11 00 039 Check compression of all cylinders

PRELIMINARY WORK

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

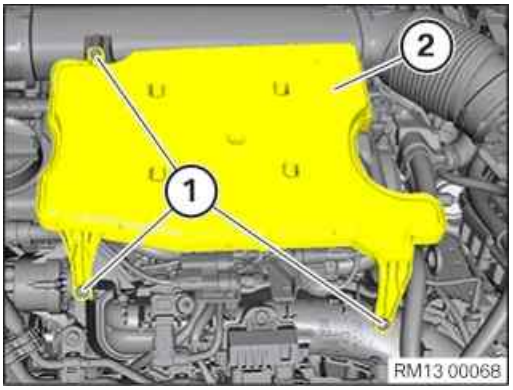
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

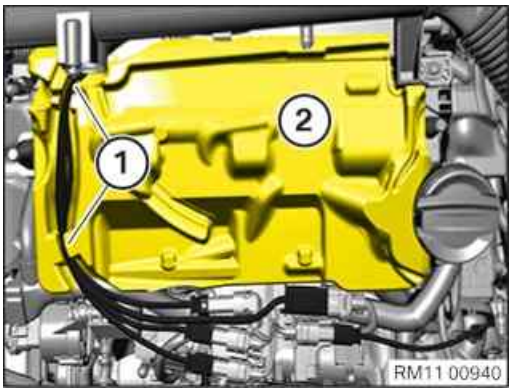
- Unclip the acoustic cover from the marked areas towards the top.

2 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

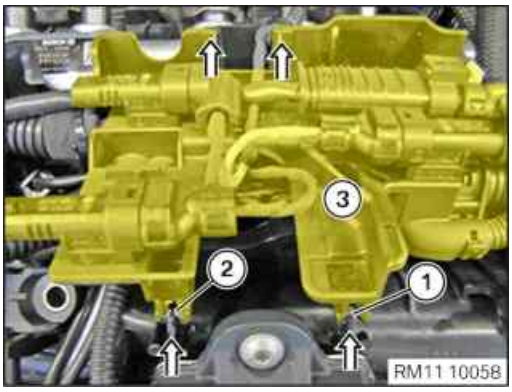
3 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

cardiagn.com

4 – Removing the cable clips from the intake plenum



- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.

5 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

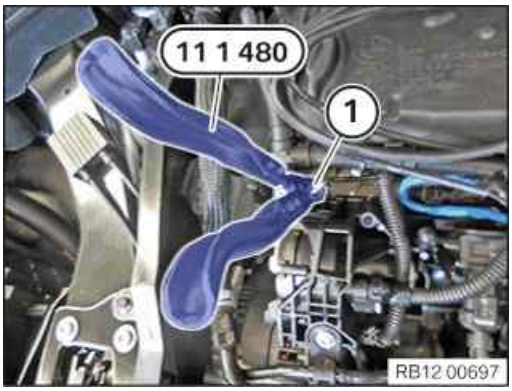
cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



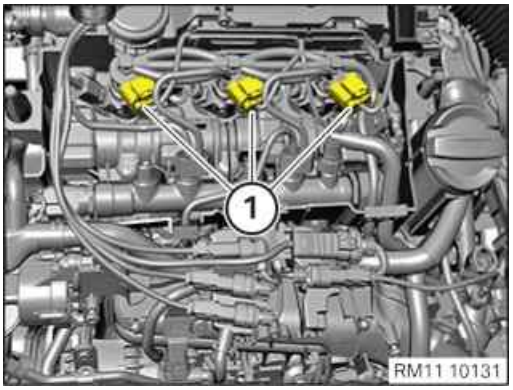
- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool **0 491 068 (11 6 050)** or conventional tools.
- Feed out preheating elements and remove.

cardiagn.com

MAIN WORK

6 – Check compression



- Unlock all connectors (1) and disconnect them from the injectors.

  This prevents injection.

- Screw special tools **0 496 146 (11 8 880)** and **0 493 129 (11 0 235)** into the bore holes of the individual cylinders.
- Connect an approved battery charger.

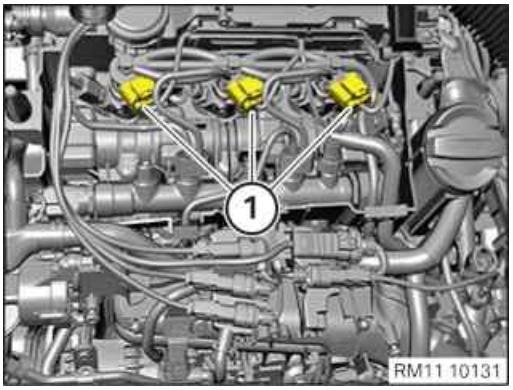
  The charger ensures constant battery voltage.
- With vehicles with manual gearbox: Ensure that no gear is engaged.
- Start engine.
- Check compression pressure and compare with the setpoint value.

  The number of engine revolutions for the compression check must be identical at each cylinder.

Compression pressure setpoint value

min. 16 bar

- Remove special tools **0 496 146 (11 8 880)** and **0 493 129 (11 0 235)**.



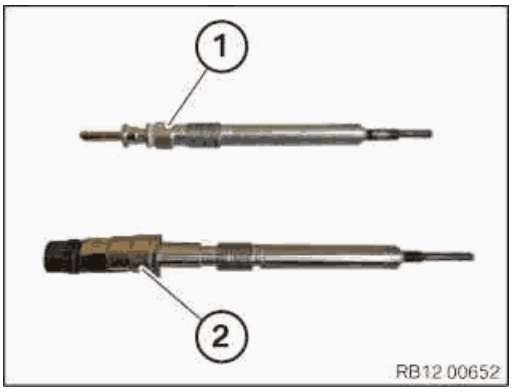
- Attach all connectors to the injectors.

  The connectors must lock audibly.

POSTPROCESSES

7 – Install glow elements

cardiagn.com

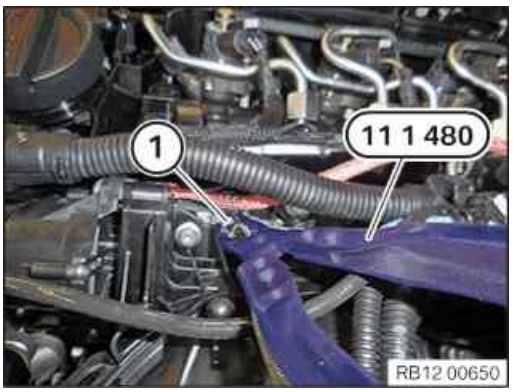


- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

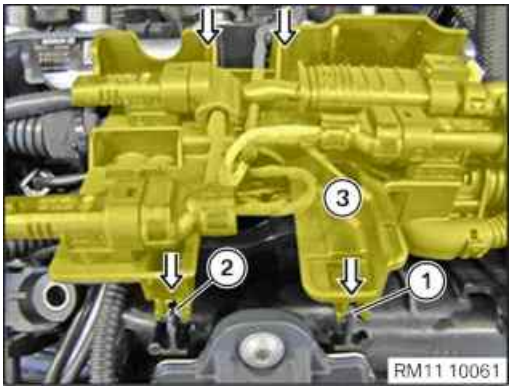
Glow element		Tightening torque	13 Nm



- Connect connectors (1) and lock.

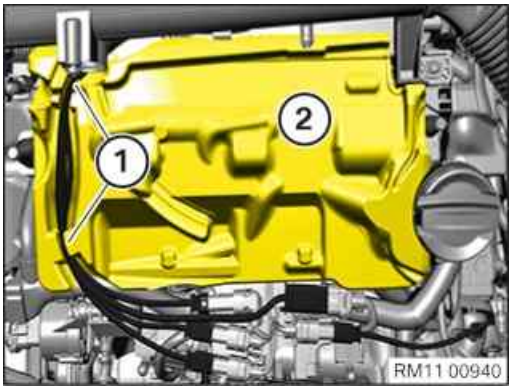
  The connector (1) must engage audibly.

8 – Installing the cable clip for the intake plenum



- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).

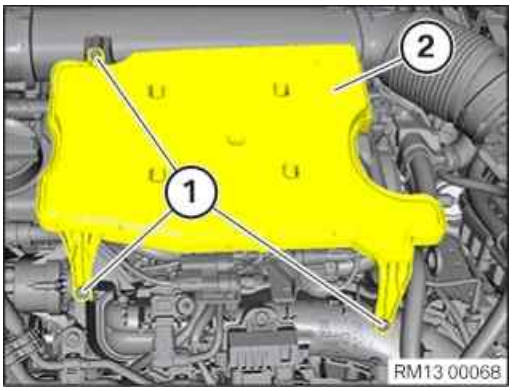
9 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

cardiagn.com

10 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

11 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

cardiagn.com

11 00 039 Checking compression of all cylinders (B37C)

Special tools required:

- 11 8 880
- 11 0 235

Necessary preliminary tasks:

- Remove all glow elements.

Warning!

On vehicles with manual gearbox:

There must be no drive position engaged during the starting operation.

Important!

To prevent the injection system from injecting, it is necessary to disconnect the injection system plug connections.

Screw in special tools11 8 880 and 11 0 235 .*Note:*
The compression check on all cylinders must have a constant battery voltage. If necessary, connect an auxiliary battery or charger.

The number of engine revolutions for the compression check must be identical for each cylinder. (The measuring result could be falsified.)

Technical data.

Required follow-up work:

- Install glow elements
- Check function of DDE, erase fault memory if necessary

cardiagn.com

00 Danger of injury if oil comes into contact with eyes and skin

Danger of injury!

Contact with eyes or skin may result in injury!

Possible symptoms are:

- Impaired sight
- Irritation of the eyes
- Reddening of the skin
- Rough and cracked skin

Protective measures/rules of conduct:

- Wear safety goggles.
- Wear oil-resistant protective gloves.
- Observe country-specific safety regulations.

First aid measures:

- Eye contact: Immediately flush eyes with lots of water for at least 15 minutes. In the case that it is available, use an eye wash bottle. If eye irritation persists, consult a doctor.
- Skin contact: Wash off with soap and water immediately. If irritation persists, consult a doctor.

  Note: Do not use solvents/thinners.

cardiagn.com

00 Danger of poisoning if oil is ingested/absorbed through the skin

Danger of poisoning!

Ingesting oil or absorbing through the skin may cause poisoning!

Possible symptoms are:

- Headaches
- Dizziness
- Stomach aches
- Vomiting
- Diarrhoea
- Cramps/fits
- Unconsciousness

Protective measures/rules of conduct:

- Fill oil in appropriately marked containers only.
- Do not fill oil in containers meant for drinking out of. (bottles for beverages, glasses or cups)
- Observe country-specific safety regulations.

First aid measures:

- Do not induce vomiting.

  If the person affected is still conscious, he/she must rinse out their mouth with water, drink plenty of water and consult a doctor immediately.

  Do not administer anything to an unconscious person via their mouth; place them in a stable position on their side. Call the emergency doctor immediately.

cardiagn.com

Engine identification

Engine number at the marked surface.

Replacement drives are already assigned a number containing the identification and engine number at the factory.

The old drive number must be imprinted for replacement crankcases.

Magnesium crank cases feature a label, the engine number does not need to be embossed.

11 00 ... Engine oil change (B37C)

Warning!

Risk of scalding!

Carry out work on the vehicle only when wearing oil- and heat-resistant protective gloves incl. forearm protection, face guard and protective apron.

Attention!

Carry out engine oil service only when the engine is at operating temperature.

Observe the exact engine oil filling capacity.

Overfilling the engine with engine oil will result in **engine damage**.

Attention!

Risk of damage!

When working on the engine oil, coolant or fuel circuit, it is essential always to protect the alternator against dirt contamination.

Cover alternator with suitable materials.

Recycling:

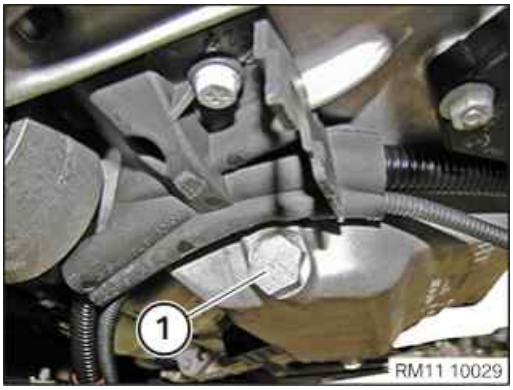
Catch and dispose of drained engine oil in a suitable collecting vessel.

Observe country-specific waste disposal regulations.

Necessary preliminary tasks:

- Opening the oil filler cap
- Open service cap in the underbody protection

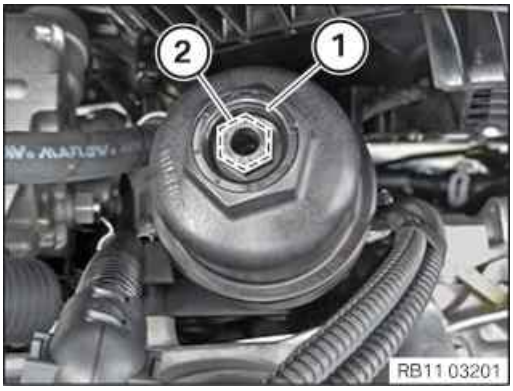
Removal:



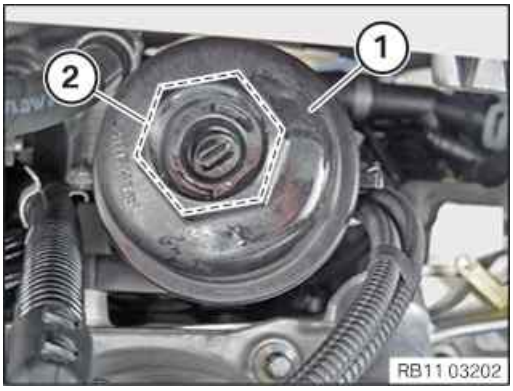
Open oil drain plug (1) and drain engine oil.

Drain the engine oil.

cardiagn.com

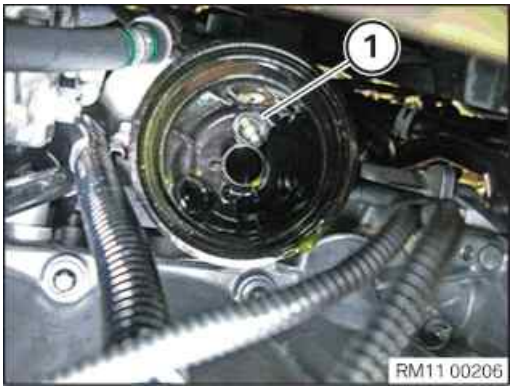


Unscrew the oil drain plug (1) at the hexagon head (2).
Drain the engine oil.

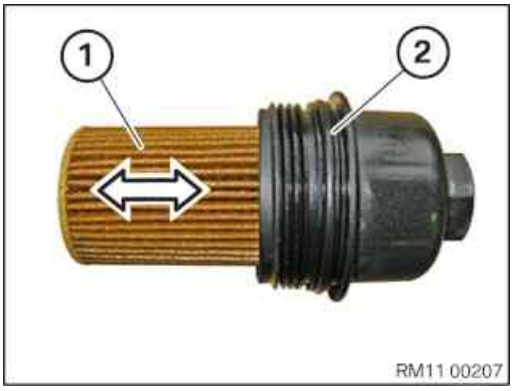


Undo oil filter cover (1) at hexagon head (2).

Installation:



Check the freedom of movement of the non-return valve (1).



Renew oil filter (1).
Parts: Oil filter (1).
Ensure that the oil filter (1) engages audibly.
Renew O-ring (2) and coat with engine oil.
Parts: O-ring (2).

cardiagn.com

Renew the bolt with the o-ring (1).

Parts: Bolt with O-ring (1).

Wet the O-ring (1) with engine oil.

It is imperative that you clean the threads (1) prior to installation with original BMW brake cleaner (part number: 83 19 2 365 214)!

Any engine oil must be completely removed from the thread!

Attention!

Risk of damage!

The elastomers (o-rings) must not have contact with the brake cleaner!

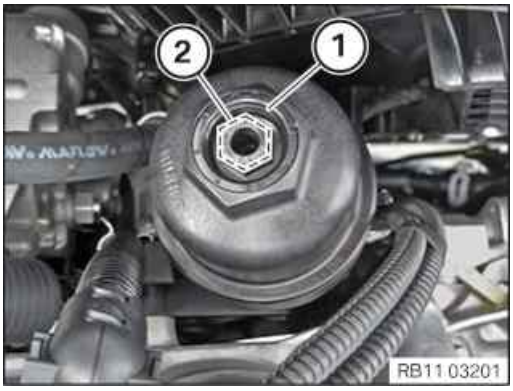
Remove the brake cleaner completely and blow-dry with compressed air as needed.

Join the oil drain plug (1).

Mount the oil filter cover (1) and tighten it at the hexagon head (2).

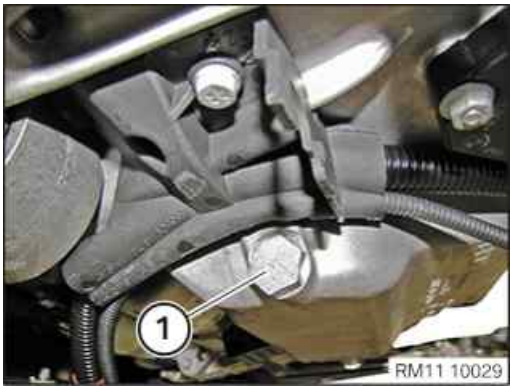
Tightening torque: 11 42 1AZ.

cardiagn.com



Tighten the oil drain plug (1) at the hexagon head (2).

Tightening torque 11 42 6AZ.



Replace sealing ring of oil drain plug.

Parts: Sealing ring.

Tighten oil drain plug (1).

Tightening torque 11 13 1AZ.

Note:
Pour in engine oil.

Close oil filler cap .

Start engine and run at idle until oil pressure indicator light goes out.

Switch off engine.

Check oil filter cover (1) and oil drain plug of oil sump for tightness.

Assemble engine.

Checking oil level:

- Park vehicle on a horizontal surface
- Wait for five minutes and check the oil level by means of the oil dipstick when the engine is at operating temperature
- Top up engine oil if necessary

Required follow-up work:

- Close the service cap in the underbody protection

cardiagn.com

11 00 300 Engine oil consumption measurement

Attention!

This procedure for measuring oil consumption may not be used for the S 85 due to the oil pan design.

Many complaints about oil consumption are caused by the oil level being measured using the wrong method.

The oil consumption should be measured after a distance of 7,500 km at the earliest, as the process of running in the engine will not have been essentially completed and the engine oil consumption stabilised until this distance has been covered.

Engine oil consumption that may occur in an engine can only be determined by the customer on the basis of the refilled engine oil quantity. As soon as the engine oil level falls below the MAX mark on the dipstick, many customers top up the engine oil without paying attention to a number of basic rules, such as the vehicle must be standing on level ground, a certain period of time must be left to allow the oil to flow back to the sump. In such cases, the available container sizes (e. g. 1-litre can) make it easy to top up above the MAX mark. Too much added engine oil is damaging to the engine and is consumed more quickly due to the splash effect.

It is therefore recommended to allow the engine oil level to the MIN mark and only then to add the required engine oil quantity. The distance between the marks is equivalent to approx. 1.0 to 1.5 litres.

The procedure for checking the oil level is given in the Owner's Handbook for the vehicle concerned.

The service delegates will only deal with claims made under warranty if exact measurements by weighing are available (see below).

Measuring oil consumption by weighing:

To assess a warranty or goodwill claim, only the following oil consumption measurement method by weighing can be accepted (this must have been carried out by a BMW contractual partner):

Note:

The engine must not leak any oil.

Engine oil may only be drained off when the engine is at its normal operating temperature. The engine oil temperature must be at least 90 °C and read off on the diagnosis system.

Preparation:

1. Eliminate any leaks and traces of oil before measuring the engine oil consumption.
2. Allow the engine to run at idling speed for 5 minutes, during which the engine oil temperature must not drop below 90 °C.
3. Unscrew the main flow oil filter cover (the engine oil will flow back into the oil sump from the oil filter housing).
4. Unscrew the oil drain plug.
5. Allow the engine oil to drain off for 15 minutes.
   If necessary, remove the fan/fan cowl.
6. Turn the engine once through 360 degrees by the vibration damper.
7. Allow the engine oil to drain off for 15 minutes.
8. Retighten the primary flow oil filter.
9. Pour in the specified engine oil quantity for the engine type in question (with filter change).
10. Drive the vehicle for a distance of at least 1,000 km/500 miles. Increasing the mileage will produce significantly better measuring results.
    Measurement procedure:
11. Check the engine for leaks; if the engine is not tight, the examination will not be meaningful.
12. Prepare the measuring container to be able to capture the oil quantity.
13. Allow the engine to run at idling speed for 5 minutes, during which the engine oil temperature must not drop below 90 °C.
14. Unscrew the main flow oil filter cover (the engine oil will flow back into the oil sump from the oil filter housing).
15. Unscrew the oil drain plug.
16. Allow the engine oil to drain off for 15 minutes.

cardiagn.com

If necessary, remove the fan/fan cowl.

17. Turn the engine once through 360 degrees by the vibration damper.
18. Allow the engine oil to drain off for 15 minutes.
19. Weight the **amount of drained engine oil**. (Engine oil has a density of about 0.86 g/cm³ at room temperature.)

$$\text{Engine oil consumption} = \frac{\text{Amount of oil added (cm³) - amount of oil drained off (g): 0.86 g/cm³}}{\text{mileage reading when draining - mileage reading when adding engine oil}}$$

Example:

Volume of oil added at mileage reading 44,800: 4.000 cm³

Weight of oil added at mileage reading 45,900: 2.700 g

$$\text{Engine oil consumption} = \frac{\text{4.000 cm3 - 2.700 g : 0.86 g/cm³}}{\text{45,900 km - 44,800 km}} = 0.78 \text{ cm³/km}$$

0.78 cm³/km = 0.78 l/1,000 km

Test certificate for engine oil consumption:

Vehicle data: _____

BMW (type): _____

Chassis number: _____

Added oil quantity (in ccm): _____ ccm at kilometre reading:_____

less drained off oil quantity (in g) : 0.86 (g/ccm) _____ ccm at kilometre reading:_____

=> oil consumption: _____ ccm => mileage: _____ km

Oil consumption [l/1000 km] =

_____ *[ccm] oil consumption* _____ [km] mileage

Oil consumption after balancing out: _____ l/1000 km

Oil grade: _____

Oil grade: _____

Viscosity: _____

Cause of damage: _____

_____ _____

11 00 ... Handling components after flood damage

Flood damage can occur if the permissible fording depth of a vehicle is exceeded. Ingress of water can cause damage to the engine (water shock) or components.

Because dirt particles generally enter into the component with the water (e.g. starter motor, wiring harness), the components need to be thoroughly inspected.

Residual moisture in the components leads to corrosion (increased contact resistance in the component), which can lead to a component failure at a later time.

If water ingress into the electrical components cannot be ruled out, it is recommended to replace the component to ensure correct functioning through the vehicle lifetime.

cardiagn.com

11 00 590 Installing the exchange engine (B37C)

Special tools required:

- 11 8 030
- 2 288 380

Attention!

Do not remove transportation retainer (adapter) of high pressure pump without special tool.

Risk of damage to timing chain drive.

Necessary preliminary work:

- Remove engine with gearbox.
- Remove transmission.
- Remove high pressure pump.
- Remount flywheel.

Attention!

Do not remove transportation retainer (1) without special tool 11 8 030 .

Remove protective cap (1) on oil sump.

cardiagn.com

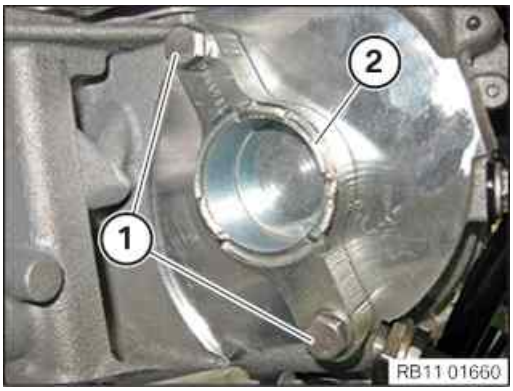
Attention!

On vehicles with manual gearbox, an additional bore hole that can be confused with dowel hole is located in front of dowel hole.

The special tool 2 288 380 must be able to be pushed into the oil sump up to the offset.

Disconnect crankshaft with special tool 2 288 380 .

Screw in special tool 11 8 030 .



Release screws (1) from the transportation retainer (2).

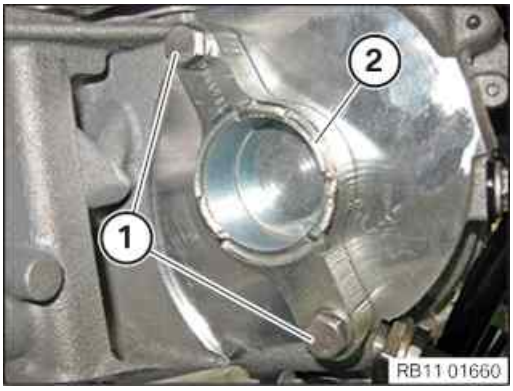
Attention!

The special tool 11 8 030 remains in the timing case.

Central bolt (1) remains in camshaft sprocket.

Remove central bolt (1).*Note:*
The central bolt (1) is supported on special tool 11 8 030 until the transportation retainer is pressed out.

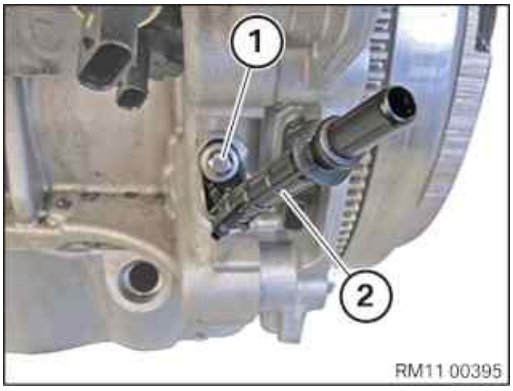
cardiagn.com



Remove transportation retainer (2).

Install high pressure pump.

Remount transportation retainer (1).



Attention!

Risk of damage!

Non-compliance may cause the brake servo to fail!

Do not dismantle non-return valve (2) into separate components!

Before installing non-return valve (2), check if the installation opening in the crankcase is clear and clean.

Release screw (1).

Remount non-return valve (2).

Parts: Replace O-ring.

Tighten screw (1).

Tightening torque: 11 00 2AZ.

Required follow-up work:

- Remount all assemblies and sensors
- Position exchange engine on table lift with workshop crane
- Fit transmission.
- Install engine with transmission.

cardiagn.com

Mounting engine on assembly stand (B37C)

Special tools required:

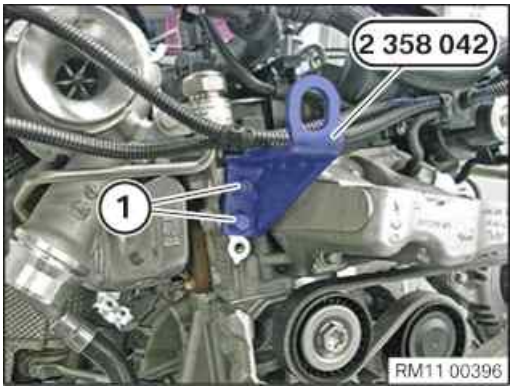
- 2 358 042
- 00 2 300
- 00 2 320
- 2 288 357
- 11 9 030
- 11 0 070

Important!

Follow manufacturer's instructions.

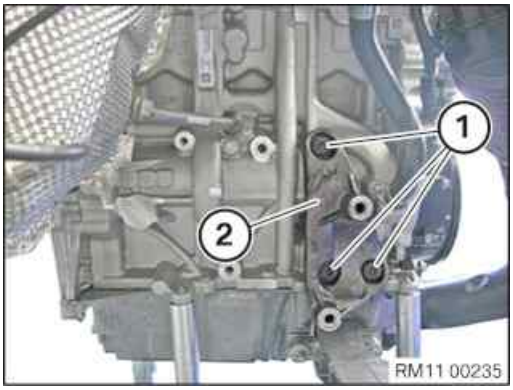
Necessary preliminary tasks:

- Remove engine with transmission.
- Remove transmission.



The securing eye 2 358 042 is to be fastened with the screws (1).

Tightening torque: 11 00 4AZ.



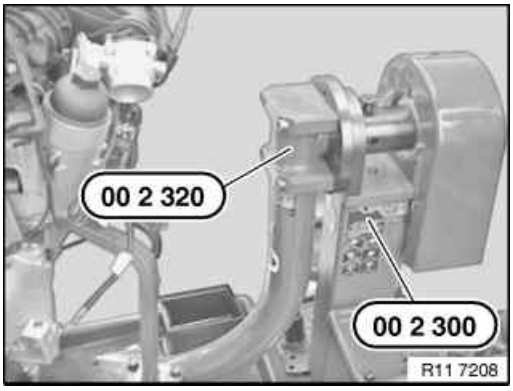
Release screws (1).

Remove adapter plate (2).

Installation note:

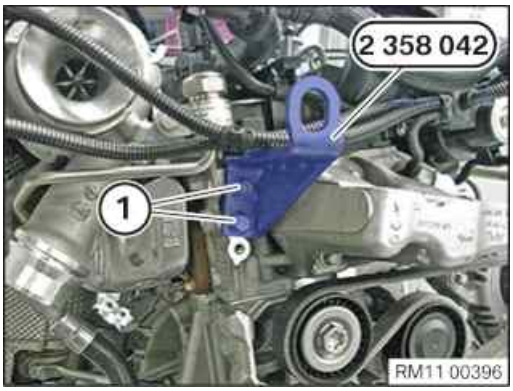
Tightening torque: 11 11 4AZ.

cardiagn.com

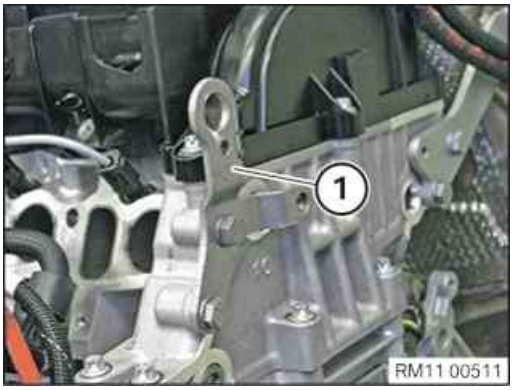


Prepare special tool 00 2 300 together with special tool 00 2 320 (00 2 321).

Prepare special tool 2 288 357 together with special tool 11 9 030 .

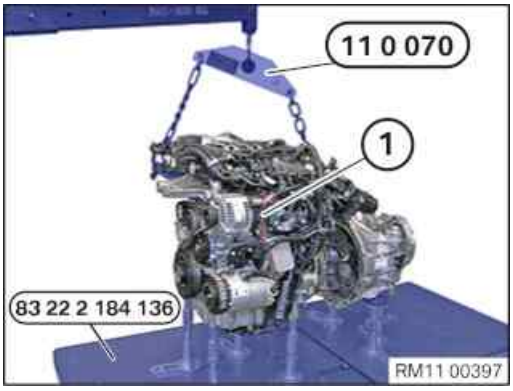


Note:
Attach engine lifter to securing eye 2 358 042 .



Note:
Attach engine lifter to the available securing eye (1).

cardiagn.com



Lift engine (1) with workshop crane and special tool 11 0 070 from table lift (83 22 2 184 136).

Lift engine with workshop crane onto assembly stand.

Bolt special tools 11 9 030 and 2 288 357 to engine.

Tightening torque: 11 11 4AZ.

Fix special tool 11 9 030 to assembly stand 00 2 300 .

Tightening torque: 11 11 5AZ.

Required follow-up work:

- Suspend engine from workshop crane.
- Remove engine from assembly stand.
- Place engine on table lift with workshop crane.
- Attach transmission.
- Install engine with transmission.

3.0 **Cleaning agent**.

	Designation in repair instructions	Designation, Electronic Parts Catalogue	Part number, Electronic Parts Catalogue	Application examples
3.1	N12, N13, N14, N18, N20, N26, N45, N46, N45T, N46T, N43, N51, N52, N52Kp, N52TU, N53, N55, N63, N63S, N63 Hybrid, N63O1, N63O2 N73, N74 B37, B38 B47, B48, B58	Cold cleaner (chlorine free)	83 19 0 026 956	Cleaning assemblies, washing engine
3.2	M47, M47T1 M47T2, M57 M57T1, M57T2 N47 K/U/O/T 0/1 N47C	Universal cleaner	83 19 2 360 981	Clean intake pipe.
3.3	All	Brake cleaner	83 19 2 365 214	Clean.

4.0 Lubricant for **application**.

	Designation in repair instructions	Designation, Electronic Parts Catalogue	Part number, Electronic Parts Catalogue	Application examples
4.1	N12, N13, N18, N20, N26, N42, N46, N46TU, N51, N52, N52KP, N52TU, N55, N62, N62TU, N63O0, N63O1, N63O2, N73 S55, S63T0 B38, B48, B58	Lubricating grease Longtime PD1	83 19 2 160 340	For greasing the splined shaft on actuator drive/gearing of intermediate shaft.
4.2	M47, M47TU, M47T2, M57, M57TU, M57T2,	High-temperature assembly paste	83 23 0 309 003	For greasing the thread on the exhaust turbocharger.
4.3	N12, N13, N14, N16, N18 N20, N26, N40, N42, N45, N45TU N46, N46TU, N43. N51, N52, N52Kp, N52TU, N53, N54, N55. N62, N62TU, N63O0, N63O1, N63O2 N73, N73H, N74. S63T1, S65, S85. B38, B48, B58	High temperature paste	83 19 2 158 851 83 19 2 158 852	For greasing the threads on the oxygen sensors.

cardiagn.com

4.4	N47, N47O1 N47C1, N47T N47D1 N57 N57D1 N63O0, N63O1, N63O2 S63, S63T0	Copper paste	81 22 9 400 794	For greasing the double hex head bolt on the exhaust turbocharger. For greasing the central bolt on the VANOS gear.
4.5	M47, M47TU, M47T2 M57, M57TU, M57T2 N47, N47O1 N47C1, N47T N47D1 N57 N57D1	High-temperature grease (UrethynE2).	83 23 0 441 070	For greasing the injectors or injector shafts. Solenoid valve and piezo injector.
4.6	N47T0, N47T1 N57T0, N57T1, N57S1 B47T0,	Assembly paste	83 29 9 407 778	For lubricating the O-rings of the pressure pipes. Multistage turbocharging assembly.
4.7	W20	Assembly paste, grease	No longer greased.	For greasing the torsion splined shaft.
4.8	N63O1, N63O2	Assembly paste, grease	83 23 9 407 778	For greasing the central bolt on the crankshaft.
4.9	W20	Assembly paste, grease	83 23 9 407 778	Grease O-ring on alternator.

5.0 lubricant for **filling**

	Designation in repair instructions	**Designation, Electronic Parts Catalogue**	**Part number, Electronic Parts Catalogue**	**Application examples**
5.1	M47, M57	Exhaust turbocharger additive	83 19 2 362 168	For filling the exhaust turbocharger after the renewal.
5.2	B32, B36, B37, B38, B42, B46, B47, B48, B58	Exhaust turbocharger additive, petrol MSP	83 19 2 457 276	For filling the exhaust turbocharger after the renewal.

6.0 Lubricants to loosen locked **screw connections.**

	Designation in repair instructions	**Designation, Electronic Parts Catalogue**	**Part number, Electronic Parts Catalogue**	**Application examples**
6.1	M47, M47TU, M47TU2, M57, M57TU, M57TU2. N47, N47C, N47D1, N57, N57D1, N57S1 W16, W17, B37, B47, B57	Brunox lubricating grease	83 23 0 418 567	For releasing the glow elements.
6.2	E89 F10, F11.	Brunox lubricating grease	83 23 0 418 567	For releasing and tightening the screw connection of the rubber mounts.

7.0 **Leak detection spray and contact spray**

	Designation in repair instructions	**Designation, Electronic Parts Catalogue**	**Part number, Electronic Parts Catalogue**	**Application examples**

cardiagn.com

7.1	Petrol: N13, N20, N26, N54, N55 B38, B48, B58 Diesel fuel: M47, M47TU, M47TU2, M57, M57TU, M57TU2. N47, N47C, N47D1, N57, N57D1, B37, B47	Leak detection spray	83 19 9 407 861	Check charge air path for tightness. Example: leakage on charge air hose or charge air cooler.
7.2	S55	Contact spray	81 22 9 400 208	For cleaning and protecting of electrical plug connections.

cardiagn.com

11 00 050 Removing and installing engine

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for

cardiagn.com

any return shipments. Always package removed components straight away.

- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.

For additional information see:

Main group 17

17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

Filling **without** the vacuum filler device (watering can filling) is **not permitted**.

Non-compliance will result in danger of component damage and/or engine damage.

Filling specification **absolutely must** be adhered to.

The operation of the vehicle is not permitted unless the filling procedure has been completed. Otherwise, functional limitations (degradation) and/or overheating may occur.

A bleeding procedure is required after a part has been exchanged in the cooling system and/or after refilling the cooling system.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

PRELIMINARY WORK

1 – Drawing off the air conditioning

- See additional information.

2 – Removing the acoustic cover

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

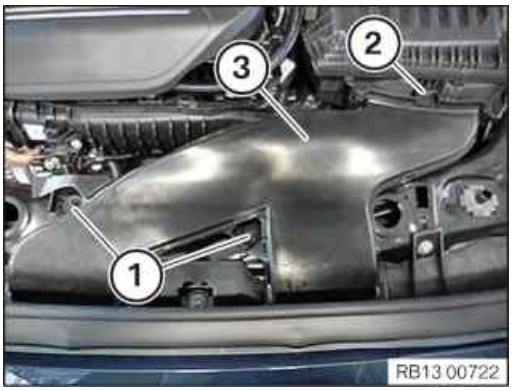
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

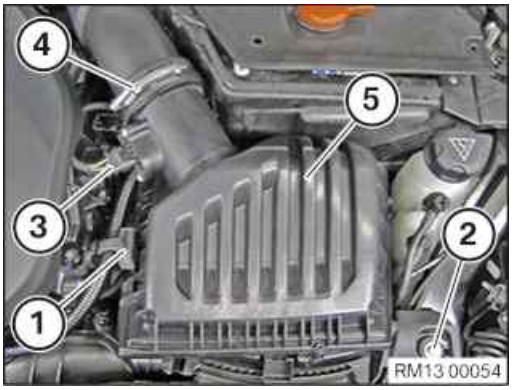
- Unclip the acoustic cover from the marked areas towards the top.

3 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

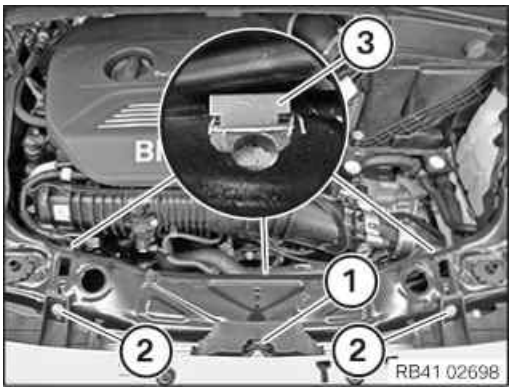
4 – Removing intake silencer housing



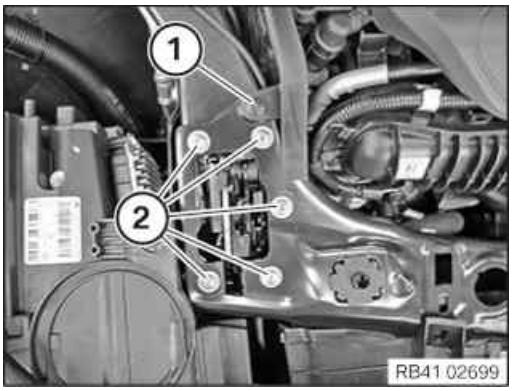
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

5 – Remove cross connection

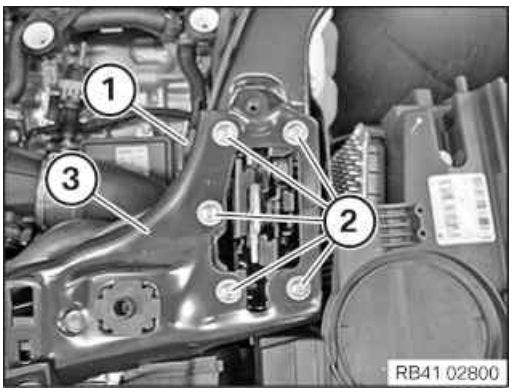
cardiagn.com



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

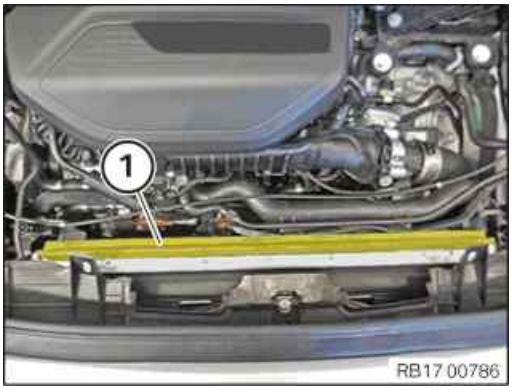
6 – Removing the fan cowl with electric fan

WARNING

Hot surfaces.

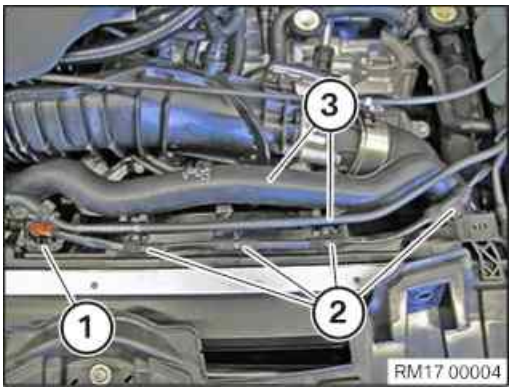
Risk of burning!

- Perform all work only on components that have cooled down.

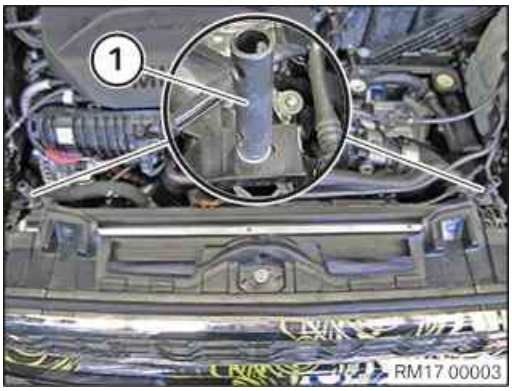


- Feed out and remove the sealing (1) from the radiator.

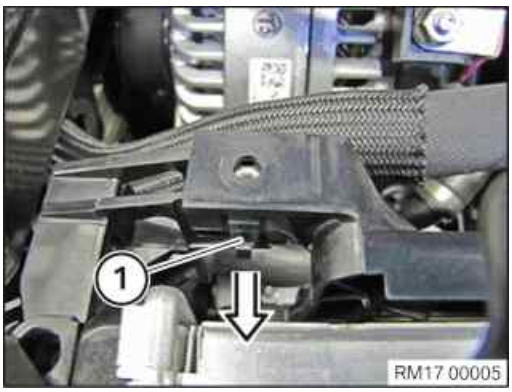
cardiagn.com



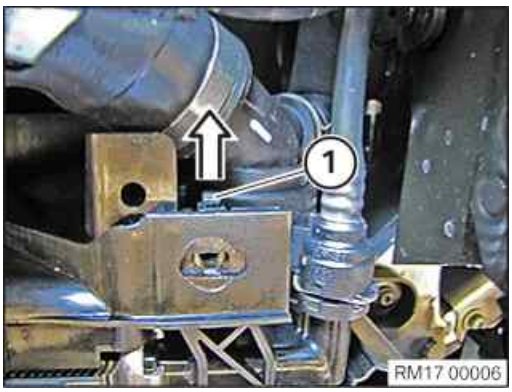
- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.



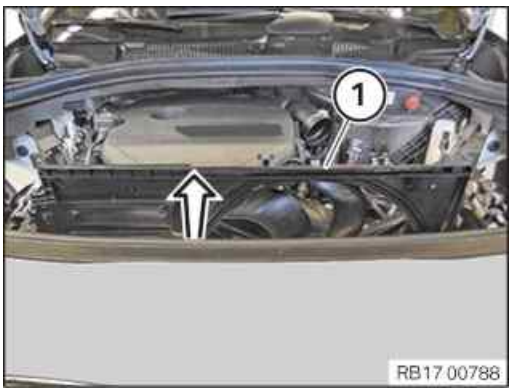
- Loosen screws (1).



- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



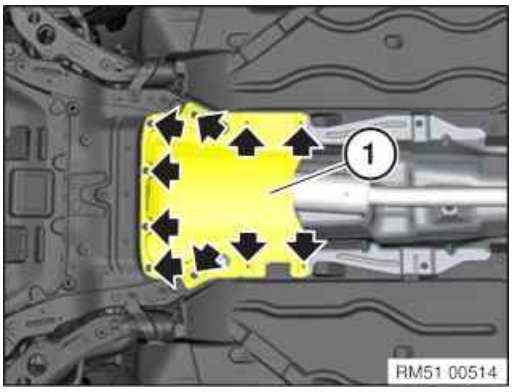
- Unlock the left lock (1) on the fan cowl in the direction of the arrow.



- Guide out fan cowl (1) in direction of arrow and remove.

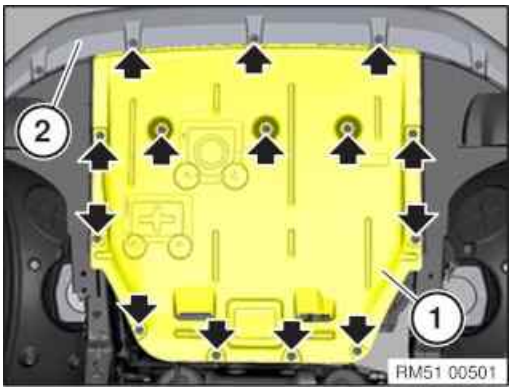
7 – If installed: Removing rear underbody protection

cardiagn.com



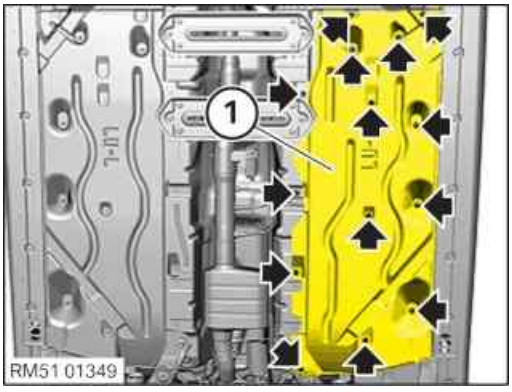
- Remove screws (arrows).
- Remove the rear underbody protection (1).

8 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

9 – Removing right underbody panelling



- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

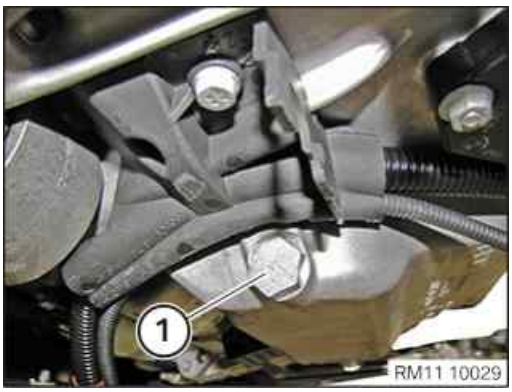
10 – Releasing the oil drain plug

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



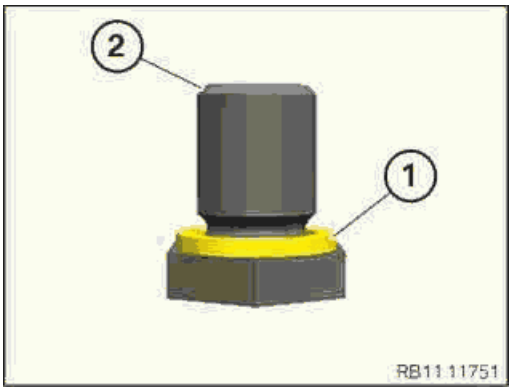
TECHNICAL INFORMATION

Catch and dispose of drained engine oil in a suitable collecting vessel.
Observe country-specific waste disposal regulations.

- Release oil drain plug (1).
- Drain engine oil.

cardiagn.com

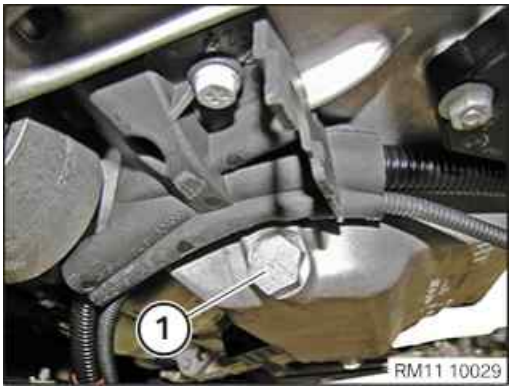
11 – Tightening the oil drain plug



- Renew sealing ring (1) on the oil drain plug (2).

  Parts: Sealing ring

- Guide in the sealing ring (1) on the oil drain plug (2) and install.



- Renew the sealing ring.

  Parts: Sealing ring

- Position oil drain plug (1) on the oil sump and tighten.

Oil drain plug on oil sump

M12x1.5	Renew the sealing ring.	Tightening torque	25 Nm

12 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

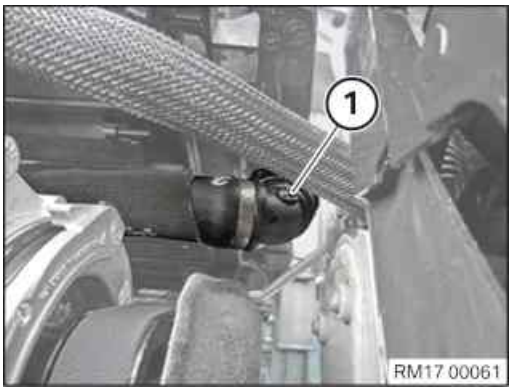
In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

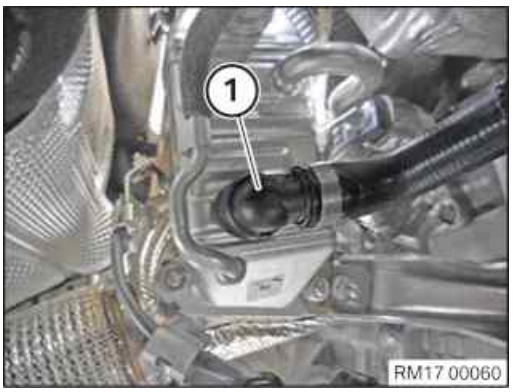
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

- Loosen sealing cap (1).

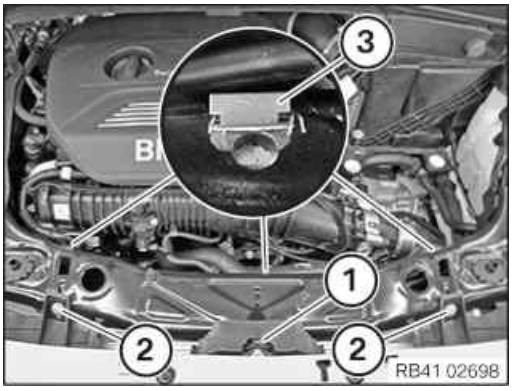


- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

13 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

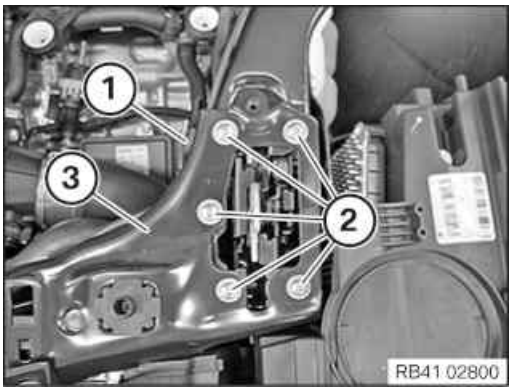
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.



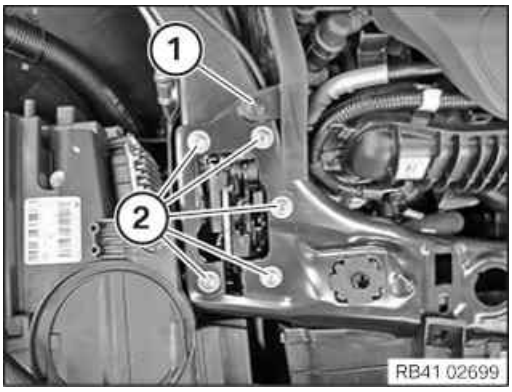
- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

cardiagn.com



- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

14 – Remove vehicle battery

WARNING

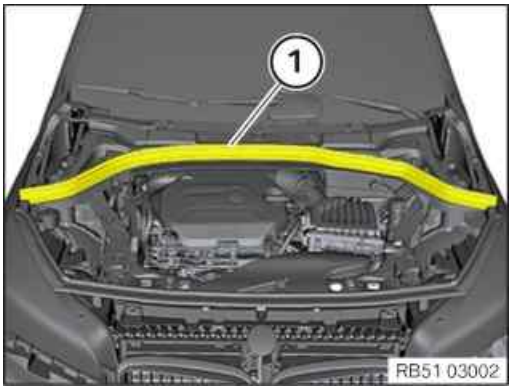
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

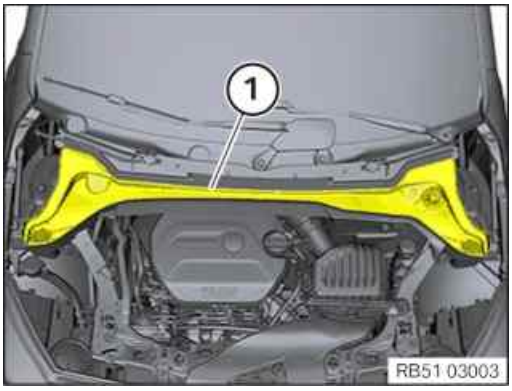
- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

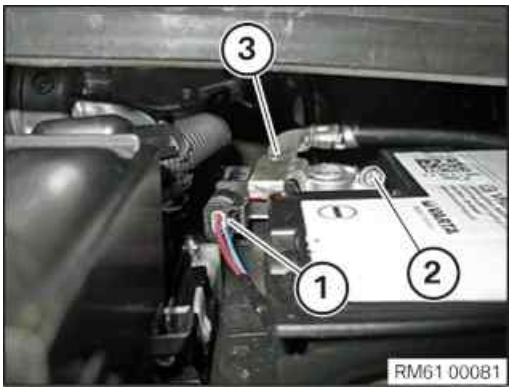


- pull off gasket (1) upwards.

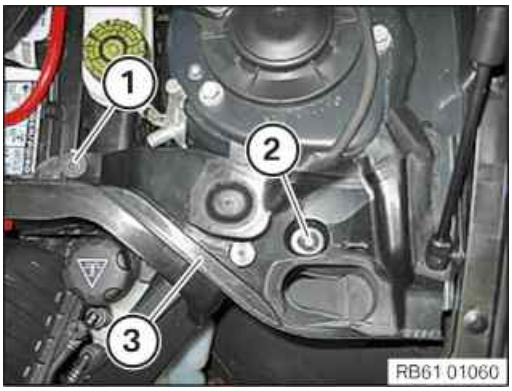


- Remove the cowl panel cover (1) to the top.

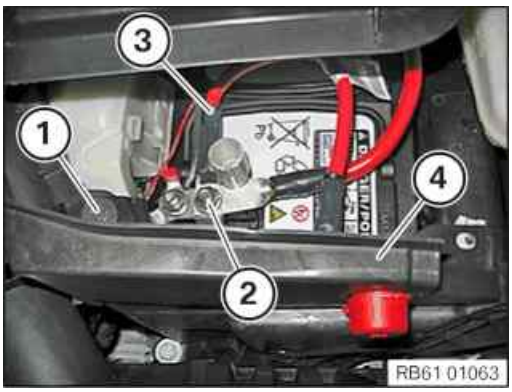
cardiagn.com



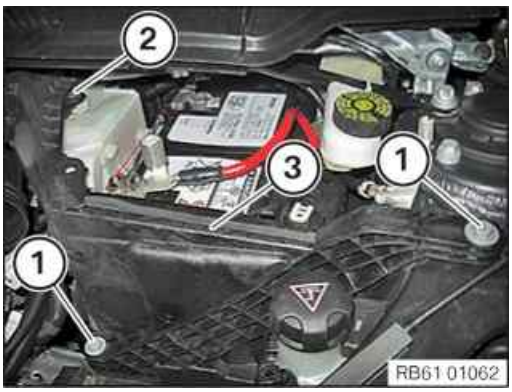
- Unlock and disconnect connector (1).
- Slacken nut (2).
- Disconnect the negative battery terminal (3).



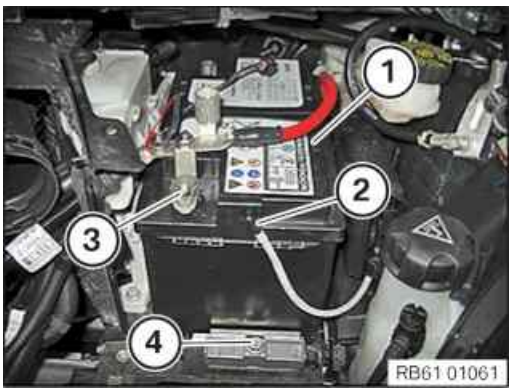
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



- Loosen screw (1).
- Unscrew the nut (2) and remove the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten nuts (2) on the positive terminal hand-tight.



- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.



- Pull off the vent hose (2).
- Slacken the nut (3) on the positive terminal and remove the positive terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

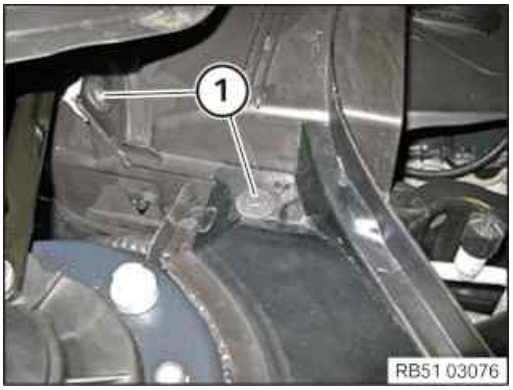
- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

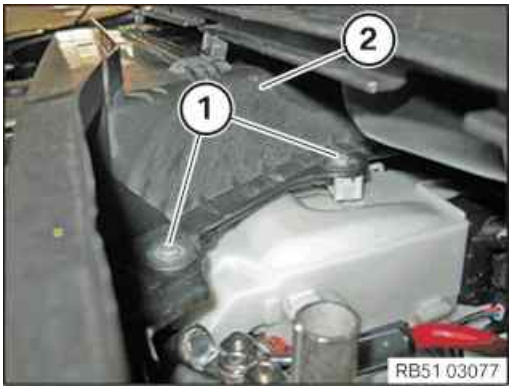
cardiagn.com

15 – Removing the upper bulkhead cover

- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

16 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

▶ **Remove the wiper arm**

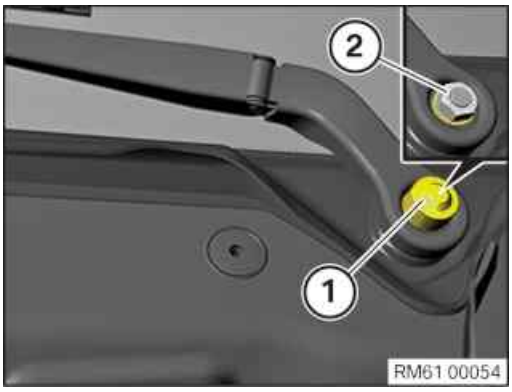
RISK OF DAMAGE

Damage to wiper console

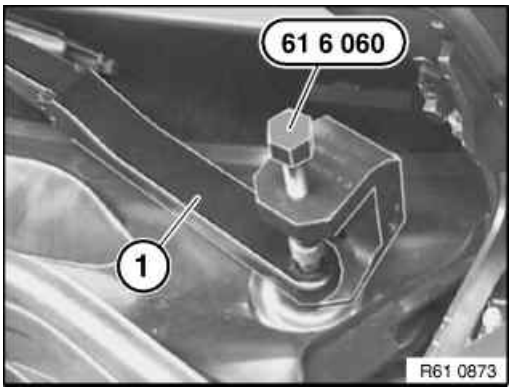
While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.

cardiagn.com



- Remove the protective cap (1).
- Loosen nut (2).



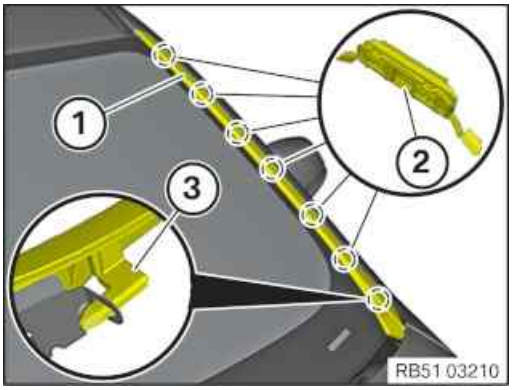
- Pull off the wiper arm (1) using special tool .

17 – Remove the gutter strip on the windscreen on the left and right

NOTICE

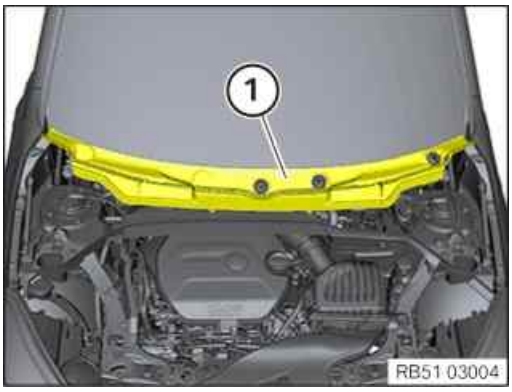
Description is for left component only. Procedure on the right side is identical.

▶ **Remove the gutter strip on the windscreen**



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

18 – Remove the rear cowl panel cover



- Disengage and guide out the rear cowl panel cover (1) towards the top.

19 – Remove electronics box

Prerequisite

cardiagn.com

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

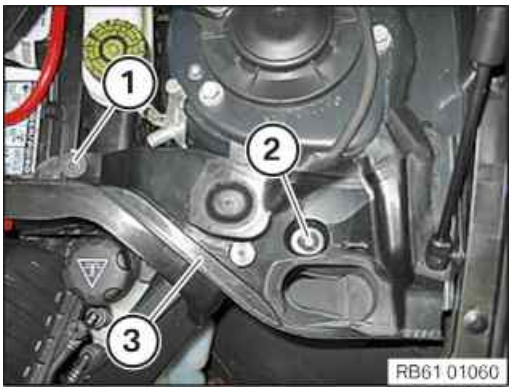
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

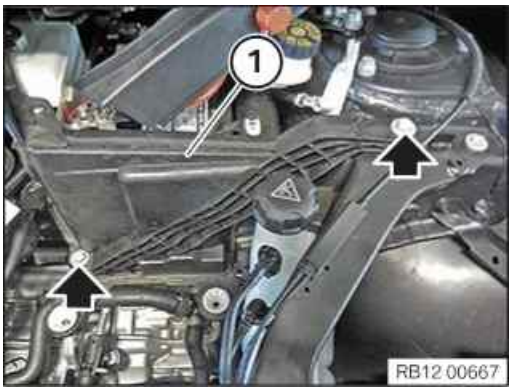
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



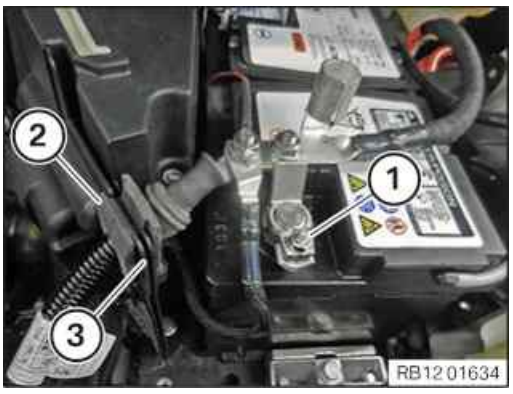
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

cardiagn.com

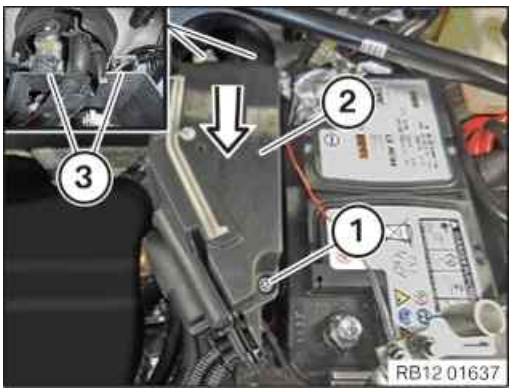
- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.



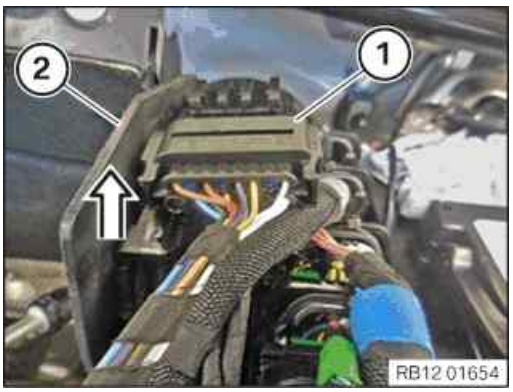
- Remove screws (arrows).
- Guide out tension strut (1) and remove.



- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

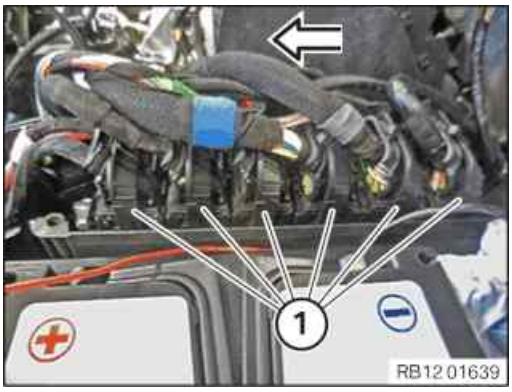


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

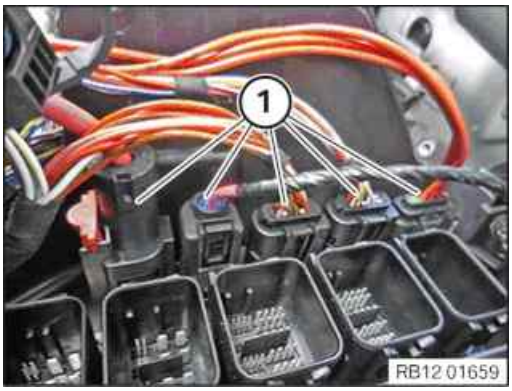


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

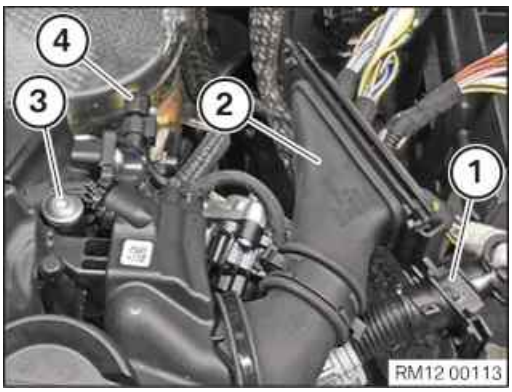
cardiagn.com



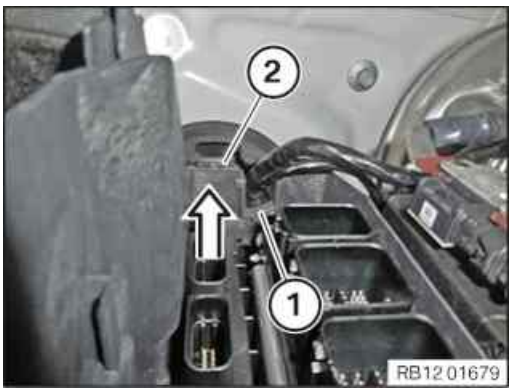
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



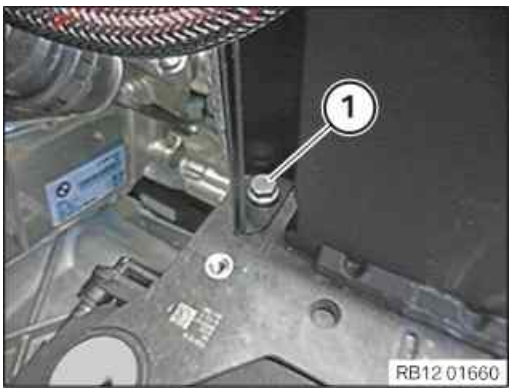
- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

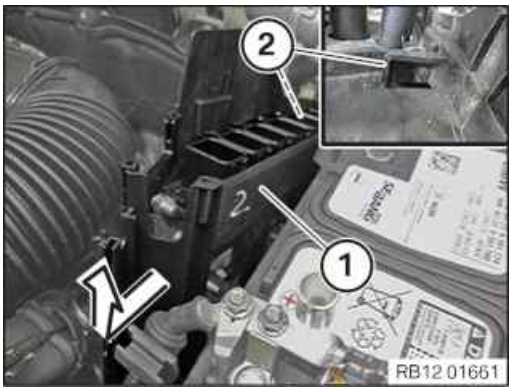


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



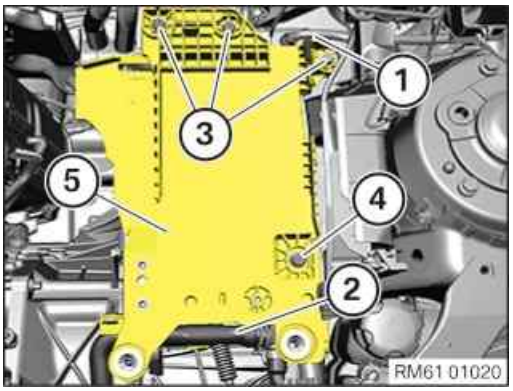
- Loosen screw (1).

cardiagn.com



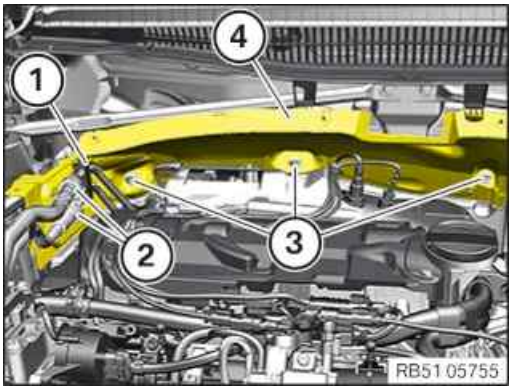
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

20 – Remove battery holder



- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

21 – Remove the rear bulkhead upper part



- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

22 – Removing both front wheels

▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

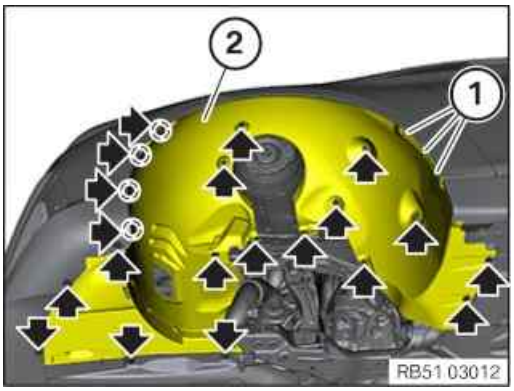
23 – Removing front left and right wheel arch cover

cardiagn.com

NOTICE

Perform the operations on the left and right side.

▶ **Remove front wheel arch cover**



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed out front wheel arch cover (2).

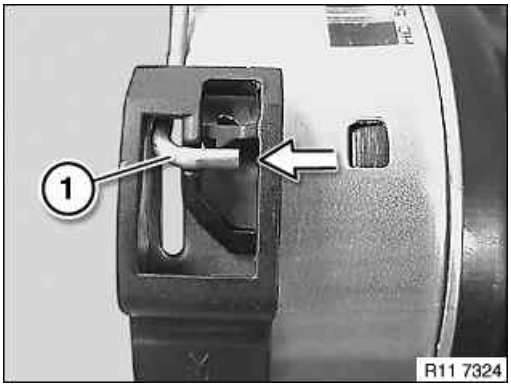
24 – Remove the pressure pipe between the throttle body and the charge air cooler

WARNING

Hot surfaces.

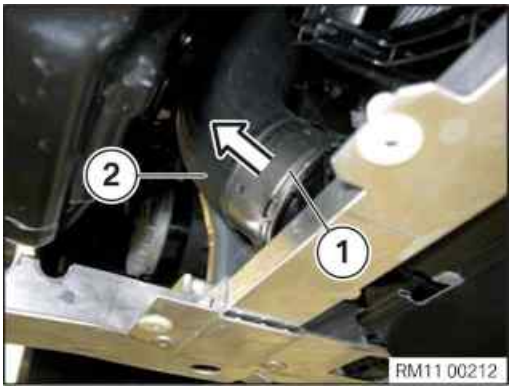
Risk of burning!

- Perform all work only on components that have cooled down.



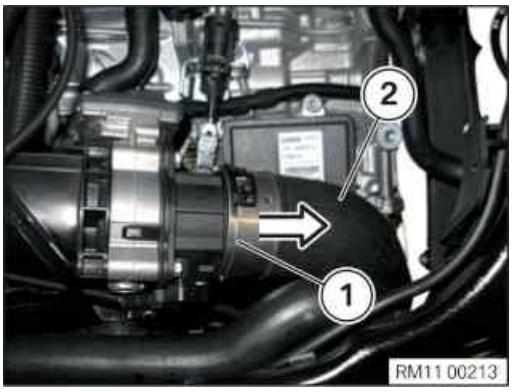
- Unlock the lock (1).

  The lock (1) must engage in the bracket (arrow).



- Unlock and detach the locks (1) on both sides.
- Guide out the pressure pipe (2) in the direction of the arrow and set it aside.

cardiagn.com



- Unlock and detach the locks (1) on both sides.
- Guide out the pressure pipe (2) in the direction of the arrow and set it aside.

- Remove the pressure pipe (1) in the direction of the arrow.

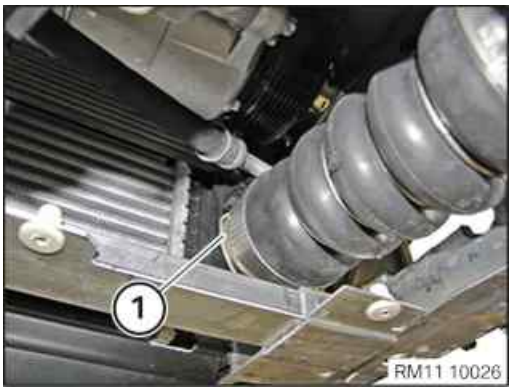
25 – Remove right charge-air line

- Release charge air duct screws (1) on oil sump.

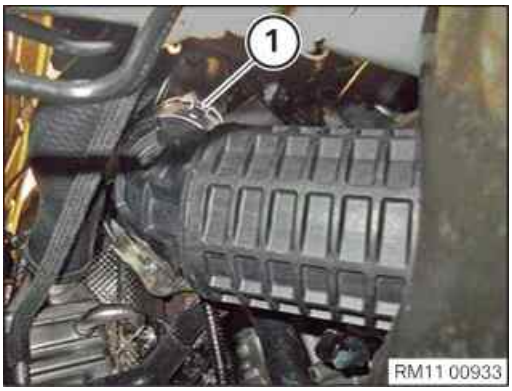
- Detach charge air duct screw connection (1) on crankcase.

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).

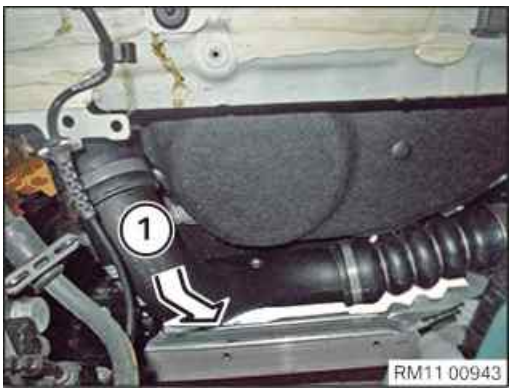
cardiagn.com



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

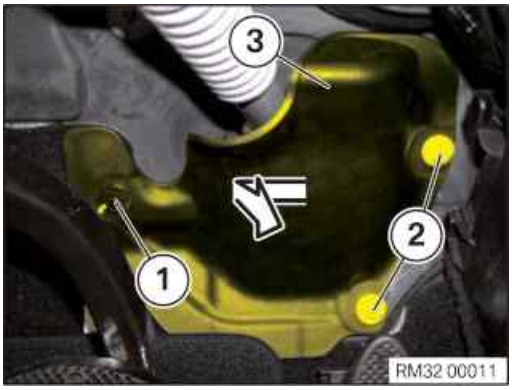


- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

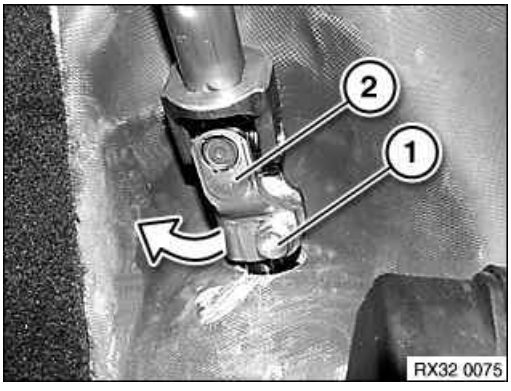
26 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

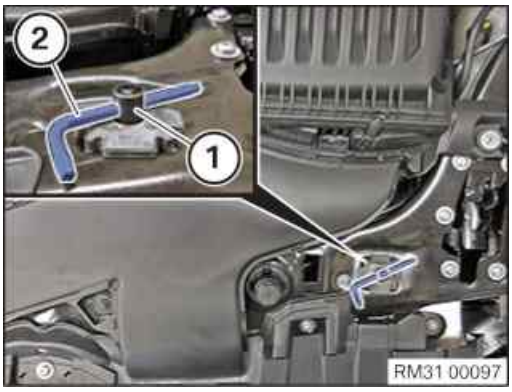
  The side footwell trim must not be disassembled!



- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

27 – Securing radiator on left and right

cardiagn.com

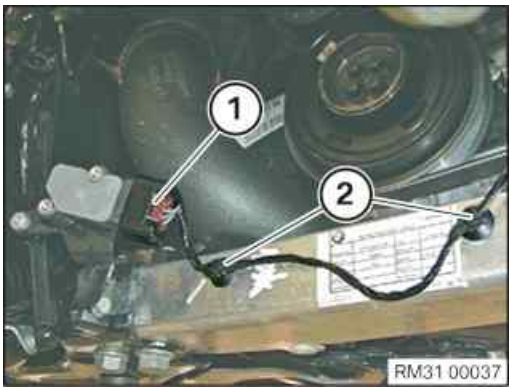


NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

28 – With right installation: Detaching ride height sensor cable



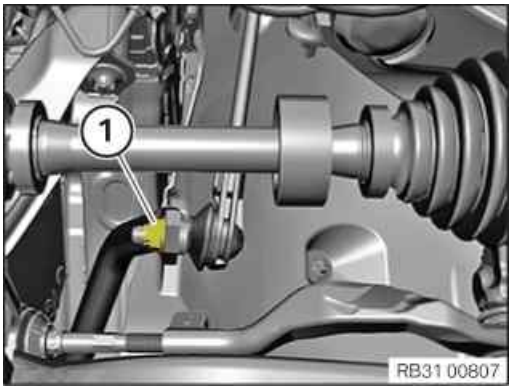
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

29 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Detach the anti-roll bar from the anti-roll bar link**



- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

30 – Detaching rubber mount from front axle support

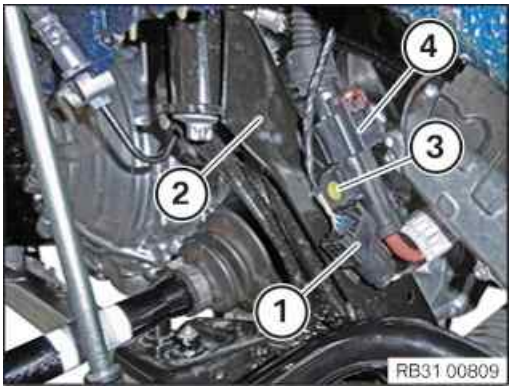
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

31 – Disconnecting plug connections from steering gear

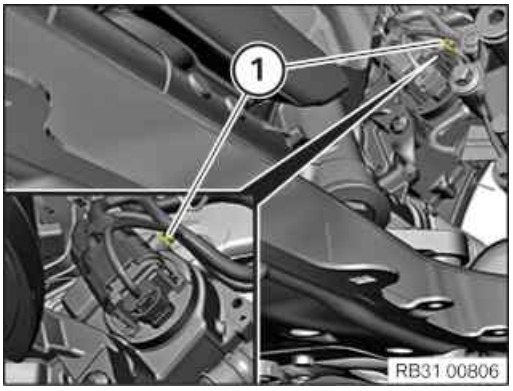
cardiagn.com

31 – Disconnecting plug connections from steering gear

▶ **If installed: Detach connectors from the front axle carrier**



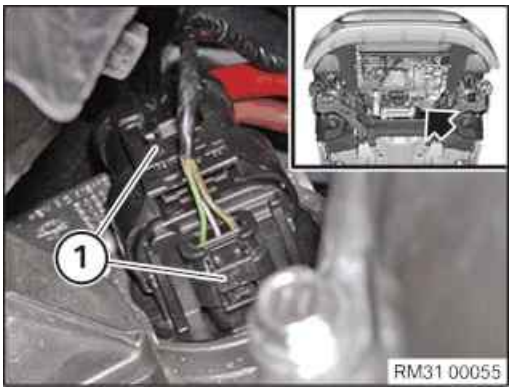
- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

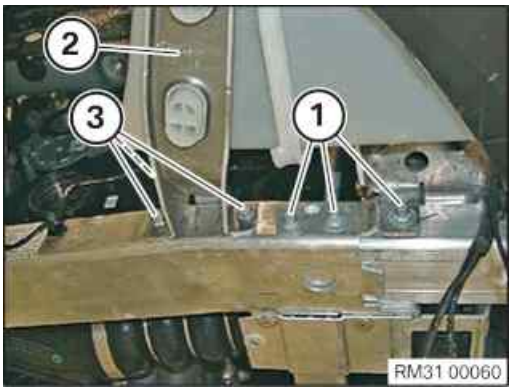
  The plug connections can be reached via the left-hand output shaft.



- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

32 – Releasing the mounted part from the front axle support

cardiagn.com

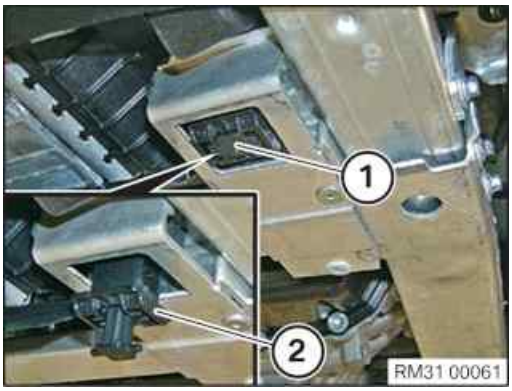


- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

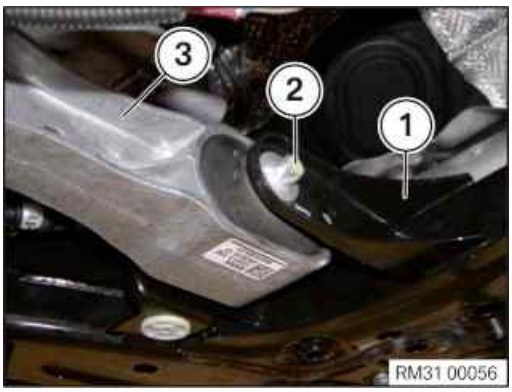
- Loosen screws (1).



NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).



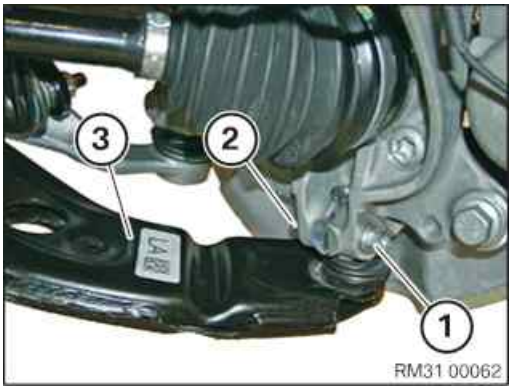
- Loosen screw (2) of the engine support (3) on the front axle (1).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

33 – Detaching and removing front axle completely

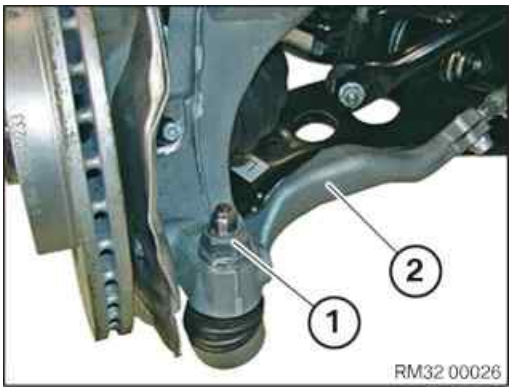


NOTICE

Perform the operations on the left and right side.

- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

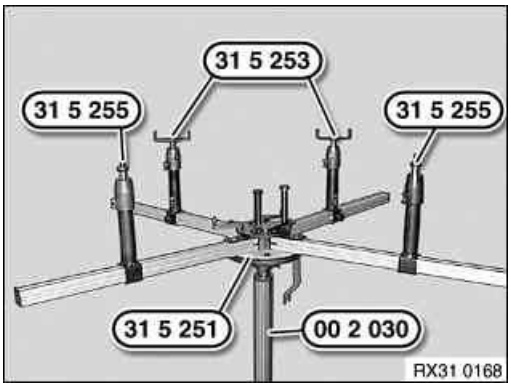
cardiagn.com



NOTICE

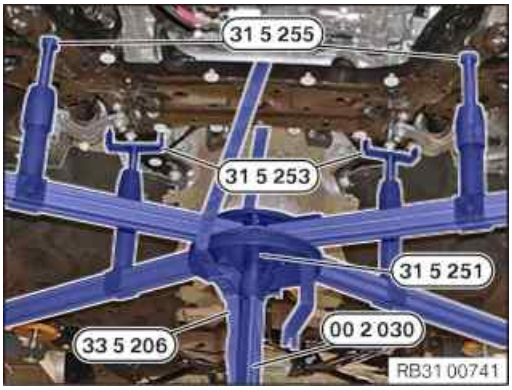
Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.



- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

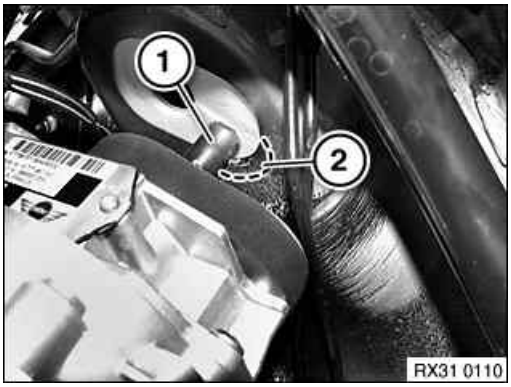
Note: In a profile rail pair, two profile rails are connected to one another by gearing.



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

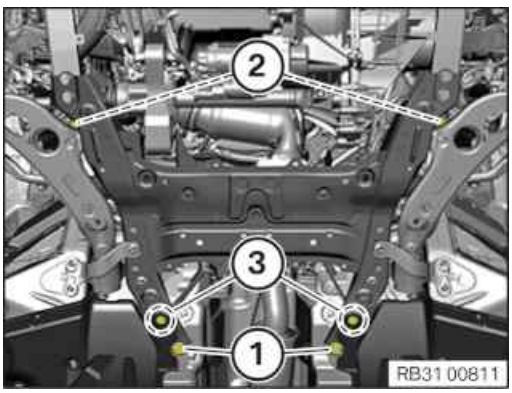


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

cardiagn.com

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

34 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).

cardiagn.com

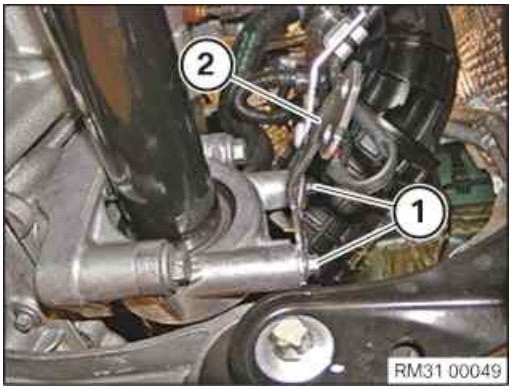
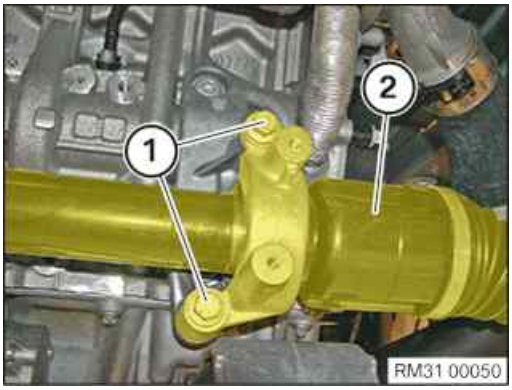
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.

35 – Removing right output shaft partially



- If necessary, unscrew the bolts (1) and remove the holder (heat shield) (2).



- Loosen screws (1).
- Pull out the output shaft (2) from the transmission.
- Tie up output shaft (1).

▸ Remove the left/right radial shaft seal on the differential (manual gearbox)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

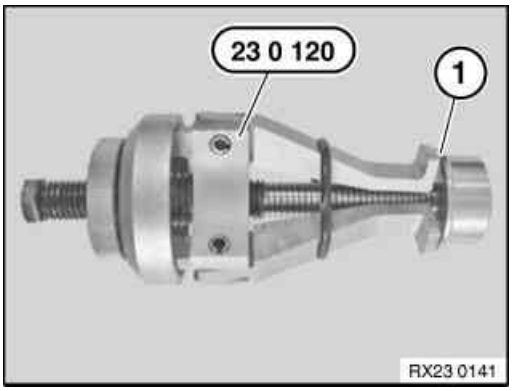
cardiagn.com

RISK OF DAMAGE

Damage to the transmission.

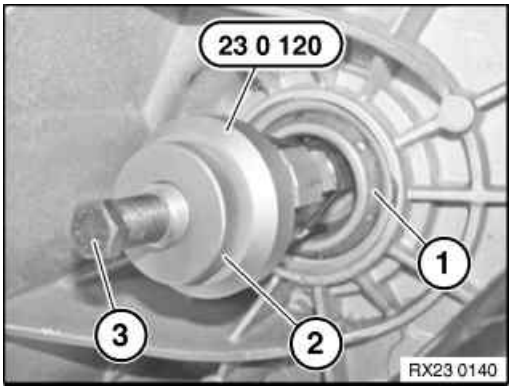
Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.



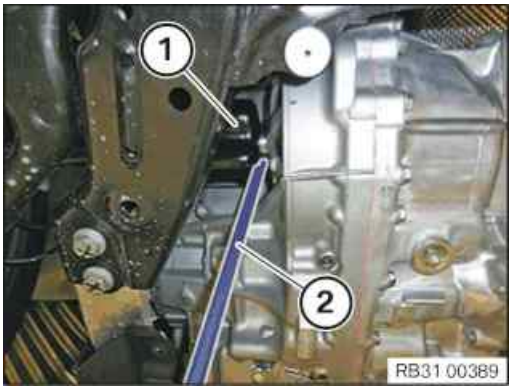
- Prepare special tool **0 496 698 (23 0 120)**.

  The distance (1) must be < 1 mm.



- Insert special tool **0 496 698 (23 0 120)** in the radial shaft seal (1) up to the limit position.
- Spread out the claws by turning the nut (2).
- Screw in screw (3) and pull off the radial shaft seal.

36 – Partially removing the left output shaft



- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

▸ Remove the left/right radial shaft seal on the differential (manual gearbox)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

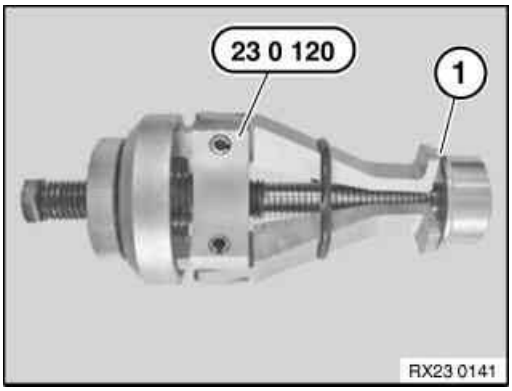
cardiagn.com

RISK OF DAMAGE

Damage to the transmission.

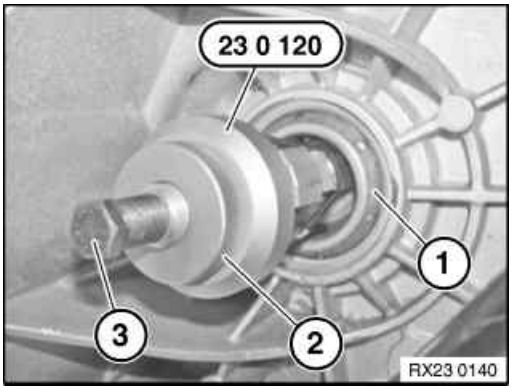
Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.



- Prepare special tool **0 496 698 (23 0 120)**.

  The distance (1) must be < 1 mm.



- Insert special tool **0 496 698 (23 0 120)** in the radial shaft seal (1) up to the limit position.
- Spread out the claws by turning the nut (2).
- Screw in screw (3) and pull off the radial shaft seal.

37 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

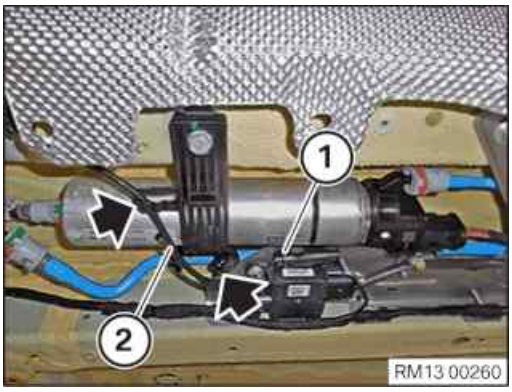
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

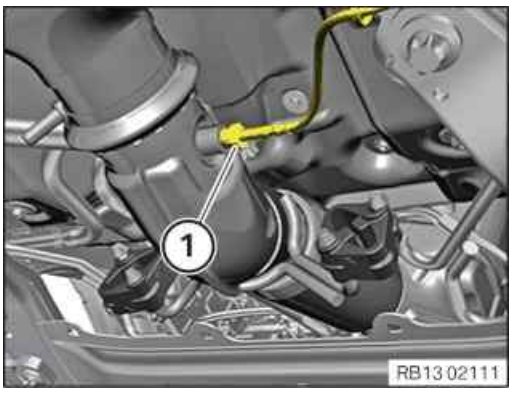
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com



- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Loosen the cable clip (1).



- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

38 – Remove the SCR metering module

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

After repair work, clean the working area thoroughly with water.
Clean special tools with water after every use.

TECHNICAL INFORMATION

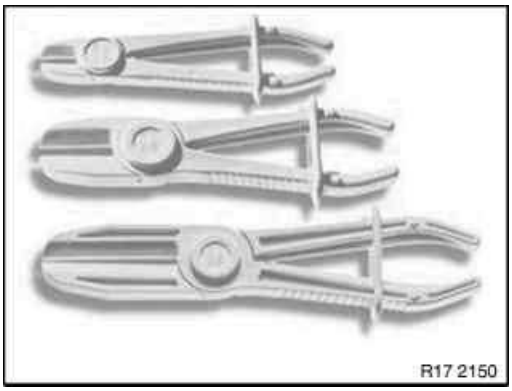
Use only lint-free cloths for cleaning the SCR system: WAYPALL cleaning cloths L20 - see BMW Group Parts.

TECHNICAL INFORMATION

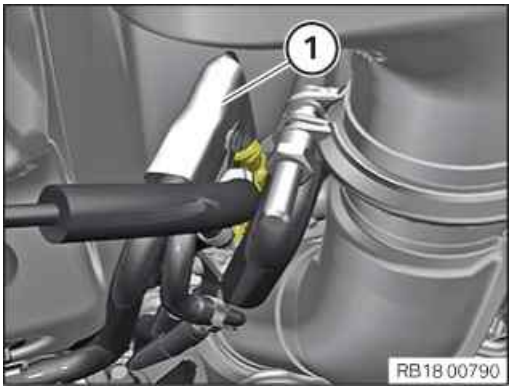
Notes on work at the cooling system form the basis of these repair instructions and must be complied with at all times.
For additional information see: 17 00 ... Instructions for repair work on cooling system

TECHNICAL INFORMATION

Do not unintentionally swap the coolant hoses and coolant lines. If necessary, mark before removal.

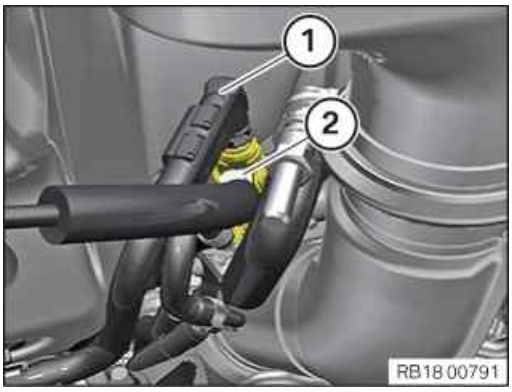


- Use commercially available pinch-off tools to pinch off the coolant hoses.



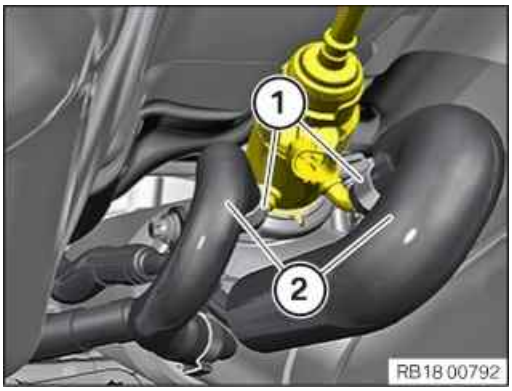
- Guide the heat protection cap (1) out and remove.

cardiagn.com

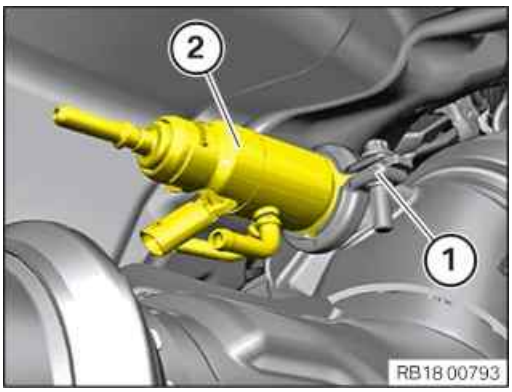


- When releasing the metering line, make sure that **no lateral forces** act on the metering line and the connection.

  The SCR metering module connection can be damaged by lateral forces.
- Unlock and disconnect the metering line (1).
- Unlock and disconnect connector (2).



- Loosen clamps (1).
- Disconnect coolant lines (2).



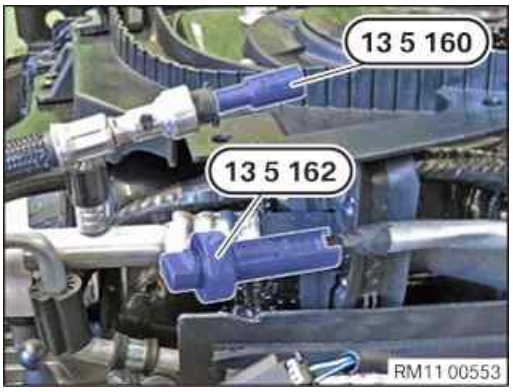
- Loosen V-band clamp (1).
- Guide out and remove the SCR metering module (2).

MAIN WORK

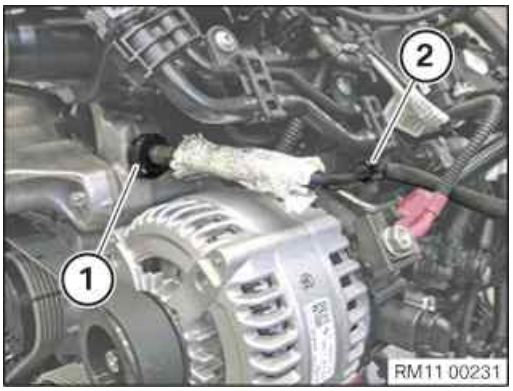
39 – Removing engine

- Unlock and pull off the fuel lines (1).

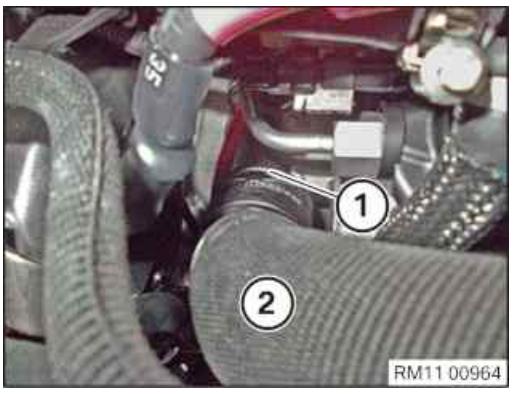
cardiagn.com



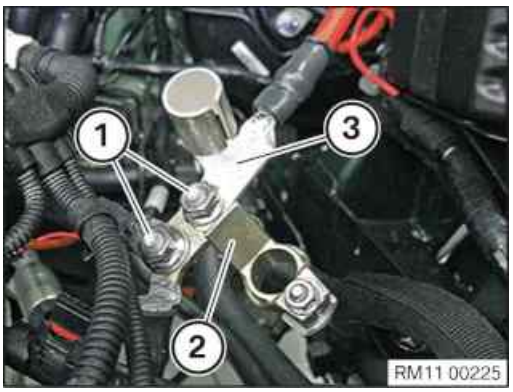
- Seal fuel lines with special tools and .



- Unlock the clamp (1).
- Pull off the coolant line (2) from the cylinder head.



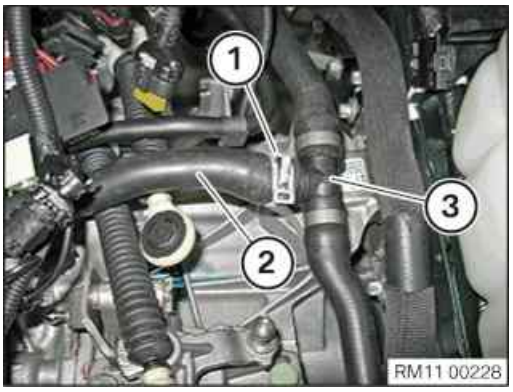
- Unlock lock (1) upwards and pull off coolant hose (2).
- Catch and dispose of escaping coolant.



- Loosen nuts (1).
- Feed out the positive battery terminal (2) and the remote positive terminal (3) and set aside.

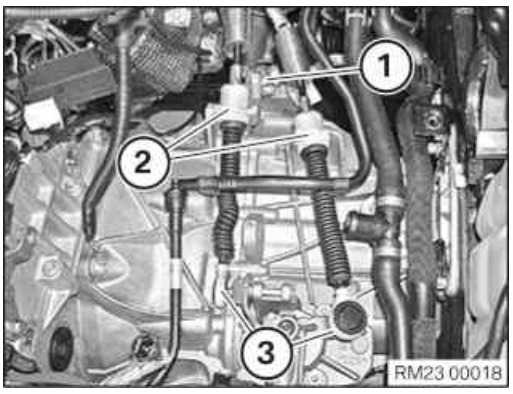
- Unscrew the bolt (1) and set the ground strap aside.

cardiagn.com

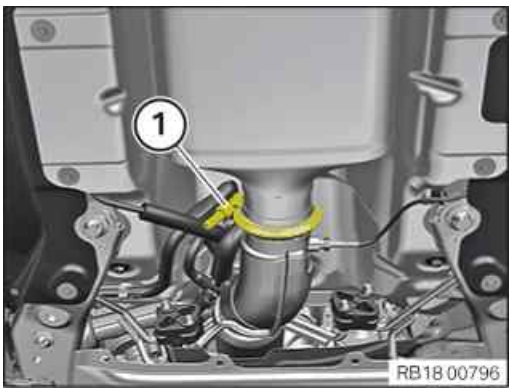


- Detach the clamping collar (1).
- Detach the coolant hose (2) from the coolant line (3).
- Catch and dispose of escaping coolant.

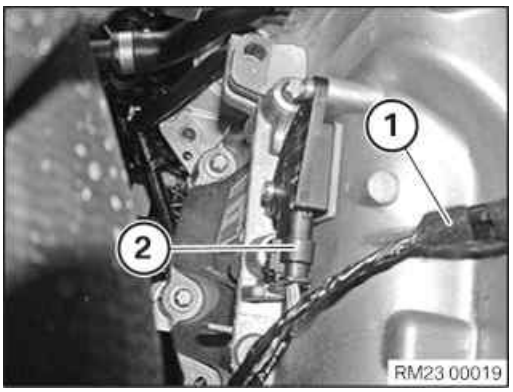
- Unlock and disconnect the vacuum line (1).



