note: With green connection marked on the O-ring.

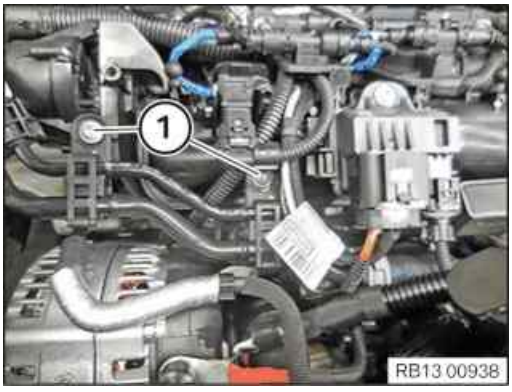
- Connect and lock the connector (3).
- Lock must snap audibly into place.



TECHNICAL INFORMATION

Latch mechanisms, guides and mounting elements must not be damaged or missing.

- Feed in electric changeover valve (2) and install in the holder from left to right.
- Lock (1) must audibly engage in the holder.



- Position fuel lines on manifold.
- Tighten the screws (1).

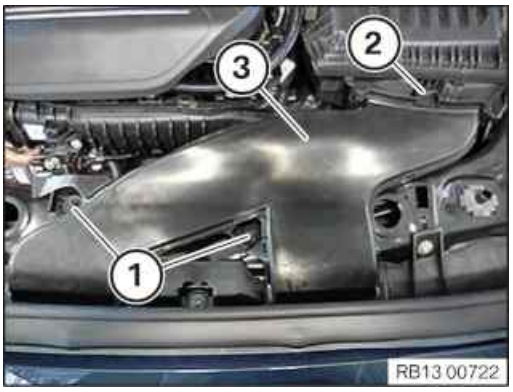
Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

POSTPROCESSES

5 – Install the intake neck for the intake filter housing

cardiagn.com



- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

6 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

11 74 050 Replacing electric valve for exhaust-gas recirculation

PRELIMINARY WORK

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

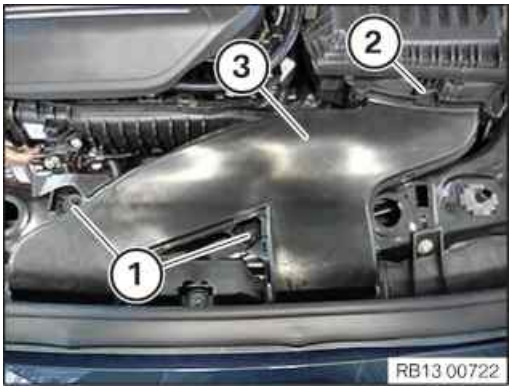
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

2 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

MAIN WORK

3 – Remove the electric changeover valve of the exhaust-gas recirculation

cardiagn.com

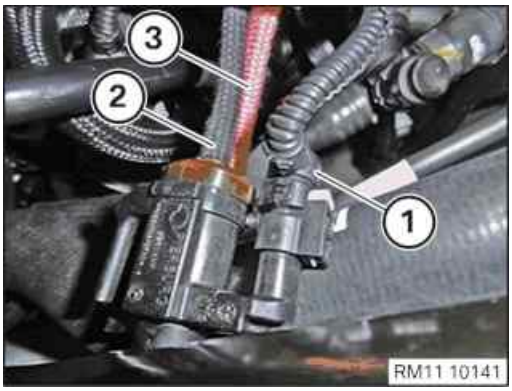
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

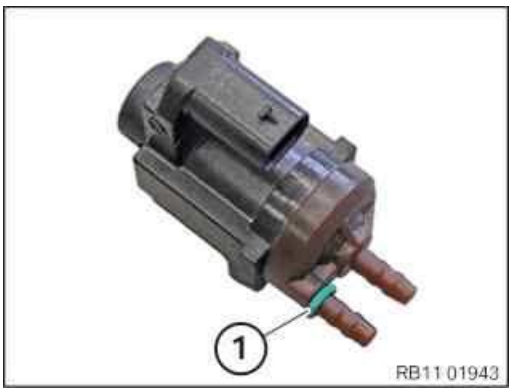
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock the lock (1).
- Guide out the electric changeover valve upwards and set it aside.



- Unlock and disconnect connector (1).
- Pull vacuum hoses (2) and (3) off the electric changeover valve **carefully**.
- Make sure the green O-ring between the red vacuum hose and the electric changeover valve is **not** lost.

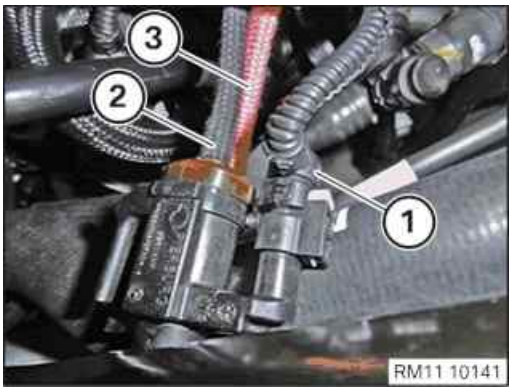
4 – Install the electric changeover valve for the exhaust-gas recirculation



- Check whether the green O-ring (1) is present on the electric changeover valve.

  The green O-ring (1) must **not** be missing.

cardiagn.com



- Connect red vacuum hose (2) to the electric changeover valve.

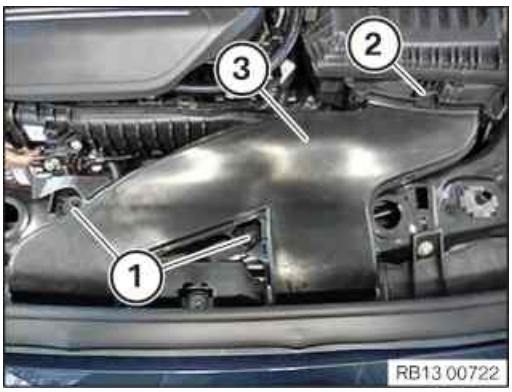
  The red vacuum hose (2) must be connected to the connection with the green O-ring.
- Connect black vacuum hose (2) to the electric changeover valve.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

- Feed in and install the electric changeover valve in the holder.
- The lock (1) must audibly engage in the holder.

POSTPROCESSES

5 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

6 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

cardiagn.com

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

00 11 500 Checking/topping up oil level in automatic transmission (AISIN F21FT)

Caution!

Use only the approved automatic transmission oil in this automatic transmission.

Failure to comply with this requirement will result in serious damage to the automatic transmission!

Note:
Level out oil level in automatic transmission via overflow connector.

Necessary preliminary work:

- Remove front underbody protection
- Remove intake filter housing

Removal:

Move selector lever to "P" position.

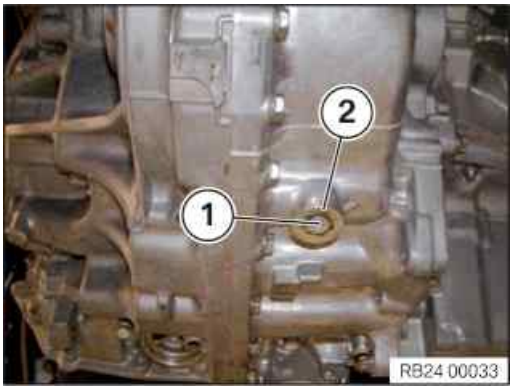
The vehicle must be horizontal and secured against rolling off.

Connect diagnosis system.

Select Service function: Transmission fluid adjustment.