- Release screw (1) and guide out the ground strap and set it aside.
- Unlock safeguards (2) on the holders of the gear selector cables and remove.
- Lever fixtures (3) of the gear selector cables with an AF 13 open-end spanner off the ball joints.

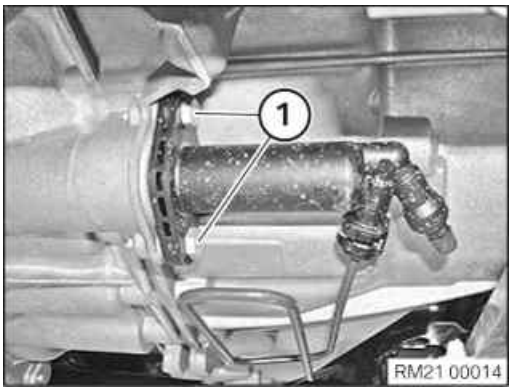


- Loosen V-band clamp (1).
- Release exhaust system from diesel particulate filter.

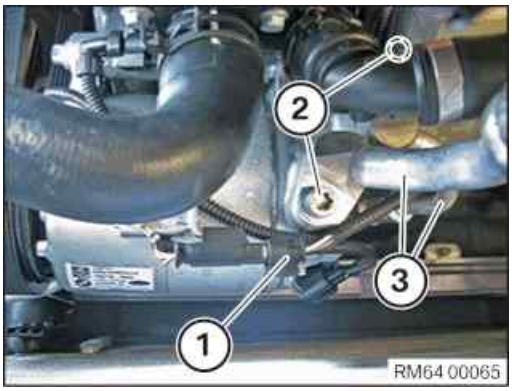


- Unlock plug connection (2) and disconnect.
- Release cable (1) with the holder from the transmission.

cardiagn.com



- **Ensure that the clutch slave cylinder remains connected to the pressure line.**
- Loosen screws (1).
- **Slowly** release clutch slave cylinder and remove.



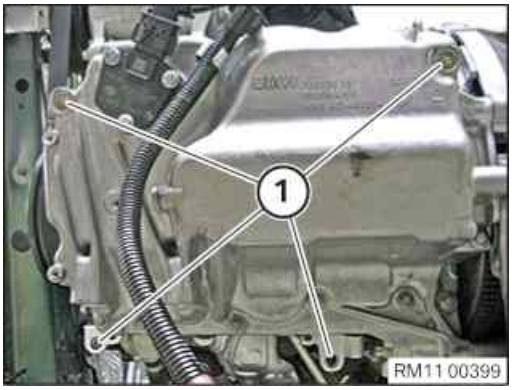
CAUTION

Residual pressure in the air conditioning.

Danger of injury!

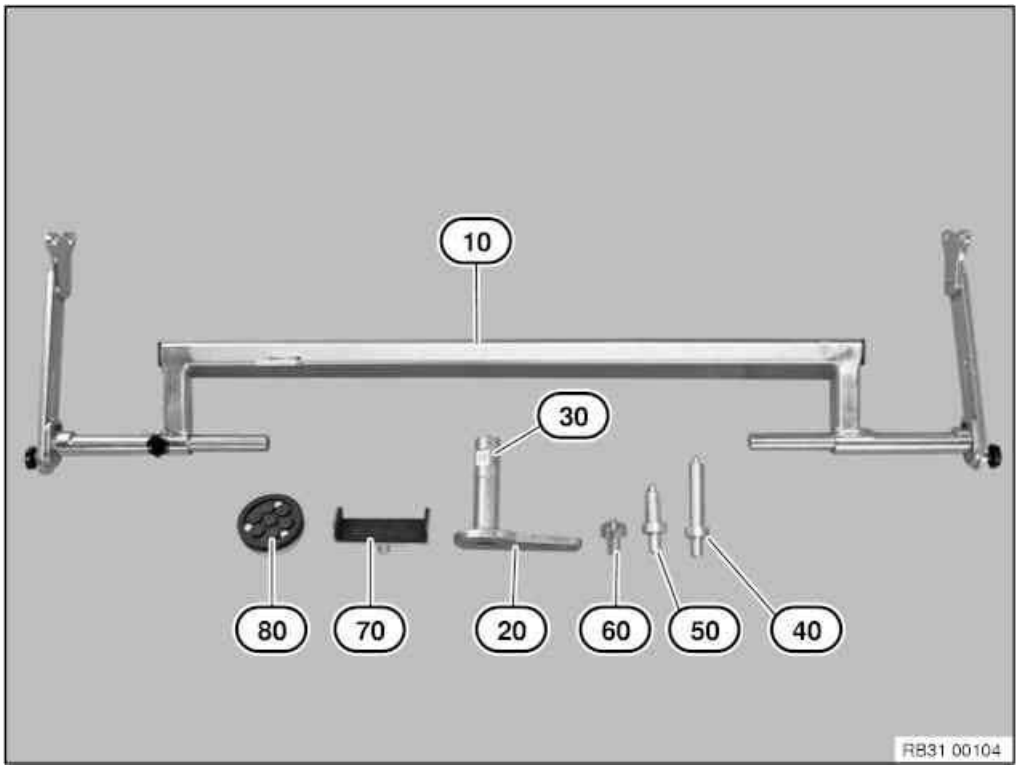
- Wear safety goggles and protective gloves when disconnecting the refrigerant line.
- Seal refrigerant lines with seal plugs.

- Unlock plug connection (1) and disconnect.
- Loosen screws (2).
- Feed out the refrigerant lines (3) and set them aside.
- Close the openings on the refrigerant lines (3) and the air conditioning compressor with standard tools.



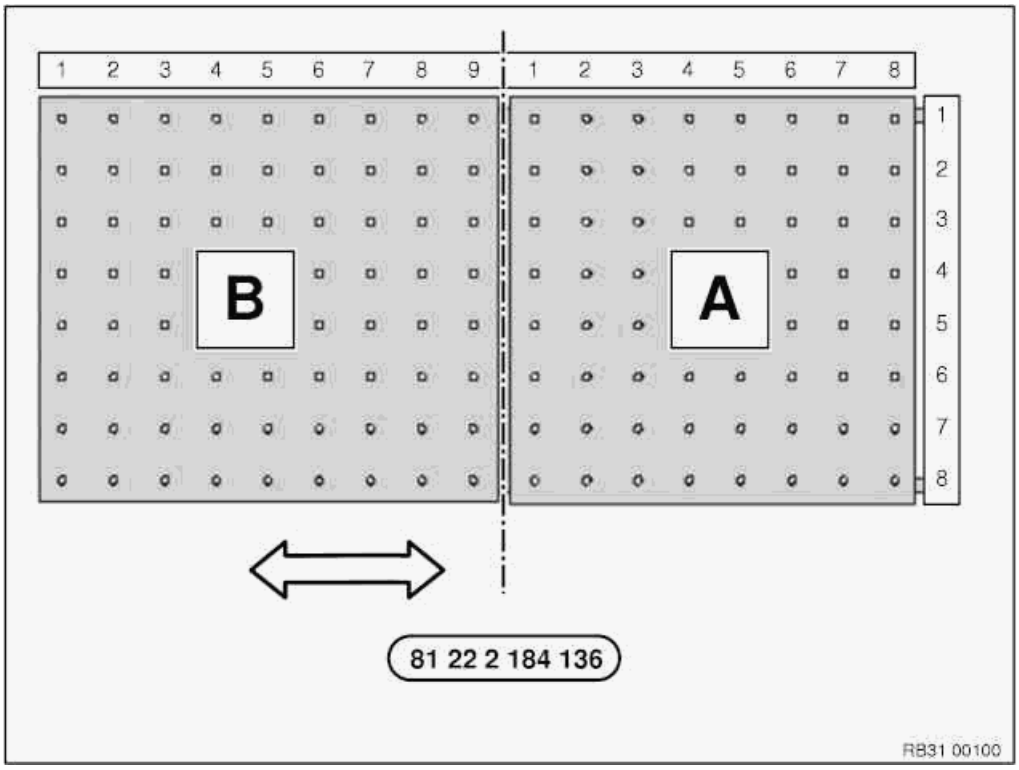
- Ensure that the **40/50** distance pins of table top **A** of the mobile lifting table are installed in mounting points (1) of the oil sump.

cardiagn.com



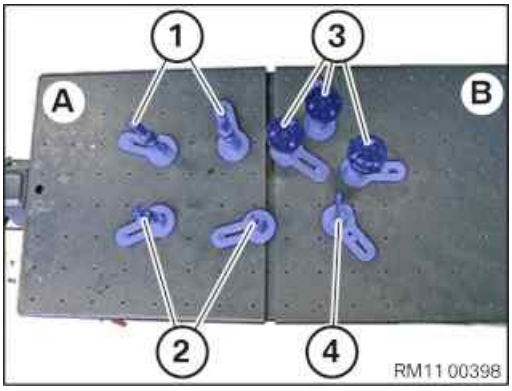
- Overview of the set of special tools **2 305 379**:

Number	Description
10	For mounting swivel bearing with brake disc
20	Retaining element for adjustable fixture
30	Adjustable fixture
40	Distance pin 40 x 160 mm
50	Distance pin 40 x 110 mm
60	Distance pin 40 x 60 mm
70	Fixture with U-profile
80	Plate mounting 100 mm



- Overview of special tools **2 184 136**:

Letter	Description
A	Table top for engine with coordinates
B	Table top for transmission with coordinates



- Position adjustable fixture (30) with distance pin (40) for the engine block on table top (A) at the coordinates **5/6** and **1/7** (1).
- Position adjustable fixture (30) with distance pin (50) for the engine oil sump on table top (A) at coordinates **5/3** and **2/3** (2).
- Position adjustable fixture (30) with distance pin (80) for the transmission housing on table top (B) at coordinates **6/5**, **2/5** and **2/7** (3).
- Position adjustable fixture **2 357 221** for transmission housing on table top (B) at coordinates **6/3** (4).

cardiagn.com

- Position the lifting table below the engine.
- Abut all fixtures and screw them to the lifting table.

- Attach the adjustable fixture **2 357 221** to the housing of the clutch slave cylinder with screw (1).

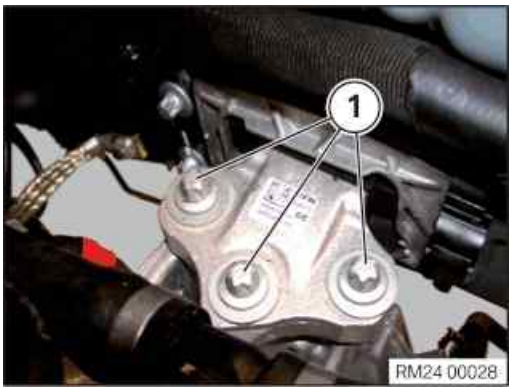
WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

- Position the weight compensation (1) on the vehicle.



WARNING

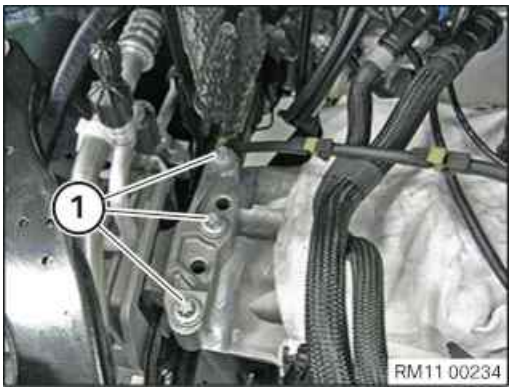
Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

- Loosen screws (1).

cardiagn.com



WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

- Loosen screws (1).
- Raise the vehicle **carefully**.

40 – Install engine

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

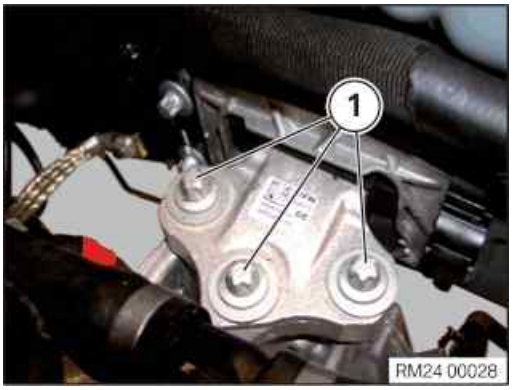
WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

- Position the lifting table and the engine under the vehicle.
- **Carefully** lower the vehicle and, if necessary, position the lifting table **correctly** for the vehicle.



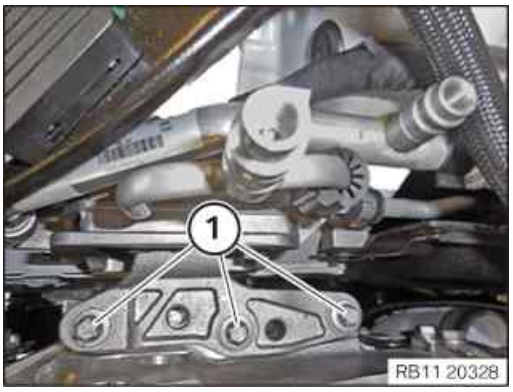
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Transmission mounting

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

cardiagn.com



- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1).

Right engine mount to cylinder head

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

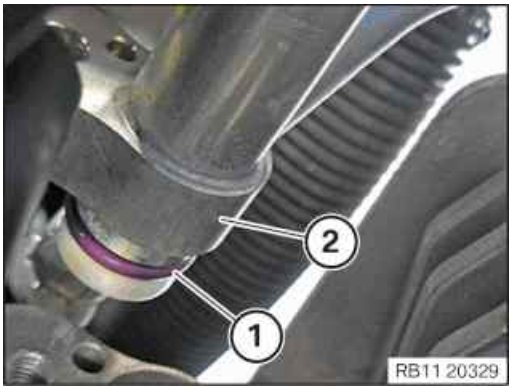
WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

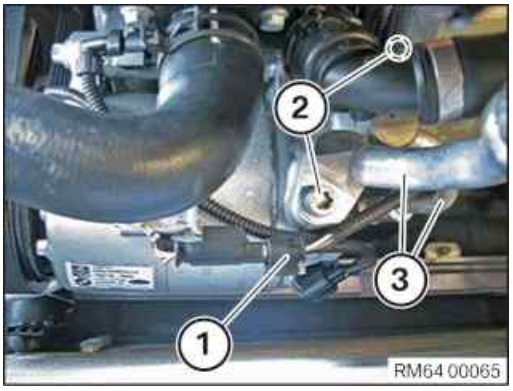
- Ensure there is a specific weight compensation on the motor vehicle.

- Remove weight compensation (1) from the vehicle.
- Lower lifting table(2) and put to one side.



- Replace the sealing ring (1) on the coolant lines (2).

  Parts: Sealing ring

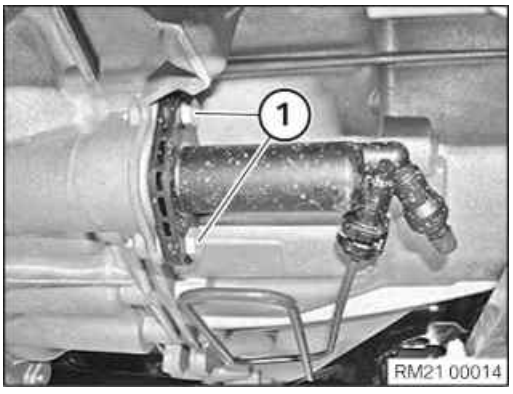


- Feed in and install the refrigerant lines (3).
- Tighten down screws (2).

Refrigerant line on air conditioning compressor

M8		Tightening torque	19 Nm

- Connect connectors (1) and lock.
- Make sure the connector (1) engages audibly.

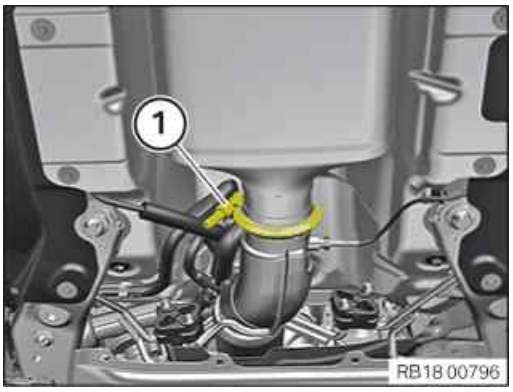


- Feed in and install the clutch slave cylinder .
- Tighten the screws (1).

Clutch slave cylinder to transmission housing

M8		Tightening torque	19 Nm

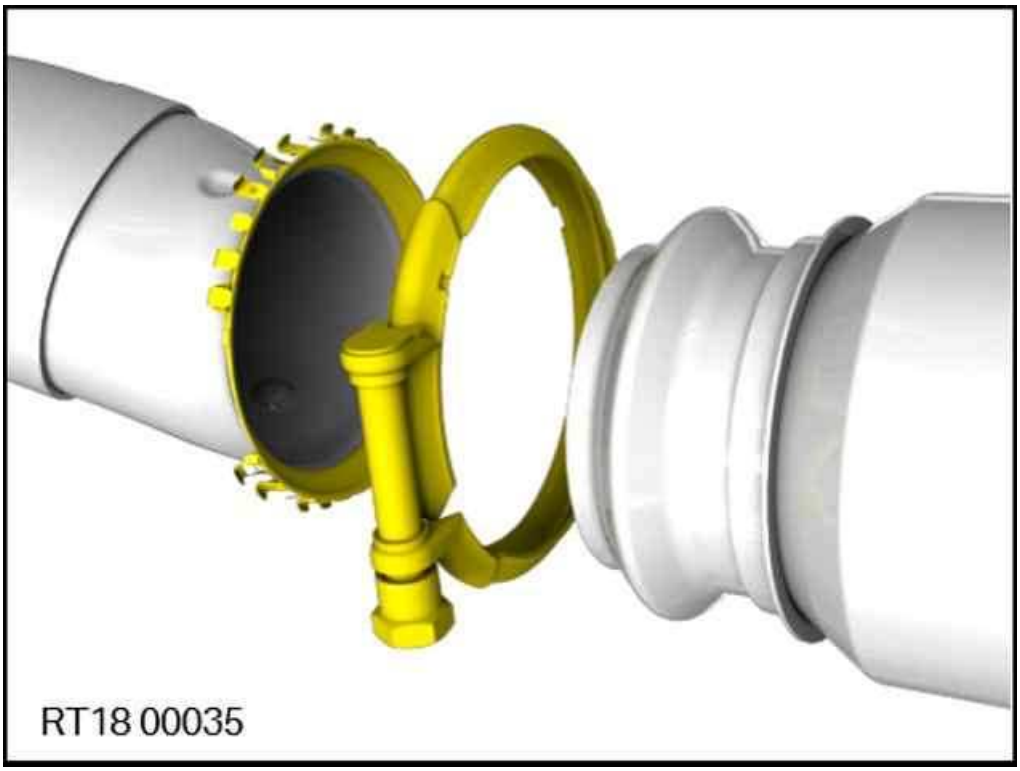
cardiagn.com

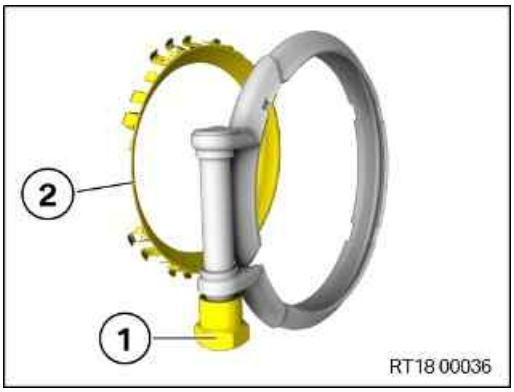


- Connect exhaust system to the diesel particulate filter.
- Feed in and install V-band clamp (1).

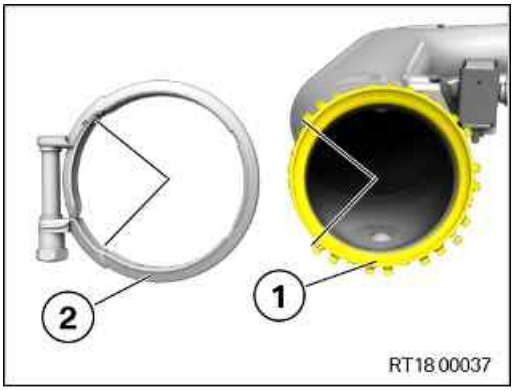
▸ **Install the V-clip**

V-band clamp





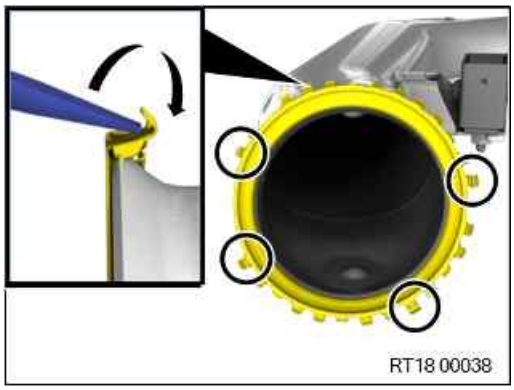
- Unscrew the nut (1) and remove the sealing ring (2).



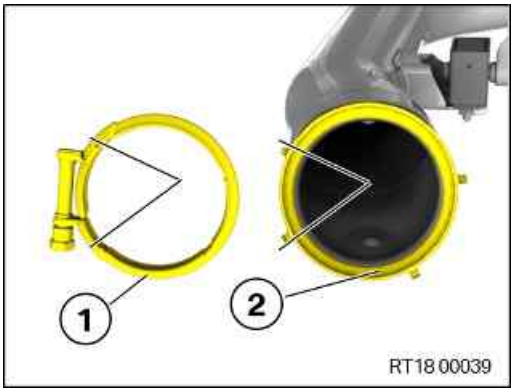
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.

cardiagn.com

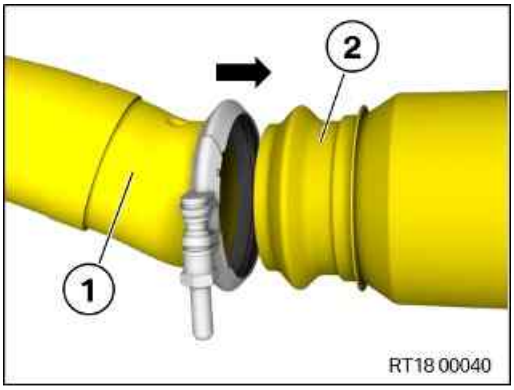


- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

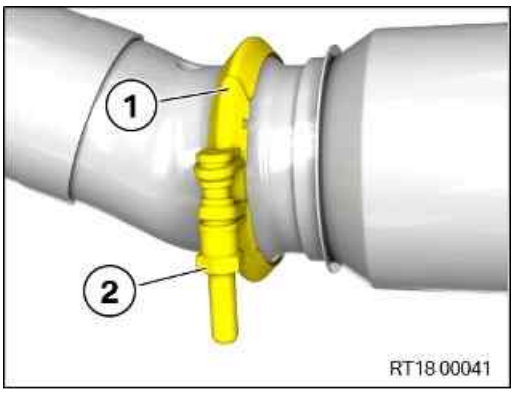


- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).



- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.

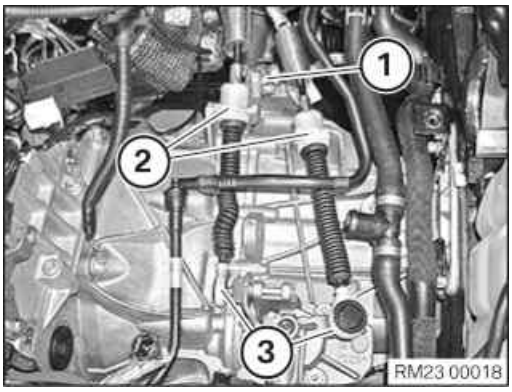


- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

cardiagn.com

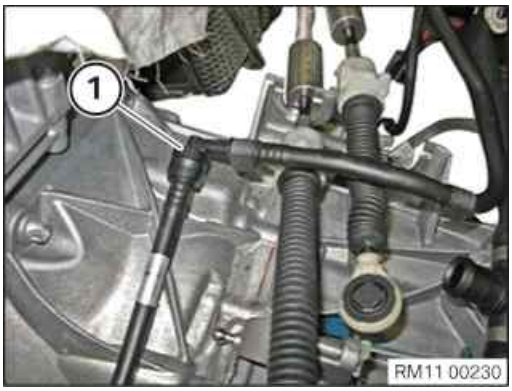


- Insert earth strap and tighten the screw (1).

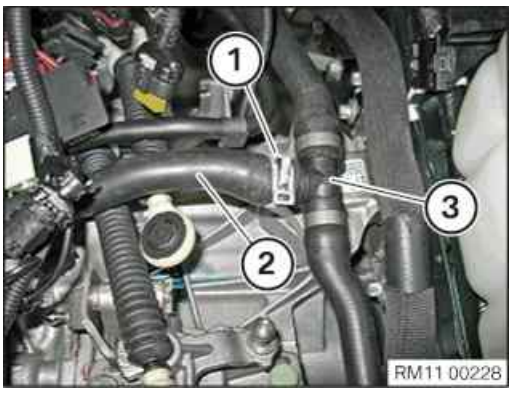
Standard screw connection M8

M8		Tightening torque	19 Nm

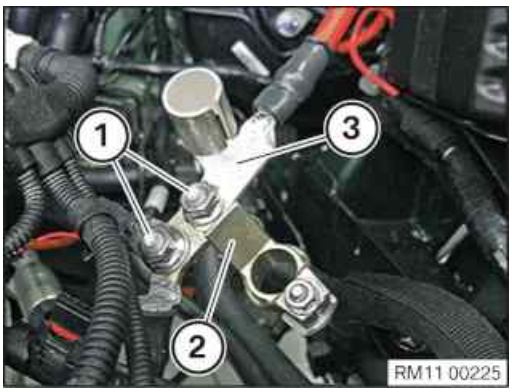
- Attach fixtures (3) of gear selector cables to the ball joints and engage.
- Insert gear selector cables in the holders and secure in the holders with safeguards (2).



- Connect the vacuum line (1) and lock.
- Make sure you can hear the vacuum line (1) engage.



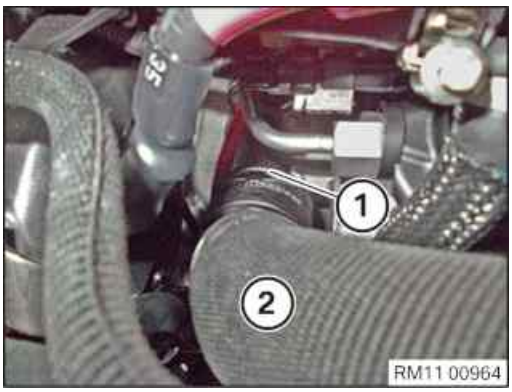
- Insert and install the coolant hose (2) on the coolant line (3).
- Fasten the clamping collar (1).



- Insert and install the positive battery terminal (2) and the remote positive terminal (3).
- Tighten nuts (1).

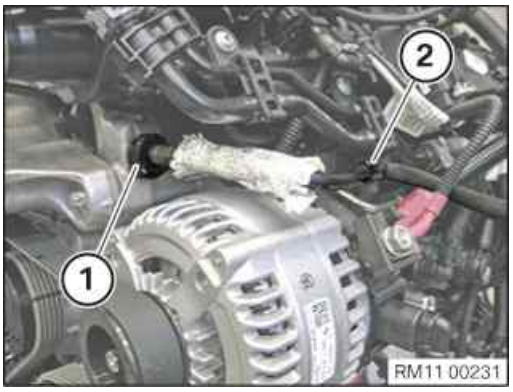
Positive battery cable to positive battery terminal

M8		Tightening torque	15 Nm

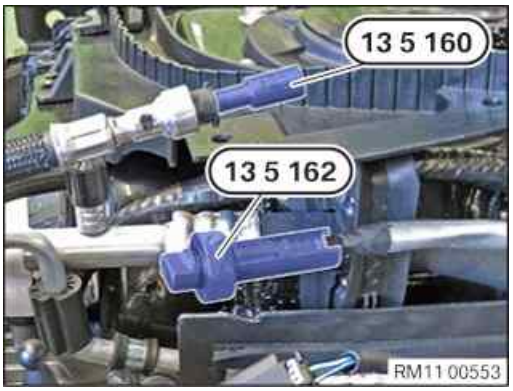


- Connect and lock the coolant lines (2).
- Ensure that the lock (1)engages audibly.

cardiagn.com



- Connect the coolant line (2).
- Lock clamp (1).

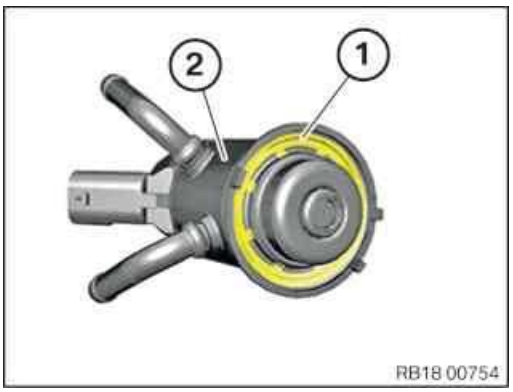


- Thread out special tools and and remove.

- Route and connect fuel lines (1).
- Ensure that the lock engages audibly.

POSTPROCESSES

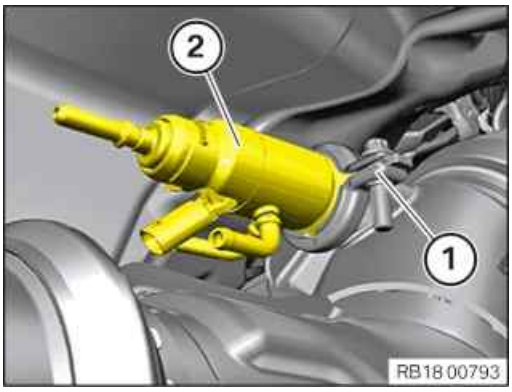
41 – Install the SCR metering module



- Renew the seal (1) of the SCR metering module (2).

  Parts: Sealing ring

cardiagn.com

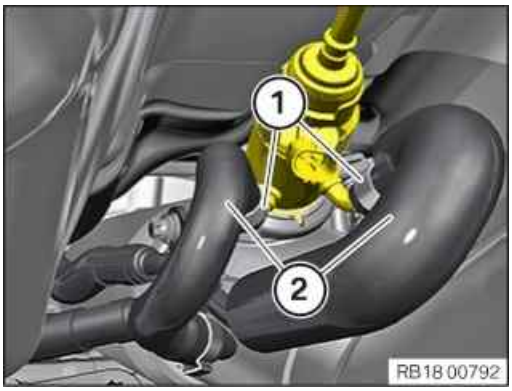


- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

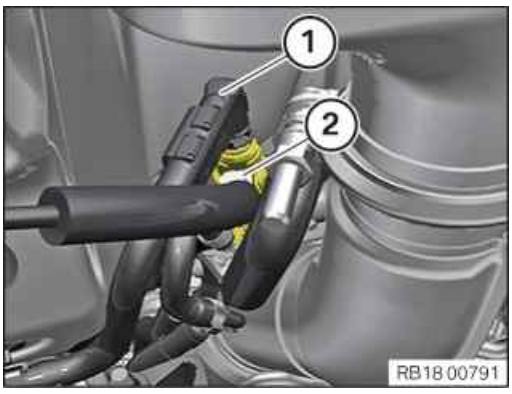
SCR metering module V-clip to exhaust system

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm



- Connect the coolant lines (2).
- Renew the clamps (1).

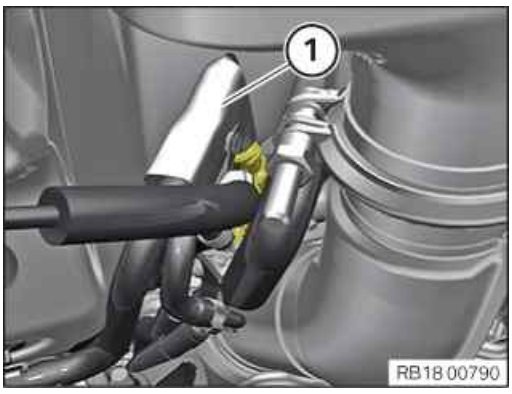
  Parts: Clamps
- Fasten the clamps (1).



- Connect connectors (2) and lock.

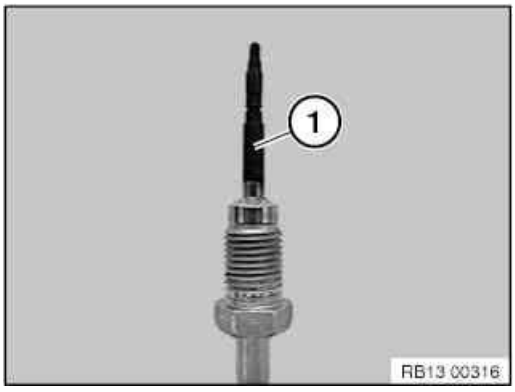
  The connector (2) must engage audibly.
- Connect and lock the metering line (1).

  Metering line (1) must engage audibly.



- Insert and install the heat protection cap (1).

42 – Installing exhaust temperature sensor on catalytic converter



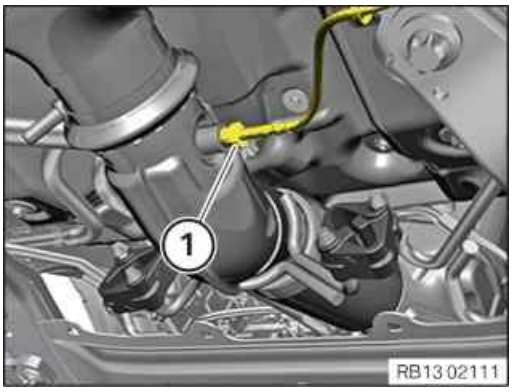
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.
- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

cardiagn.com

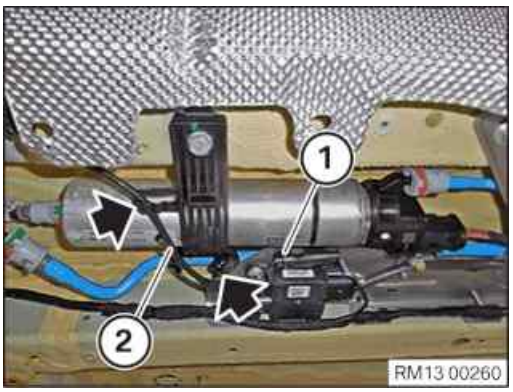


- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Secure the cable clips (1).



- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

43 – Installing right output shaft partially

▸ Installing the radial shaft seal, right in the differential (manual gearbox)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

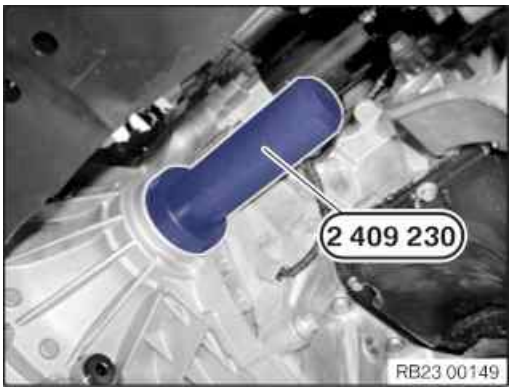
RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

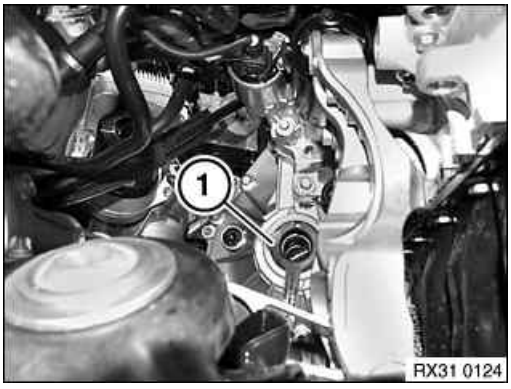
cardiagn.com



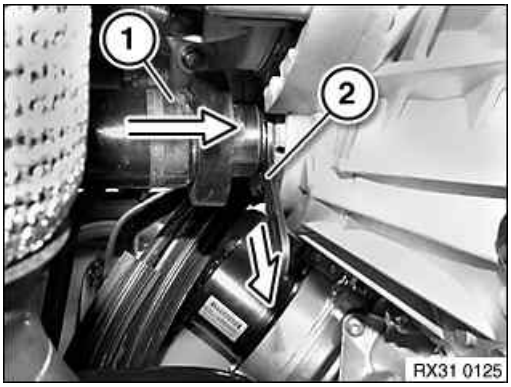
- Coat sealing lips of radial shaft seal with transmission oil.
- Drive the radial shaft seal into the housing with the special tool **2 409 230** until the sealing ring finishes flush with the transmission housing.

- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

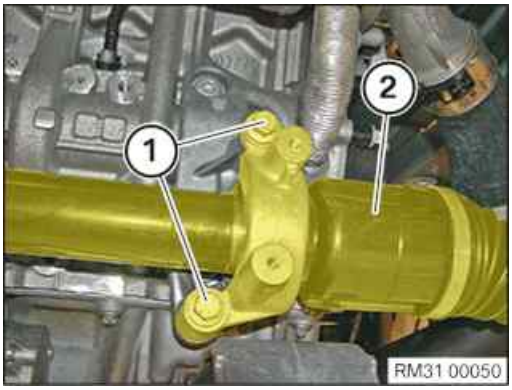
  Parts: O-ring
- Insert new O-ring (1).



- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.



- Insert output shaft (1) into transmission.
- Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.
- Check for secure seat by levering.



- Tighten the screws (1).

Output shaft bearing to engine block

M10		Tightening torque	38 Nm

44 – Partially installing the left output shaft

▸ **Installing the left radial shaft seal on the differential (manual gearbox)**

cardiagn.com

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

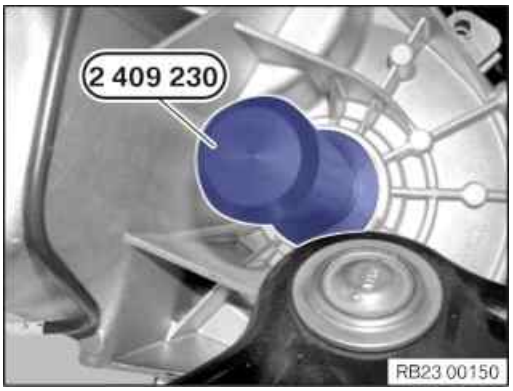
- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

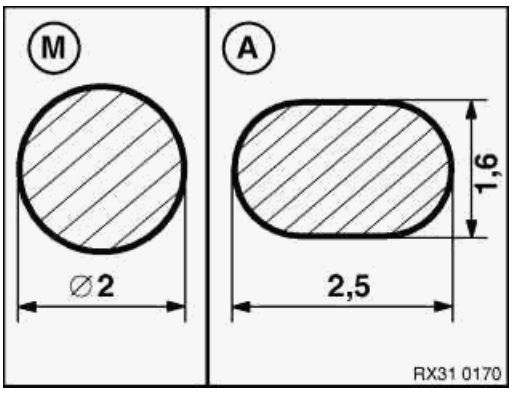
- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.



- Coat sealing lips of radial shaft seal with transmission oil.
- Drive the radial shaft seal into the housing with the special tool **2 409 230** until the sealing ring finishes flush with the transmission housing.

- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

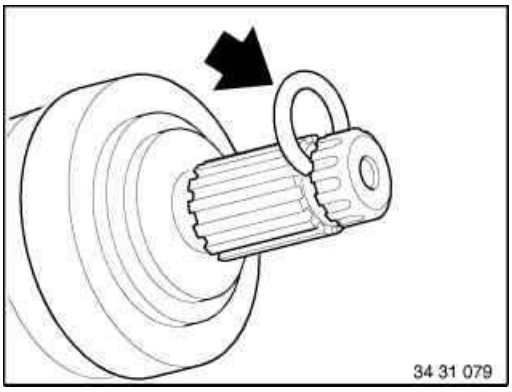
  Parts: O-ring
- Insert new O-ring (1).



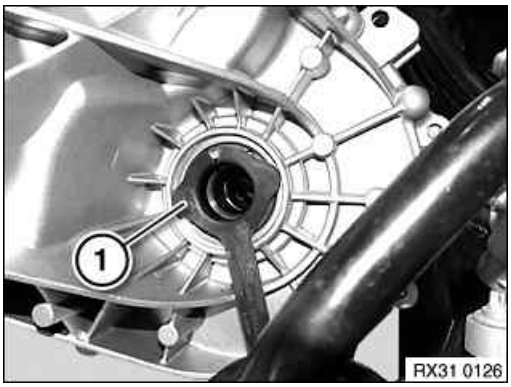
- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission

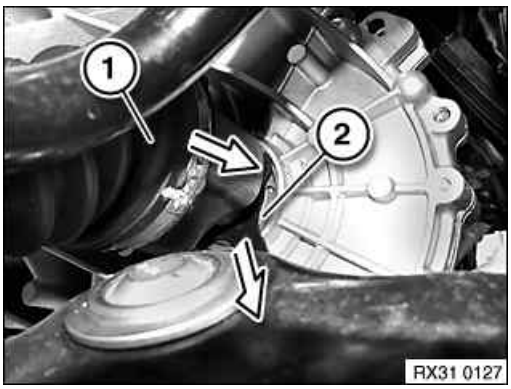
cardiagn.com



- Renew circlip (arrow).



- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.



- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

45 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

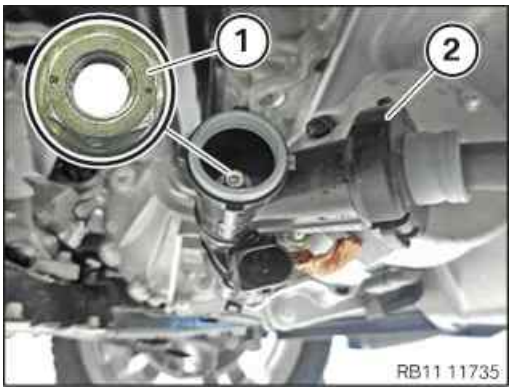
- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

cardiagn.com



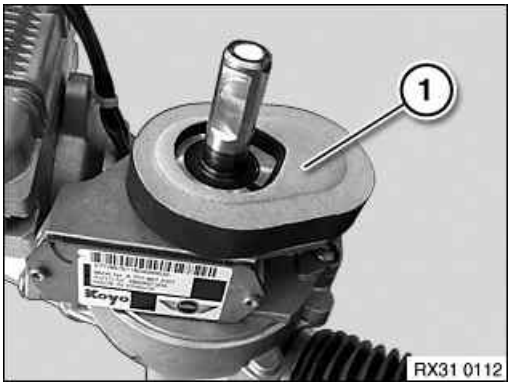
- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

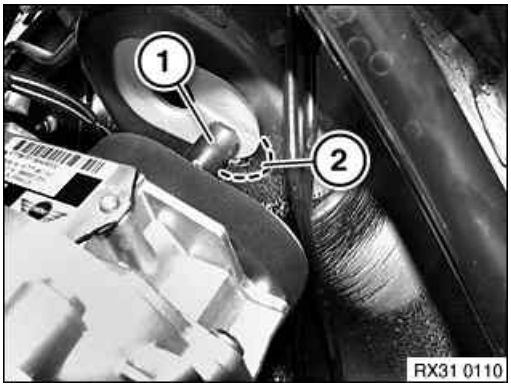
- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

46 – Mount and secure the complete front axle



- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



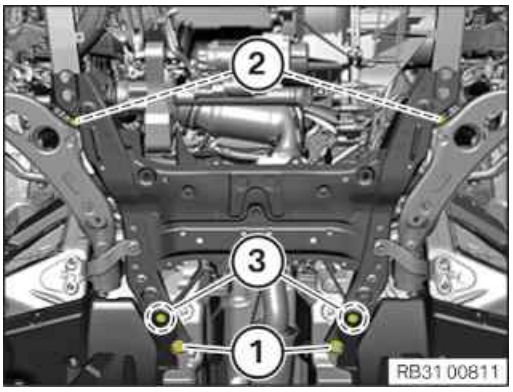
TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com



- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

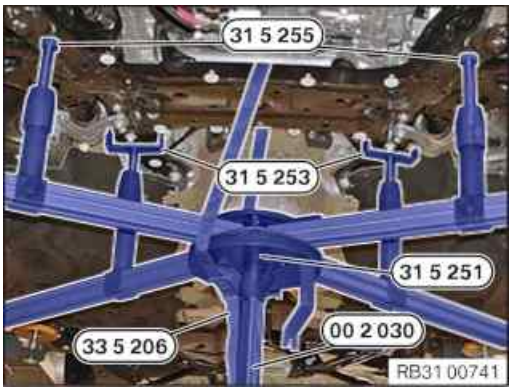
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

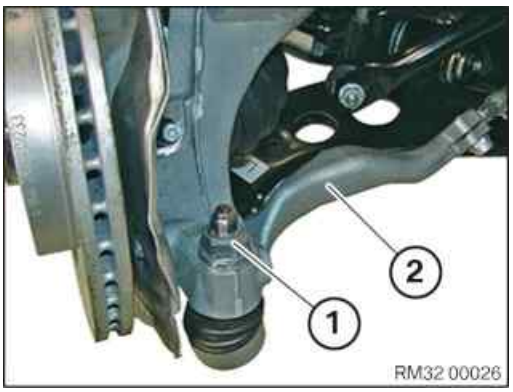
- If necessary, tighten the screws in the areas (3).

Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and place it to the side.



NOTICE

Perform the operations on the left and right side.

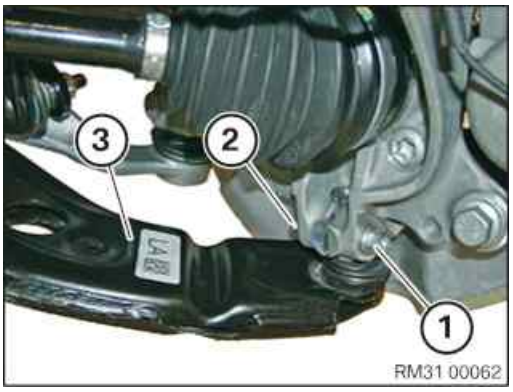
- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

cardiagn.com



NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

47 – Install the mounted parts on the front axle support

NOTICE

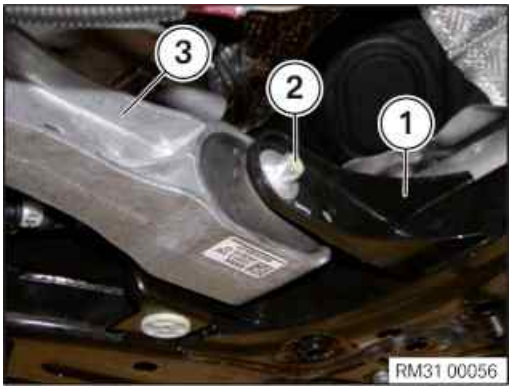
Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

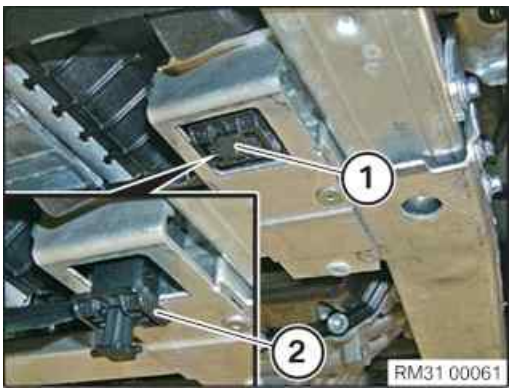
M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °



- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm

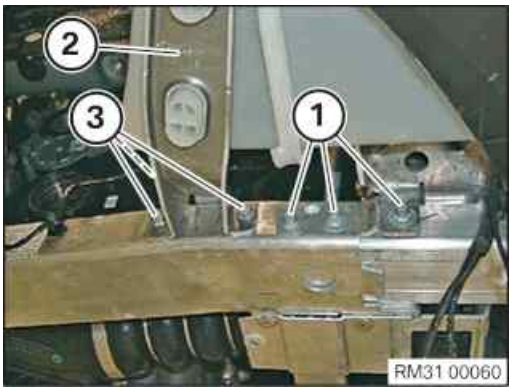


NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

cardiagn.com



- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

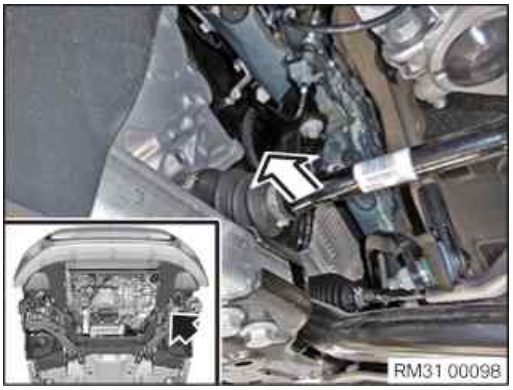
Perform the operations on the left and right side.

- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

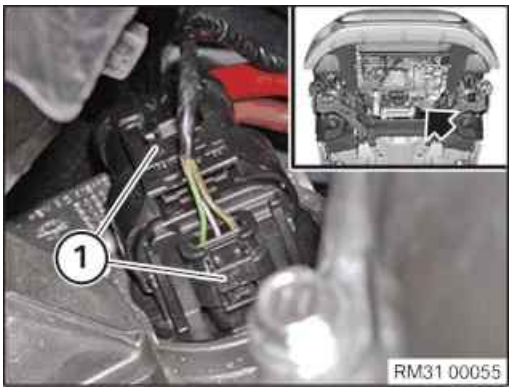
		Tightening torque	11,8 Nm

48 – Attaching connector at steering gear

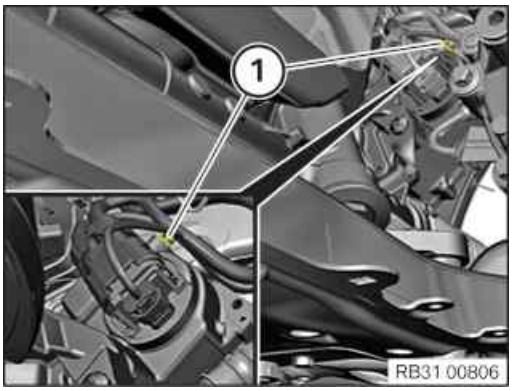


- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.



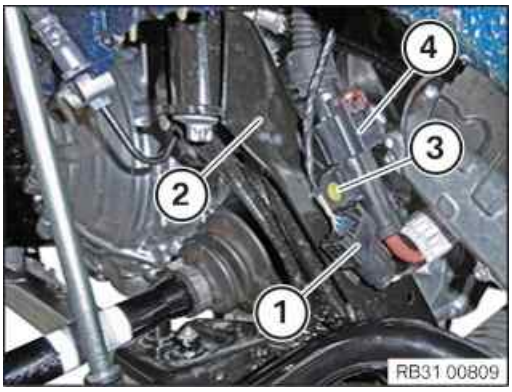
- Connect and lock connector (arrow) (1) with the steering gear.



- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**

cardiagn.com



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

49 – Securing rubber mount on front axle support

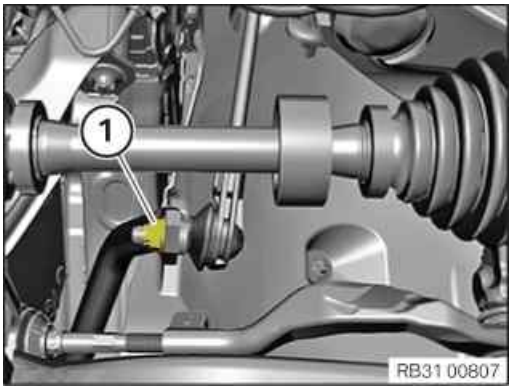
- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

50 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.



▸ **Fastening anti-roll bar on the anti-roll bar link**

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

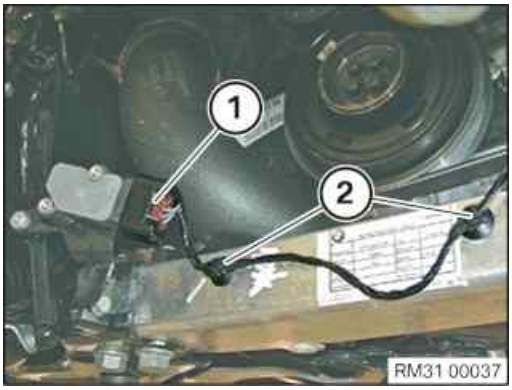
  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

51 – With right installation: Securing the cable for the ride height sensor



- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

52 – Installing pressure pipe between throttle body and charge air cooler

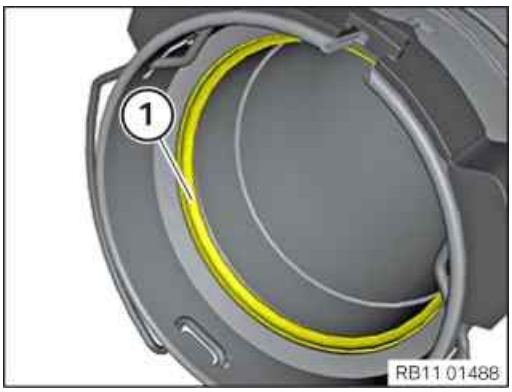
cardiagn.com

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.



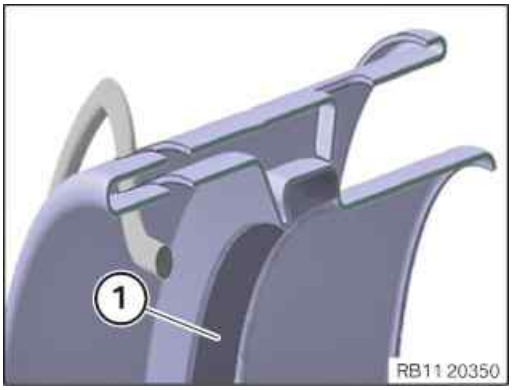
- Check seal (1) for damage and renew seal (1) as needed.

  Parts: Gasket

▶ **Replace damaged gasket**

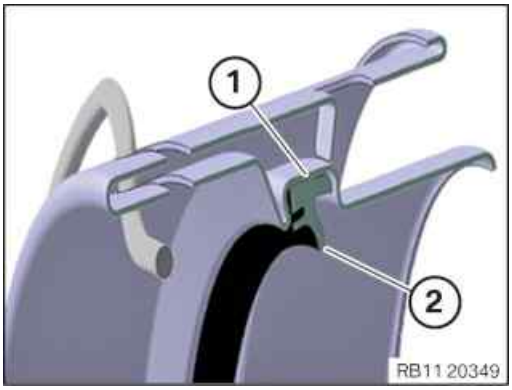
TECHNICAL INFORMATION

Do not use pointed or sharp-edged tools for the installation and/or removal.



- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.



- Renew gasket.

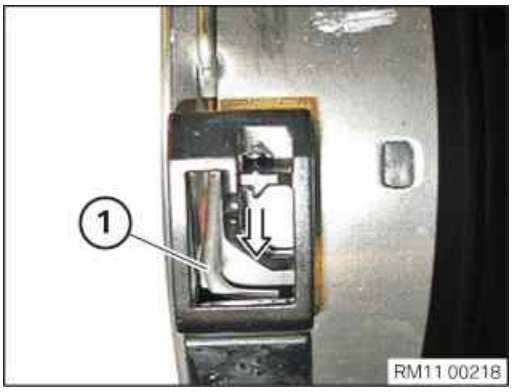
  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

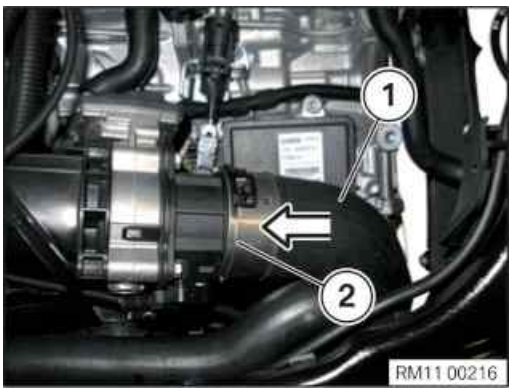
- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

cardiagn.com

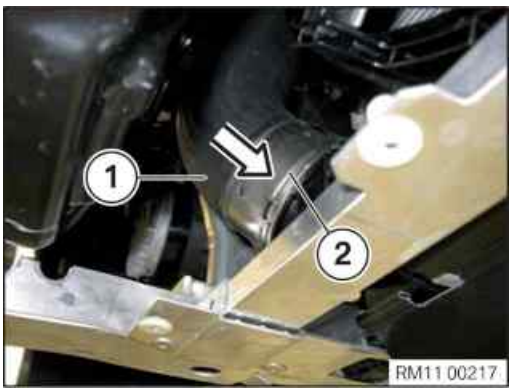


- Detach the locks (1) in the direction of the arrow from the brackets.

- Insert and install the pressure pipe (1) in the direction of the arrow.



- Insert and install the pressure pipe (1) in the direction of the arrow.
- Ensure that the locks (1) engage audibly.



- Insert and install the pressure pipe (1) in the direction of the arrow.
- Ensure that the locks (2)engage audibly.

53 – Install right charge air duct

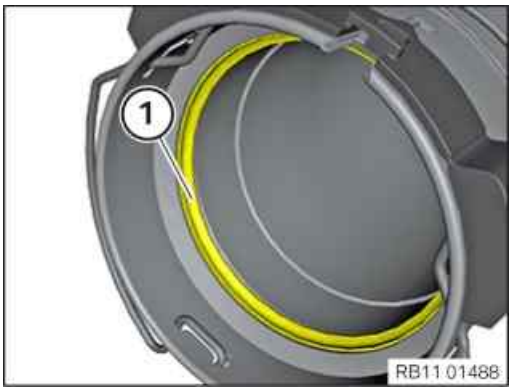
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

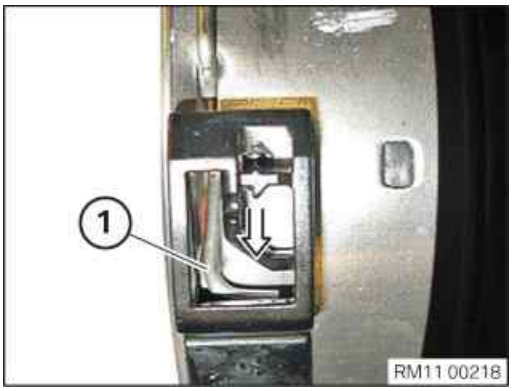
- Replace the gaskets and pressure pipe if necessary.

cardiagn.com

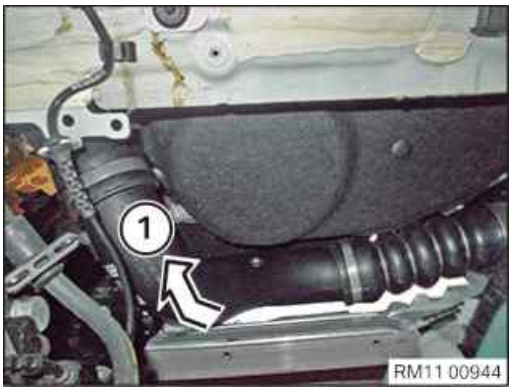


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

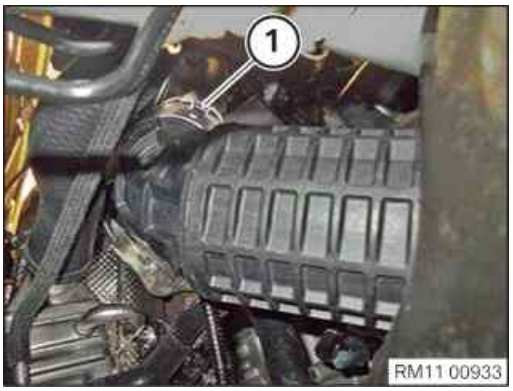
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).

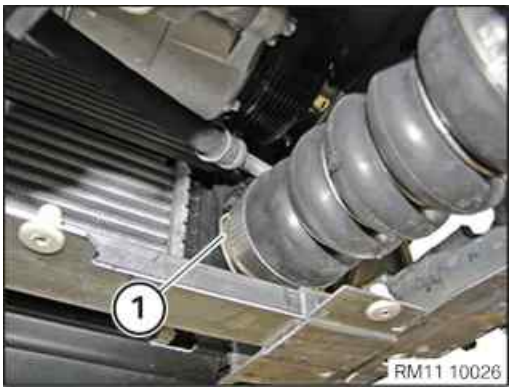


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

cardiagn.com

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm

- Tighten charge air duct screws (1) on oil sump.

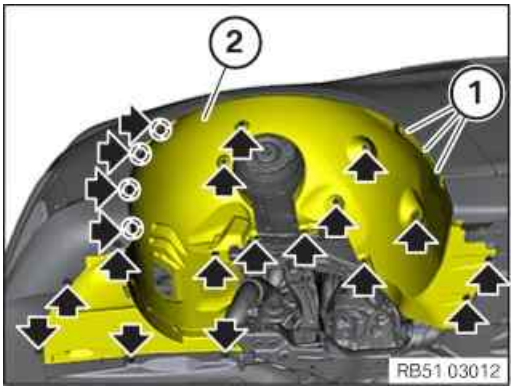
Charge air duct to oil sump

M6		Tightening torque	8 Nm

54 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.



▸ **Installing the front wheel arch cover**

- Guide the wheel arch cover (2) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

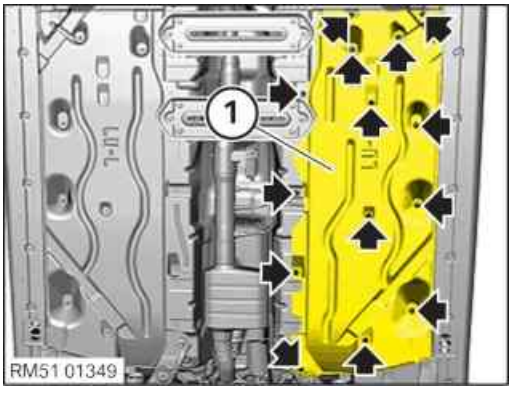
Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

- Secure expanding rivet (1).

55 – Installing underbody panelling , right



- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side

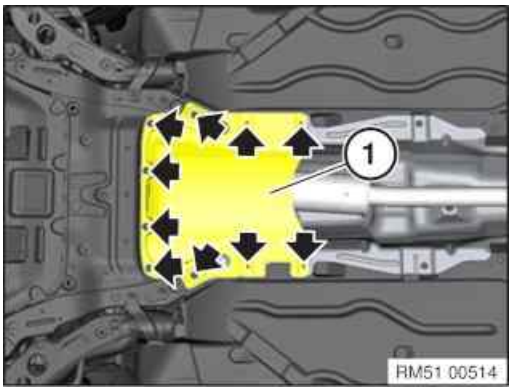
Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

56 – If installed: Installing underbody protection at rear

cardiagn.com

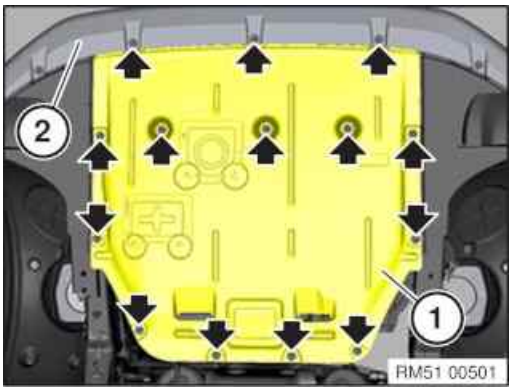


- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

57 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

58 – Mount the front left and right wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

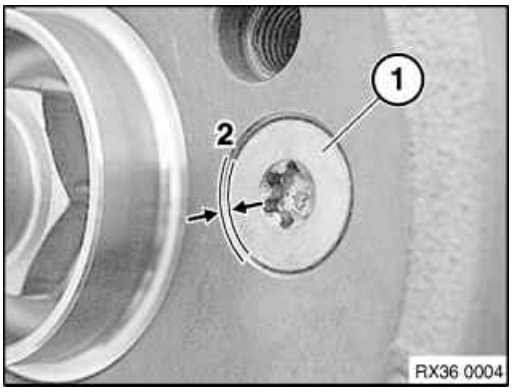
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com



- Check the mounting bolt for the brake disc (1) for secure fit.

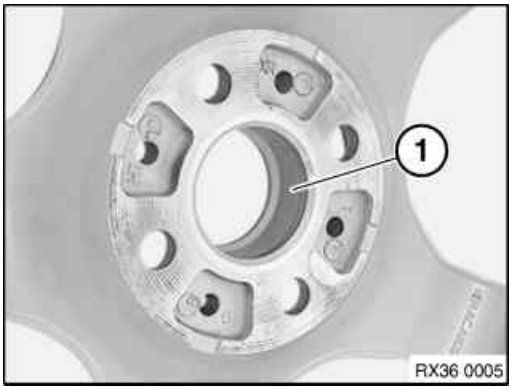
  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

◁

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

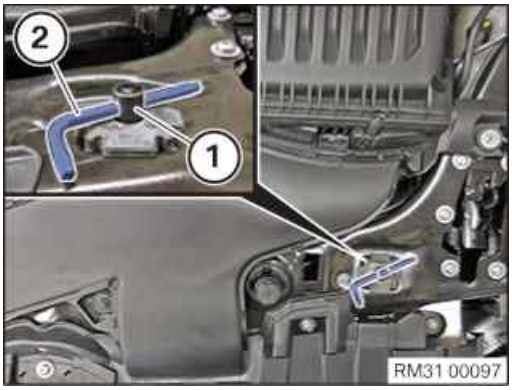
  Parts: Wheel bolts
- Clean the wheel bolts.
- Check wheel bolts (arrows) and threads for damage, renew the wheel bolts if necessary.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

cardiagn.com

59 – Removing fastener for left and right radiator

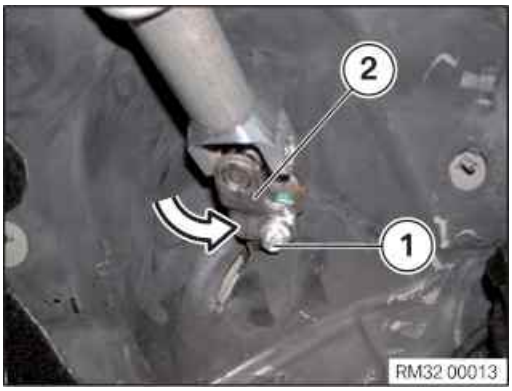


NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

60 – Secure the steering shaft at the bottom on the steering gear



- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

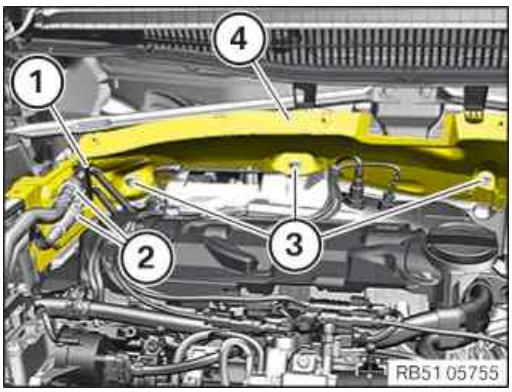
M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

61 – Installing rear bulkhead upper part



- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead

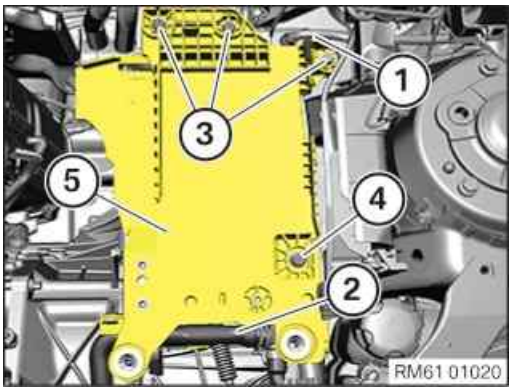
Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

62 – Install the battery holder

cardiagn.com



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

63 – Install electronics box

Prerequisite

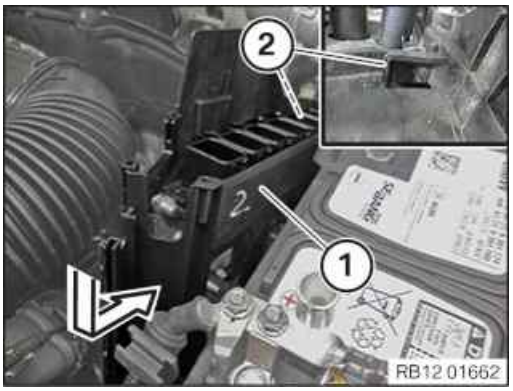
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

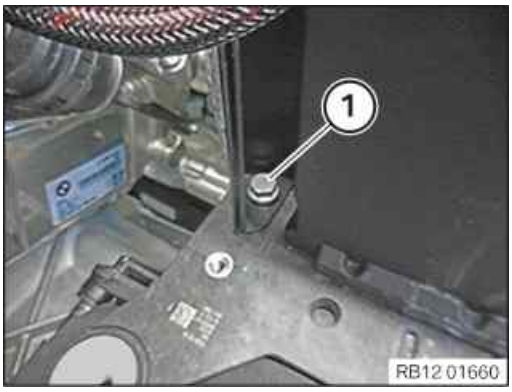
- Route all cables without abrasions, do not trap and crush.



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

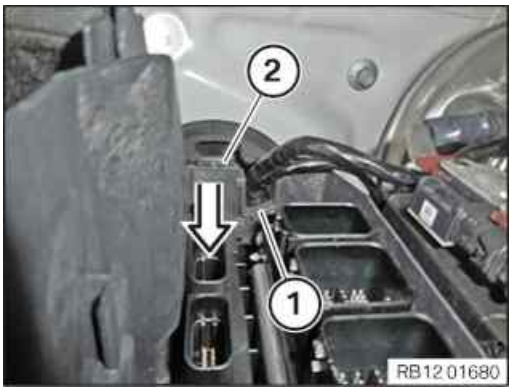
cardiagn.com



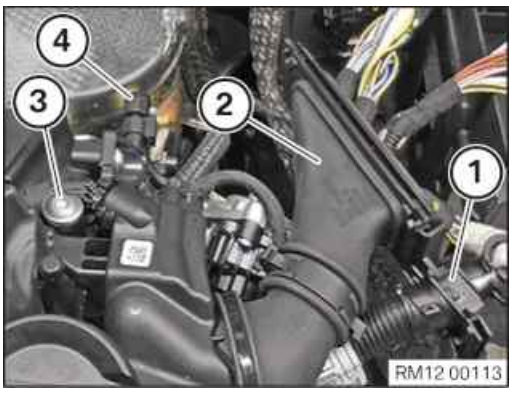
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

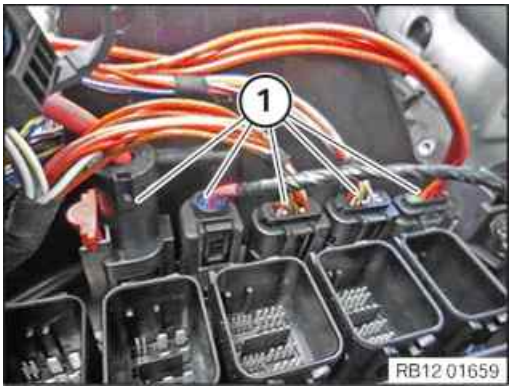


- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

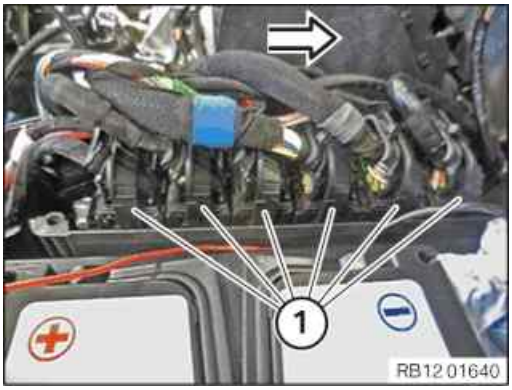
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

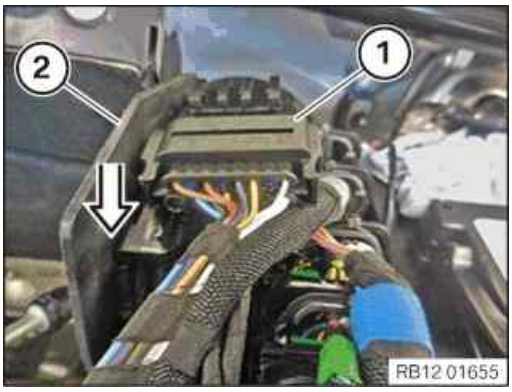


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

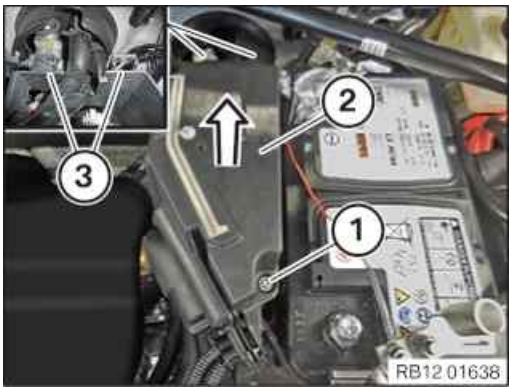


- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

cardiagn.com



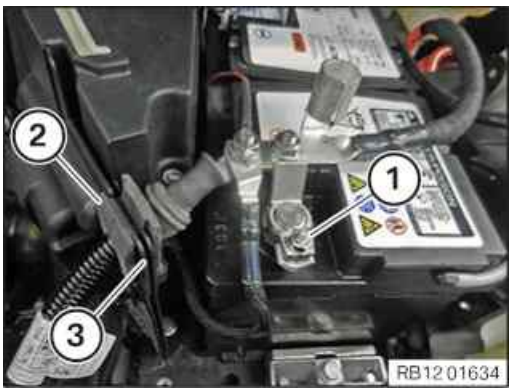
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

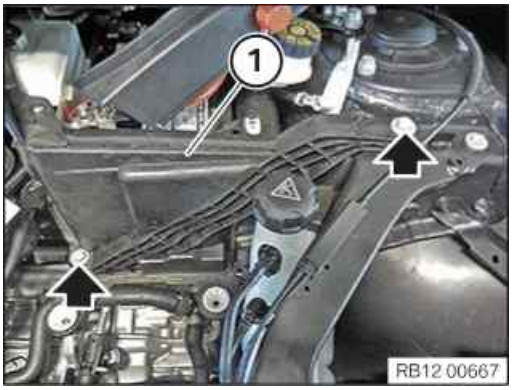
RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (1).
- Tighten screws (arrows).

Tension strut to spring strut dome/battery tray

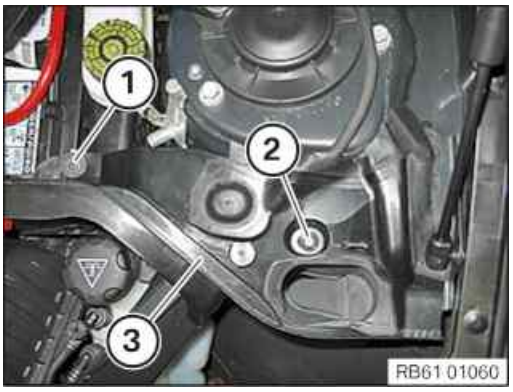
M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

cardiagn.com

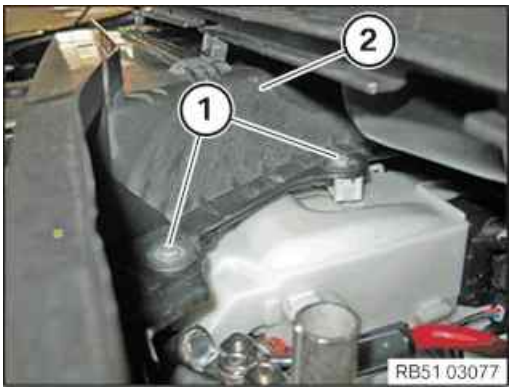


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

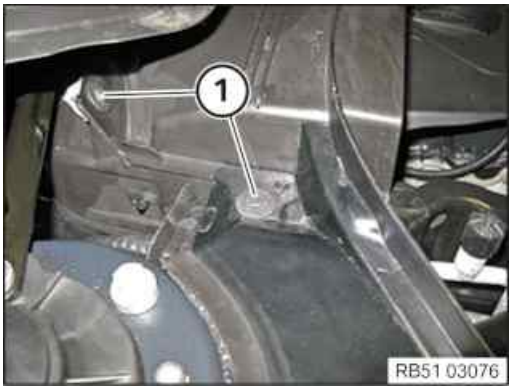
64 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

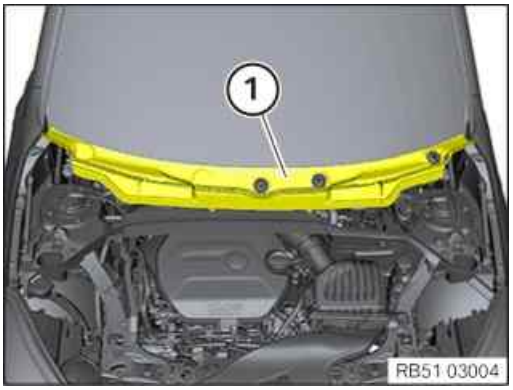
Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

65 – Install the rear cowl panel cover



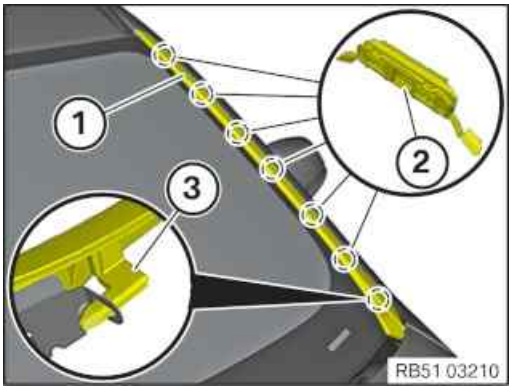
- Feed in and engage the rear cowl panel cover (1).

cardiagn.com

66 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.



▸ **Install the gutter strip on the windscreen**

- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

67 – Install left and right wiper arm

NOTICE

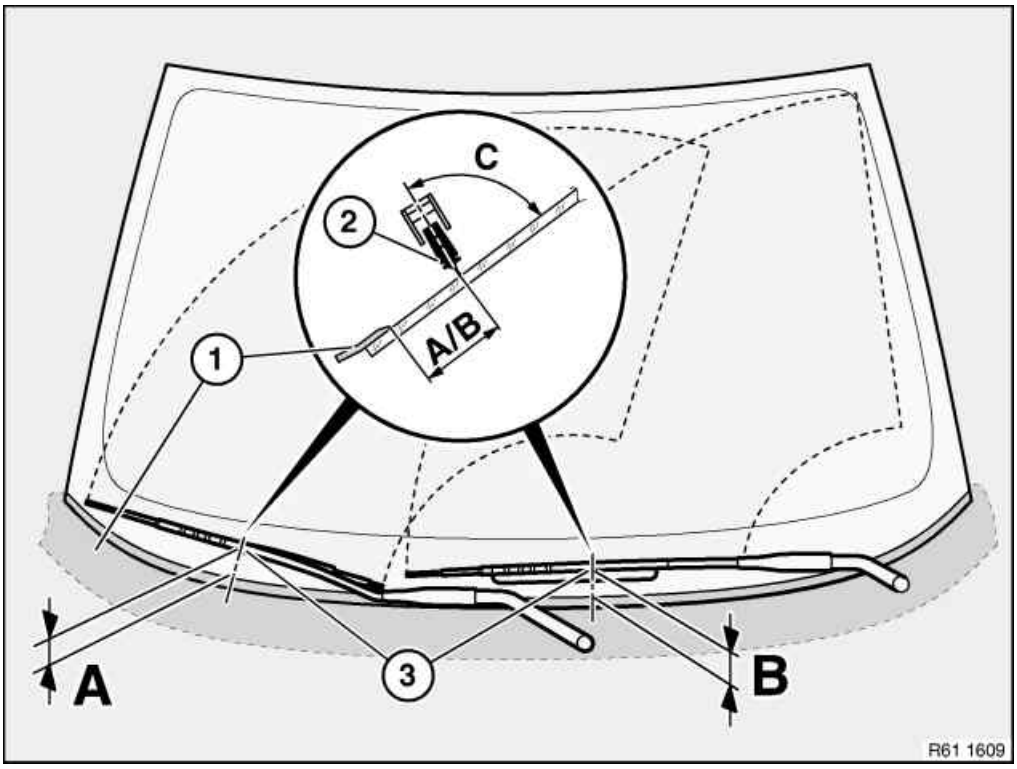
Description is for left component only. Procedure on the right side is identical.

▸ **Install the wiper arm**

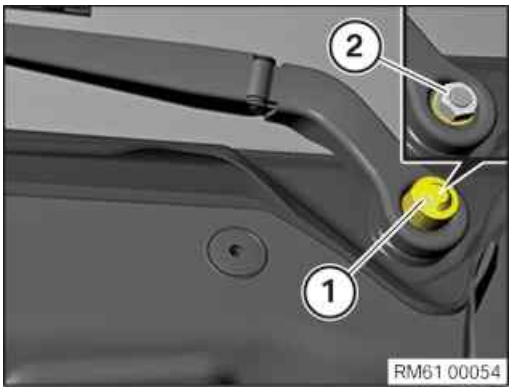
TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.

cardiagn.com



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

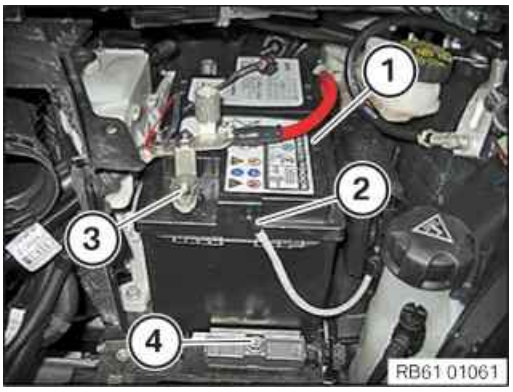
- Connect the protective cap (1).

68 – Install vehicle battery

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Install vehicle battery (1).
- Tighten the holder with the bolt (4).

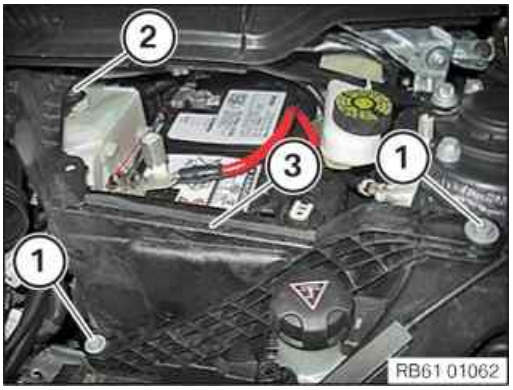
Battery terminal rail to battery tray

M8 screw		19 Nm

- Position the vent hose (2).
- Position the positive terminal.
- Tighten the nut (3) on the positive terminal.

Positive battery terminal

NutM6		5 Nm



- Insert the tension strut (3).
- Tighten down screw (2).

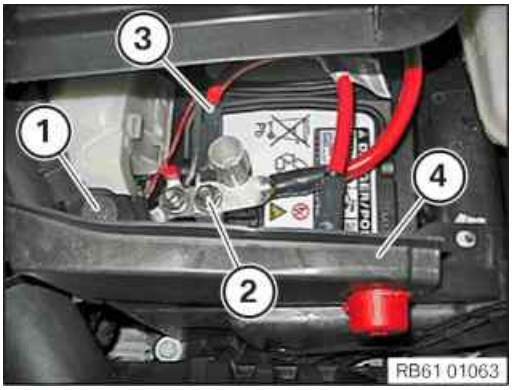
Battery cover

Screw		2,8 Nm

- Tighten the screws (1).

Trailing link

M8 screw		19 Nm



- Position the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten down screw (1).

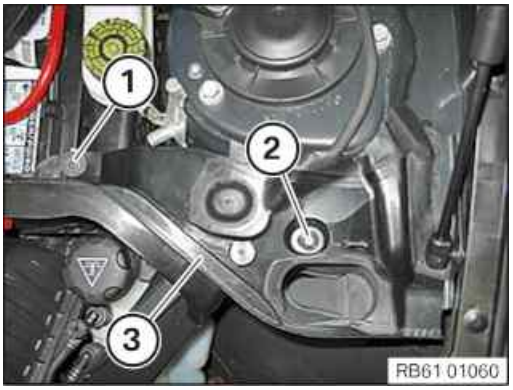
Battery cover

Screw		2,8 Nm

- Tighten the nut (2) on the positive terminal.

Positive battery cable to battery terminal

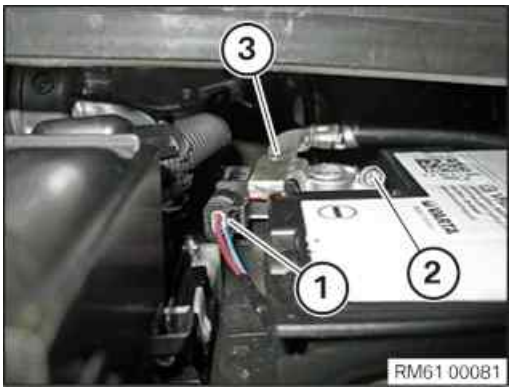
Nut M8		15,2 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm



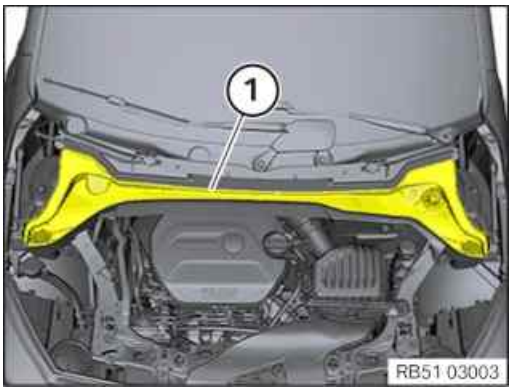
- Position the negative battery terminal (3).
- Tighten nut (2).

Negative battery terminal (with IBS)

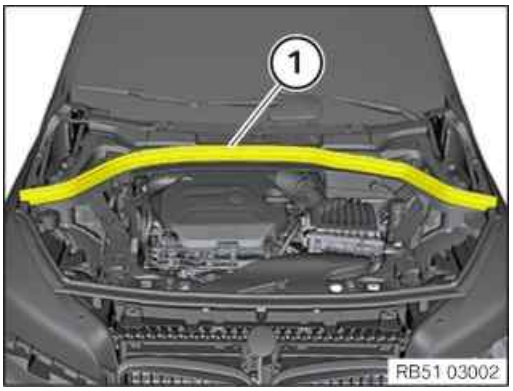
NutM6		5 Nm

- Connect connectors (1) and lock.

cardiagn.com

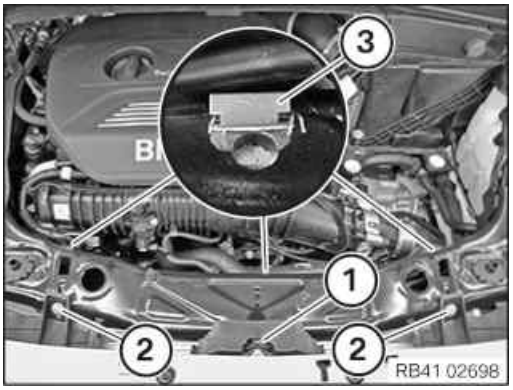


- Feed in the cowl panel cover (1).

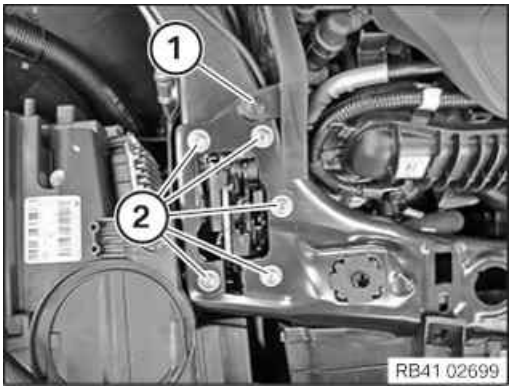


- Press the gasket (1) in a downwards direction.

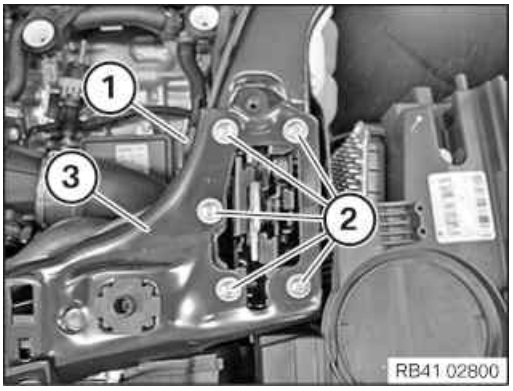
69 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



- Lever out expanding rivet (1).
- Loosen screws (2).



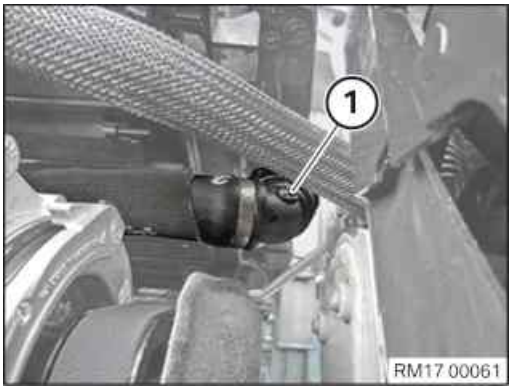
- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

70 – Connect the coolant line

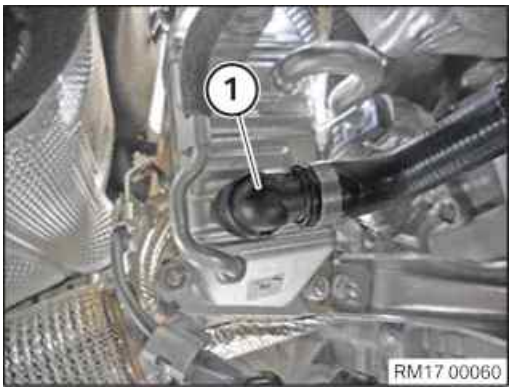
cardiagn.com

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect the right coolant line (1) to the radiator and lock audibly.

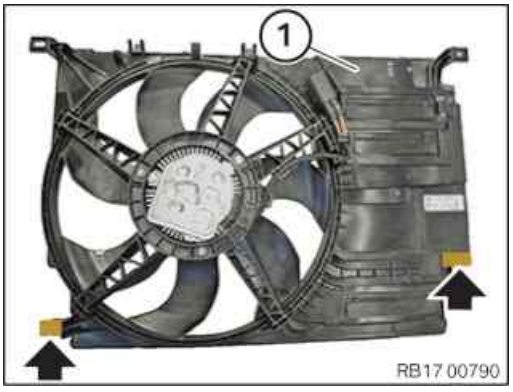


- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

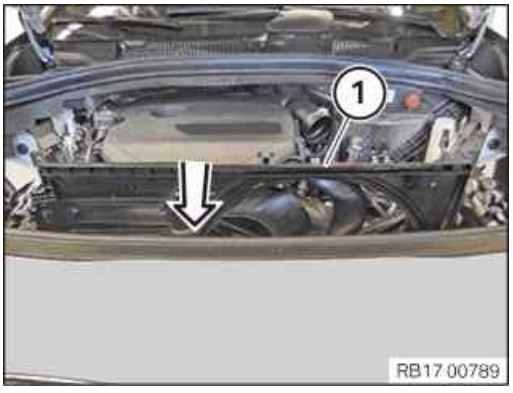
71 – Installing fan cowl with electric fan

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



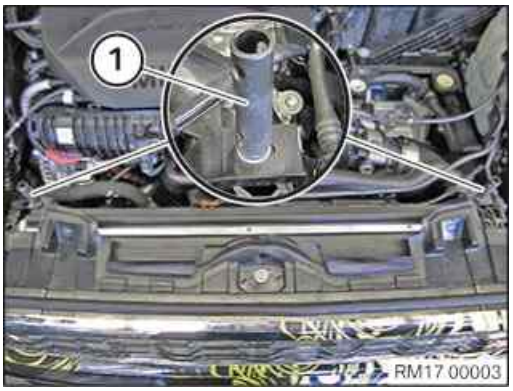
- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.



- Feed in and install the fan cowl (1) in the direction of the arrow.

cardiagn.com

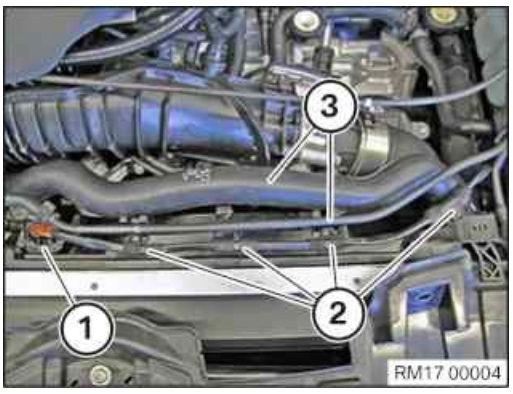
- Lock the left and right locks (arrows).



- Tighten the screws (1).

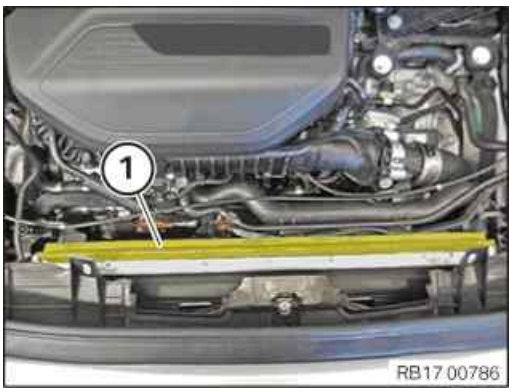
Fan cowl on radiator

M6X12		Tightening torque	6 Nm



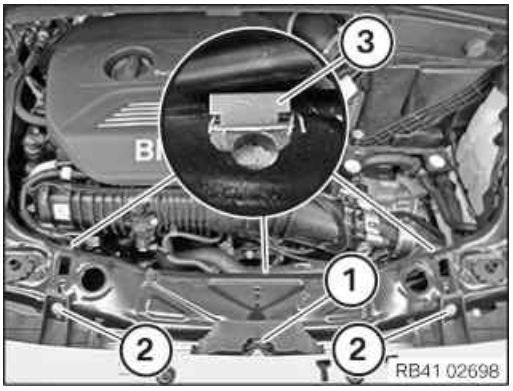
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).



- Guide the sealing (1) on the radiator in and install it.

72 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

M8		Tightening torque	25 Nm

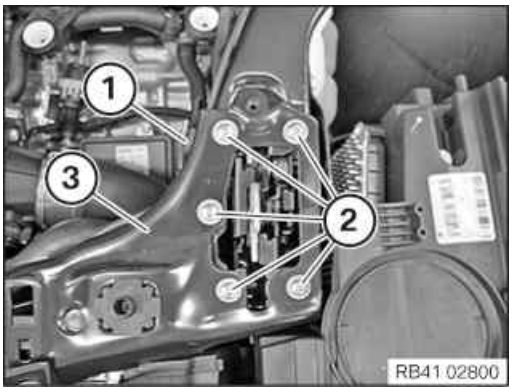
- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

cardiagn.com

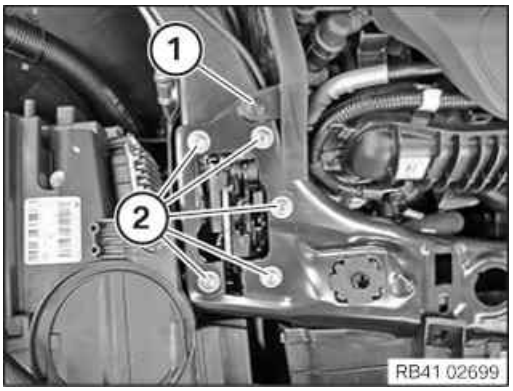


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



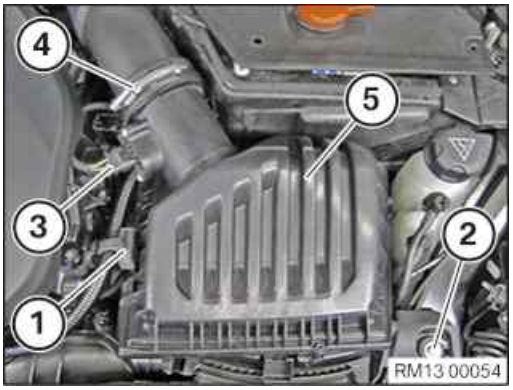
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

73 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

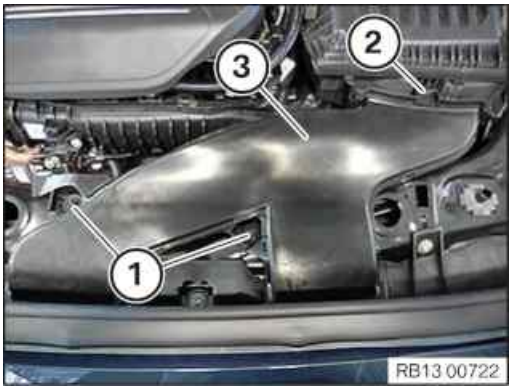
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

74 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

75 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

76 – Removing the oil filler cap

- Open oil filler cap (1).

77 – Topping up the engine oil

cardiagn.com

RISK OF DAMAGE

Damage to the petrol particulate filter.

Vehicles equipped with a petrol particulate filter must be operated with low-ash engine oil only.

- Use BMW Longlife-04 , BMW Longlife-12 FE or BMW Longlife-17 FE+ engine oils or engine oils approved by BMW matching the same specifications only.
- For additional information see: Overview of approved engine oils for BMW Group engines.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

- Pour in engine oil.

Engine oilB37C15U1

Capacity of engine oil	4,8 l

Engine oil: Technically suitable engine oils for BMW Group engines

78 – Installing the oil filler cap

- Close oil filler cap (1).

79 – Check engine oil level

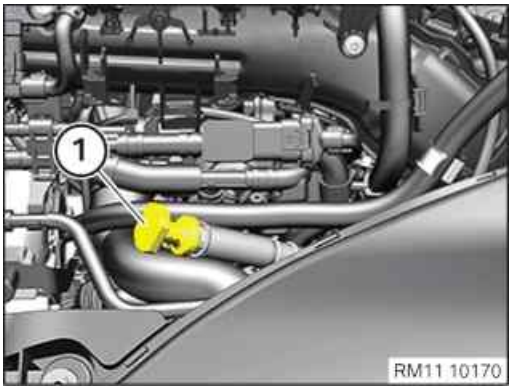
- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▸ **Check engine oil level**

cardiagn.com

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

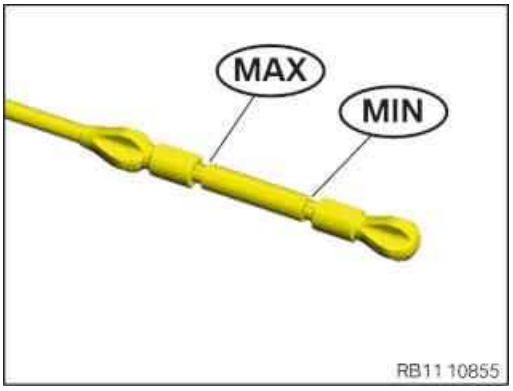


- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.



TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

80 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

81 – Evacuate and fill air conditioning

- See additional information.

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for

cardiagn.com

any return shipments. Always package removed components straight away.

- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.

For additional information see:

Main group 17

17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

Filling **without** the vacuum filler device (watering can filling) is **not permitted**.

Non-compliance will result in danger of component damage and/or engine damage.

Filling specification **absolutely must** be adhered to.

The operation of the vehicle is not permitted unless the filling procedure has been completed. Otherwise, functional limitations (degradation) and/or overheating may occur.

A bleeding procedure is required after a part has been exchanged in the cooling system and/or after refilling the cooling system.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

PRELIMINARY WORK

1 – Drawing off the air conditioning

- See additional information.

2 – Removing the acoustic cover

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

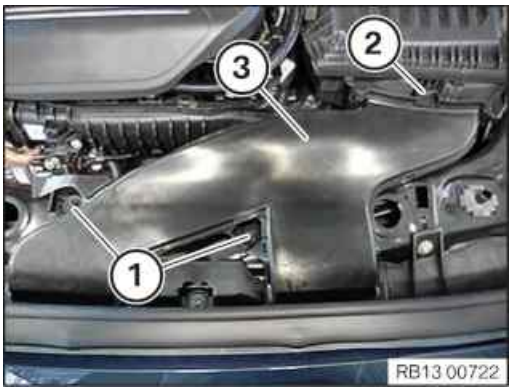
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

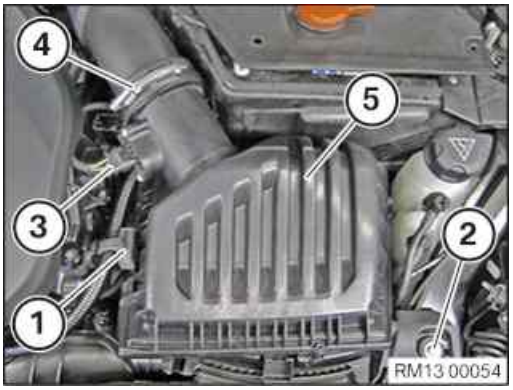
- Unclip the acoustic cover from the marked areas towards the top.

3 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

4 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

5 – Remove cross connection

cardiagn.com

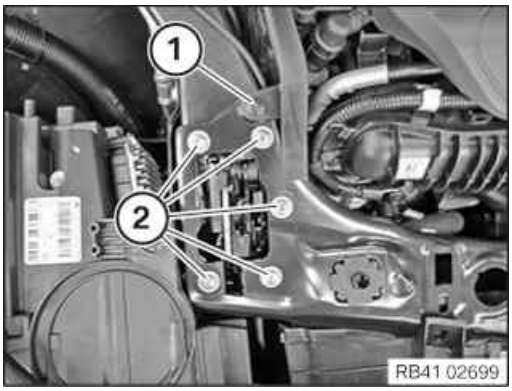
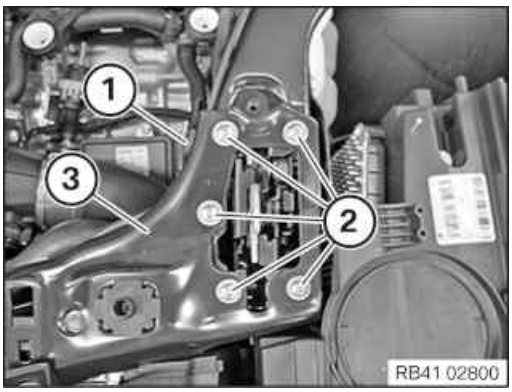
- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

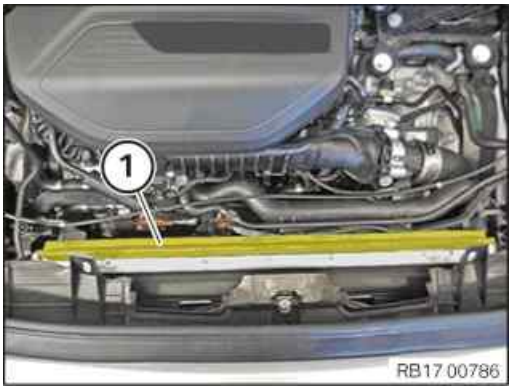
6 – Removing the fan cowl with electric fan

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed out and remove the sealing (1) from the radiator.

cardiagn.com

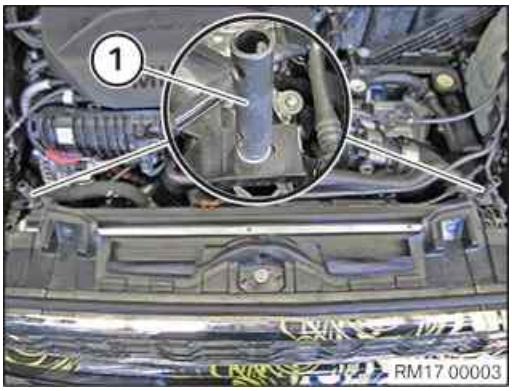
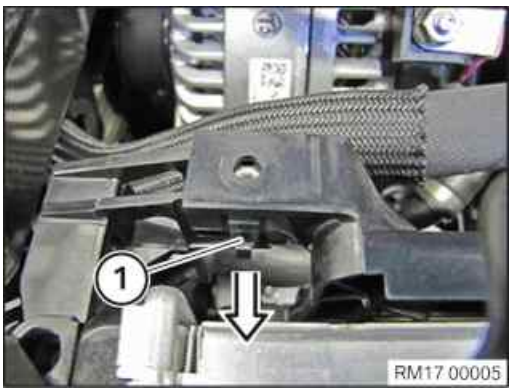
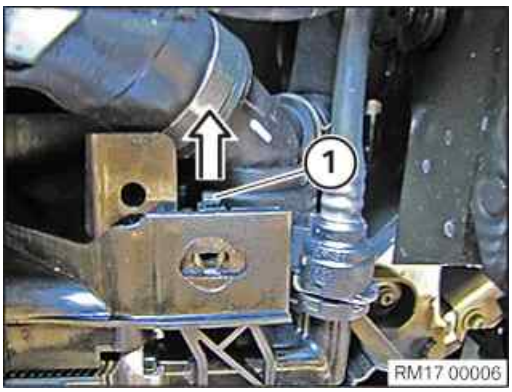
- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.



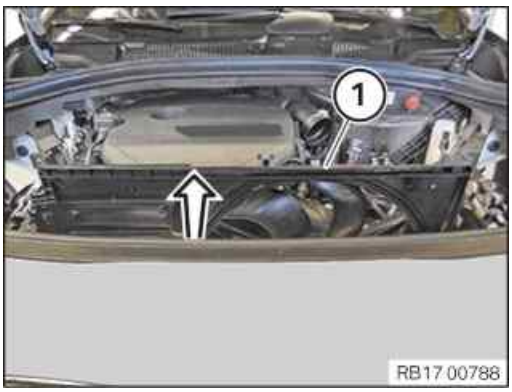
- Loosen screws (1).



- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



- Unlock the left lock (1) on the fan cowl in the direction of the arrow.



- Guide out fan cowl (1) in direction of arrow and remove.

7 – If installed: Removing rear underbody protection

cardiagn.com

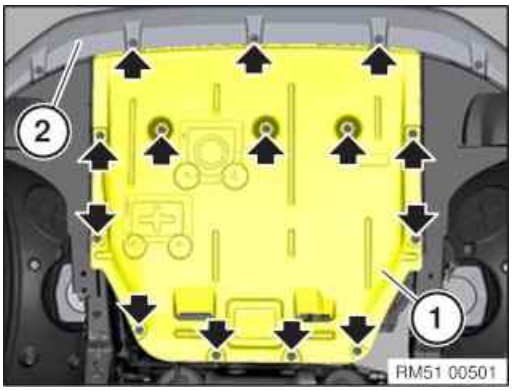
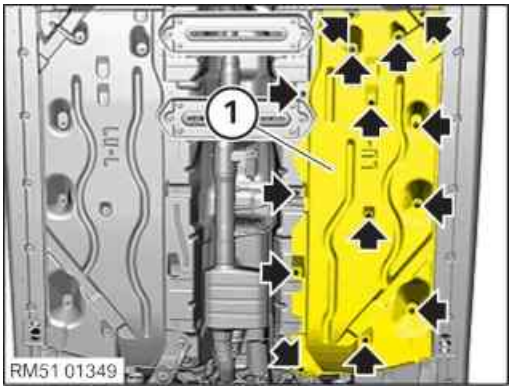
- Remove screws (arrows).
- Remove the rear underbody protection (1).

8 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

9 – Removing right underbody panelling



- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

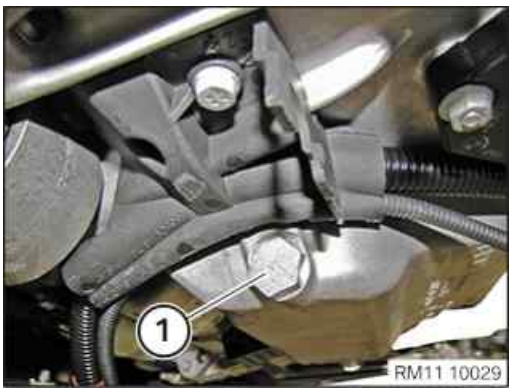
10 – Releasing the oil drain plug

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

Catch and dispose of drained engine oil in a suitable collecting vessel.
Observe country-specific waste disposal regulations.

- Release oil drain plug (1).
- Drain engine oil.

cardiagn.com

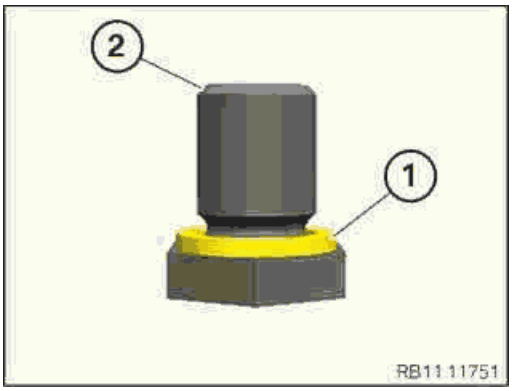
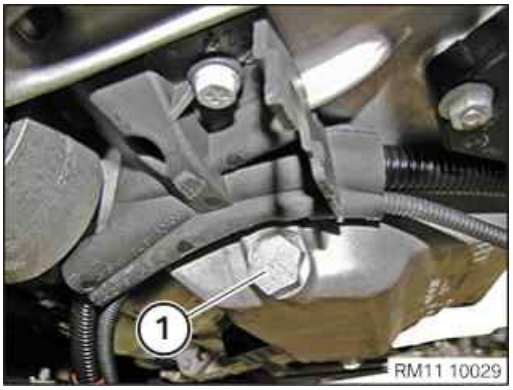
11 – Tightening the oil drain plug



- Renew sealing ring (1) on the oil drain plug (2).

  Parts: Sealing ring

- Guide in the sealing ring (1) on the oil drain plug (2) and install.



- Renew the sealing ring.

  Parts: Sealing ring

- Position oil drain plug (1) on the oil sump and tighten.

Oil drain plug on oil sump

M12x1.5	Renew the sealing ring.	Tightening torque	25 Nm

12 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

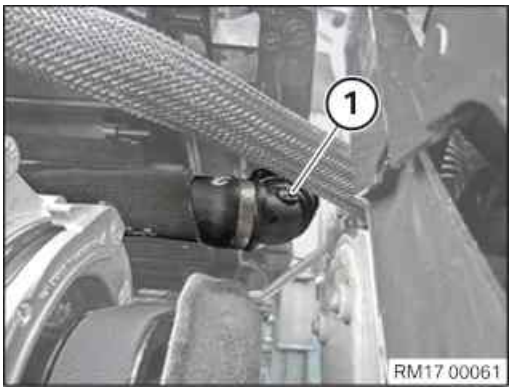
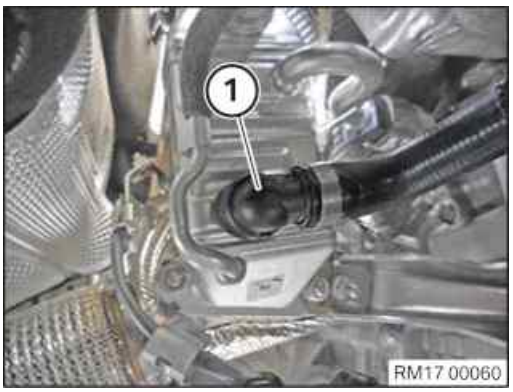
- Loosen sealing cap (1).

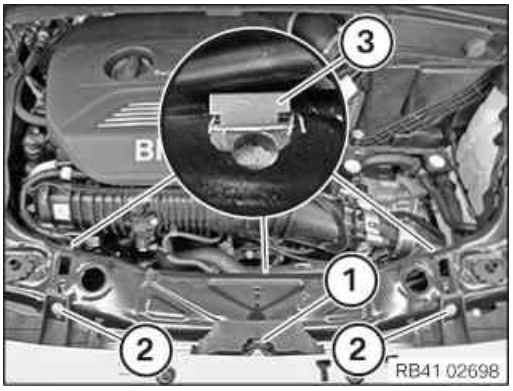


- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

13 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

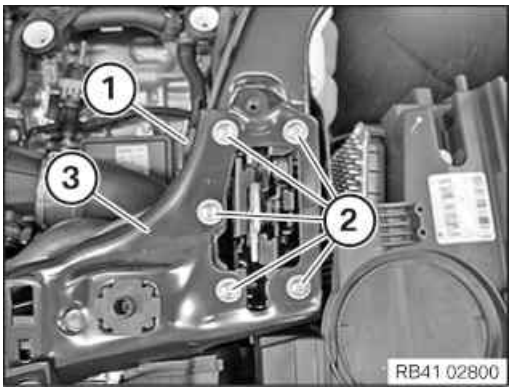
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.



- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

cardiagn.com

- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

14 – Remove vehicle battery

WARNING

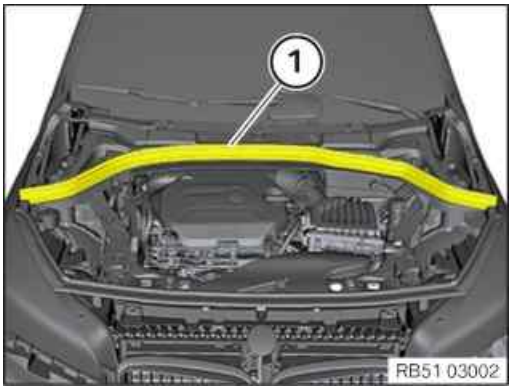
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

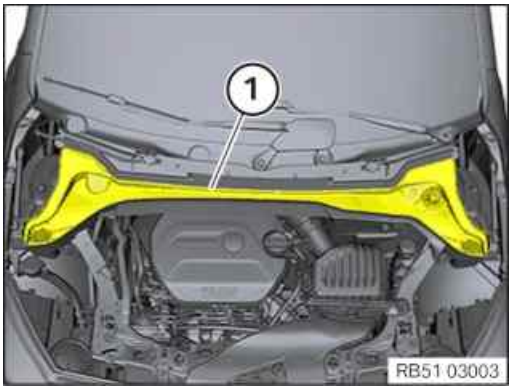
- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



- pull off gasket (1) upwards.



- Remove the cowl panel cover (1) to the top.

cardiagn.com

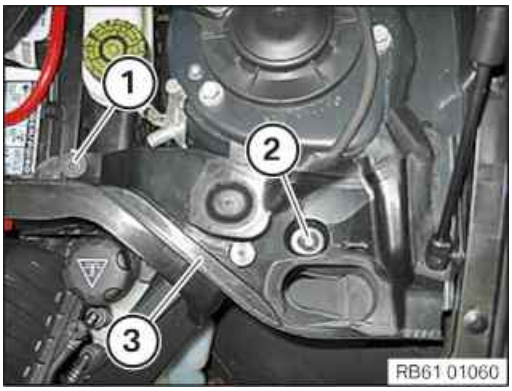
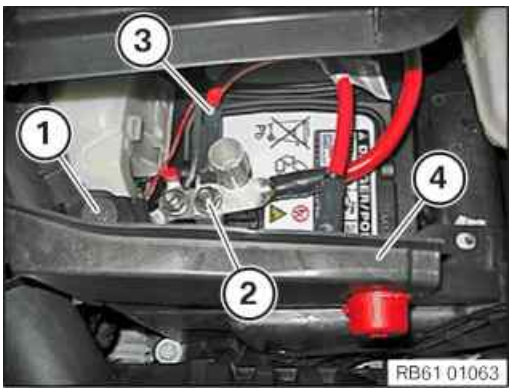
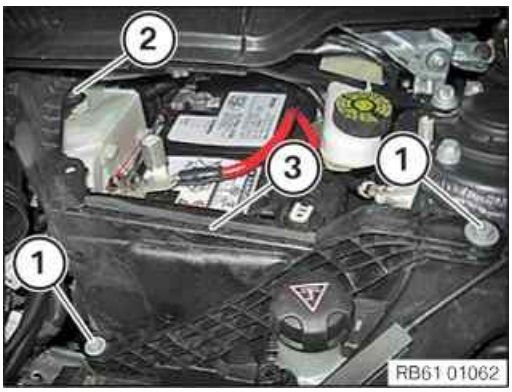
- Unlock and disconnect connector (1).
- Slacken nut (2).
- Disconnect the negative battery terminal (3).



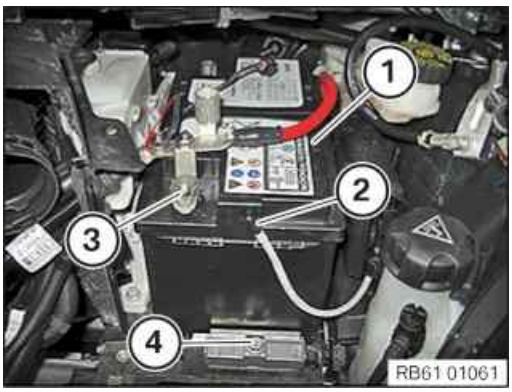
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



- Loosen screw (1).
- Unscrew the nut (2) and remove the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten nuts (2) on the positive terminal hand-tight.



- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.



- Pull off the vent hose (2).
- Slacken the nut (3) on the positive terminal and remove the positive terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

cardiagn.com

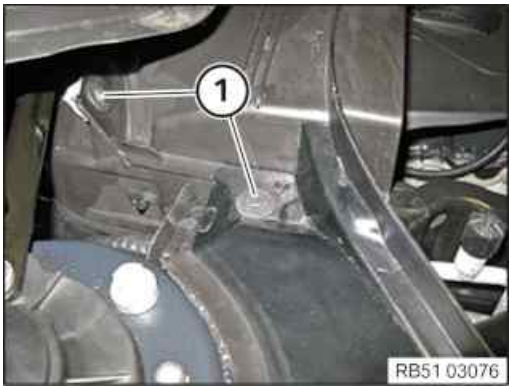
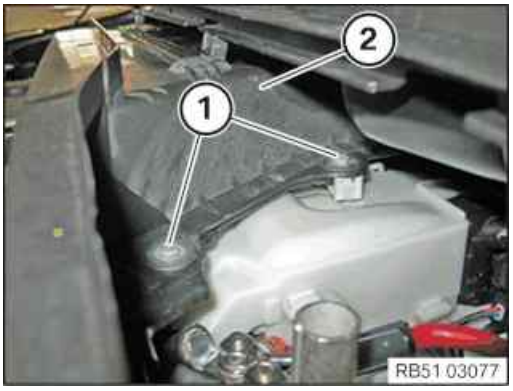
15 – Removing the upper bulkhead cover

- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

16 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

▶ **Remove the wiper arm**

RISK OF DAMAGE

Damage to wiper console

While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.

cardiagn.com

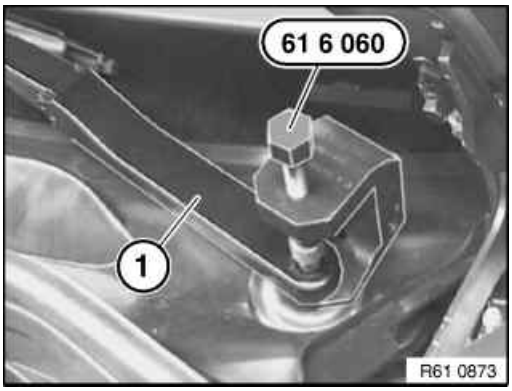
- Remove the protective cap (1).
- Loosen nut (2).



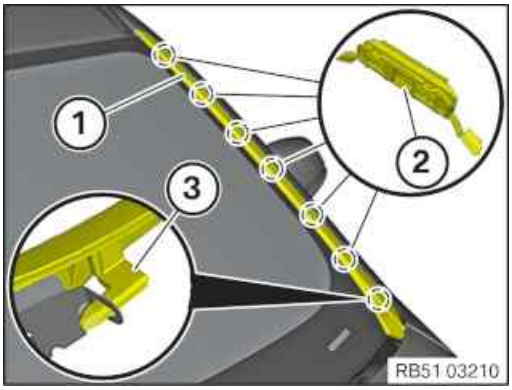
- Pull off the wiper arm (1) using special tool .

17 – Remove the gutter strip on the windscreen on the left and right

NOTICE

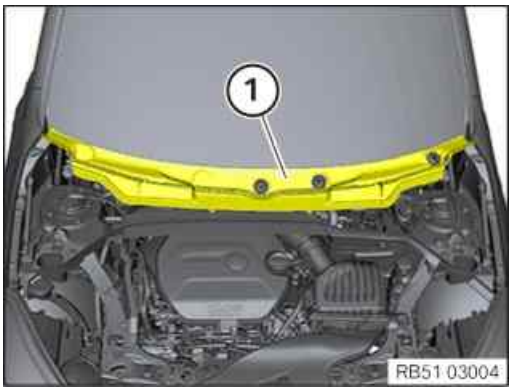
Description is for left component only. Procedure on the right side is identical.

▶ **Remove the gutter strip on the windscreen**



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

18 – Remove the rear cowl panel cover



- Disengage and guide out the rear cowl panel cover (1) towards the top.

19 – Remove electronics box

Prerequisite

cardiagn.com

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

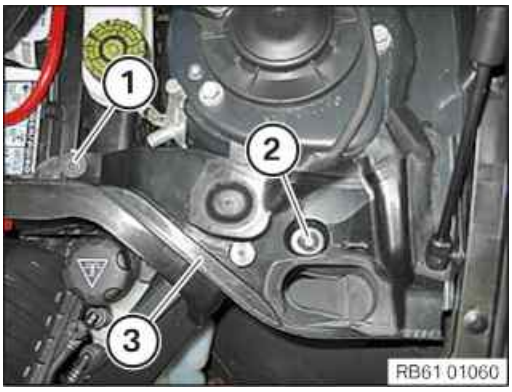
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

cardiagn.com

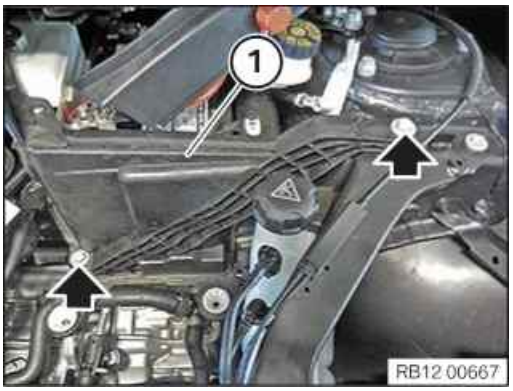
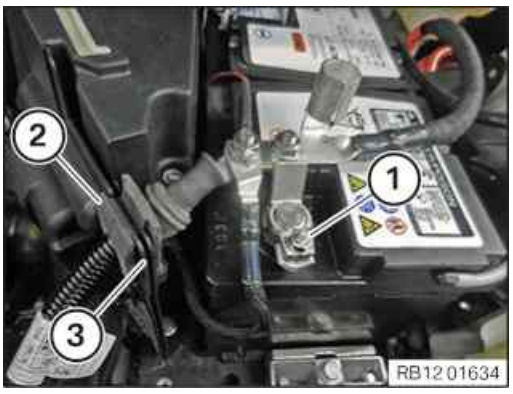
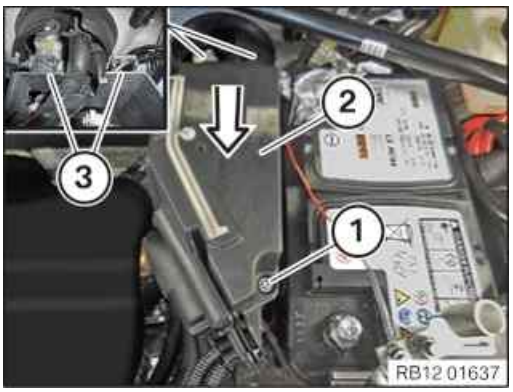
- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.



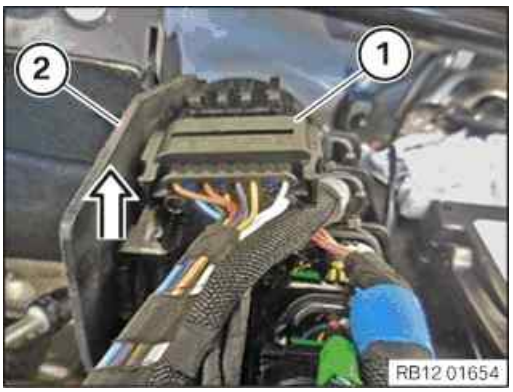
- Remove screws (arrows).
- Guide out tension strut (1) and remove.



- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

cardiagn.com

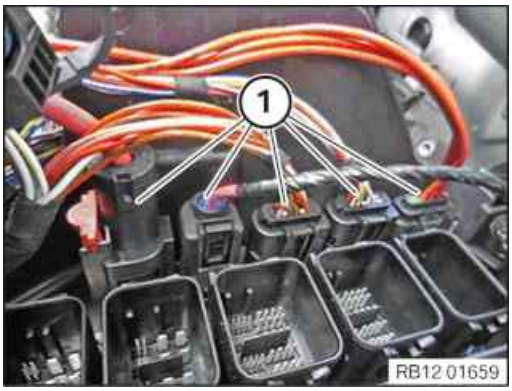
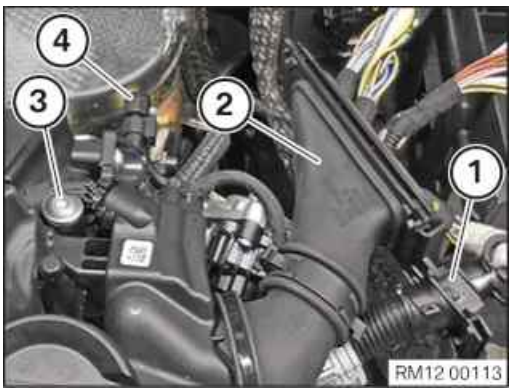
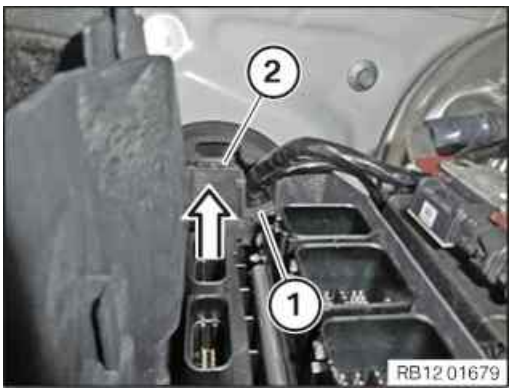
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



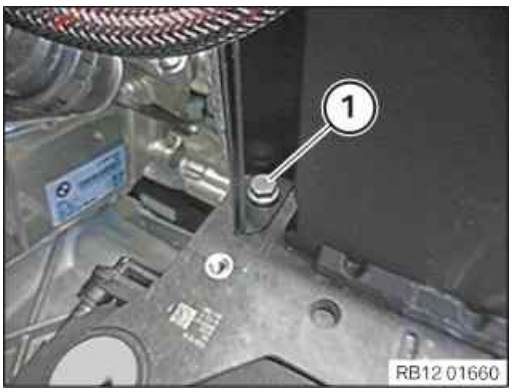
- Unlock and loosen connector (1).



- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.



- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



- Loosen screw (1).

cardiagn.com

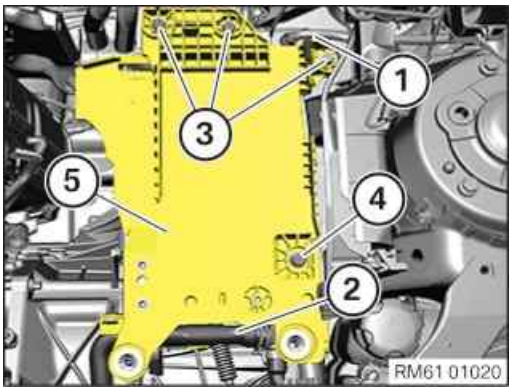
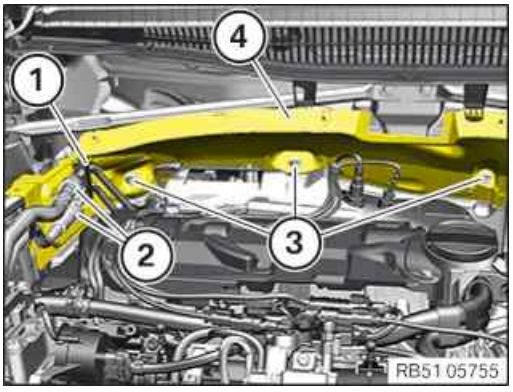
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

20 – Remove battery holder



- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

21 – Remove the rear bulkhead upper part



- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

22 – Removing both front wheels

▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

23 – Removing front left and right wheel arch cover

cardiagn.com

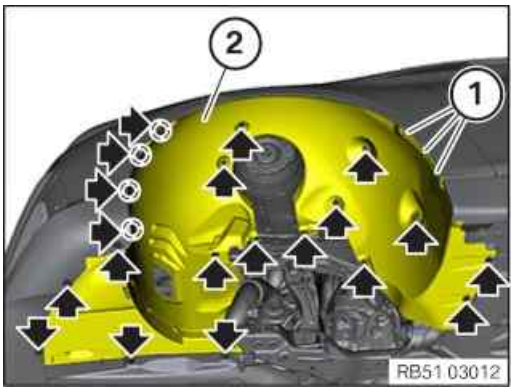
NOTICE

Perform the operations on the left and right side.

▶ **Remove front wheel arch cover**



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed out front wheel arch cover (2).

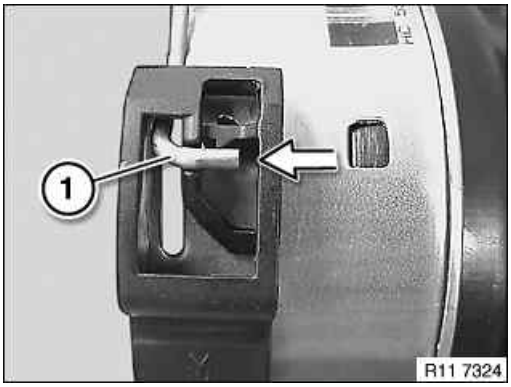
24 – Remove the pressure pipe between the throttle body and the charge air cooler

WARNING

Hot surfaces.

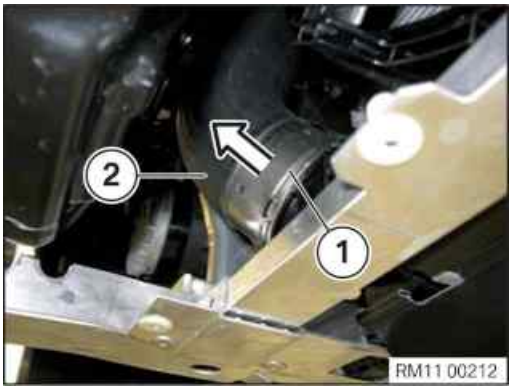
Risk of burning!

- Perform all work only on components that have cooled down.



- Unlock the lock (1).

  The lock (1) must engage in the bracket (arrow).



- Unlock and detach the locks (1) on both sides.
- Guide out the pressure pipe (2) in the direction of the arrow and set it aside.

cardiagn.com

- Unlock and detach the locks (1) on both sides.
- Guide out the pressure pipe (2) in the direction of the arrow and set it aside.

- Remove the pressure pipe (1) in the direction of the arrow.

25 – Remove right charge-air line

- Release charge air duct screws (1) on oil sump.

- Detach charge air duct screw connection (1) on crankcase.

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).

cardiagn.com

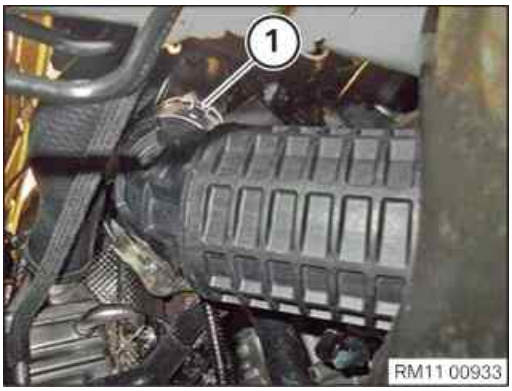
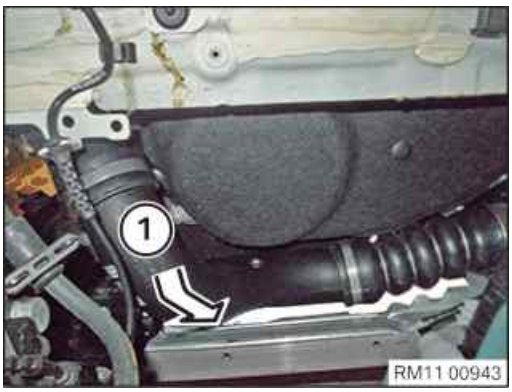
- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

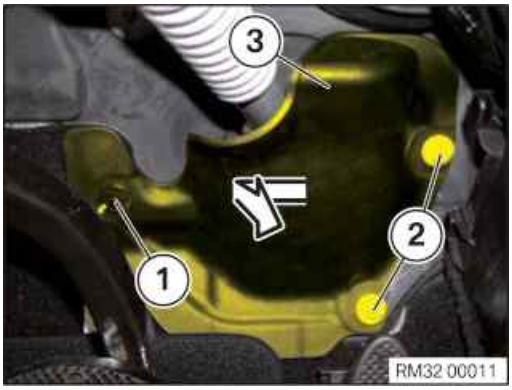


- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

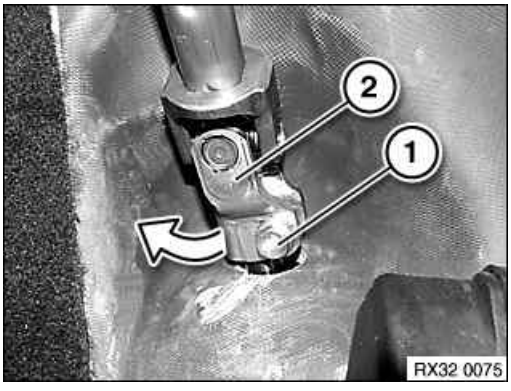
26 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!



- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

27 – Securing radiator on left and right

cardiagn.com

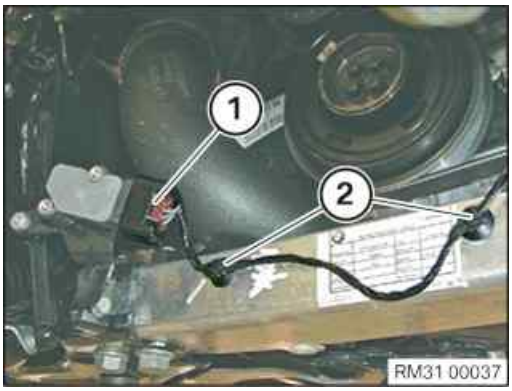
NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

28 – With right installation: Detaching ride height sensor cable



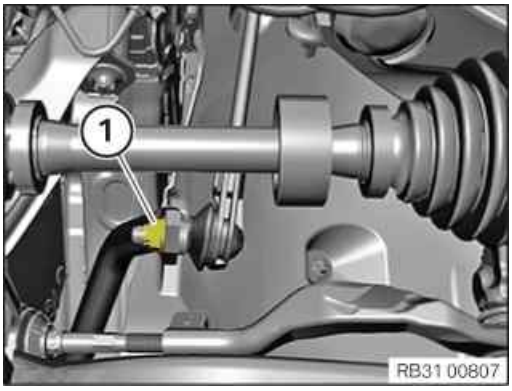
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

29 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Detach the anti-roll bar from the anti-roll bar link**



- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

30 – Detaching rubber mount from front axle support

- Spray rubber mount (1) with lubricant and release from holder on front axle support.

31 – Disconnecting plug connections from steering gear

cardiagn.com

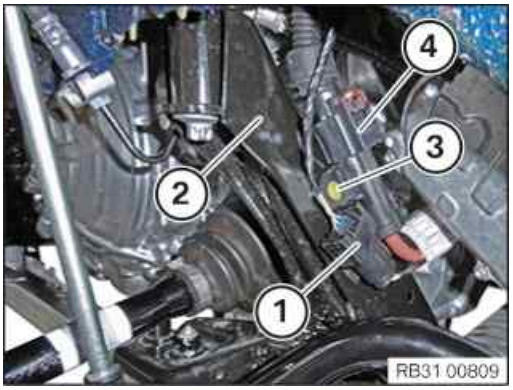
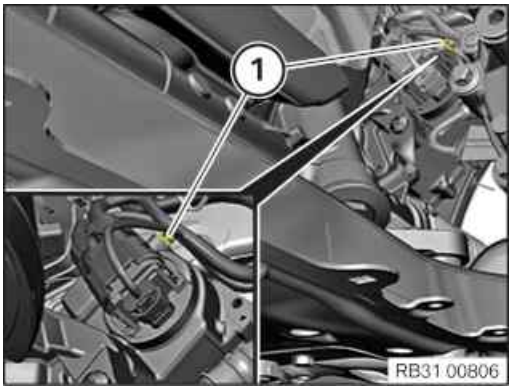
31 – Disconnecting plug connections from steering gear

▶ **If installed: Detach connectors from the front axle carrier**



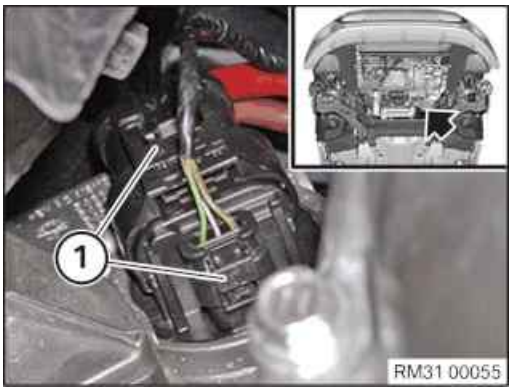
- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.



- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

32 – Releasing the mounted part from the front axle support

cardiagn.com

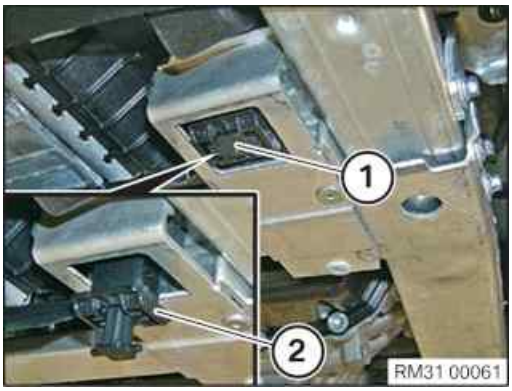
- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

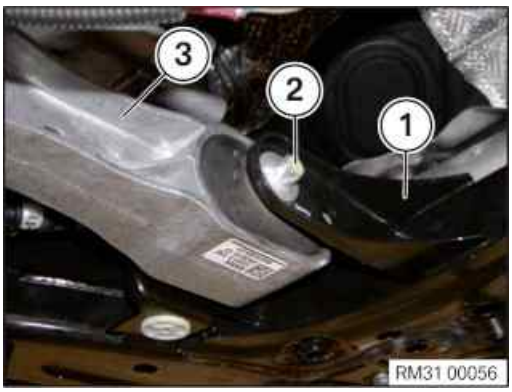
- Loosen screws (1).



NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).



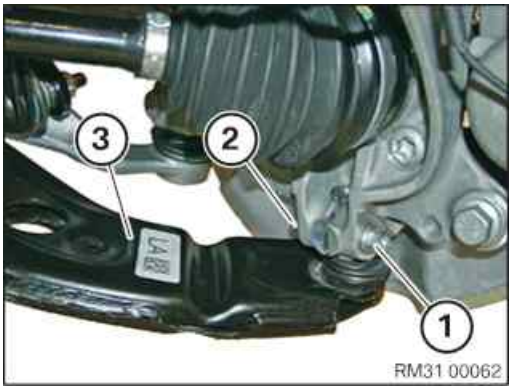
- Loosen screw (2) of the engine support (3) on the front axle (1).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

33 – Detaching and removing front axle completely



NOTICE

Perform the operations on the left and right side.

- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

cardiagn.com

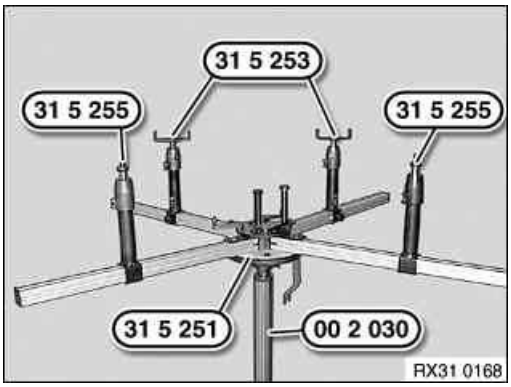
NOTICE

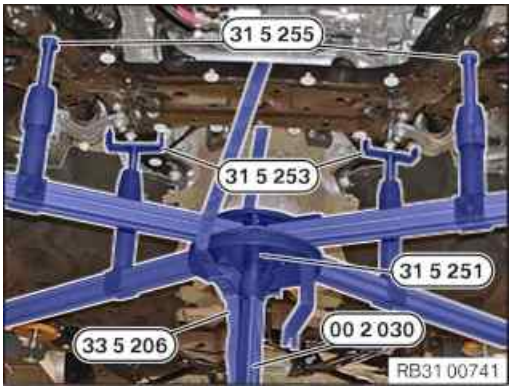
Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.



- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

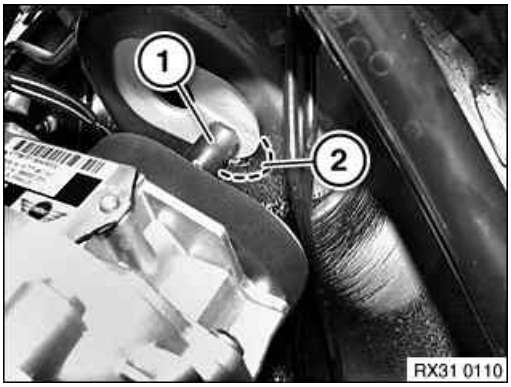
Note: In a profile rail pair, two profile rails are connected to one another by gearing.



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

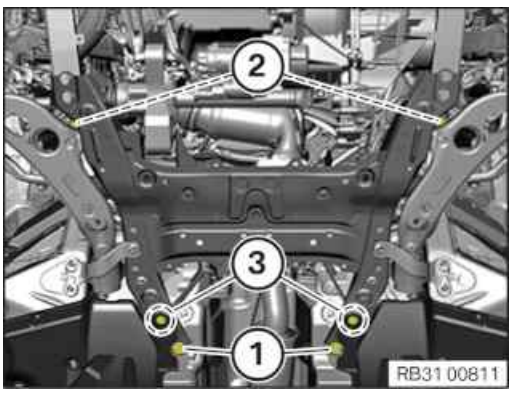


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

cardiagn.com

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

34 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).

cardiagn.com

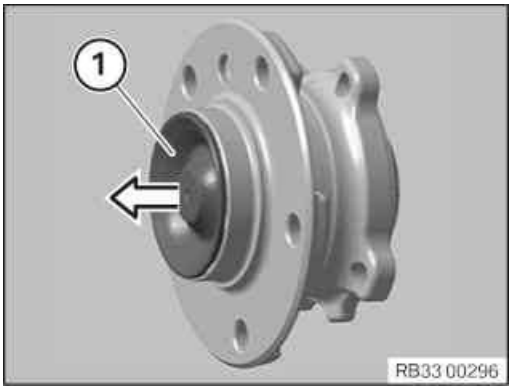
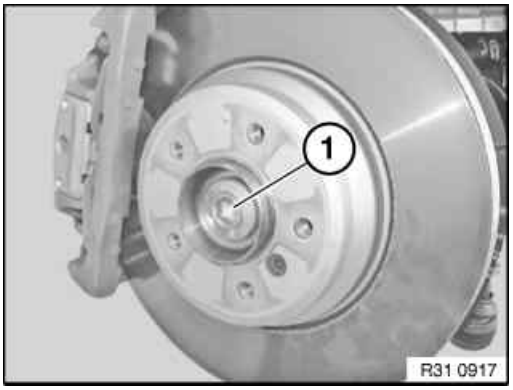
- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.

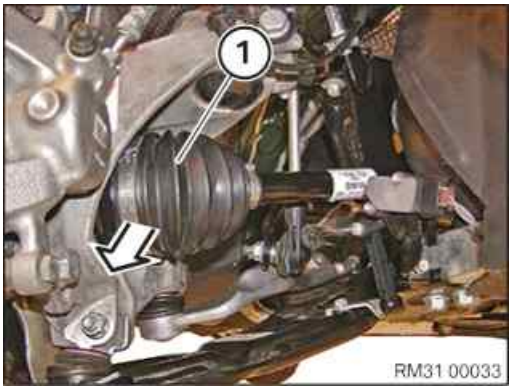
35 – Removing right output shaft (double-clutch transmission (DKG))



- If necessary, lever off the protective cap (1).

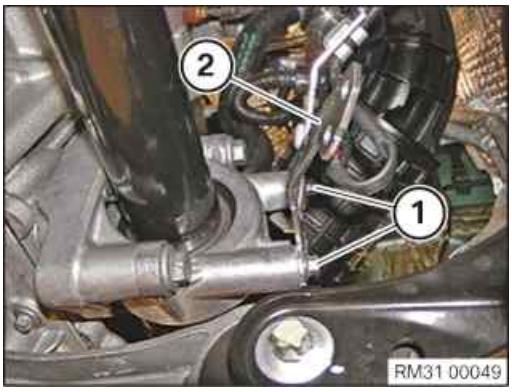


- Press the brake pedal to the floor to unscrew the collar bolt (1).

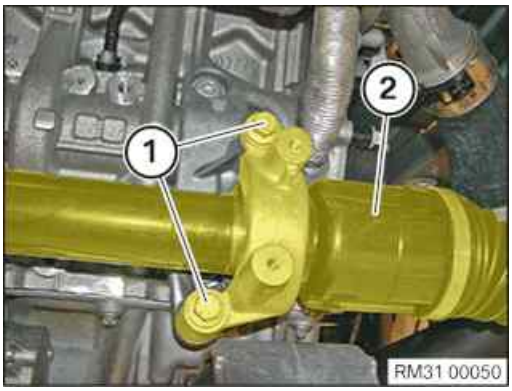


- Protect the output shaft (1) from falling.
- Turn steering wheel to right.
- Pull the output shaft (1) out.

cardiagn.com



- If necessary, unscrew the bolts (1) and remove the holder (heat shield) (2).



- Loosen screws (1).
- Pull the output shaft (2) out of the transmission and remove it sideways.
- Remove output shaft (1).

▸ **Removing the right radial shaft seal on the differential (7DCT300)**

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

TECHNICAL INFORMATION

Clean the transmission around the radial shaft seal prior to removing the propeller shaft!
Transmission oil (at maximum 0.3 l) may escape from the radial shaft seal opening when pulling off the propeller shaft!
Collect and dispose of escaping transmission oil!

cardiagn.com

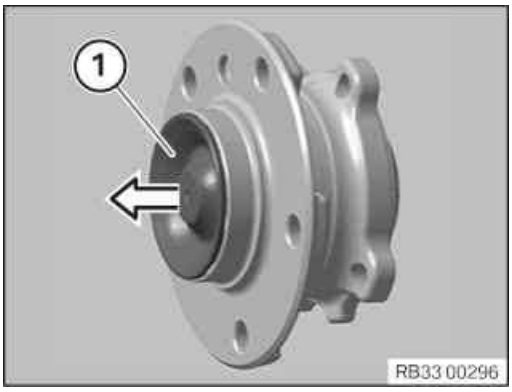
TECHNICAL INFORMATION

Do not use a drill.

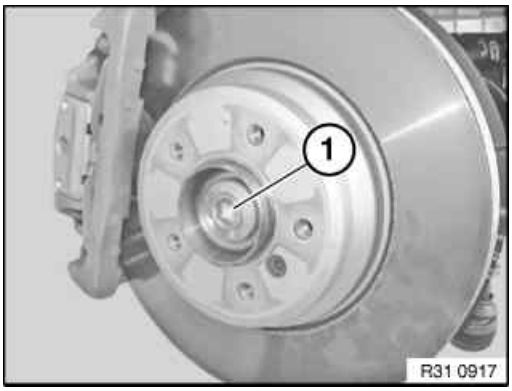
Swarf may damage the transmission and result in a failure of the transmission.

- Drive a hole into the radial shaft seal (1) using a centre punch.
- Screw the special tool **0 491 454 (23 0 490)** into the radial shaft seal (1).
- Drive out the radial shaft seal (1) with the impact weight (2).

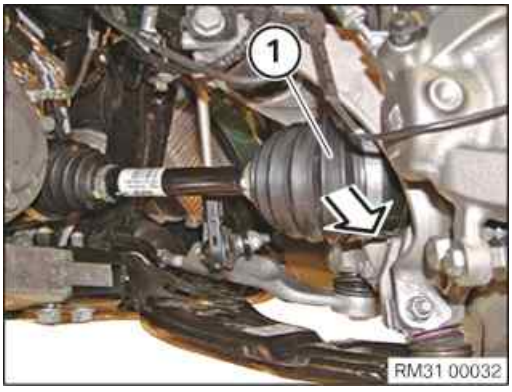
36 – Remove the left drive shaft (double-clutch transmission (DKG))



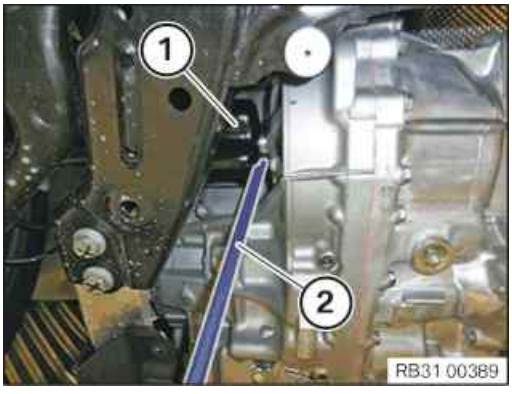
- If necessary, lever off the protective cap (1).



- Press the brake pedal to the floor to unscrew the collar bolt (1).



- Turn steering wheel to left.
- Pull the output shaft (1) out toward the front.



- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Remove output shaft (1).

cardiagn.com

▸ **Removing the left radial shaft seal on the differential (7DCT300)**

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

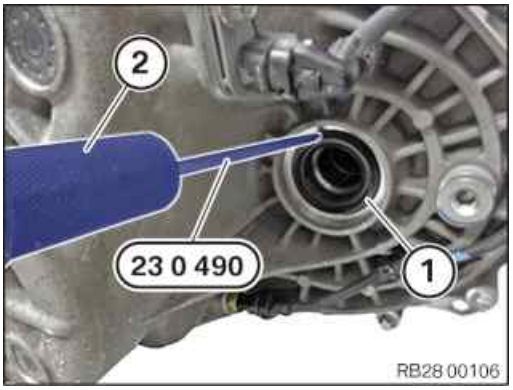
Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

TECHNICAL INFORMATION

Clean the transmission around the radial shaft seal prior to removing the propeller shaft!
Transmission oil (at maximum 0.3 l) may escape from the radial shaft seal opening when pulling off the propeller shaft!
Collect and dispose of escaping transmission oil!



TECHNICAL INFORMATION

Do not use a drill.
Swarf may damage the transmission and result in a failure of the transmission.

- Drill a hole in the radial shaft seal (1) using a centre punch.
- Screw special tool **0 491 454 (23 0 490)** in the radial shaft seal (1).
- Drive out radial shaft seal (1) with the impact weight (2).

37 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

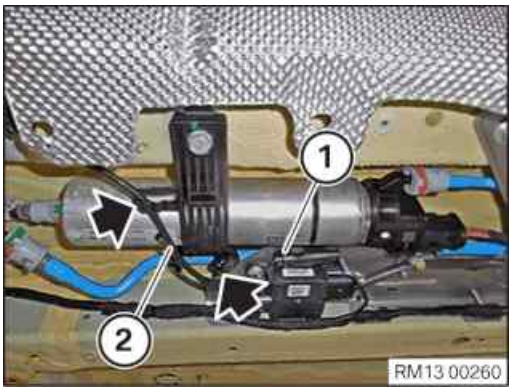
cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

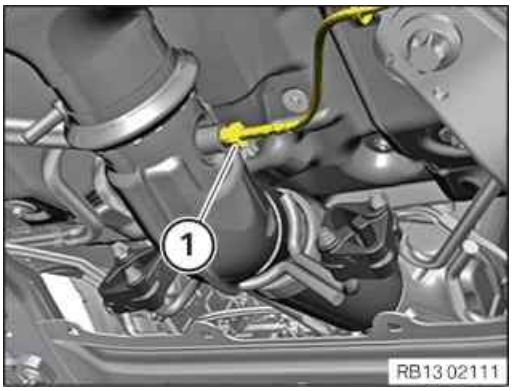
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

- Loosen the cable clip (1).



- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

38 – Remove the SCR metering module

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

After repair work, clean the working area thoroughly with water.
Clean special tools with water after every use.

TECHNICAL INFORMATION

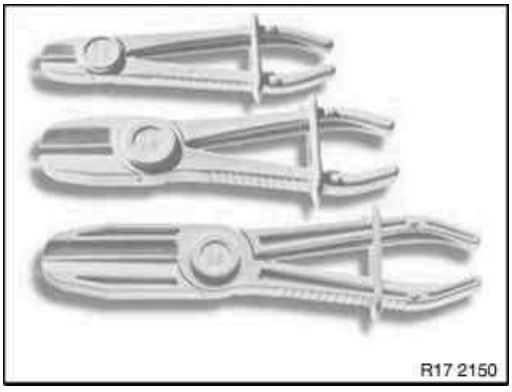
Use only lint-free cloths for cleaning the SCR system: WAYPALL cleaning cloths L20 - see BMW Group Parts.

TECHNICAL INFORMATION

Notes on work at the cooling system form the basis of these repair instructions and must be complied with at all times.
For additional information see: 17 00 ... Instructions for repair work on cooling system

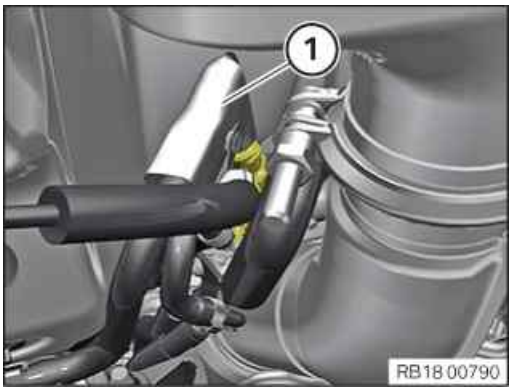
TECHNICAL INFORMATION

Do not unintentionally swap the coolant hoses and coolant lines. If necessary, mark before removal.

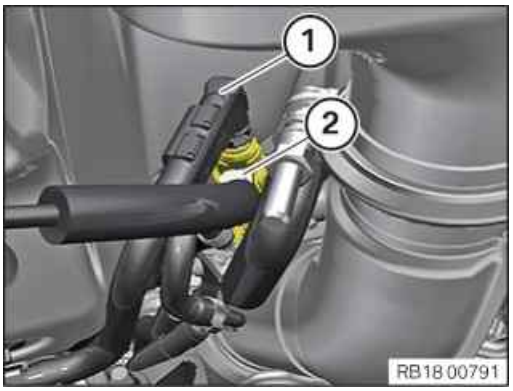


- Use commercially available pinch-off tools to pinch off the coolant hoses.

cardiagn.com

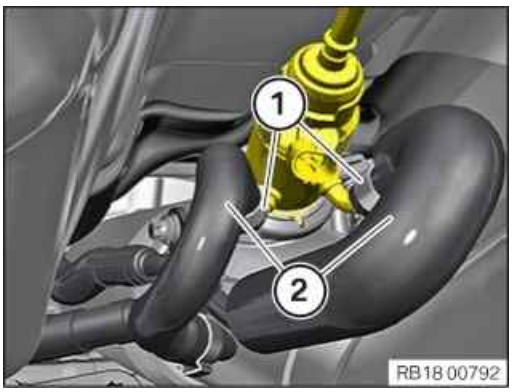


- Guide the heat protection cap (1) out and remove.

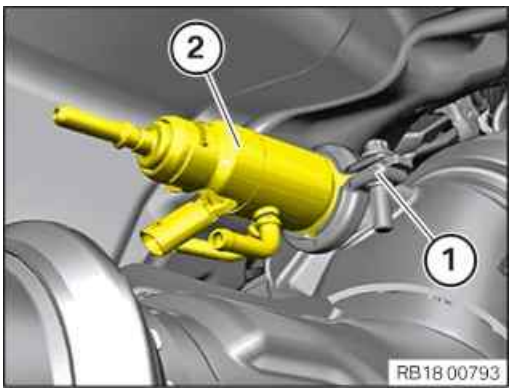


- When releasing the metering line, make sure that **no lateral forces** act on the metering line and the connection.

  The SCR metering module connection can be damaged by lateral forces.
- Unlock and disconnect the metering line (1).
- Unlock and disconnect connector (2).



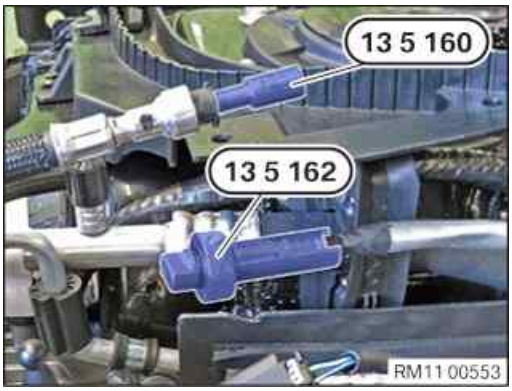
- Loosen clamps (1).
- Disconnect coolant lines (2).



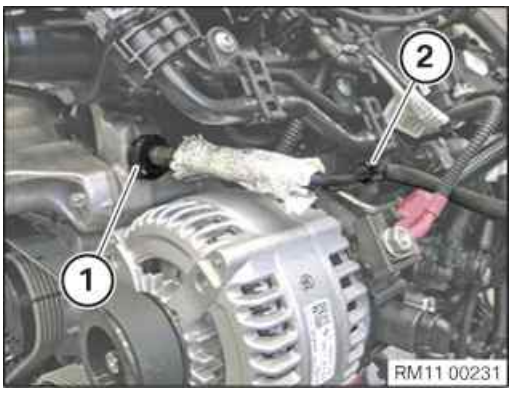
- Loosen V-band clamp (1).
- Guide out and remove the SCR metering module (2).

cardiagn.com

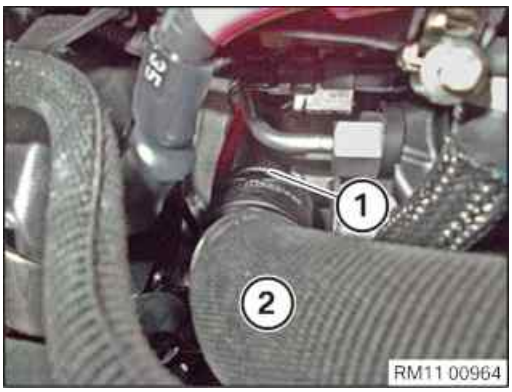
- Unlock and pull off the fuel lines (1).



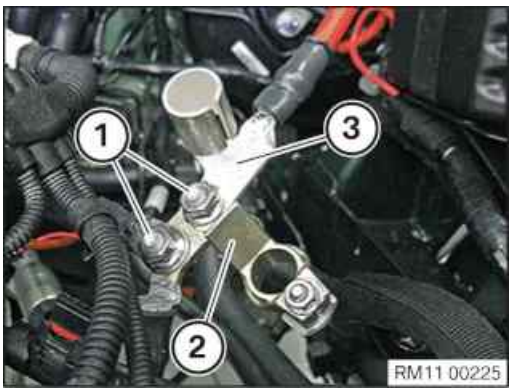
- Seal fuel lines with special tools and .



- Unlock the clamp (1).
- Pull off the coolant line (2) from the cylinder head.

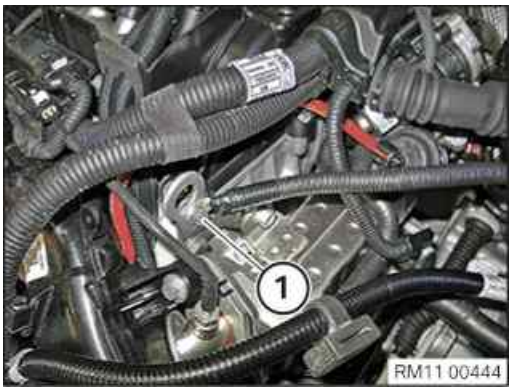


- Unlock lock (1) upwards and pull off coolant hose (2).
- Catch and dispose of escaping coolant.

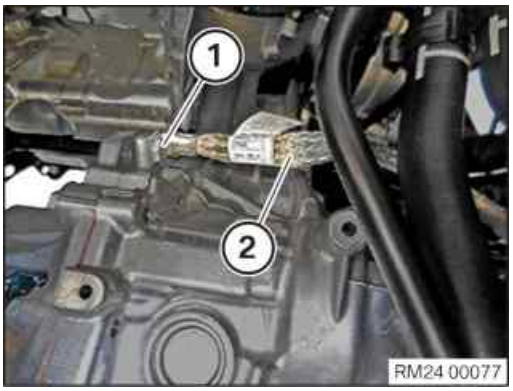


- Loosen nuts (1).
- Feed out the positive battery terminal (2) and the remote positive terminal (3) and set aside.

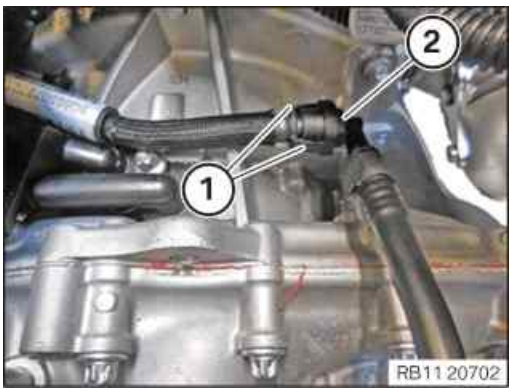
cardiagn.com



- Unscrew the bolt (1) and set the ground strap aside.

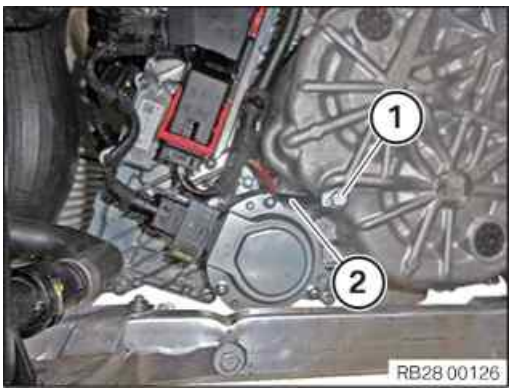


- Loosen screw (1).
- Feed out the grounding cable (2) and set aside.



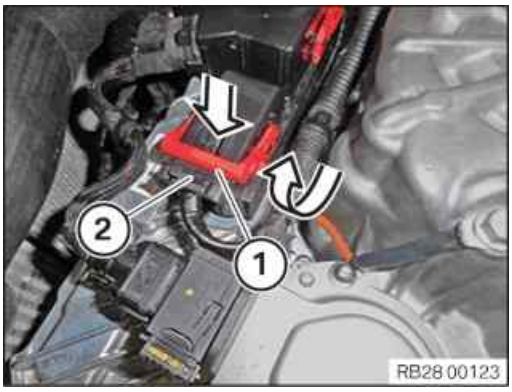
- Unlock the locks (1).
- Feed out he vacuum line (2) and set it aside.

- Release the clamping collar (1) with the special tool **0 495 794 (17 2 050)**.
- Feed out coolant line (2) and place to one side.
- Catch and dispose of escaping coolant.

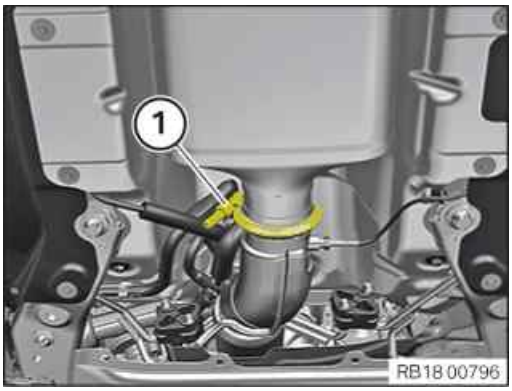


- Loosen screw (1).
- Feed out the grounding cable (2) and set aside.

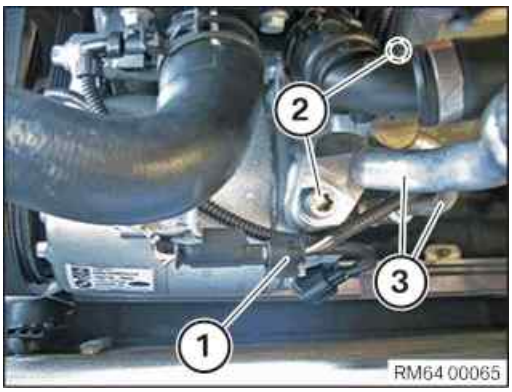
cardiagn.com



- Unlock and release the lock (1) in direction of arrow.
- Feed out connector (2) and place to one side.



- Loosen V-band clamp (1).
- Release exhaust system from diesel particulate filter.



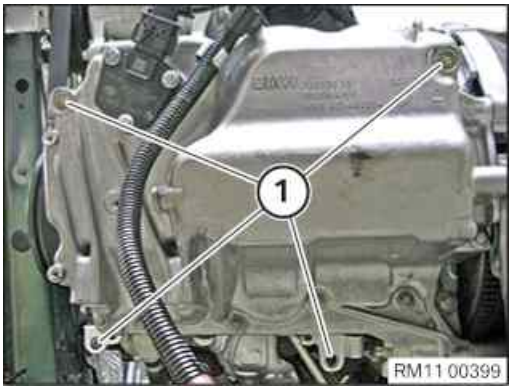
CAUTION

Residual pressure in the air conditioning.

Danger of injury!

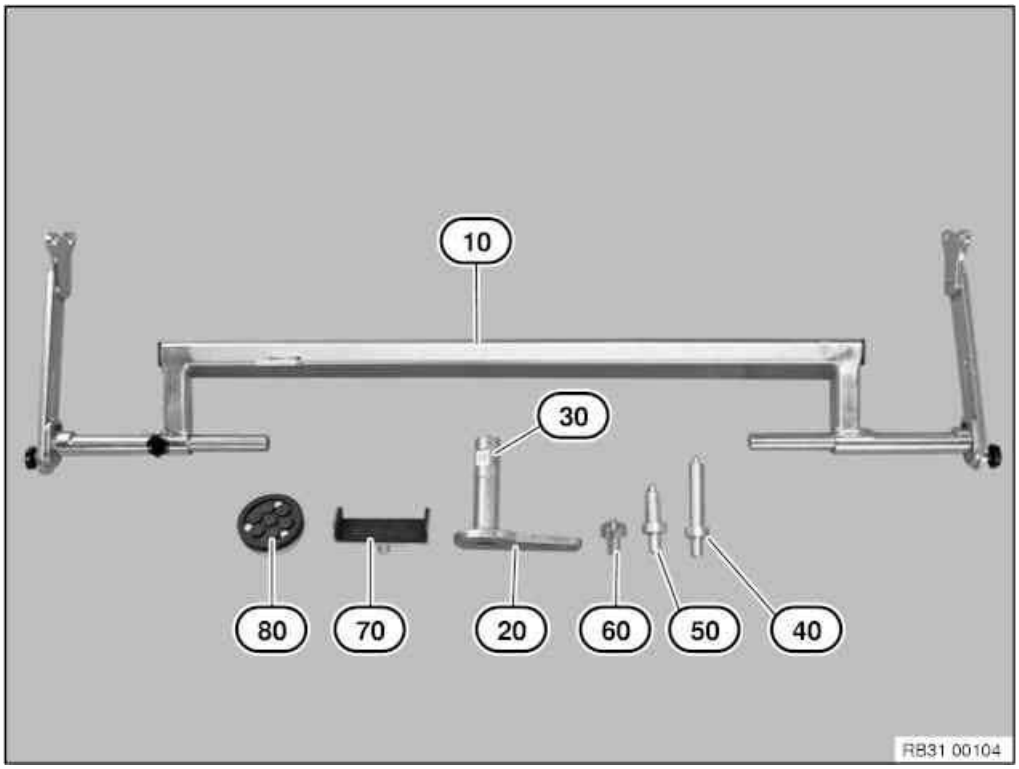
- Wear safety goggles and protective gloves when disconnecting the refrigerant line.
- Seal refrigerant lines with seal plugs.

- Unlock plug connection (1) and disconnect.
- Loosen screws (2).
- Feed out the refrigerant lines (3) and set them aside.
- Close the openings on the refrigerant lines (3) and the air conditioning compressor with standard tools.



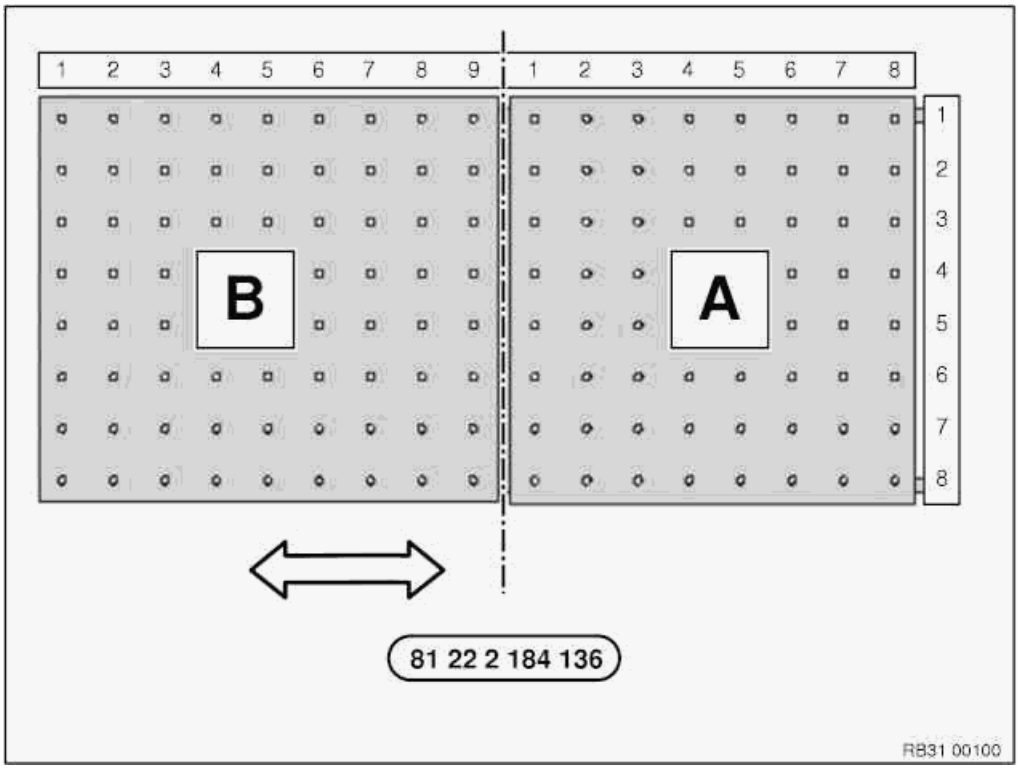
- Ensure that the spacer pins **40/50** of table top (A) of the mobile lifting table are installed in mounting points (1) of the oil sump.

cardiagn.com



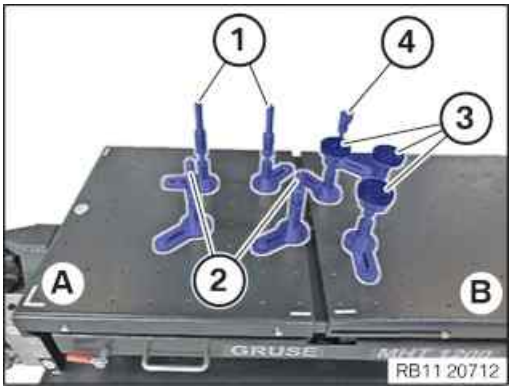
- Overview of the set of special tools **2 305 379**:

Number	Description
10	For mounting the swivel bearing including brake disc
20	Retaining element for adjustable fixture
30	Adjustable fixture
40	Distance pin 40 x 160 mm
50	Distance pin 40 x 110 mm
60	Distance pin 40 x 60 mm
70	Fixture with U-profile
80	Plate mounting 100 mm



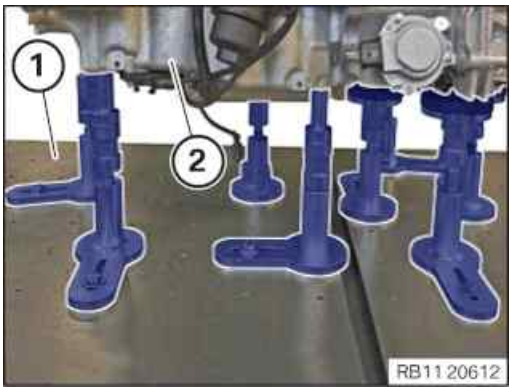
- Overview of special tools **2 184 136**:

Letter	Description
A	Table top for engine with coordinates
B	Table top for transmission with coordinates

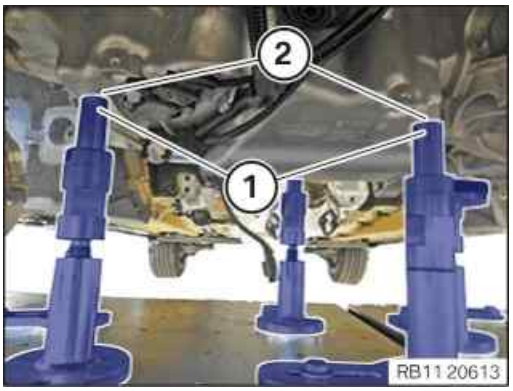


- Position adjustable mounting (30) with spacer pin (40) for the engine block on the table top (A) at coordinates **5/6** and **1/7** (1).
- Position adjustable fixture (30) with spacer pin (50) for the engine oil sump on table top (A) at coordinates **5/3** and **2/3** (2).
- Position adjustable fixture (30) with distance pin (80) for transmission housing on table top (B) at coordinates **9/6**, **7/6** and **8/2** (3).
- Position the adjustable mounting **2 357 221** for the transmission housing on the table top (B) at coordinates **7/7** (4).

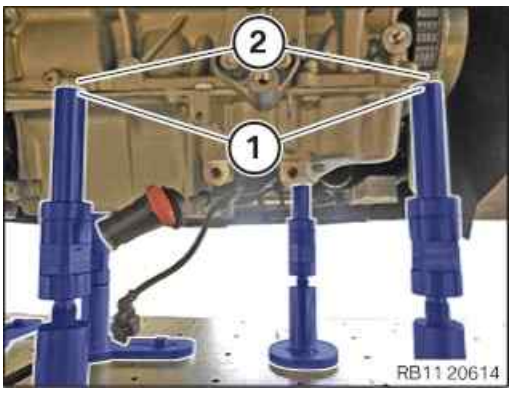
cardiagn.com



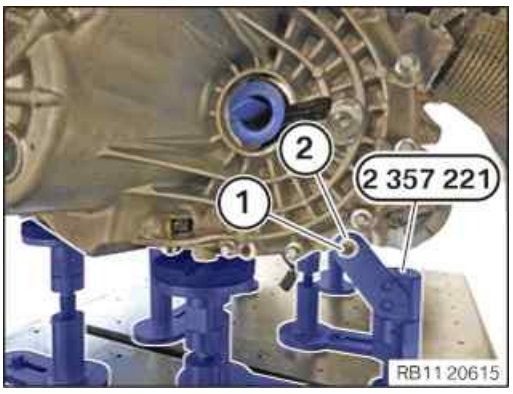
- Position the lifting table (1) below the engine (2).
- Abut all fixtures and screw them to the lifting table (1).



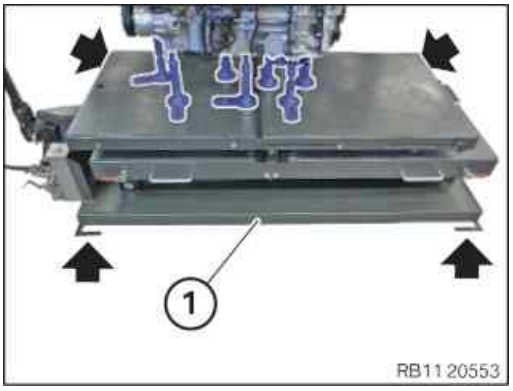
- Make sure that the spacer pins (1) are correctly positioned in the mountings (2) of the engine oil sump.



- Make sure that the spacer pins (1) are correctly positioned in the mountings (2) of the crankcase.



- Screw the special tool **2 357 221** with a commonly available bolt (1) and nut (2) onto the transmission housing.



- Mark the position of the lifting table (1) on the workshop floor (arrows).

  The marks (arrows) make the installation easier.

cardiagn.com

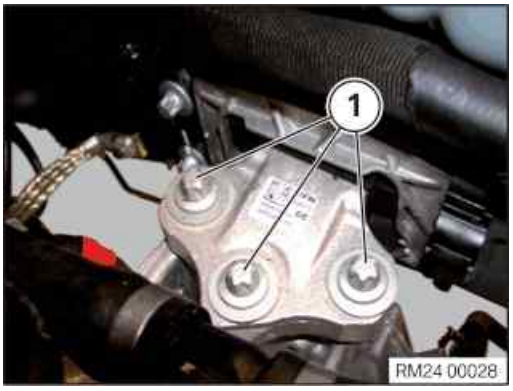
WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

- Position the weight compensation (1) on the vehicle.



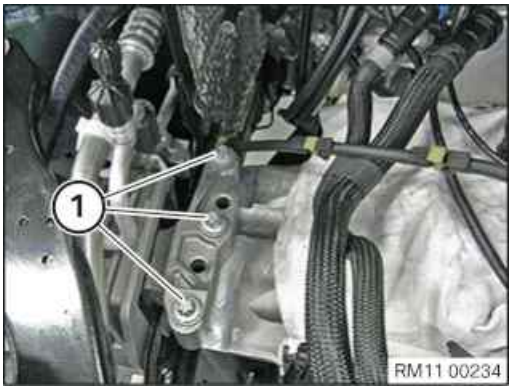
WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

- Loosen screws (1).



WARNING

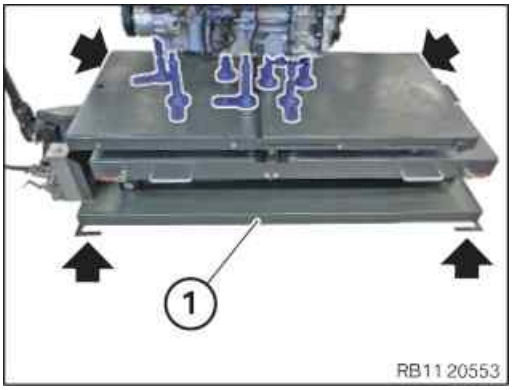
Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

- Loosen screws (1).
- Raise the vehicle **carefully**.

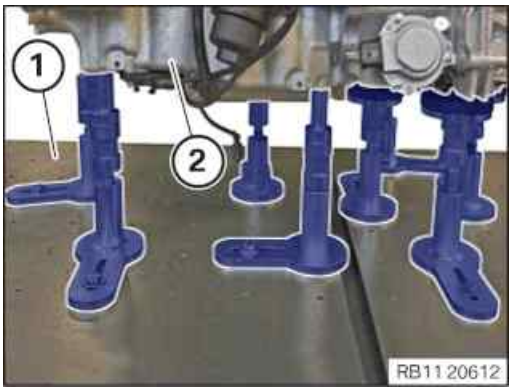
40 – Install engine



- Position the lifting table (1) with the engine under the vehicle.

  The marks (arrows) that were made on the workshop floor during the disassembly serve as positioning aid.

cardiagn.com



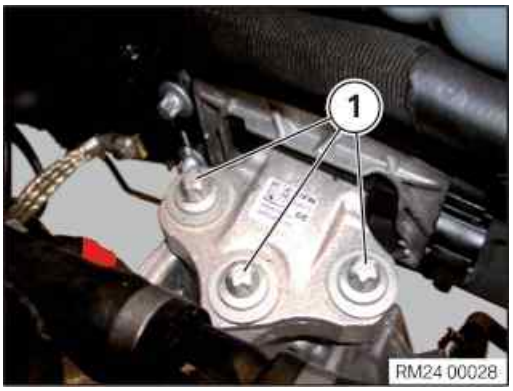
WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

- Lower the vehicle **carefully** and, if necessary, the positioning of the lifting table (1) with the engine (2) must be **corrected**.



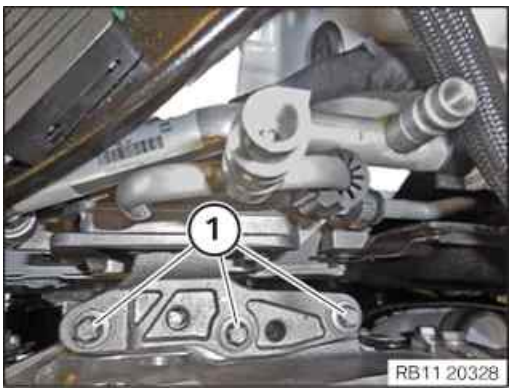
- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1).

Transmission mounting

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °



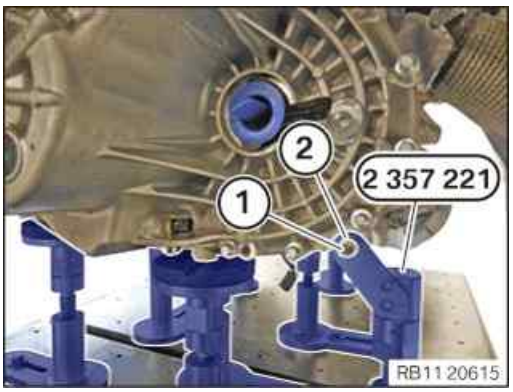
- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1).

Right engine mount to cylinder head

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °



- Release standard nut (1) on the special tool **2 357 221**.
- Feed out and remove standard bolt (2) on the special tool **2 357 221**.

cardiagn.com

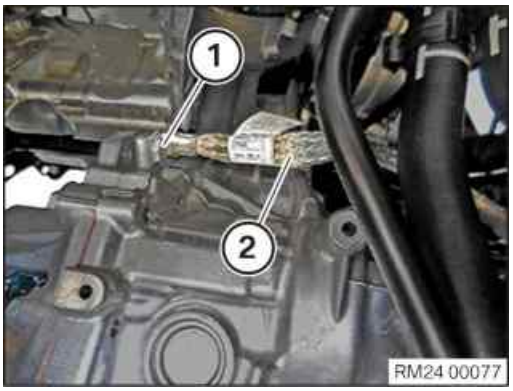
WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

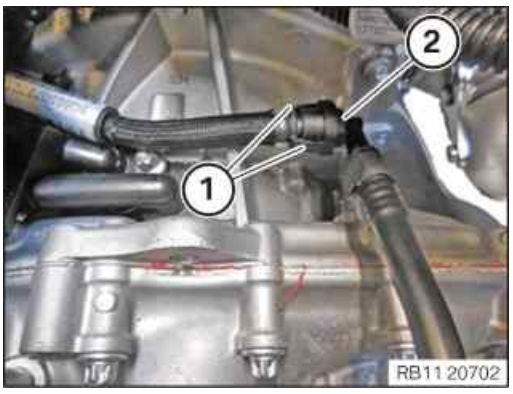
- Remove weight compensation (1) from the vehicle.
- Lower lifting table(2) and put to one side.



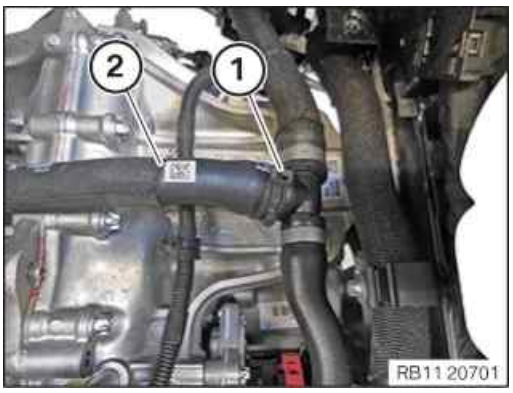
- Thread in and position grounding cable (2).
- Tighten down screw (1).

Standard screw connection M8

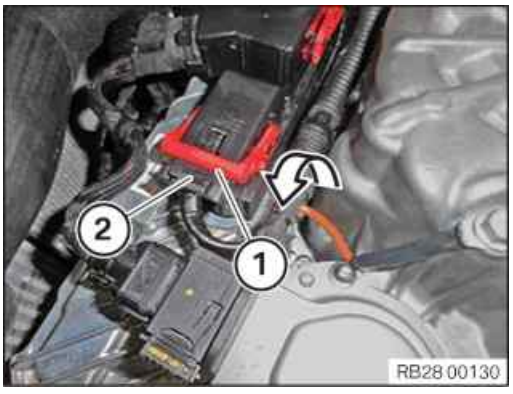
M8		Tightening torque	19 Nm



- Connect the vacuum line (2) and lock.
- Ensure that the locks (1) engage audibly.

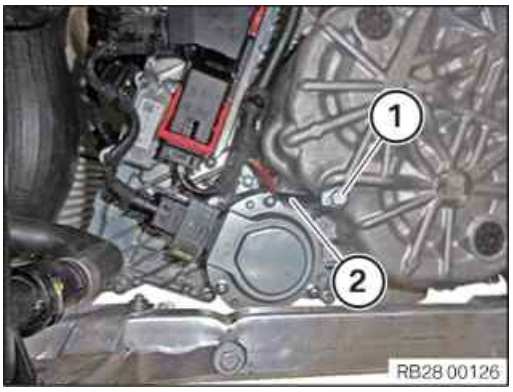


- Feed in and install coolant line (2).
- Secure clamping collar (1) with the special tool **0 495 794 (17 2 050)**.



- Feed in and install the connector (2).
- Lock the lock in direction of arrow (1).
- Ensure that the lock (1)engages audibly.

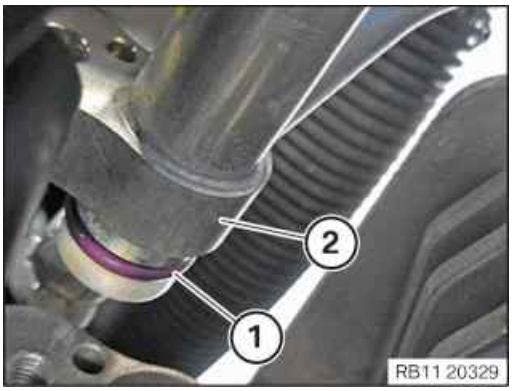
cardiagn.com



- Install and position grounding cable (2).
- Tighten down screw (1).

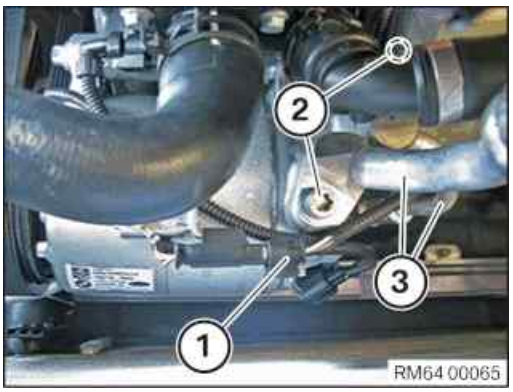
Standard screw connection M6

M6		8 Nm



- Renew sealing ring (1) of the refrigerant lines (2).

  Parts: Sealing ring

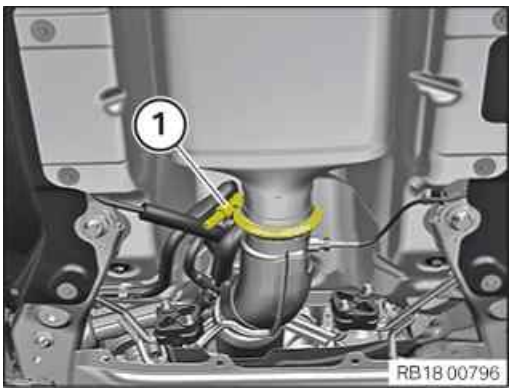


- Feed in and install the refrigerant lines (3).
- Tighten the screws (2).

Refrigerant line on air conditioning compressor

M8		Tightening torque	19 Nm

- Connect connectors (1) and lock.
- Make sure the connector (1) engages audibly.

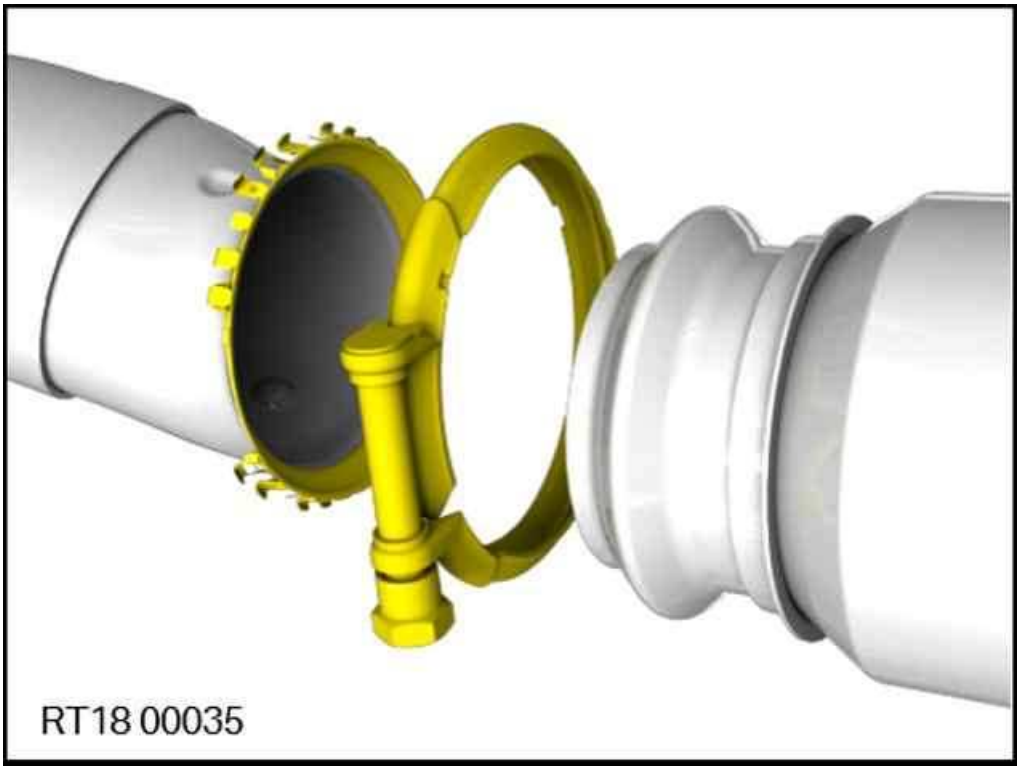


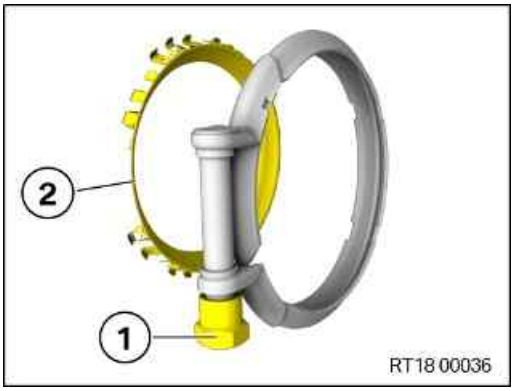
- Connect exhaust system to the diesel particulate filter.
- Feed in and install V-band clamp (1).

▸ **Install the V-clip**

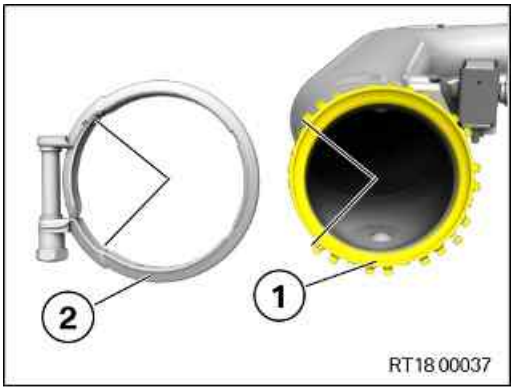
cardiagn.com

V-band clamp



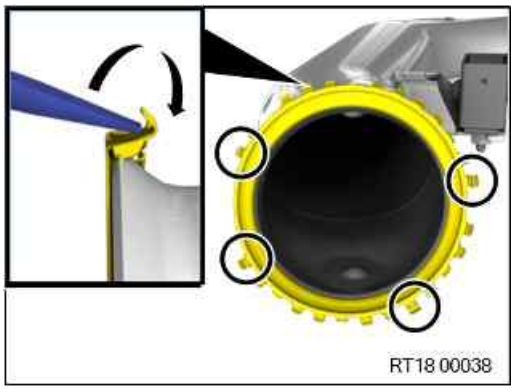


- Unscrew the nut (1) and remove the sealing ring (2).



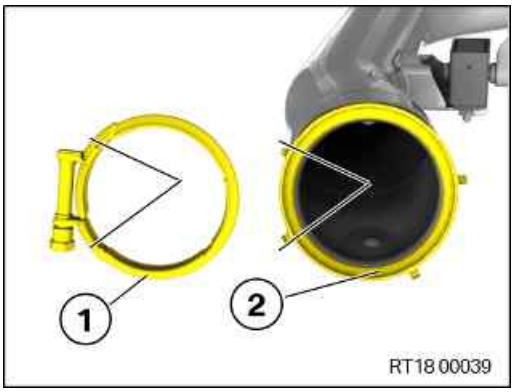
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.



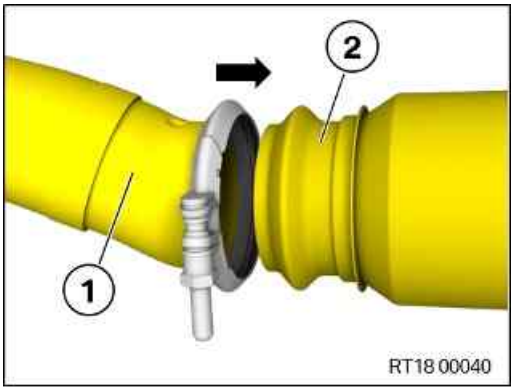
- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

cardiagn.com

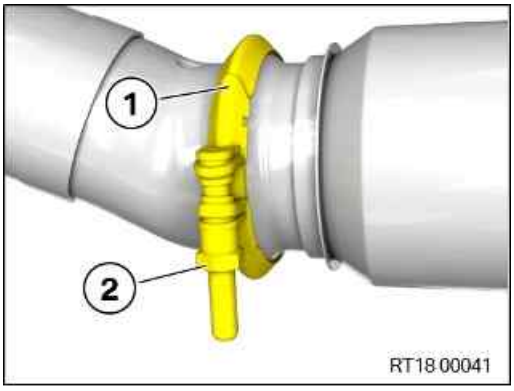


- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).



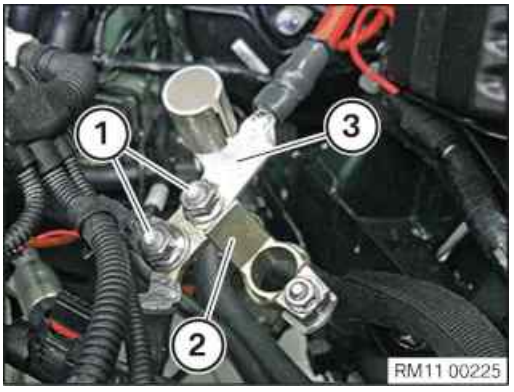
- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.



- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

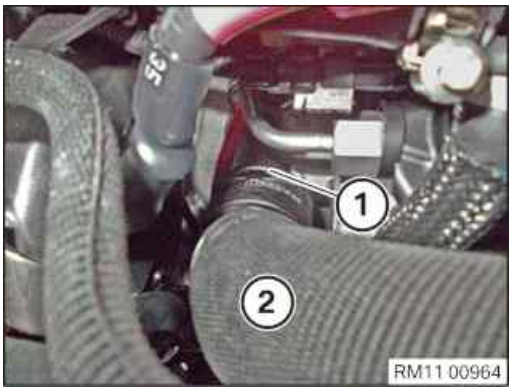


- Insert and install the positive battery terminal (2) and the remote positive terminal (3).
- Tighten nuts (1).

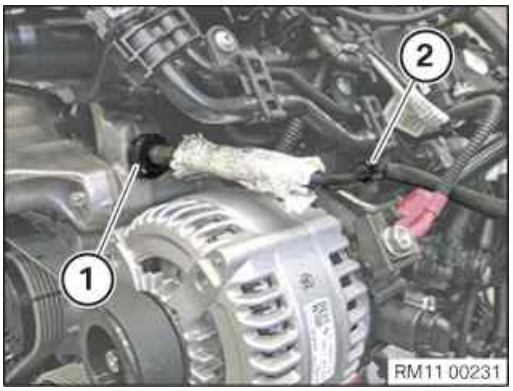
Positive battery cable to positive battery terminal

M8		Tightening torque	15 Nm

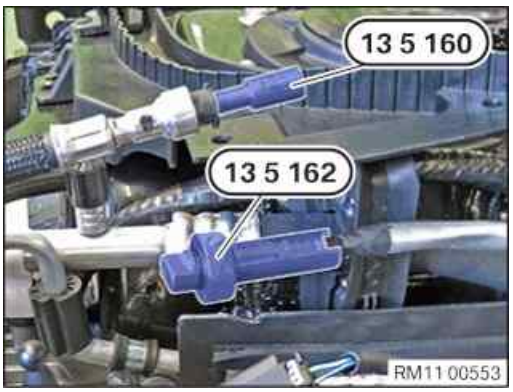
cardiagn.com



- Connect and lock the coolant lines (2).
- Ensure that the lock (1) engages audibly.



- Connect the coolant line (2).
- Lock clamp (1).



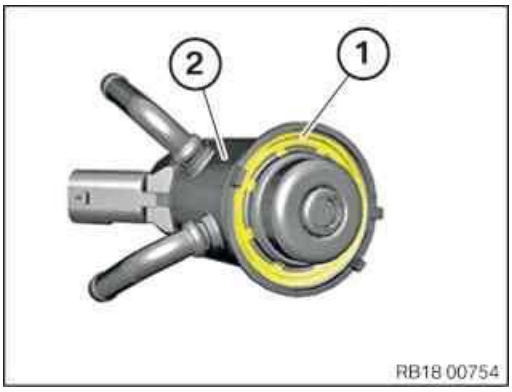
- Thread out special tools and remove.

- Route and connect fuel lines (1).
- Ensure that the locks engage audibly.

POSTPROCESSES

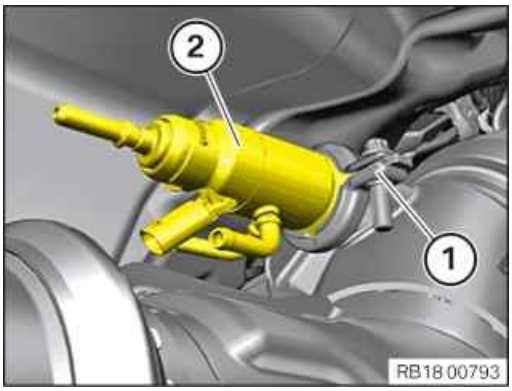
41 – Install the SCR metering module

cardiagn.com



- Renew the seal (1) of the SCR metering module (2).

  Parts: Sealing ring

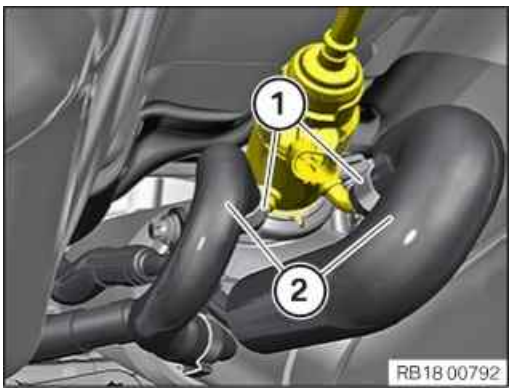


- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

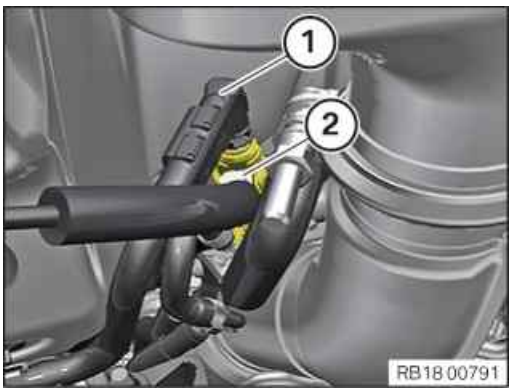
SCR metering module V-clip to exhaust system

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm



- Connect the coolant lines (2).
- Renew the clamps (1).

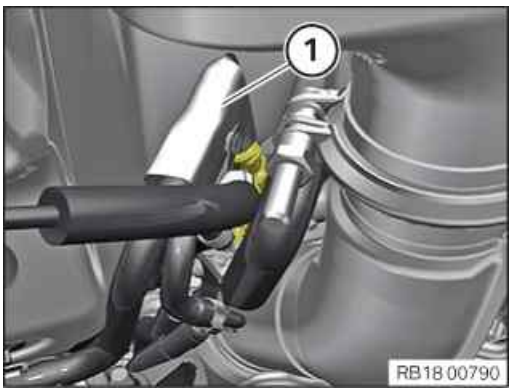
  Parts: Clamps
- Fasten the clamps (1).



- Connect connectors (2) and lock.

  The connector (2) must engage audibly.
- Connect and lock the metering line (1).

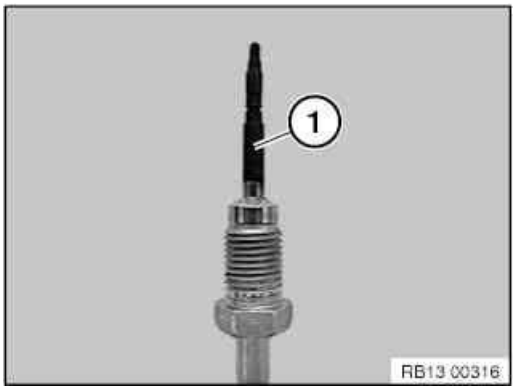
  Metering line (1) must engage audibly.



- Insert and install the heat protection cap (1).

42 – Installing exhaust temperature sensor on catalytic converter

cardiagn.com



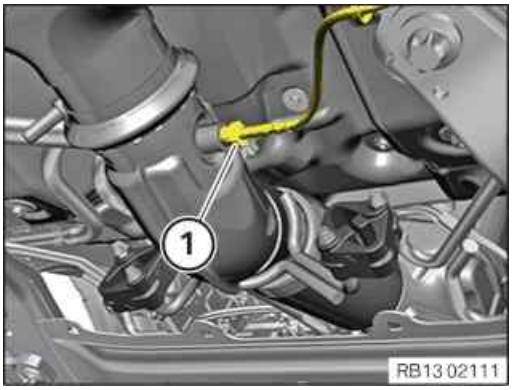
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

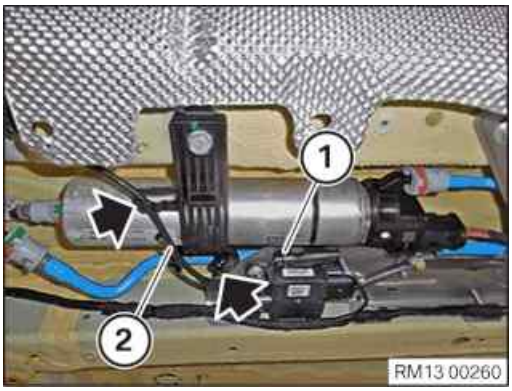


- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Secure the cable clips (1).



- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

43 – Installing the output shaft, right (double-clutch transmission (DKG))

▸ **Installing the right radial shaft seal on the differential (7DCT300)**

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

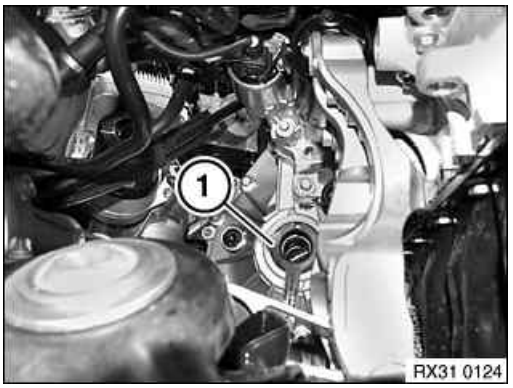
- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Coat sealing lips of radial shaft seal with transmission oil.
- Drive the radial shaft seal into the gearbox housing using the special tool **2 409 230**.

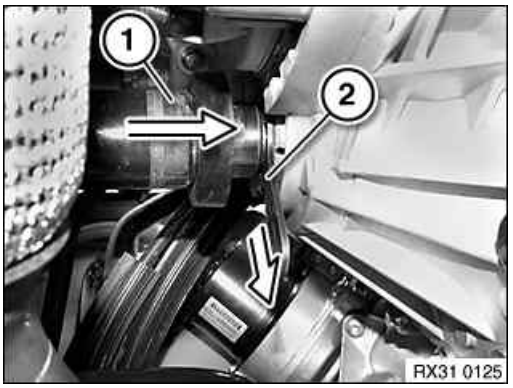
  The sealing ring must lie flush with the gearbox housing.

- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

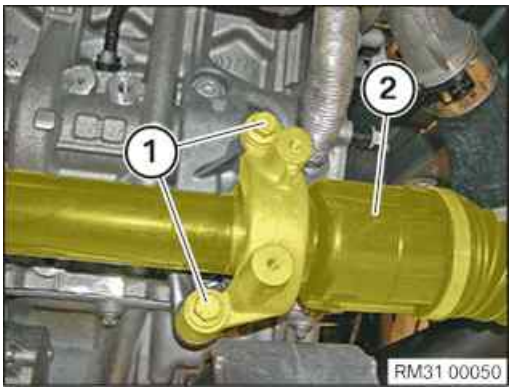


- Insert output shaft (1) into transmission.

Note: Make sure the output shaft is joined in parallel to the axle and without being entangled.

- Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.
- Check for secure seat by levering.

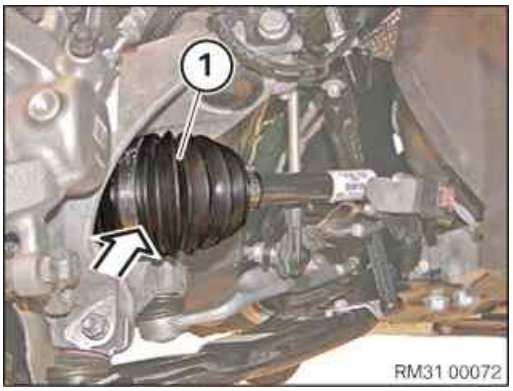
cardiagn.com



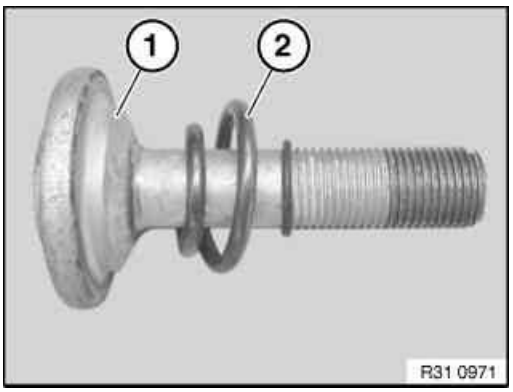
- Tighten the screws (1).

Output shaft bearing to engine block

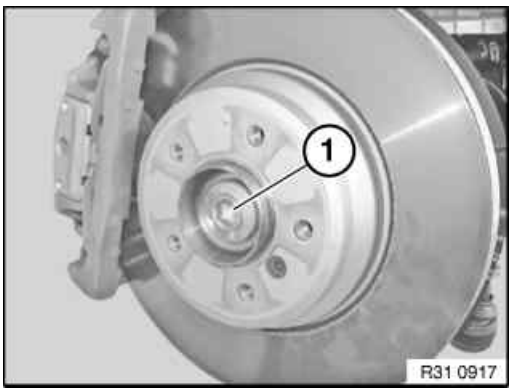
M10		Tightening torque	38 Nm



- Turn steering wheel to right.
- Insert the output shaft (1) into the swivel bearing from the front.

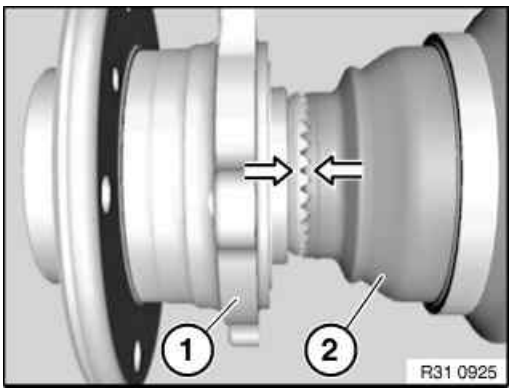


- Note installation position of compression spring (2).
- Keep the collar bolt (1) and the front gearing of the wheel bearing and the output shaft clean and free of grease.



- Renew collar bolt (1) with compression spring.

  Parts: Collar bolt with compression spring
- Hand-tighten the collar bolt (1) with the compression spring.

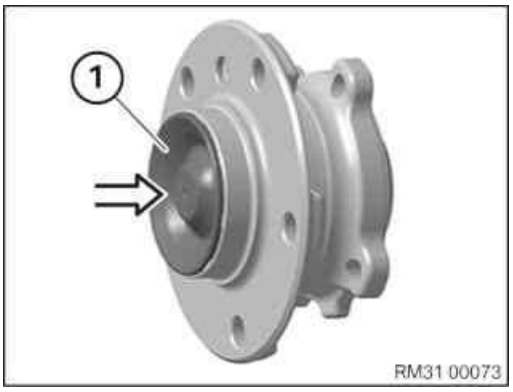


- Install the front gearing of the wheel bearing (1) and output shaft (2) in an interlocking position (tooth-in-tooth position).
- Check whether the front gearing is locked tooth in tooth by reciprocally rotating wheel hub and the output shaft.
- If positive locking is ensured: Tighten the collar bolt to tightening torque. For this purpose, press the brake pedal.

Output shaft to wheel bearing

M16	Replace the collar bolt.	Jointing torque	210 Nm
		Angle of rotation	90 °

cardiagn.com



- If necessary, attach protective cap (1).

44 – Installing left output shaft (double-clutch transmission (DKG))

▶ **Installing the left radial shaft seal on the differential (7DCT300)**

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

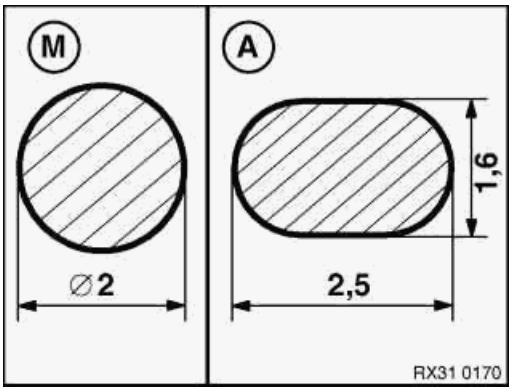
- Coat sealing lips of radial shaft seal with transmission oil.
- Drive in radial shaft seal using the special tool **2 409 230** into the transmission housing.