Release oil filler plug (1) with Torx T55.

cardiagn.com



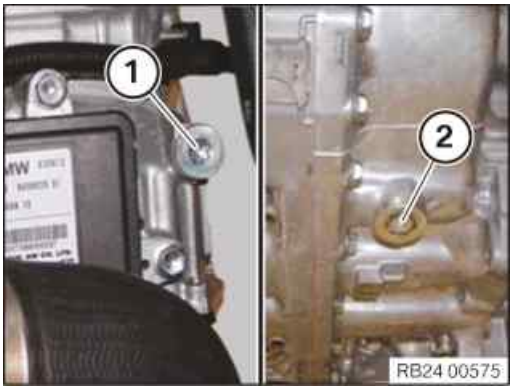
Draining transmission oil:

Release overflow plug (1) with Torx T40.

Undo oil drain plug (2) using 17 mm hexagon socket.

Tightening torque 24 11 1AZ.

cardiagn.com



Top up transmission oil. (Transmission oil has been drained)

Release oil filler plug (1) from engine compartment.

Tightening torque 24 11 3AZ.

Loosen the overflow plug (2) below at the transmission.

Tightening torque 24 11 2AZ.

Top up automatic transmission fluid at oil filler plug (1) until oil emerges at overflow plug (2).

Start engine and run at idle speed.

Check whether automatic transmission fluid emerges at overflow plug (2).

If not, fill automatic transmission fluid at the oil filler plug (1).

Actuate footbrake and at idle shift through all gears "P" to "D" twice for more than 2 seconds.

Then set switch to "P" position.

Recheck whether automatic transmission fluid emerges at the overflow plug (2).

Check the temperature of the automatic transmission fluid with the diagnosis system.

Increase temperature of automatic transmission fluid to 35 ... 45 °C.

Top up automatic transmission fluid until it flows over.

Screw in oil filler plug (1) and overflow plug (2).

Tightening torque 24 11 2/3AZ.

Installation note:

Parts: Renew sealing rings.

Check oil level (transmission oil temperature must be between 35 and 45°C):

Undo oil filler plug (1).

Slacken overflow plug (2).

Tightening torque 24 11 2/3AZ.

Start engine and run at idle speed.

Unscrew overflow plug (2).

Check whether automatic transmission fluid emerges at overflow plug (2).

If not, fill automatic transmission fluid at the oil filler plug (1).

Top up automatic transmission fluid until it overflows at overflow plug (2).

Actuate footbrake and at idle shift through all gears "P" to "D" twice for more than 2 seconds.

Move switch to "P" position.

Check oil level again.

Seal screws when the oil emerges slightly from overflow plug (2).

Tightening torque 24 11 2/3AZ.

Installation note:

Parts: Renew sealing rings.

Required follow-up work:

- Install front underbody protection
- Install intake silencer housing
- Delete fault memory

cardiagn.com

Delete fault memory with the diagnosis system.

00 11 229 Oil change in manual gearboxes (GS6-58/59 BG/DG)

Recycling:

Catch and dispose of escaping transmission oil.

Observe country-specific waste disposal regulations

Note:

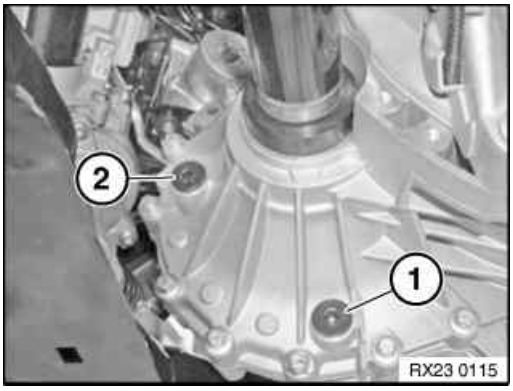
Gearbox is at normal operation temperature.

Attention!
Use only the approved transmission oil.

Failure to comply with this instruction will result in serious damage to the transmission.

Capacity, see BMW operating fluid.

The vehicle must be parked on a level surface in the workshop during transmission oil filling.