  The sealing ring must close flush with the transmission housing.

- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).

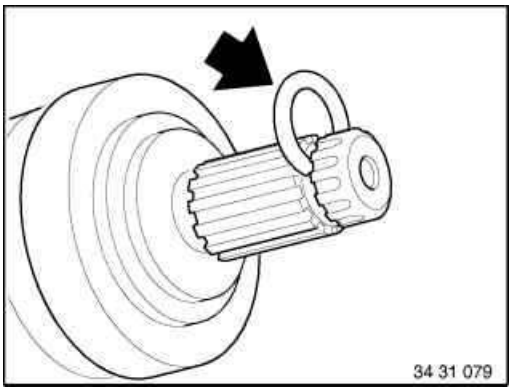
cardiagn.com



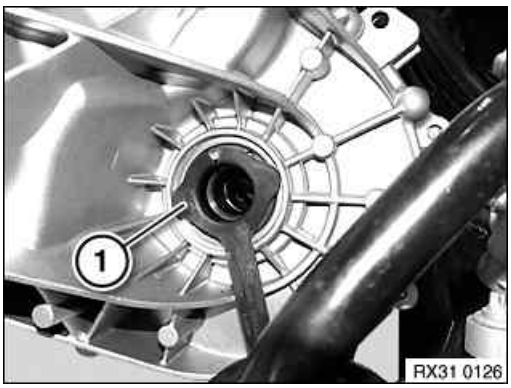
- Do not mix up circlips.

  Different types of output shafts fitted:

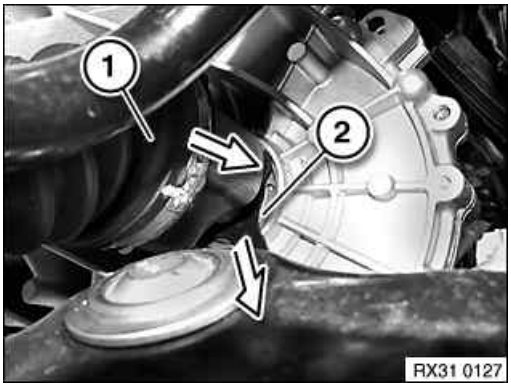
  - M: Manual transmission
  - A: Automatic transmission



- Renew circlip (arrow).



- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

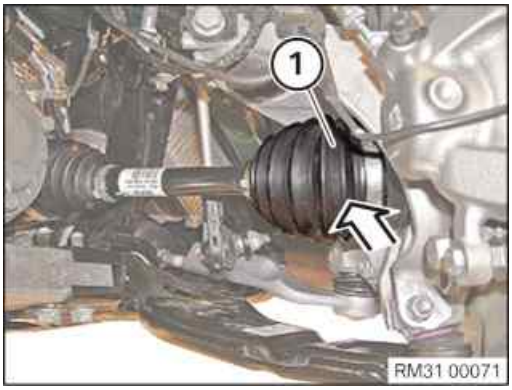


- Insert output shaft (1) into transmission.

Note: Make sure the output shaft is joined in parallel to the axle and without being entangled.

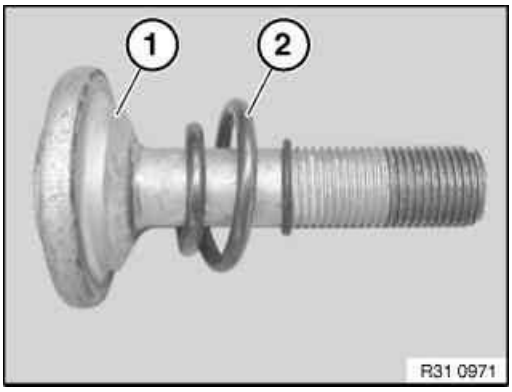
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

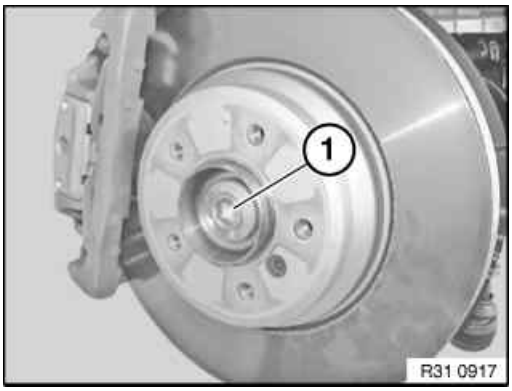


- Turn steering wheel to left.
- Insert the output shaft (1) into the swivel bearing from the front.

cardiagn.com

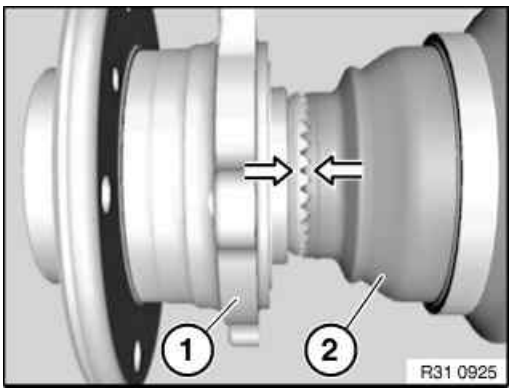


- Note installation position of compression spring (2).
- Keep the collar bolt (1) and the front gearing of the wheel bearing and the output shaft clean and free of grease.



- Renew collar bolt (1) with compression spring.

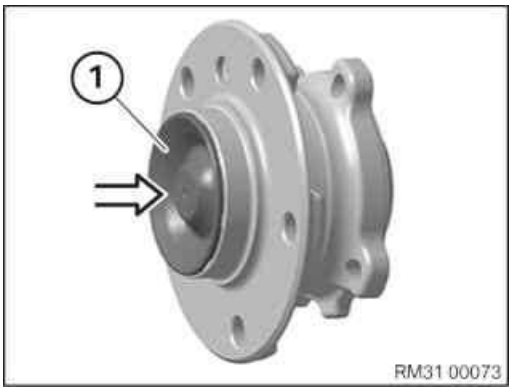
  Parts: Collar bolt with compression spring
- Hand-tighten the collar bolt (1) with the compression spring.



- Install the front gearing of the wheel bearing (1) and output shaft (2) in an interlocking position (tooth-in-tooth position).
- Check whether the front gearing is locked tooth in tooth by reciprocally rotating wheel hub and the output shaft.
- When positive locking is ensured: Tighten the collar bolt to tightening torque. For this purpose, press the brake pedal.

Output shaft to wheel bearing

M16	Replace the collar bolt.	Jointing torque	210 Nm
		Angle of rotation	90 °



- If necessary, attach protective cap (1).

45 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

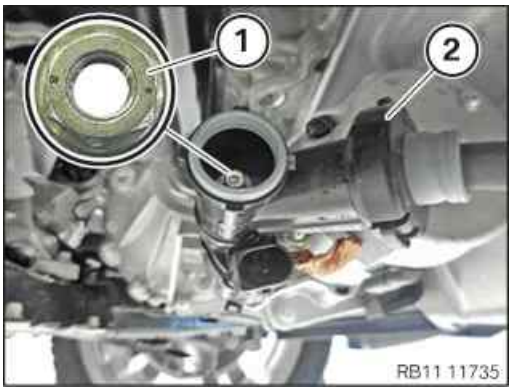
- Route the positive battery cable without abrasions and do not trap.

cardiagn.com

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm



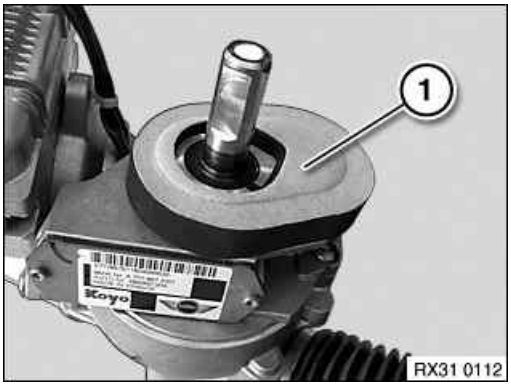
- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

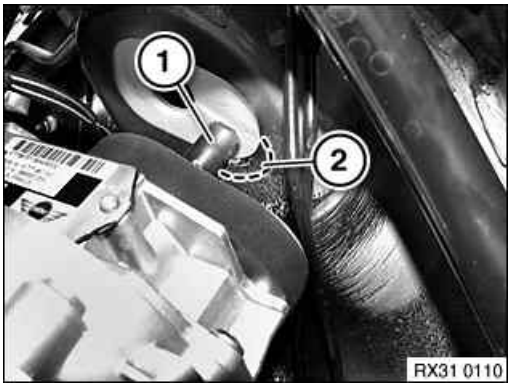
- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

46 – Mount and secure the complete front axle



- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.



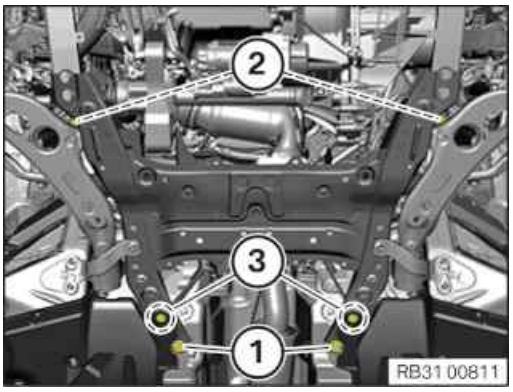
TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com



- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

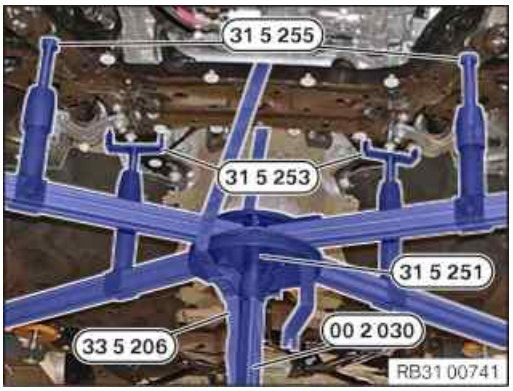
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

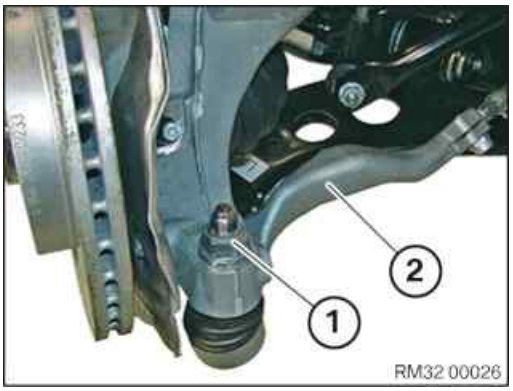
- If necessary, tighten the screws in the areas (3).

Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and place it to the side.



NOTICE

Perform the operations on the left and right side.

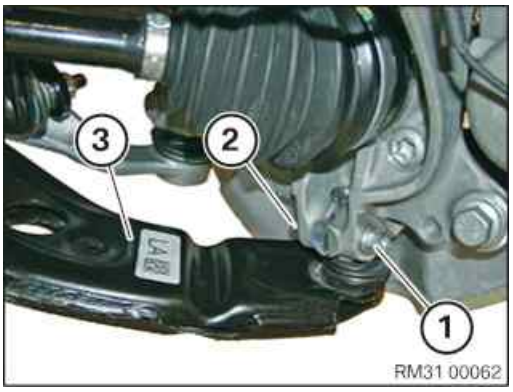
- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm

cardiagn.com



NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

47 – Install the mounted parts on the front axle support

NOTICE

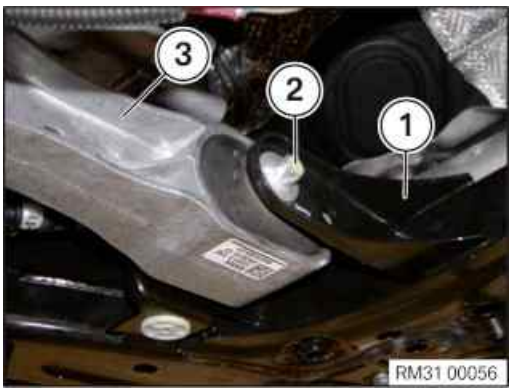
Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

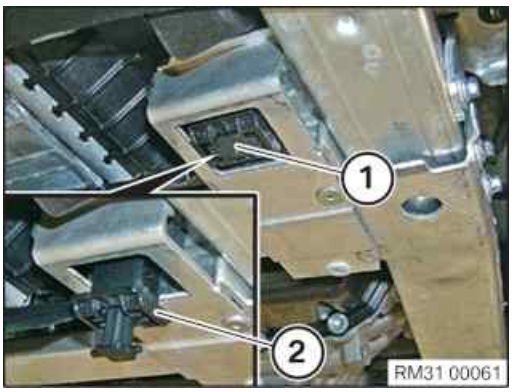
M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °



- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm

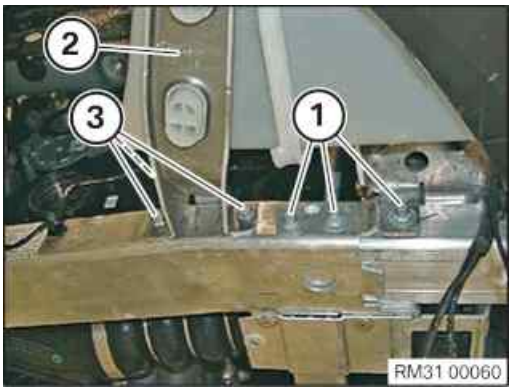


NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.

cardiagn.com



- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

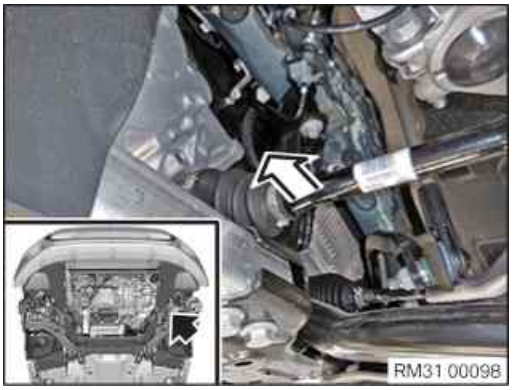
Perform the operations on the left and right side.

- Tighten the screws (1).

Deformation element, bottom, to adapter plate, front axle carrier

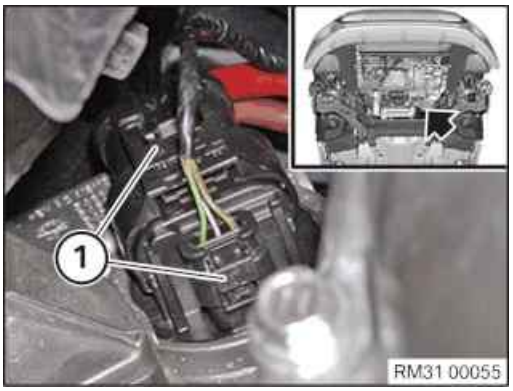
		Tightening torque	11,8 Nm

48 – Attaching connector at steering gear

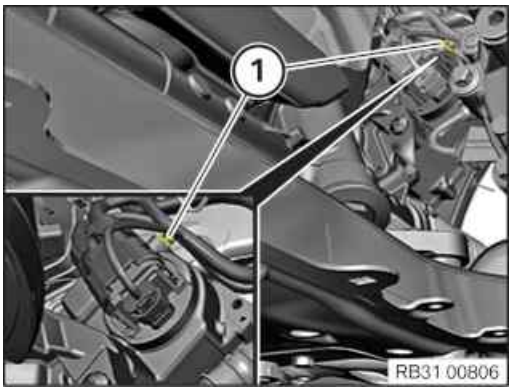


- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.



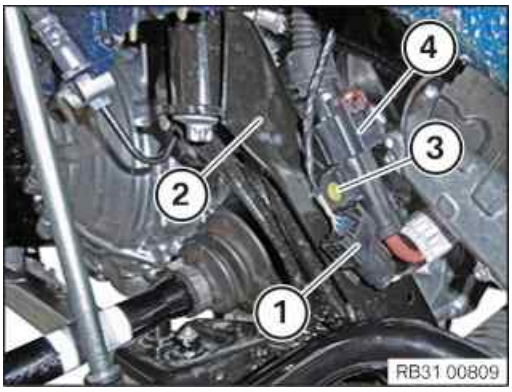
- Connect and lock connector (arrow) (1) with the steering gear.



- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**

cardiagn.com



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

49 – Securing rubber mount on front axle support

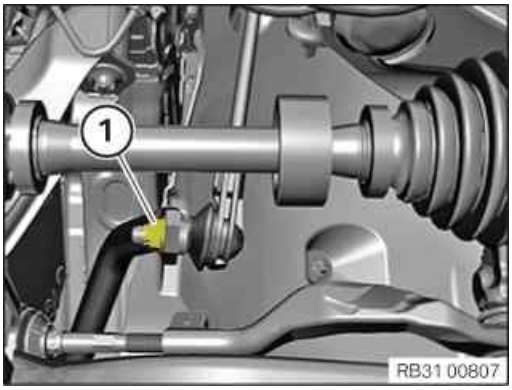
- Check rubber mount (1), replace if necessary.

  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

50 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.



▸ **Fastening anti-roll bar on the anti-roll bar link**

- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

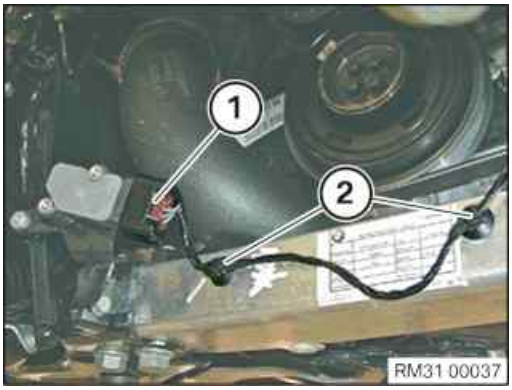
  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

51 – With right installation: Securing the cable for the ride height sensor



- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

52 – Installing pressure pipe between throttle body and charge air cooler

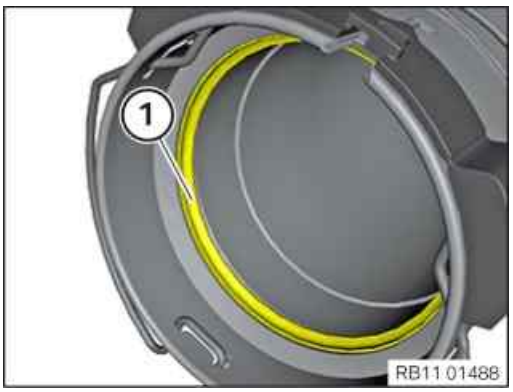
cardiagn.com

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.



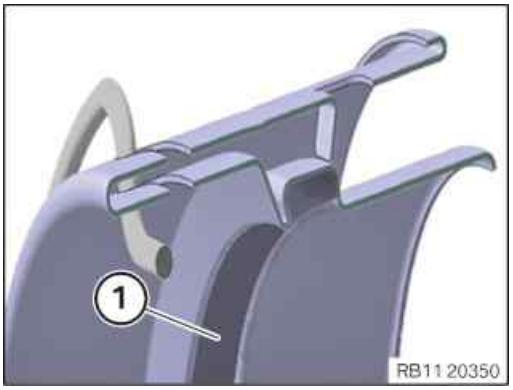
- Check seal (1) for damage and renew seal (1) as needed.

  Parts: Gasket

▶ **Replace damaged gasket**

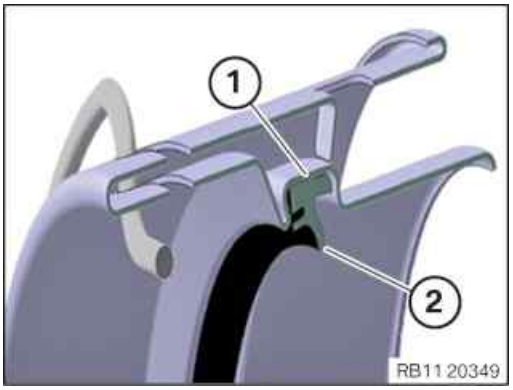
TECHNICAL INFORMATION

Do not use pointed or sharp-edged tools for the installation and/or removal.



- Remove damaged seal.
- Clean gasket groove (1) with a dry towel.

  The gasket groove (1) must be clean.



- Renew gasket.

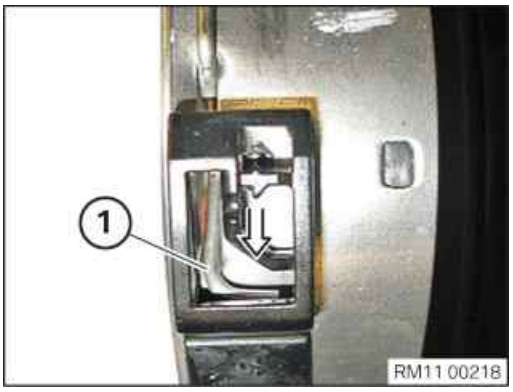
  Parts: Gasket
- Install seal dry without lubricant or mounting agent.

TECHNICAL INFORMATION

Incorrect assembly is possible. Ensure correct installation position.

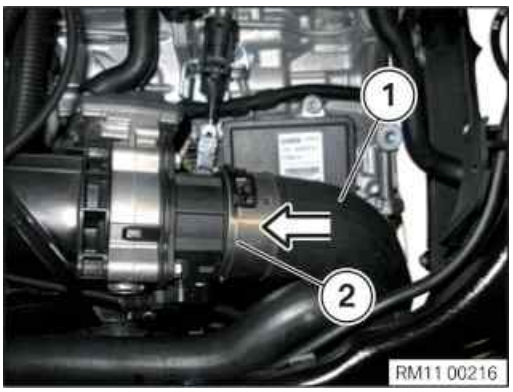
- Feed in and install the seal.
- Make sure the seal is correctly installed in the gasket groove (1).
- Make sure that the sealing lip (2) is pointing downwards (see figure).

cardiagn.com

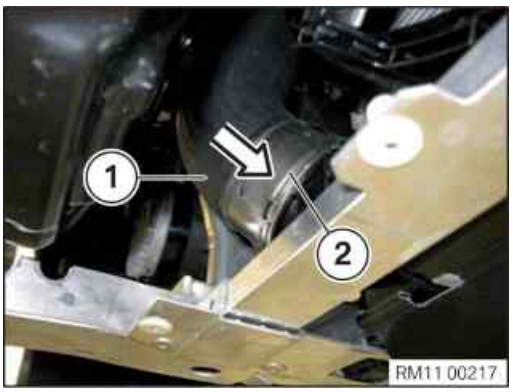


- Detach the locks (1) in the direction of the arrow from the brackets.

- Insert and install the pressure pipe (1) in the direction of the arrow.



- Insert and install the pressure pipe (1) in the direction of the arrow.
- Ensure that the locks (1) engage audibly.



- Insert and install the pressure pipe (1) in the direction of the arrow.
- Ensure that the locks (2)engage audibly.

53 – Install right charge air duct

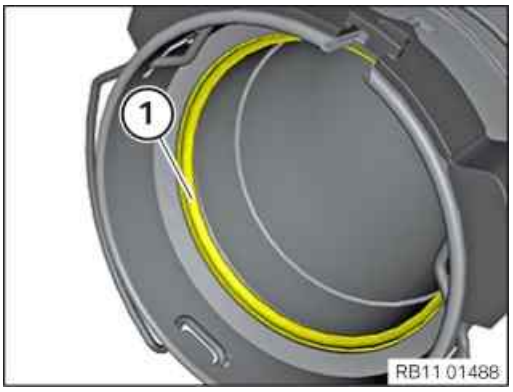
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

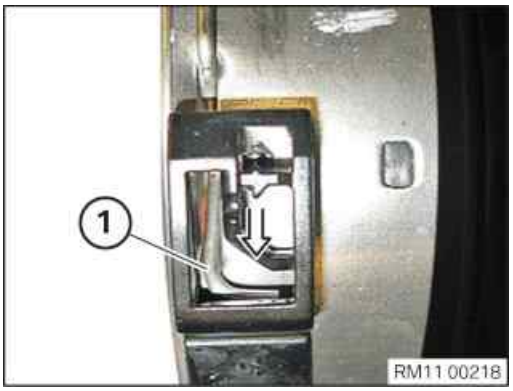
- Replace the gaskets and pressure pipe if necessary.

cardiagn.com

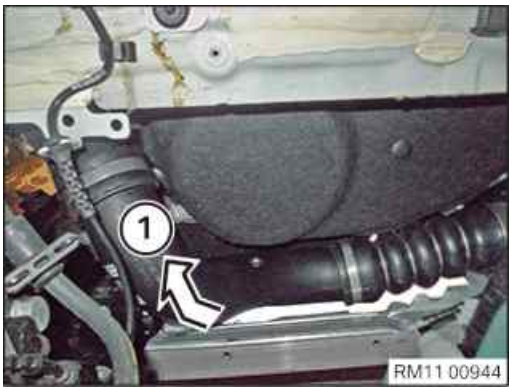


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

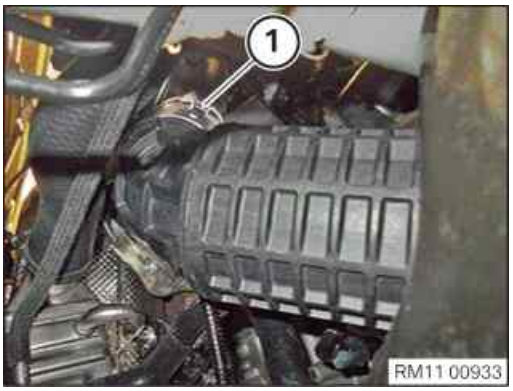
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).

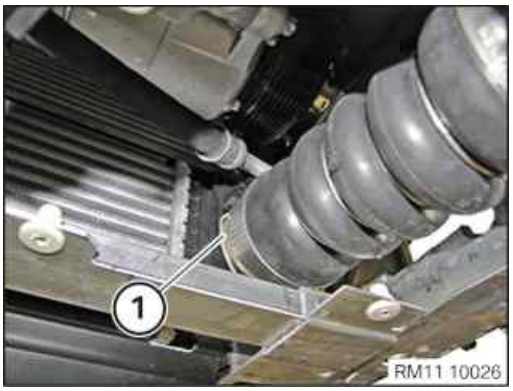


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

cardiagn.com

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

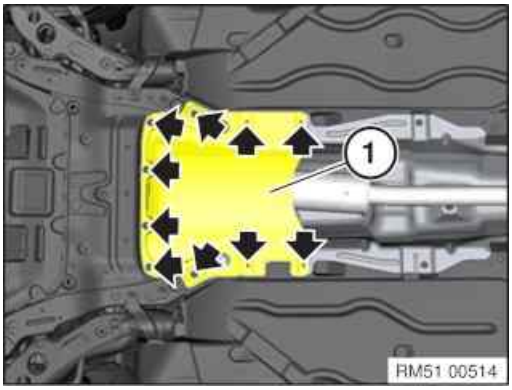
M6x25		Tightening torque	5 Nm

- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

54 – If installed: Installing underbody protection at rear

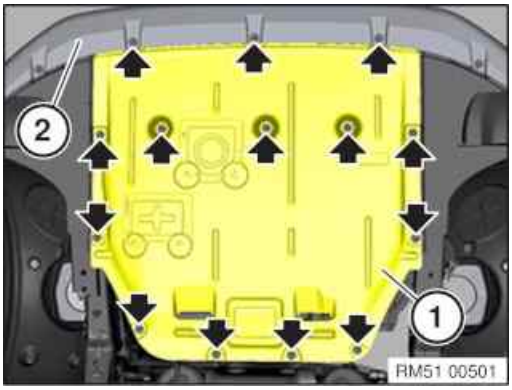


- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

55 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

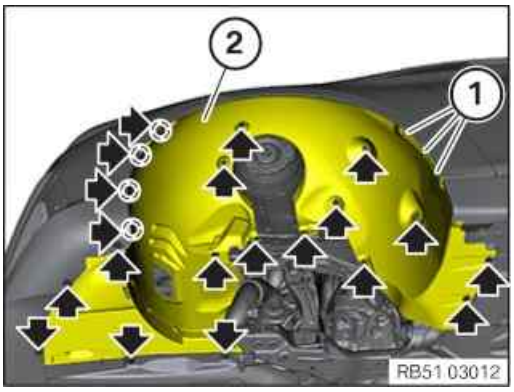
56 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

cardiagn.com



- Guide the wheel arch cover (2) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

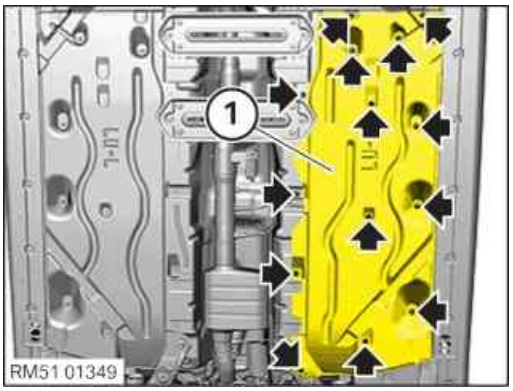
Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

- Secure expanding rivet (1).

57 – Installing underbody panelling , right



- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

58 – Mount the front left and right wheels

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

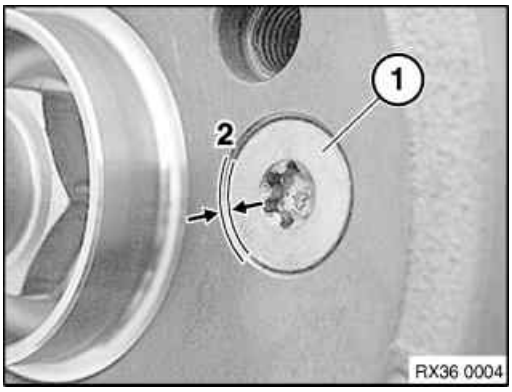
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com



- Check the mounting bolt for the brake disc (1) for secure fit.

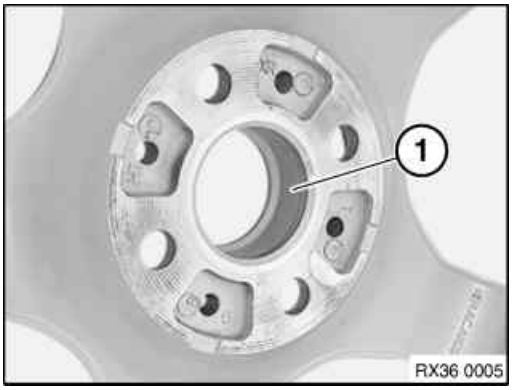
  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

◁

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

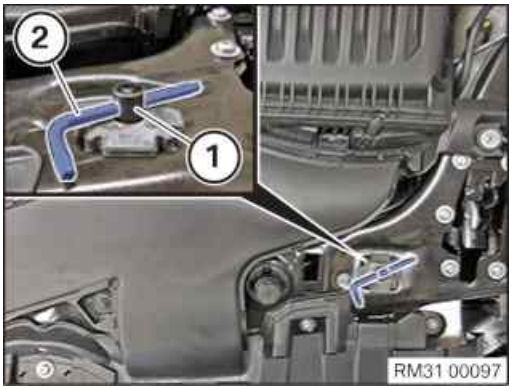
  Parts: Wheel bolts
- Clean the wheel bolts.
- Check wheel bolts (arrows) and threads for damage, renew the wheel bolts if necessary.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

cardiagn.com

59 – Removing fastener for left and right radiator

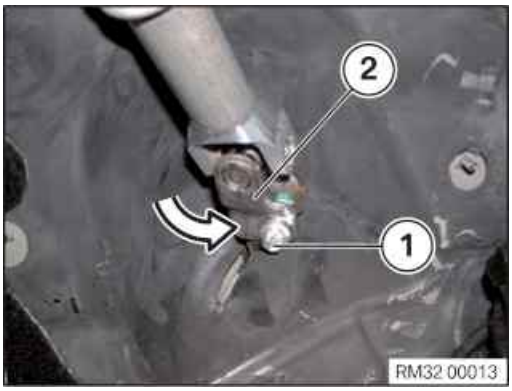


NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

60 – Secure the steering shaft at the bottom on the steering gear



- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

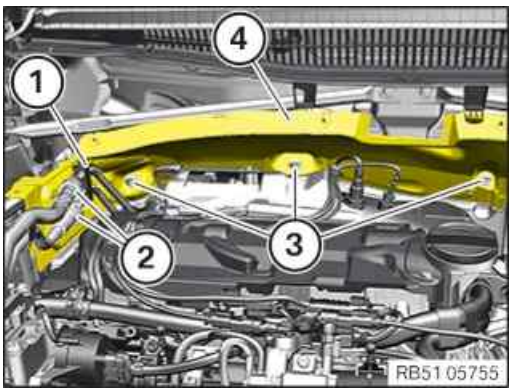
M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

61 – Installing rear bulkhead upper part



- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead

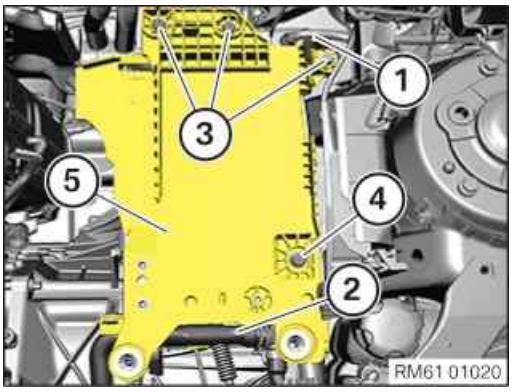
Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

62 – Install the battery holder

cardiagn.com



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

63 – Install electronics box

Prerequisite

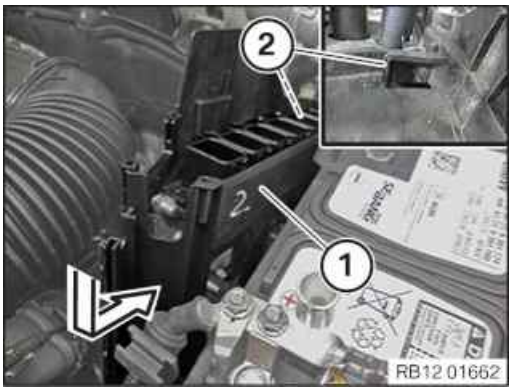
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

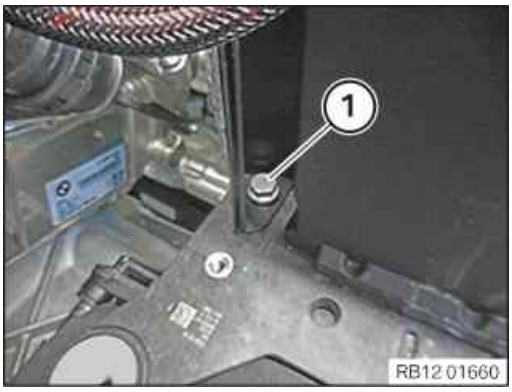
- Route all cables without abrasions, do not trap and crush.



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

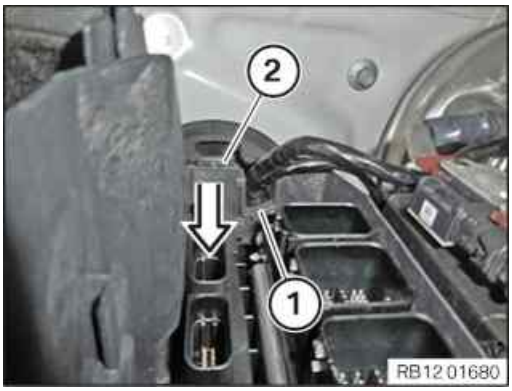
cardiagn.com



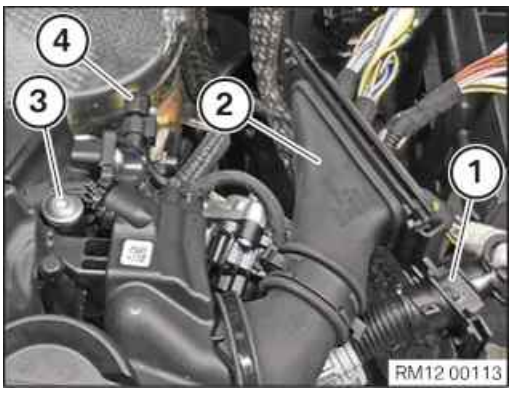
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

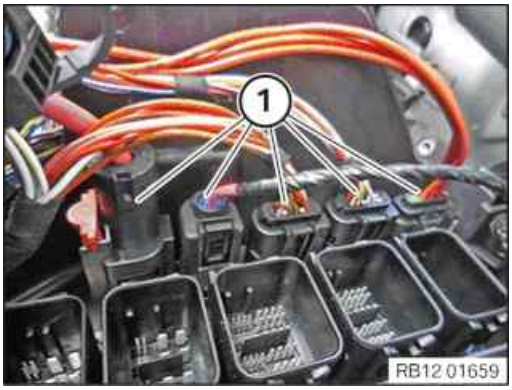


- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

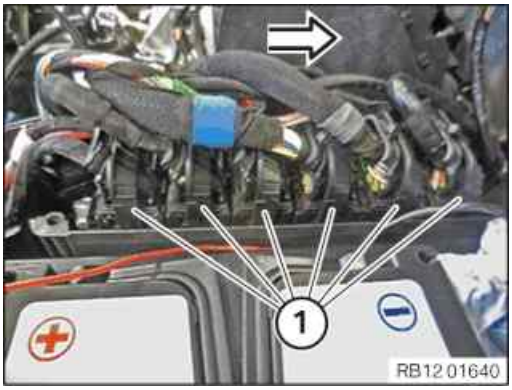
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

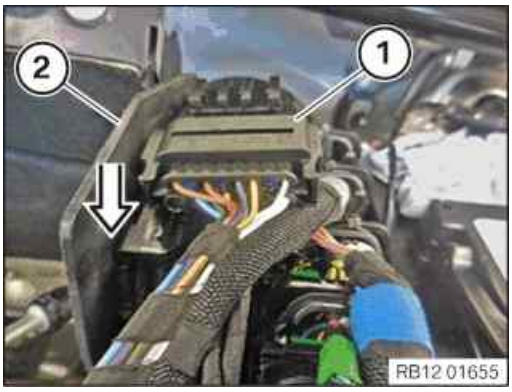


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

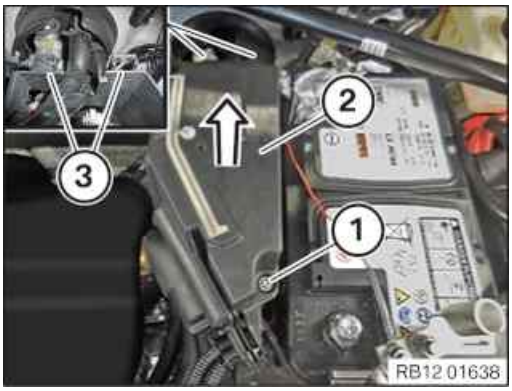


- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

cardiagn.com



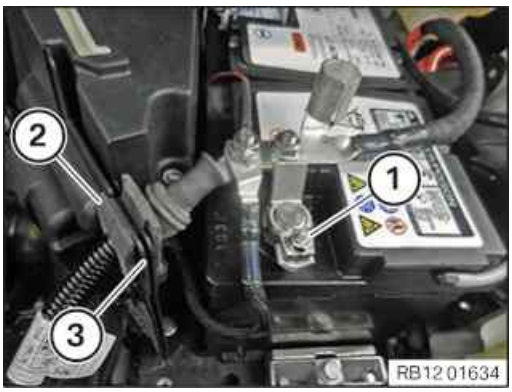
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

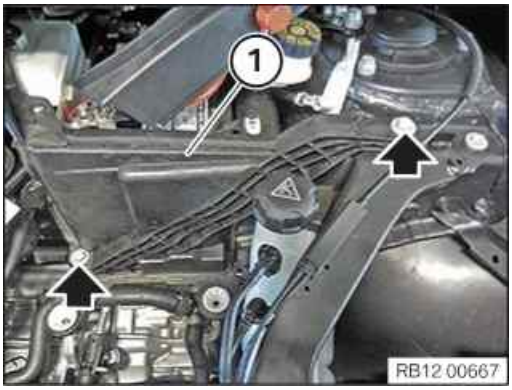
RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (1).
- Tighten screws (arrows).

Tension strut to spring strut dome/battery tray

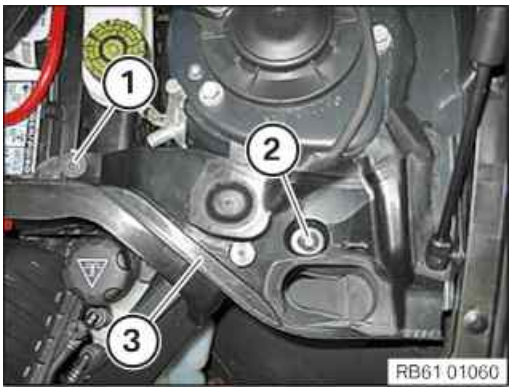
M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

cardiagn.com

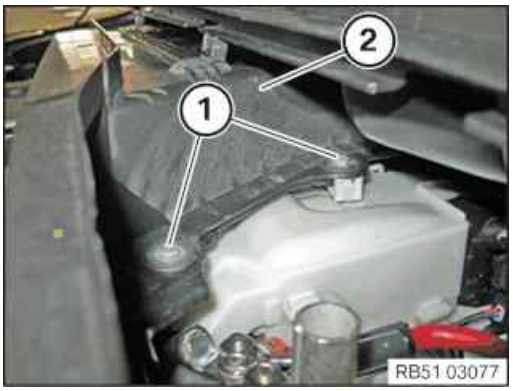


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

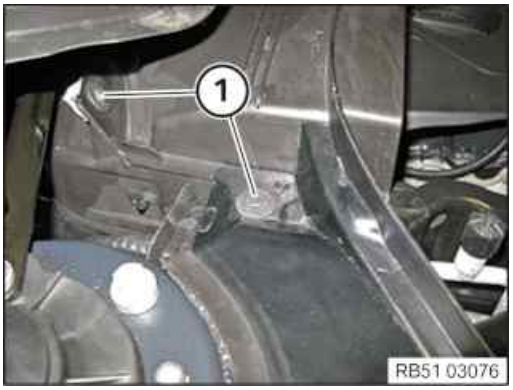
64 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

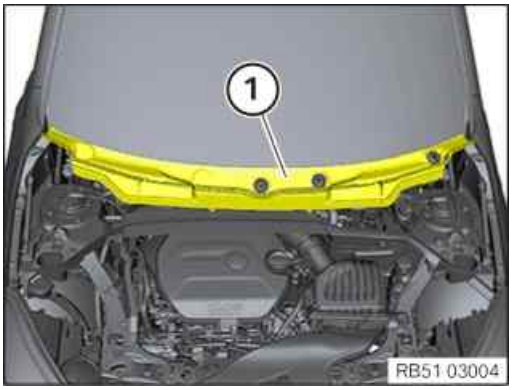
Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

65 – Install the rear cowl panel cover



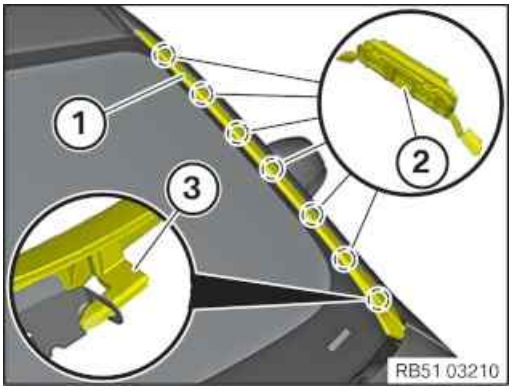
- Feed in and engage the rear cowl panel cover (1).

cardiagn.com

66 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.



▸ **Install the gutter strip on the windscreen**

- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

67 – Install left and right wiper arm

NOTICE

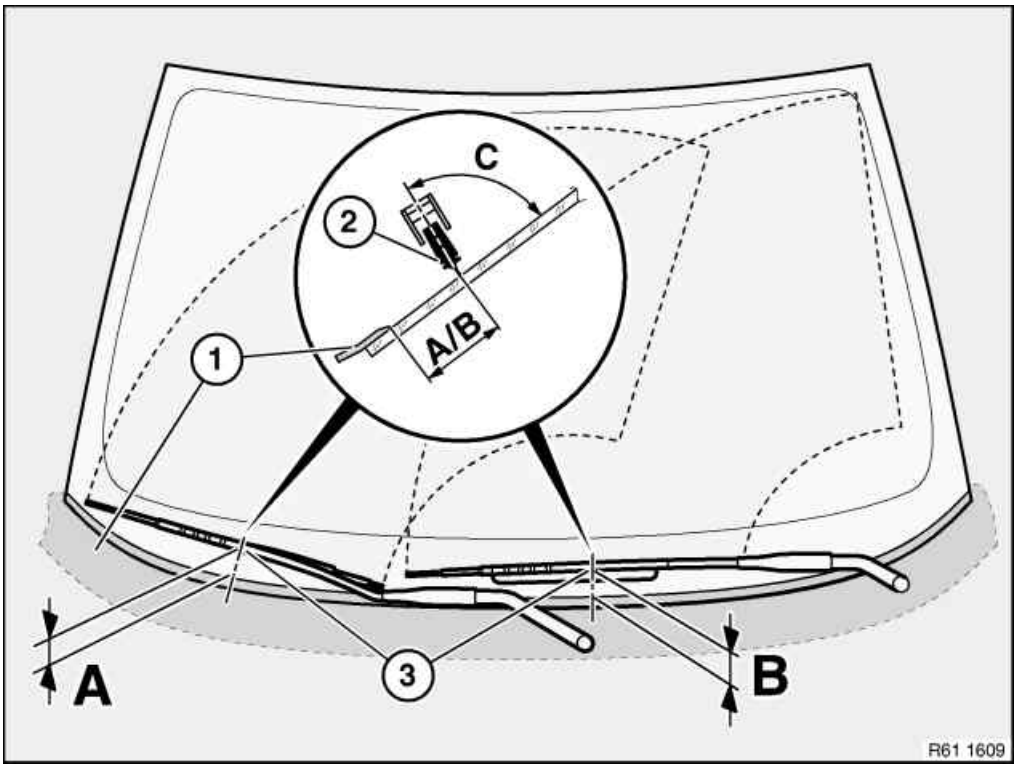
Description is for left component only. Procedure on the right side is identical.

▸ **Install the wiper arm**

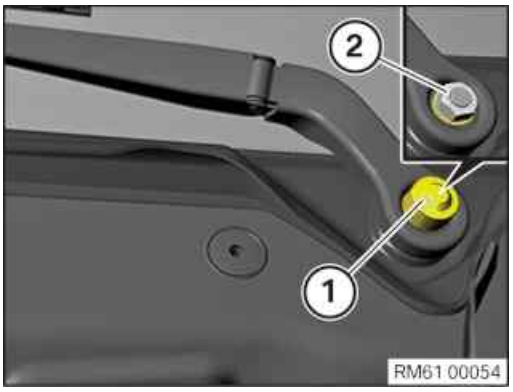
TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.

cardiagn.com



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

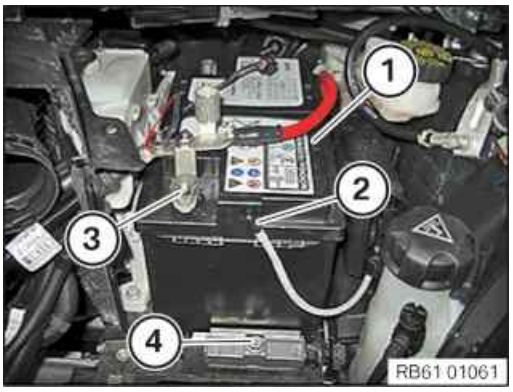
- Connect the protective cap (1).

68 – Install vehicle battery

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Install vehicle battery (1).
- Tighten the holder with the bolt (4).

Battery terminal rail to battery tray

M8 screw		19 Nm

- Position the vent hose (2).
- Position the positive terminal.
- Tighten the nut (3) on the positive terminal.

Positive battery terminal

NutM6		5 Nm

Screw		2,8 Nm

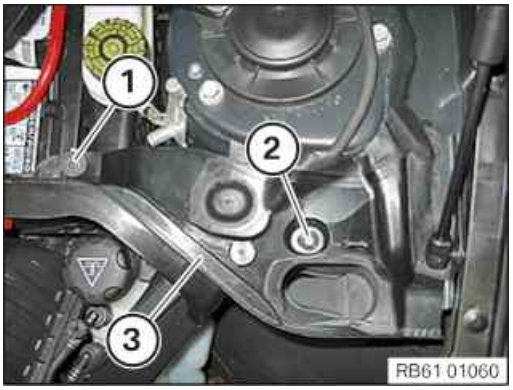
- Tighten the nut (2) on the positive terminal.

Positive battery cable to battery terminal

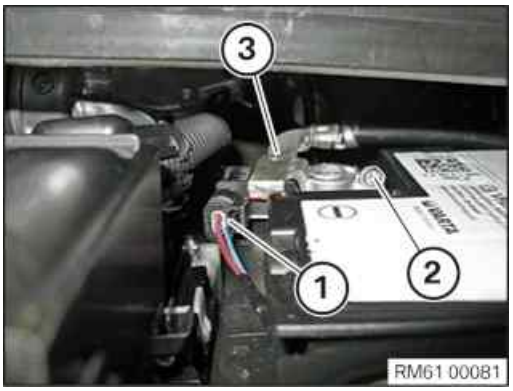
Nut M8		15,2 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm



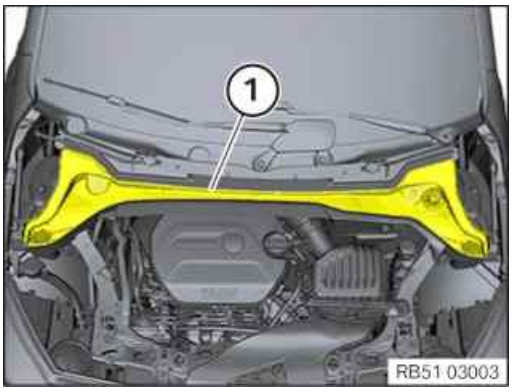
- Position the negative battery terminal (3).
- Tighten nut (2).

Negative battery terminal (with IBS)

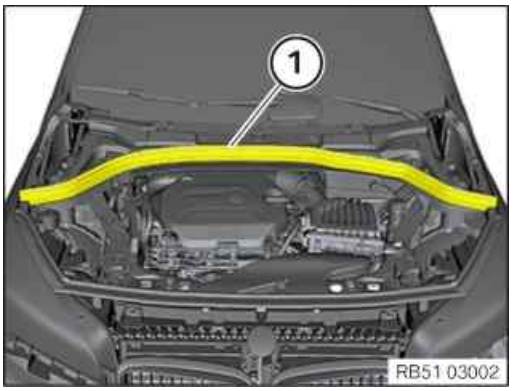
NutM6		5 Nm

- Connect connectors (1) and lock.

cardiagn.com

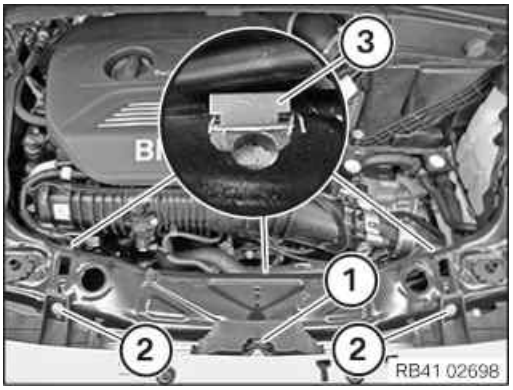


- Feed in the cowl panel cover (1).

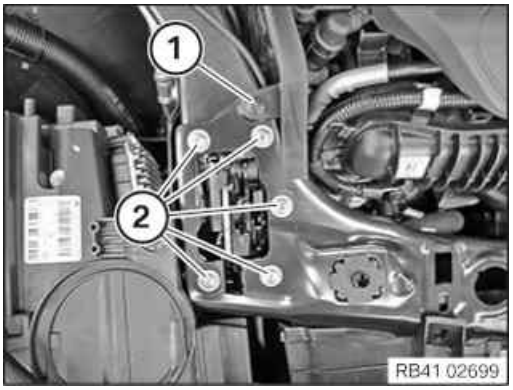


- Press the gasket (1) in a downwards direction.

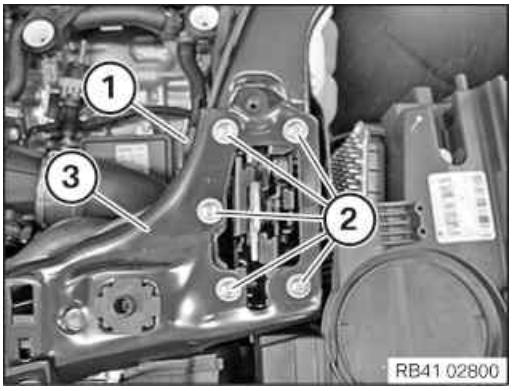
69 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



- Lever out expanding rivet (1).
- Loosen screws (2).



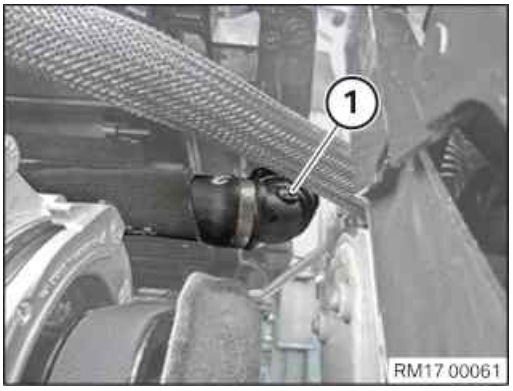
- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

70 – Connect the coolant line

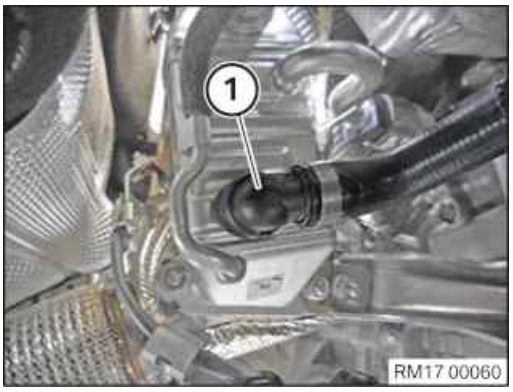
cardiagn.com

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect the right coolant line (1) to the radiator and lock audibly.

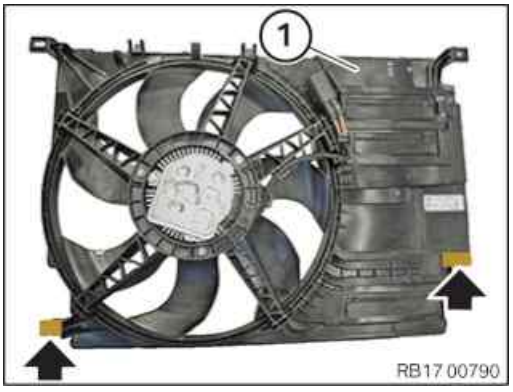


- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

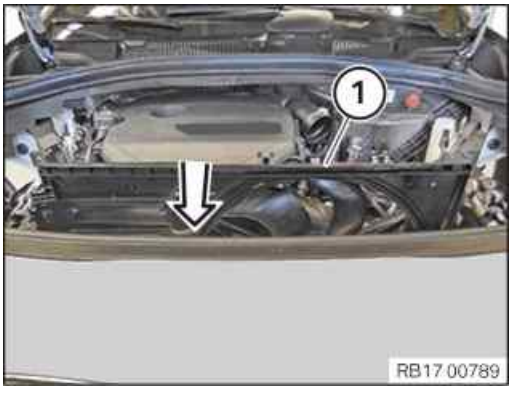
71 – Installing fan cowl with electric fan

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



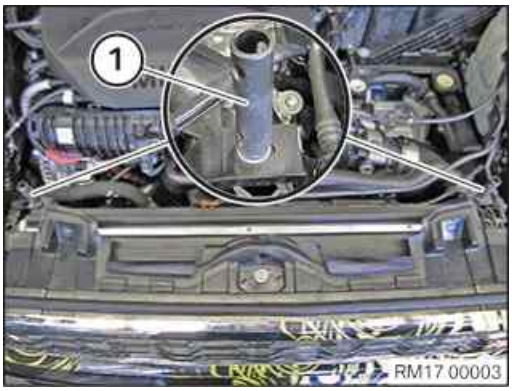
- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.



- Feed in and install the fan cowl (1) in the direction of the arrow.

cardiagn.com

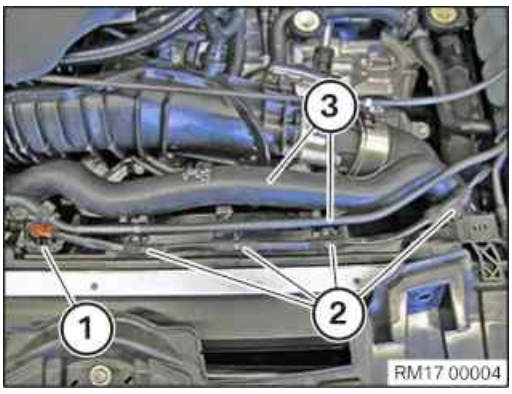
- Lock the left and right locks (arrows).



- Tighten the screws (1).

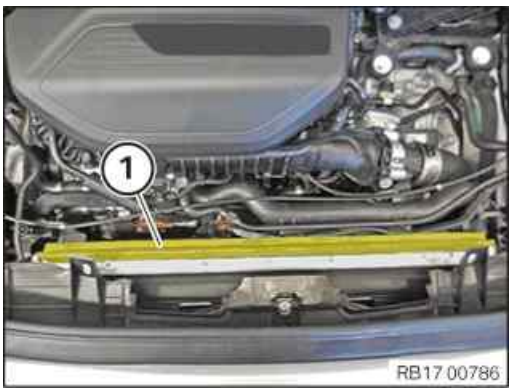
Fan cowl on radiator

M6X12		Tightening torque	6 Nm



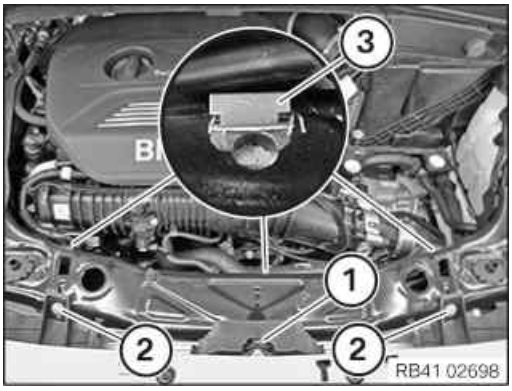
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).



- Guide the sealing (1) on the radiator in and install it.

72 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

M8		Tightening torque	25 Nm

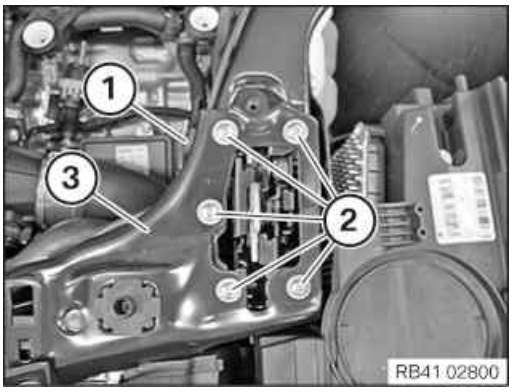
- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

cardiagn.com

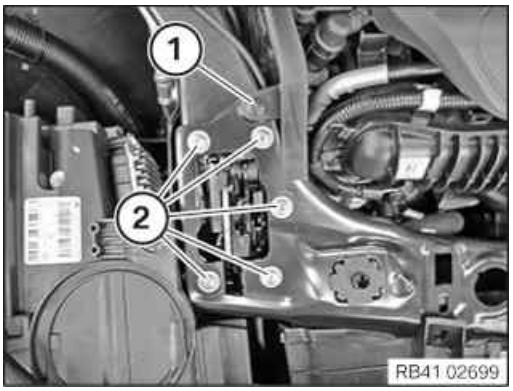


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



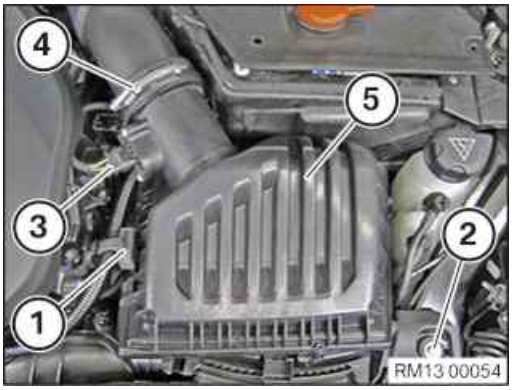
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

73 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

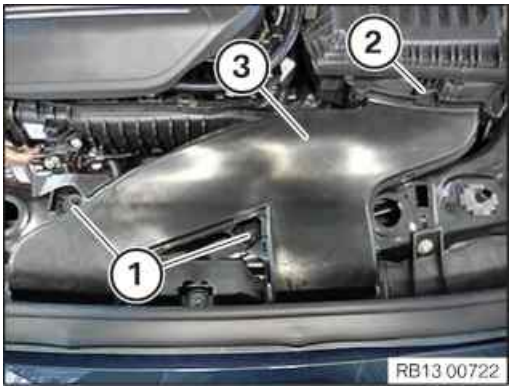
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

74 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

75 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

76 – Removing the oil filler cap

- Open oil filler cap (1).

77 – Topping up the engine oil

cardiagn.com

RISK OF DAMAGE

Damage to the petrol particulate filter.

Vehicles equipped with a petrol particulate filter must be operated with low-ash engine oil only.

- Use BMW Longlife-04 , BMW Longlife-12 FE or BMW Longlife-17 FE+ engine oils or engine oils approved by BMW matching the same specifications only.
- For additional information see: Overview of approved engine oils for BMW Group engines.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

- Pour in engine oil.

Engine oilB37C15U1

Capacity of engine oil	4,8 l

Engine oil: Technically suitable engine oils for BMW Group engines

78 – Installing the oil filler cap

- Close oil filler cap (1).

79 – Check engine oil level

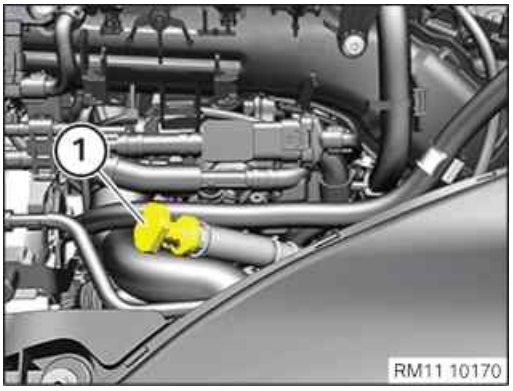
- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▸ **Check engine oil level**

cardiagn.com

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

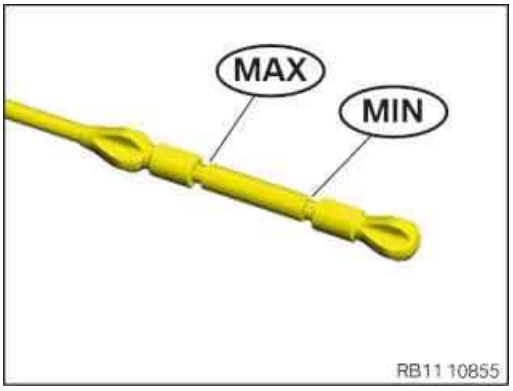


- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.



TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

80 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

81 – Evacuate and fill air conditioning

- See additional information.

Additional Information

Overview of Tightening Torques

Oil drain plug on oil sump — Used in step 11

M12x1.5	Renew the sealing ring.	Tightening torque	25 Nm

cardiagn.com

Bracing strut to top cross connection — Used in step 13 72

M8		Tightening torque	25 Nm

Air duct to deformation element/cross connection — Used in step 13 72

M6x20 screw		Tightening torque	6 Nm

Cross connection on support for cross connection — Used in step 13 72

M6x20		Tightening torque	12 Nm

Transmission mounting — Used in step 40

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

Right engine mount to cylinder head — Used in step 40

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

Standard screw connection M8 — Used in step 40

M8		Tightening torque	19 Nm

Standard screw connection M6 — Used in step 40

M6			8 Nm

Refrigerant line on air conditioning compressor — Used in step 40

M8		Tightening torque	19 Nm

V-clip to catalytic converter — Used in step 40

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Positive battery cable to positive battery terminal — Used in step 40

M8		Tightening torque	15 Nm

SCR metering module V-clip to exhaust system — Used in step 41

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

Exhaust-gas temperature sensor to exhaust system — Used in step 42

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Output shaft bearing to engine block — Used in step 43

M10		Tightening torque	38 Nm

Output shaft to wheel bearing — Used in step 43 44

M16	Replace the collar bolt.	Jointing torque	210 Nm
		Angle of rotation	90 °

Starter motor to transmission — Used in step 45

M8x45		Tightening torque	19 Nm

Battery positive lead to starter — Used in step 45

M8		Tightening torque	13,5 Nm

cardiagn.com

Rear end of front axle support to body

Used in step 46

M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body

Used in step 46

M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body

Used in step 46 54

Screw		Tightening torque	3 Nm

Track rod end to swivel bearing

Used in step 46

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing

Used in step 46

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body

Used in step 47

M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °

Holder with rubber mount to front axle support

Used in step 47

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate

Used in step 47

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier

Used in step 47

		Tightening torque	11,8 Nm

Holder to front axle support

Used in step 48

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar

Used in step 50

M10	Renew nut.	Tightening torque	56 Nm

Charge air line to crankcase

Used in step 53

M6x25		Tightening torque	5 Nm

Charge air duct to oil sump

Used in step 53

M6		Tightening torque	8 Nm

Underbody protection front

Used in step 55

			3 Nm

Wheel arch cover to body

Used in step 56

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 56

Plastic nut		Tightening torque	3 Nm

cardiagn.com

Underbody panelling, side

Used in step 57

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Used in step 57

Plastic nut		Tightening torque	2,6 Nm

Brake disc to front wheel hub

Used in step 58

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

Used in step 58

M8	Renew screw.		16 Nm

Wheel bolts

Used in step 58

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 60

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 60

Plastic nut		Tightening torque	3 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 61

Oval-head screw		Tightening torque	5 Nm

Battery holder to engine support

Used in step 62

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray

Used in step 63

M8X16		Tightening torque	15 Nm

Wiring harness to cylinder head cover

Used in step 63

TS5x20		Tightening torque	3,5 Nm

Cover to electronics box

Used in step 63

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery

Used in step 63

cardiagn.com

11 00 050 Removing and installing engine with transmission (B37C)

Special tools required:

- 32 1 270
- 00 9 030
- 2 358 042

Recycling:

Catch and dispose of escaping fuel with auxiliary materials.

Observe country-specific waste disposal regulations.

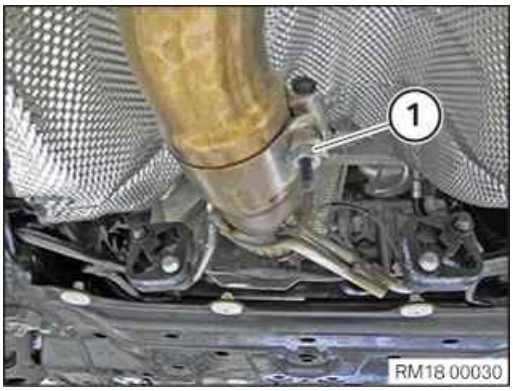
Important!

Seal openings or lines on air conditioning with special tool 32 1 270 to prevent escape of media and contamination.

Necessary preliminary tasks:

- Remove acoustic cover
- Remove battery.
- Remove control unit and equipment holder.
- Remove front axle complete.
- Remove both output shafts.
- Remove starter motor.
- Drain engine oil.
- Remove charge air cooler.
- Remove radiator.

REMOVAL:



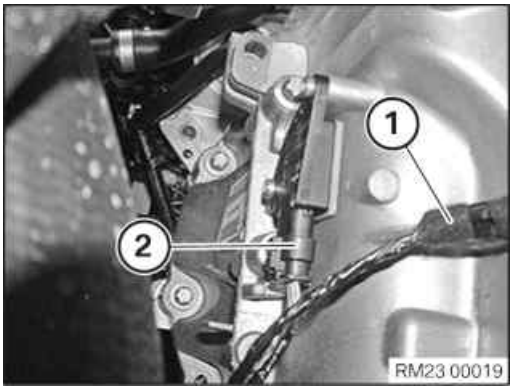
Release clamp (1).

Replace clamp (1).

Slide exhaust system from diesel particulate filter.

Parts: Clamp.

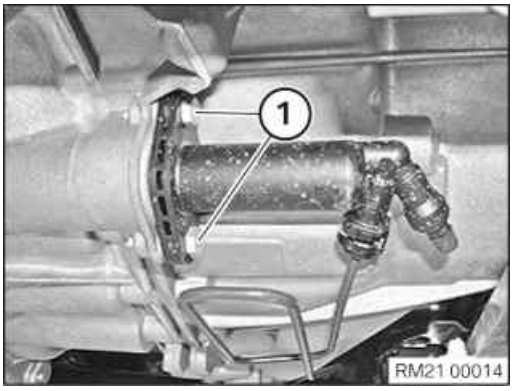
cardiagn.com



Vehicles with manual transmission:

Disconnect plug connection (2) on gear sensor.

Detach cable (1) with holder from transmission.



Vehicles with manual transmission:

Note:
Pressure line of clutch slave cylinder remains connected.

Important!

Slowly relieve tension on clutch slave cylinder otherwise air may be drawn in through sealing sleeve.

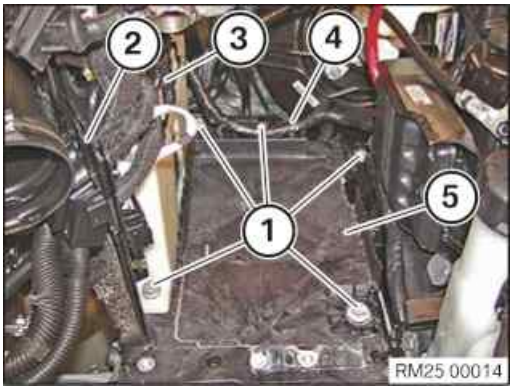
If possible, do not deflect push rod of clutch slave cylinder.

A deflection of the push rod caused by removal will cause easy escape of fluid. This escape of fluid does not mean that the clutch slave cylinder is damaged.

Exchange is therefore not necessary.

Vehicles with manual transmission:

Release nuts (1) and remove clutch slave cylinder.



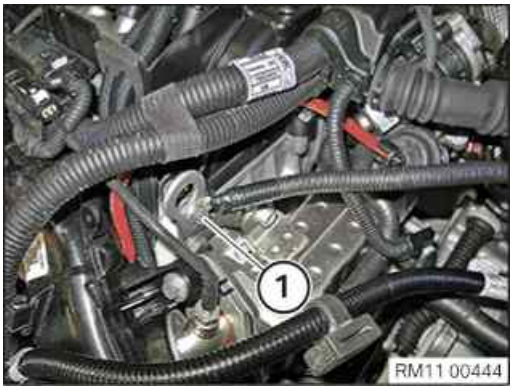
Release screws (1).

Release battery housing (2) from bracket and remove.

Release control unit (3) from bracket.

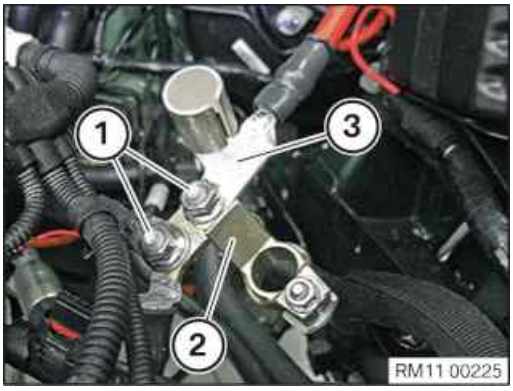
Detach wiring harness (4) from battery tray (5).

Remove battery tray (5).



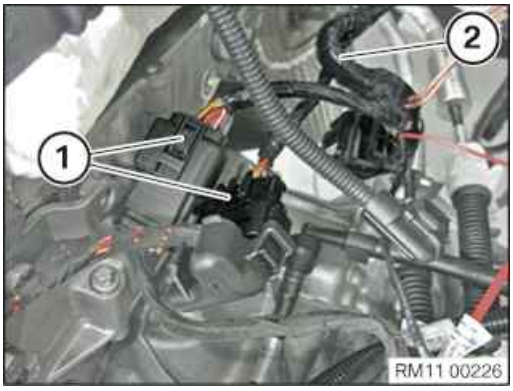
Loosen screw connection (1) of the ground strap.

cardiagn.com



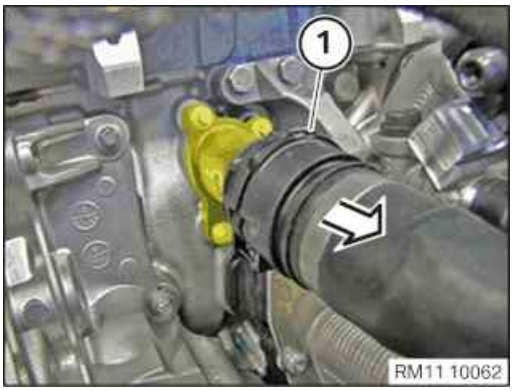
Unscrew nuts (1).

Disconnect positive battery terminal (2) and positive battery connection point (3).

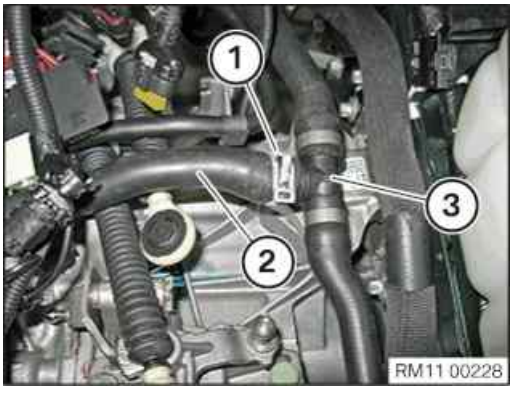


Unlock plug connections (1) and disconnect.

Disconnect wiring harness (2) from engine wiring harness.



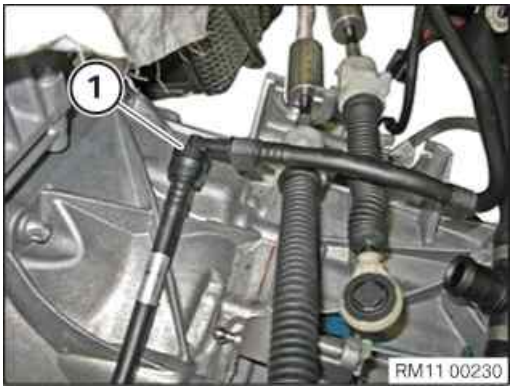
Release coolant hose (1) and pull off connecting branch.



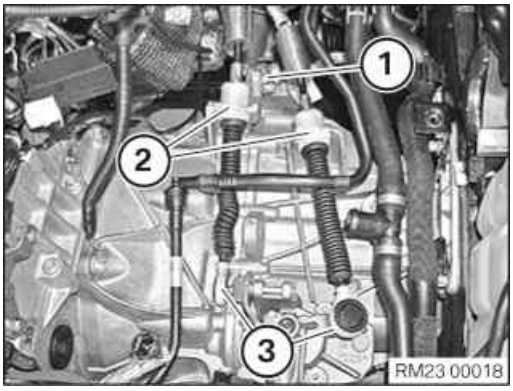
Release clamp (1).

Pull hose (2) off connecting pipe (3).

cardiagn.com



Release vacuum line (1) connection and disconnect.

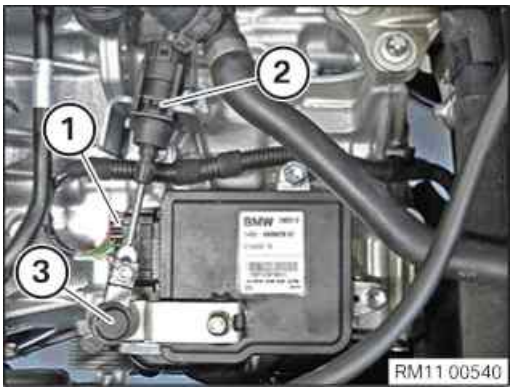


Release screw (1) and remove ground strap.

Vehicles with manual gearbox:

Release clips on limit position/holder (2).

Detach selector lever cables (3) at ball joints.



Vehicles with automatic transmission:

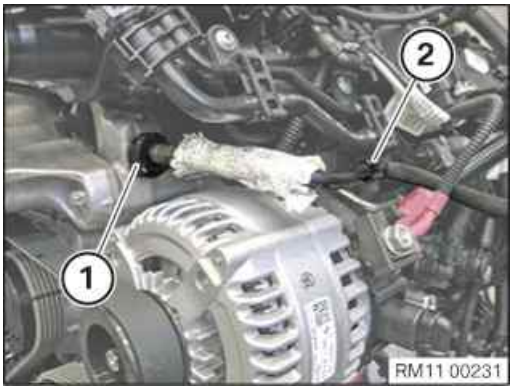
Unlock and disconnect the connector (1).

Release clips on limit position/holder (2).

Detach selector lever cable (3) at ball joint.

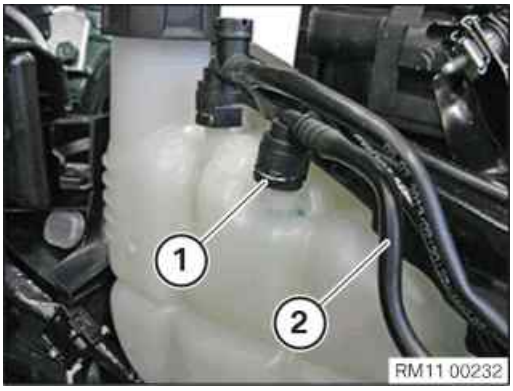
Disconnect fuel lines (1).

cardiagn.com



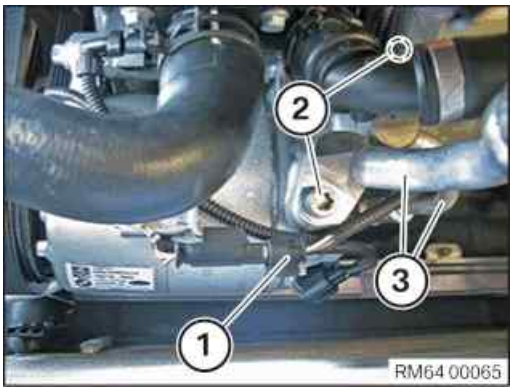
Unlock coolant line (1) and pull off.

Unclip coolant line (1) from holder (2).



Unlock coolant line (1) and pull off.

Remove coolant line (1).

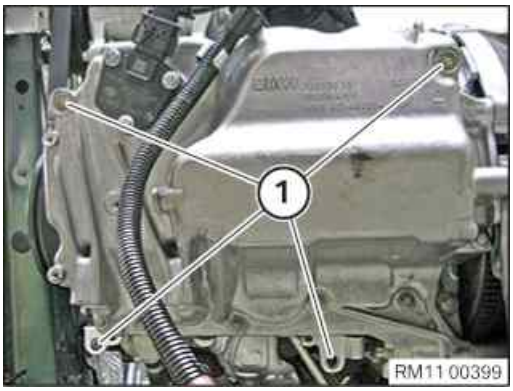


Unfasten screws (2).

Remove refrigerant lines (3).

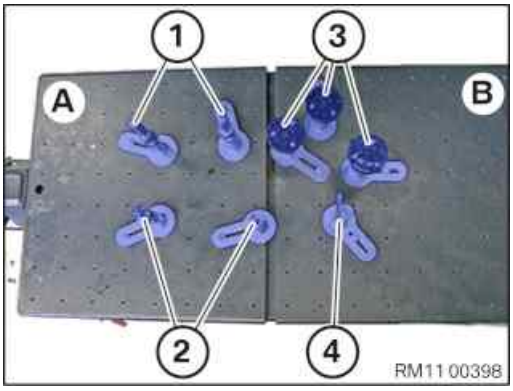
Installation note:
Replace sealing rings.

Use special tool 00 9 030 to mount sealing rings without damaging them.



Note:
The fixtures (40/50) of table top **A** of the mobile table lift must be seated in the mounting points (1).

cardiagn.com



Vehicles with manual gearbox:

Prepare mobile table lift:

Note:
Position engine assembly on table top **A**.

Position transmission on table top **B** .

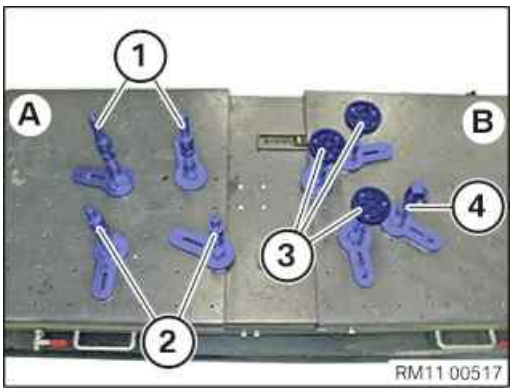
Structure of table lift.

Position fixture (30) with fixture (40) for engine block on table top **A** at co-ordinates **5/6** and **1/7** (1).

Position fixture (30) with fixture (50) for oil sump on table top **A** at co-ordinates **5/3** and **2/3** (2).

Position fixture (30) with fixture (80) for transmission housing on table top **B** at co-ordinates **6/5**, **2/5** and **2/7** (3).

Position fixture (83 30 2 357 221) for transmission housing on table top **B** at co-ordinates **7/3** (4).



Vehicle with automatic transmission:

Prepare mobile table lift:

Note:
Position engine assembly on table top **A**.

Position transmission on table top **B** .

Structure of table lift.

Position fixture (30) with fixture (40) for engine block on table top **A** at co-ordinates **5/5** and **2/6** (1).

Position fixture (30) with fixture (50) for oil sump on table top **A** at co-ordinates **4/2** and **2/3** (2).

Position fixture (30) with fixture (80) for transmission housing on table top **B** at co-ordinates **9/6**, **7/6** and **8/2** (3).

Position fixture (83 30 2 357 221) for transmission housing on table top **B** at co-ordinates **6/3** (4).

Important!

Removal weight approx. 150 kg to 300 kg.

Check payload of vehicle, empty if necessary.

Load front footwell with sandbags if necessary, approx. 100 kg.

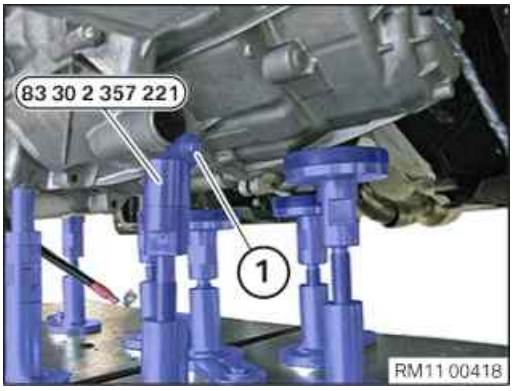
Note safety instructions of table lift.

Vehicles with manual gearbox:

Position table lift under the engine.

Abut all fixtures and screw to the table lift.

cardiagn.com



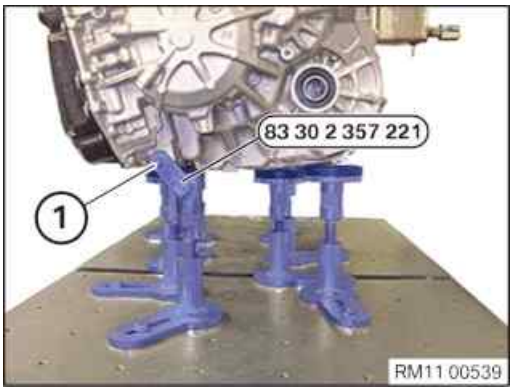
Vehicles with manual gearbox:

Screw fixture (83 30 2 357 221) to the housing for the clutch slave cylinder.

Vehicles with automatic transmission:

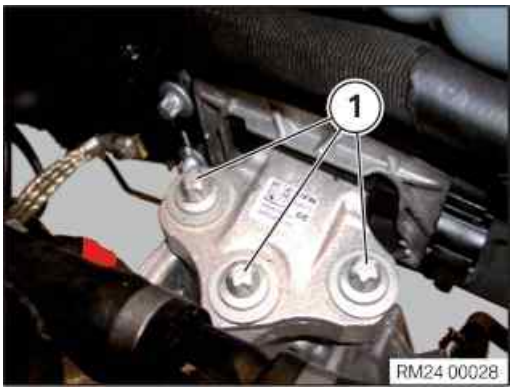
Position table lift under the engine.

Abut all fixtures and screw to the table lift.



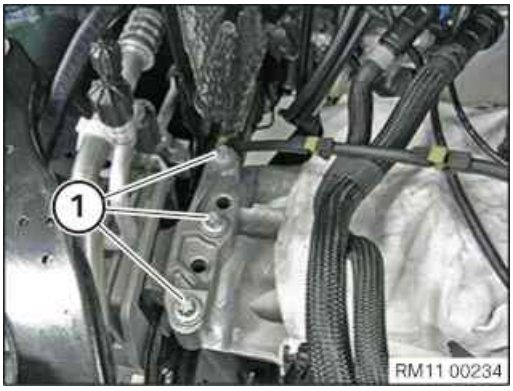
Vehicles with automatic transmission:

Screw fixture (83 30 2 357 221) to the transmission housing with screw (1).

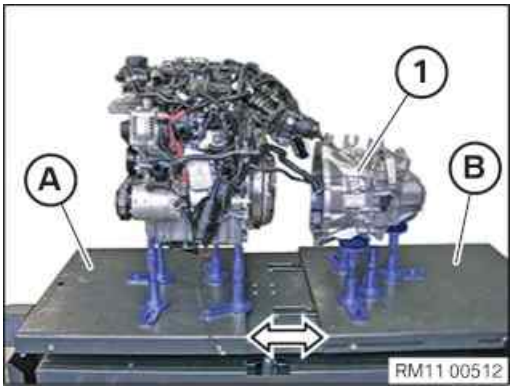


Release screws (1).

cardiagn.com

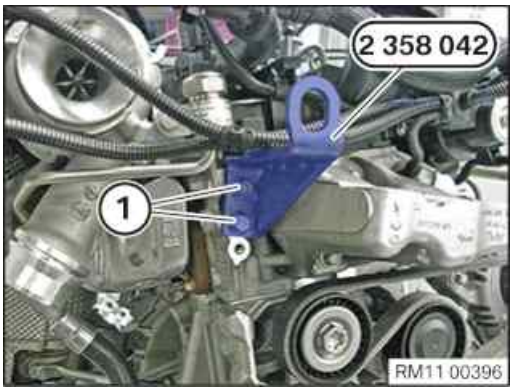


Release screw connection (1) of right engine support.



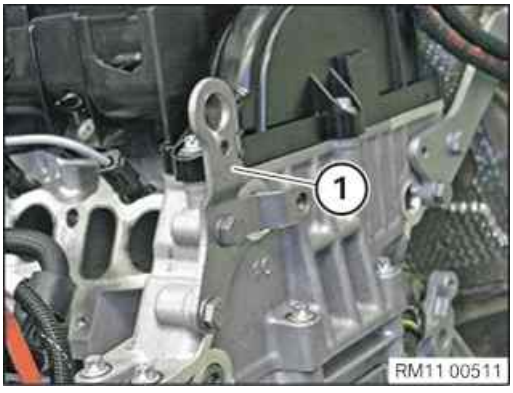
Loosen transmission.

Slide table top **B** in direction of arrow and remove transmission.



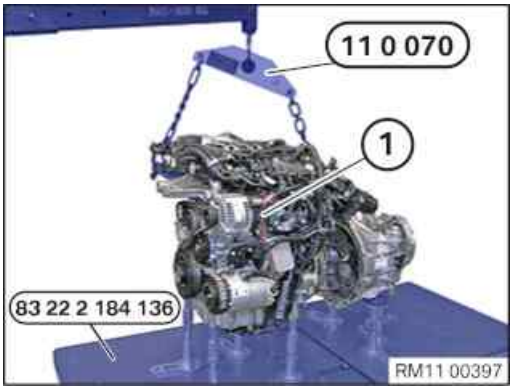
When using a workshop crane, the securing eye 2 358 042 must be screwed on.

Tightening torque: 11 00 4AZ.



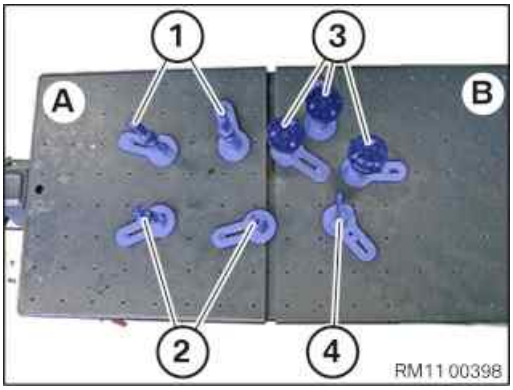
When using a workshop crane, the securing eye (1) provided must be used.

cardiagn.com



Lifting the engine from the table lift is described in the instructions Mount engine on assembly stand.

INSTALLATION:



Vehicles with manual gearbox:

Prepare mobile table lift:

Note:
Position engine assembly on table top **A**.

Position transmission on table top **B** .

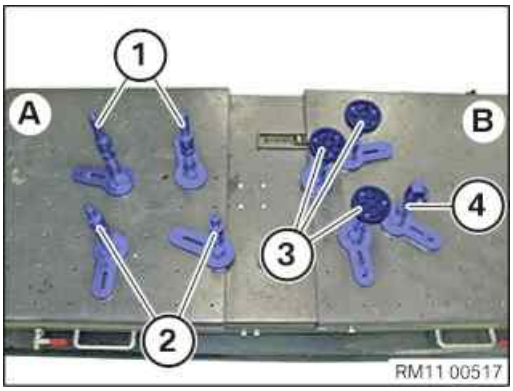
Structure of table lift.

Position fixture (30) with fixture (40) for engine block on table top **A** at co-ordinates **5/6** and **1/7** (1).

Position fixture (30) with fixture (5) for oil sump on table top **A** at co-ordinates **5/3** and **2/3** (2).

Position fixture (30) with fixture (80) for transmission housing on table top **B** at co-ordinates **6/5**, **2/5** and **2/7** (3).

Position fixture (83 30 2 357 221) for transmission housing on table top **B** at co-ordinates **7/3** (4).



Vehicle with automatic transmission:

Prepare mobile table lift:

Note:
Position engine assembly on table top **A**.

Position transmission on table top **B** .

Structure of table lift.

Position fixture (30) with fixture (40) for engine block on table top **A** at co-ordinates **5/5** and **2/6** (1).

Position fixture (30) with fixture (50) for oil sump on table top **A** at co-ordinates **4/2** and **2/3** (2).

Position fixture (30) with fixture (80) for transmission housing on table top **B** at co-ordinates **9/6**, **7/6** and **8/2** (3).

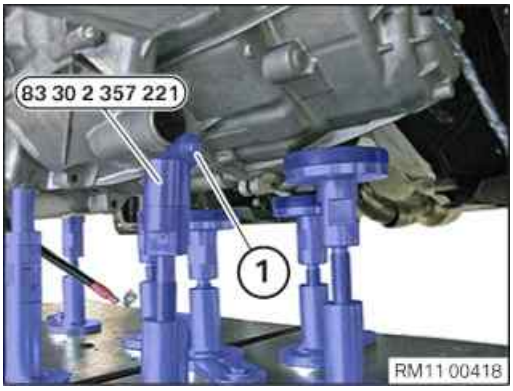
Position fixture (83 30 2 357 221) for transmission housing on table top **B** at co-ordinates **6/3** (4).

cardiagn.com

Vehicles with manual gearbox:

Place engine on table lift.

Lower vehicle.



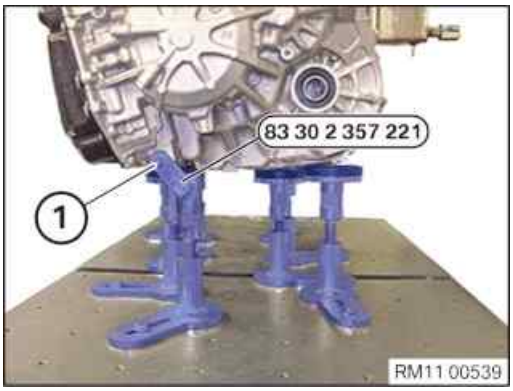
Vehicles with manual gearbox:

Screw fixture (83 30 2 357 221) to the housing for the clutch slave cylinder.

Vehicles with automatic transmission:

Place engine on table lift.

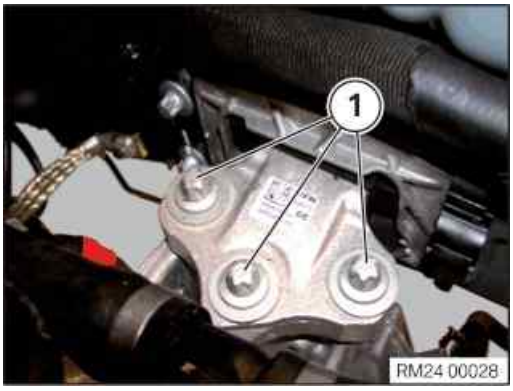
Lower vehicle.



Vehicles with automatic transmission:

Screw fixture (83 30 2 357 221) to the transmission housing with screw (1).

cardiagn.com

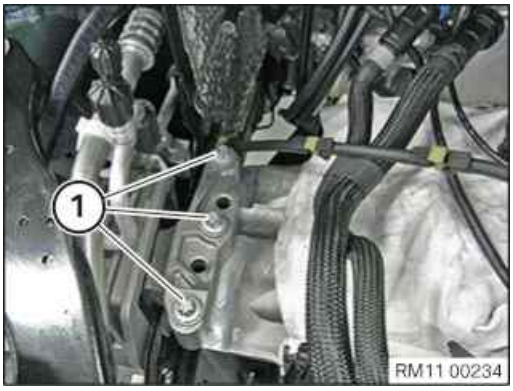


Position table lift with engine and transmission under the vehicle.

Carefully lower the vehicle.

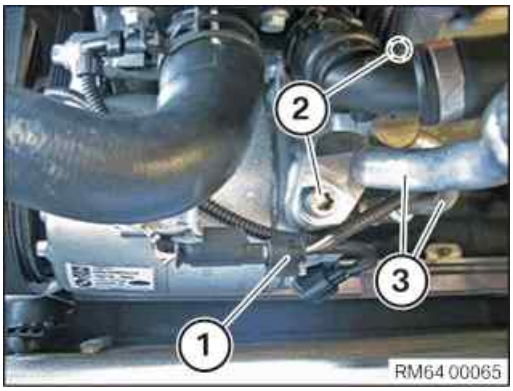
Tighten screws (1) on transmission carrier.

Tightening torque 22 32 1AZ.



Tighten screws (1) on right engine support.

Tightening torque 22 11 1AZ.



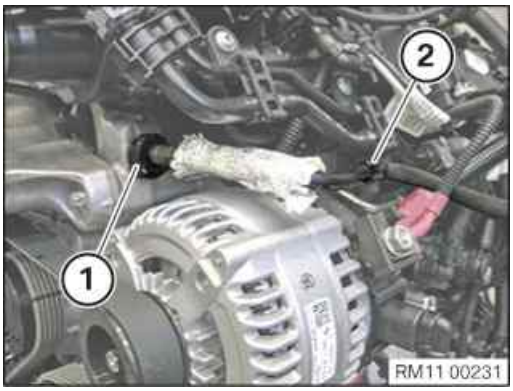
Join refrigerant lines (3) to compressor.

Tighten down screws (2).

Tightening torque 64 53 4AZ.

Installation note:
Replace sealing rings.

Use special tool 00 9 030 to mount sealing rings without damaging them.

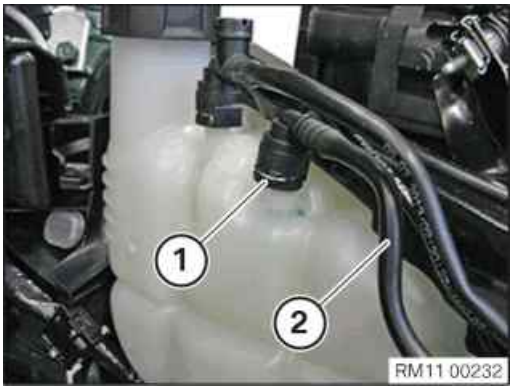


Install coolant line (1) in vehicle

Connect and lock coolant line (1).

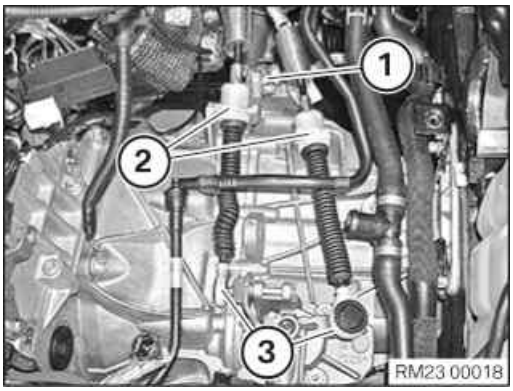
Clip coolant line (1) into holder (2).

cardiagn.com



Connect and lock coolant line (1).

Connect fuel lines (1).

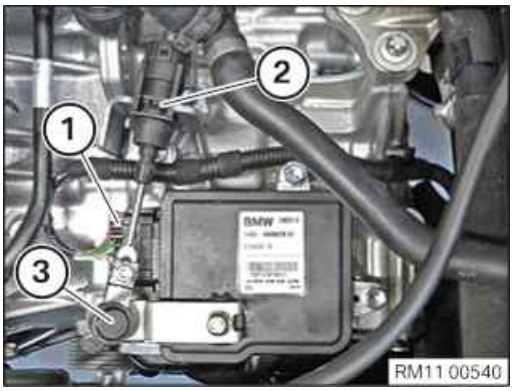


Position ground strap and tighten screw (1).

Vehicles with manual gearbox:

Attach selector lever cables (3) at ball joints.

Fasten limit position/holder (2) with clips.



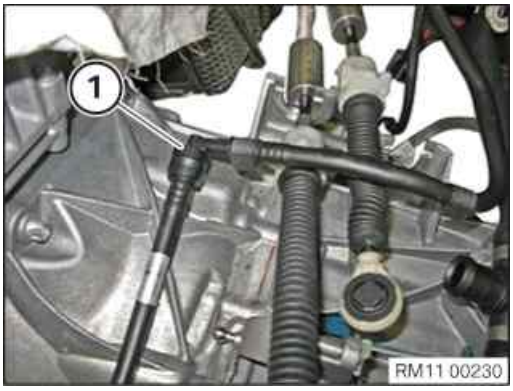
Vehicles with automatic transmission:

Unlock and disconnect the connector (1).

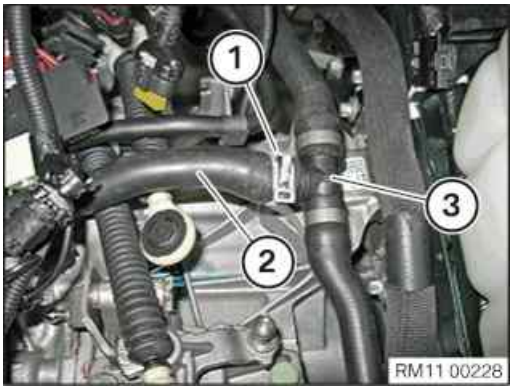
Release clips on limit position/holder (2).

Detach selector lever cable (3) at ball joint.

cardiagn.com

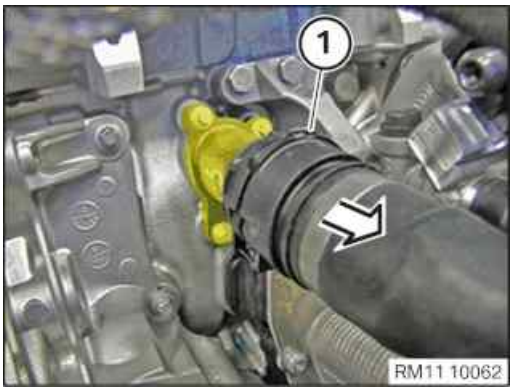


Connect vacuum line (1).

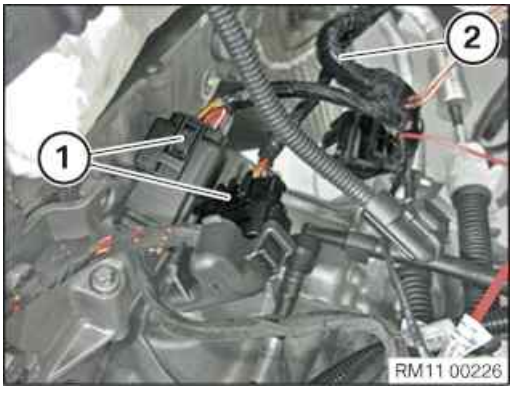


Connect hose (2) to connecting pipe (3).

Fasten clamp (1).



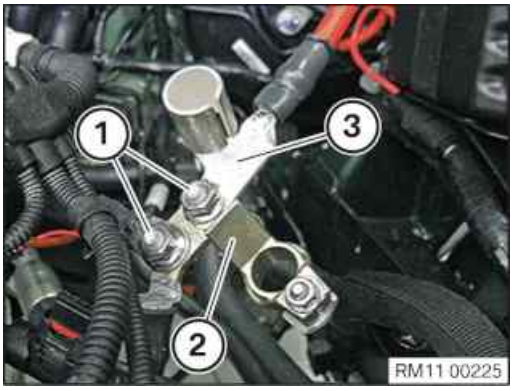
Connect coolant hose (1) to the connecting branch counter to the direction of arrow and lock.



Join wiring harness (2) and engine wiring harness.

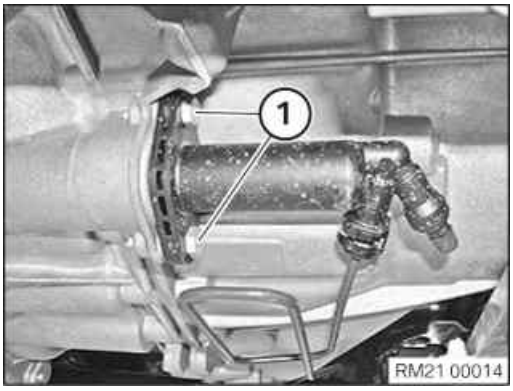
Connect the plug (1).

cardiagn.com



Connect positive battery terminal (2) and positive battery connection point (3).

Tighten down nuts (1).



Vehicles with manual transmission:

Note:
Pressure line of clutch slave cylinder remains connected.

Important!

Slowly relieve tension on clutch slave cylinder otherwise air may be drawn in through sealing sleeve.

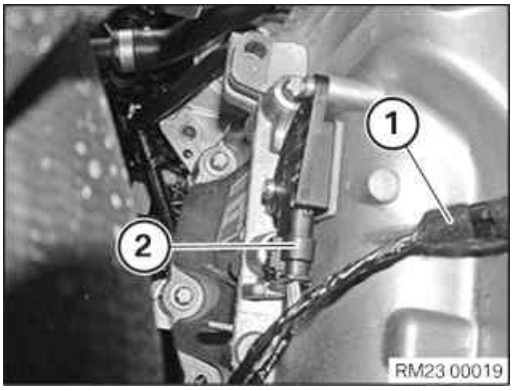
If possible, do not deflect push rod of clutch slave cylinder.

A deflection of the push rod caused by removal will cause easy escape of fluid. This escape of fluid does not mean that the clutch slave cylinder is damaged.

Exchange is therefore not necessary.

Carefully insert clutch slave cylinder and tighten nuts (2).

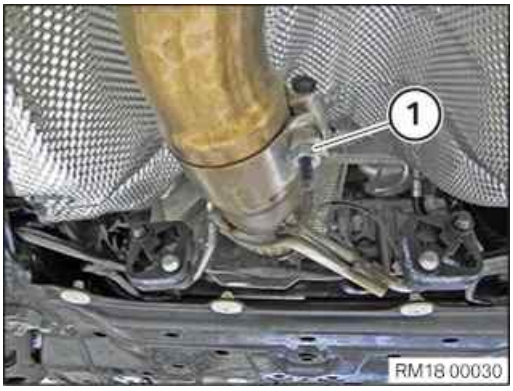
Tightening torque 21 52 1AZ.



Manual gearbox only:

Connect connector (2) of neutral gear sensor.

Fasten cable (1) with holder on transmission.



Slide exhaust system onto diesel particulate filter.

Tighten clamp (1).

Tightening torque 18 20 1AZ.

cardiagn.com

Required follow-up work:

- Install radiator.
- Install charge air cooler.
- Install both output shafts.
- Install starter.
- Install complete front axle.
- Top up engine oil.
- Install control unit with equipment holder.
- Install battery.
- Install acoustic cover.

Check cooling system for tightness.

cardiagn.com

00 Safety information for working on vehicles with automatic engine start-stop function (MSA)

Warning!

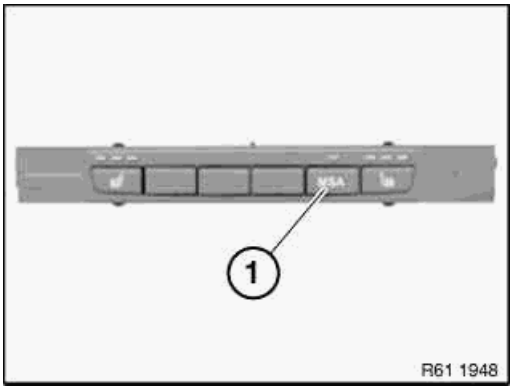
If the engine hood/bonnet contact is pulled upwards (workshop mode), the information "switch closed" is output. The automatic engine start-stop function is active.