Unscrew oil drain plug (1) and allow oil to flow out completely.

Clean oil drain plug and reinstall.

Tightening torque 23 00 2AZ.

Unscrew filler/fluid level monitoring connector (2) and fill the transmission until the oil overflows. Allow excess oil to drain and screw in filler/fluid level monitoring connector again.

Tightening torque 23 00 2AZ.

11 00 670 Securing engine in installation position

Special tools required:

- 2 358 042
- 00 6 100
- 00 6 130
- 2 365 070
- 11 0 000
- 2 357 269
- 00 0 490

Warning!

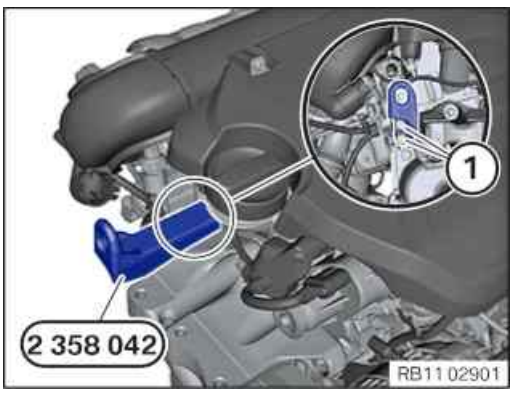
Danger of injury!

Observe following instructions relating to special tool:

1. Prior to each use, check the special tools for defects, modifications and operational reliability.
2. Damaged/modified special tools must not be used!
3. No changes or modifications may be made to the special tools!
4. Keep special tools dry, clean and free of grease.

Necessary preliminary tasks:

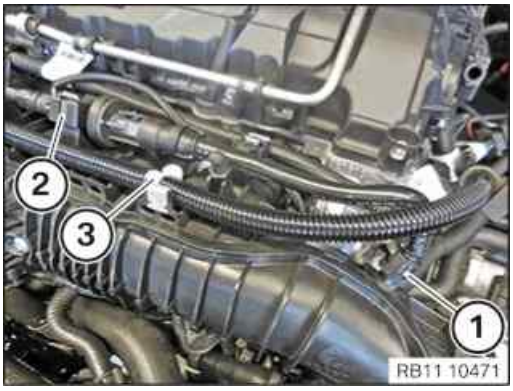
- Remove upper bulkhead cover



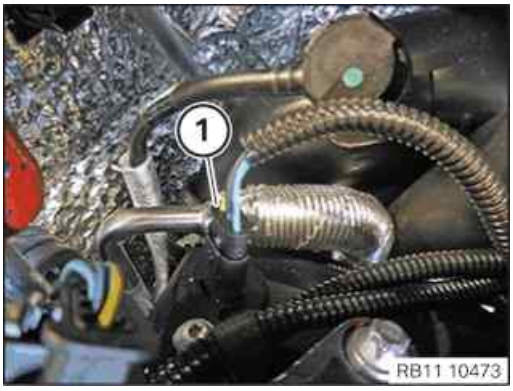
Only for B37 and B38engines:

Align special tool 2 358 042 on the engine and secure with screws (1).