An automatic engine start is possible.

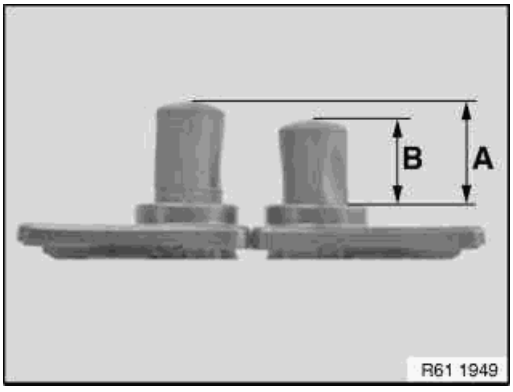
Observe safety precautions when working on MSA vehicles.

Before carrying out practical work on the engine, always ensure that the MSA functionality is deactivated so as to prevent automatic engine starting while work is being carried out in the engine compartment.

MSA function is deactivated by:



- Deactivate MSA by means of button (1) in passenger compartment
- Open seat belt buckle and driver's door



- Open engine bonnet/hood and ensure that engine hood/bonnet contact is not in workshop mode
  - Workshop mode

    A = 10 mm
  - Basic setting (engine hood/bonnet open)

    B = 7 mm

  To make sure that the engine hood/bonnet contact is at the basic setting, if necessary press the hood/bonnet contact up to the limit position before starting work and slowly release.

When working with diagnosis tools:

- Observe instructions in diagnosis tool

cardiagn.com

Note:
For further information on automatic engine start-stop function (MSA):

- Refer to the Service Information (bulletin) (for manual transmissions) Service Information (bulletin) 61 01 07 335
- Refer to the Service Information (bulletin) (for automatic transmissions or twin-clutch gearboxes) Service Information (bulletin) 61 01 10 629

cardiagn.com

00 Safety instructions for handling oil

Warning!

Danger of poisoning if oil is ingested/absorbed through the skin!

Risk of injury if oil comes into contact with eyes and skin!

Recycling:

Observe country-specific waste disposal regulations.

Measures if oil is unintentionally released:

- Personal precautionary measures: Danger of slipping! Keep non-involved persons away from the work area. Wear personal protective clothing/equipment.
- Environmental protection measures: Prevent oil from draining into drain channels, sewerage systems, pits, cellars, water and the ground.
- Limiting spread: Use oil blocks to prevent the surface spread of oil.
- Cleaning procedure: Bind and dispose of escaped oil with nonflammable absorbents.

  Note: Do not flush oil away with water or aqueous cleaning agents.

cardiagn.com

11 00 670 Securing engine in installation position

Special tools required:

- 2 358 042
- 00 6 100
- 00 6 130
- 2 365 070
- 11 0 000
- 2 357 269
- 00 0 490

Warning!

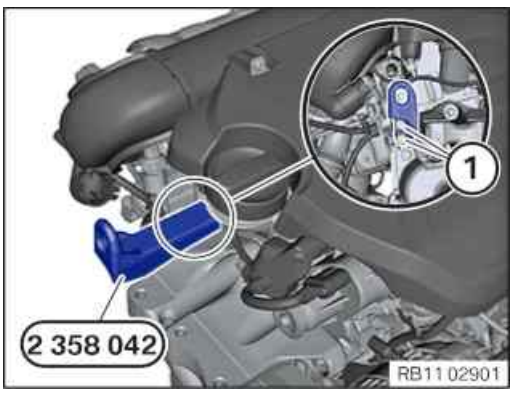
Danger of injury!

Observe following instructions relating to special tool:

1. Prior to each use, check the special tools for defects, modifications and operational reliability.
2. Damaged/modified special tools must not be used!
3. No changes or modifications may be made to the special tools!
4. Keep special tools dry, clean and free of grease.

Necessary preliminary tasks:

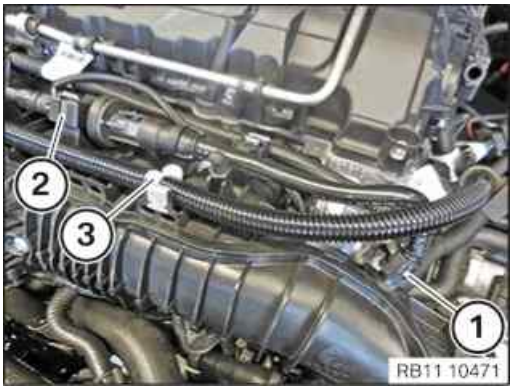
- Remove upper bulkhead cover



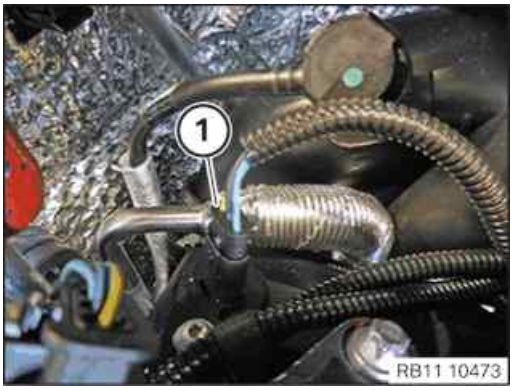
Only for B37 and B38engines:

Align special tool 2 358 042 on the engine and secure with screws (1).

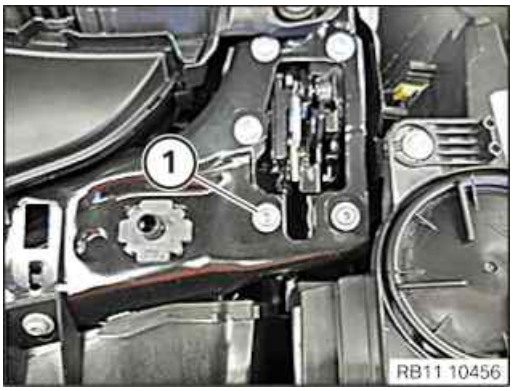
cardiagn.com



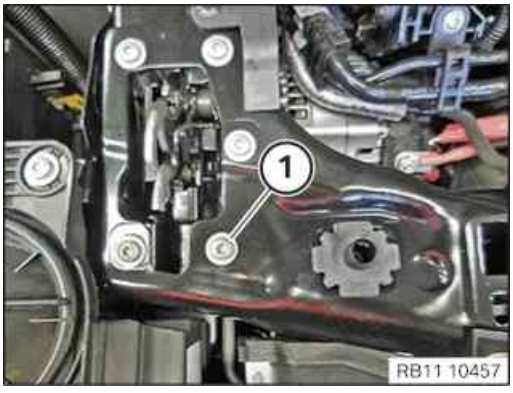
Unlock and disconnect line (1).
Pull off line from holder (2).
Release cable (3) from holder.



Unlock connector (1) and pull off.

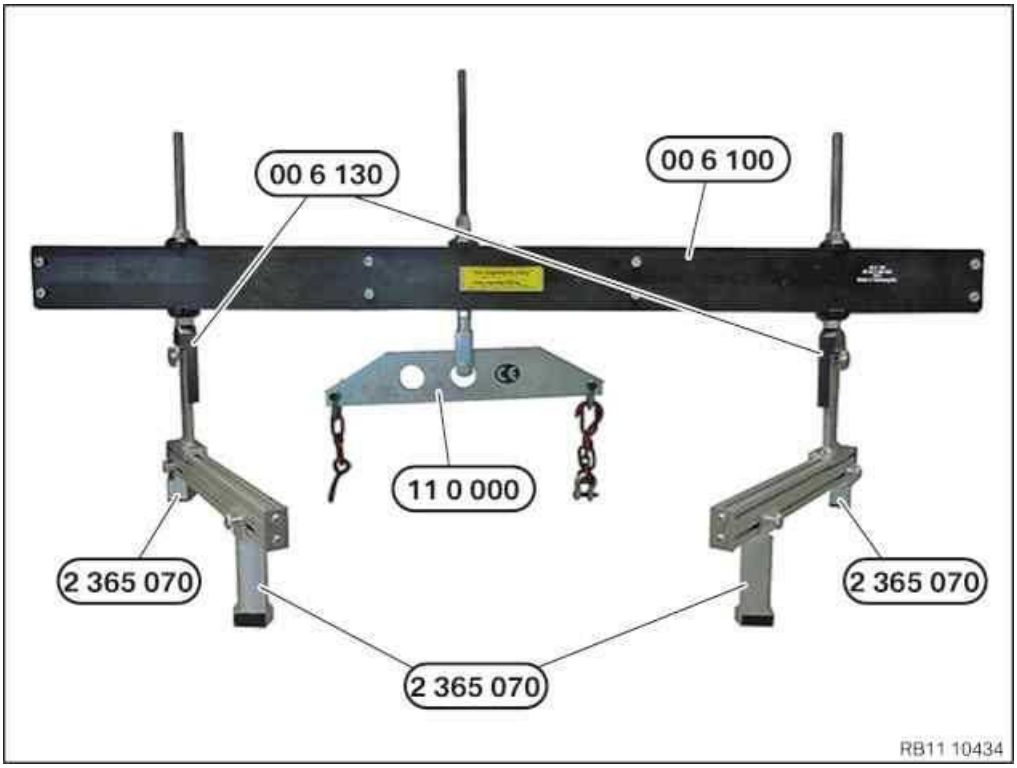


Release screw (1) from left engine compartment lock.



Release screw (1) from right engine compartment lock.

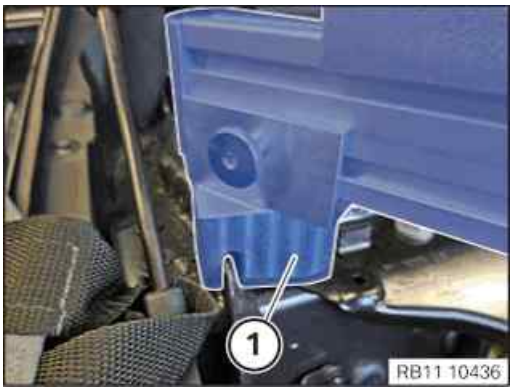
cardiagn.com



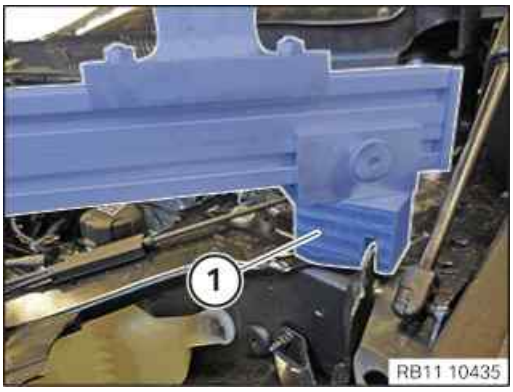
Remount engine bridges 00 6 100 with special tool 00 6 130 , 2 365 070 and 11 0 000 on the vehicle.

With the help of an assistant, fit the entire cross-member 00 6 100 onto the vehicle.

.

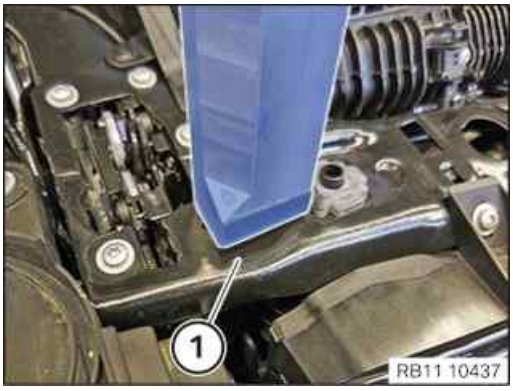


(1) = rear right support point.

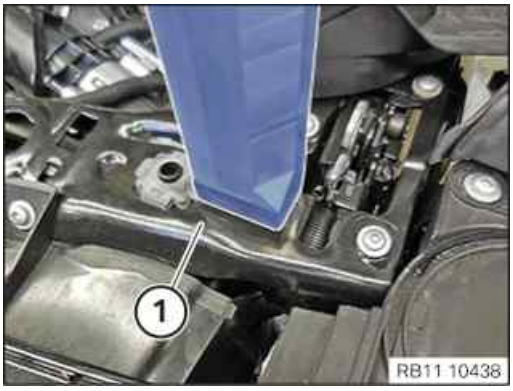


(1) = rear left support point.

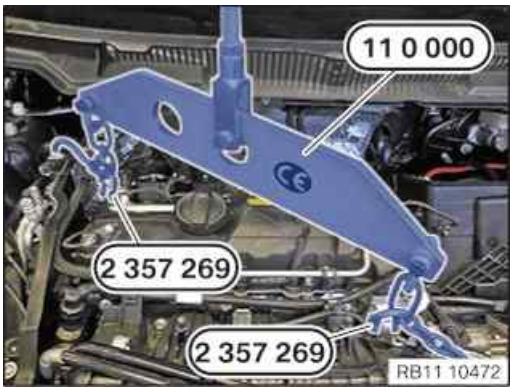
cardiagn.com



(1) = front right support point.



(1) = front left support point.



After mounting the cross-member,

Attach special tool 2 357 269 to the chains and engine mounting lugs.

cardiagn.com

Screw in shackle screws (2 and 3).

Slightly pretension the spindle (1) of the engine support beam.

Warning!
Danger of injury!

Tighten down all adjusting screws, knurled screws and nuts on cross-member 00 6 100 and on special tool 00 0 490 .

Attention!

Avoid a change of engine position in the transverse or longitudinal direction!

Always make sure there is sufficient clearance between the engine (or its add-on parts) and the body.

cardiagn.com

11 27 020 Removing and installing/replacing counterbalance shaft (B37C)

Special tools required:

- 2 288 942
- 11 5 370
- 2 288 943

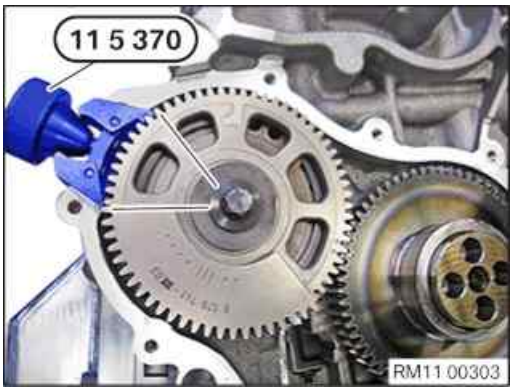
Necessary preliminary tasks:

- Remove engine with gearbox.
- Remove transmission.
- Mount engine on assembly stand.
- Remove cylinder head.
- Remove flywheel.
- Remove oil sump.
- Remove rear timing case cover.
- Remove vibration damper.
- Remove belt tensioner.
- Remove front, lower timing case cover.

Removal:

Use special tool 2 288 942 to fix counterbalance shaft in TDC position of cylinder 1.

Screw special tool 2 288 942 to crankcase (1).



Important!

Ring gear of the counterbalance shaft gear has two sections (fixed gearwheel and free gearwheel).

Ring gear is preloaded and must be blocked before removal.

If the gear must be installed again, the ring gear must remain blocked with special tool 11 5 370 until installation.

If a new gear is being installed, the ring gear must be blocked using the factory fixation until installation.

Block the ring gear of the gear in the position shown using special tool 11 5 370 .

cardiagn.com

Note:
When counterbalance shaft is locked, marks on crankshaft and gear of counterbalance shaft must align.

Release screw (1).

Loosen screw connection (1) on special tool 2 288 942 .

Remove special tool 2 288 942 .

Screw special tool 2 288 943 into the counterbalance shaft as far as the limit position.

Important!

If the gear must be installed again, the ring gear must remain blocked with special tool 11 5 370 until installation.

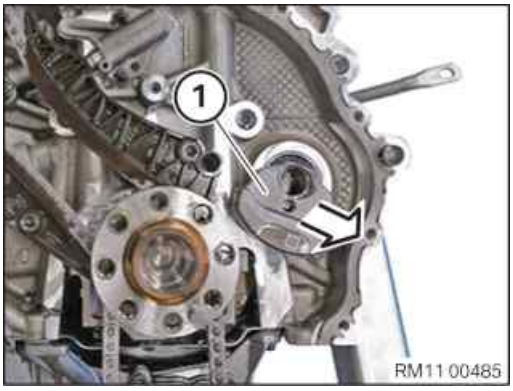
If a new gear is being installed, the ring gear must be blocked using the factory fixation until installation.

cardiagn.com

Separate the counterbalance shaft from gear (1) with hammer blows on special tool 2 288 943 .

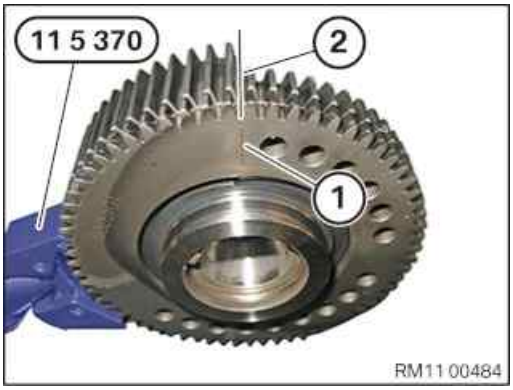
Remove special tool 2 288 943 .

Note:
If necessary, secure the counterbalance shaft against falling.



Remove counterbalance shaft (1) in direction of arrow.*Note:*
If necessary, secure gear of the counterbalance shaft against falling.

Remove gear of the counterbalance shaft in direction of arrow.*Note:*
Figure B38.



Important!

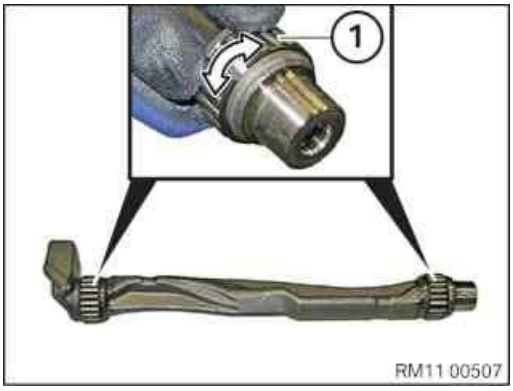
If the gear must be installed again, the ring gear must remain blocked with special tool 11 5 370 until installation.

Installation:

cardiagn.com

Important!

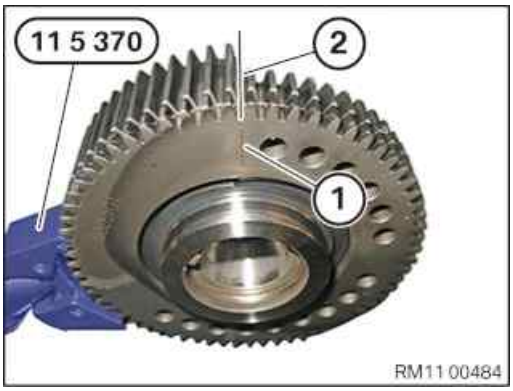
If a new gear is being installed, the ring gear must be blocked using the factory fixation until installation.



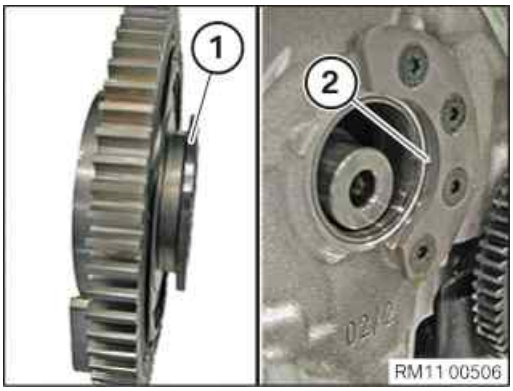
Check needle bearing (1) of the counterbalance shaft.

If necessary, pull needle bearing (1) off the counterbalance shaft and replace it.

Note:
Picture shows B38



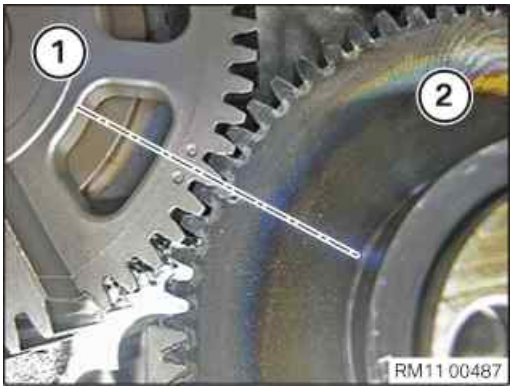
Note:
With correct preload, the mark (1) on the free gearwheel and the section (2) of the fixed gearwheel are aligned.



Note:
Gear is guided over guide ring (1) in crankcase (2).

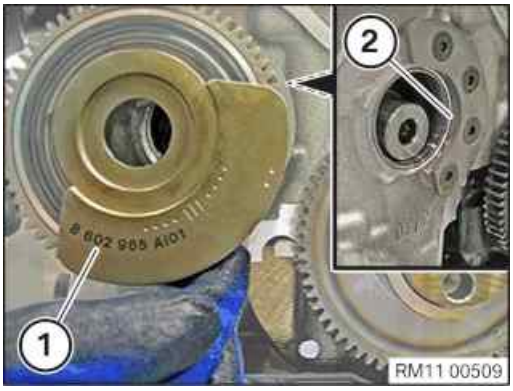
Figure B38.

cardiagn.com



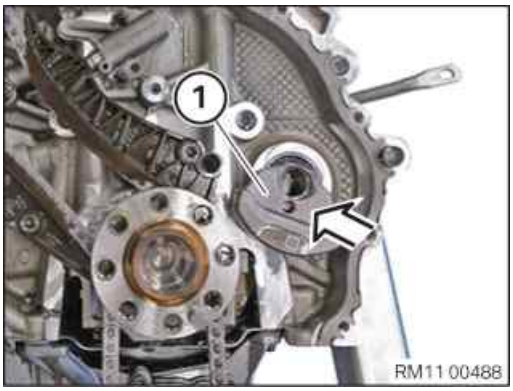
Important!

The marks on the gear (1) of the counterbalance shaft and the crankshaft (2) must align.

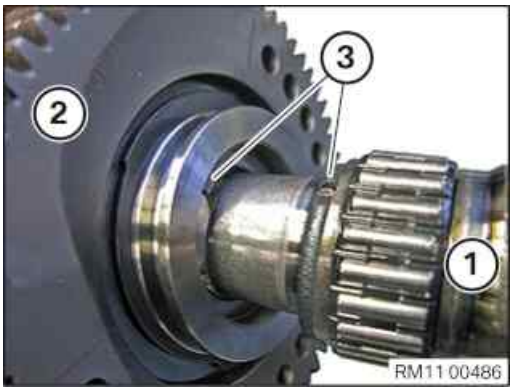


Insert gear (1) of the counterbalance shaft into the guide of the crankcase.*Note:*
Secure counterbalance shaft gear (1) against falling if necessary.

Figure B38.



Install counterbalance shaft (1) in the crankcase in direction of arrow.



Important!

Counterbalance shaft (1) can only be installed in the gear (2) in one position.

Pay attention to encoding (3).

Note:
For purposes of clarity, picture shows component removed.

cardiagn.com

Bring counterbalance shaft (1) into contact in gear (2).

Note:
Parts: Replace screw (1).

Insert screw (1) and tighten until it makes contact.

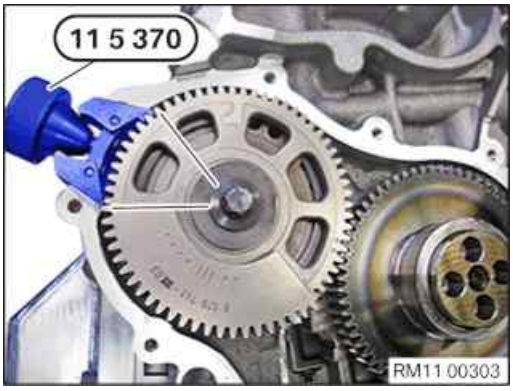
Use special tool 2 288 942 to fix counterbalance shaft in TDC position of cylinder 1.

Screw special tool 2 288 942 to crankcase (1).

Tighten screw (1).

Tightening torque: 11 27 1AZ.

cardiagn.com



Remove special tool 11 5 370 .

With new gear:

Remove factory retainer.

Loosen screw connection (1) on special tool 2 288 942 .

Remove special tool 2 288 942 .

Required follow-up work:

- Install front lower timing case cover.
- Install belt tensioner.
- Install vibration damper.
- Install rear timing case cover.
- Install oil sump.
- Install flywheel.
- Install cylinder head.
- Remove engine from assembly stand and place on table lift.
- Attach transmission.
- Install engine with transmission.

cardiagn.com

11 12 729 Checking cylinder head for watertightness

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.

For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

TECHNICAL INFORMATION

Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Maintain conditions of absolute cleanliness.

cardiagn.com

1 – Remove vehicle battery

WARNING

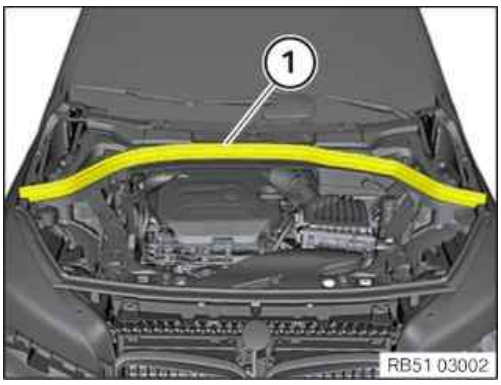
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

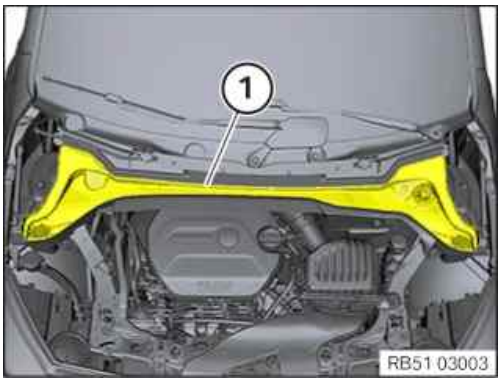
- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

TECHNICAL INFORMATION

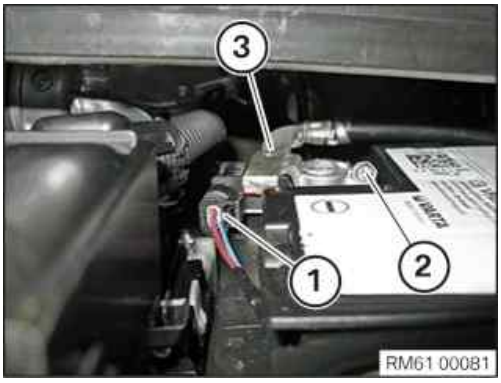
For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



- pull off gasket (1) upwards.

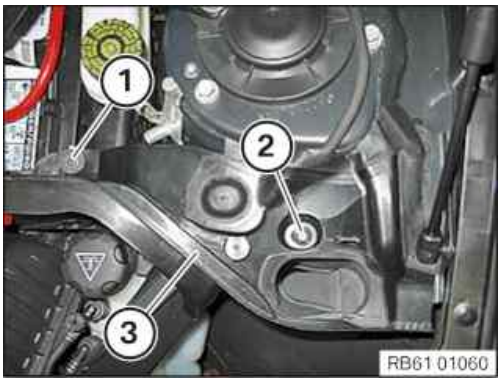


- Remove the cowl panel cover (1) to the top.

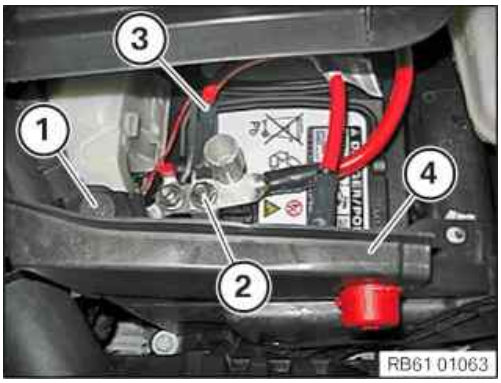


- Unlock and disconnect connector (1).
- Slacken nut (2).
- Disconnect the negative battery terminal (3).

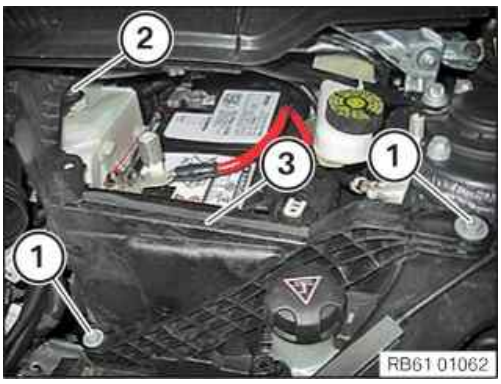
cardiagn.com



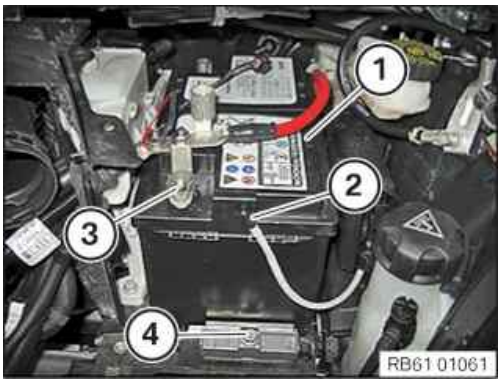
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



- Loosen screw (1).
- Unscrew the nut (2) and remove the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten nuts (2) on the positive terminal hand-tight.



- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.



- Pull off the vent hose (2).
- Slacken the nut (3) on the positive terminal and remove the positive terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

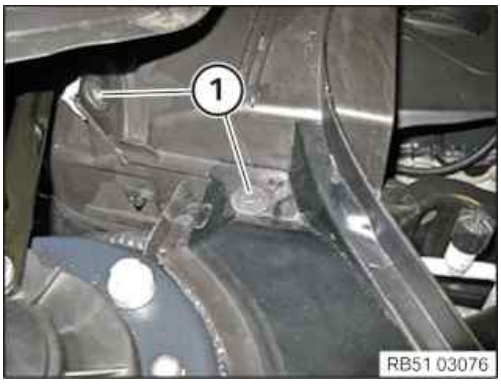
- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

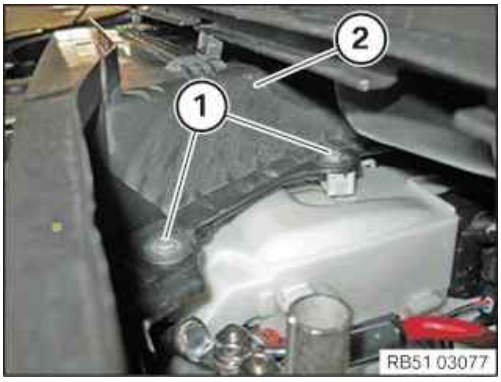
2 – Removing the upper bulkhead cover

cardiagn.com

- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

3 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

▶ **Remove the wiper arm**

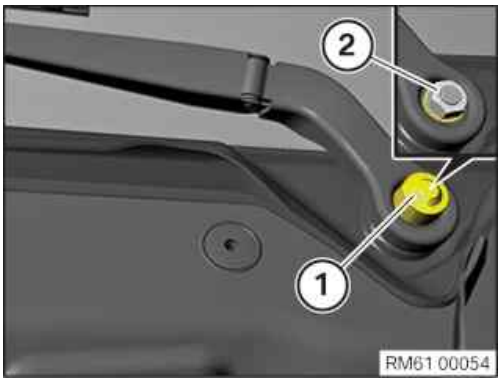
RISK OF DAMAGE

Damage to wiper console

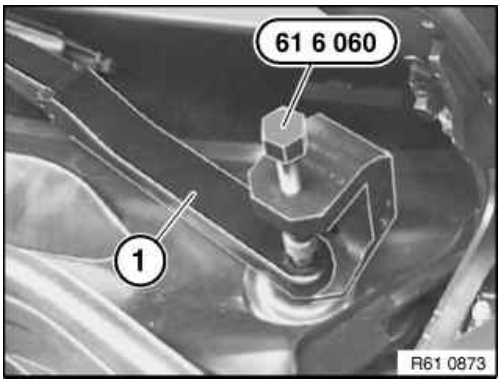
While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.

cardiagn.com



- Remove the protective cap (1).
- Loosen nut (2).



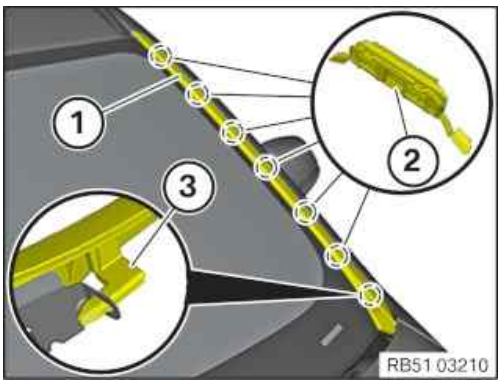
- Pull off the wiper arm (1) using special tool .

4 – Remove the gutter strip on the windscreen on the left and right

NOTICE

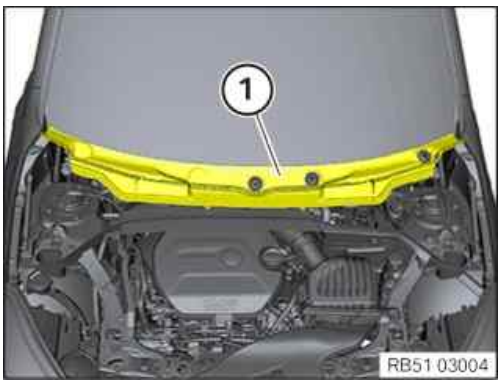
Description is for left component only. Procedure on the right side is identical.

▶ Remove the gutter strip on the windscreen



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

5 – Remove the rear cowl panel cover



- Disengage and guide out the rear cowl panel cover (1) towards the top.

6 – Removing the acoustic cover

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

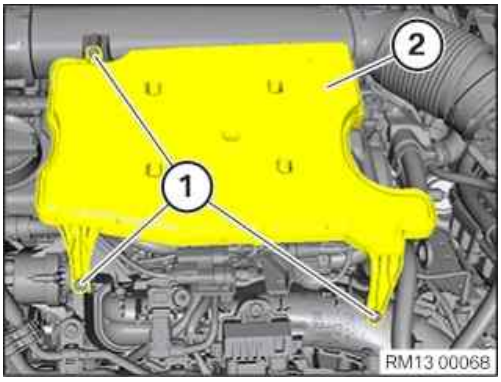
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

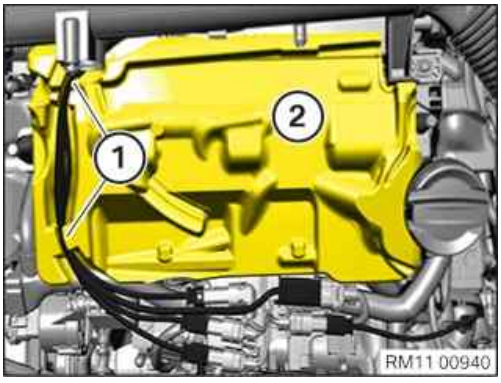
- Unclip the acoustic cover from the marked areas towards the top.

7 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

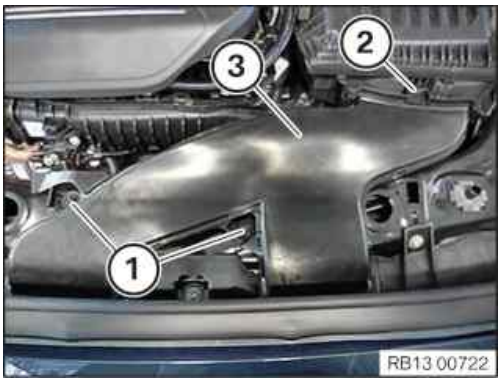
8 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

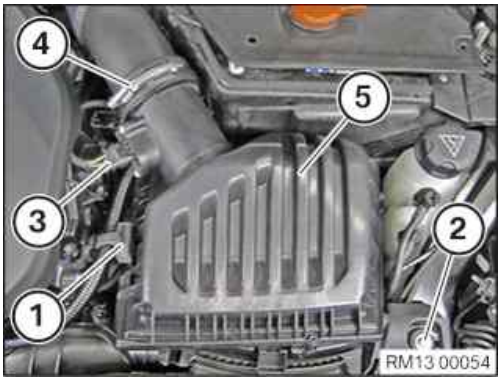
9 – Remove the intake neck for intake silencer housing

cardiagn.com



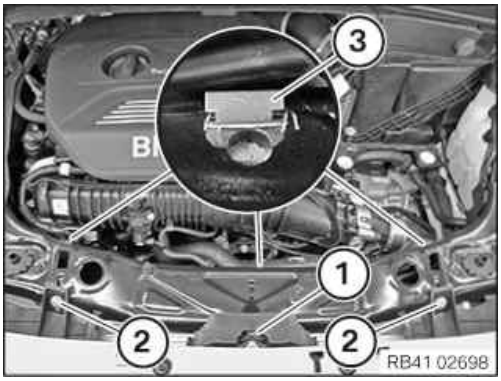
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

10 – Removing intake silencer housing

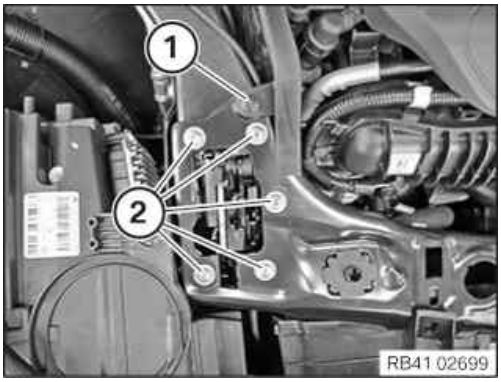


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

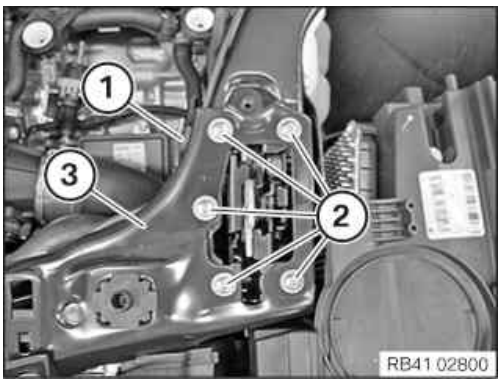
11 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



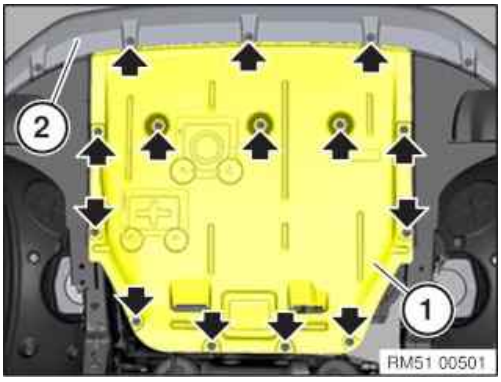
- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

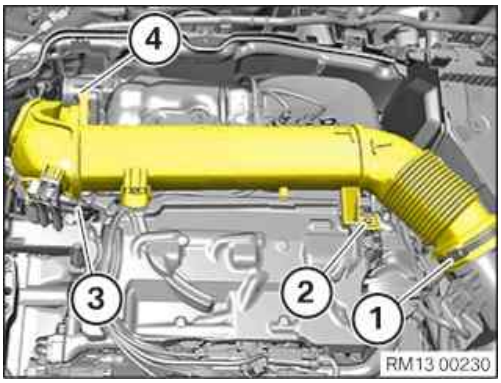
cardiagn.com

12 – Removing the front underbody protection

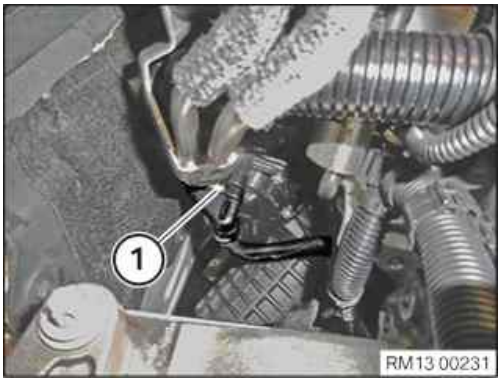


- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

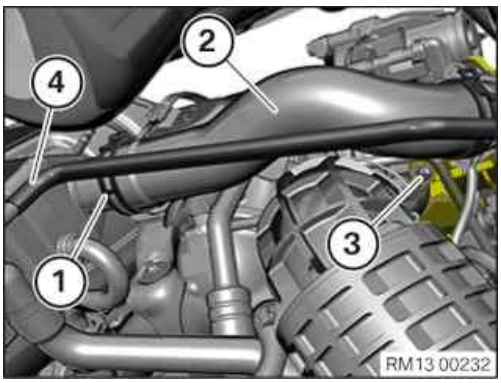
13 – Removing clean air pipe



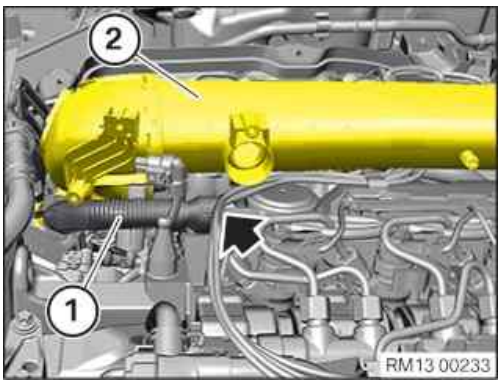
- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).



- Unlock and loosen connector (1).

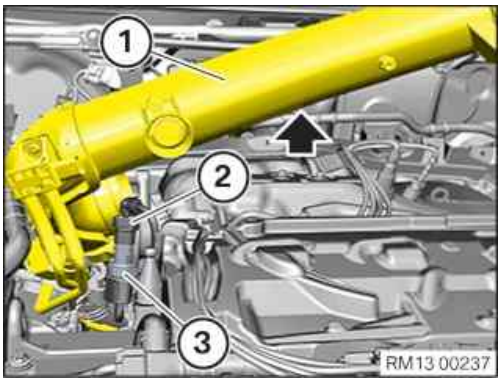


- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

cardiagn.com



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

14 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

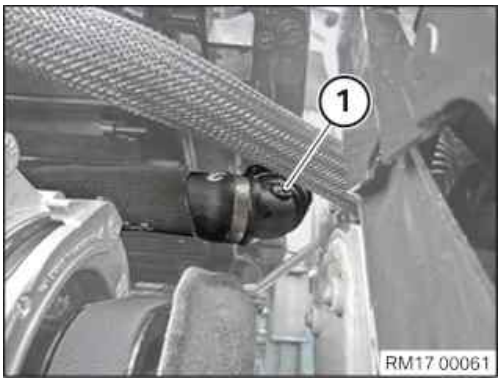
In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

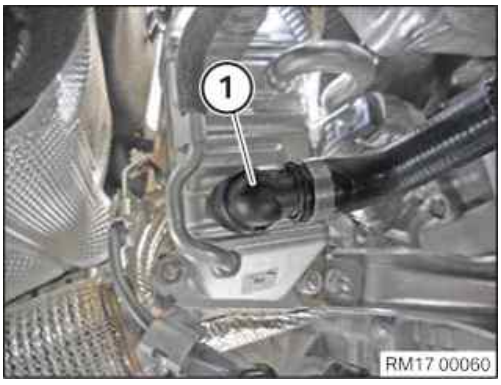
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

cardiagn.com



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

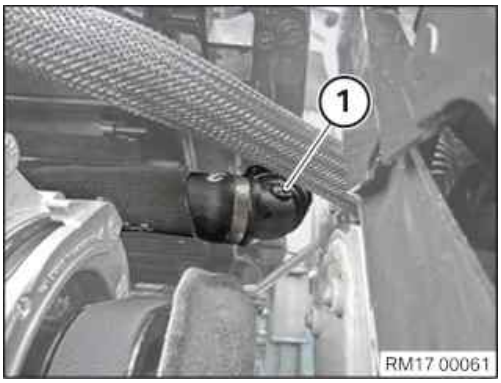


- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

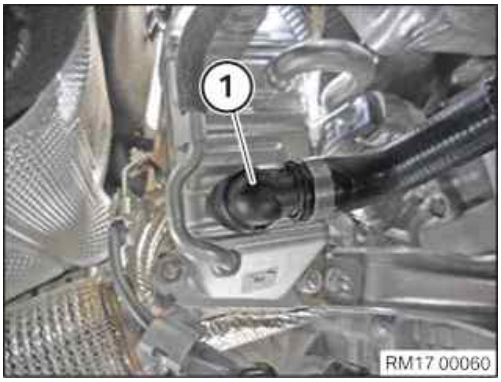
15 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

16 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

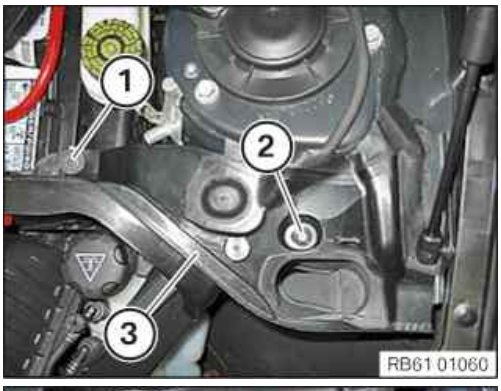
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

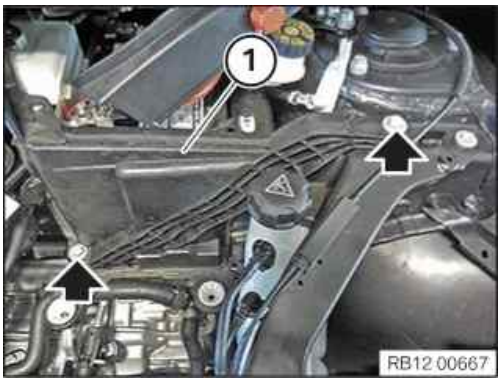
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



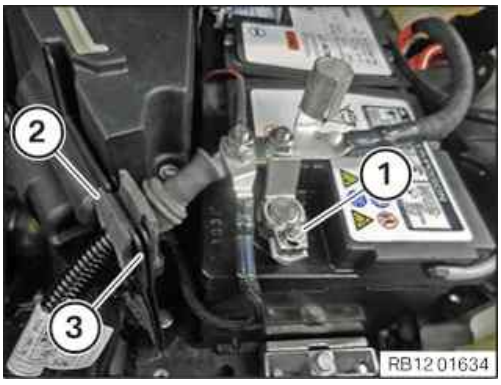
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.

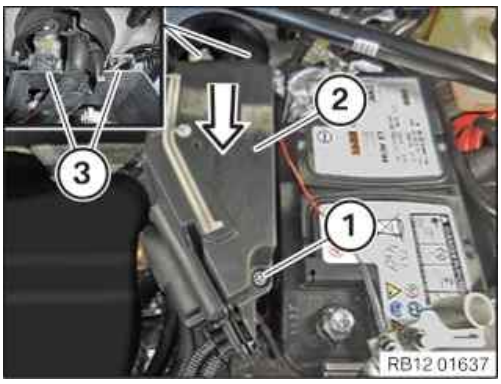
cardiagn.com



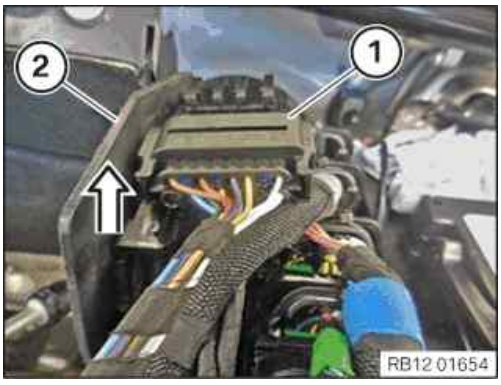
- Remove screws (arrows).
- Guide out tension strut (1) and remove.



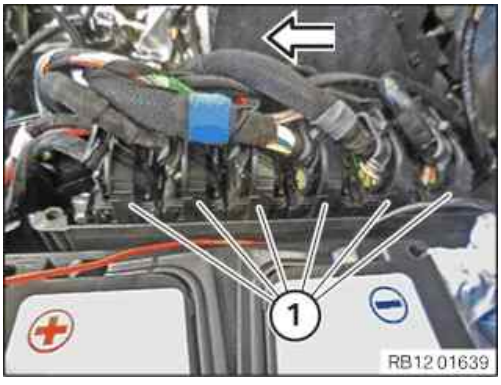
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

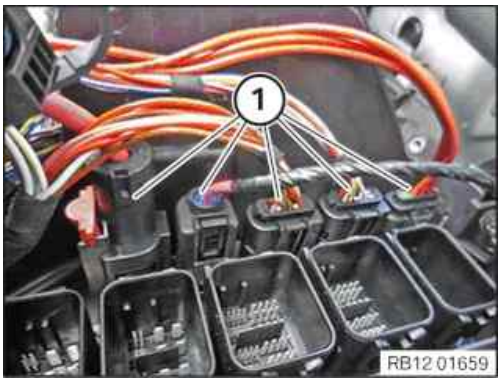


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

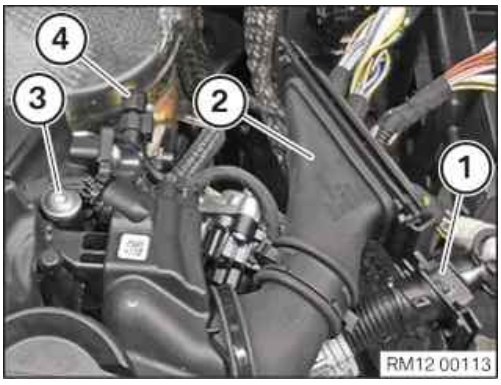


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

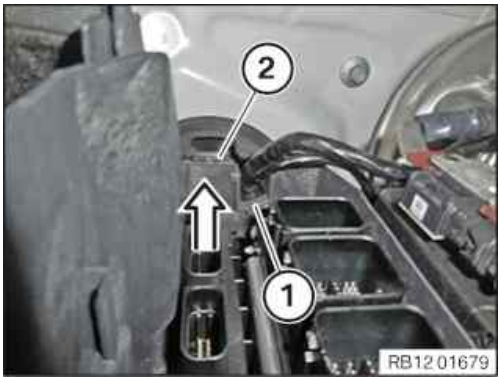
cardiagn.com



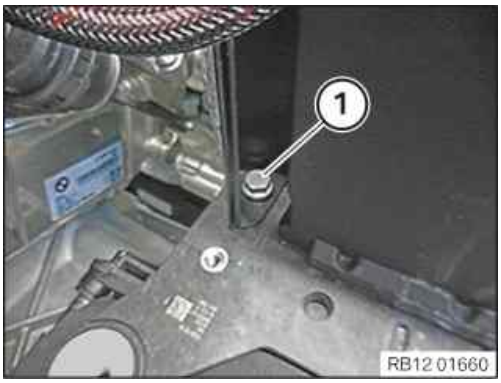
- Unlock and loosen connector (1).



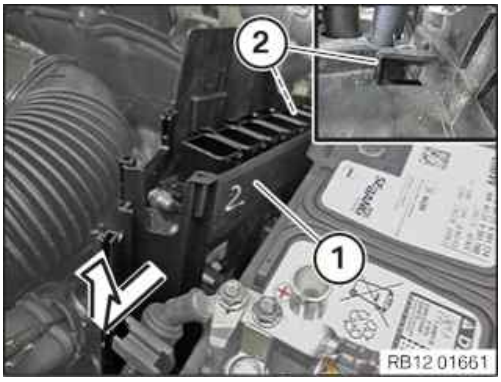
- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.



- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



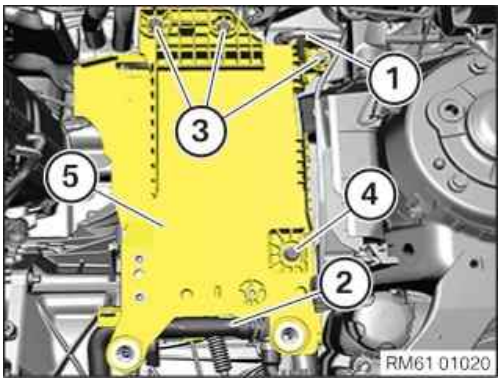
- Loosen screw (1).



- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

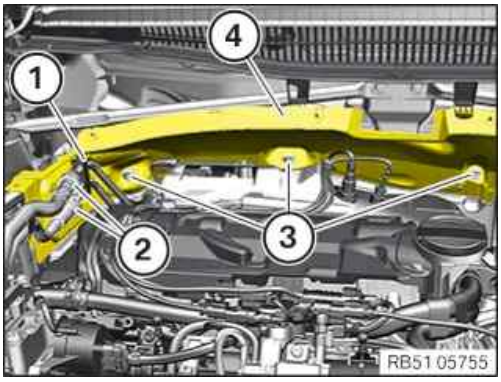
17 – Remove battery holder

cardiagn.com



- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

18 – Remove the rear bulkhead upper part



- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

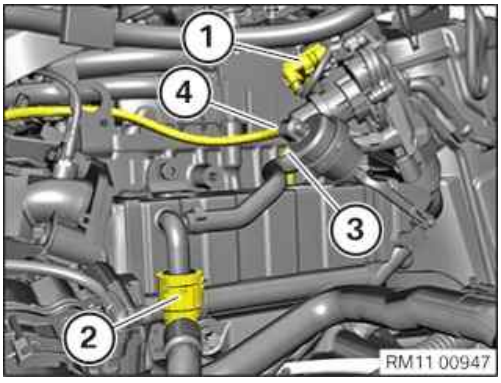
19 – Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

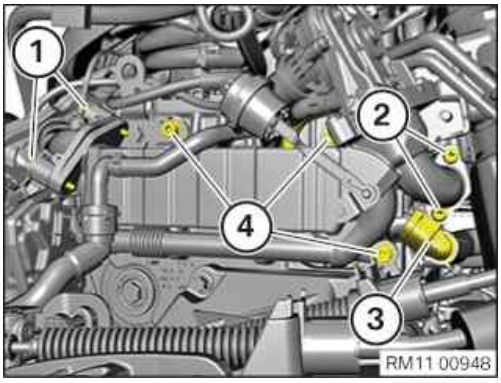
- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

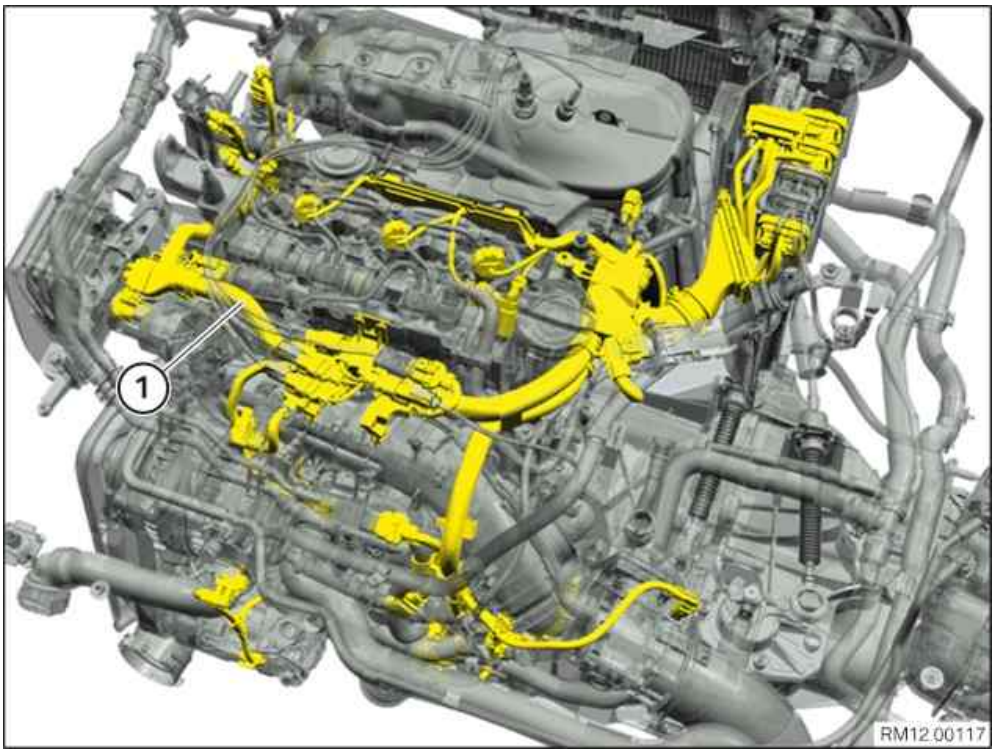


- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

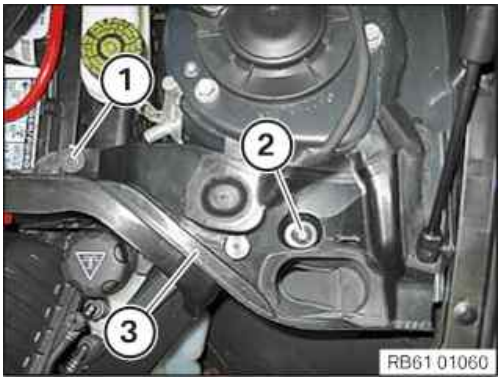
cardiagn.com

20 – Releasing the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine

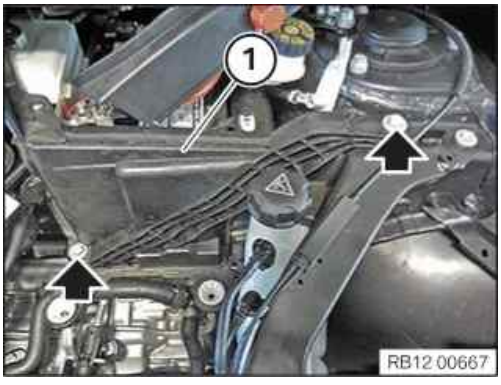


1 Wiring harness section for the engine



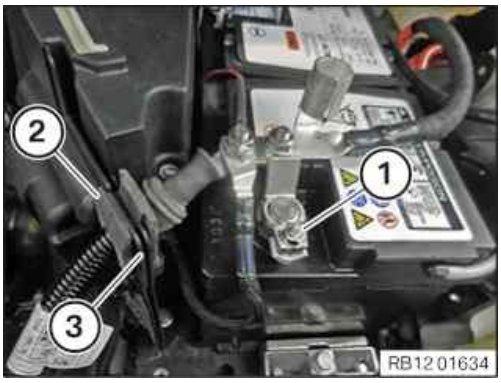
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.

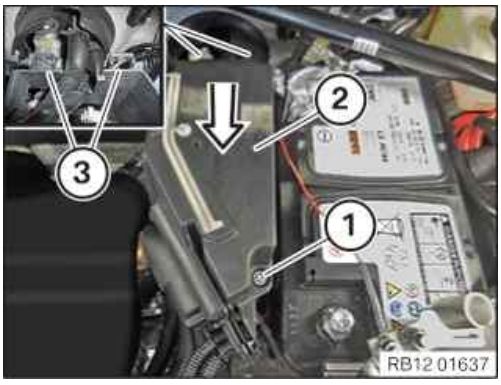


- Remove screws (arrows).
- Guide out tension strut (1) and remove.

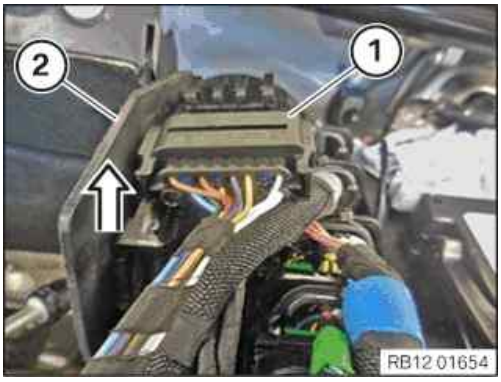
cardiagn.com



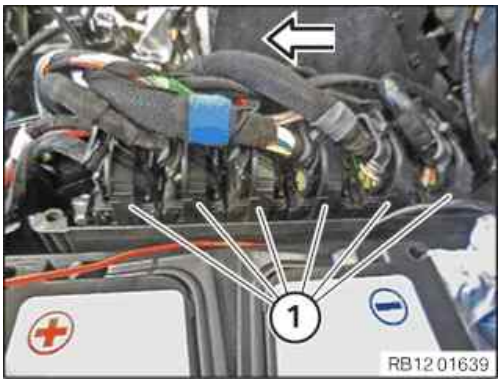
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



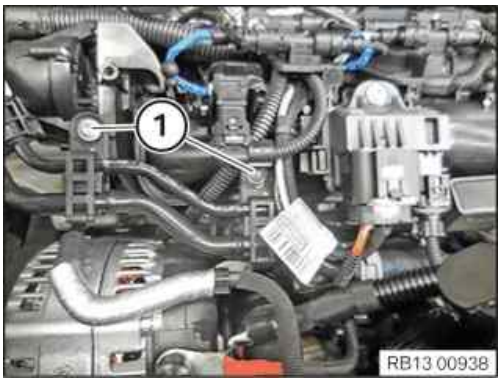
- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).



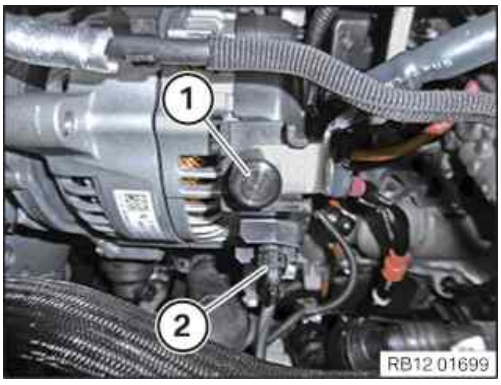
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).

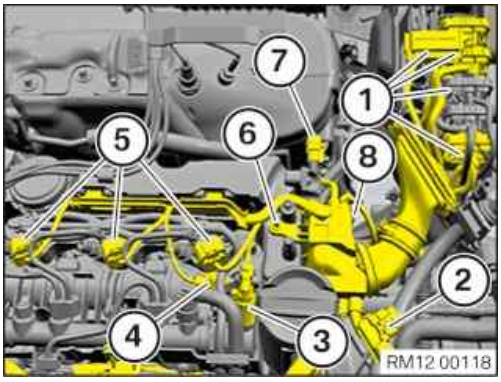
cardiagn.com



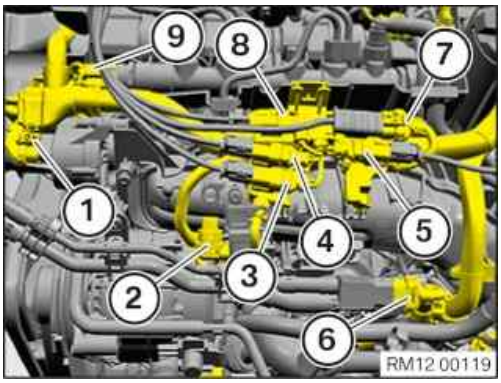
- Loosen screws (1).



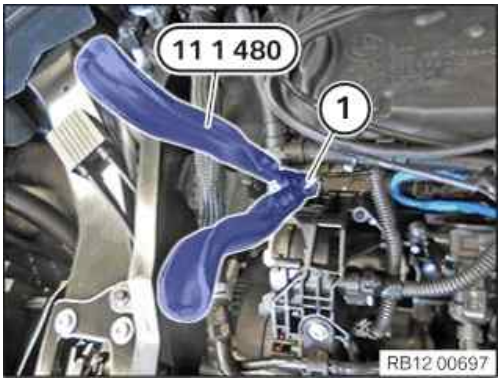
- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock connector (3) and pull off from fuel pressure regulator.
- Unlock connector (4) and disconnect from camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock connector (7) and disconnect from differential pressure sensor.

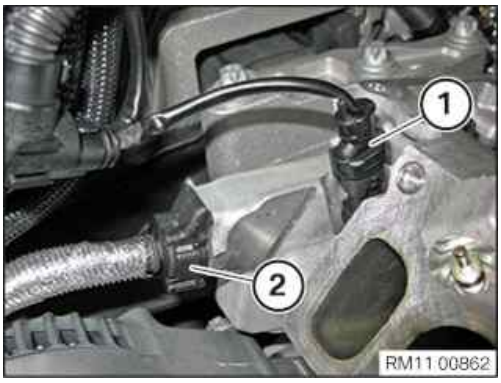


- Unlock connector (1) and pull it off the servomotor for the swirl flap.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock connector (3) and pull off from exhaust temperature sensor downstream from the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock connector (6) and pull off from the fuel pressure and temperature sensor.
- Unlock and disconnect the connector (7) from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.



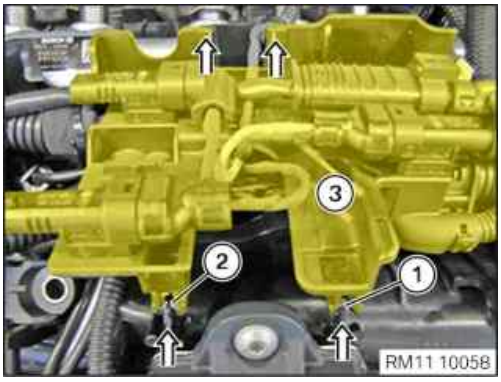
- Unlock connector (1) at all glow elements using special tool **0 490 796 (11 1 480)** and release.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

cardiagn.com



- Unlock and loosen connector (1).
- Unlock the clamp of the coolant line (2) and release the coolant line.

21 – Removing the cable clips from the intake plenum



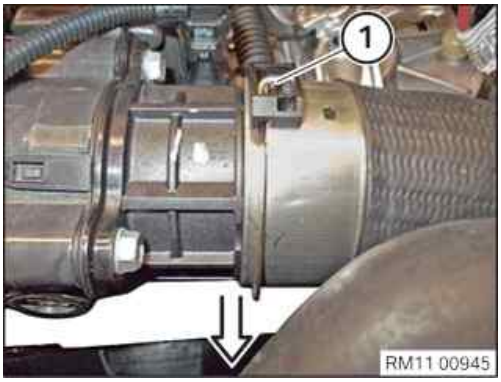
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.

22 – Removing the intake plenum

TECHNICAL INFORMATION

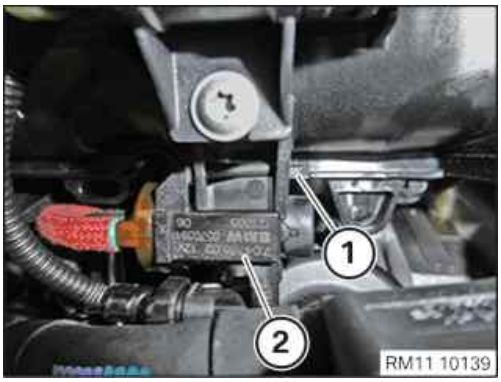
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).

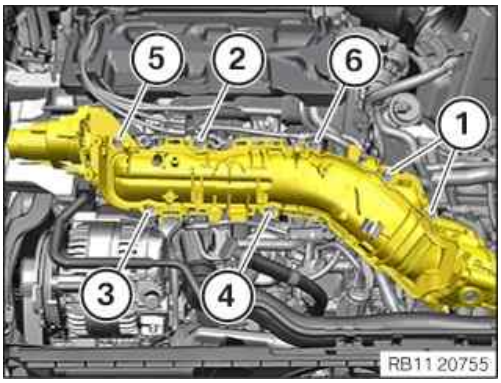


- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

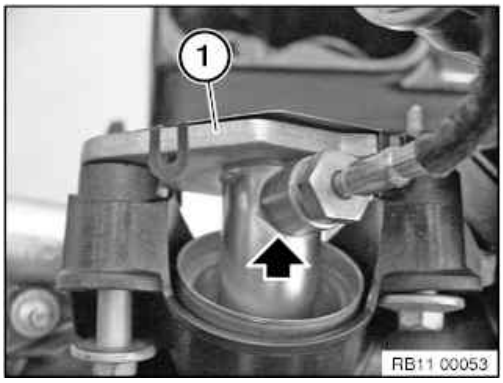
cardiagn.com



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

23 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

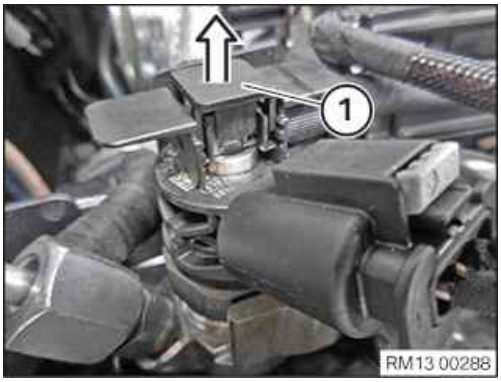
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

24 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

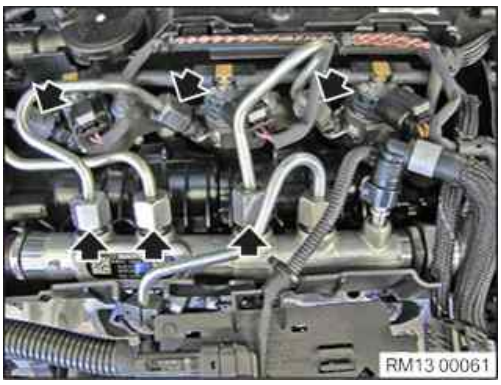
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

25 – Remove the high pressure line between the high pressure pump and the rail

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

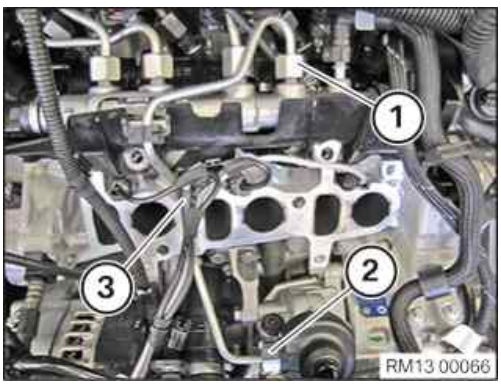
- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Loosen union nut (1) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Loosen union nut (2) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Catch and dispose of escaping fuel.
- Feed the high pressure line (3) out and remove.
- Seal open connections using special tool **2 413 106**.

26 – Remove high-pressure rail

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

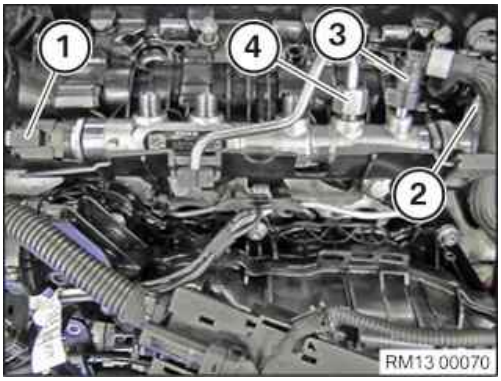
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

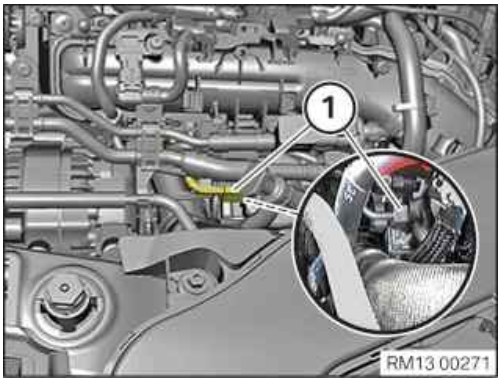
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

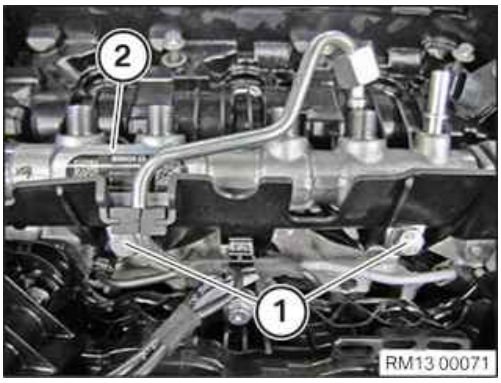


- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.

cardiagn.com



- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

27 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

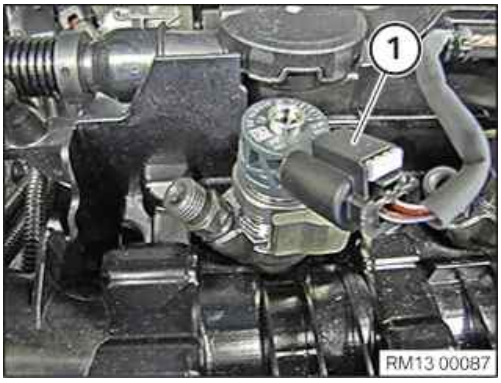
Electrostatic discharge.

Damage to or destruction of electrical components.

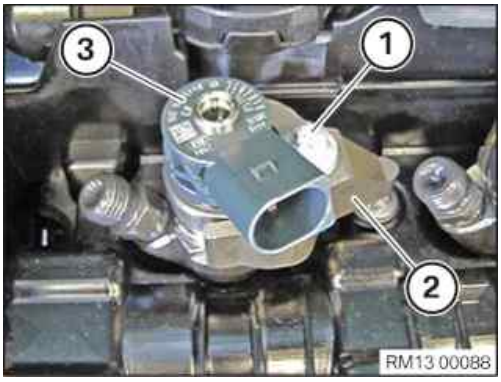
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.



- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

▸ **Loosen stuck injectors**

cardiagn.com

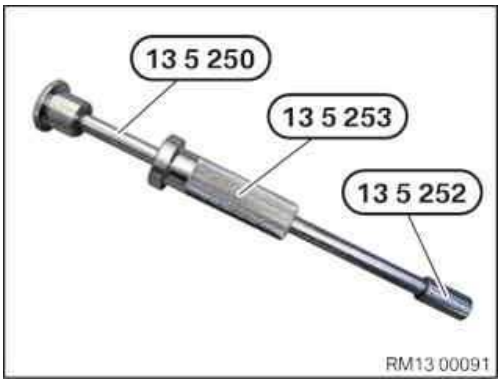
RISK OF DAMAGE

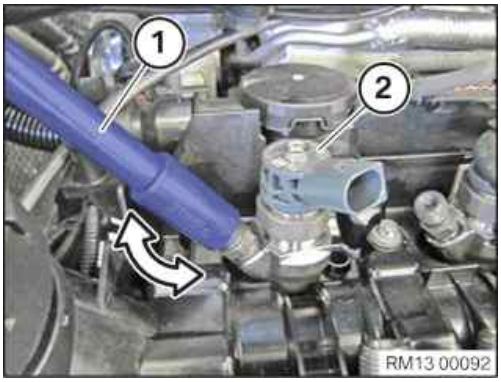
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

28 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

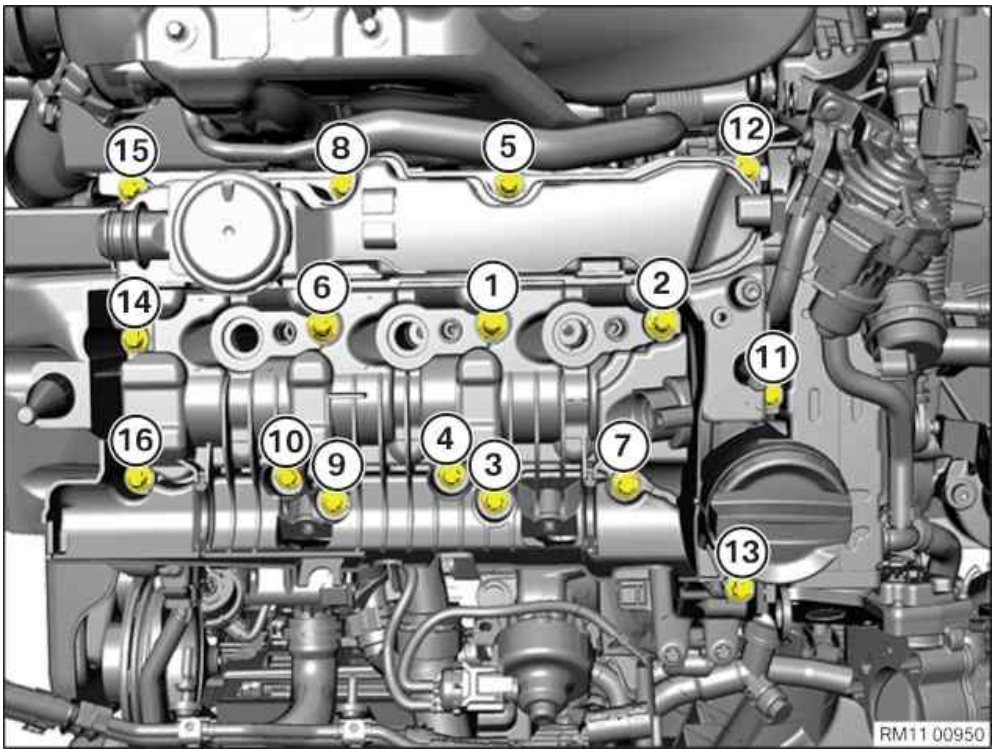
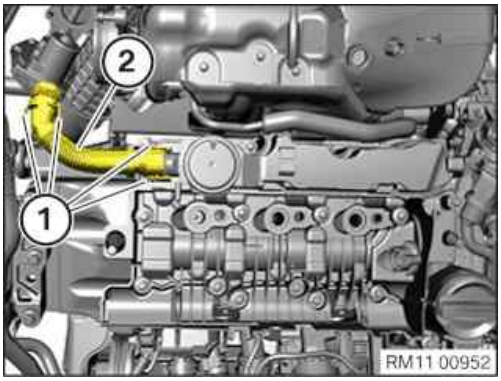
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

29 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

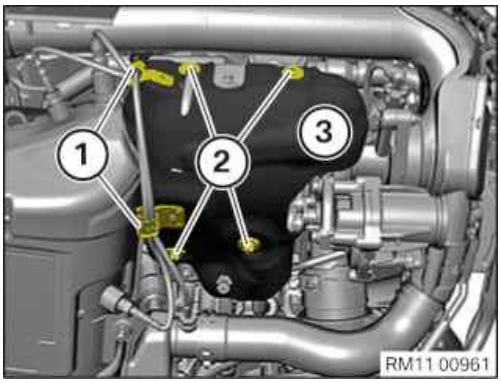
30 – Removing heat shield from top exhaust turbocharger

WARNING

Hot surfaces.

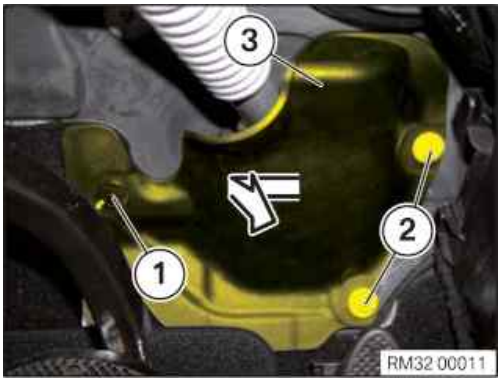
Risk of burning!

- Perform all work only on components that have cooled down.



- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).

31 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

cardiagn.com

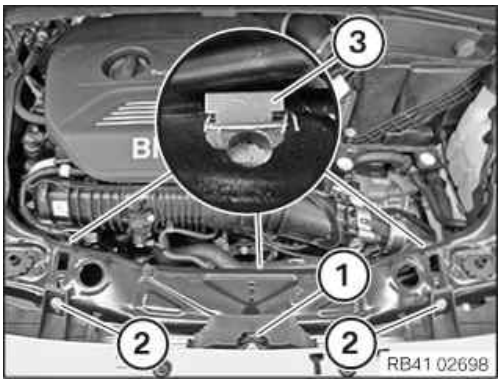
- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

32 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

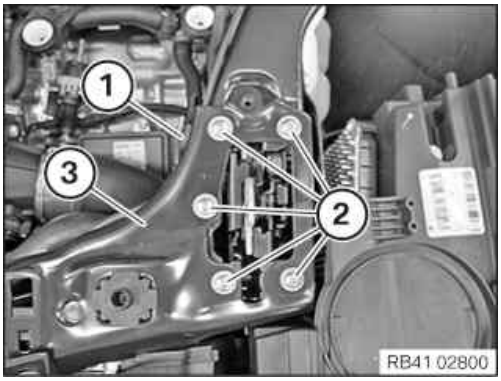
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

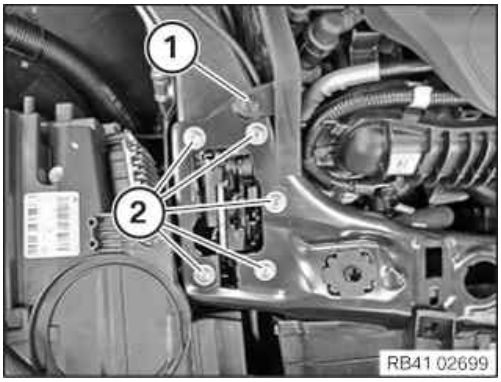


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

33 – Securing radiator on left and right

cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

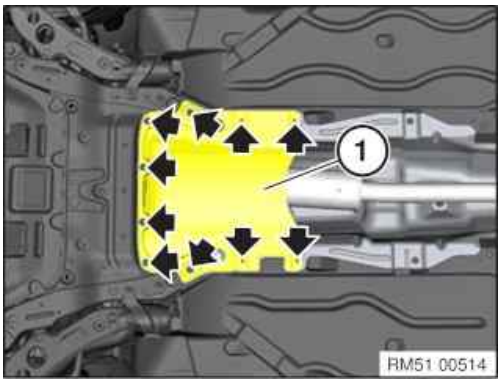
34 – Remove the front left and right wheel

▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

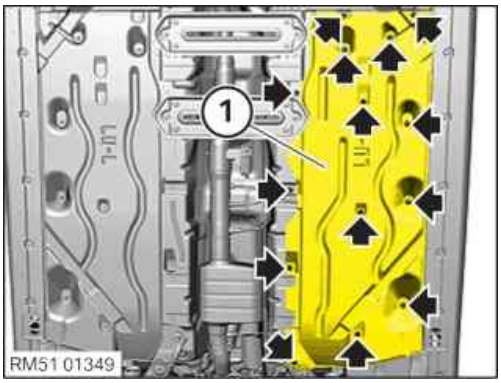
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

35 – If installed: Removing rear underbody protection



- Remove screws (arrows).
- Remove the rear underbody protection (1).

36 – Removing right underbody panelling



- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

37 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

cardiagn.com

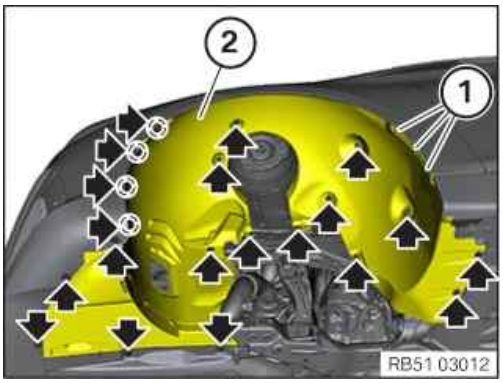
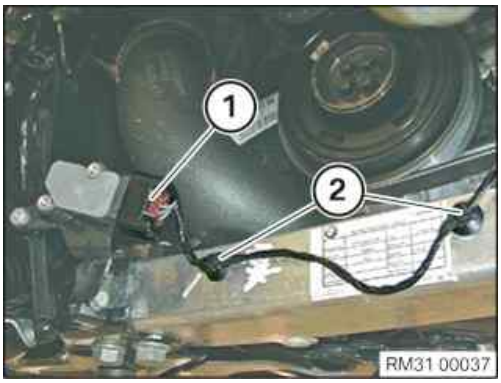
▶ **Remove front wheel arch cover**



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed out front wheel arch cover (2).

38 – With right installation: Detaching ride height sensor cable



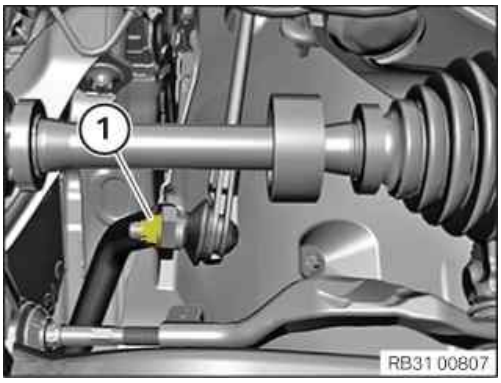
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

39 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**



- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

40 – Detaching rubber mount from front axle support

- Spray rubber mount (1) with lubricant and release from holder on front axle support.

cardiagn.com

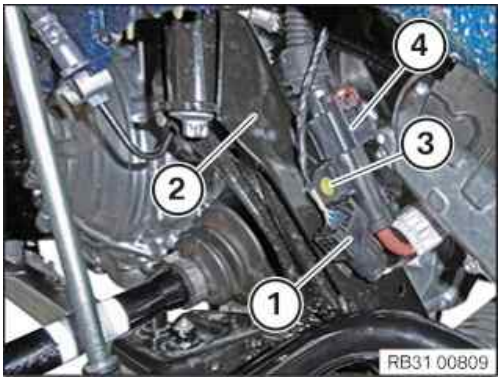
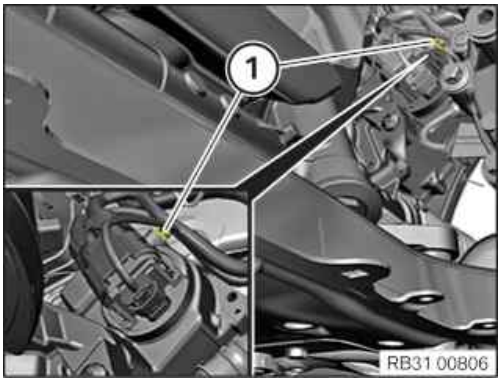
41 – Disconnecting plug connections from steering gear

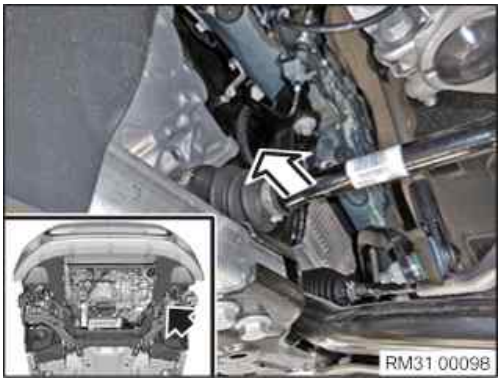
▶ **If installed: Detach connectors from the front axle carrier**



- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).

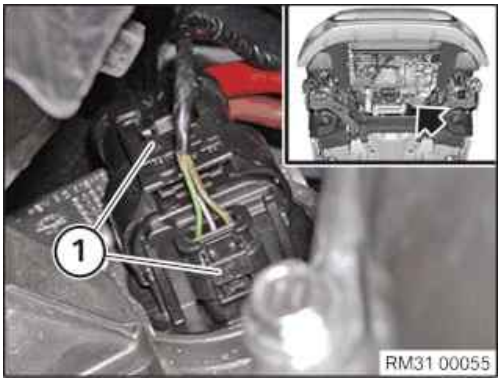


- Disconnect wiring harness (1) from steering gear.



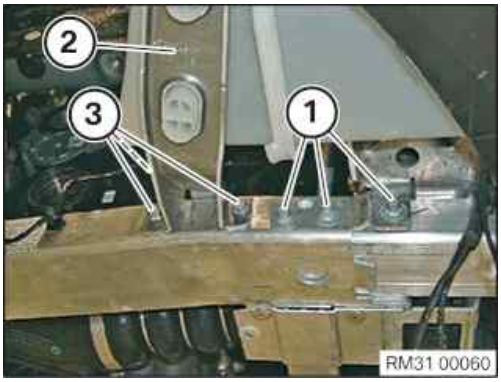
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.



- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

42 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

cardiagn.com

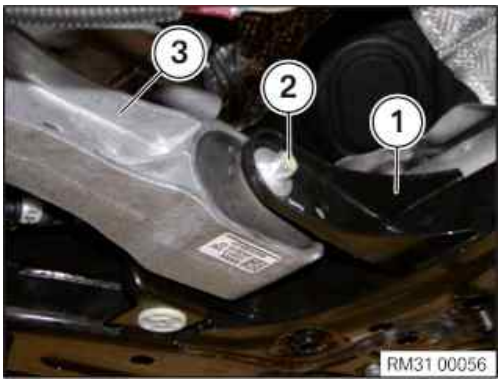
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).



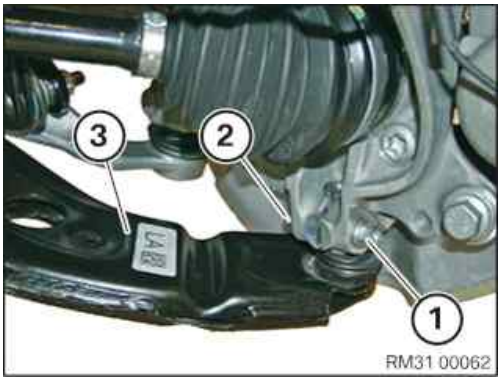
- Loosen screw (2) of the engine support (3) on the front axle (1).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

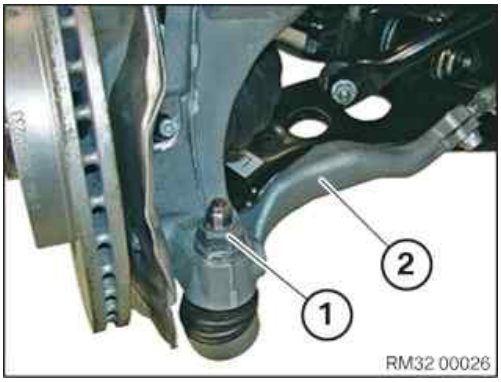
43 – Detaching and removing front axle completely



NOTICE

Perform the operations on the left and right side.

- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .



NOTICE

Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

cardiagn.com

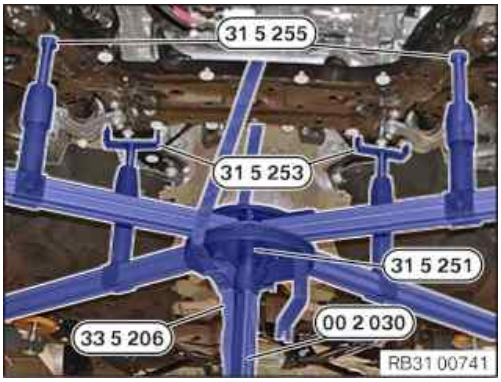
- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

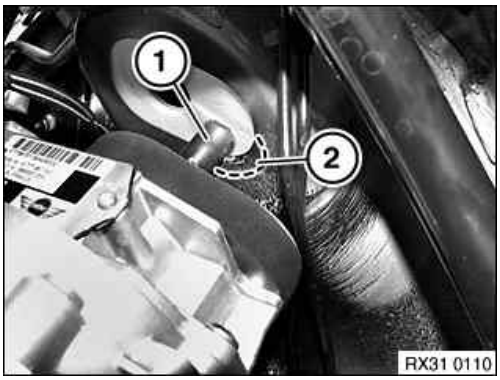
Note: In a profile rail pair, two profile rails are connected to one another by gearing.



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

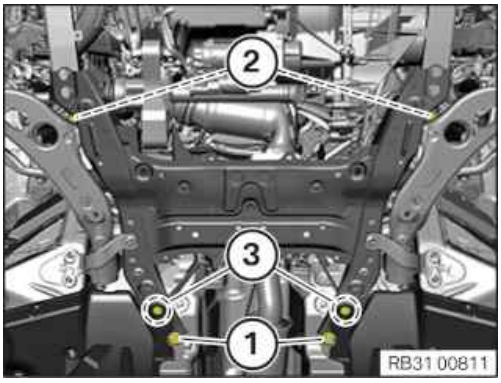


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.

For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

44 – Removing the connecting support from the tunnel in front and back

cardiagn.com

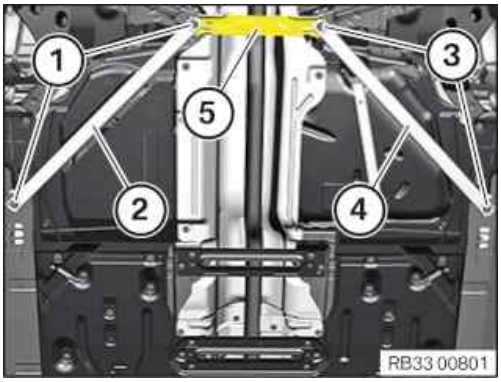
- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

45 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.



- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

46 – Remove exhaust system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

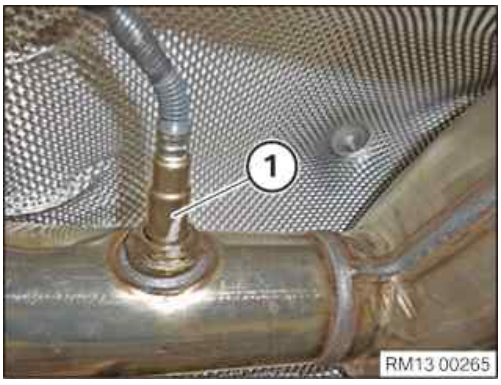
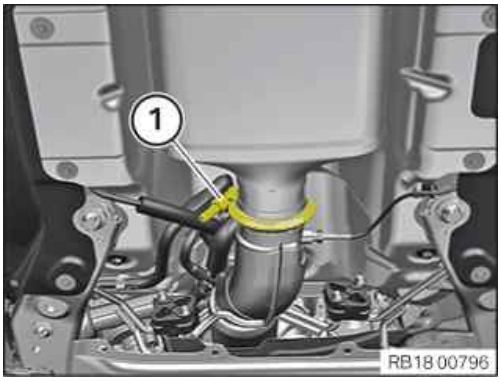
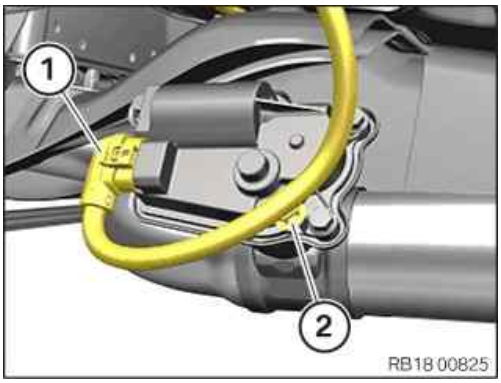
- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.



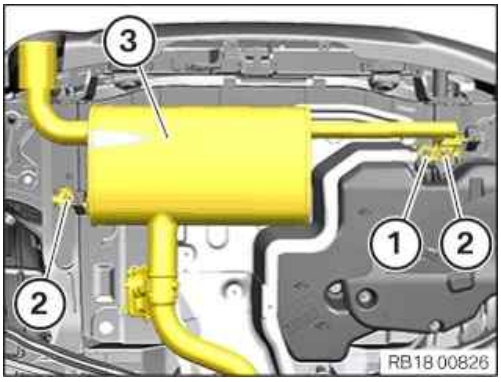
- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).



- Unlock and disconnect connector (1).
- Loosen clamp (2).



- Loosen screw (1).
- Loosen nuts (2).
- Lower the exhaust system (3) with an auxiliary person, guide out and remove.

47 – Removing starter motor

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

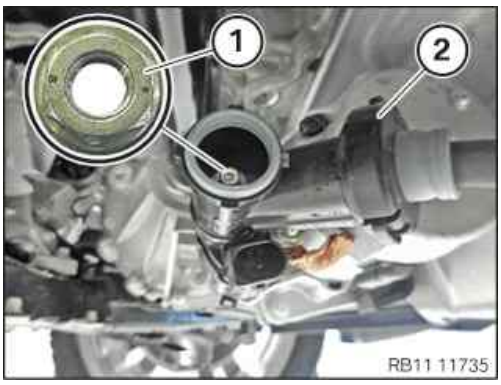
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

cardiagn.com

- Loosen screws (1).
- Feed out starter motor and remove.

48 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

Risk of burning!

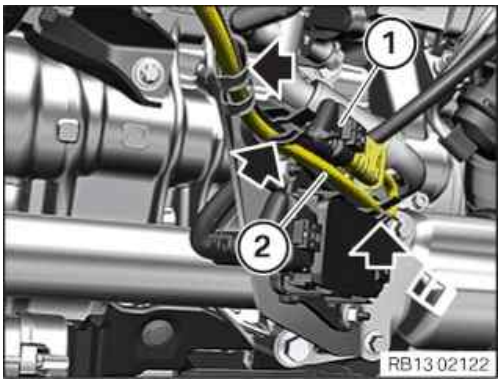
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

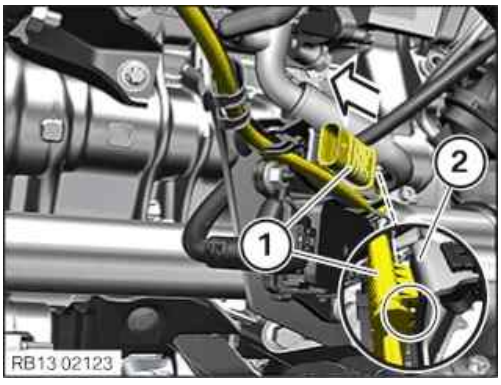
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).



- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

cardiagn.com

- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

49 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

Risk of burning!

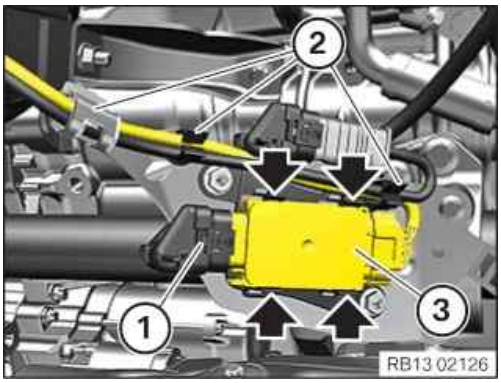
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

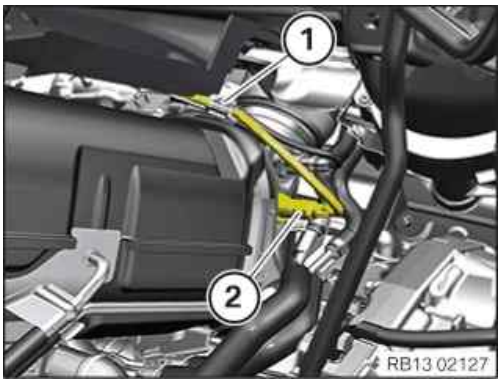
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).



- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

cardiagn.com

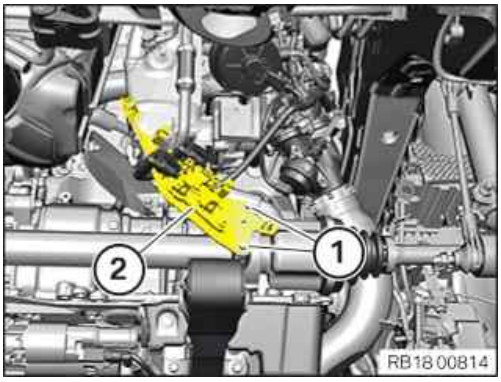
50 – Remove holder for oxygen sensor



- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

51 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

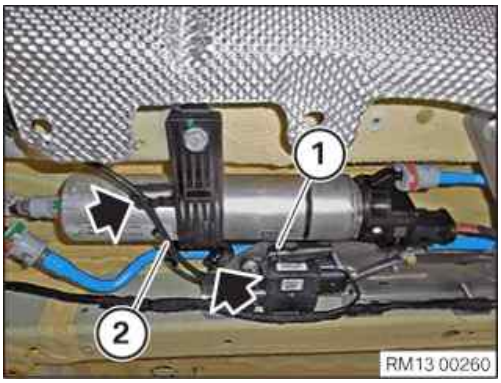
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

cardiagn.com

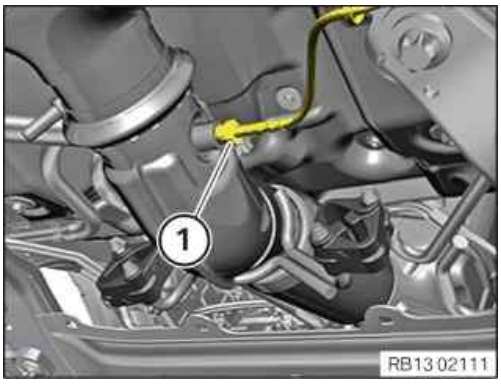
- Loosen the cable clip (1).



- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

52 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

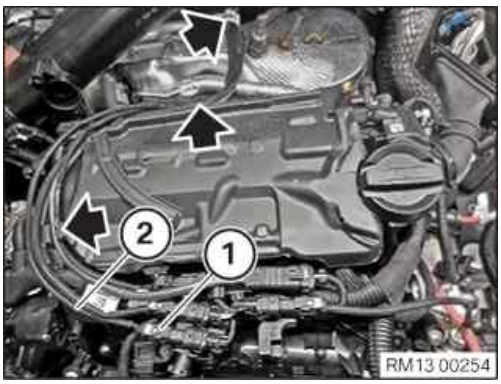
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect the plug connection (1).
- Feed the cable (2) from the temperature sensor out of the clamps (arrows) and remove it.

cardiagn.com

- Release the exhaust temperature sensor (1) with conventional tools (2).

- Feed out and remove exhaust temperature sensor (1).

53 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect the plug connection (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

cardiagn.com

- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

54 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!

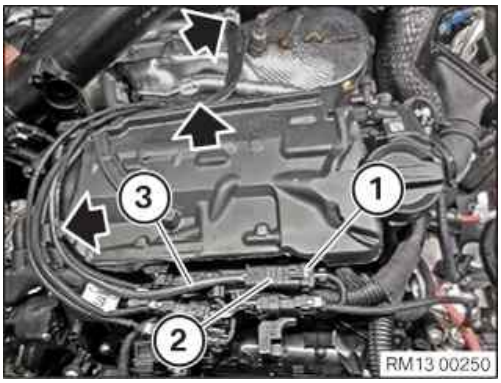
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

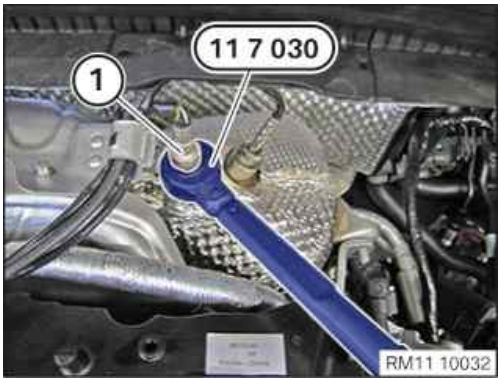
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect the plug connection (1).
- Detach the connector (2) from the holder .
- Feed out and remove cable (3) out of the oxygen control sensor from the clamps (arrows).



- Release the front oxygen control sensor (1) using special tool **0 491 075 (11 7 030)** .
- Feed out and remove the control sensor (1).

cardiagn.com

55 – Removing the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

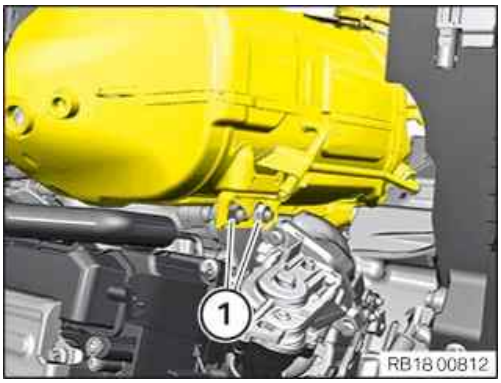
CAUTION

Heavy component.

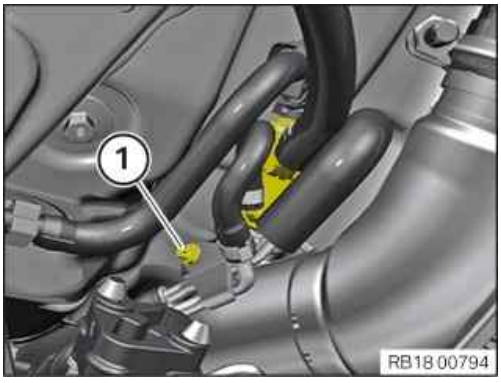
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).



- Loosen screw (1).

cardiagn.com

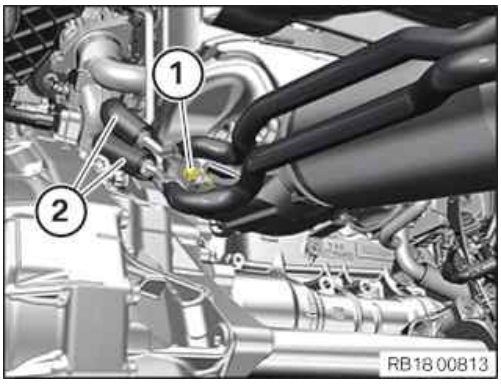
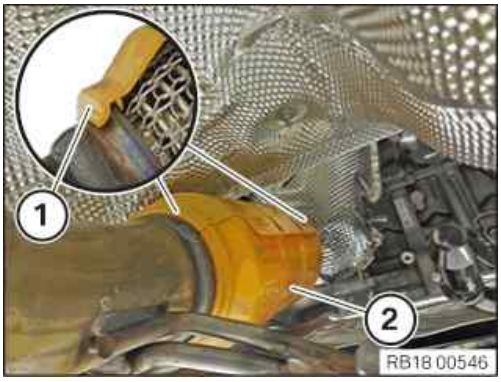
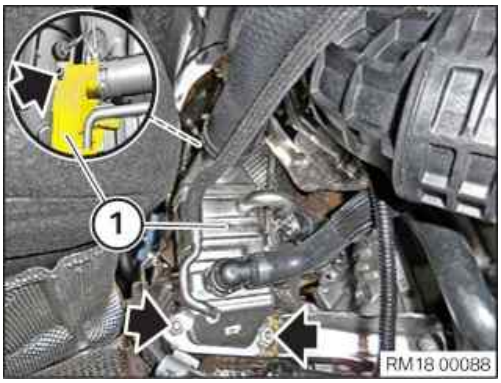
- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.