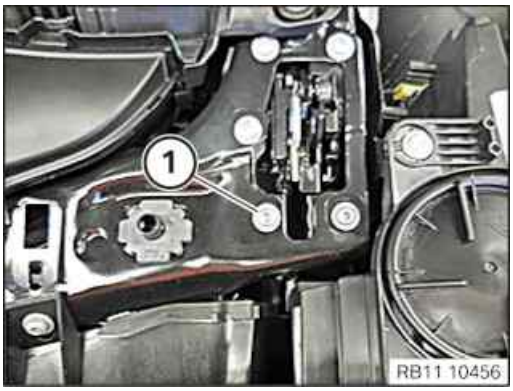
cardiagn.com



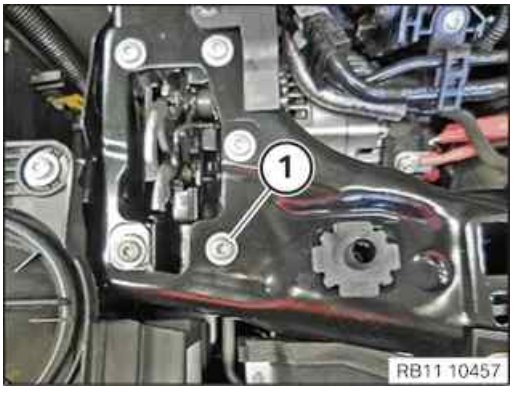
Unlock and disconnect line (1).
Pull off line from holder (2).
Release cable (3) from holder.



Unlock connector (1) and pull off.

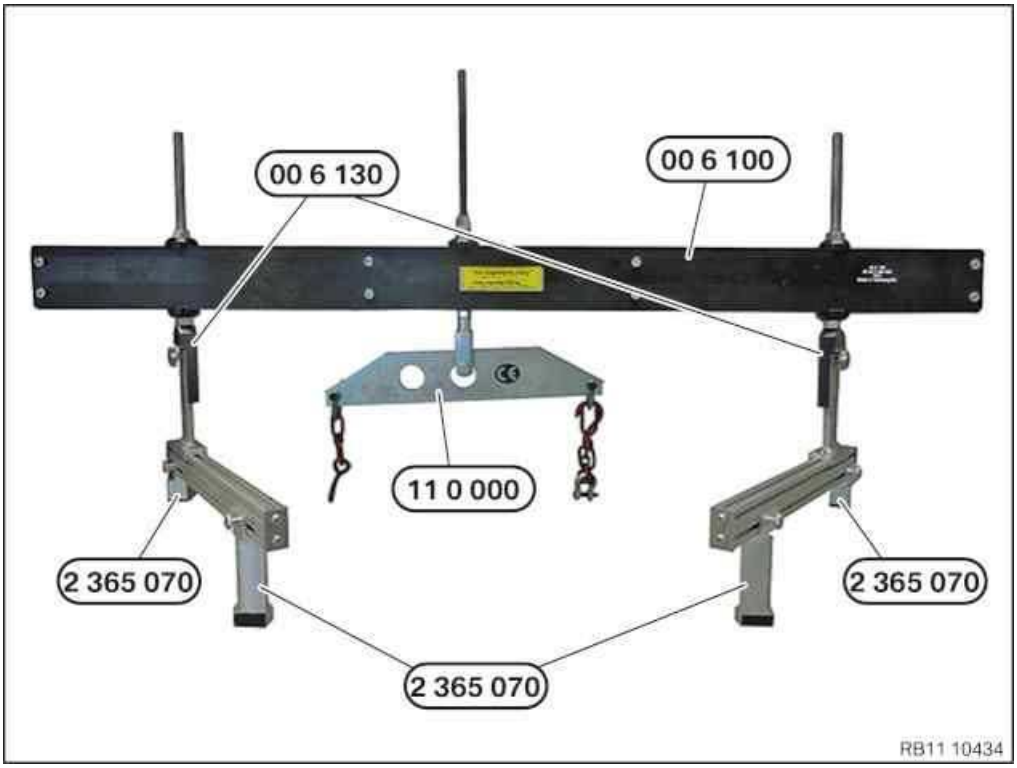


Release screw (1) from left engine compartment lock.



Release screw (1) from right engine compartment lock.