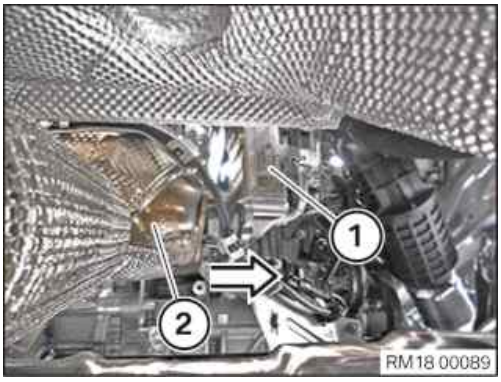
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.



- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.



- Detach nuts (arrows) from low pressure exhaust-gas recirculation cooler (1).



- Feed out low pressure exhaust-gas recirculation cooler (1) from diesel particulate filter (2) in direction of arrow and set aside.

cardiagn.com

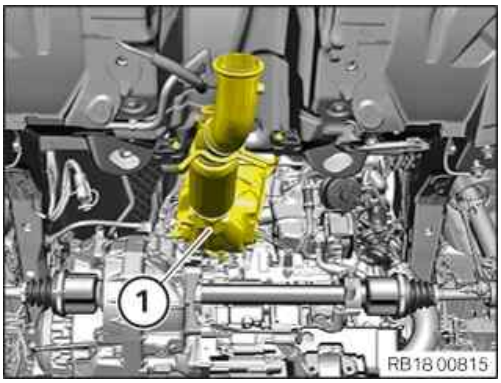
- Unfasten nut (1).



- Feed out diesel particulate filter (1) toward the bottom and remove.

56 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING

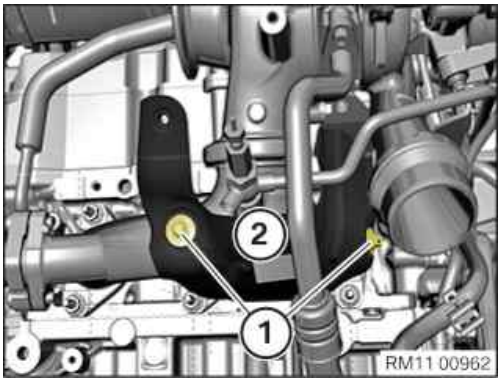
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

57 – Removing heat shield from rear exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

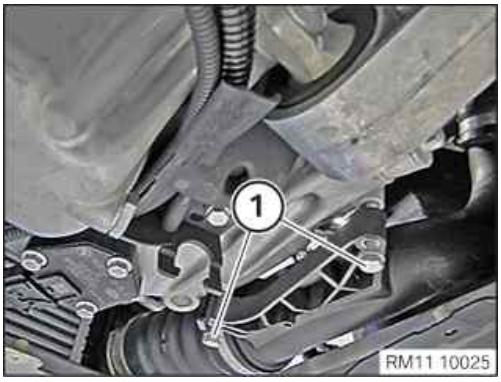
- Loosen screws (1).
- Loosen screw (2).

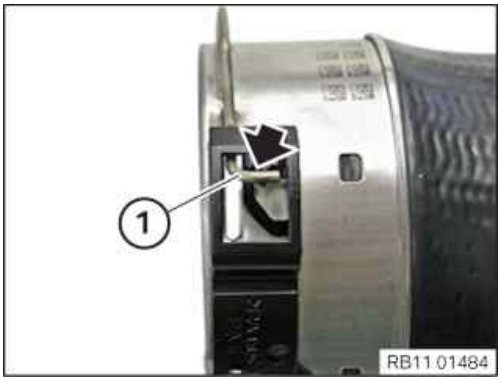
  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

58 – Remove right charge-air line

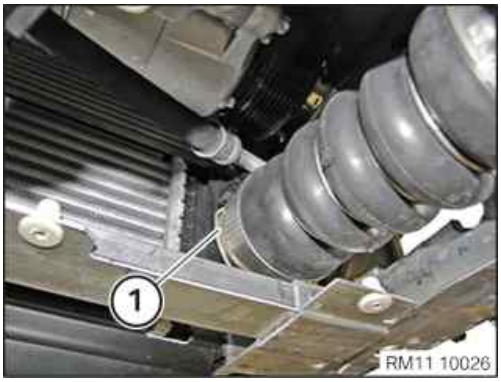


- Release charge air duct screws (1) on oil sump.

- Detach charge air duct screw connection (1) on crankcase.



- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

cardiagn.com

- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

59 – Remove exhaust turbocharger

- Release screw (1) from beneath with a long extension.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).
- Disconnect the oil return line (2) toward the bottom and set it aside.

- Release banjo bolt (1) of oil feed line from exhaust turbocharger and place to one side.

cardiagn.com

- Release screw (1) and remove V-clip.
- Pull exhaust turbocharger up and remove.
- Remove seal between exhaust turbocharger and exhaust manifold.

60 – Remove exhaust manifold

WARNING

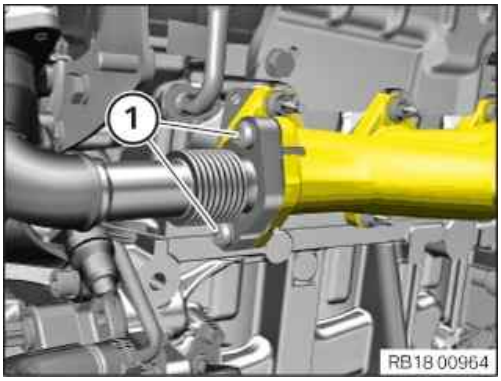
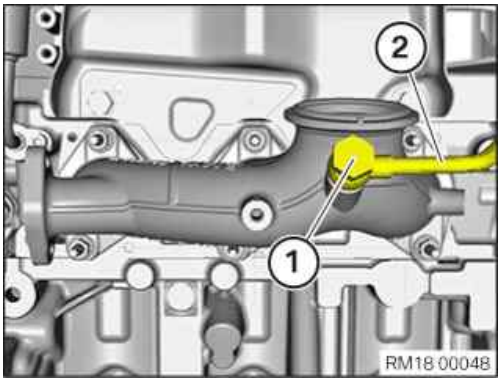
Hot surfaces.

Risk of burning!

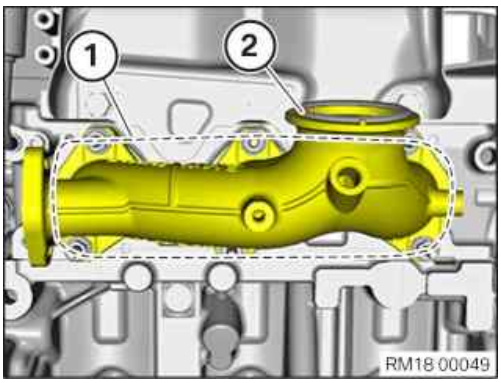
- Perform all work only on components that have cooled down.



- Loosen screws (1).



- Unscrew the banjo bolt (1).
- Feed out exhaust gas pressure pipe (2) and place to one side.



- Evenly release nuts along the dashed line (1) from outer to inner side.
- Feed out exhaust manifold (2) and remove.

61 – Removing the acoustic cover for the engine at the front

cardiagn.com

- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

62 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

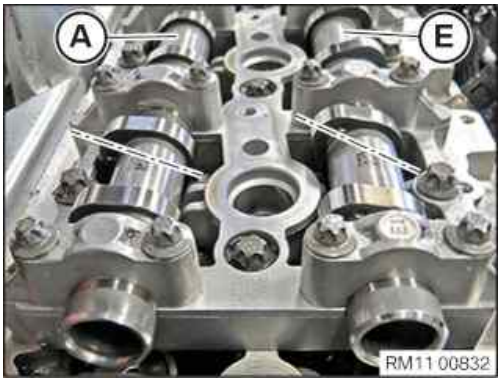
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

cardiagn.com

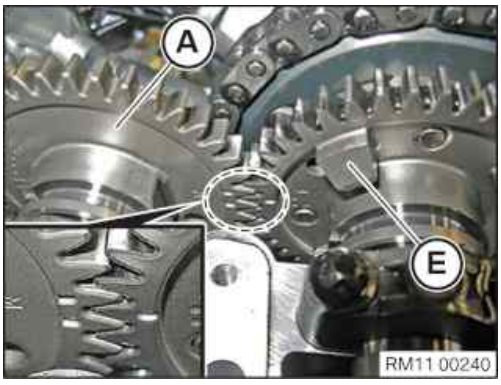
- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

63 – Remove chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

TECHNICAL INFORMATION

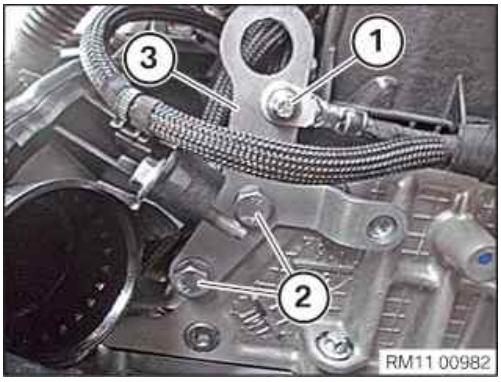
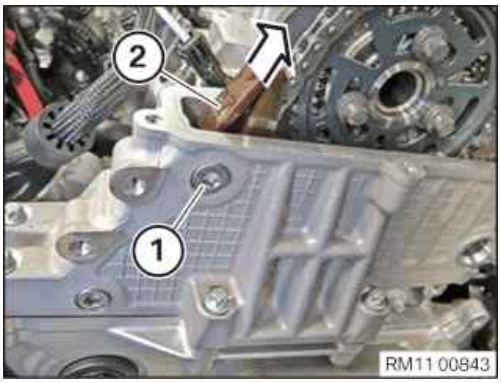
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

64 – Remove the timing chain guide rail

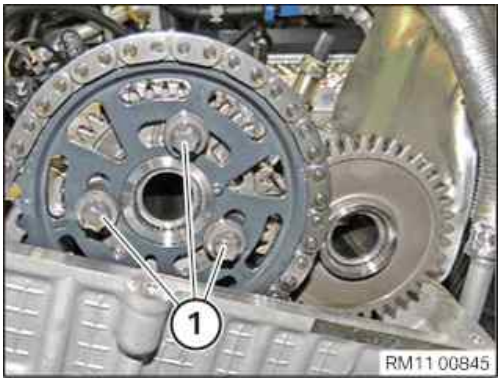


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

65 – Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

66 – Removing the camshaft support

cardiagn.com

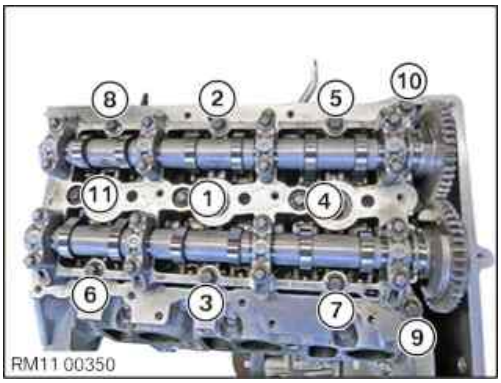
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

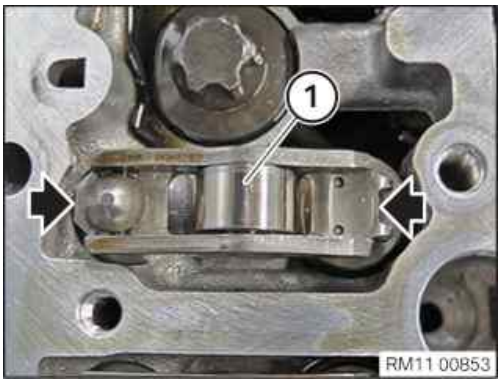
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen all screws step-by-step of the camshaft support in sequence (11) to (1).
- Remove camshaft support in upward direction.

  The camshafts remain installed in the camshaft support.

67 – Remove roller cam followers



- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

68 – Removing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

cardiagn.com

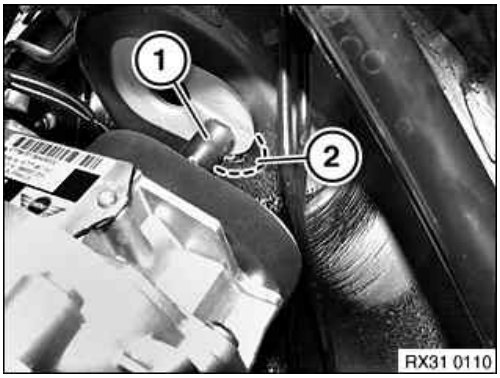
69 – Remove cylinder head.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

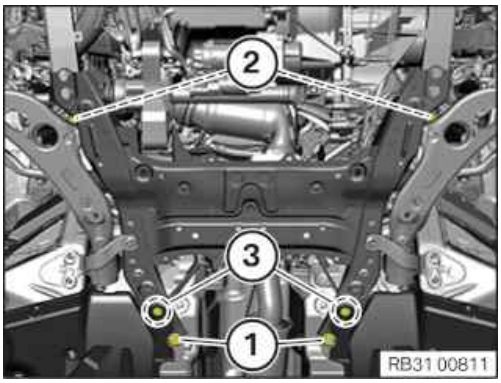


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- Position front axle support.
- Bend the underbody panelling to the side in area (3).
- Raise front axle support.
- When raising, insert the charge air cooler into its rubber mount on the transmission cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

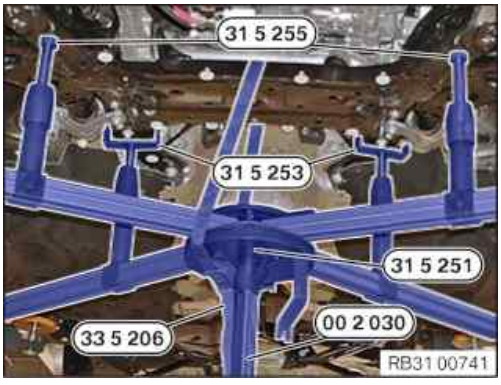
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If applicable, tighten the screws in area (3).

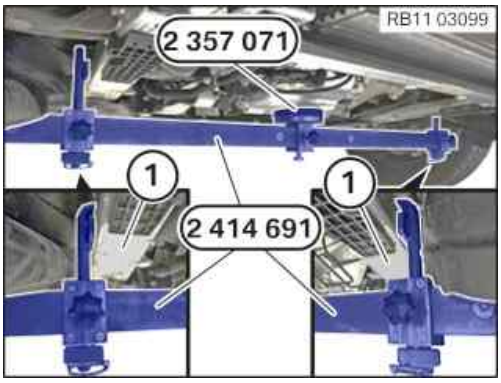
Underbody protection to body

Screw		Tightening torque	3 Nm



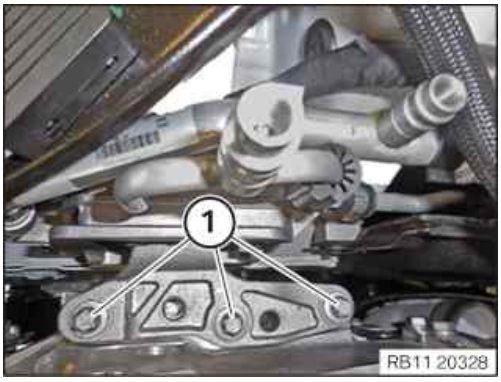
- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower the universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and set it aside.

cardiagn.com

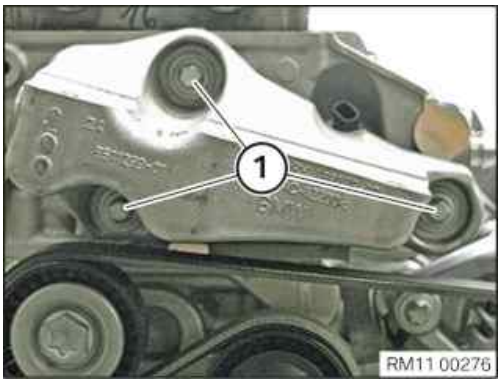


- Prepare special tool **2 414 691** together with the special tool **2 357 071**.
- Attach special tool **2 414 691** to front axle support and correctly align the special tool **2 357 071** under the oil sump and tighten.
- Turn special tool **2 414 691** at adjusting screw uniformly upwards, until the special tool **2 357 071** makes contact with the oil sump.
- Tighten all adjusting screws of special tools**2 414 691** and **2 357 071**.

- Remove all glow elements with special tool **0 491 068 (11 6 050)** or a standard tool.



- Loosen screws (1).



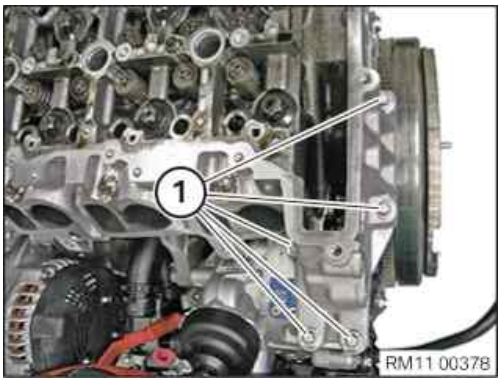
- Loosen screws (1).

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

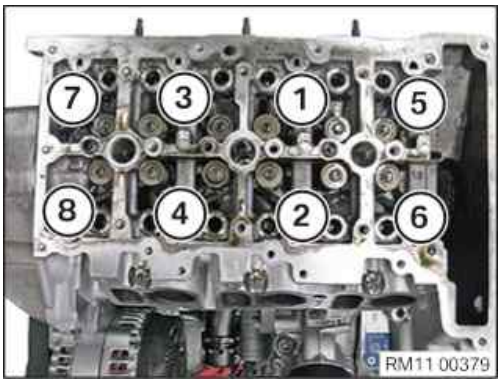
Special tool to cylinder head

M8		Tightening torque	21,5 Nm

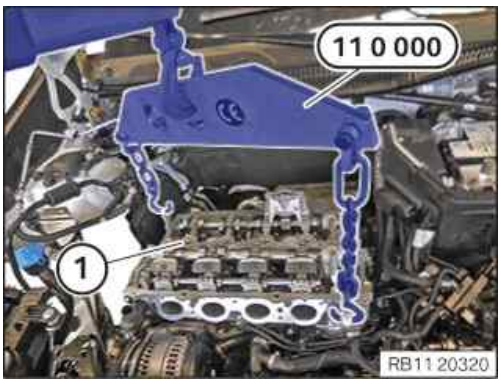
cardiagn.com



- Loosen screws (1).



- Loosen the cylinder head bolts in the sequence from (8) to (1).



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

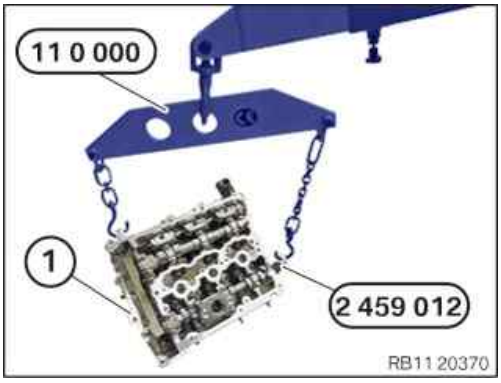
RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

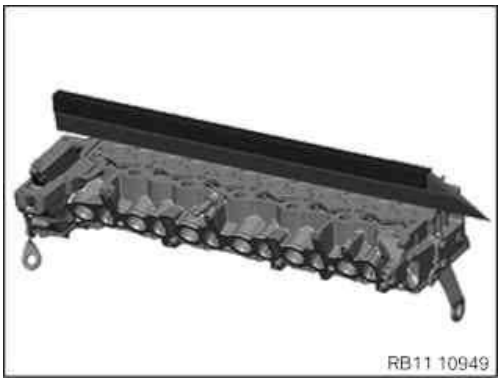
- **Carefully** guide out the cylinder head (1) with the engine lifter and the special tool **0 490 561 (11 0 000)** and remove.



- Mount the cylinder head (1) on the special tool **0 494 362 (11 9 000)**.

70 – Check the flatness of the cylinder head

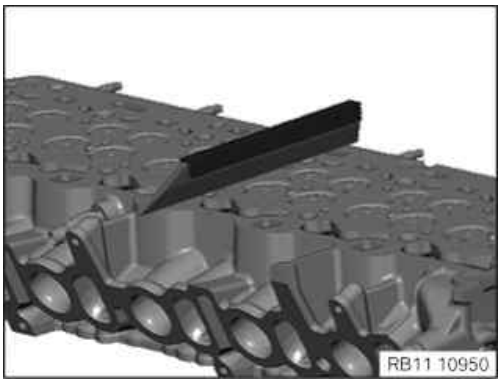
cardiagn.com



- Check the flatness of the cylinder head lengthwise using a straightedge.

Cylinder head flatness

Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

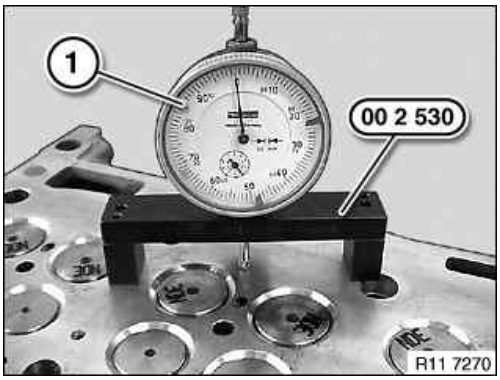


- Check the flatness of the cylinder head crosswise using a straightedge.

Cylinder head flatness

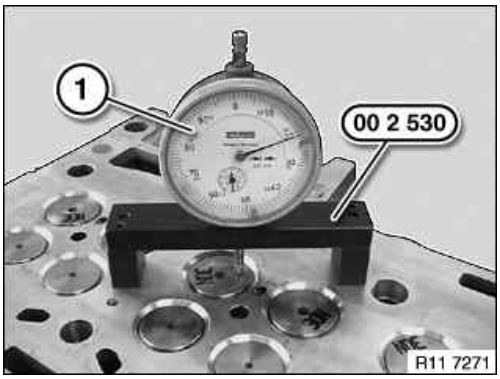
Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

71 – Checking the valve underprotrusion



- Set the dial gauge (1) onto the cleaned cylinder sealing surface with slight preload in special tool **0 490 185 (00 2 530)**.
- Set dial gauge in mildly preloaded state to "zero".

Check



- Position the dial gauge (1) on the valve with special tool **0 490 185 (00 2 530)**.
- Measure valve underprotrusion and compare with the setpoint value.

Valve underprotrusion

	0,8 (0,7 - 0,9) mm

Result

» Valve underprotrusion is outside tolerance.

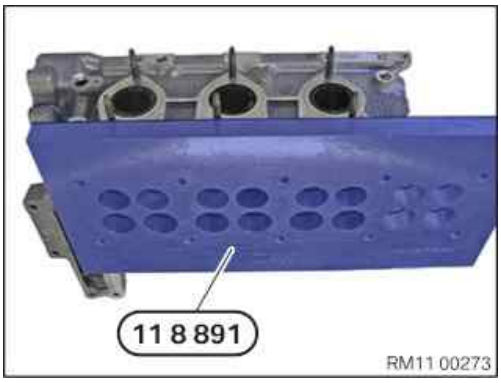
Measure

- Replace cylinder head.

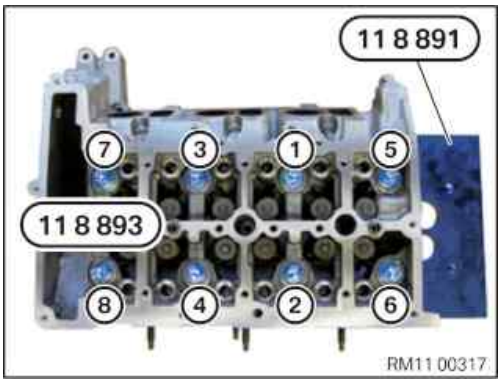
MAIN WORK

72 – Checking cylinder head for watertightness

cardiagn.com



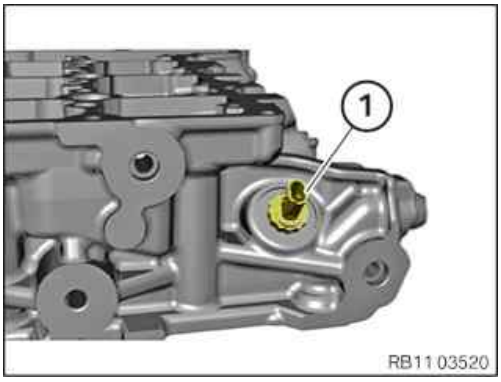
- **Set of special tools 0 496 183 (11 8 890)required.**
- Attach base plate to cylinder head with seal **0 496 184 (11 8 891)**.



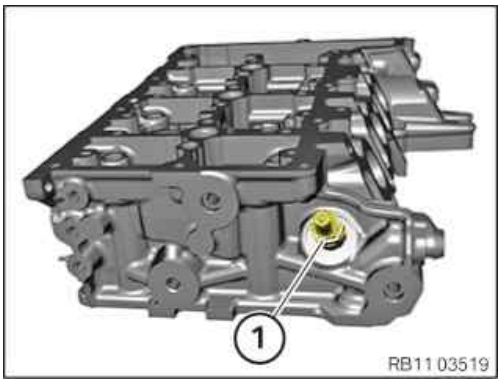
- Install and tighten special tool on cylinder head **0 496 184 (11 8 891)** using screws **0 496 186 (11 8 893)** in order (1) to (8).

Special tool to cylinder head

Special tool		Tightening torque	20 Nm



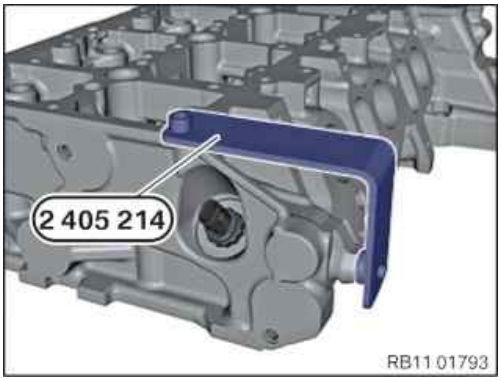
- Remove coolant temperature sensor (1) with special tool **0 496 142 (11 8 850)**.



- Install valve (1) from special tool in cylinder head.
- Tighten valve (1).

Special tool to cylinder head

Special tool		Tightening torque	20 Nm



- Seal coolant duct to cylinder head using special tool .
- Tighten down screw.

Standard screw connection M6

M6		8 Nm

Check

cardiagn.com

- Heat up the cylinder head.

Check for cylinder head watertightness

Temperature of the cylinder head	60 °C

- Connect compressed air to valve (1).

Check for cylinder head watertightness

Testing pressure	max. 3,0 bar

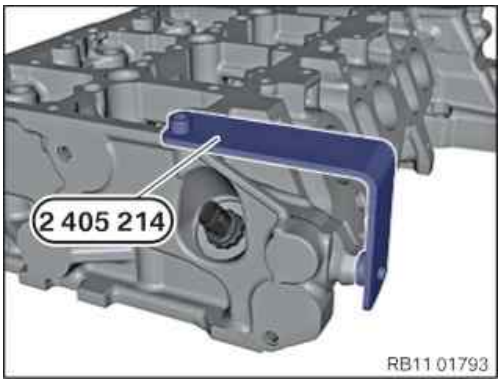
- Check the cylinder head in for tightness in a water bath.

Result

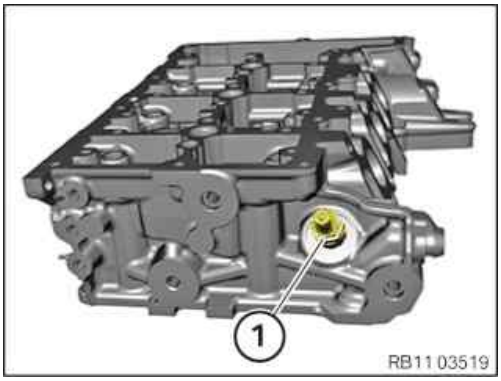
» Air bubbles develop.

Measure

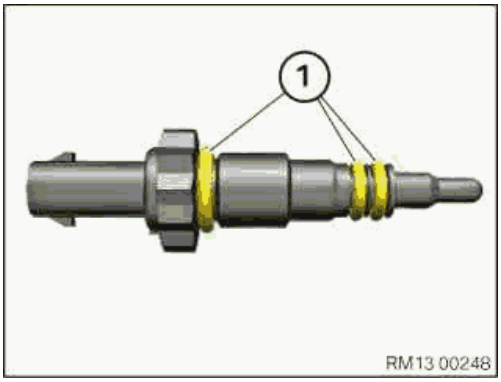
- Check cylinder head at the point of exit of the air bubbles for damage, repair or renew if required.



- Remove the special tool from the cylinder head.



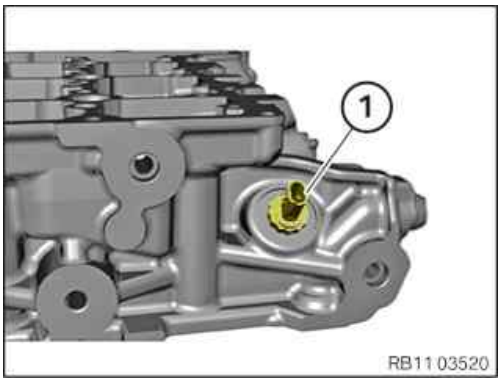
- Remove valve (1).



- When reusing coolant temperature sensor sealing rings (1), check for damage, renew if necessary.

  Parts: Sealing ring

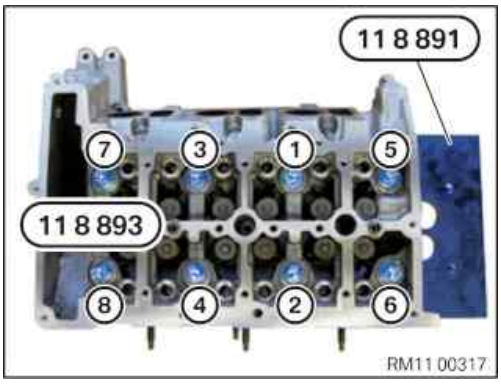
cardiagn.com



- Install coolant temperature sensor (1) and tighten using special tool **0 496 142 (11 8 850)**.

Coolant temperature sensor at cylinder head

Temperature sensor		Tightening torque	3,5 Nm



- Loosen screws **0 496 186 (11 8 893)** on cylinder head in order (8) to (1)and remove **0 496 184 (11 8 891)**.

POSTPROCESSES

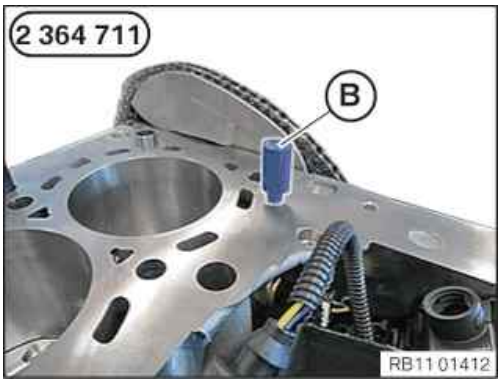
73 – Cleaning the sealing surface

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

cardiagn.com

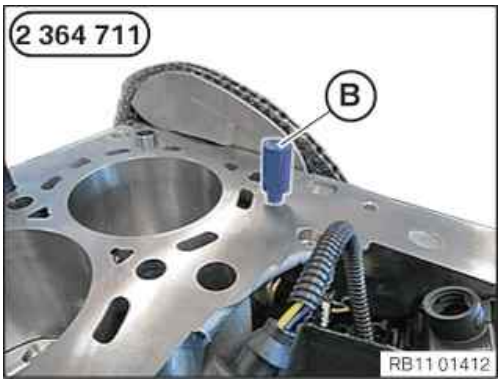
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

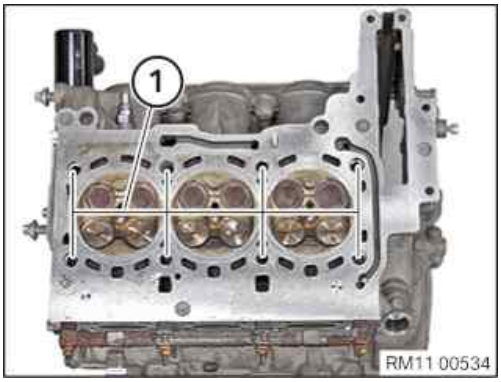
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.



- Remove special tool (B).

74 – Renewing the cylinder head gasket



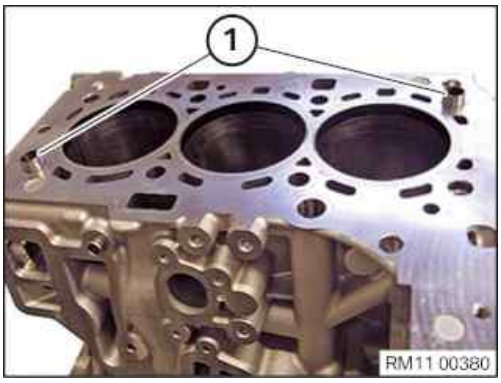
RISK OF DAMAGE

Damage to the surface.

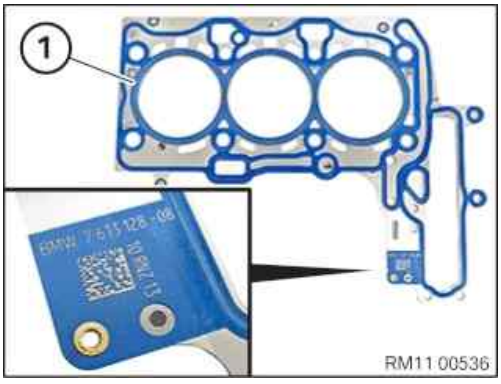
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

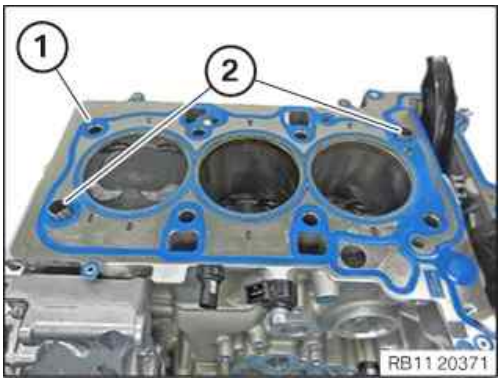


- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.
- **After work on the crankshaft drive and processing the cylinder head, the thickness of the cylinder head gasket must be determined.**

cardiagn.com



- Guide in the cylinder head gasket (1) and install.

  Parts: Cylinder head gasket.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

75 – Installing the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

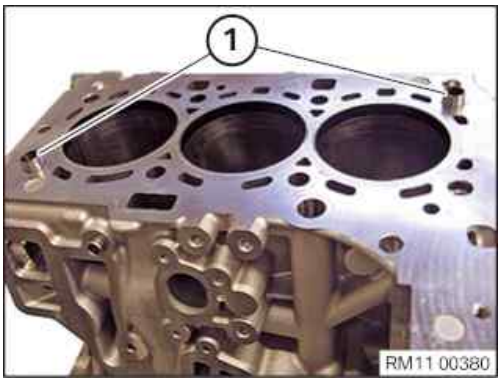
Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

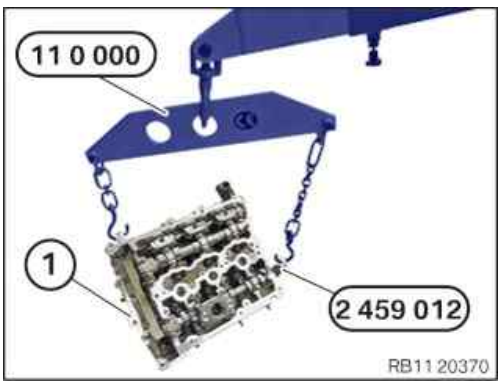
TECHNICAL INFORMATION

Do not remove bolt coating.



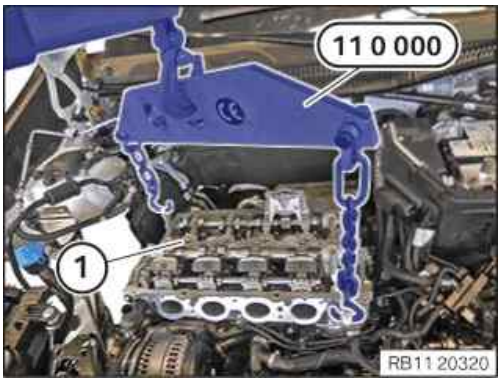
- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.
- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.



- Position cylinder head (1) on special tool **0 490 561 (11 0 000)** and engine lifter.

cardiagn.com



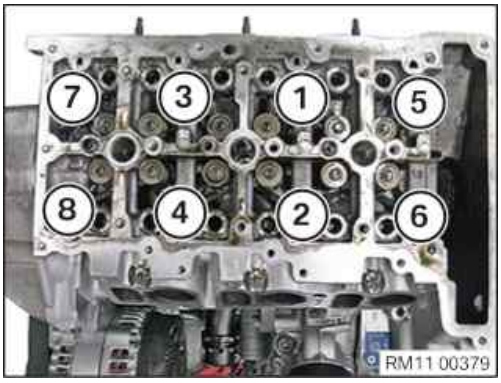
RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- Feed in the cylinder head (1) **carefully** with the engine lifter and the special tool **0 490 561 (11 0 000)** and install.



- Fit new cylinder head bolts.

  Parts: Cylinder head bolts

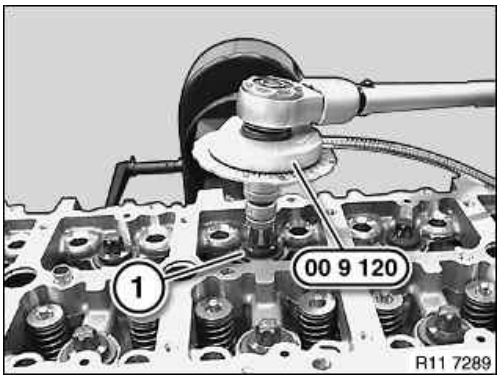
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

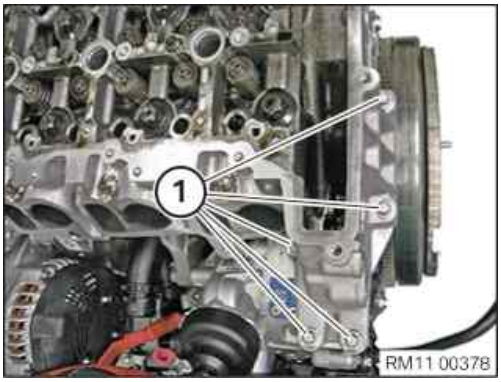
- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolt in the sequence (1) to (8).



- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °



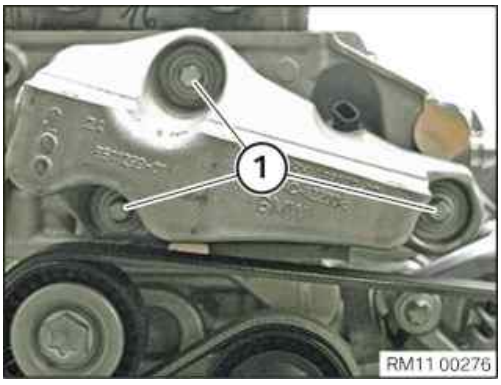
- Tighten the screws (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

cardiagn.com

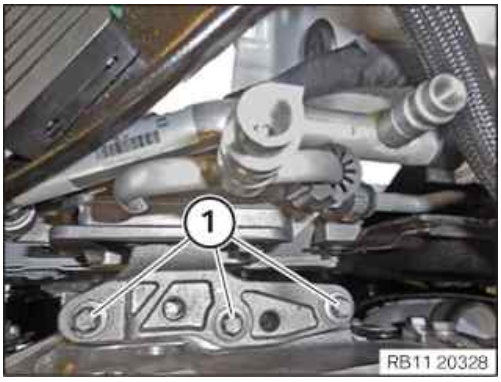
- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.



- Tighten the screws (1).

Engine support to cylinder head

M10X45		Tightening torque	41 Nm



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

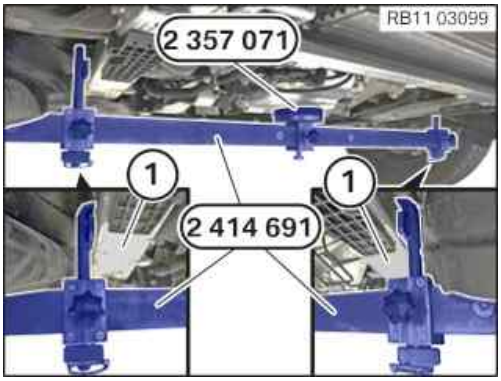
Right engine mount to cylinder head

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

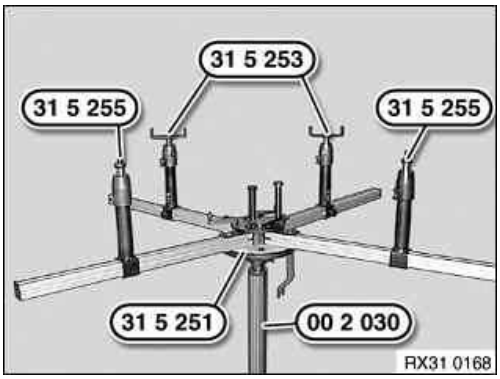
Glow elements to cylinder head

Glow element		Tightening torque	13 Nm



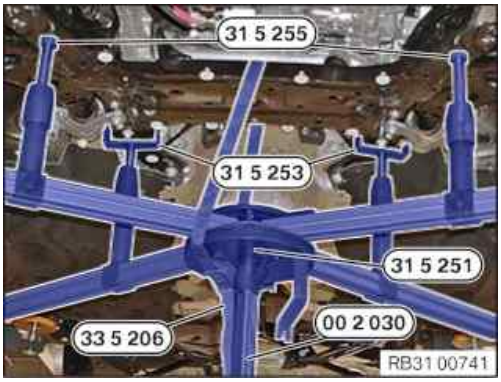
- Disassemble special tool **2 414 691** using special tool **2 357 071**.

cardiagn.com



- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

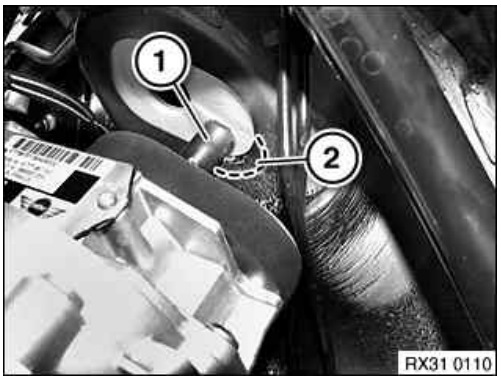
Note: In a profile rail pair, two profile rails are connected to one another by gearing.



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

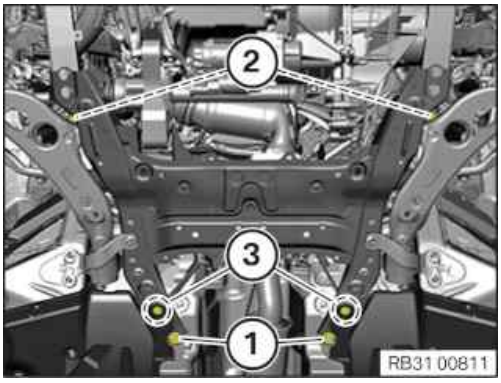


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and the front axle remove.

76 – Installing the hydraulic valve clearance compensating element

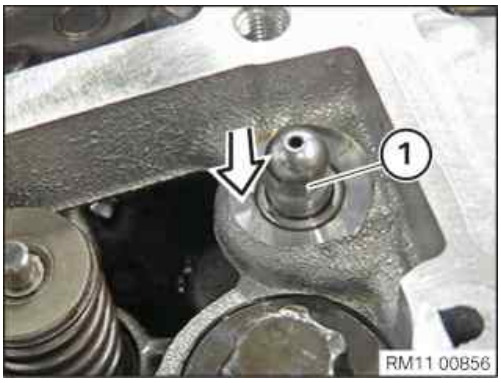
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

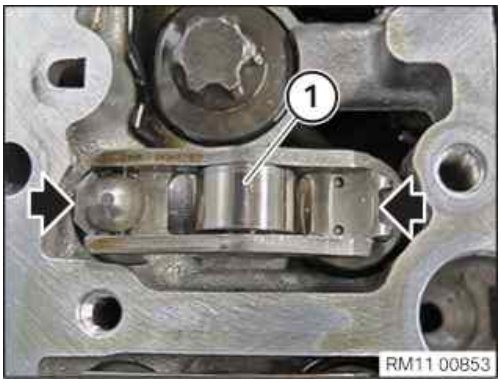


- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

77 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.



- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

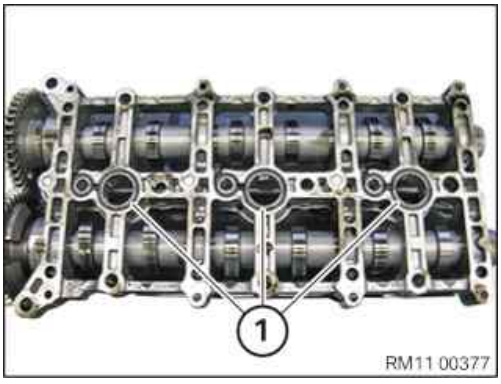
78 – Installing the camshaft support

RISK OF DAMAGE

Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

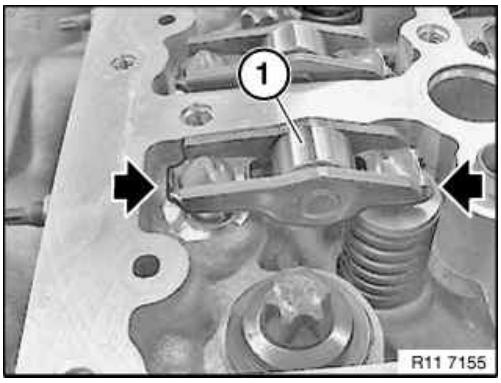
- Comply with the regulations for the installation and disassembly.
- Perform work with care.



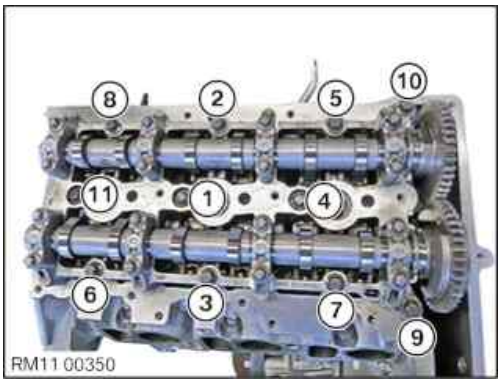
- Renew the seals (1) on the camshaft support.

  Parts: Seals

cardiagn.com



- Make sure the roller cam followers (1) have the correct mounting orientation.
- Position the camshaft support.

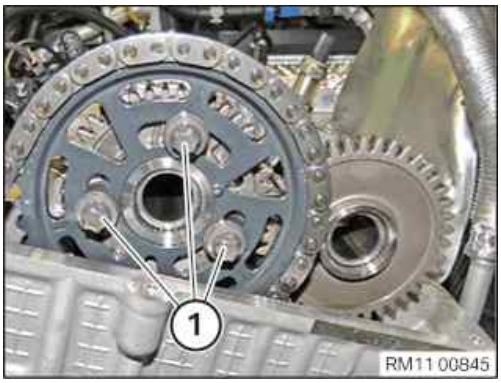


- Tighten the screws of the camshaft support incrementally in the sequence (1) to (11).

Camshaft carrier to cylinder head

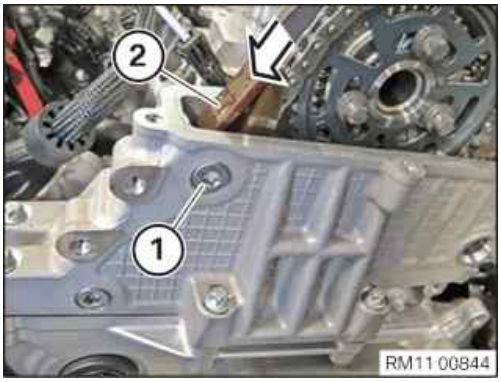
M7x35		Tightening torque	13 Nm

79 – Installing the camshaft sprocket on the intake camshaft



- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

80 – Install the timing chain guide rail



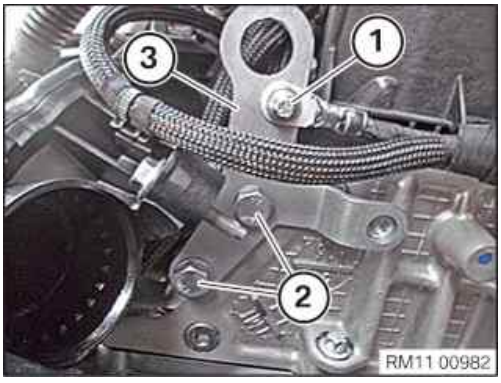
- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm



- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

cardiagn.com

81 – Installing the chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

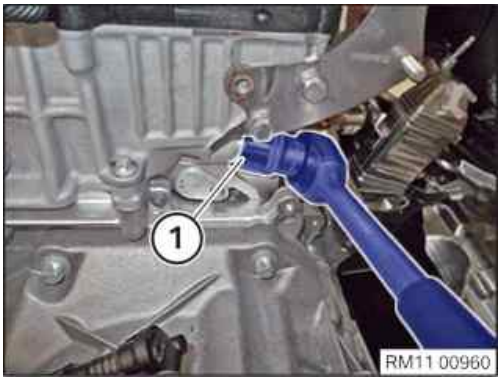
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

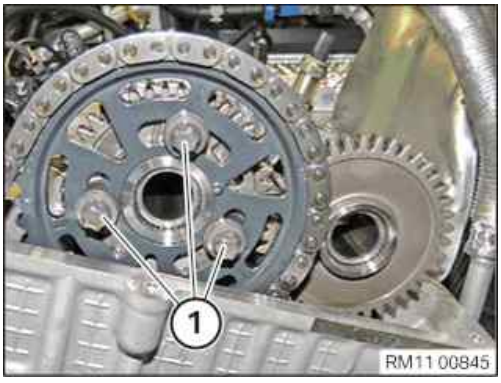


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

82 – Tightening the camshaft sprocket on the intake camshaft



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

83 – Removing the special tool to secure the exhaust camshaft

cardiagn.com

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

84 – Remove special tool to disconnect the crank shaft

- Remove special tool **2 288 380**.

85 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

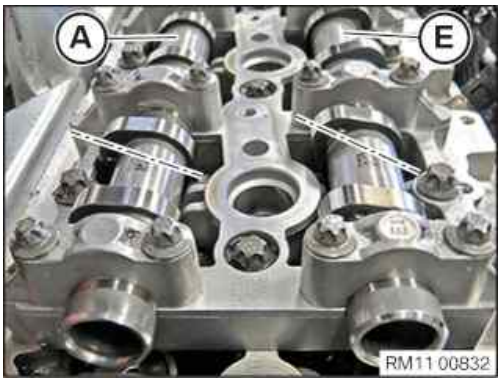
The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

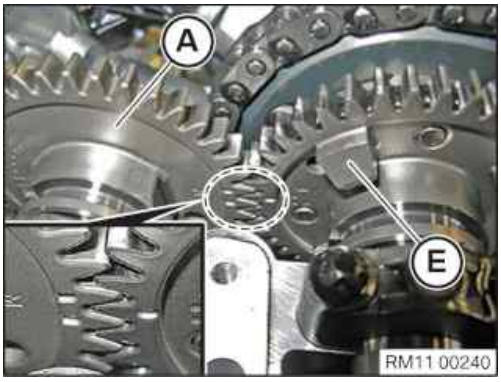
  Do **not** crank the engine in reverse.

cardiagn.com



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

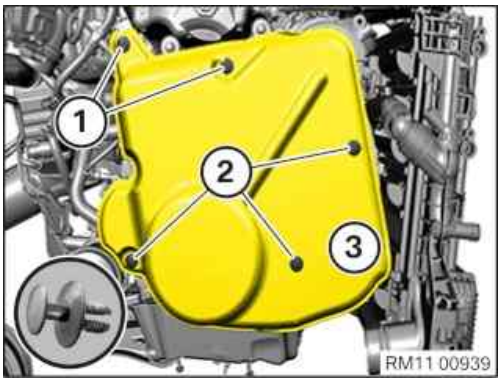
If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

86 – Install the acoustic cover for the engine at the front

cardiagn.com



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

87 – Installing exhaust manifold

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

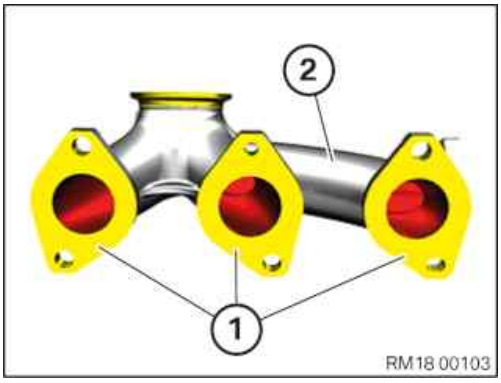
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

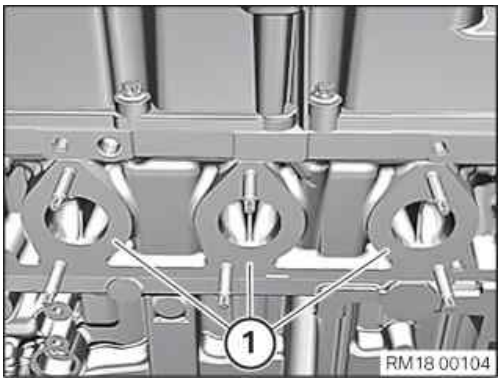
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

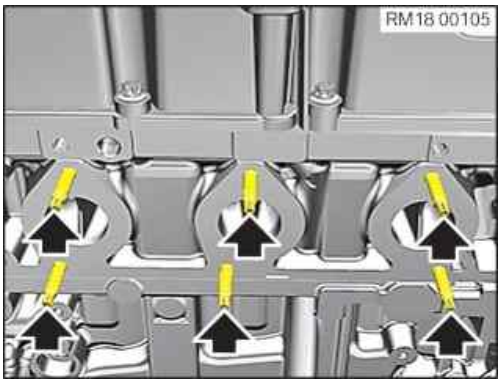


- Clean the connection points (1) on the exhaust manifold (2) with the special tool **0 495 102 (11 4 470)**.

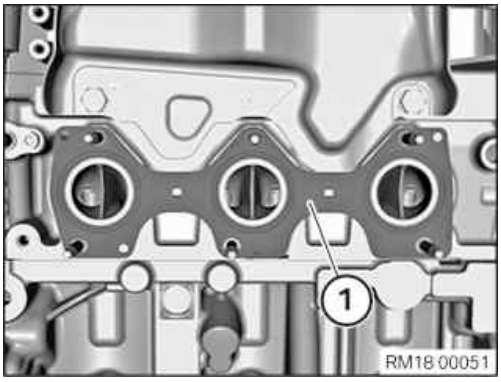
cardiagn.com



- Clean the connection points (1) on the cylinder head with the special tool **0 495 102 (11 4 470)**.



- Check the stud bolts (arrows) on the cylinder head for **correct** fit.



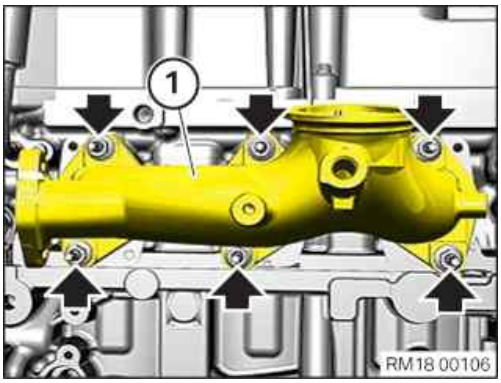
TECHNICAL INFORMATION

The **coated side of the** seal must be mounted facing towards the exhaust manifold.

- Renew the gasket (1).

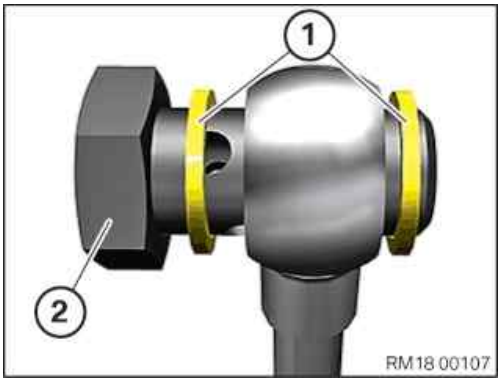
  Parts: Gasket
- Insert and install the gasket (1).
- Insert and install the exhaust manifold (1).
- Renew the nuts (arrows).

  Parts: Nuts
- Hand-tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.
- Tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.



Exhaust manifold to cylinder head

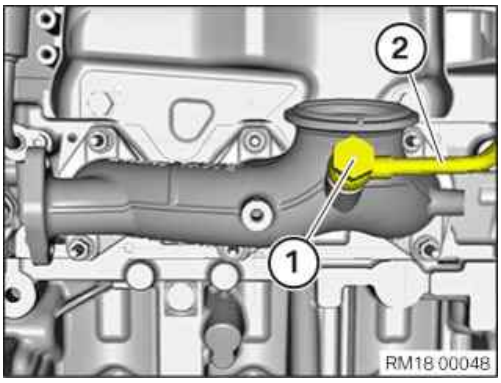
M7	If necessary, renew loose stud bolts.	Tightening torque	11 Nm
	Replace nuts.	Tightening torque	13 Nm



- Renew the sealing rings (1) from the banjo bolt (2).

  Parts: Sealing ring

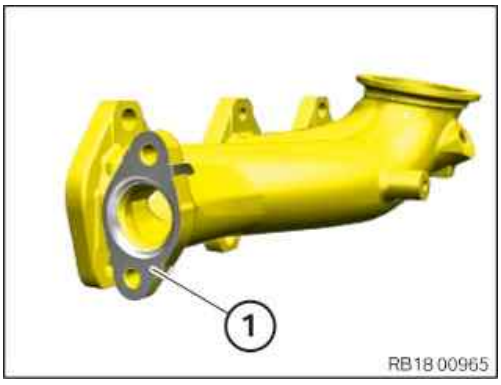
cardiagn.com



- Insert and install the exhaust gas pressure pipe (2).
- Tighten the banjo bolt (1).

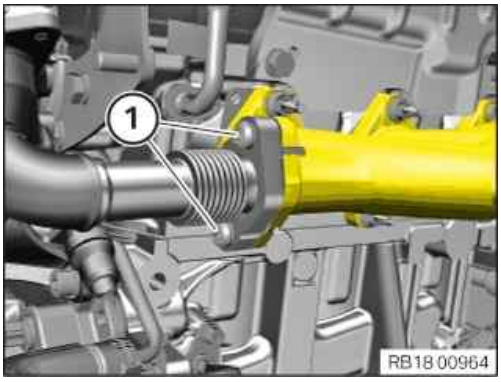
Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt		Renew sealing rings.	30 Nm



- Renew seal (1) between exhaust-gas recirculation cooler and exhaust manifold.

  Parts: Gasket



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

88 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

89 – Installing exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to the exhaust turbocharger

Inadequate initial filling of exhaust turbocharger leads to dry running.

- Make sure the initial filling is correct when replacing exhaust turbocharger.
- Fill the exhaust turbocharger with the suitable additive (see electronic Parts Catalogue).

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.

For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

TECHNICAL INFORMATION

- It is imperative to perform certain test steps to prevent subsequent damage in the event of exhaust turbocharger damage. See further information.

TECHNICAL INFORMATION

For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

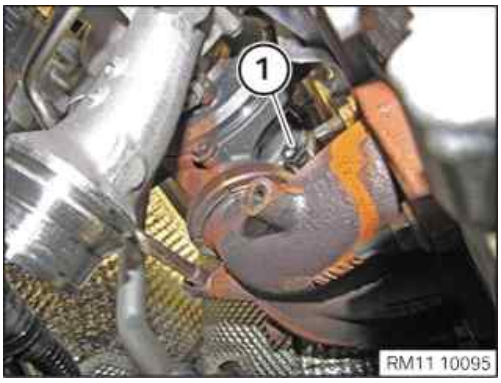
If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger

cardiagn.com



- Renew gasket.

  Parts: Gasket
- Position seal on exhaust manifold.
- Guide the exhaust turbocharger in from the top and position it.
- **Ensure that gasket is correctly seated.**
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Renew sealing rings.

  Parts: Sealing ring
- Position oil feed line with banjo bolt (1) and sealing rings and tighten hand-tight.

  There are 2 sealing rings fitted on the banjo bolt (1).
- Align oil feed line and tighten banjo bolt (1).

  The oil feed line must not sit on the exhaust turbocharger.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

- Renew gasket.

  Parts: Gasket
- Position oil return line (2) with **seal** on exhaust turbocharger.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Feed in and tighten screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

90 – Install right charge air duct

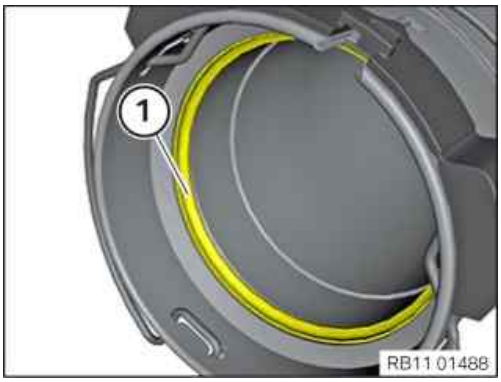
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

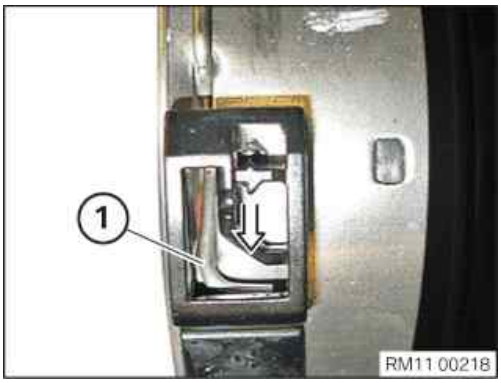
- Replace the gaskets and pressure pipe if necessary.

cardiagn.com

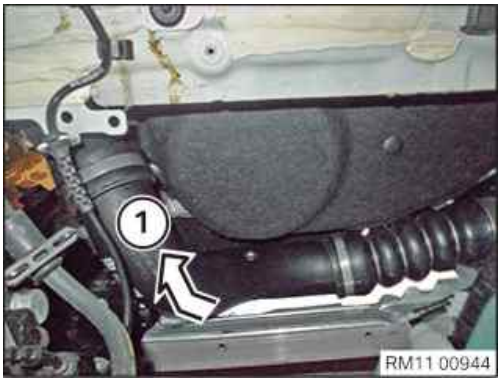


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

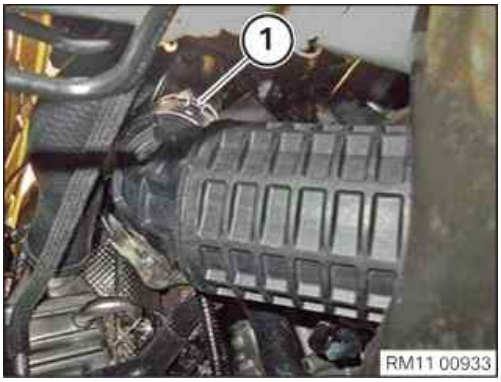
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).

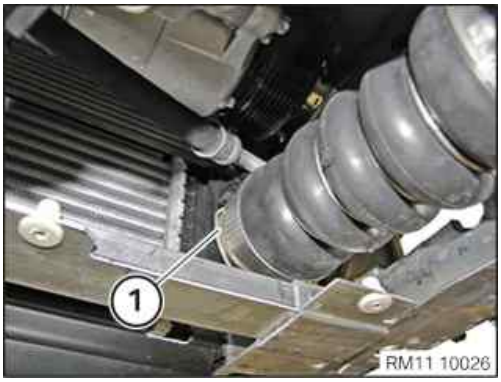


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

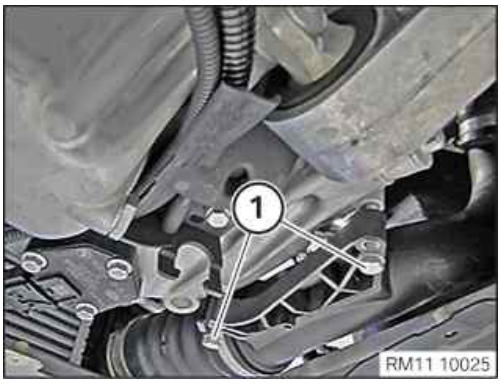
  The lock (1) must audibly engage.

cardiagn.com

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm



- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

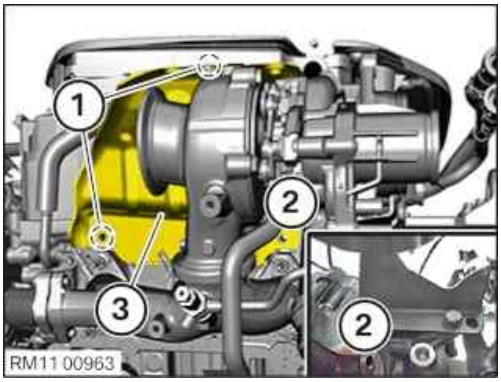
91 – Installing heat shield on exhaust turbocharger at the rear

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

92 – Installing heat shield on exhaust turbocharger at bottom

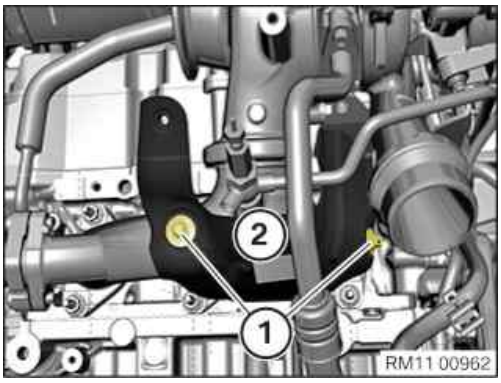
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Feed in and install the heat shield (2).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

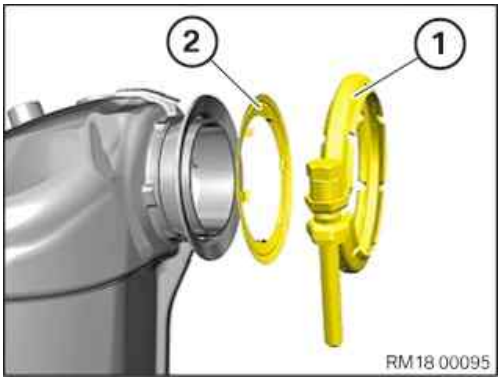
93 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

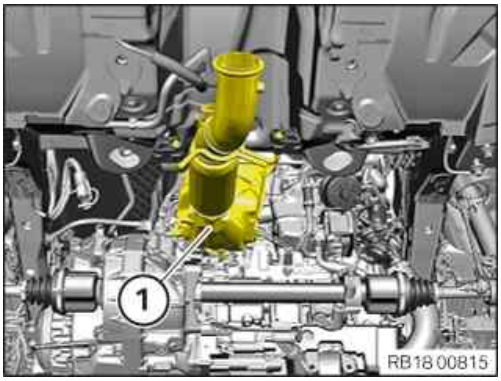


- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

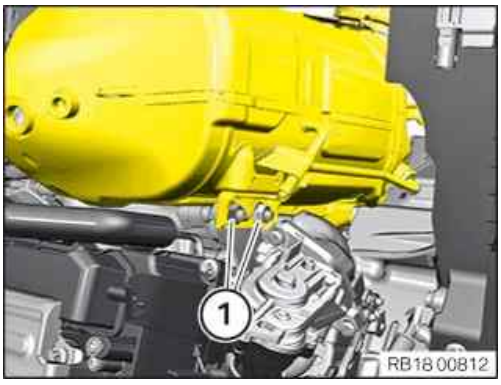
- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.



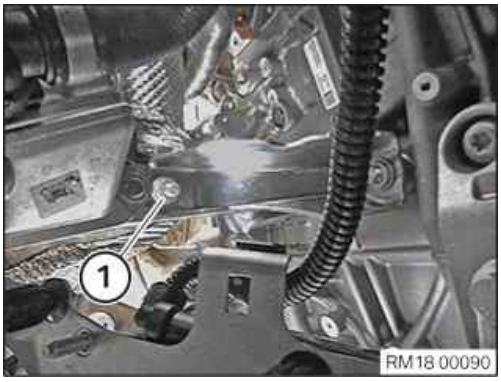
- Carefully insert and install the diesel particulate filter (1).

cardiagn.com

- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).



- Tighten nuts (1) by hand.



- Tighten the nut (1) hand-tight.

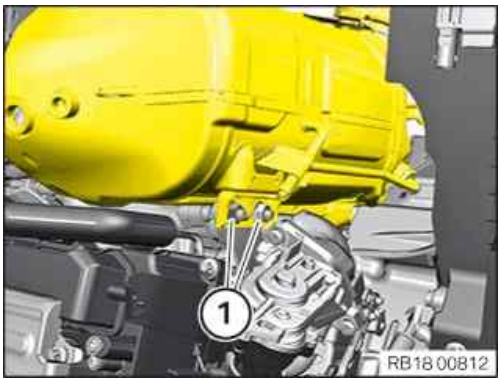
- Remove fitting aid (1) for the flexible tube.

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

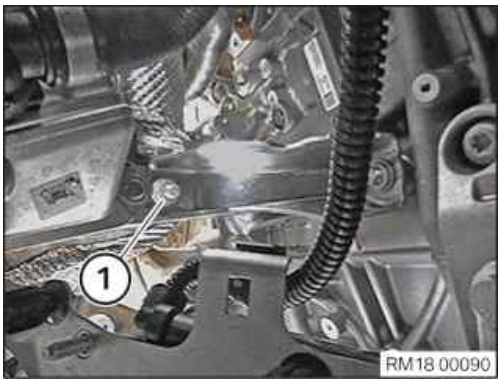
cardiagn.com



- Tighten nuts (1).

Diesel particle filter to holder

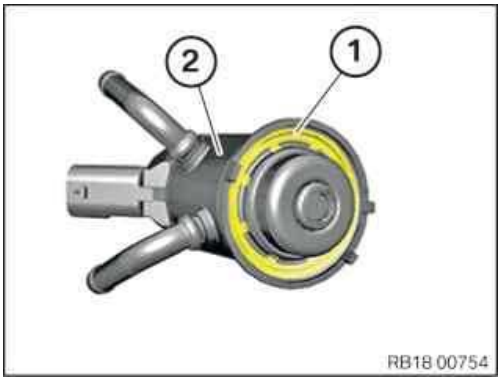
M8 hexagon nut		Tightening torque	19 Nm



- Tighten nut (1).

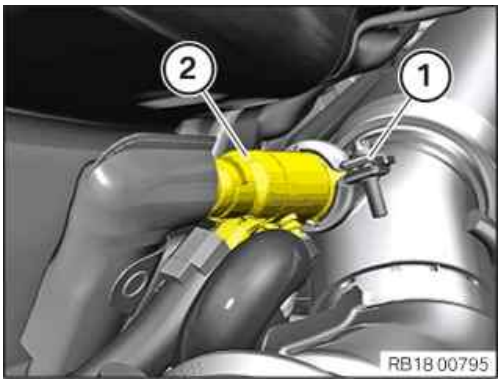
Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm



- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

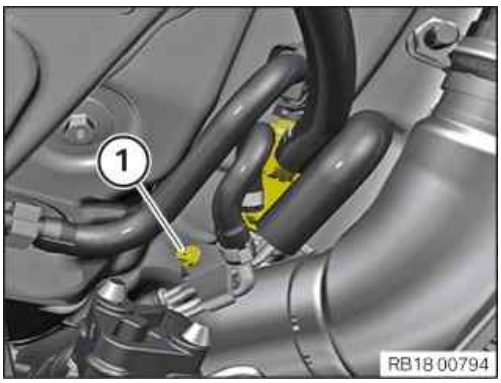


- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

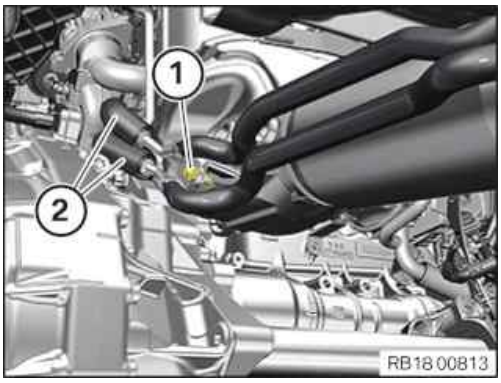


- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

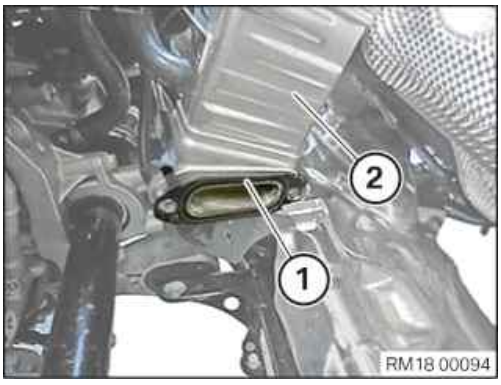
cardiagn.com



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

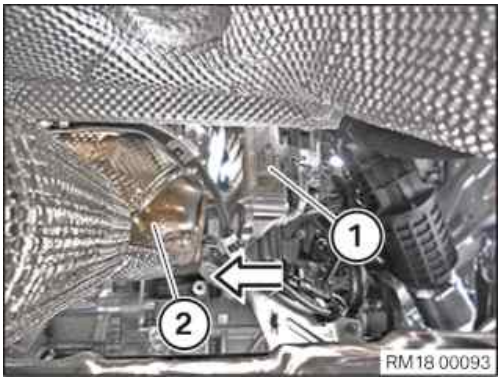
Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

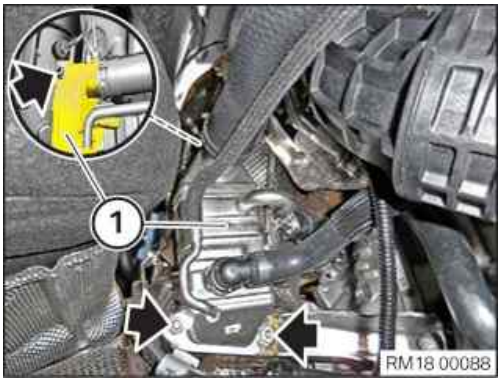


- Replace seal (1) of the low pressure exhaust-gas recirculation cooler (2).

  Parts: Gasket



- Feed in and install the low pressure exhaust-gas recirculation cooler (1) in at the diesel particulate filter (2) in the direction of arrow.

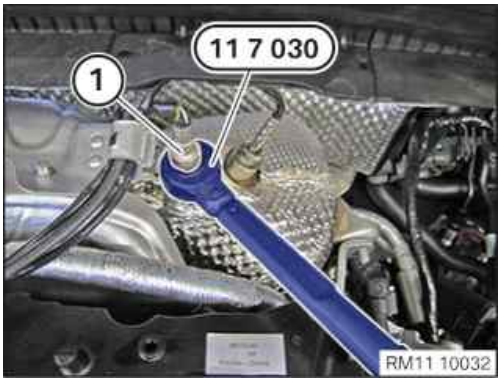


- Tighten nuts (arrows) of the low pressure exhaust-gas recirculation coolers (1).

Low-pressure exhaust-gas recirculation cooler to diesel particulate filter

Flange nutM8		Tightening torque	19 Nm

94 – Install the control sensor

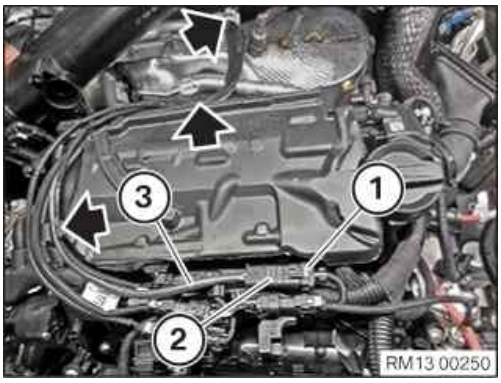


- Feed in front oxygen sensor (1) and install.
- Tighten the front oxygen sensor (1) with the special tool **0 491 075 (11 7 030)**.

Control sensor

Control sensor		Tightening torque	50 Nm

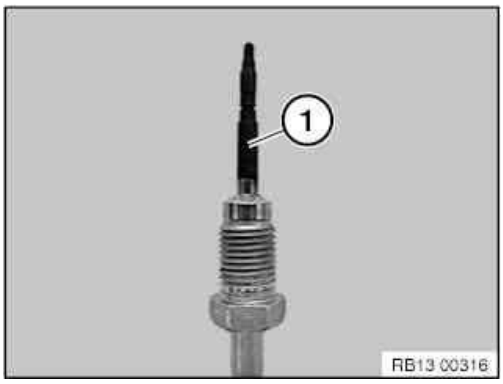
cardiagn.com



- Feed in and install cable (3) from the oxygen control sensor into the clamps (arrows).
- Secure connector (2) on holder.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

95 – Install the exhaust-gas temperature sensor on the diesel particulate filter



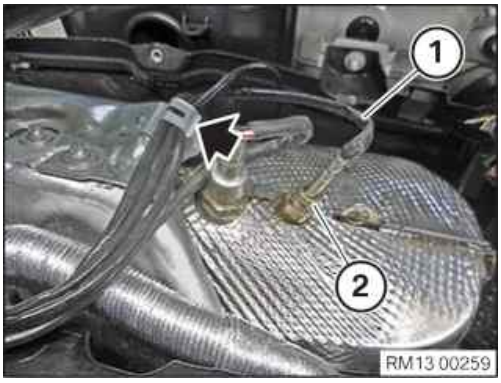
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.



- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

96 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

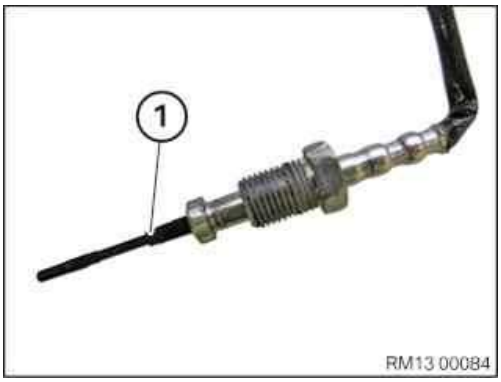
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

cardiagn.com



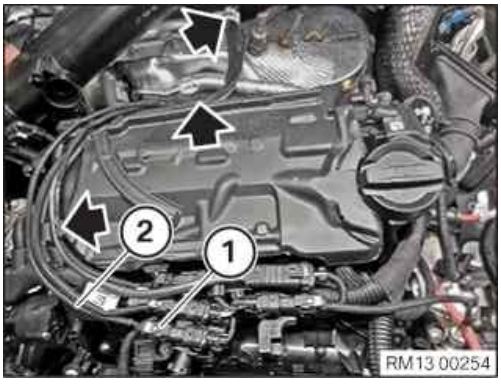
- Make sure the gauge tip (1) is not damaged during installation.

- Feed in and install the exhaust temperature sensor (1).

- Tighten the exhaust temperature sensor (1) with conventional tools (2).

Exhaust temperature sensor to diesel particulate filter

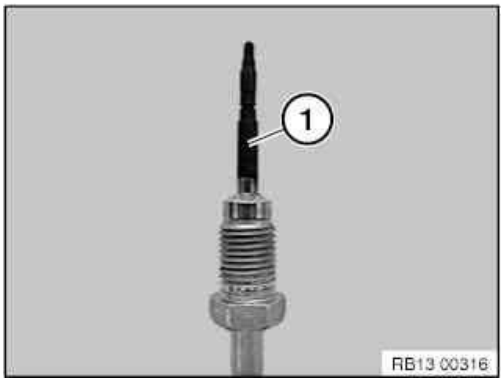
Exhaust-gas temperature sensor		Tightening torque	28 Nm



- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

97 – Installing exhaust temperature sensor on catalytic converter



RISK OF DAMAGE

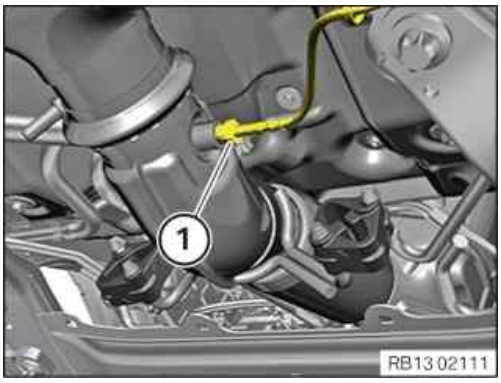
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

cardiagn.com

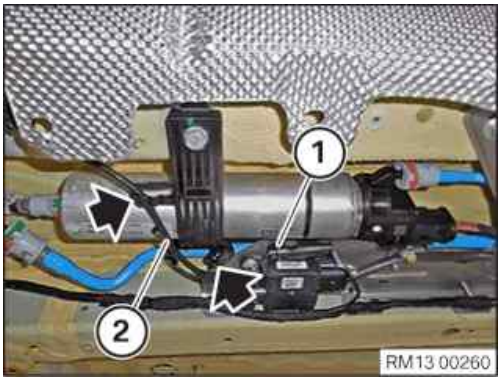


- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

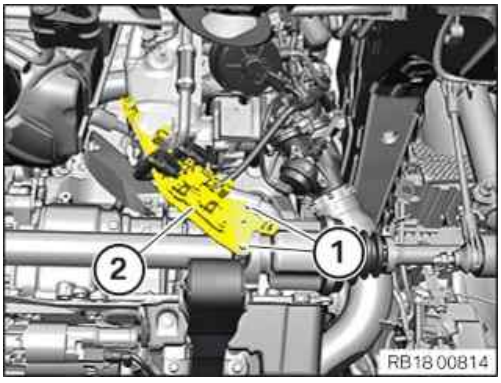
- Secure the cable clips (1).



- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

98 – Install holder for oxygen sensor

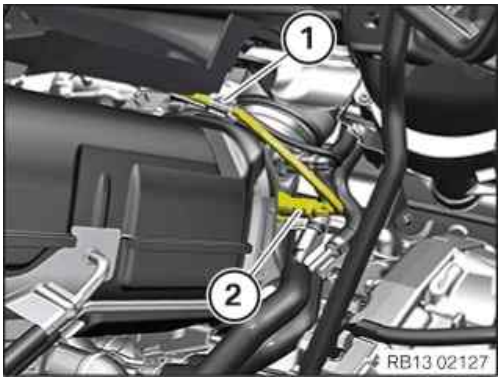


- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm

99 – Installing the nitrogen oxide sensor before SCR catalytic converter

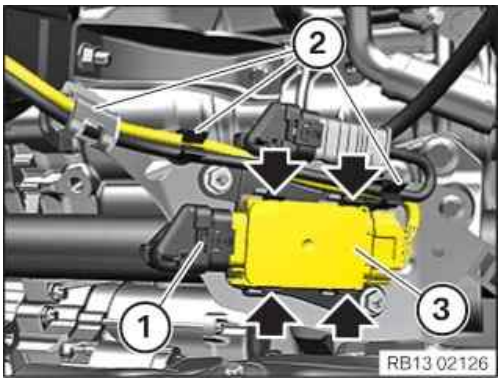


- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

Sensor		Tightening torque	50 Nm

cardiagn.com



- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

100 – Install the monitoring sensor

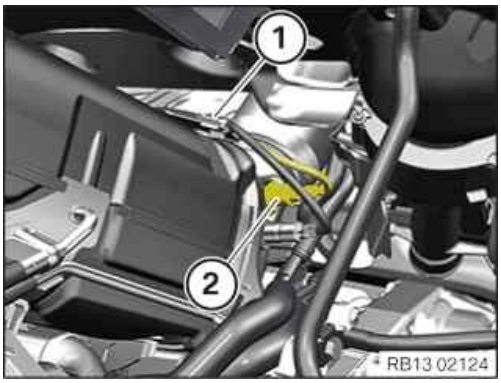
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

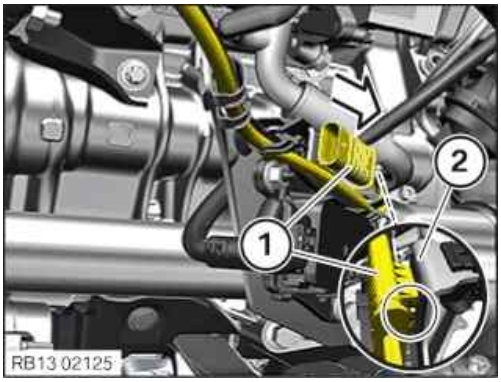


- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor

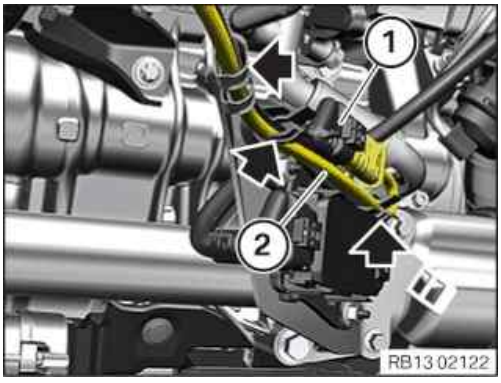
Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.



- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.



- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

101 – Installing starter motor

cardiagn.com

CAUTION

Improper routing of the positive battery cable.

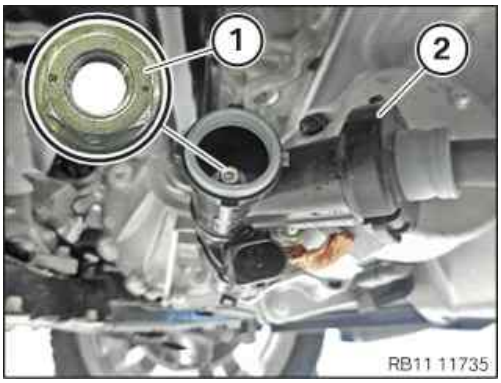
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm



- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

102 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

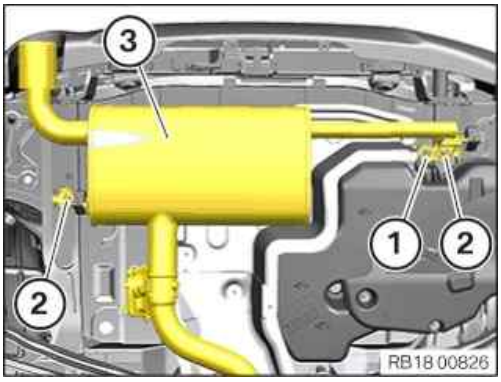
cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Insert and install the exhaust system (3) with the help of another person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

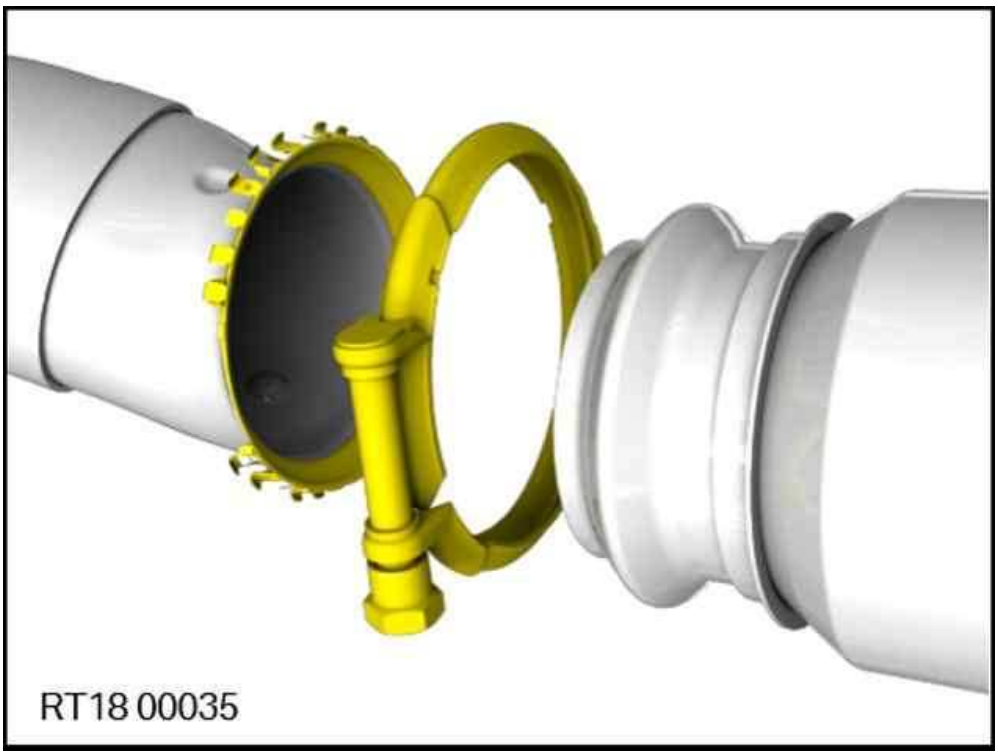
- Tighten down screw (1).

Exhaust bracket on body

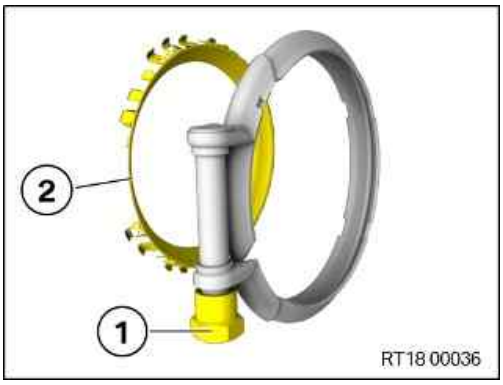
Hexagon screw M8x30		Tightening torque	19 Nm

▸ **Install the V-clip**

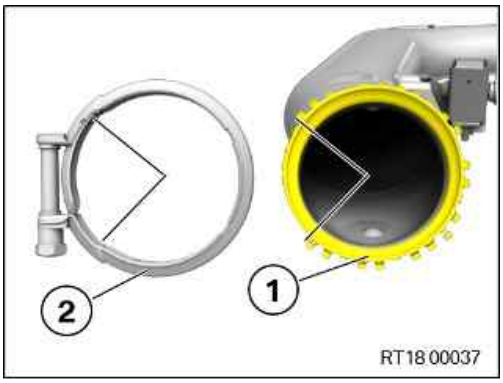
V-band clamp



cardiagn.com

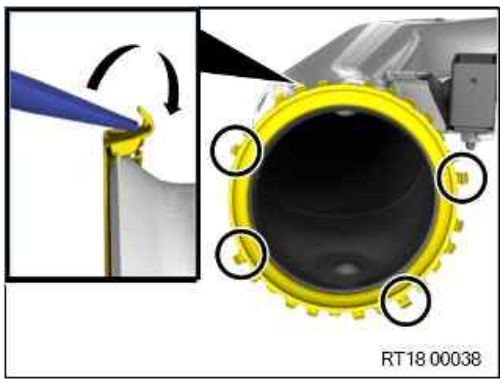


- Unscrew the nut (1) and remove the sealing ring (2).

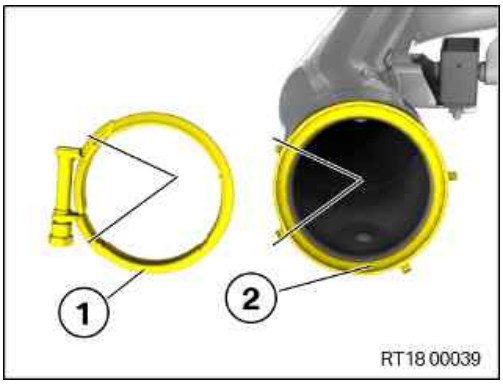


- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.



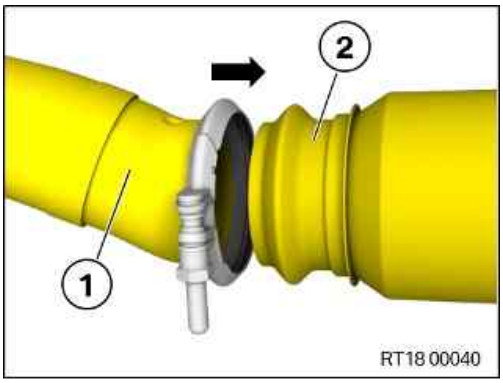
- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.



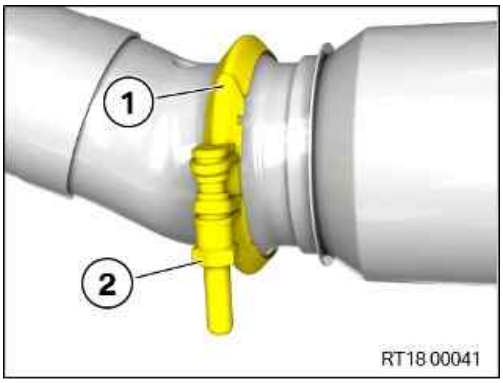
- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

cardiagn.com



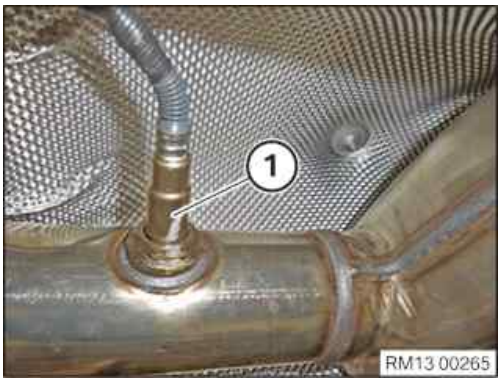
- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.



- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

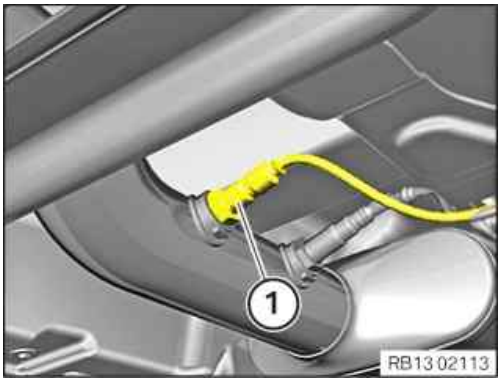
V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm



- Guide in, position and tighten the diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

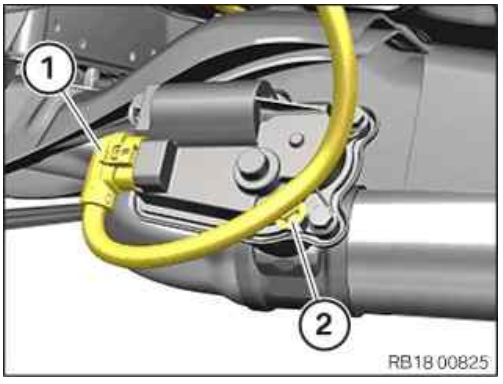
Sensor		Tightening torque	50 Nm



- Guide in, position and tighten the nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

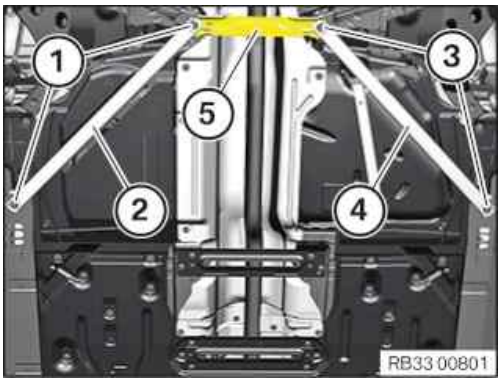


- Secure clamps (2).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

103 – Install the cross-member with torsion struts

cardiagn.com



- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

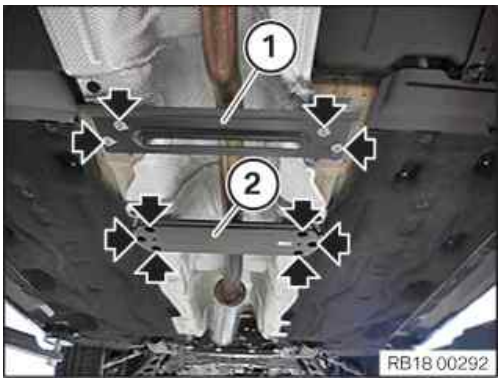
- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

104 – Install the connecting support on the tunnel in front and back



- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

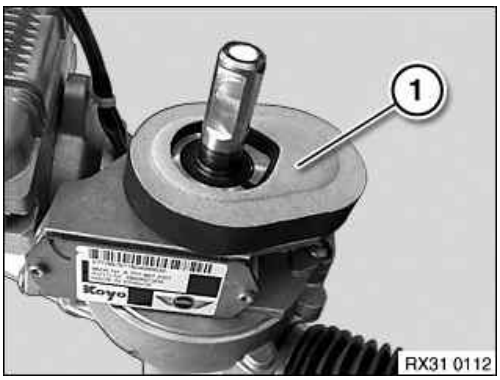
M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

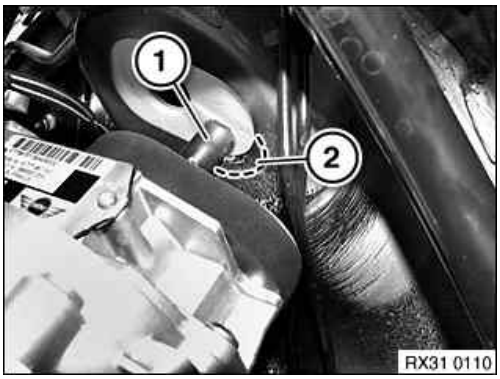
105 – Mount and secure the complete front axle



- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

cardiagn.com

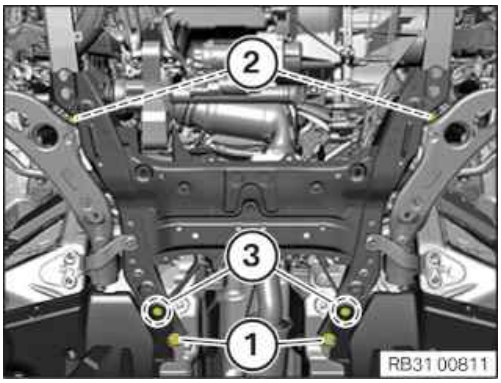


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

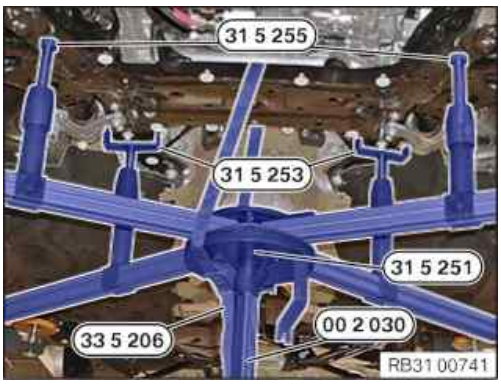
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).

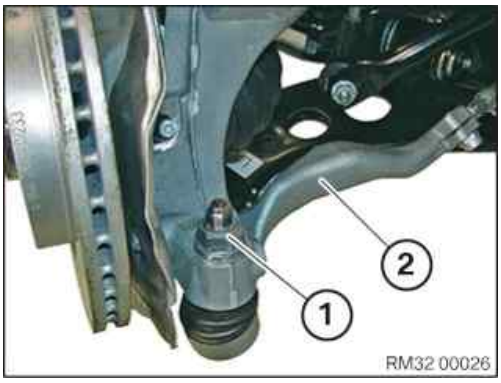
Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and place it to the side.

cardiagn.com



NOTICE

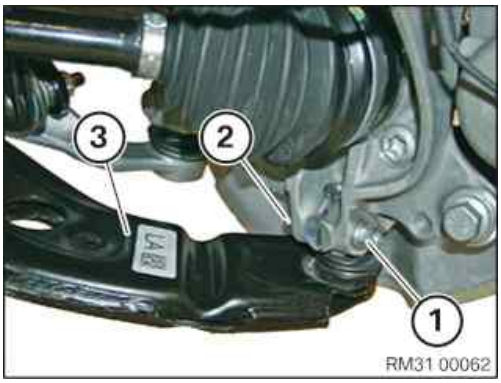
Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm



NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

106 – Install the mounted parts on the front axle support

NOTICE

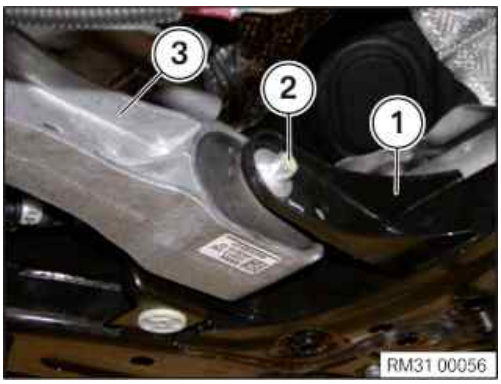
Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

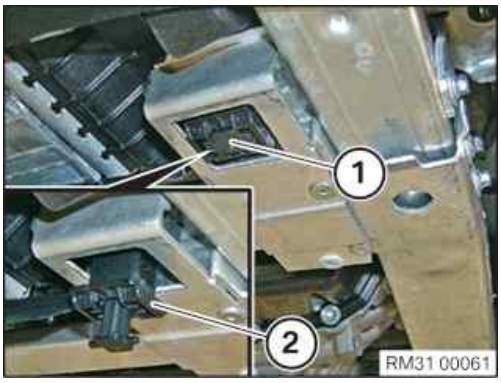


- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm

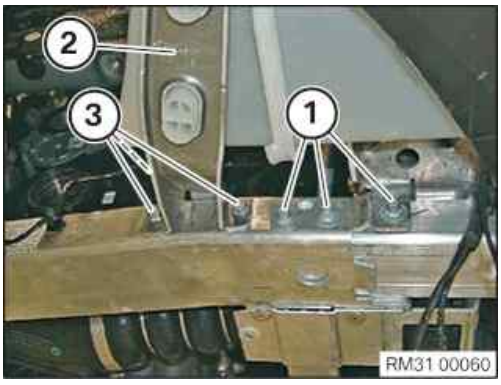
cardiagn.com



NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.



- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

Perform the operations on the left and right side.

- Tighten the screws (1).

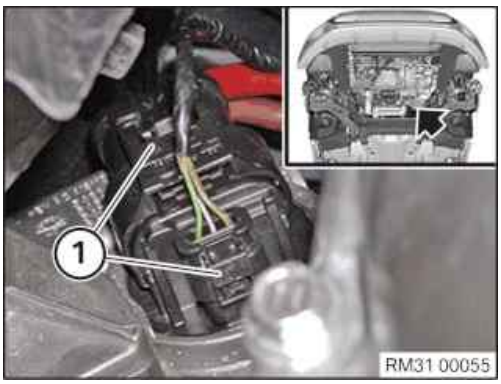
Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm

107 – Attaching connector at steering gear

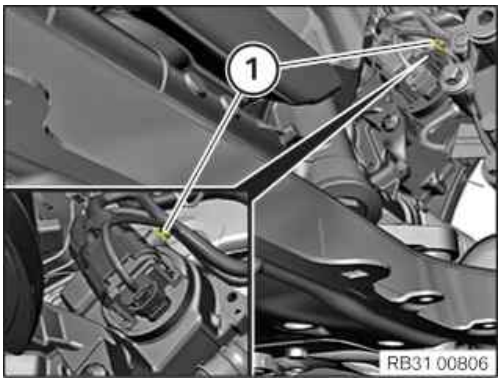
- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.



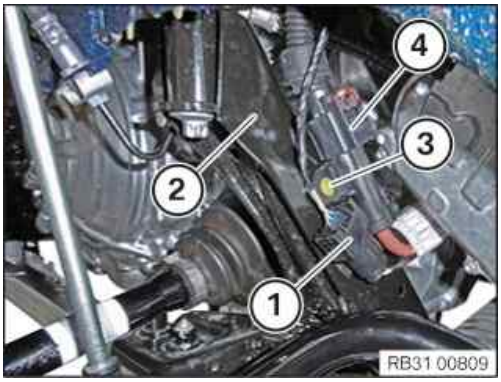
- Connect and lock connector (arrow) (1) with the steering gear.

cardiagn.com



- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

108 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

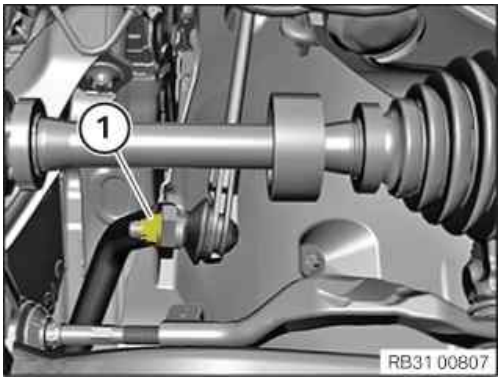
  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

109 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**



- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

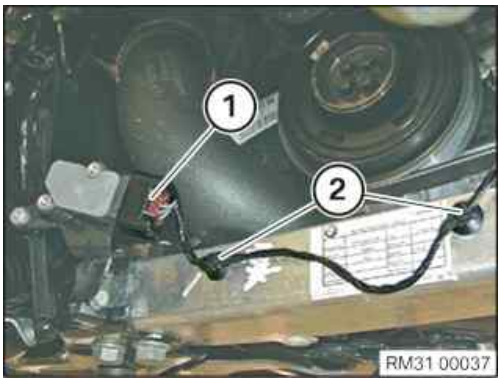
Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

110 – With right installation: Securing the cable for the ride height sensor

cardiagn.com



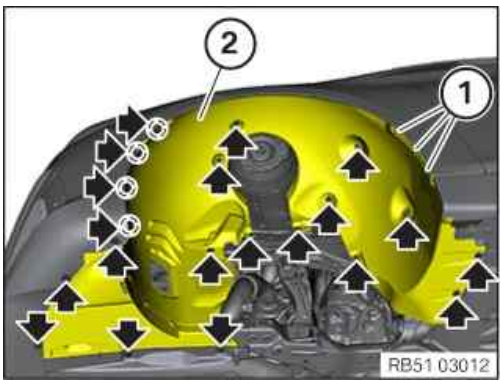
- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

111 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▶ **Installing the front wheel arch cover**



- Guide the wheel arch cover (2) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

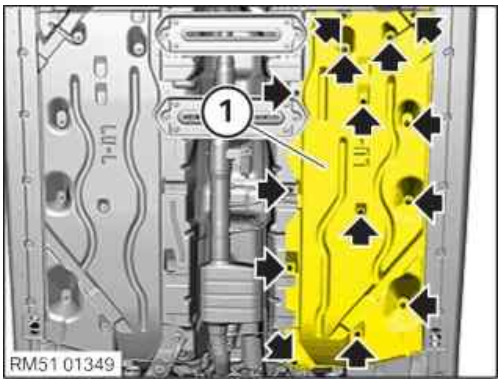
Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

- Secure expanding rivet (1).

112 – Installing underbody panelling , right



- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

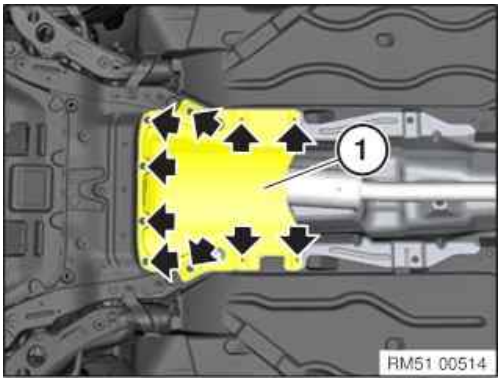
Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

113 – If installed: Installing underbody protection at rear



- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

114 – Mount the front left and right wheels

cardiagn.com

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

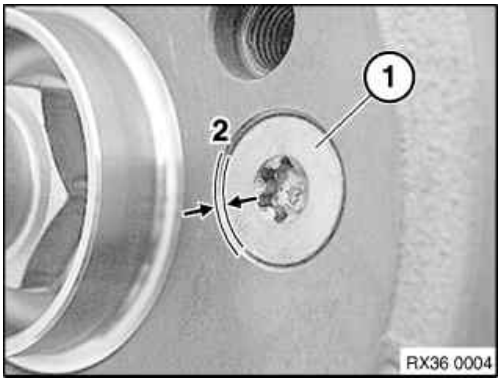
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

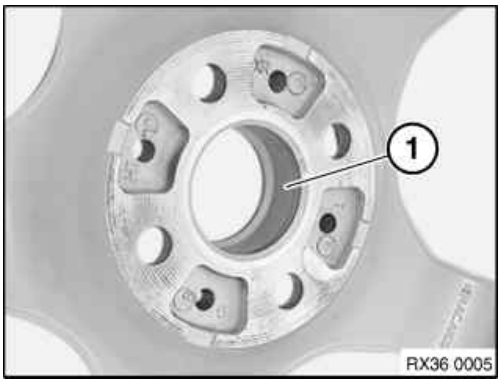
  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

◁

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

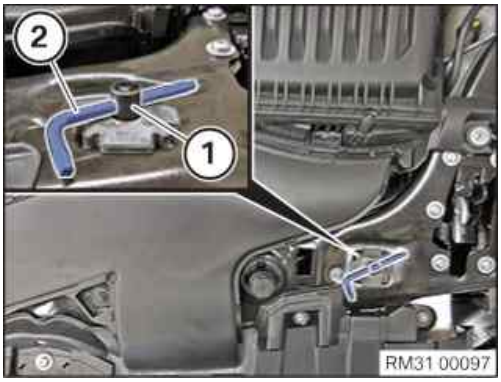
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check wheel bolts (arrows) and threads for damage, renew the wheel bolts if necessary.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

115 – Removing fastener for left and right radiator



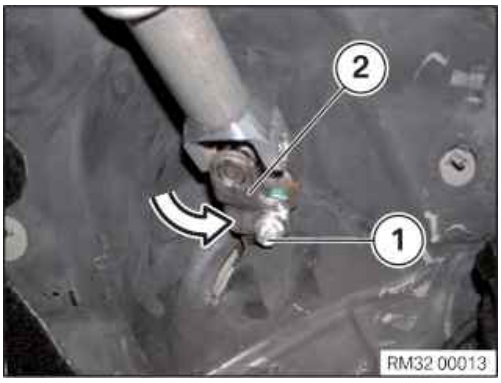
NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

116 – Secure the steering shaft at the bottom on the steering gear

cardiagn.com

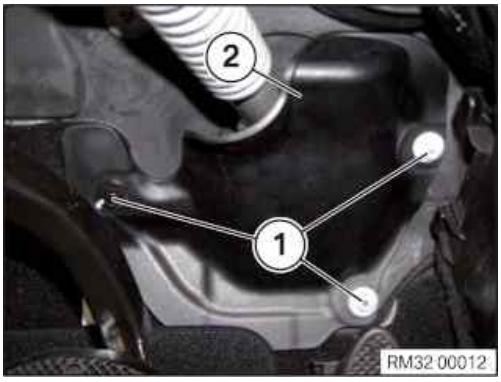


- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm



- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

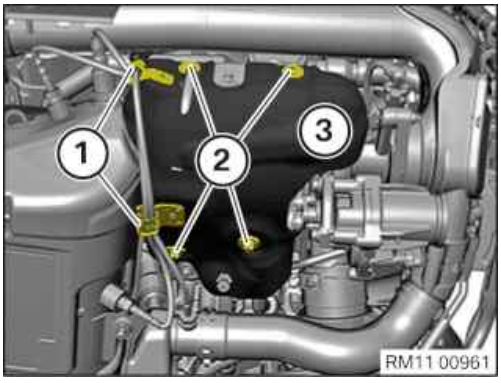
117 – Install the heat shield on the exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



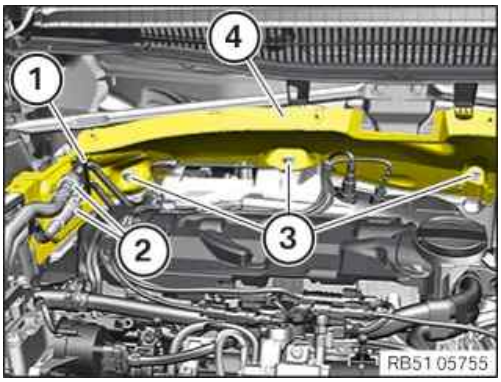
- Feed in and install the heat shield (3).
- Tighten down screws (2).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Secure cable in holders (1).

118 – Installing rear bulkhead upper part



- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

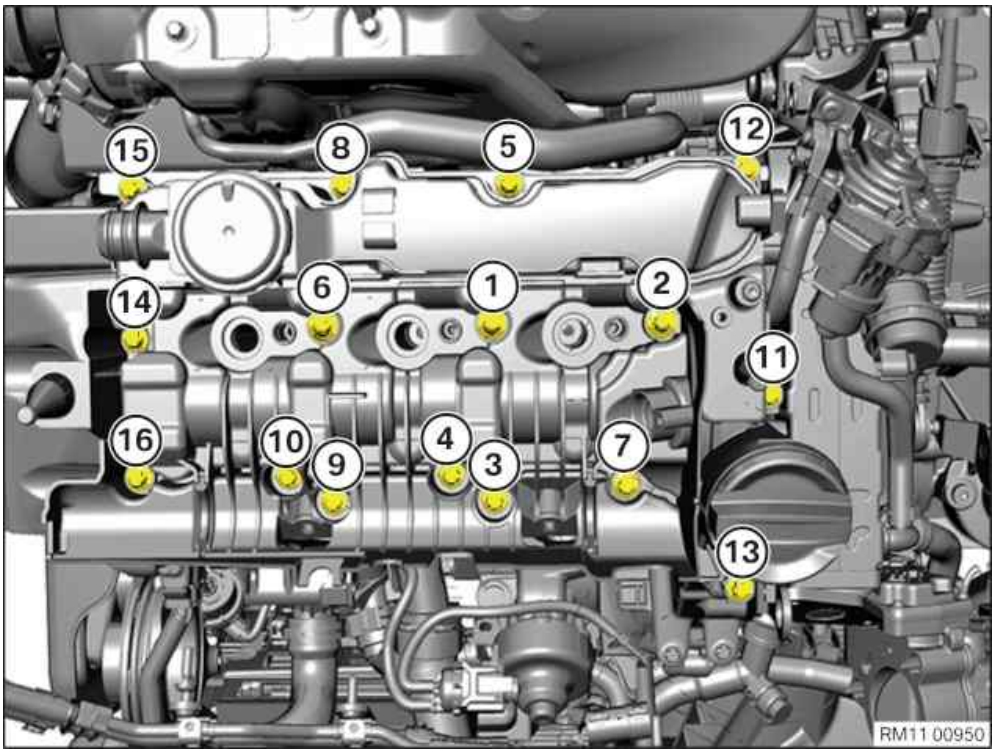
- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

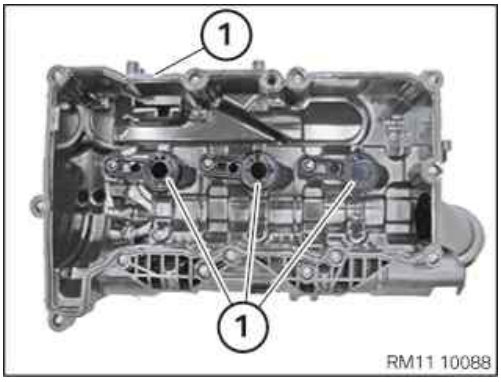
cardiagn.com

119 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

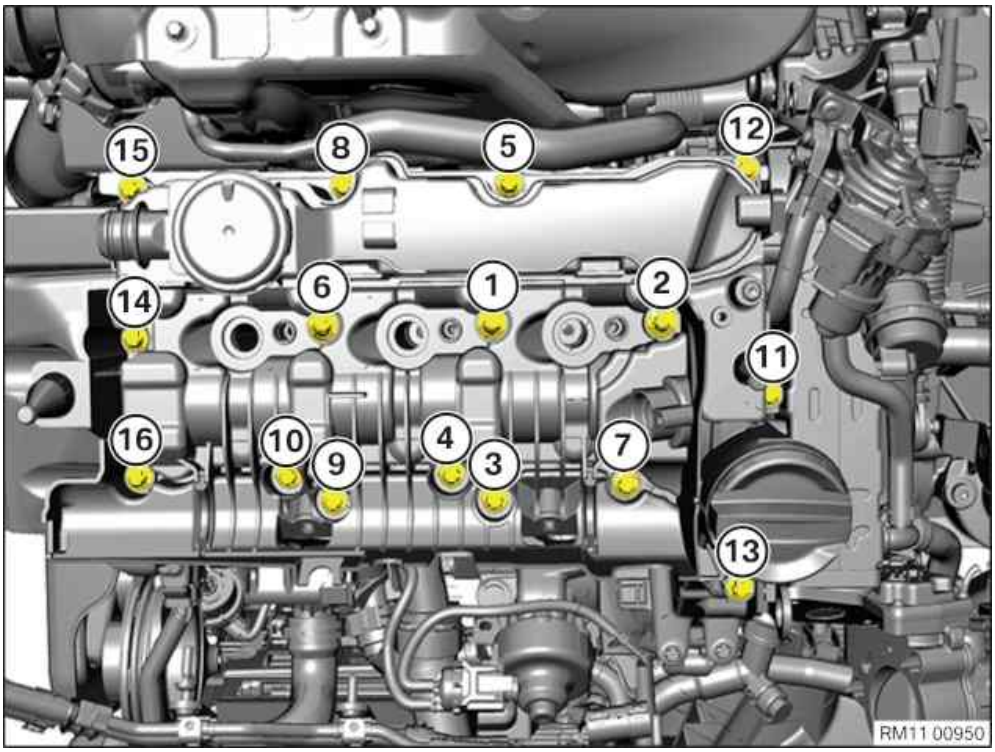


1 to 16 Bolts of the cylinder head cover



- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

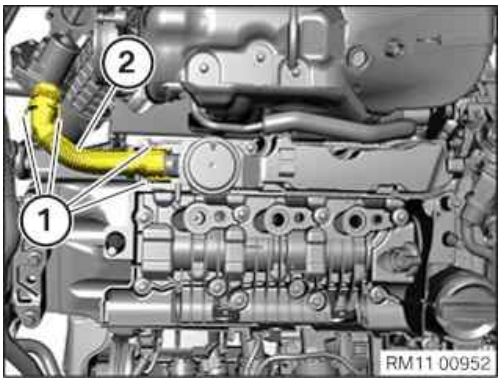


- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8,5 Nm

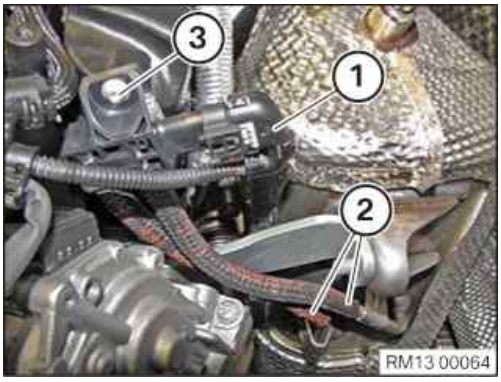
cardiagn.com



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

120 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

121 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.

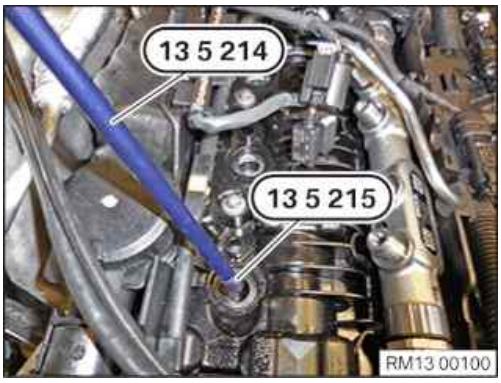
RISK OF DAMAGE

Contaminant or foreign body.

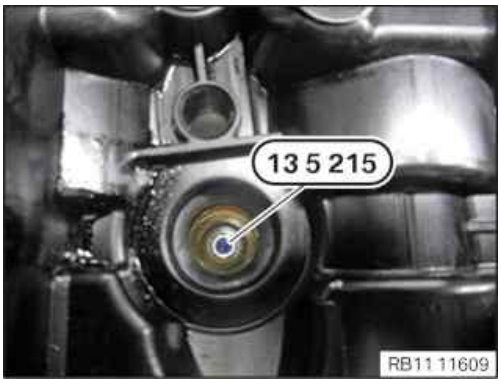
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com



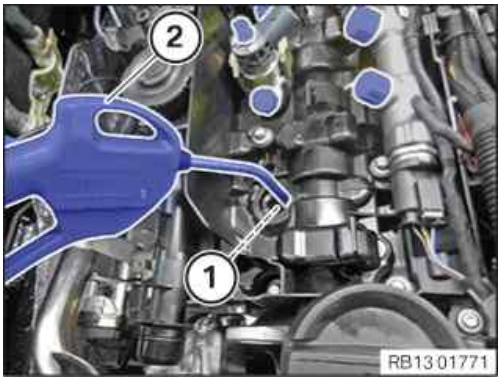
- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

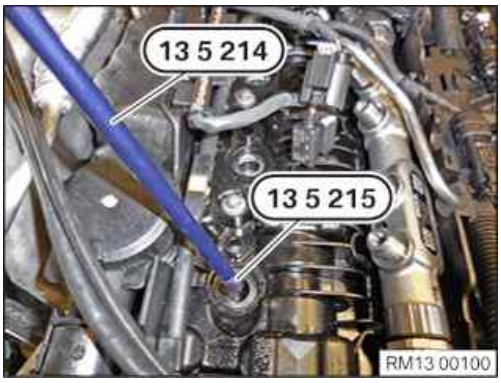
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.



- Blow out injector shaft (1) with air gun (2).

cardiagn.com



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

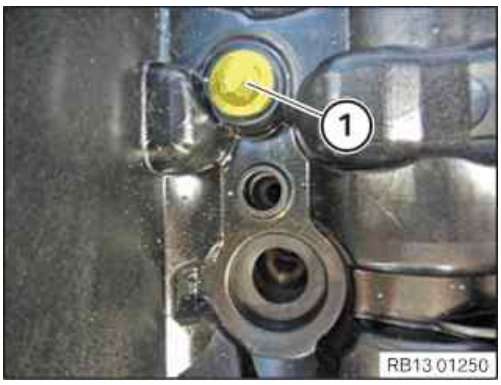
▶ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▶ **Prepare the injector for installation**

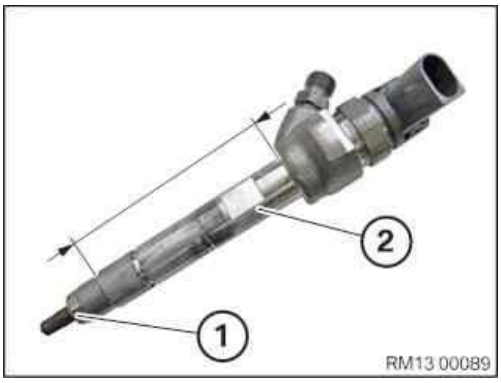
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com



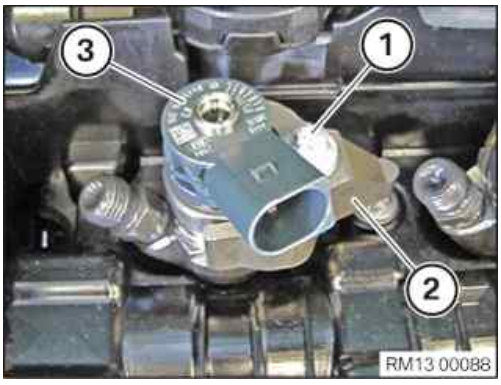
- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

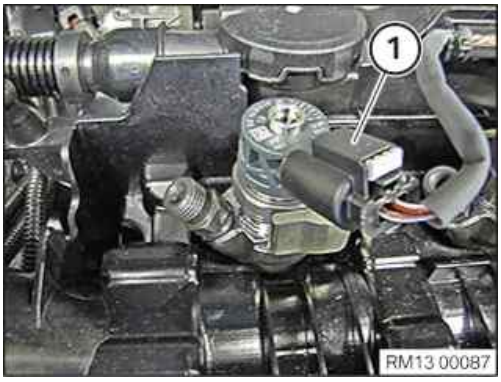
Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

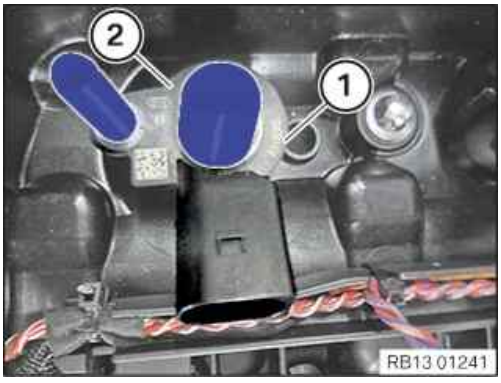
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

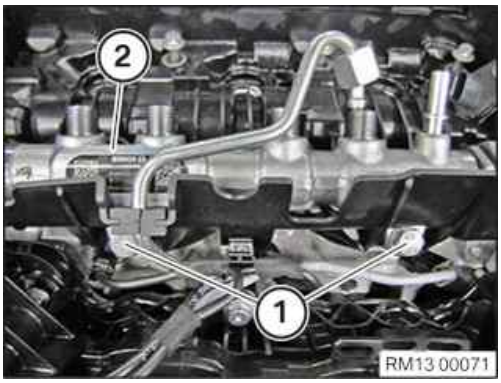


- Read off the adjustment value (1) on the new injector (2).

cardiagn.com

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

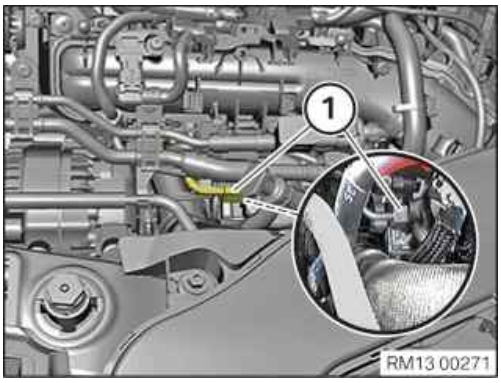
122 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm



TECHNICAL INFORMATION

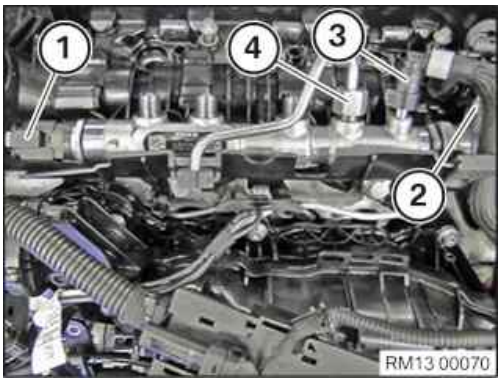
Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

123 – Installing high pressure line between rail and high pressure pump

WARNING

Working on fuel system.

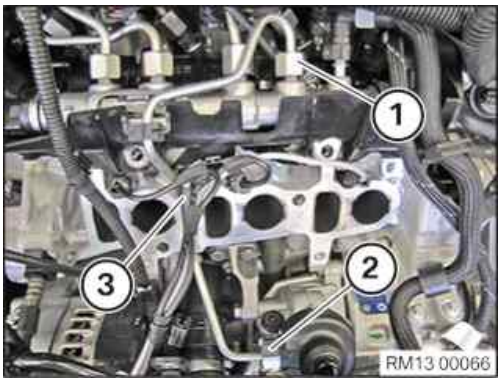
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com



- Remove special tool **2 413 106**.
- Thread in and install the high pressure line (3).
- Make sure that the rubber grommet is positioned correctly in the area of the cylinder head cover.
- Tighten the union nut (1) hand-tight.
- Tighten the union nut (2) hand-tight.
- Ensure that high pressure line (3) is installed without any strain.

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the union nut (1) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Tighten the union nut (2) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

124 – Installing high pressure lines between rail and injectors

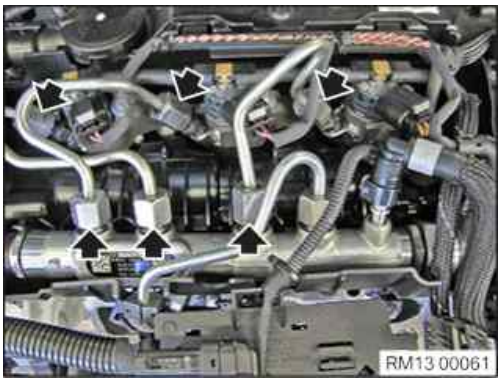
TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

125 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

126 – Installing the exhaust-gas recirculation cooler

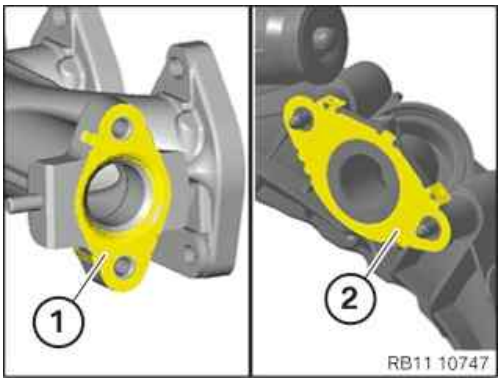
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

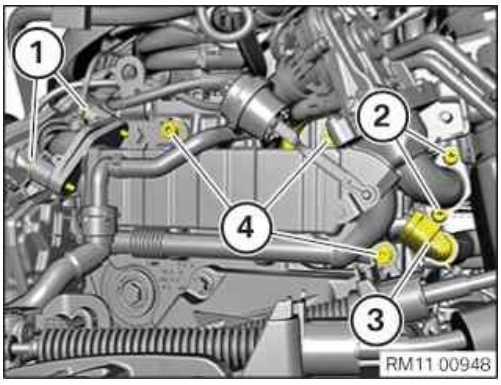


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

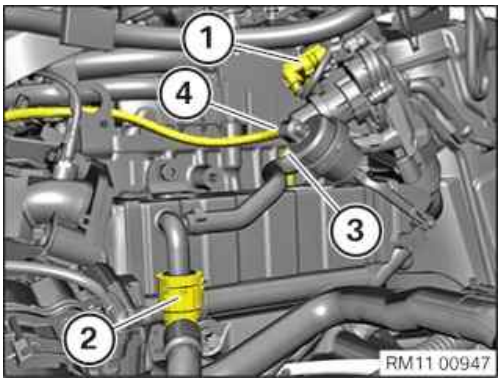
  The coolant hose (3) must audibly engage.

- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com



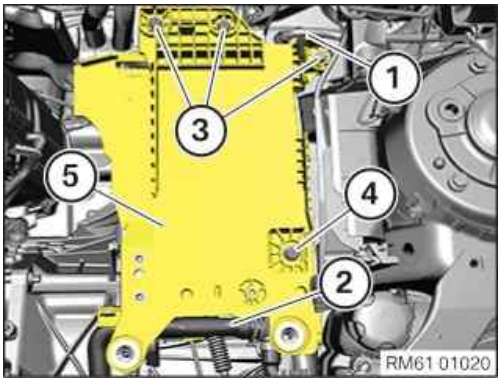
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

127 – Install the battery holder



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

128 – Install electronics box

Prerequisite

Battery earth lead is disconnected.

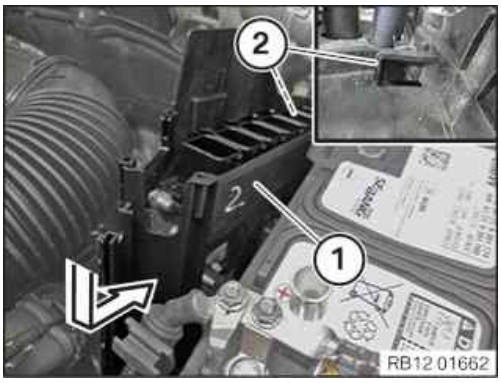
RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

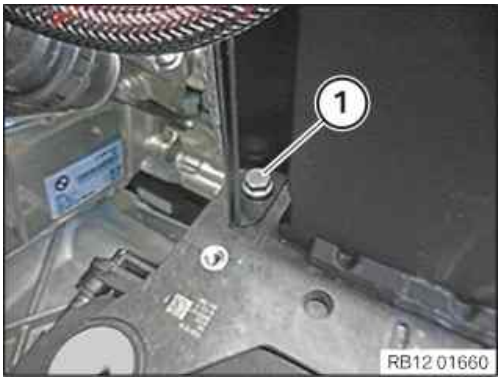
- Route all cables without abrasions, do not trap and crush.

cardiagn.com



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

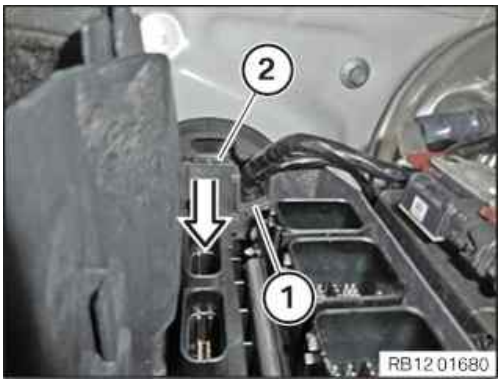
- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



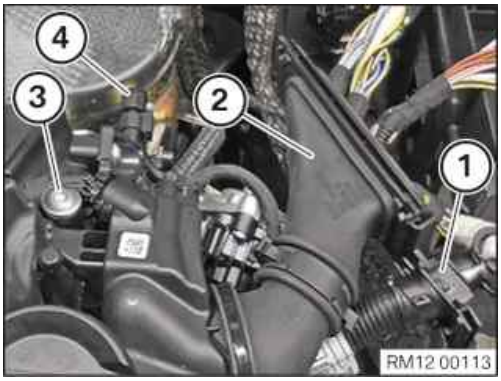
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



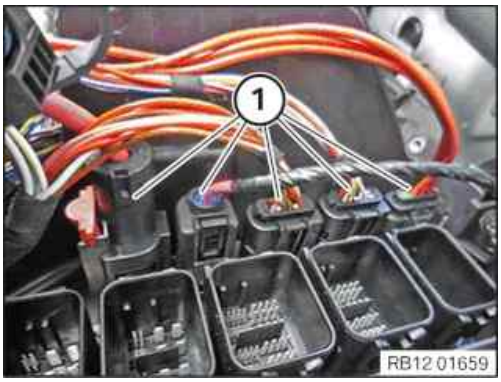
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

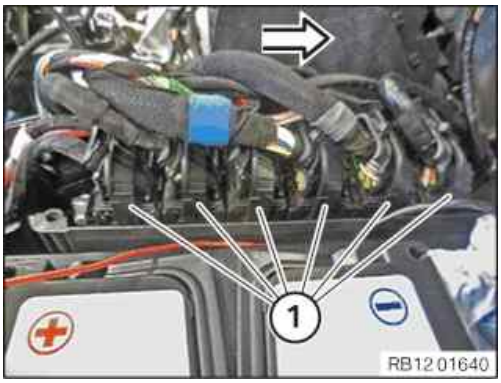
TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

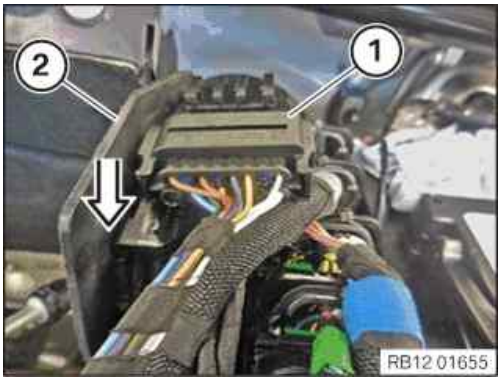
cardiagn.com



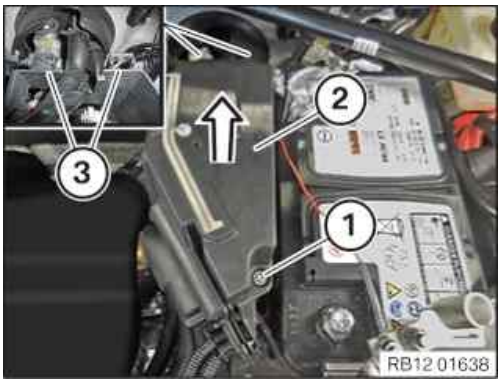
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

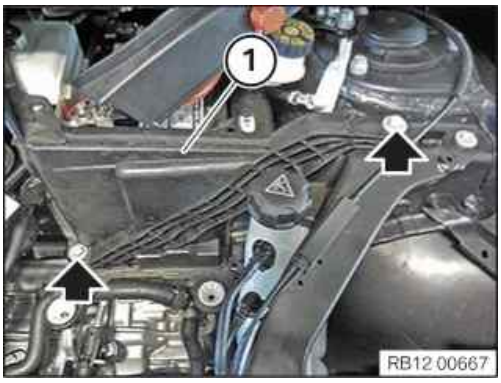
RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (1).
- Tighten screws (arrows).

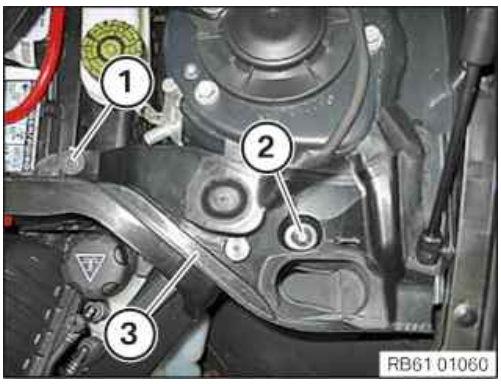
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

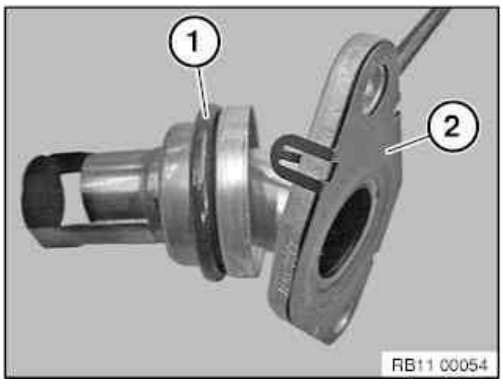


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

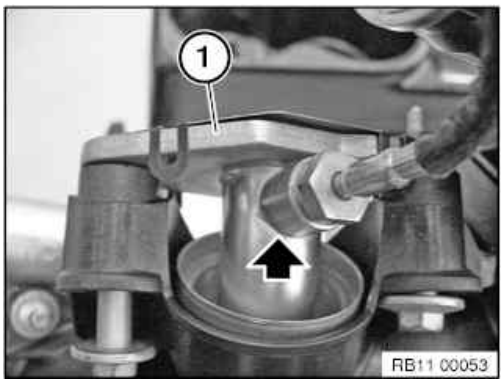
129 – Installing the intake plenum



- Renew O-ring (1).

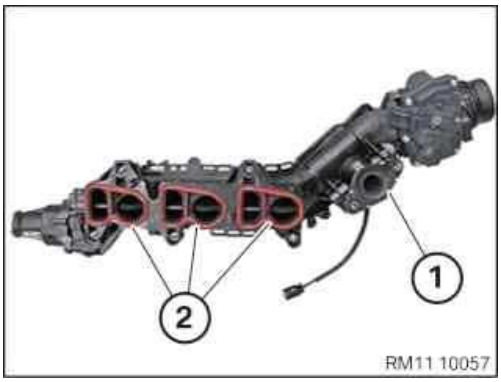
  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.



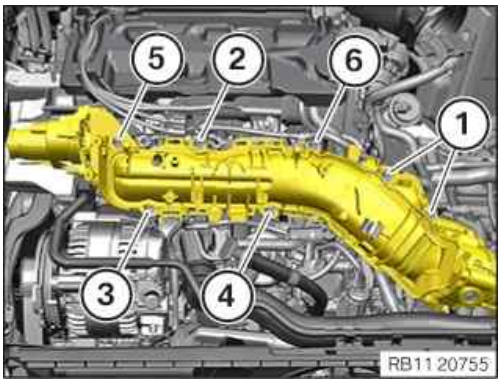
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

cardiagn.com



- Renew gaskets (2).

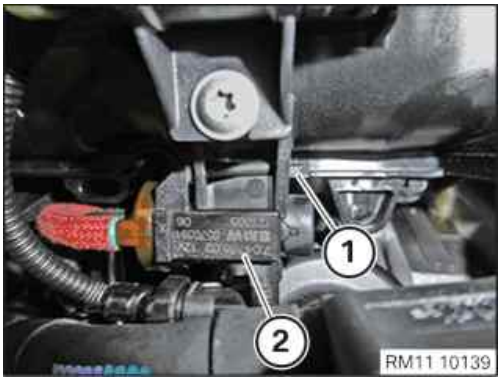
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



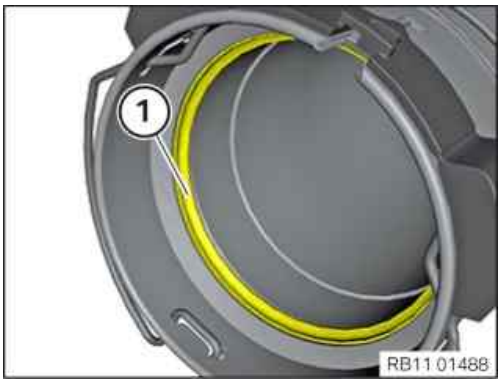
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm

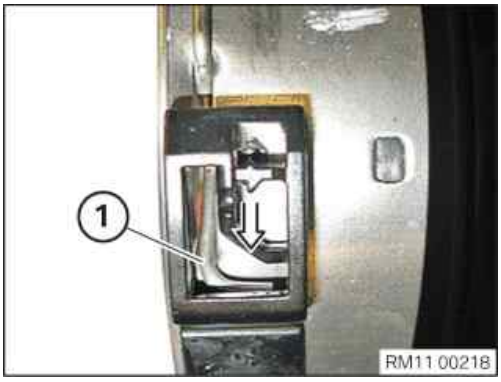


- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.



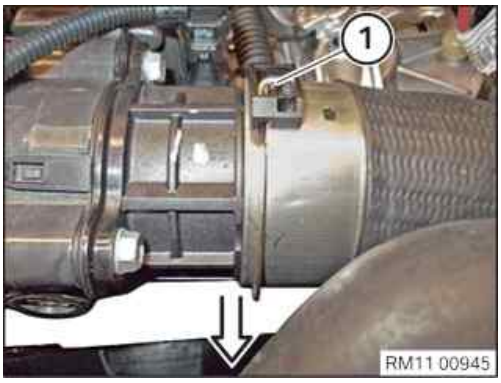
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring



- Engage the lock (1) on the bracket (arrow).

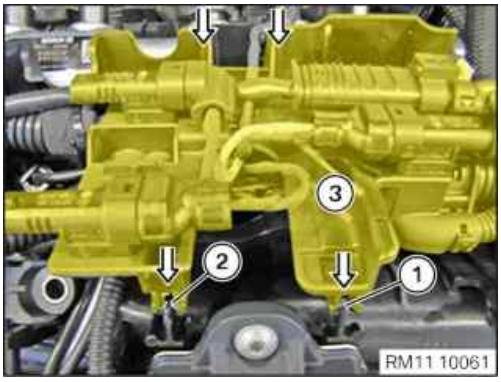
cardiagn.com



- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

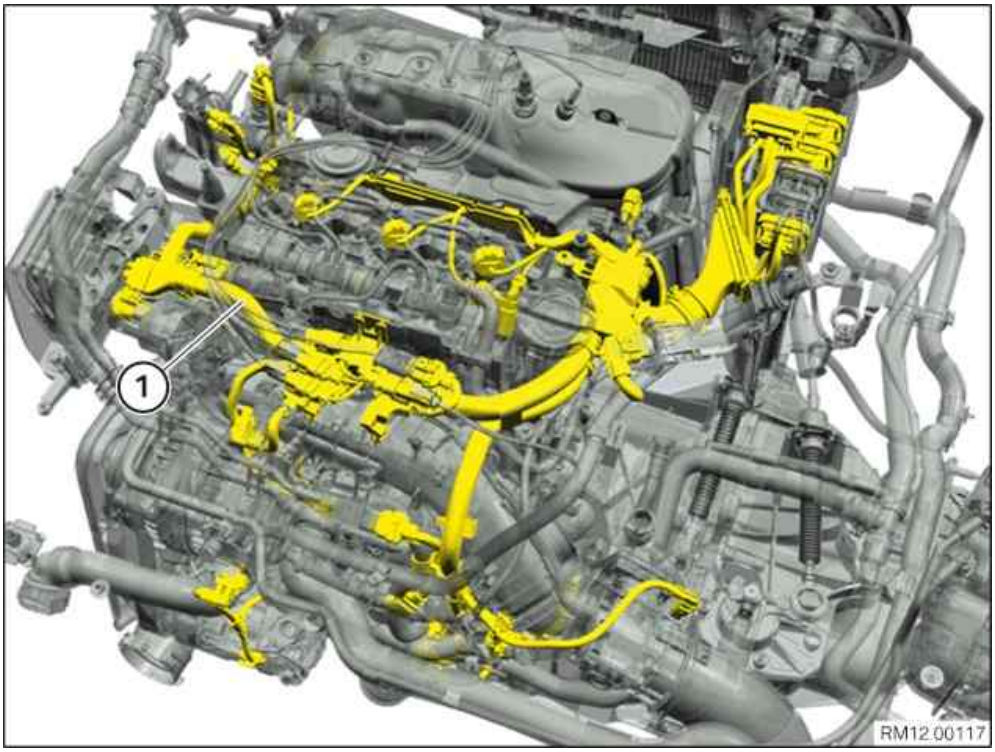
130 – Installing the cable clip for the intake plenum



- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).

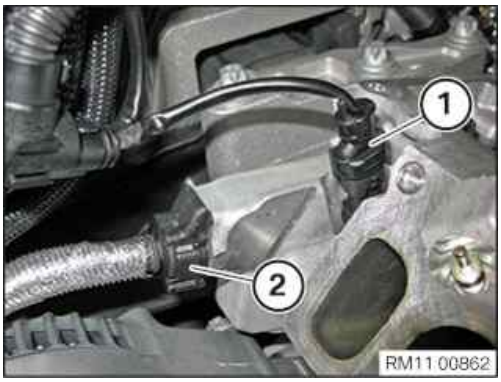
131 – Fastening the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine

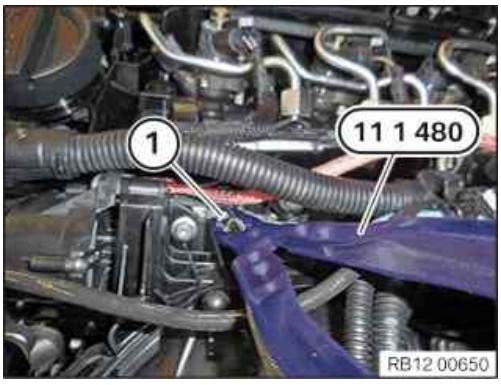


1 Wiring harness section for the engine

cardiagn.com

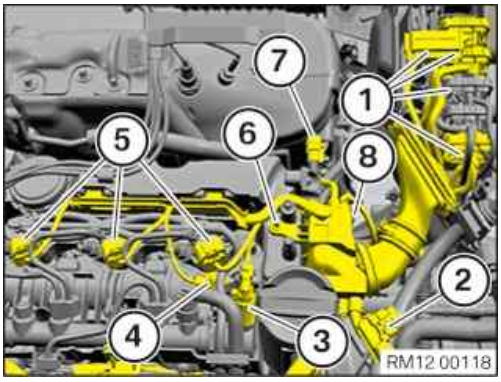


- Connect the coolant line (2) and lock the clamp.
- Connect and lock the connector (1).
- The locks must engage audibly.



- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

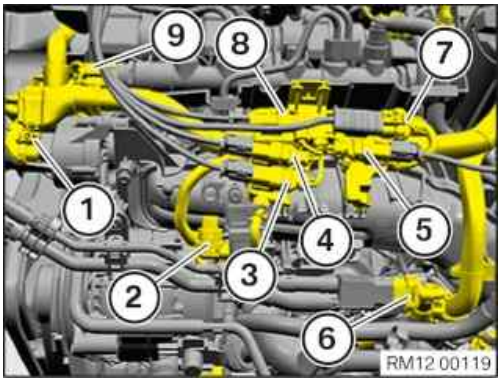


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

Wiring harness to cylinder head cover

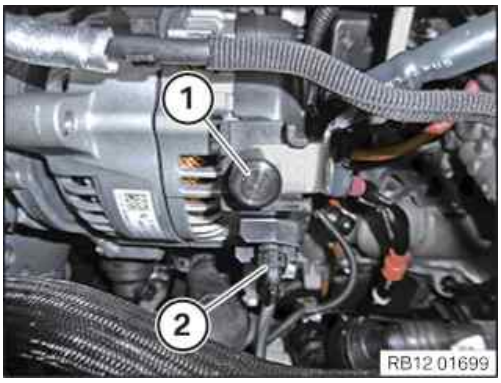
TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.



- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.

cardiagn.com

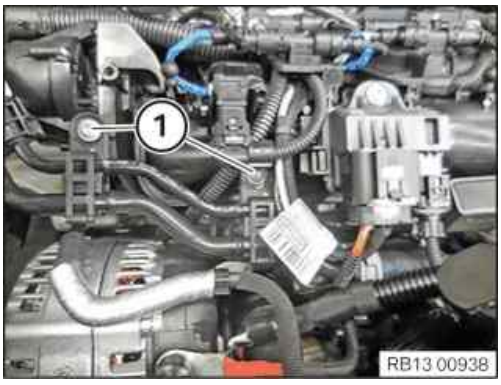


- Connect and lock the connector (2).

  Lock must audibly engage.
- Connect positive battery cable (1) on alternator and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

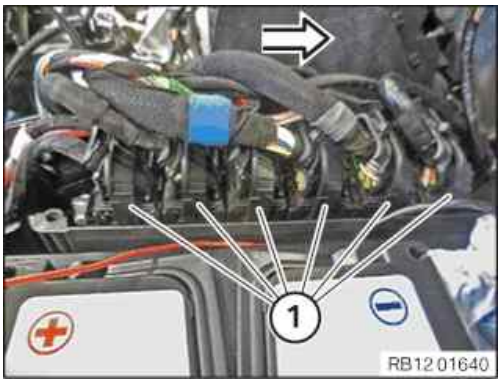


- Position fuel lines.
- Tighten the screws (1).

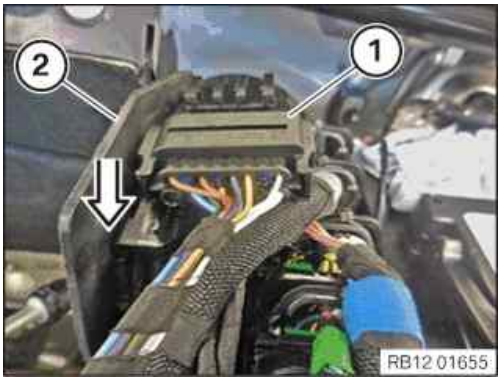
Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

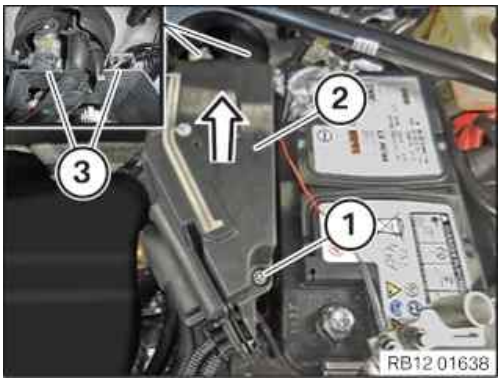


- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

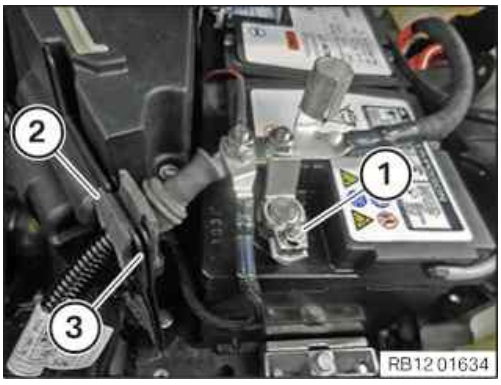
cardiagn.com



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

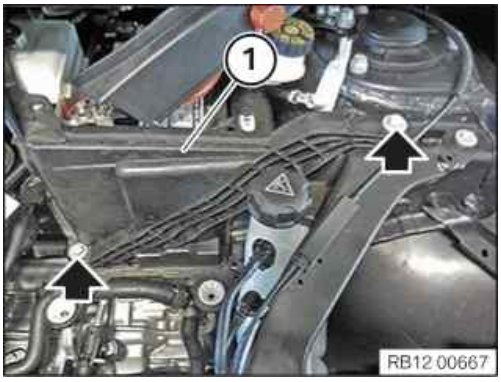
RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (1).
- Tighten screws (arrows).

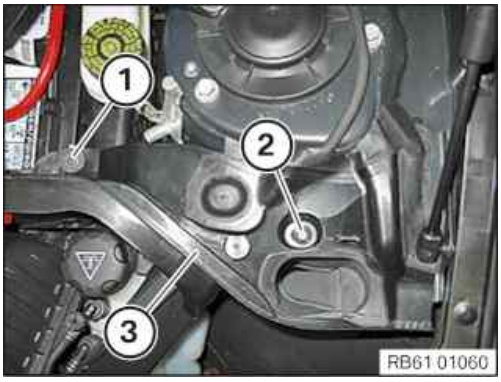
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm



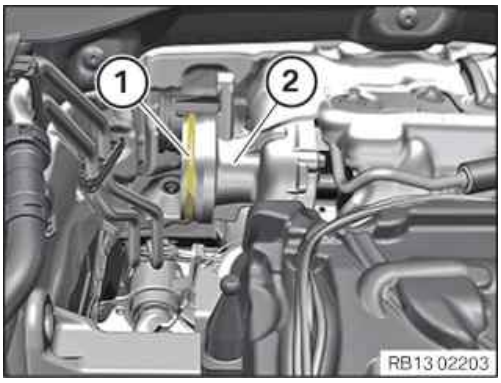
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

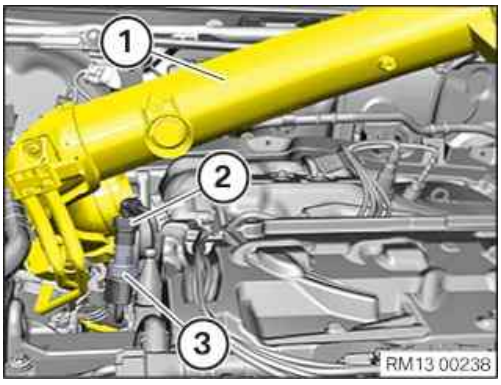
Screw			2,8 Nm

132 – Installing clean air pipe

cardiagn.com



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.



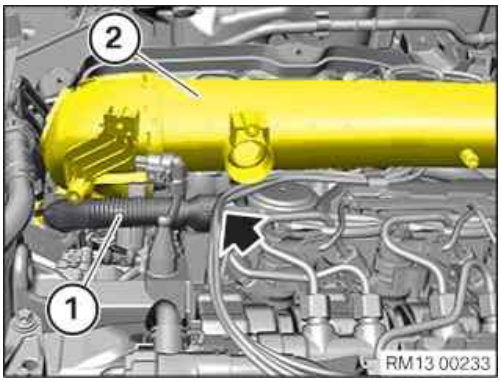
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

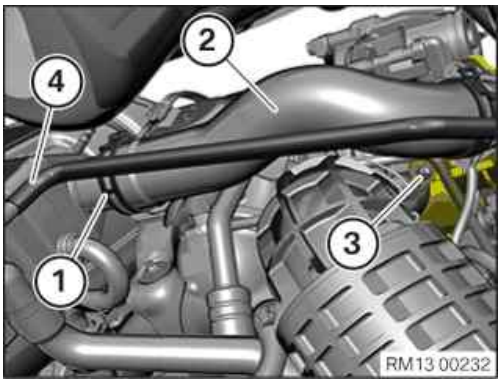
Exhaust gas pressure sensor		Tightening torque	13,5 Nm

- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

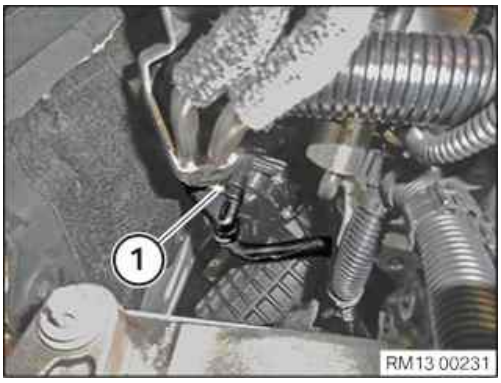
- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

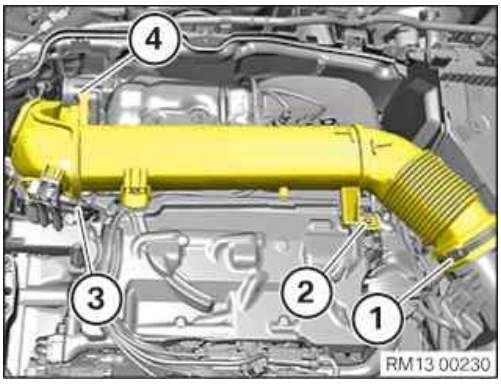
Clamp 15–19mm		Tightening torque	3 Nm

cardiagn.com



- Connect and lock the connector (1).

  The connector (1) must lock audibly.



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

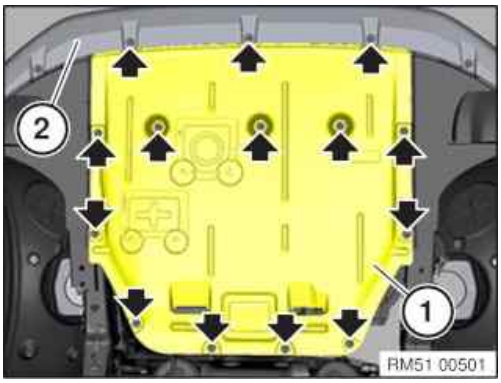
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

133 – Installing the front underbody protection

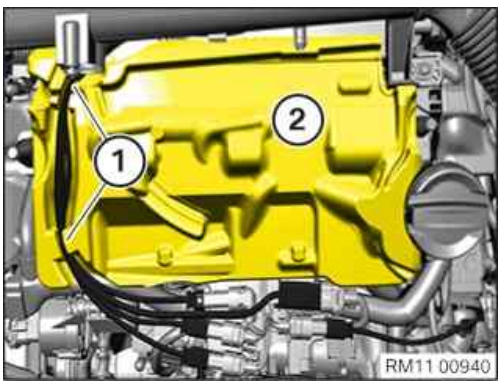


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

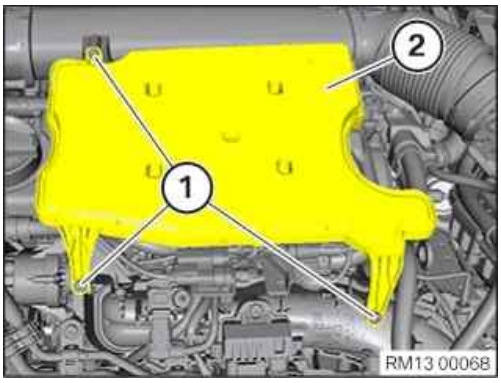
134 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

135 – Install resonator

cardiagn.com



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

136 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

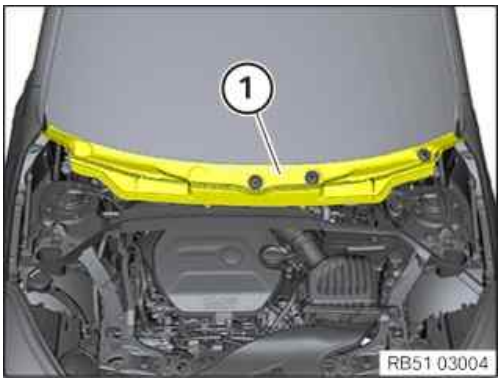
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

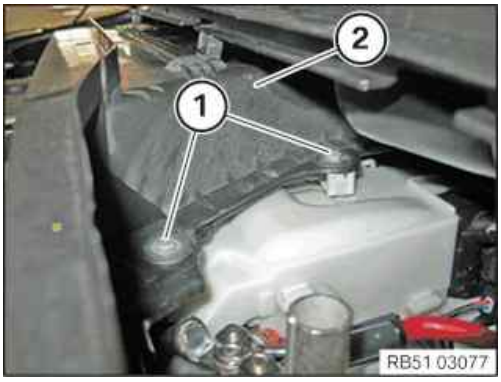
137 – Install the rear cowl panel cover

cardiagn.com



- Feed in and engage the rear cowl panel cover (1).

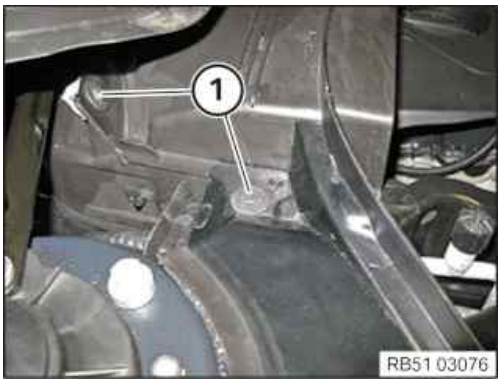
138 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

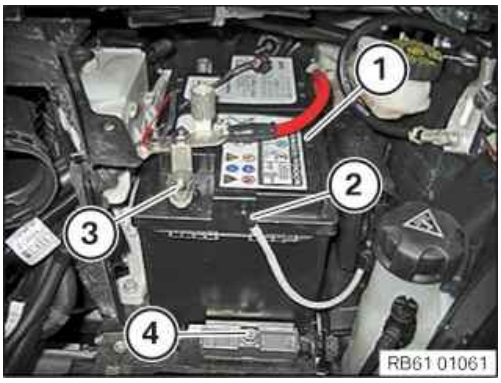
Screw		Tightening torque	3 Nm

139 – Install vehicle battery

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Install vehicle battery (1).
- Tighten the holder with the bolt (4).

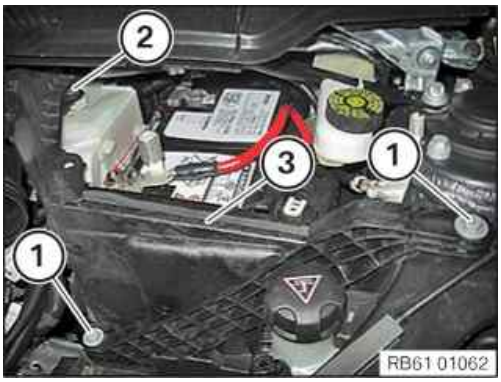
Battery terminal rail to battery tray

M8 screw		19 Nm

- Position the vent hose (2).
- Position the positive terminal.
- Tighten the nut (3) on the positive terminal.

Positive battery terminal

NutM6		5 Nm



- Insert the tension strut (3).
- Tighten down screw (2).

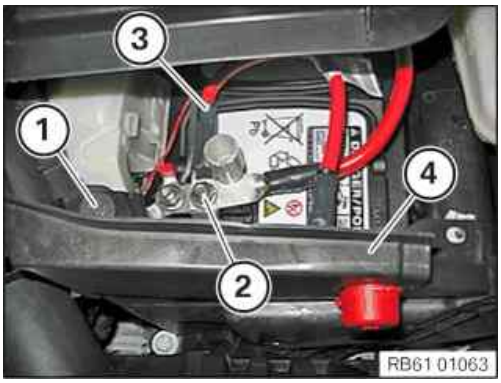
Battery cover

Screw		2,8 Nm

- Tighten the screws (1).

Trailing link

M8 screw		19 Nm



- Position the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten down screw (1).

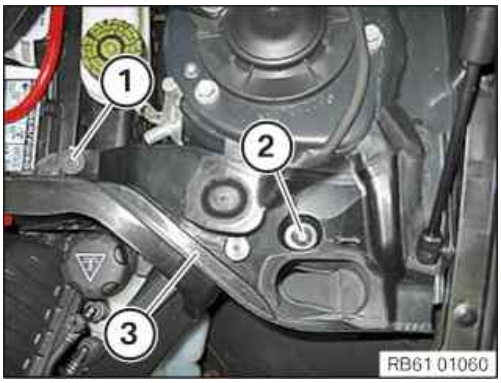
Battery cover

Screw		2,8 Nm

- Tighten the nut (2) on the positive terminal.

Positive battery cable to battery terminal

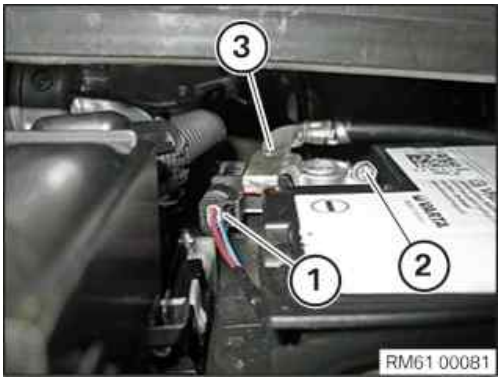
Nut M8		15,2 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm



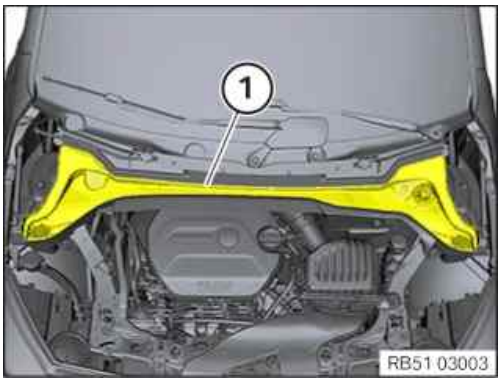
- Position the negative battery terminal (3).
- Tighten nut (2).

Negative battery terminal (with IBS)

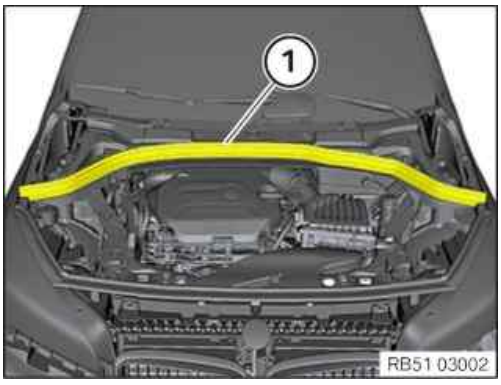
NutM6		5 Nm

- Connect connectors (1) and lock.

cardiagn.com



- Feed in the cowl panel cover (1).



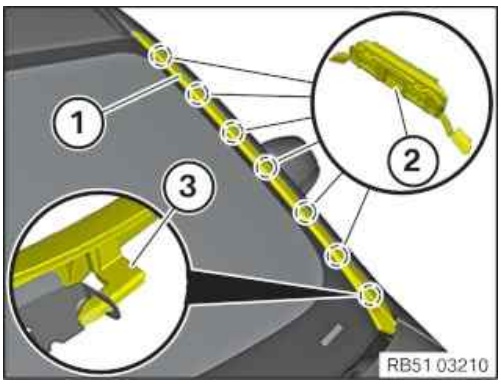
- Press the gasket (1) in a downwards direction.

140 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the gutter strip on the windscreen**



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

141 – Install left and right wiper arm

NOTICE

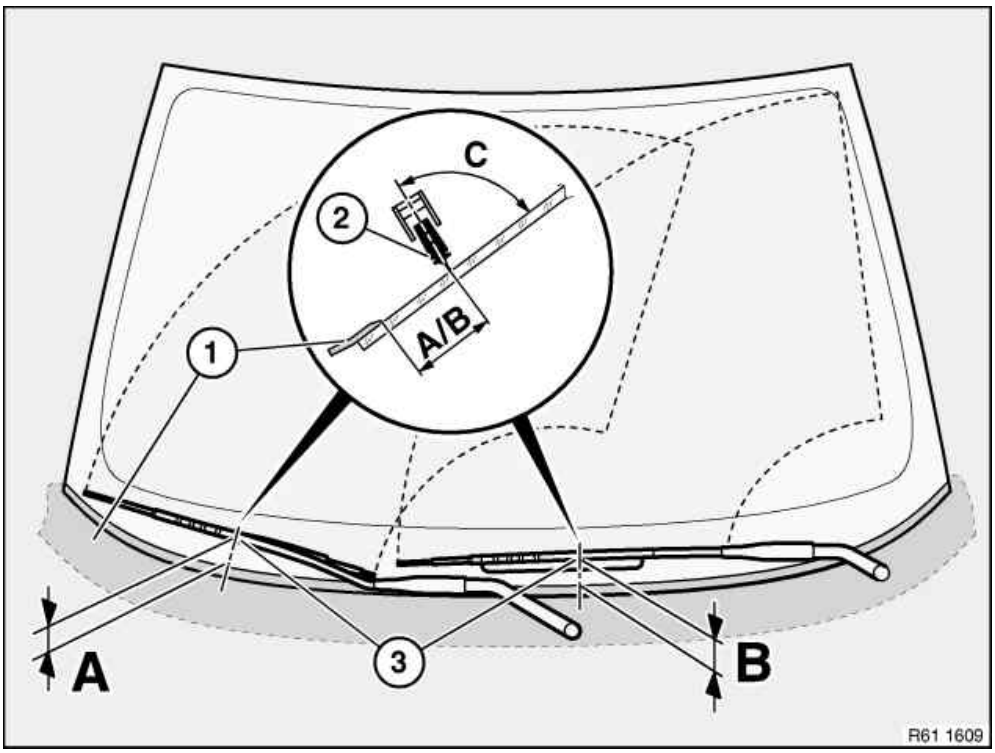
Description is for left component only. Procedure on the right side is identical.

▸ **Install the wiper arm**

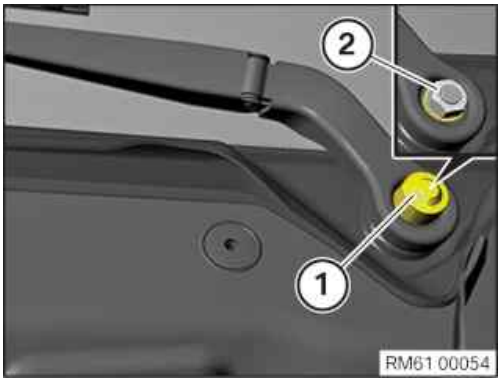
cardiagn.com

TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

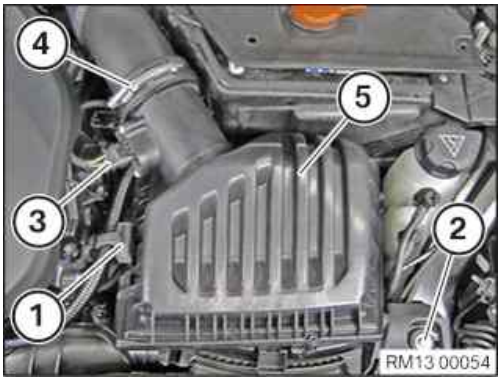
- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

142 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

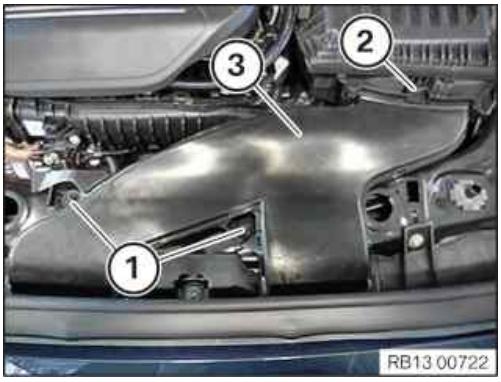
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

cardiagn.com

143 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

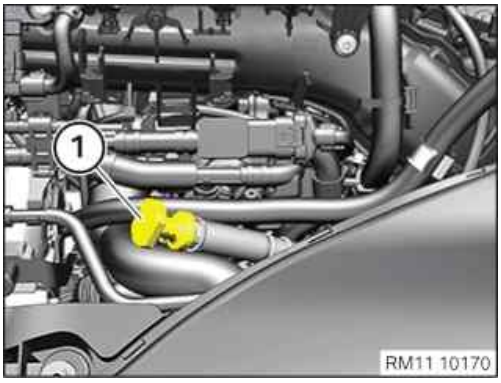
144 – Check engine oil level

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▶ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

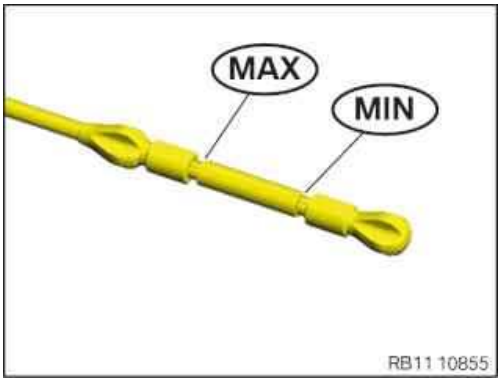


- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.



TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

145 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

Additional Information

Overview of Tightening Torques

Bracing strut to top cross connection — Used in step 32

M8		Tightening torque	25 Nm

Air duct to deformation element/cross connection — Used in step 32

M6x20 screw		Tightening torque	6 Nm

Cross connection on support for cross connection — Used in step 32

M6x20		Tightening torque	12 Nm

Rear end of front axle support to body — Used in step 69 105

M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body — Used in step 69 105

M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body — Used in step 69 105 113

Screw		Tightening torque	3 Nm

Special tool to cylinder head — Used in step 69

M8		Tightening torque	21,5 Nm

Special tool to cylinder head — Used in step 72

Special tool		Tightening torque	20 Nm

Standard screw connection M6 — Used in step 72 80

M6			8 Nm

Coolant temperature sensor at cylinder head — Used in step 72

Temperature sensor		Tightening torque	3,5 Nm

Cylinder head to crankcase — Used in step 75

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

Cylinder head bolt to timing case cover — Used in step 75

M8x40		Tightening torque	19 Nm

cardiagn.com

Engine support to cylinder head

Used in step 75

M10X45		Tightening torque	41 Nm

Right engine mount to cylinder head

Used in step 75

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

Glow elements to cylinder head

Used in step 75

Glow element		Tightening torque	13 Nm

Camshaft carrier to cylinder head

Used in step 78

M7x35		Tightening torque	13 Nm

Bearing journal to cylinder head

Used in step 80

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

Standard screw connection M8

Used in step 80

M8		Tightening torque	19 Nm

Chain tensioner piston to cylinder head

Used in step 81

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Camshaft sprocket to camshaft

Used in step 82

M7x17.			17 Nm

Exhaust manifold to cylinder head

Used in step 87

M7	If necessary, renew loose stud bolts.	Tightening torque	11 Nm
	Replace nuts.	Tightening torque	13 Nm

Banjo bolt for exhaust pressure pipe to exhaust manifold

Used in step 87

Hollow bolt		Renew sealing rings.	30 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 87 126

M8x28	Replace screws	Tightening torque	32 Nm

Exhaust turbocharger to exhaust manifold

Used in step 89

V-band clamp		Tightening torque	19 Nm

Oil feed line to exhaust turbocharger

Used in step 89

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

Oil return line to turbocharger

Used in step 89

M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 89

M8x16		Tightening torque	22 Nm

Charge air line to crankcase

Used in step 90

M6x25		Tightening torque	5 Nm

cardiagn.com

Charge air duct to oil sump — Used in step 90

M6		Tightening torque	8 Nm

Heat shield for exhaust turbocharger — Used in step 91 92 117

Torx screw BM 6x12		Tightening torque	10 Nm

Exhaust turbocharger bracket to cylinder head — Used in step 91

Hexagon screw M 8x16		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger — Used in step 93

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Diesel particle filter to holder — Used in step 93

M8 hexagon nut		Tightening torque	19 Nm

SCR metering module V-clip to exhaust system — Used in step 93

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

Holder for coolant lines to diesel particulate filter — Used in step 93

Torx bolt BM6x16		Tightening torque	8 Nm

Low-pressure exhaust-gas recirculation cooler to diesel particulate filter — Used in step 93

Flange nutM8		Tightening torque	19 Nm

Control sensor — Used in step 94

Control sensor		Tightening torque	50 Nm

Exhaust temperature sensor to diesel particulate filter — Used in step 95 96

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Exhaust-gas temperature sensor to exhaust system — Used in step 97

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Oxygen sensor holder to intermediate shaft — Used in step 98

Hexagon screw M6x16		Tightening torque	8 Nm

Nitrogen oxide sensor before SCR catalytic converter — Used in step 99

Sensor		Tightening torque	50 Nm

Monitoring sensor — Used in step 100

Sensor		Tightening torque	50 Nm

Starter motor to transmission — Used in step 101

M8x45		Tightening torque	19 Nm

Battery positive lead to starter — Used in step 101

M8		Tightening torque	13,5 Nm

Exhaust system to body — Used in step 102

M8	Replace nuts.	Tightening torque	19 Nm

cardiagn.com

Exhaust bracket on body

Used in step 102

Hexagon screw M8x30		Tightening torque	19 Nm

V-clip to catalytic converter

Used in step 102

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Diesel particulate sensor to exhaust system

Used in step 102

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter

Used in step 102

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting

Used in step 103

M12x48	Renew screws.	Jointing torque Angle of rotation	100 Nm 90 °

Front connection carrier to body

Used in step 104

M10x18		Tightening torque	56 Nm

Rear connection carrier to body

Used in step 104

M8x18		Tightening torque	28 Nm

Track rod end to swivel bearing

Used in step 105

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing

Used in step 105

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body

Used in step 106

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

Holder with rubber mount to front axle support

Used in step 106

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate

Used in step 106

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier

Used in step 106

		Tightening torque	11,8 Nm

Holder to front axle support

Used in step 107

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar

Used in step 109

M10	Renew nut.	Tightening torque	56 Nm

Wheel arch cover to body

Used in step 111

Screw		Tightening torque	2,5 Nm

cardiagn.com

Wheel arch cover to body

Used in step 111

Plastic nut		Tightening torque	3 Nm

Underbody panelling, side

Used in step 112

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Used in step 112

Plastic nut		Tightening torque	2,6 Nm

Brake disc to front wheel hub

Used in step 114

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

Used in step 114

M8	Renew screw.		16 Nm

Wheel bolts

Used in step 114

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 116

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 116

Plastic nut		Tightening torque	3 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 118

Oval-head screw		Tightening torque	5 Nm

Cylinder head cover to cylinder head

Used in step 119

M6		Tightening torque.	8,5 Nm

Differential pressure sensor to holder

Used in step 120

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor

Used in step 120 132

Clamp 15–19mm		Tightening torque	3 Nm

Clamping claw facing to cylinder head cover

Used in step 121

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 121

Screw		Jointing torque Angle of rotation	8 Nm 120 °

cardiagn.com

Rail on cylinder head cover — Used in step 122

Torx screw M8x25		Tightening torque	19 Nm

High pressure line between high pressure pump and rail — Used in step 122 123

High-pressure pipe		Tightening torque	28 Nm

High pressure lines between injector and rail — Used in step 124

High pressure lines		Tightening torque	28 Nm

Exhaust-gas recirculation cooler to cylinder head — Used in step 126

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler — Used in step 126

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head — Used in step 126

0 495 910 (37 1 152) Socket wrench

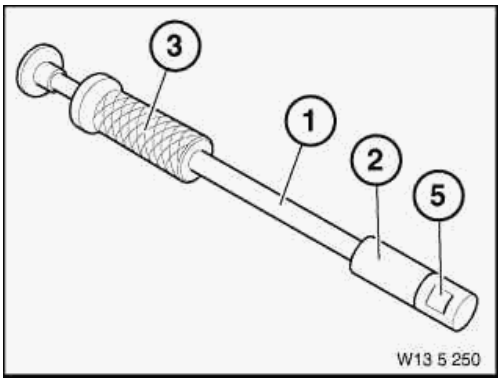
Common	Used in step 24 25 26 122 123 124
Usage	(Socket wrench)SW19
Included in the tool or work	0 495 908
Storage location	B21
Replaced by	
In connection with	
SI-Number	01 01 07 (333)

2 413 106 Fastener

Common	Used in step 24 25 123 124
Usage	For avoiding contamination and damage of rail, injectors and high pressure pump.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 16 (419)

cardiagn.com

0 493 321 (13 5 250) Puller



Common

Used in step 27

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common

Used in step 27

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

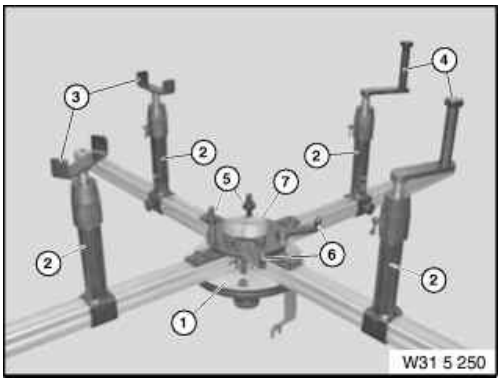
Common

Used in step 27

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

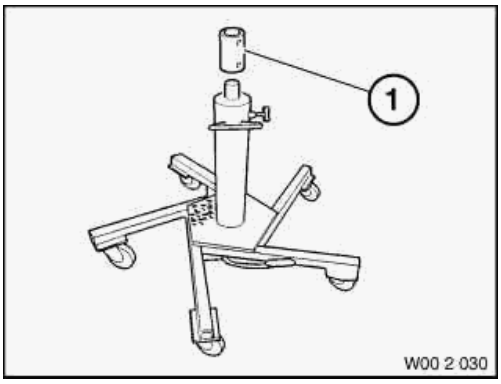
0 495 817 (31 5 251) Basic body



Common Used in step 43 69 75 105

Usage	(Basic body) No longer available separately, only via special tool set 31 5 250 (83 30 0 495 567)
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

0 490 133 (00 2 030) Device



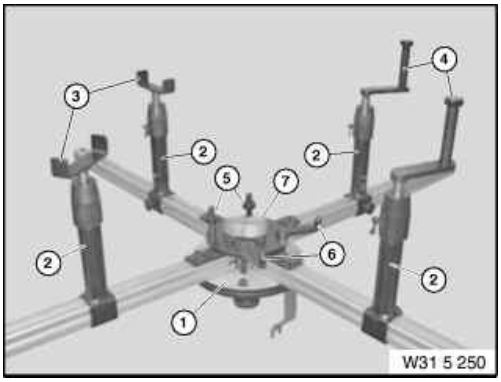
Common Used in step 43 69 75 105

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

0 495 821 (31 5 255) Adapter



Common Used in step 43 75

Usage	(take-up adapter for bore holes (2 x))
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

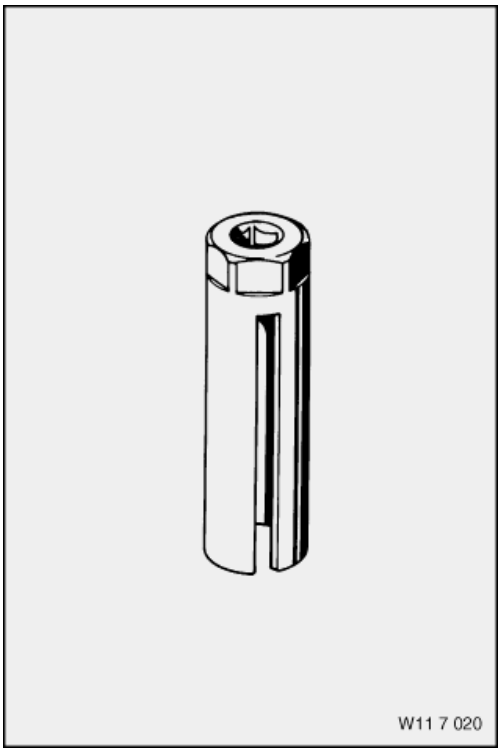
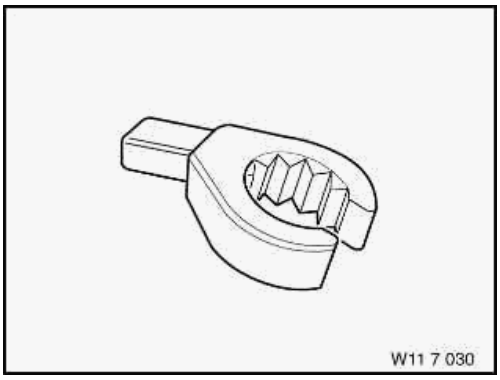
0 491 074 (11 7 020) Socket wrench insert



Common	Used in step 48 49 100
Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

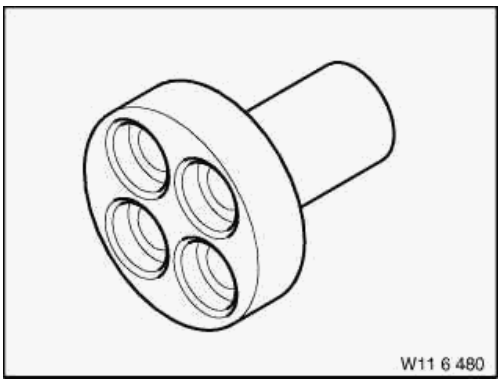
cardiagn.com

0 491 075 (11 7 030) Socket wrench insert



Common	Used in step 54 94
Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	01 06 95 (963)

0 493 380 (11 6 480) Connector



Common	Used in step 62 85
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

Common	Used in step 62 84 85
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common	Used in step 62 83 85
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 495 105 (11 4 480) oddments tray

Common

Used in step 67 68

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

2 414 691 Support

Common

Used in step 69 75

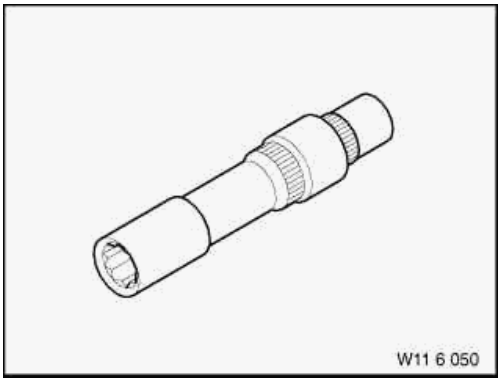
Usage	To support the engine when the engine support is removed.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	2357071
SI-Number	01 12 16 (406)

cardiagn.com

2 357 071 Panel

Common	Used in step 69 75
Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

0 491 068 (11 6 050) Socket wrench insert



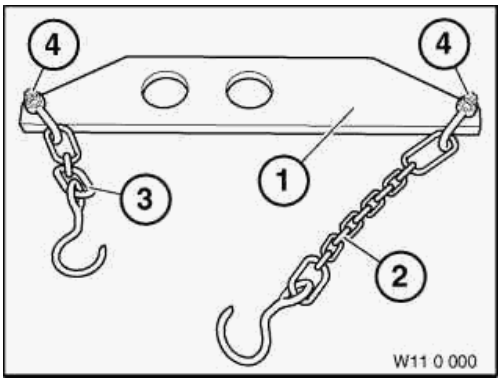
Common	Used in step 69 75
Usage	(Wrench socket AF 10) bi-hexagon/glow elements
Included in the tool or work	
Storage location	B10
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

2 459 012 Holder

Common	Used in step 69 75
Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

cardiagn.com

0 490 561 (11 0 000) Lifting gear



Common

Used in step 69 75

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

0 494 362 (11 9 000) Device

Used in step 69

Overview Technical Data

Cylinder head flatness	Used in step 70
Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

Valve underprotrusion	Used in step 71
	0,8 (0,7 - 0,9) mm

Check for cylinder head watertightness	Used in step 72
Temperature of the cylinder head	60 °C

Check for cylinder head watertightness	Used in step 72
Testing pressure	max. 3,0 bar

cardiagn.com

11 12 729 Checking cylinder head on watertightness (B37C)

Special tools required:

- 11 8 890
- 2 289 610

Important!

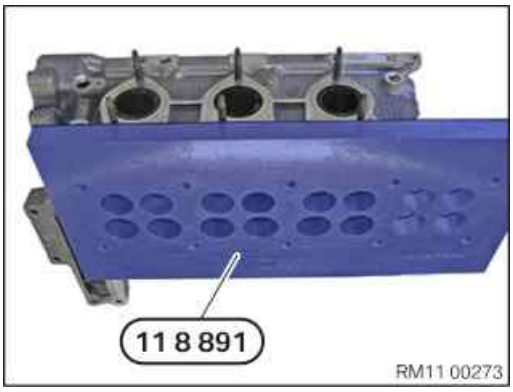
Pressure-test cylinder head to max. **3 bar**.

Heat cylinder head to 60 °.

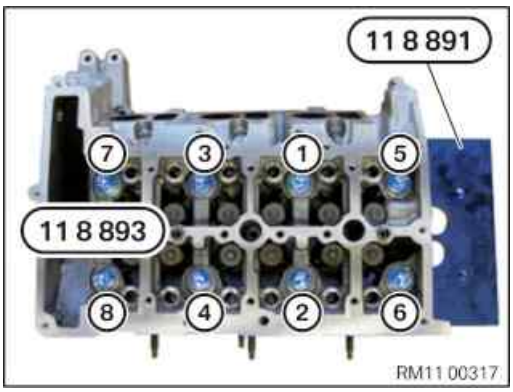
Check for bubble formation in a water bath.

Necessary preliminary tasks:

- Remove cylinder head.
- Remove all glow elements.
- Remove exhaust manifold.



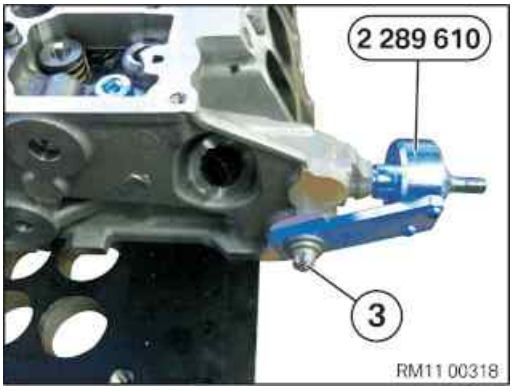
Mount special tool 11 8 890 (11 8 891) on the cylinder head.



Fasten special tool 11 8 890 (11 8 891) with screws 11 8 890 (11 8 893).

Tightening torque: **20 Nm**.

cardiagn.com



Mount special tool 2 289 610 and secure with screw (1).

Note:
Compressed air at valve (1) max. **3 bar**.

Heat cylinder head to 60 °.

Check for bubble formation in a water bath.

Concluding tasks:

- Remove special tools
- Attach exhaust manifold.
- Install all glow elements.
- Install cylinder head.

cardiagn.com

11 12 800 Clean cylinder head intake channels and intake plenums

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

PRELIMINARY WORK

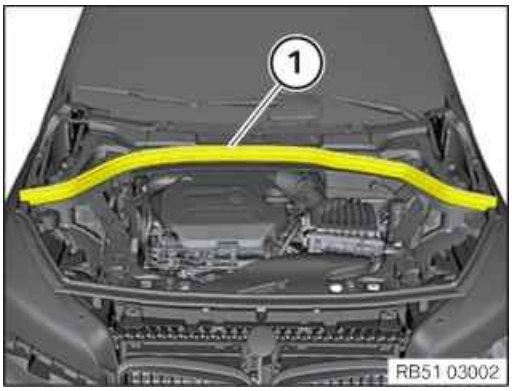
1 – Disconnecting all battery earth leads

- See additional information.

2 – Remove the seal for the rear bonnet

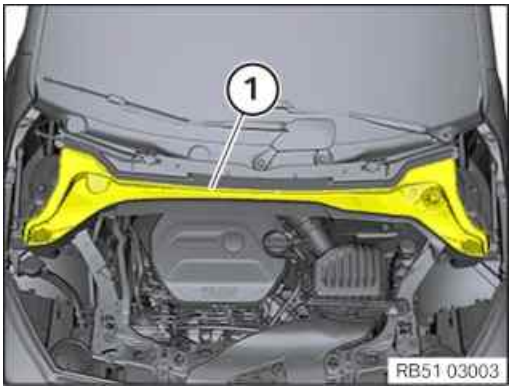
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

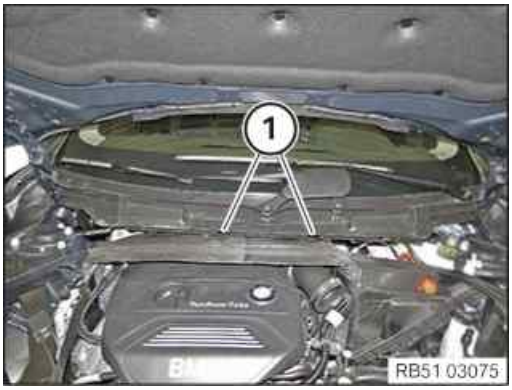
3 – Removing front cowl panel cover



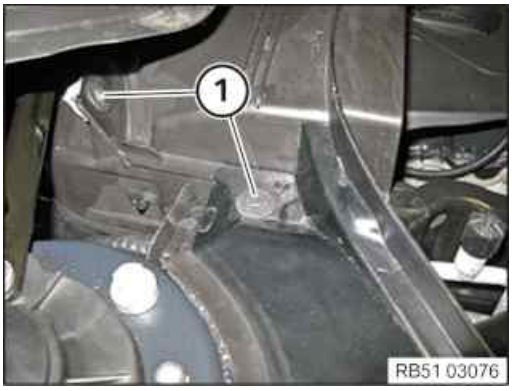
- Guide the front cowl panel cover (1) out toward the top and remove it.

cardiagn.com

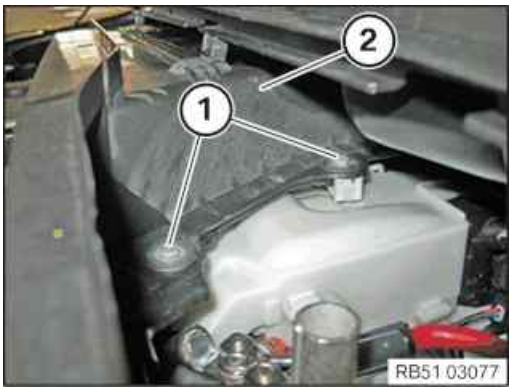
4 – Removing the upper bulkhead cover



- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

5 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Remove the wiper arm**

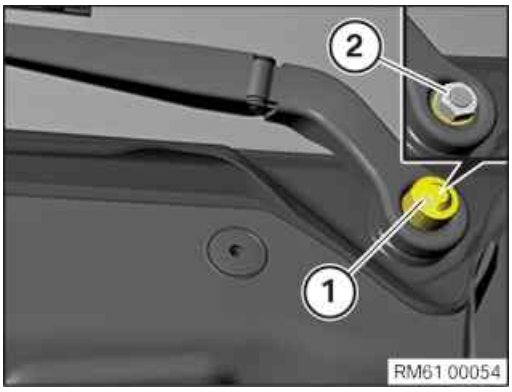
RISK OF DAMAGE

Damage to wiper console

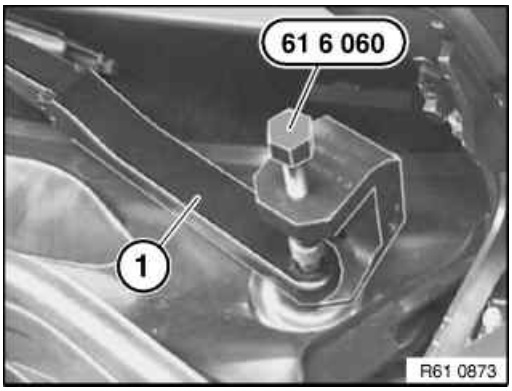
While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.

cardiagn.com



- Remove the protective cap (1).
- Loosen nut (2).



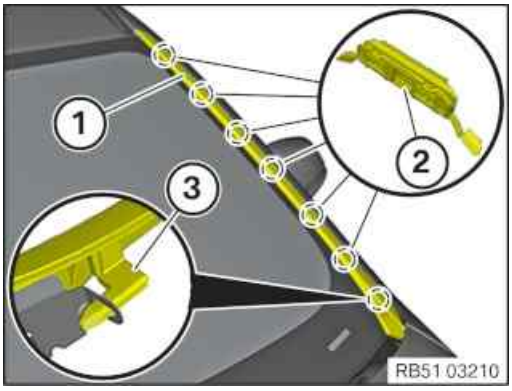
- Pull off the wiper arm (1) using special tool .

6 – Remove the gutter strip on the windscreen on the left and right

NOTICE

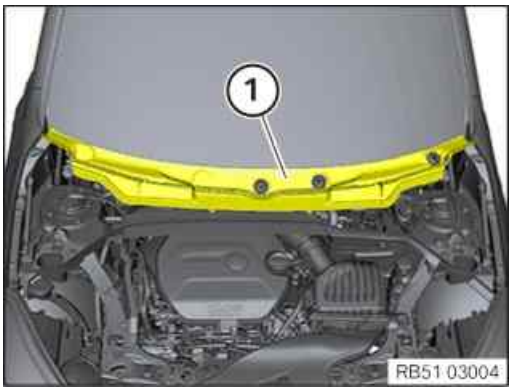
Description is for left component only. Procedure on the right side is identical.

▶ **Remove the gutter strip on the windscreen**



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

7 – Remove the rear cowl panel cover



- Disengage and guide out the rear cowl panel cover (1) towards the top.

8 – Removing the acoustic cover

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

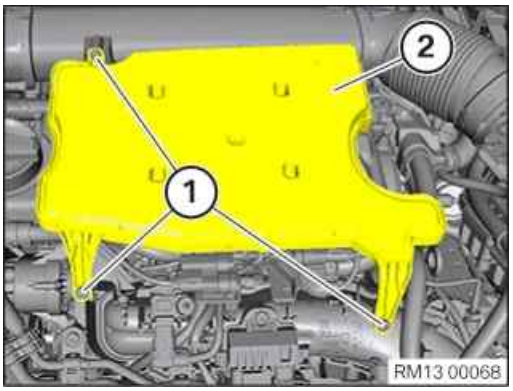
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

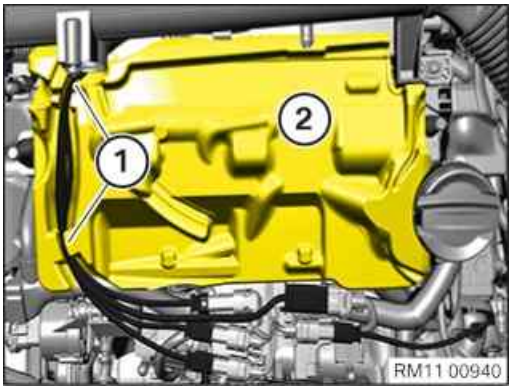
- Unclip the acoustic cover from the marked areas towards the top.

9 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

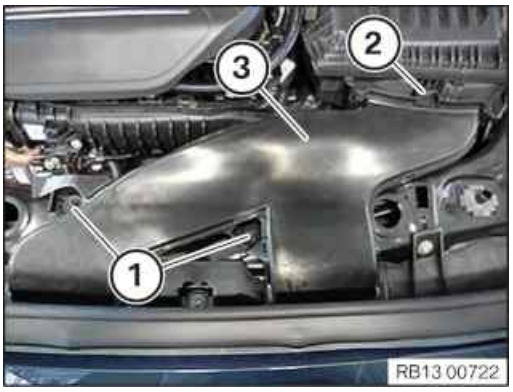
10 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

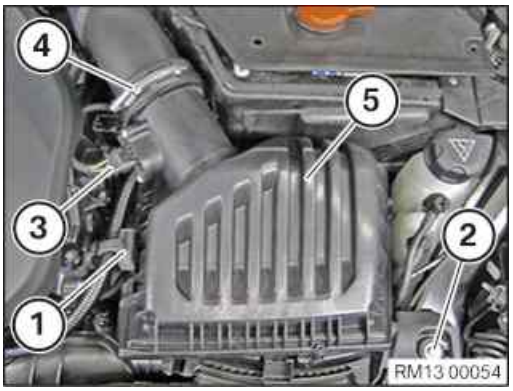
11 – Remove the intake neck for intake silencer housing

cardiagn.com



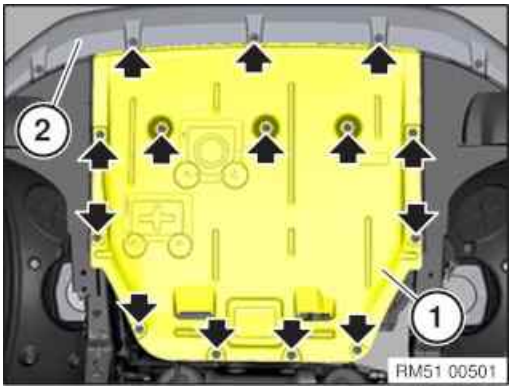
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

12 – Removing intake silencer housing



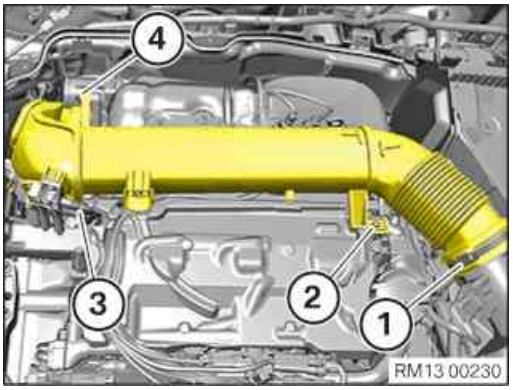
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

13 – Removing the front underbody protection



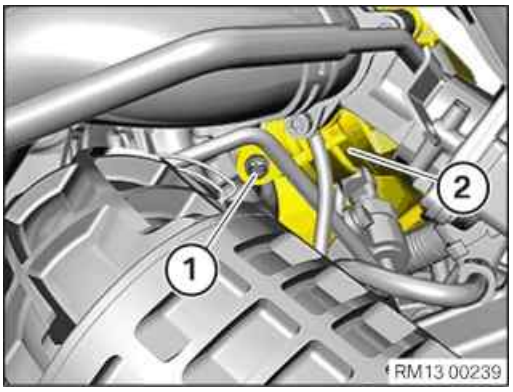
- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

14 – Partially detach the clean air pipe

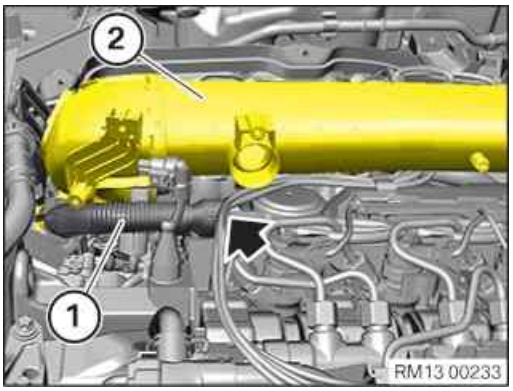


- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).

cardiagn.com



- Unscrew the screw (1) from the clean air pipe (2).

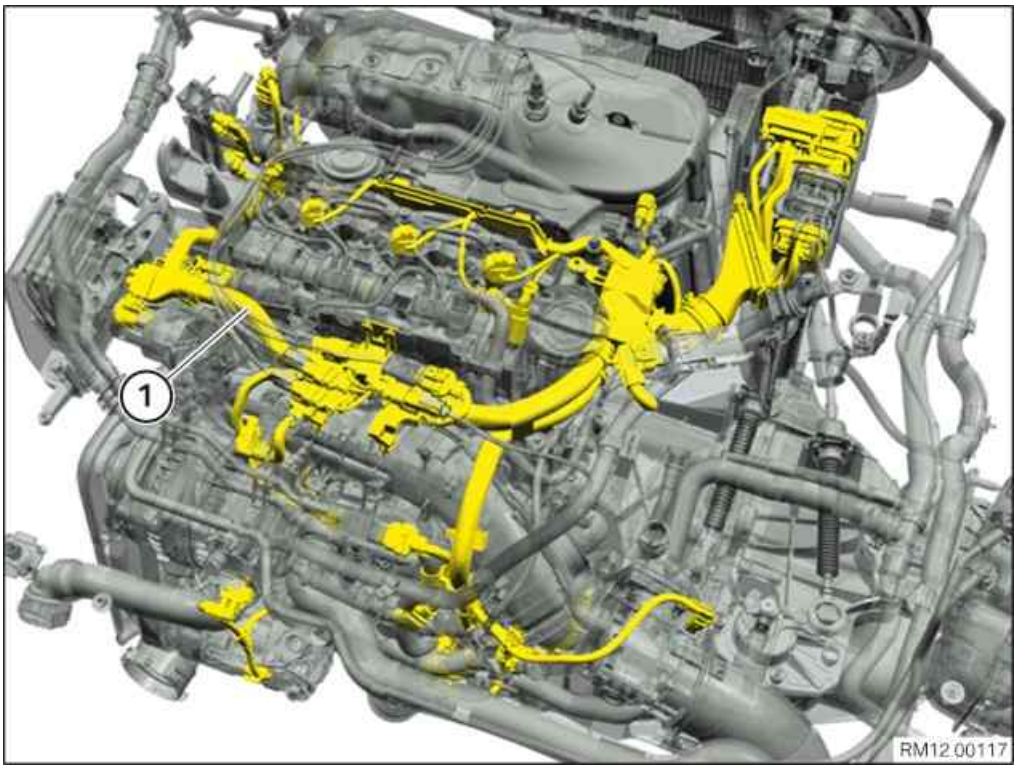


- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

- Thread out the clean air pipe (1) and set it aside as shown.

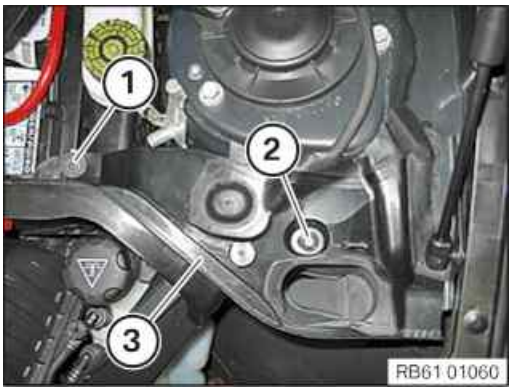
15 – Releasing the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine



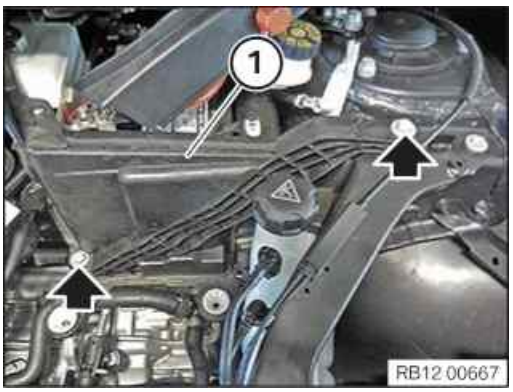
1 Wiring harness section for the engine

cardiagn.com

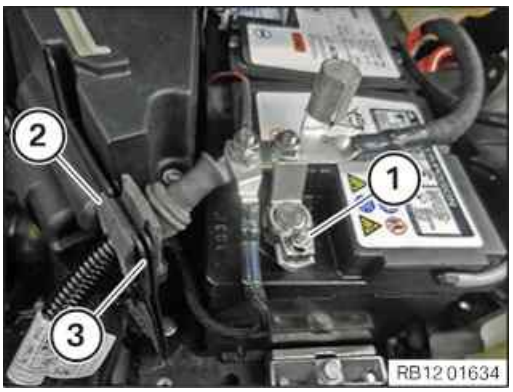


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

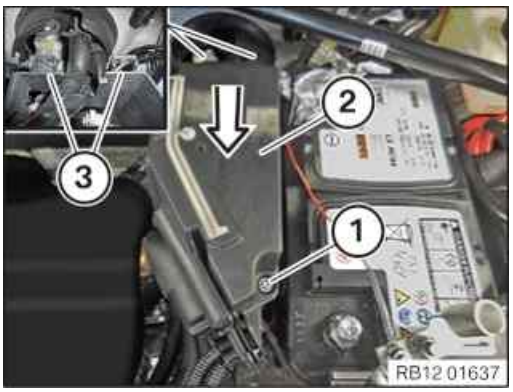
- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.



- Remove screws (arrows).
- Guide out tension strut (1) and remove.

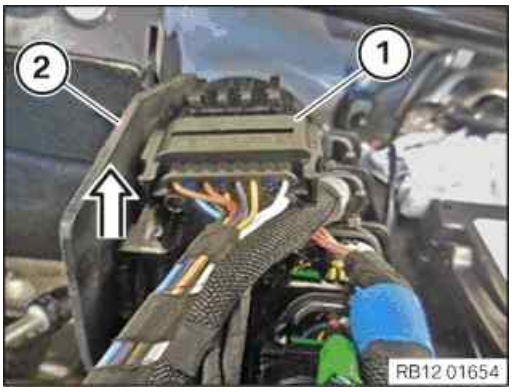


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

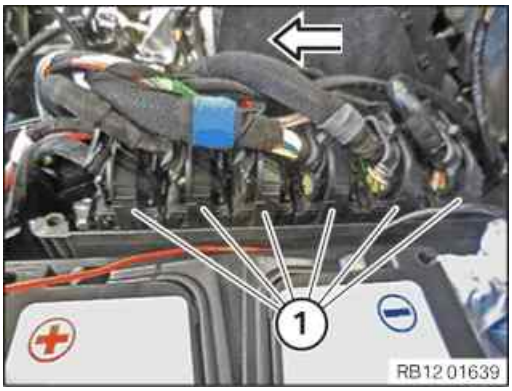


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

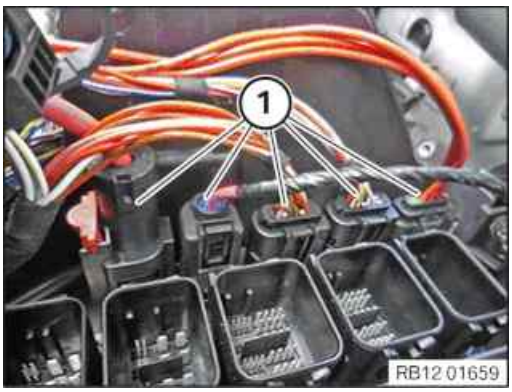
cardiagn.com



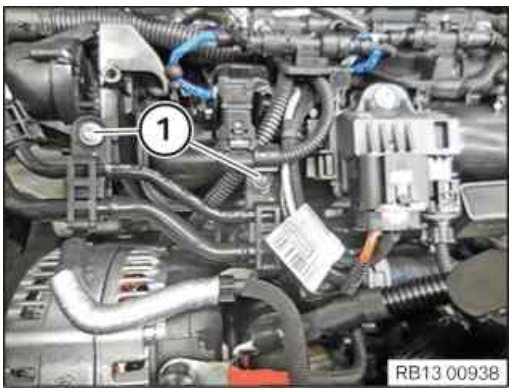
- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).



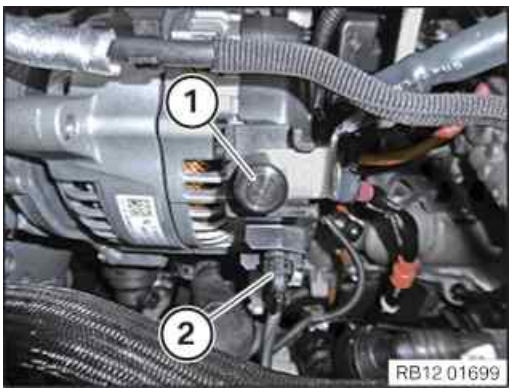
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

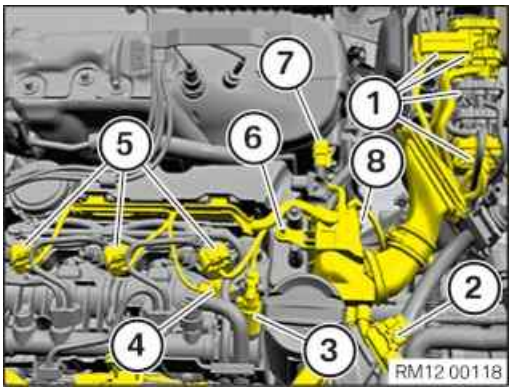


- Loosen screws (1).