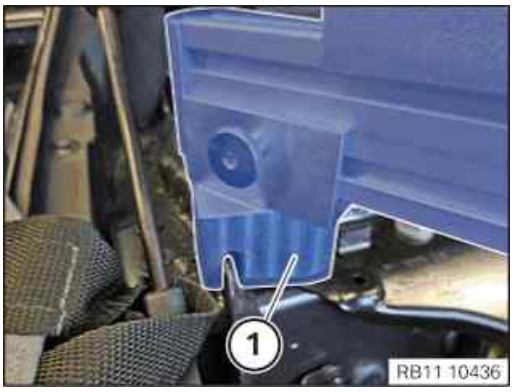
cardiagn.com



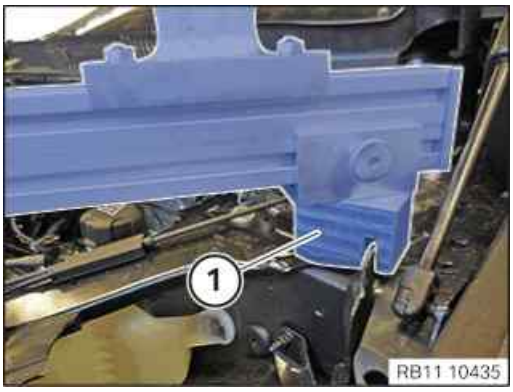
Remount engine bridges 00 6 100 with special tool 00 6 130 , 2 365 070 and 11 0 000 on the vehicle.

With the help of an assistant, fit the entire cross-member 00 6 100 onto the vehicle.

.

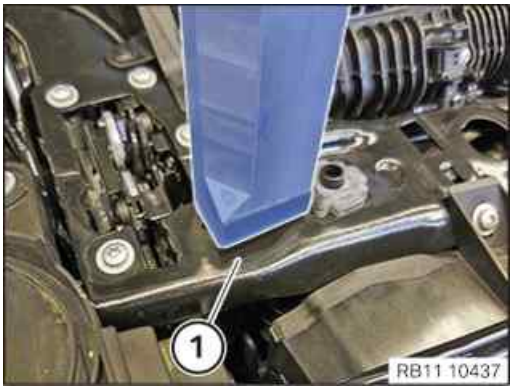


(1) = rear right support point.

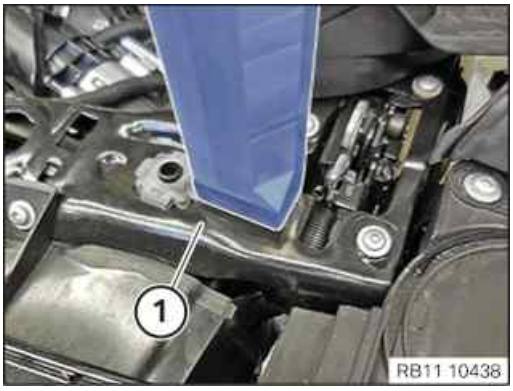


(1) = rear left support point.

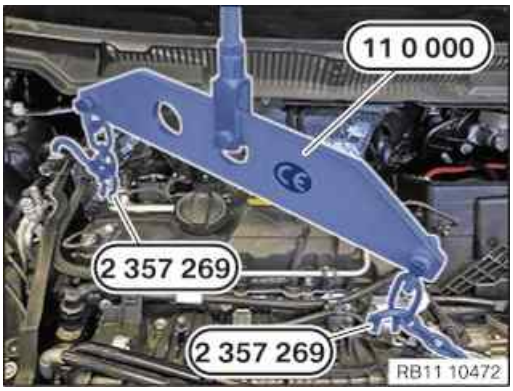
cardiagn.com



(1) = front right support point.



(1) = front left support point.



After mounting the cross-member,

Attach special tool 2 357 269 to the chains and engine mounting lugs.

cardiagn.com

Screw in shackle screws (2 and 3).

Slightly pretension the spindle (1) of the engine support beam.

Warning!
Danger of injury!

Tighten down all adjusting screws, knurled screws and nuts on cross-member 00 6 100 and on special tool 00 0 490 .

Attention!

Avoid a change of engine position in the transverse or longitudinal direction!

Always make sure there is sufficient clearance between the engine (or its add-on parts) and the body.