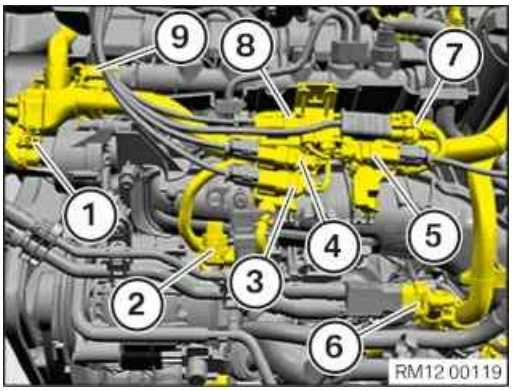


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.

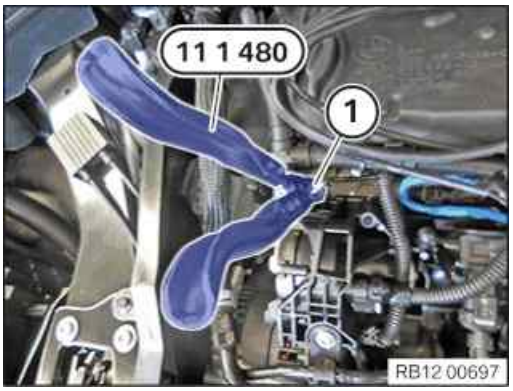
cardiagn.com



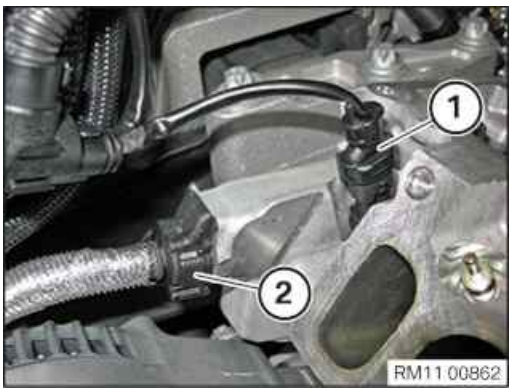
- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock connector (3) and pull off from fuel pressure regulator.
- Unlock connector (4) and disconnect from camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock connector (7) and disconnect from differential pressure sensor.



- Unlock connector (1) and pull it off the servomotor for the swirl flap.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock connector (3) and pull off from exhaust temperature sensor downstream from the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock connector (6) and pull off from the fuel pressure and temperature sensor.
- Unlock and disconnect the connector (7) from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.



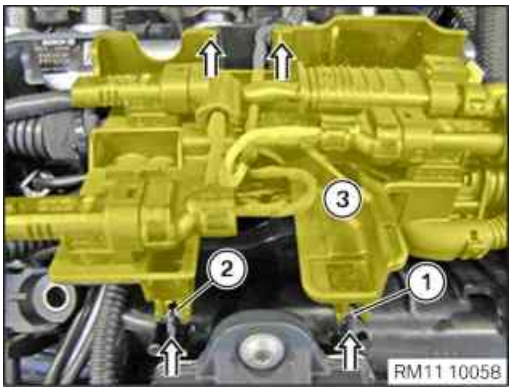
- Unlock connector (1) at all glow elements using special tool **0 490 796 (11 1 480)** and release.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.



- Unlock and loosen connector (1).
- Unlock the clamp of the coolant line (2) and release the coolant line.

16 – Removing the cable clips from the intake plenum

cardiagn.com



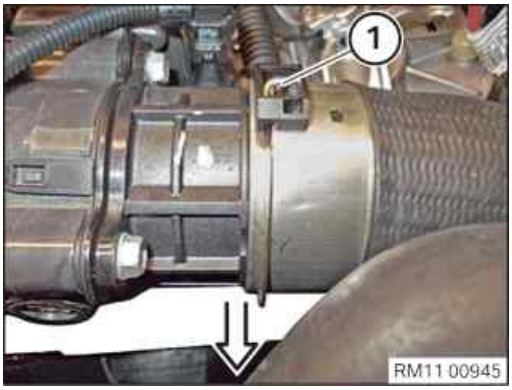
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.

17 – Removing the intake plenum

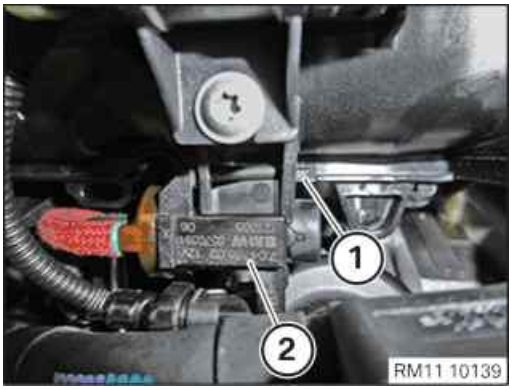
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).

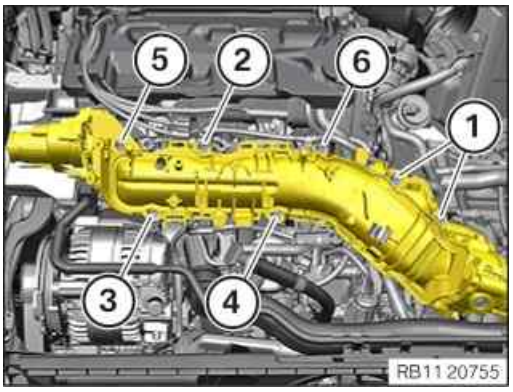


- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

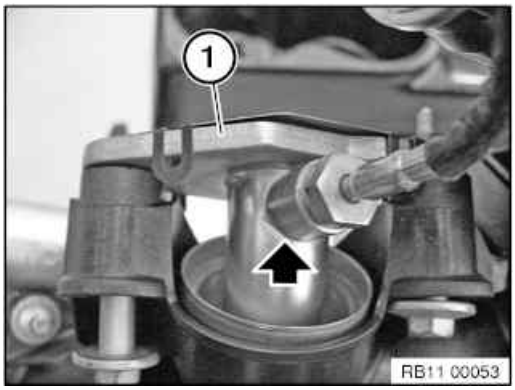


- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com

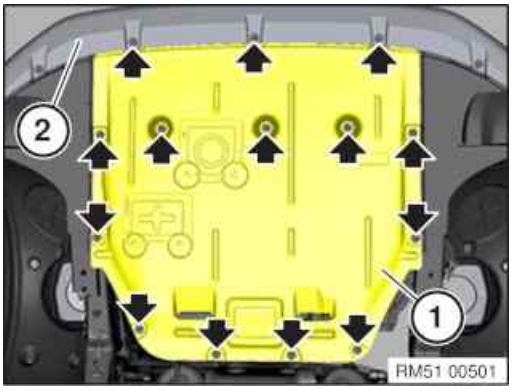


- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

18 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

19 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

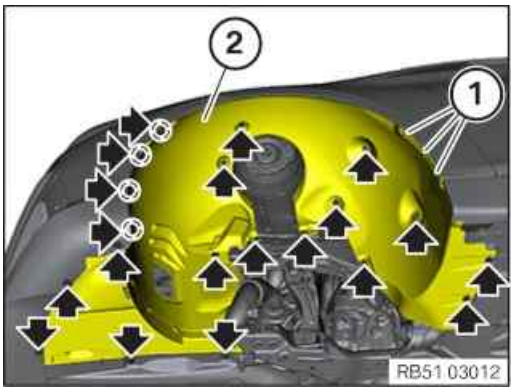
Strictly observe the specified procedure to prevent clamping errors and imbalance.

cardiagn.com

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

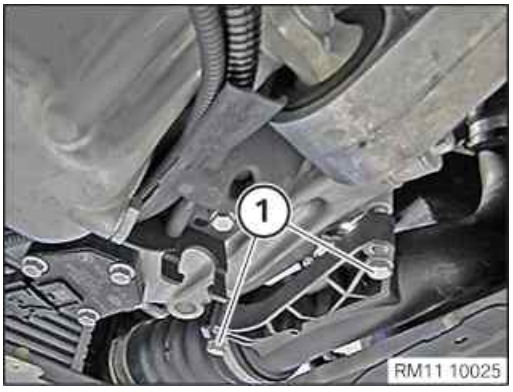
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

20 – Removing the front right wheel arch cover

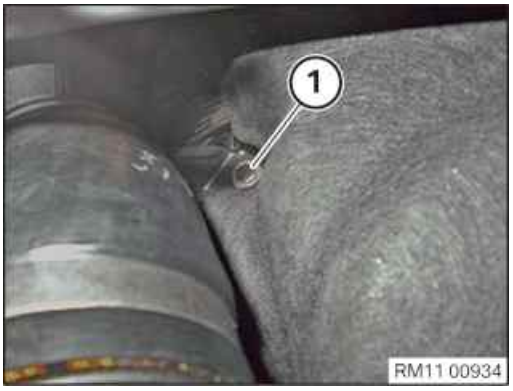


- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

21 – Remove right charge-air line



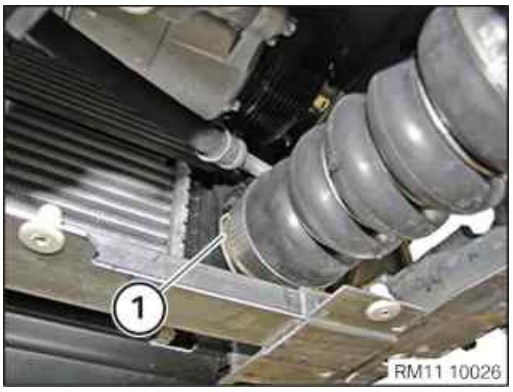
- Release charge air duct screws (1) on oil sump.



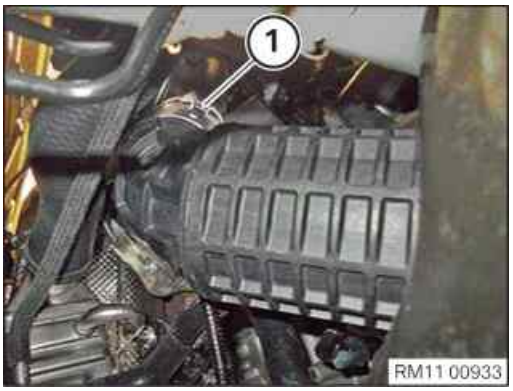
- Detach charge air duct screw connection (1) on crankcase.

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).

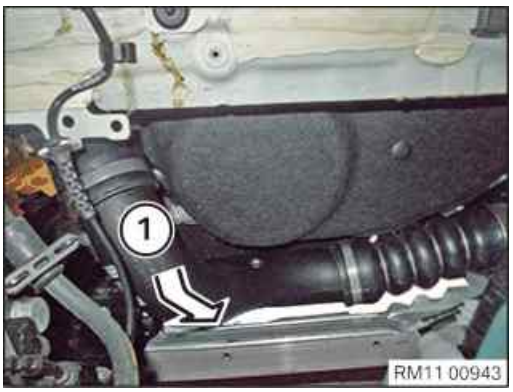
cardiagn.com



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

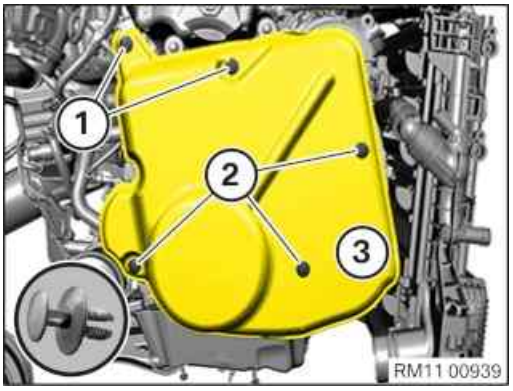


- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

22 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

23 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

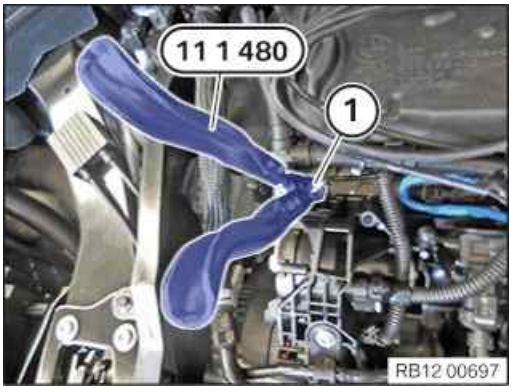
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

cardiagn.com

- Release the glow elements with the special tool **0 491 068 (11 6 050)** or conventional tools.
- Feed out preheating elements and remove.

MAIN WORK

24 – Clean the intake system

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

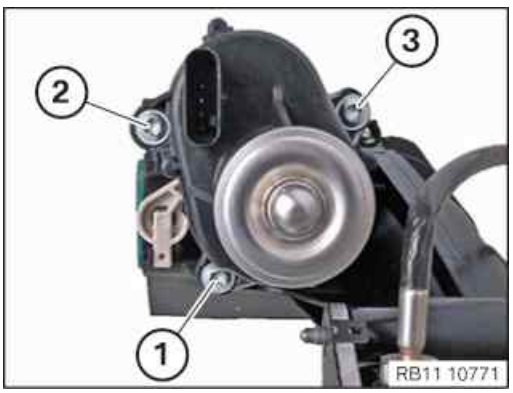
- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Electrostatic discharge.

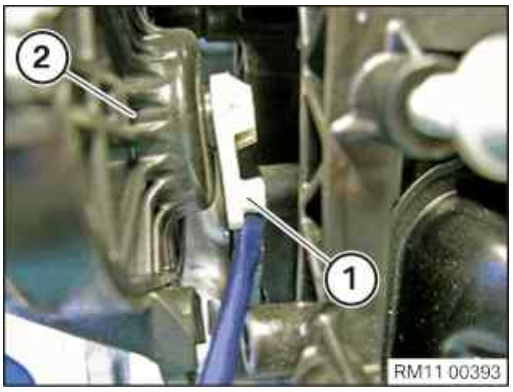
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

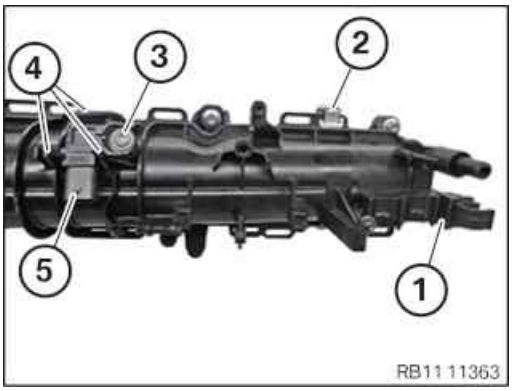


- Loosen screws (1) to (3).

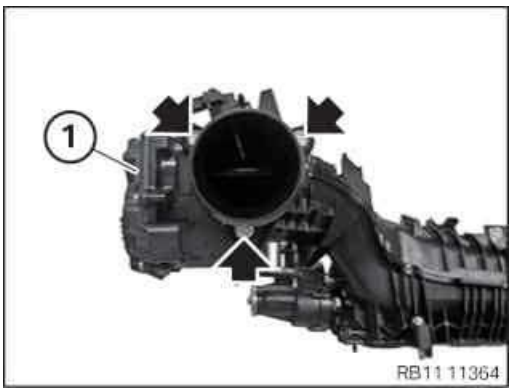
cardiagn.com



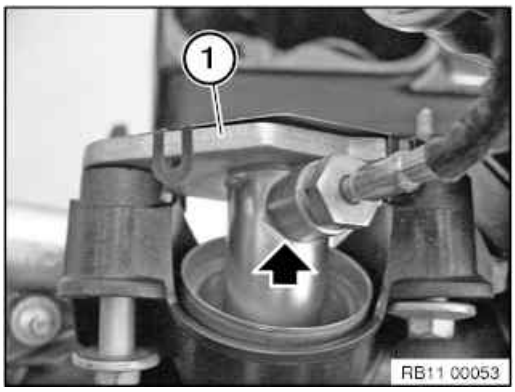
- Carefully release the drive arm (1) from the adjustment lever.
- Remove the swirl-flap controller (2).



- Guide out and remove holder (1).
- Feed out and remove the clamp (2).
- Loosen screw (3).
- Unlock the locks (4).
- Remove the charging pressure sensor (5).

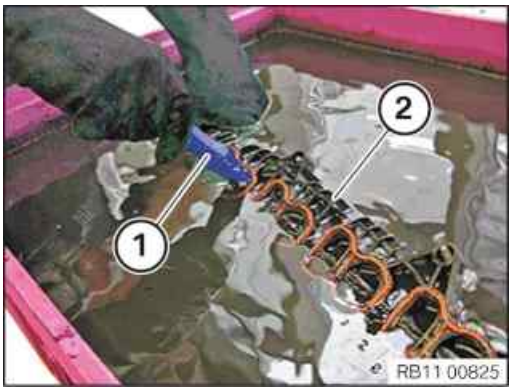


- Remove screws (arrows).
- Remove the throttle bodies (1).



- Remove the exhaust-gas recirculation pipe (1) (arrow).

cardiagn.com



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Mix the cleaning agent in a large collecting vessel.

Cleaning agent

Universal cleaner must be diluted with water.	
Washer fluid	2 parts water, 1 part universal cleaner

Expendable materials: Universal cleaner

- Place the intake system (2) into the collecting vessel.

Clean the intake system

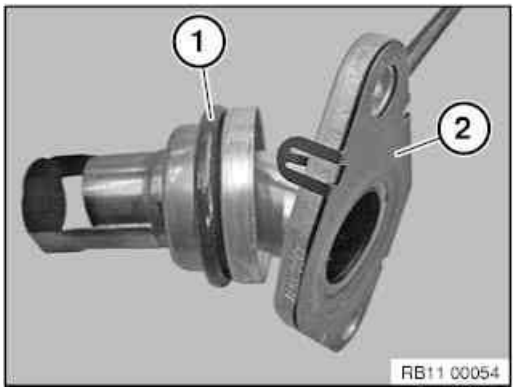
Soaking time of the cleaning agent	1 h

- Clean the intake system (2) with the brushes (1).

Care product

Wheel rim brushes	1x, Set	83192298237

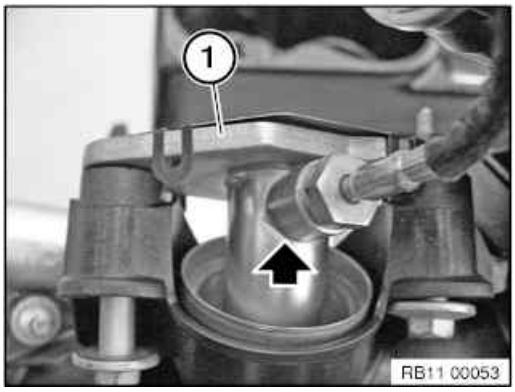
- Then rinse the intake system (2) with water.



- Renew O-ring (1).

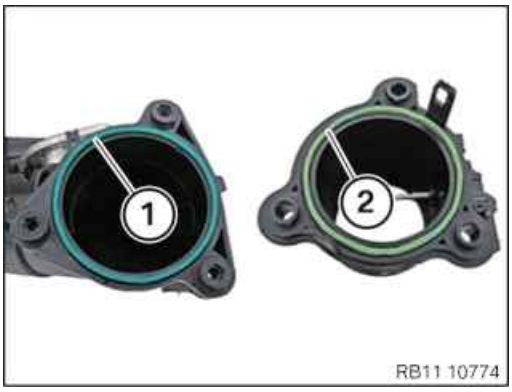
  Parts: O-ring
- Unclip the seal (2).
- Renew the gasket (2).

  Parts: Gasket
- Position the seal (2) and clip it in.



- Install the exhaust-gas recirculation pipe (1) in the intake plenum.
- Position the swirl-flap controller.
- Engage the drive arm of the swirl-flap controller in the adjustment lever of the intake plenum.

cardiagn.com

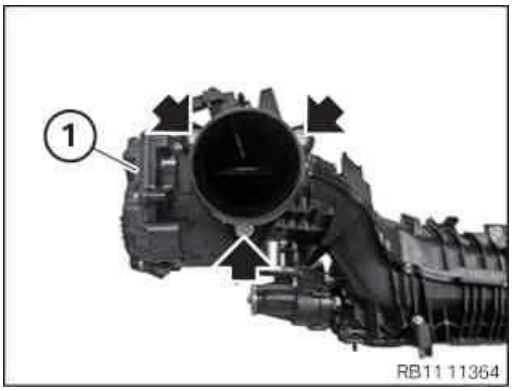


- Renew seal (1) between the intake system and the throttle body.

  Parts: Gasket

- Renew seal (2) between the throttle body and the charge air pipe.

  Parts: Gasket

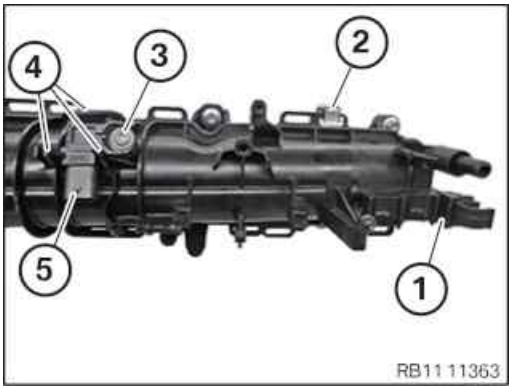


- Feed in and install the throttle body (1).
- Tighten screws (arrows).

Throttle body to intake plenum

6x50		Tightening torque	7 Nm

- Clean the charging pressure sensor and, if necessary, renew it.
- Check the sealing ring (1) for damage and renew where required.
- Lightly coat the sealing ring (1) on the charging pressure sensor with lubricant for the installation.



- Insert and install the charging pressure sensor (5).
- Lock the locks (4).

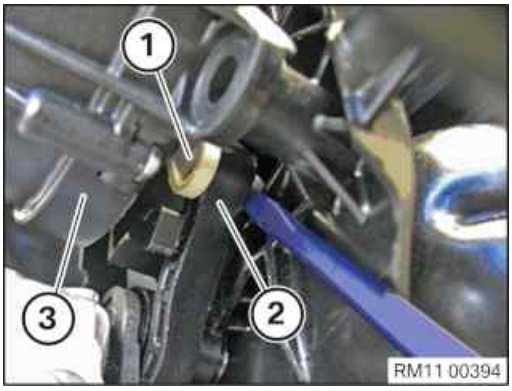
  The locks (4) must engage audibly.

- Tighten down screw (3).

Charging pressure sensor to intake plenum

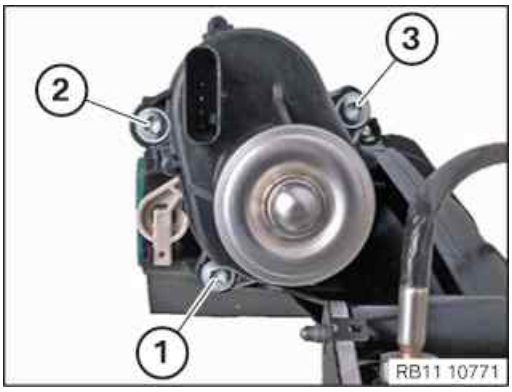
6x20		Tightening torque	5 Nm

- Feed in and install the clamp (2).
- Insert and install the holder (1).



- Position swirl-flap controller (3).
- Carefully engage the drive arm (1) in the adjustment lever (2).
- Install the swirl-flap controller (3).

cardiagn.com



- Tighten screws in the order (1) to (3).

Swirl-flap controller to intake plenum

M6 x 16	Tighten the bolts in alternating order until flush.	4 Nm

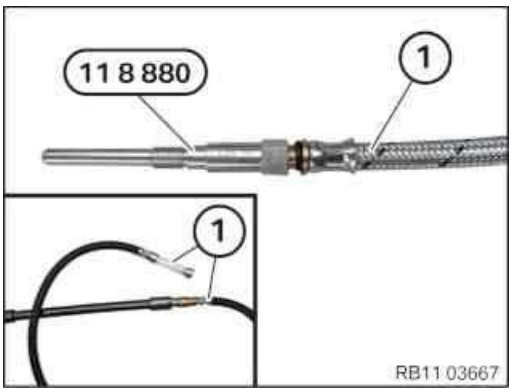
25 – Turn the piston to top dead centre

RISK OF DAMAGE

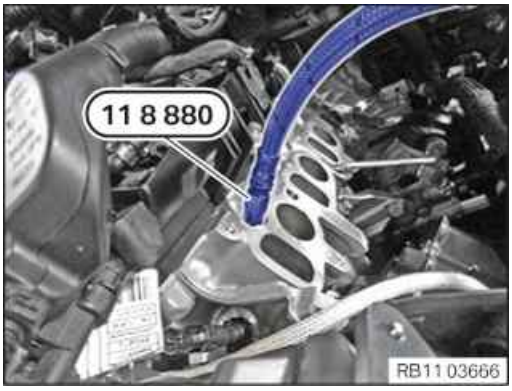
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Connect TDC gauge (1) from set of special tools **2 302 630** to special tool **0 496 146 (11 8 880)**.



- Install special tool **0 496 146 (11 8 880)** in place of the glow element.

cardiagn.com

- Fit special tool **0 493 380 (11 6 480)**.

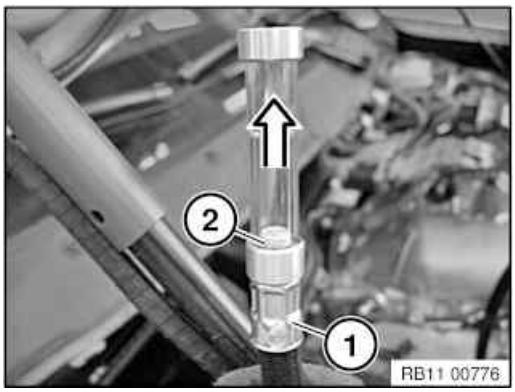
RISK OF DAMAGE

Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Turn the engine by hand using special tool **0 493 380 (11 6 480)**.



- Turn the engine by hand.
- When the piston moves up, the journal (2) in the special tool (1) also moves up.
- In the top dead centre, the piston and also the journal (2) are positioned at the highest point in the special tool (1).
- Turn the piston to the top dead centre.

» The valves are now closed.

RISK OF DAMAGE

Engine damage due to walnut granules in the combustion chamber.

If walnut granules penetrate the combustion chamber while cleaning the intake ports, engine damage may occur.

- Always clean the intake port with valves of the relevant cylinder closed.
- Set the piston of the relevant cylinder to the top dead centre.
- If walnut granules have entered the combustion chamber: Do **not** turn or start the engine by hand. Disassemble the cylinder head and clean all components.

- Engine must not be rotated further.
- Intake valves (1) must be closed while cleaning.

26 – Cleaning intake ports

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.

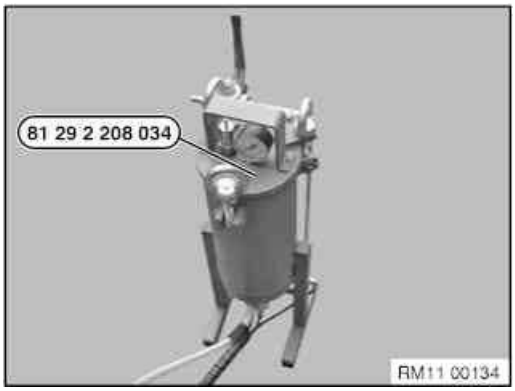
cardiagn.com

RISK OF DAMAGE

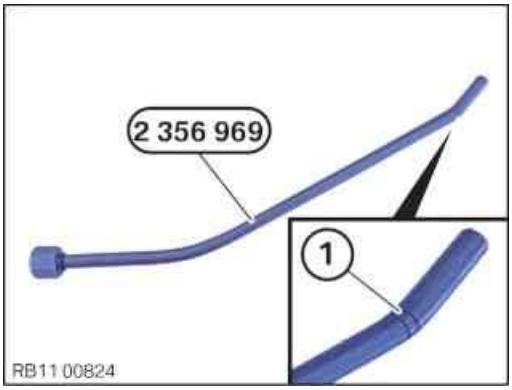
Engine damage due to walnut granules in the combustion chamber.

If walnut granules penetrate the combustion chamber while cleaning the intake ports, engine damage may occur.

- Always clean the intake port with valves of the relevant cylinder closed.
- Set the piston of the relevant cylinder to the top dead centre.
- If walnut granules have entered the combustion chamber: Do **not** turn or start the engine by hand. Disassemble the cylinder head and clean all components.



- Keep the special tool **2 208 034**, the walnut granules and a vacuum cleaner ready.



- Have the special tool **2 356 969** ready.

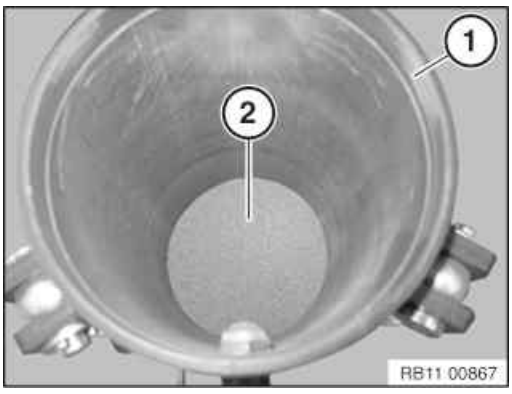
TECHNICAL INFORMATION

The front area of the blasting wand is marked with two notches. These may additionally be highlighted in colour.

During the blasting process, only pull the blasting wand out of the vacuum adapter until the mark becomes visible.

- Observe the mark (1).

- Stage special tools **2 356 966** and **2 356 967**.



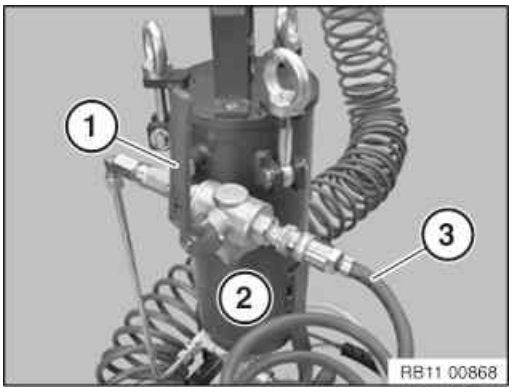
- Open blasting device (1).
- Fill in walnut granules (2).

Walnut granules

Quantity for each blasting process	2 l

- Close blasting device (1).

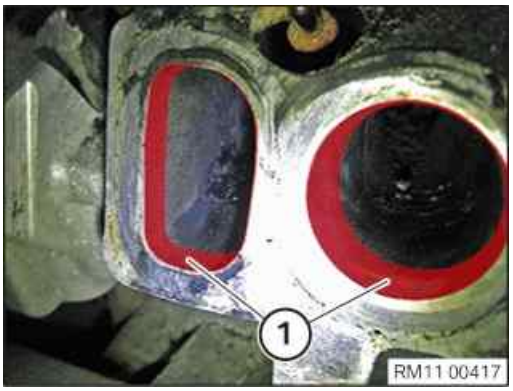
cardiagn.com



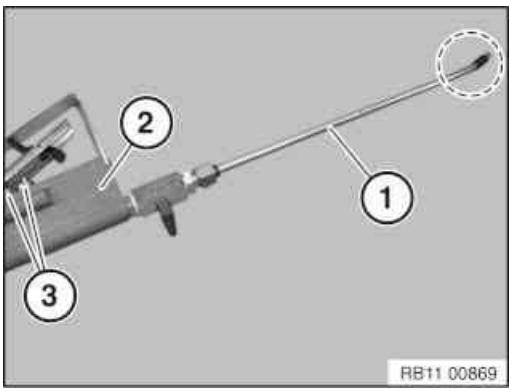
- Close the valve (1) on the blasting device (2).
- Connect compressed air (3).

Cleaning the intake ports

Operating pressure	6 bar ... 8 bar

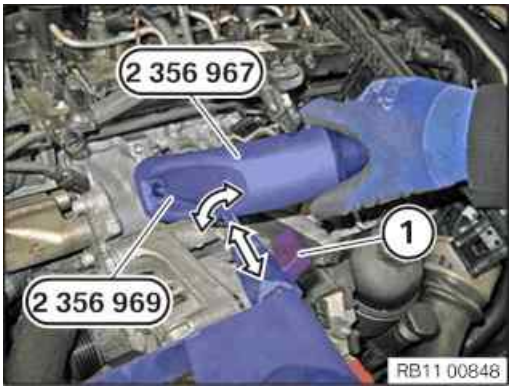


- Clean marked areas (1) with a brush.



- Attach the blasting wand (2) to the blasting device (1).

- Connect the special tool **2 356 967** to a vacuum cleaner.
- Insert the special tool **2 356 967** into the swirl port of cylinder 1.



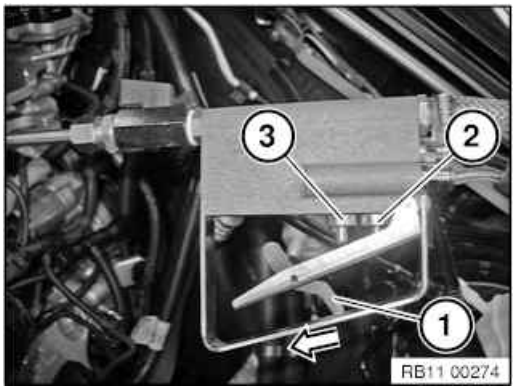
TECHNICAL INFORMATION

Conduct the following operation with the assistance of a second person.

- Insert the special tool **2 356 969** into the special tool **2 356 967**.
- Open the valve (1).
- Move the blasting wand forwards and backwards and rotate.

  This removes any dirt in the tangential port.

cardiagn.com



- Slide the locking lever (1) forward in the direction of the arrow.
- To release the compressed air: Actuate valve (2).
- To release the walnut granules and the compressed air: Actuate valves (1) and (2).
- Clean the swirl port.

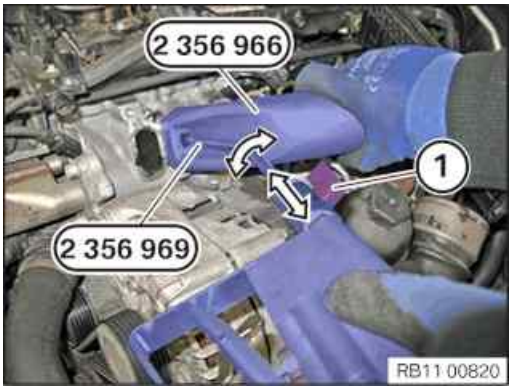
Cleaning the intake ports

Blast duration with walnut granules	Approx. 20 s
Blast duration with pure compressed air for the complete blowing out of walnut granules	Approx. 10 s

- Close the valve on the blasting wand.

» Check the pressure drop at the pressure measuring device.

- Connect the special tool **2 356 967** to a vacuum cleaner.
- Insert the special tool **2 356 967** into the swirl port of cylinder 1.

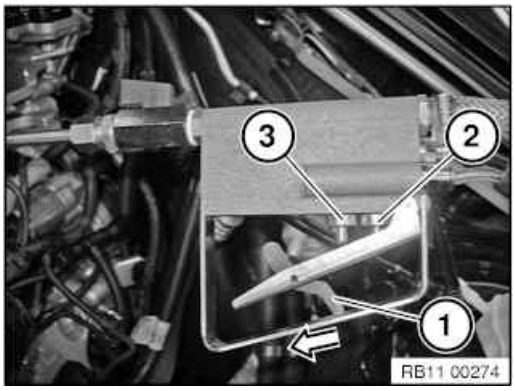


TECHNICAL INFORMATION

Conduct the following operation with the assistance of a second person.

- Insert the special tool **2 356 969** into the special tool **2 356 967**.
- Open the valve (1).
- Move the blasting wand forwards and backwards and rotate.

  This removes any dirt in the swirl port.



- Slide the locking lever (1) forward in the direction of the arrow.
- To release the compressed air: Actuate valve (2).
- To release the walnut granules and the compressed air: Actuate valves (1) and (2).
- Clean the swirl port.

Cleaning the intake ports

Blast duration with walnut granules	Approx. 20 s
Blast duration with pure compressed air for the complete blowing out of walnut granules	Approx. 10 s

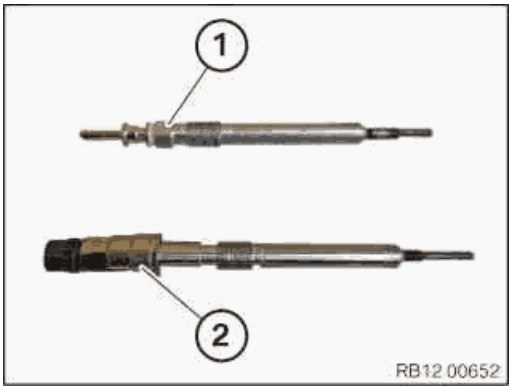
- Close the valve on the blasting wand.

» Check the pressure drop at the pressure measuring device.

- Perform the following steps one after another on all the other cylinders:
  - Turn the piston to top dead centre
  - Cleaning intake ports

cardiagn.com

27 – Install glow elements

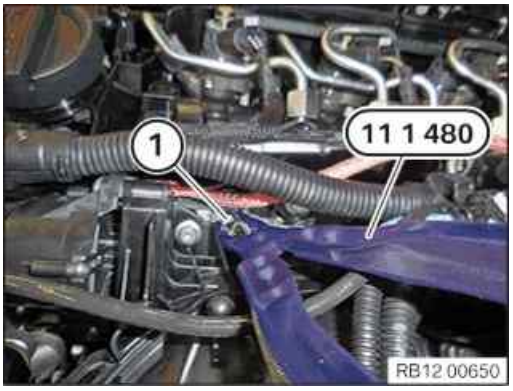


- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

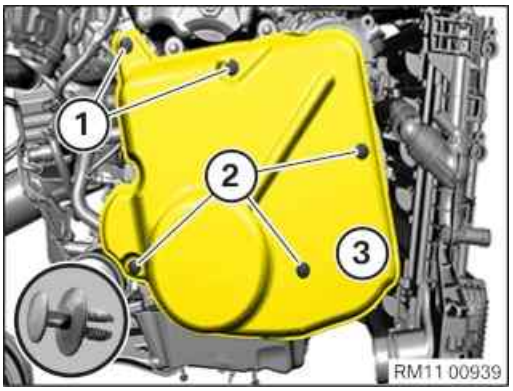
Glow element		Tightening torque	13 Nm



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

28 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

29 – Install right charge air duct

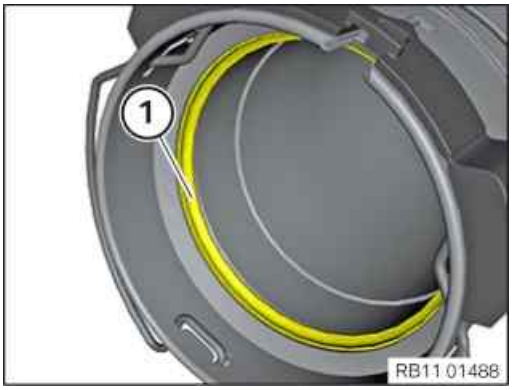
cardiagn.com

RISK OF DAMAGE

Damage to the exhaust turbocharger.

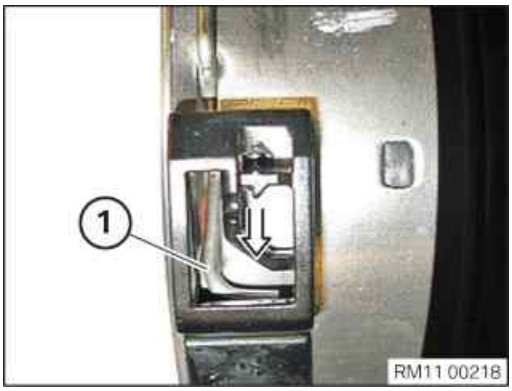
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

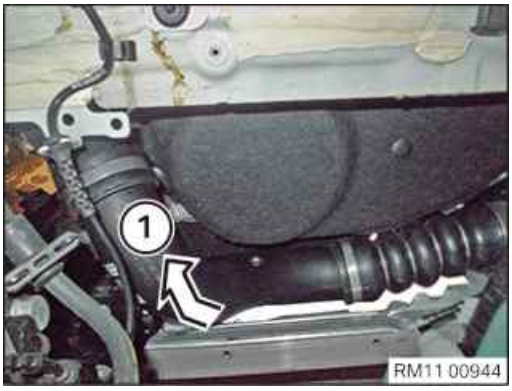


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

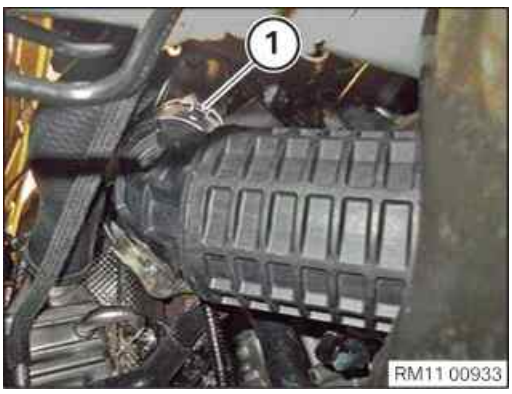
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).



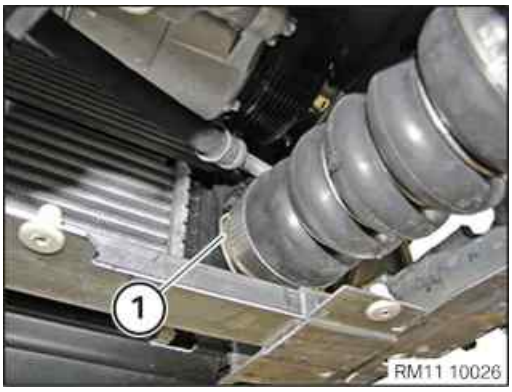
- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.

cardiagn.com



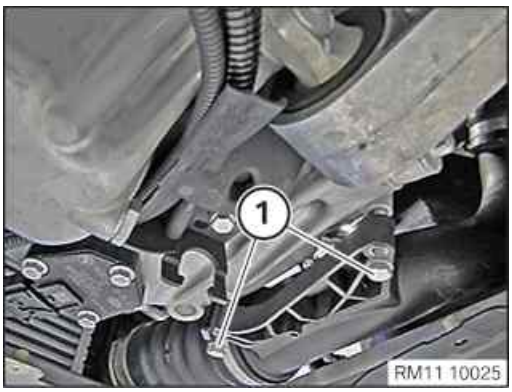
- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm

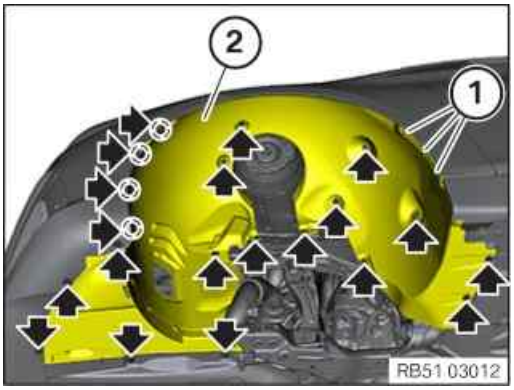


- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

30 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

31 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

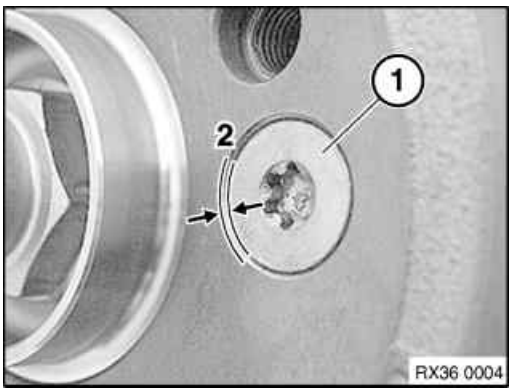
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

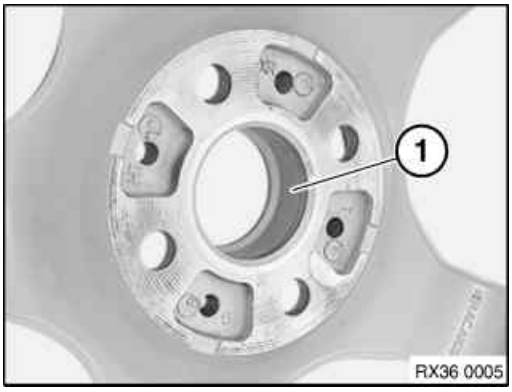


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts

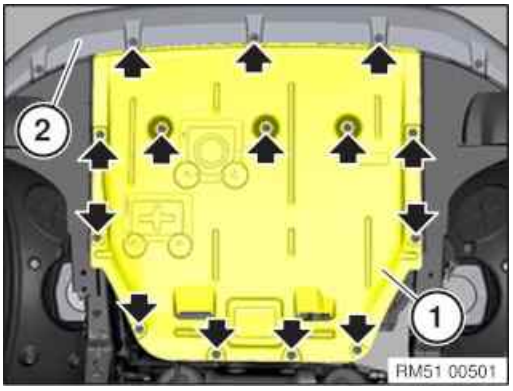
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

cardiagn.com

32 – Installing the front underbody protection

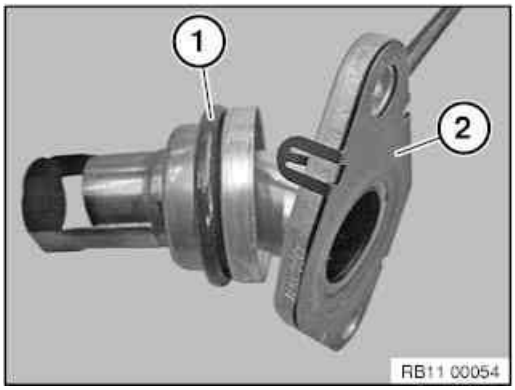


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

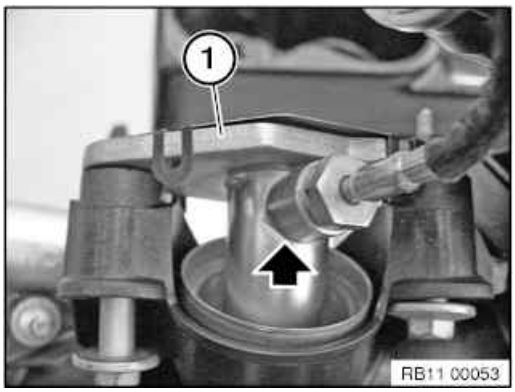
33 – Installing the intake plenum



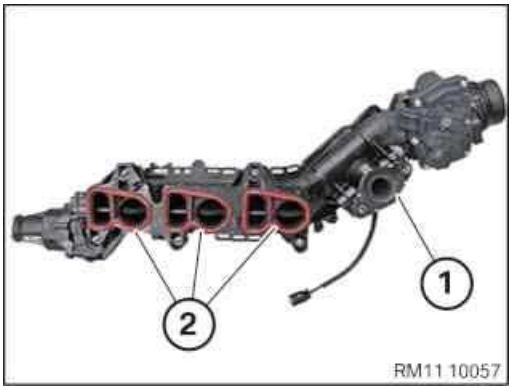
- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.

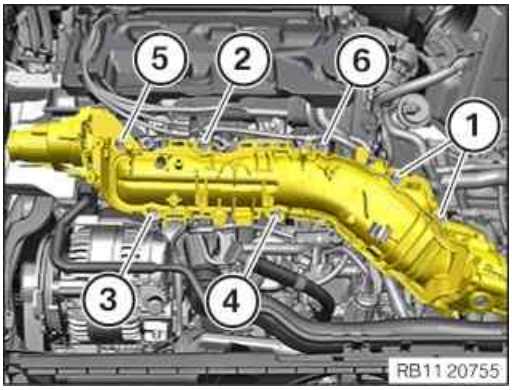


- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

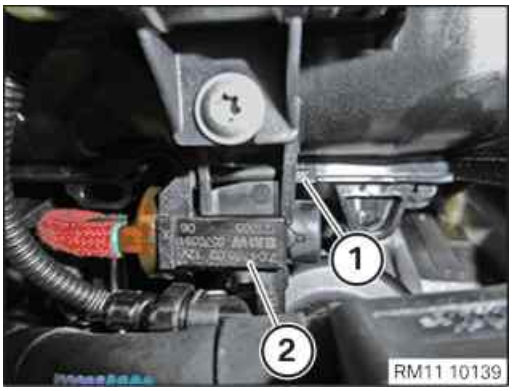
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

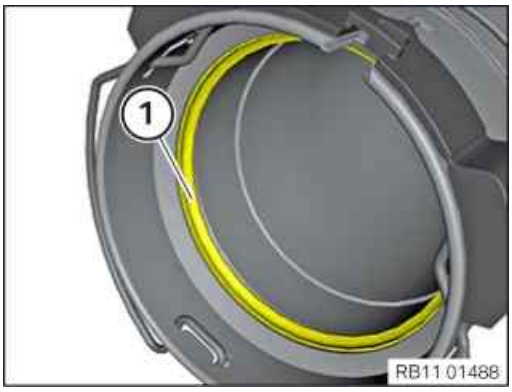
Intake plenum to cylinder head

M6		Tightening torque	11 Nm



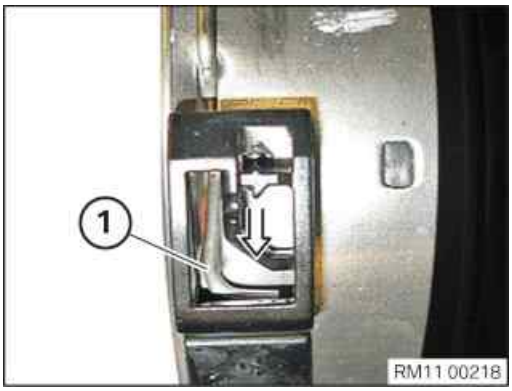
- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.

cardiagn.com

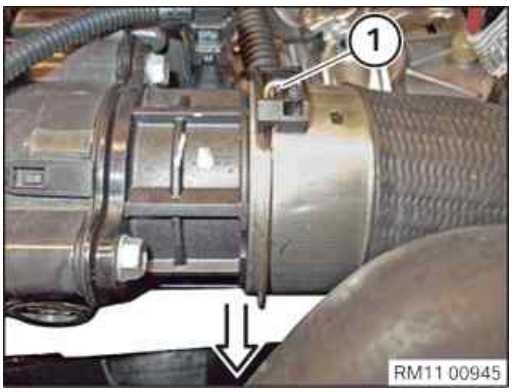


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring



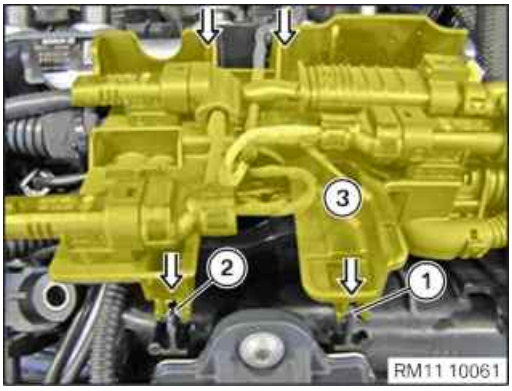
- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

34 – Installing the cable clip for the intake plenum

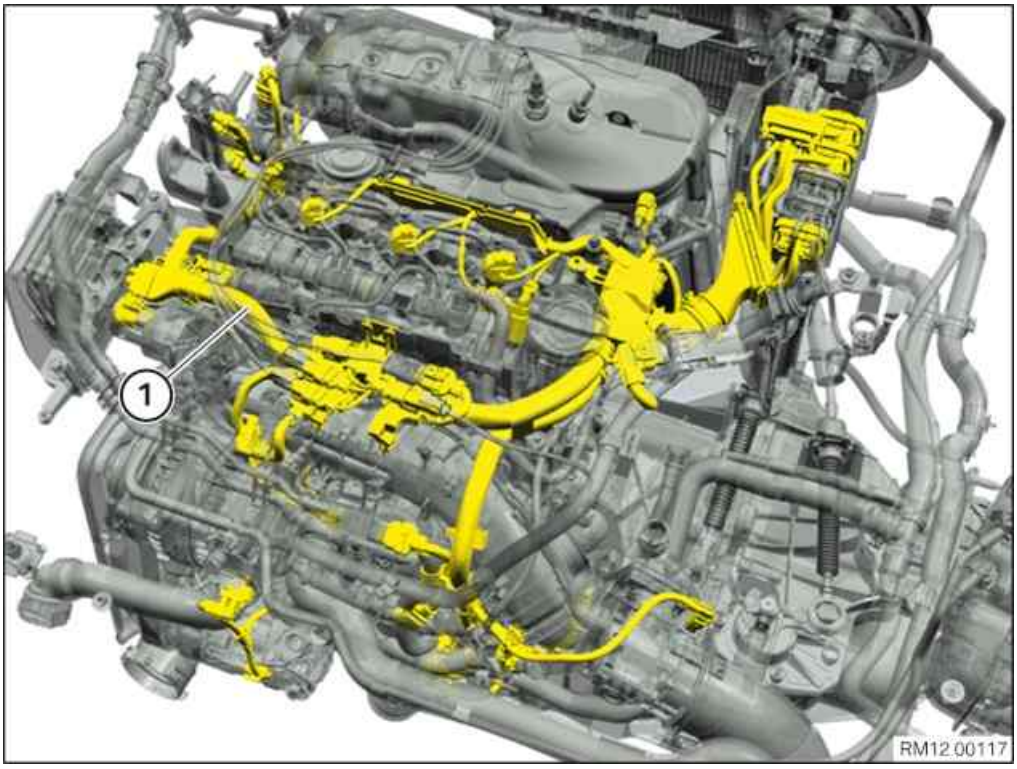


- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).

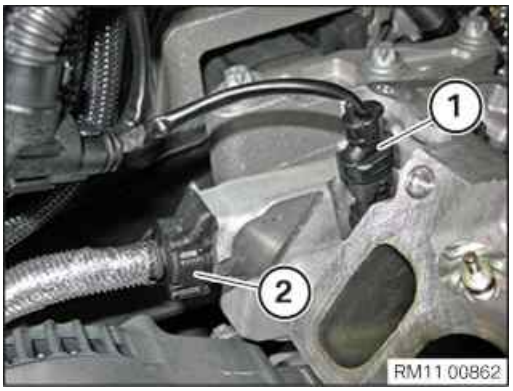
35 – Fastening the wiring harness section for the intake plenum

cardiagn.com

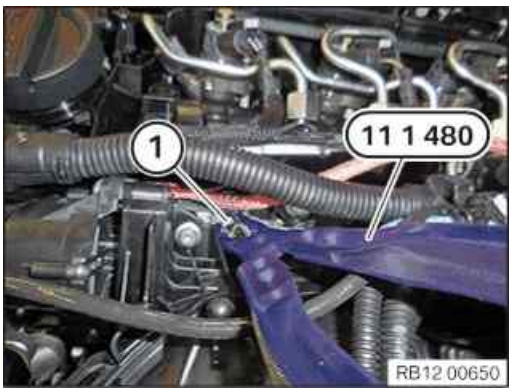
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine

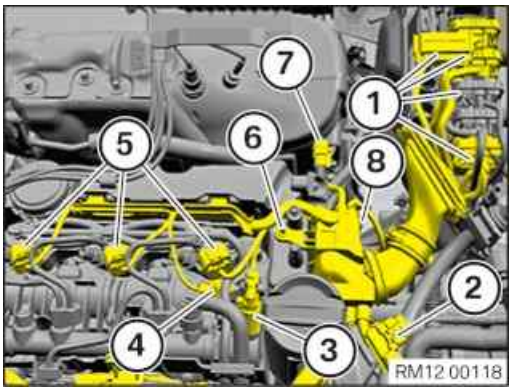


- Connect the coolant line (2) and lock the clamp.
- Connect and lock the connector (1).
- The locks must engage audibly.



- Connect and lock the connector (1) on the glow elements.
  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

cardiagn.com

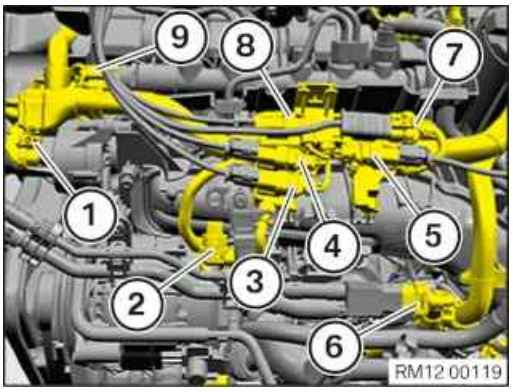


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

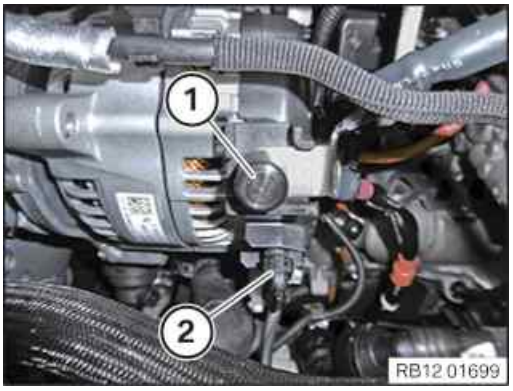
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.



- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.

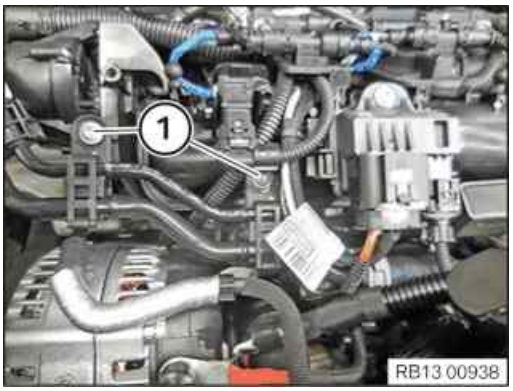


- Connect and lock the connector (2).

  Lock must audibly engage.
- Connect positive battery cable (1) on alternator and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

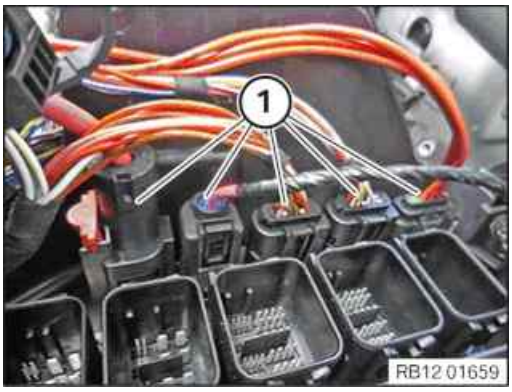


- Position fuel lines.
- Tighten the screws (1).

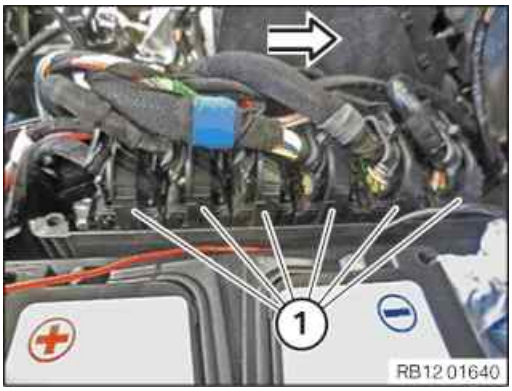
Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

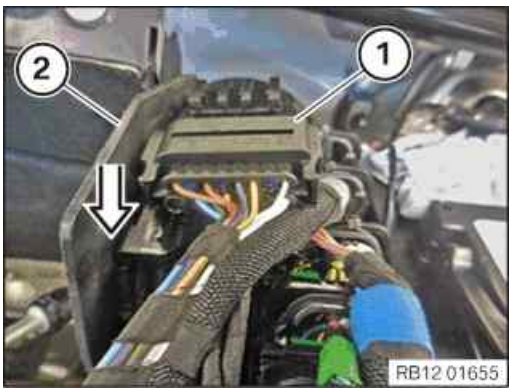
cardiagn.com



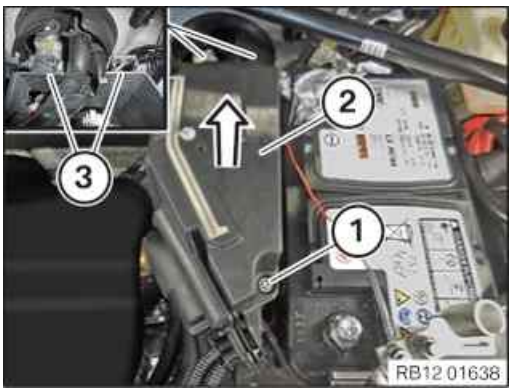
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



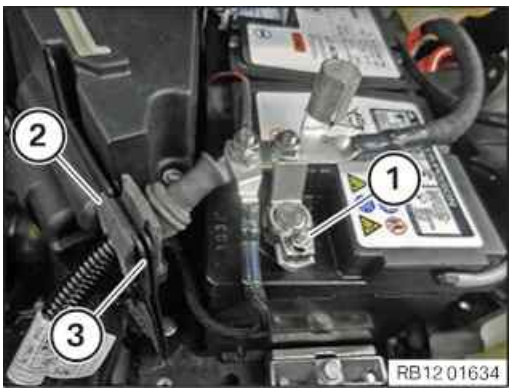
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

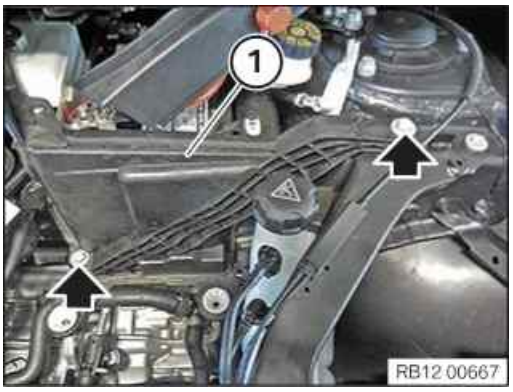


- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (1).
- Tighten screws (arrows).

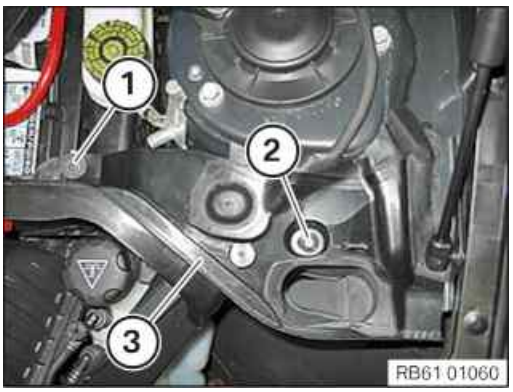
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

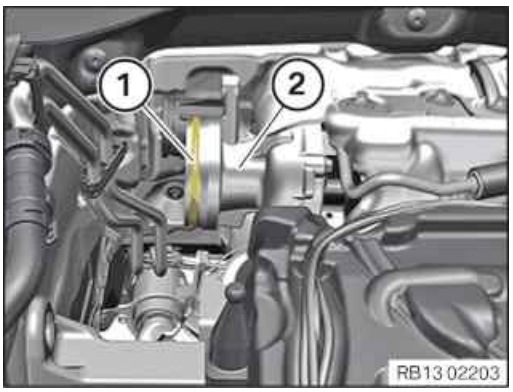


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

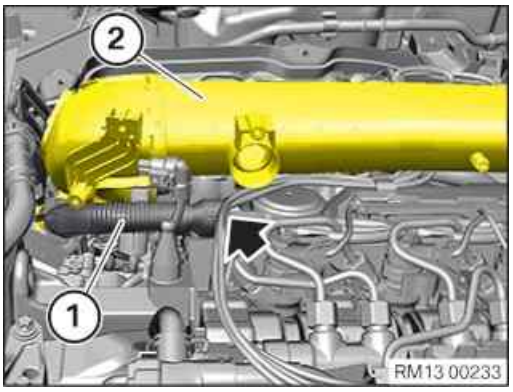
36 – Partially securing clean air pipe



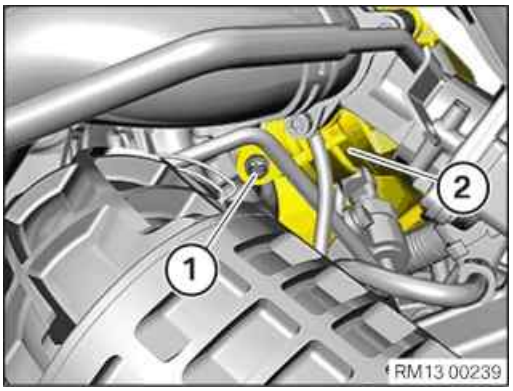
- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

- Feed in clean air pipe (1) and install.

cardiagn.com



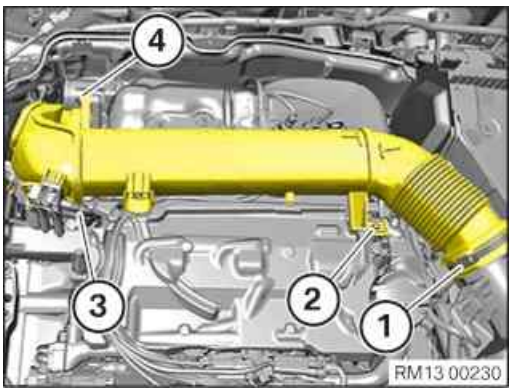
- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten screw (1) from clean air pipe (2).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

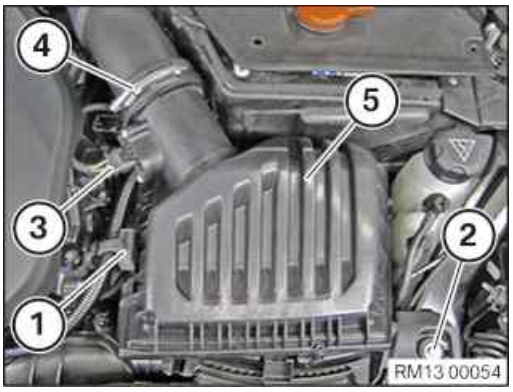
- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

37 – Installing intake silencer housing

cardiagn.com



- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

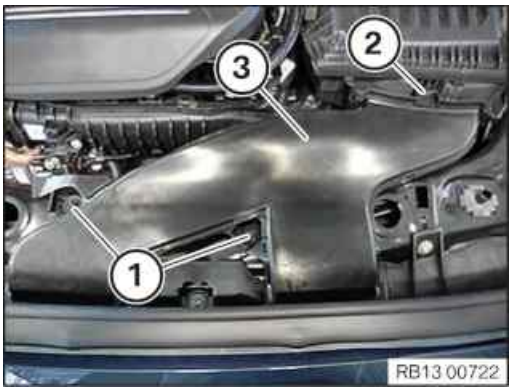
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

38 – Install the intake neck for the intake filter housing



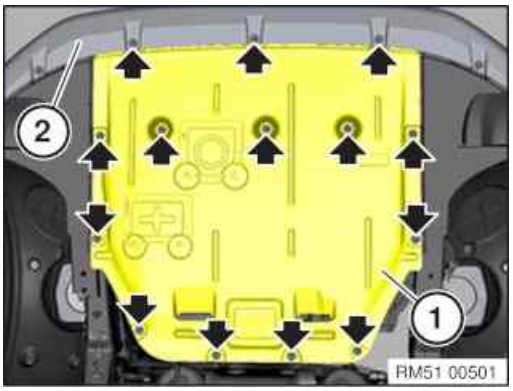
- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

39 – Installing the front underbody protection

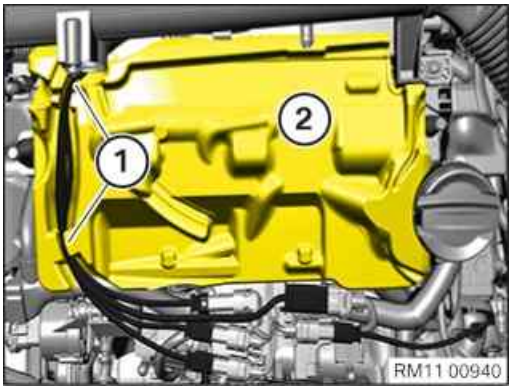


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

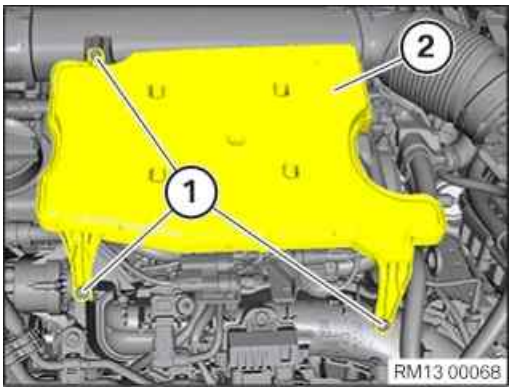
40 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

41 – Install resonator

cardiagn.com



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

42 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

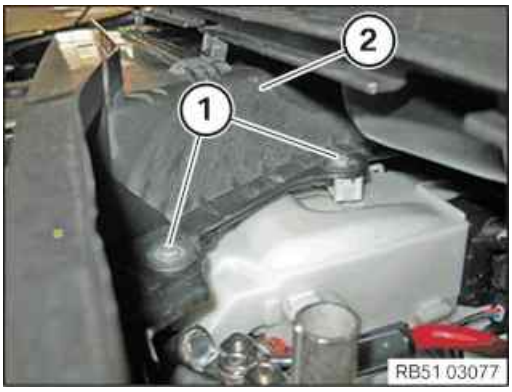
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

43 – Installing the upper bulkhead cover

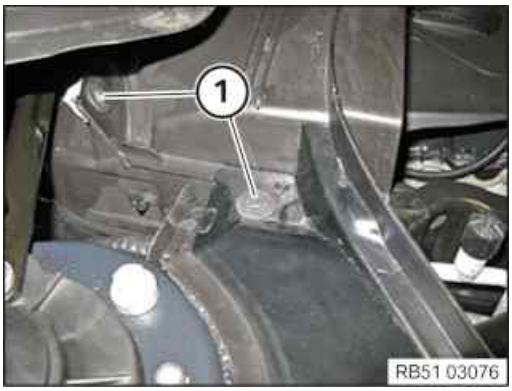
cardiagn.com



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

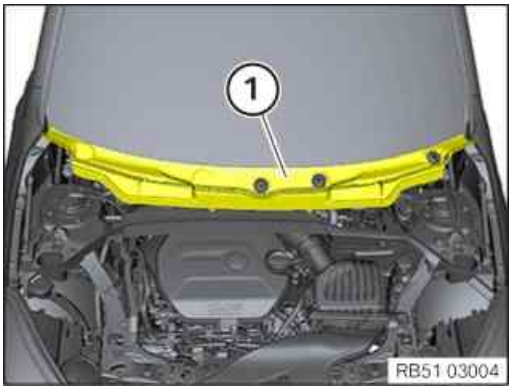
Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

44 – Install the rear cowl panel cover



- Feed in and engage the rear cowl panel cover (1).

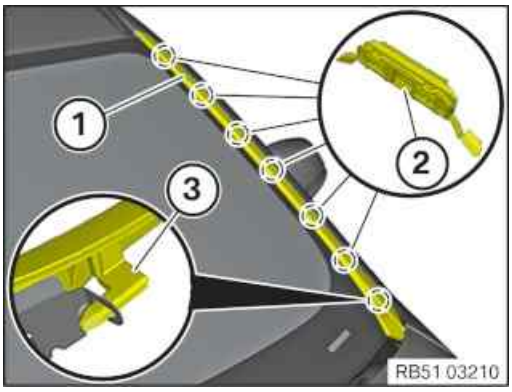
45 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the gutter strip on the windscreen**

cardiagn.com



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

46 – Install left and right wiper arm

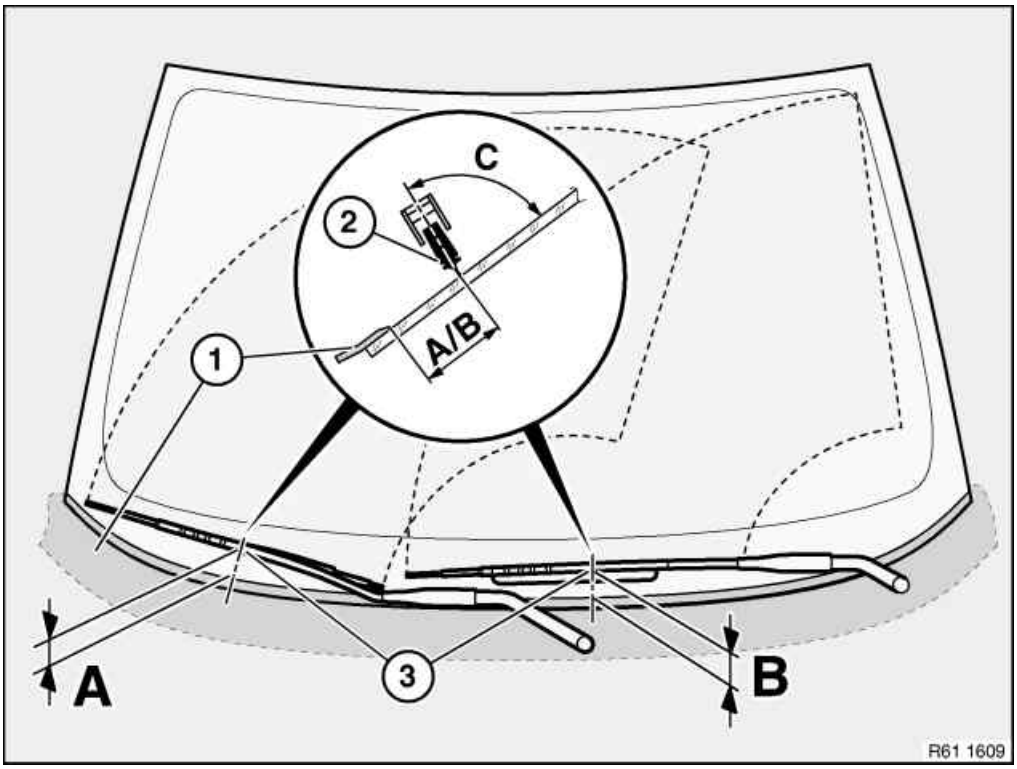
NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the wiper arm**

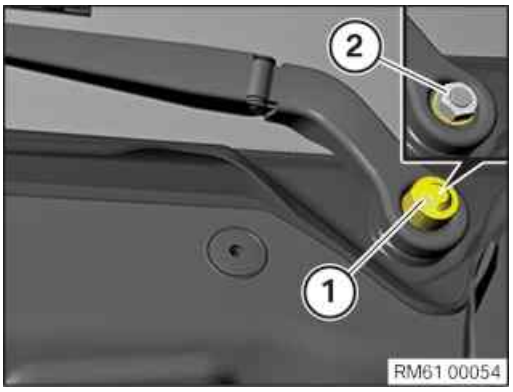
TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).

cardiagn.com



NOTICE

Description is for left component only. Procedure on the right side is identical.

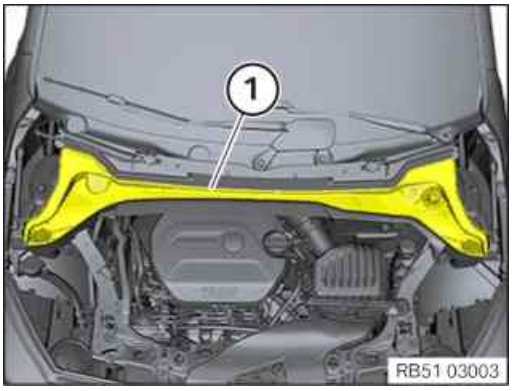
- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

47 – Installing front cowl panel cover

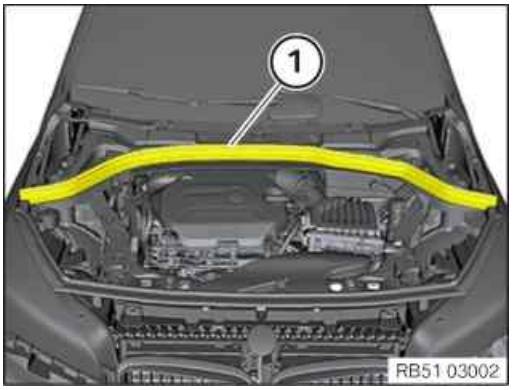


- Insert the cowl panel cover front (1) to the rear and install.
- Check cowl panel cover at front is correctly seated (1).

48 – Install the seal for the bonnet

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

49 – Disconnecting all battery earth leads

- See additional information.

cardiagn.com

50 – Delete adaptations

- Connect diagnosis system.
  - Power train
  - Digital diesel electronics (DDE)
  - Reset adaptations

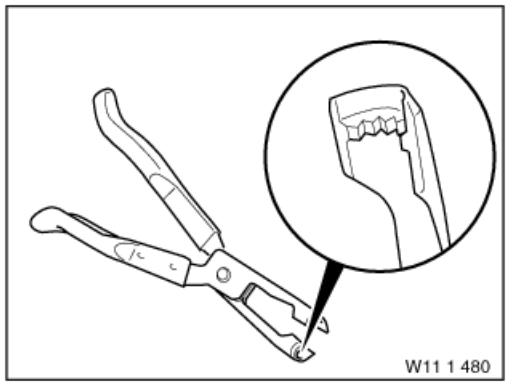
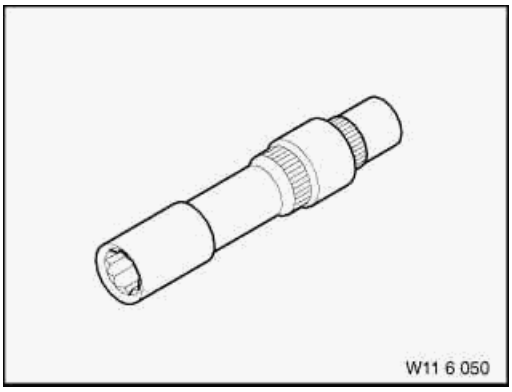
Overview of Special Tools

0 490 796 (11 1 480) Pliers



Common	Used in step 15 23
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 491 068 (11 6 050) Socket wrench insert



Common	Used in step 23 27
Usage	(Wrench socket AF 10) bi-hexagon/glow elements
Included in the tool or work	
Storage location	B10
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

2 302 630 Tester

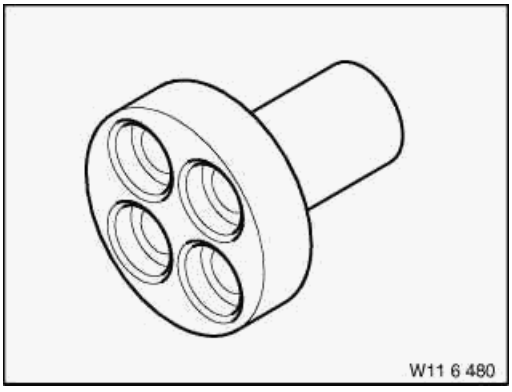
Common	Used in step 25
Usage	Leitenberger DRV05 with OT gauge OT04 and adapter no.60 from the adapter set. This test requires only a one-time removal of the electrical machine electronics. After removing the spark plugs, the test for the loss of pressure can be carried out. This is essential for E72, as a conventional compression test is uneconomical for the reasons given below. Remove the electrical machine electronics, install the eight hoses for the compression test, install the electrical machine electronics, fill coolant and carry out the compression test. With this, the development of the 8-part hose set for the compression test is not required any more.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	02 03 12 (804)

cardiagn.com

0 496 146 (11 8 880) Adapter

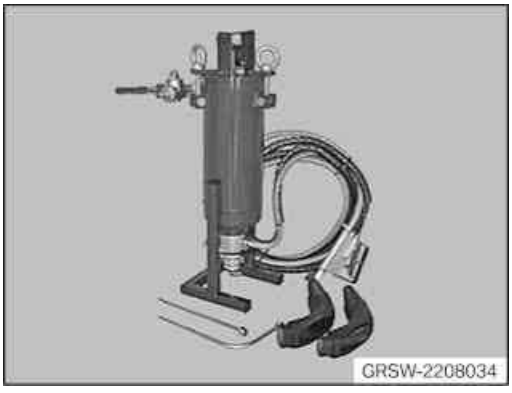
Common	Used in step 25
Usage	For compression testing.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 493 380 (11 6 480) Connector



Common	Used in step 25
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 208 034 Blasting material device



Common	Used in step 26
Usage	For cleaning of the intake ports and the intake valves.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 02 10 (650)

Overview Technical Data

Cleaning agent	Used in step 24
Universal cleaner must be diluted with water.	
Washer fluid	2 parts water, 1 part universal cleaner
Expendable materials: Universal cleaner	

Clean the intake system	Used in step 24
Soaking time of the cleaning agent	1 h

Walnut granules	Used in step 26
Quantity for each blasting process	2 l

Cleaning the intake ports	Used in step 26
Operating pressure	6 bar ... 8 bar

Cleaning the intake ports	Used in step 26
Blast duration with walnut granules	Approx. 20 s
Blast duration with pure compressed air for the complete blowing out of walnut granules	Approx. 10 s

Throttle body gasket to charge air pipe with integrated temperature sensor for intake air	24
Charging pressure sensor seal to intake system	24

cardiagn.com

11 12 800 Clean cylinder head intake channels and intake plenums

Special tools required:

- 11 8 880
- 11 0 235
- 2 302 630
- 11 6 480
- 11 6 050
- 2 356 969
- 2 356 966
- 2 356 967

Necessary preliminary work:

- Disconnect negative battery lead
- Removing intake plenum
- Remove front right wheel arch panel

Dismantle intake plenum:

- Remove throttle body
- Remove adjuster
- Remove charging pressure sensor
- Remove the temperature sensor for the exhaust-gas recirculation
- If applicable, remove preheating control unit

Wear protective goggles and gloves.

Caution!
Never place electrical components in cleaning agent!

Cleaning intake plenum:

- Wear personal protective clothing/equipment
- Prepare cleaning agent: Mix 2 parts water with 1 part BMW universal cleaner (see Section 3.2)
- Place intake plenum in cleaning agent
- Observe application time of at least 1 hour

cardiagn.com

Cleaning intake ports: Caution!

Risk of engine damage!

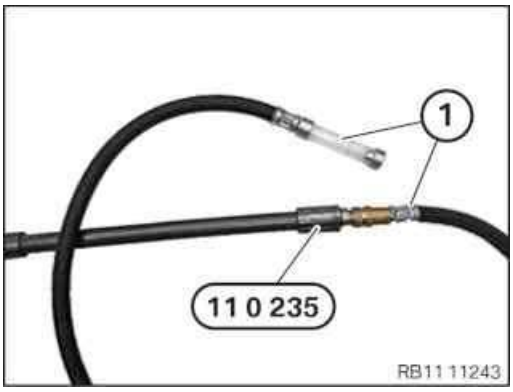
When cleaning the intake ports, it must be ensured that the intake valves of the corresponding cylinder are closed.

Determine the TDC (intake valves closed) using a TDC determination unit via the glow-plug hole.

Start with the 1st cylinder when cleaning the intake ports.

Remove glow-plug cylinder 1.

Screw in special tools 11 8 880 and 11 0 235 .

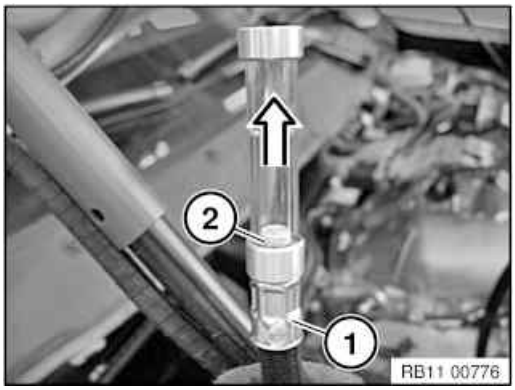


Connect TDC determination unit (1) from special tool 2 302 630 with special tool 11 0 235 .

Turn the engine with special tool 11 6 480 on the central bolt till cylinder 1 is in TDC position.**Caution!**

Do not crank engine in reverse direction.

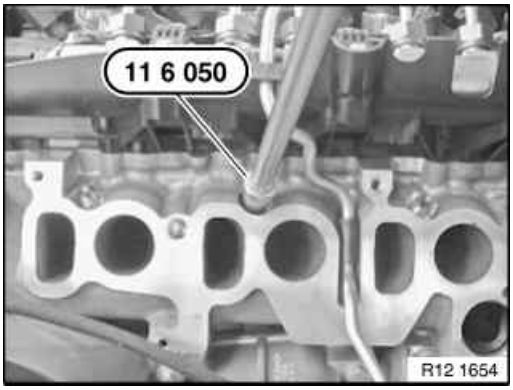
cardiagn.com



Caution!

Determine the TDC (intake valves closed) using a TDC determination unit (1) via the glow-plug hole.

Turn the engine on the central bolt until cylinder 1 is in TDC position.

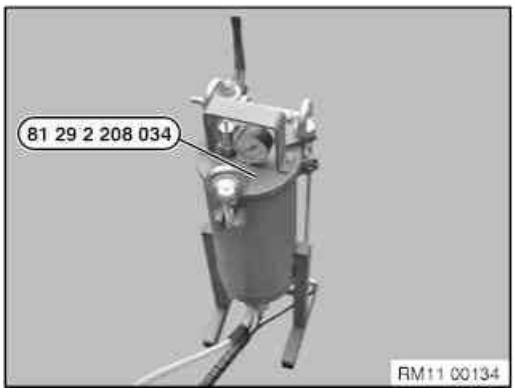


Remove special tools.

Reinstall glow-plug using special tool 11 6 050 .

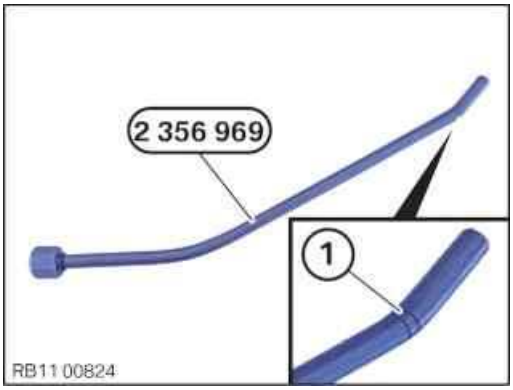
Installation note:

Tightening torque 12 23 1AZ.



The following are required:

- Blasting tool 81 29 2 208 034
- Walnut shell granulate
- Vacuum cleaner



Caution!

Front area of sensors is marked with two notches. These can additionally be highlighted in colour.

During the blasting process, only pull the wands out of the vacuum adapter until the mark becomes visible.

Blasting wand for swirl ports:

- 2 356 969

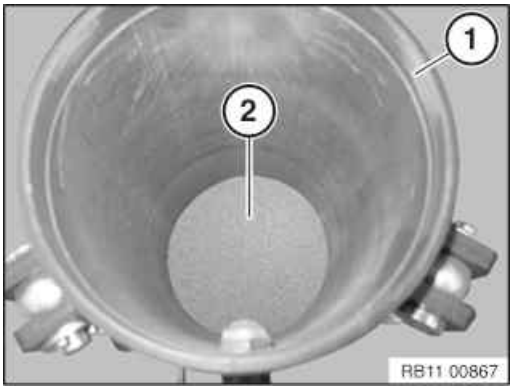
cardiagn.com

Vacuum adapter for tangential swirl port:

- 2 356 966

Vacuum adapter for swirl port:

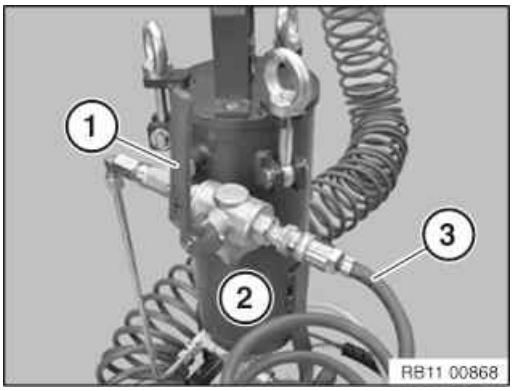
- 2 356 967



Note:
Use 2 litres of granulate per cleaning operation; this corresponds to a blasting duration of approx. 20 seconds.

Open blasting tool (1) and pour in 2 litres of granulate (2).

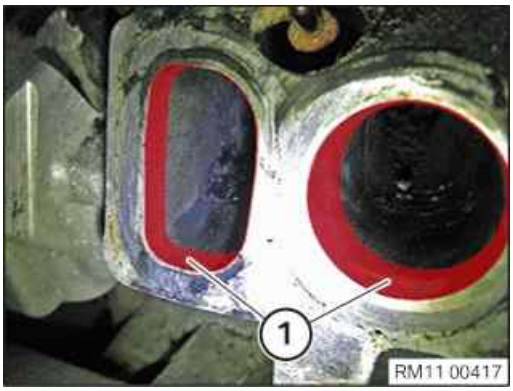
Close the device again.



Note:
Operating pressure 6 - 8 bar.

Close main valve (1) on blasting tool (2).

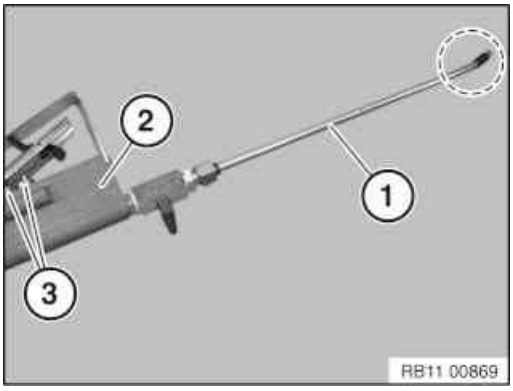
Connect compressed air (3).



Cleaning the swirl port of 1st cylinder:

Prior to the blasting process, clean the front area of both intake ports (1) of first cylinder with a suitable tool (e.g. plastic scraper, brushes 83 19 2 298 237).

cardiagn.com



Screw together blasting wand 2 356 969 (1) and actuator (2).

Open blasting tool and pour in 2 l granulate.

Close the device again.

Note:
Actuator (3) has two stages!

In stage one, only compressed air flows through the blasting wand.

In stage two (operation is fully pressed), granulate is added (blasting process).

Connect vacuum adapter 2 356 967 to vacuum cleaner. Hold vacuum adapter 2 356 967 against swirl port at no. 1 cylinder.

Open the main valve on the blasting tool and switch the vacuum cleaner on.

Caution!

Danger of injury!

Risk of damage!

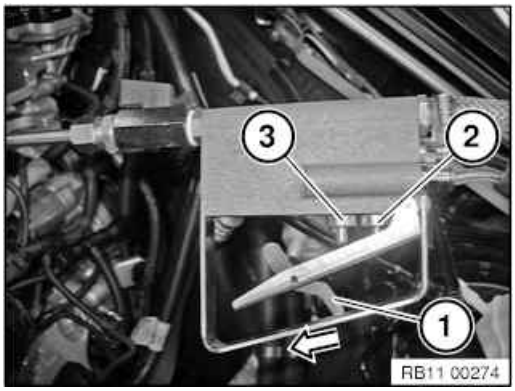
Second person required to assist.

Blasting wand may only be pulled out until the mark becomes visible.

Wear safety goggles.

Insert blasting wand 2 356 969 in the adapter 2 356 967 .

Open the actuator valve (1).



Slide locking lever (1) to the front in direction of arrow.

Operate compressed-air valve (2) at stage one; compressed air can now flow in.

Fully operate valve (3) at stage two; walnut shell granulate is now injected.

Clean intake port, rotating the blasting wand and moving it vertically up and down.

Blasting wand may only be pulled out until the mark becomes visible.

When you notice that the collection container is becoming empty, continue operation for at least 10 seconds at stage one in order to swirl up and draw off the remaining granulate.

Close operation valve. Close main valve, check pressure drop at the pressure gauge.

Evaluate result if necessary.

If necessary, repeat procedure.

cardiagn.com

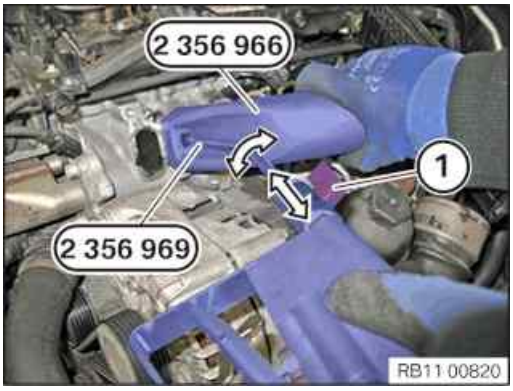
Cleaning the tangential swirl port of 1st cylinder:

Open blasting tool and pour in 2 l granulate.

Close the device again.

Connect vacuum adapter 2 356 966 to vacuum cleaner. Hold vacuum adapter 2 356 966 on swirl port of first cylinder.

Open the main valve on the blasting tool and switch the vacuum cleaner on.



Caution!

Danger of injury!

Risk of damage!

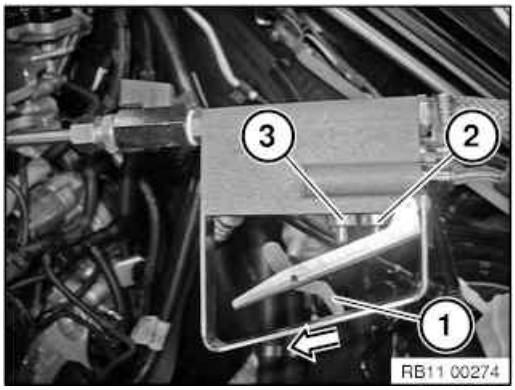
Second person required to assist.

Blasting wand may only be pulled out until the mark becomes visible.

Wear safety goggles.

Insert blasting wand 2 356 969 in the adapter 2 356 966 .

Open the actuator valve (1).



Slide locking lever (1) to the front in direction of arrow.

Operate compressed-air valve (2) at stage one; compressed air can now flow in.

Fully operate valve (3) at stage two; walnut shell granulate is now injected.

Clean intake port, rotating the blasting wand and moving it vertically up and down.

Blasting wand may only be pulled out until the mark becomes visible.

When you notice that the collection container is becoming empty, continue operation for at least 10 seconds at stage one in order to swirl up and draw off the remaining granulate.

Close operation valve. Close main valve, check pressure drop at the pressure gauge.

Evaluate result if necessary.

If necessary, repeat procedure.

Cleaning the other cylinders:

Clean the tangential ports and swirl ports of the next cylinder using the same procedure.

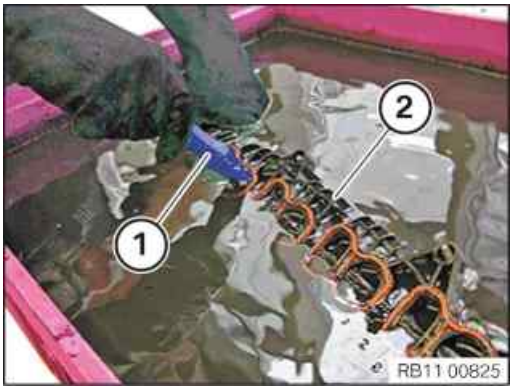
Caution!

When cleaning the intake ports, it must be ensured that the intake valves of the corresponding cylinder are closed.

Determine the TDC (intake valves closed) using a TDC determination unit via the glow-plug hole.

Do not crank engine in reverse direction.

cardiagn.com



Wear protective goggles and gloves.

Caution!

Do not clean electrical components with a parts cleaning unit or high pressure cleaner!

Cleaning intake plenum:

- Remove the intake plenum (2) from the cleaning agent
- Clean the openings on intake plenum (2) and swirl flap using the brush (1)

  (Part number: 83 19 2 298 237)
- Clean throttle valve, exhaust-gas recirculation valve, mixing tube and mounted parts with the brush (1) if necessary
- Then clean intake plenum (2) with a parts cleaning unit or a high-pressure cleaner
- Check all seals for damage and renew, if applicable

Observe country-specific waste disposal regulations.

Required follow-up work:

Assemble intake plenum:

- Installing the throttle body
- Install adjuster
- Install the charging pressure sensor
- Install the temperature sensor for the exhaust-gas recirculation
- If applicable, install preheating control unit

- Crank the engine at the central bolt at minimum twice
- Install front right wheel arch panel trim
- Install intake plenum
- Connect battery earth lead

- Reset the quantity correction under:
  - Service functions
  - 01 Drive
  - Digital Diesel Electronics
  - Reset correction values of injectors

cardiagn.com

11 12 ... Clean intake plenum (B37, B47)

Necessary preliminary work:

- Remove intake plenum

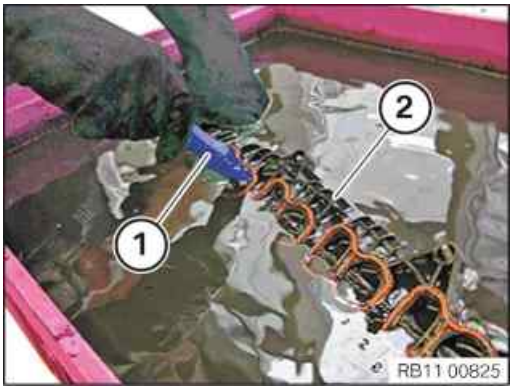
Dismantle intake plenum:

- Remove throttle body
- Remove adjuster
- Remove charging pressure sensor
- Remove the temperature sensor for the exhaust-gas recirculation .
- If applicable, remove preheating control unit

Wear protective goggles and gloves.

Caution!
Never place electrical components in cleaning agent!

- Put on personal protective clothing/equipment!
- Prepare cleaning agent: Mix 2 parts water with 1 part BMW universal cleaner (part number: 83 19 2 360 981) mixed
- Place intake plenum in cleaning agent
- Adhere to an application time of at least 1 h



Wear protective goggles and gloves.

Caution!
Do not clean electrical components with a parts cleaning unit or high pressure cleaner.

- Remove the intake plenum (2) from the cleaning agent
- Clean the openings of the intake plenum (2) and swirl flaps using the brush (1)

  (Part number: 83 19 2 298 237)
- Clean throttle valve, exhaust-gas recirculation valve, mixing tube and mounted parts with brush (1) if necessary
- Clean the intake plenum (2) with a parts cleaning unit or a high-pressure cleaner.
- Check all seals for damage and renew, if applicable.

Pay attention to country specific instructions for disposal.

cardiagn.com

Required follow-up work:

Assemble intake plenum:

- Installing the throttle body
- Install adjuster
- Install the charging pressure sensor
- Install the temperature sensor for the exhaust-gas recirculation.
- If applicable, install preheating control unit

- Install intake plenum

cardiagn.com

11 12 070 Remove and install/replace acoustic cover

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

2 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

cardiagn.com

11 12 070 Remove and install/replace acoustic cover

11 12 100 Removing and installing cylinder head

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.

For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

TECHNICAL INFORMATION

Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Maintain conditions of absolute cleanliness.

cardiagn.com

1 – Remove vehicle battery

WARNING

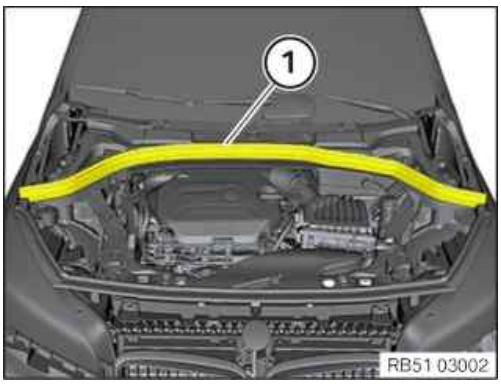
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

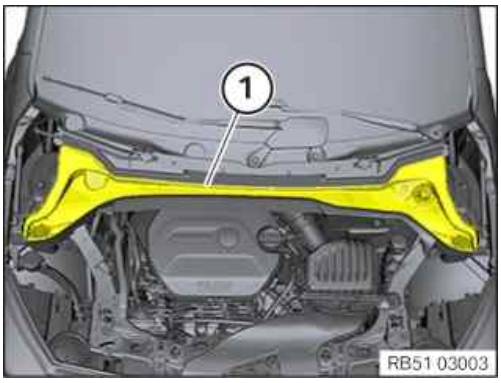
- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

TECHNICAL INFORMATION

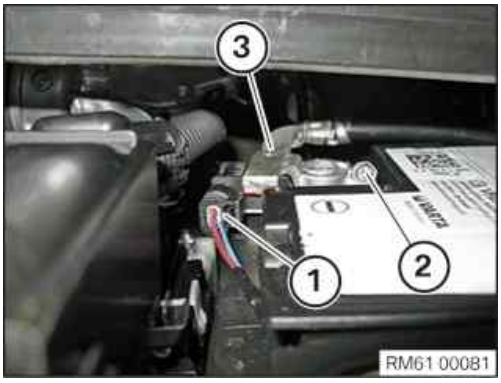
For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



- pull off gasket (1) upwards.

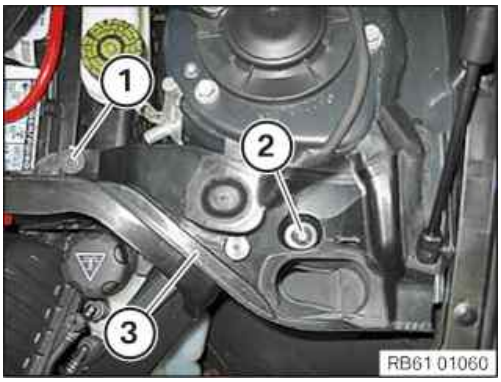


- Remove the cowl panel cover (1) to the top.

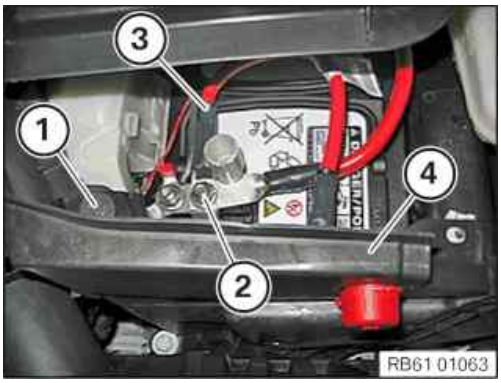


- Unlock and disconnect connector (1).
- Slacken nut (2).
- Disconnect the negative battery terminal (3).

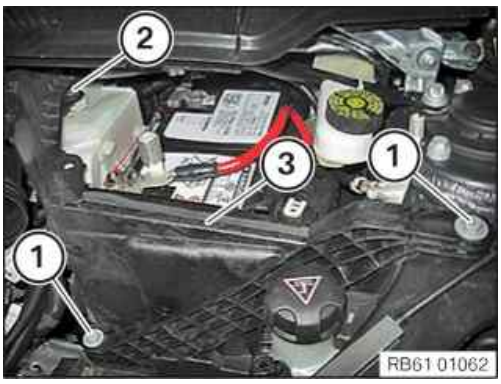
cardiagn.com



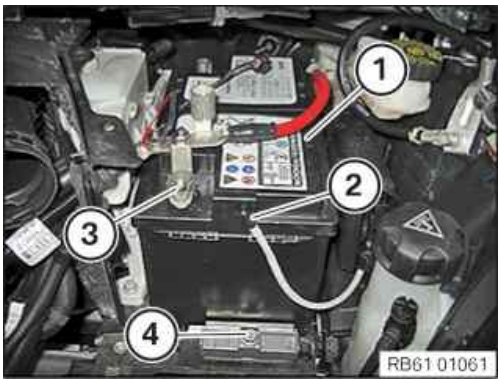
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



- Loosen screw (1).
- Unscrew the nut (2) and remove the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten nuts (2) on the positive terminal hand-tight.



- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.



- Pull off the vent hose (2).
- Slacken the nut (3) on the positive terminal and remove the positive terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

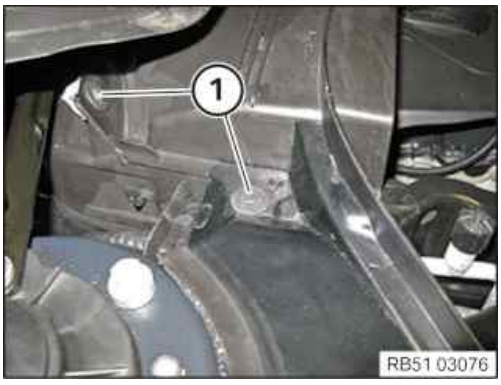
- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

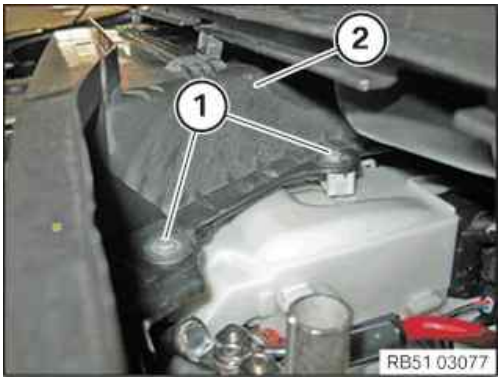
2 – Removing the upper bulkhead cover

cardiagn.com

- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

3 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

▶ **Remove the wiper arm**

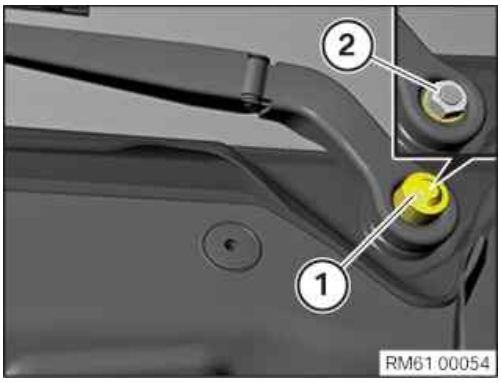
RISK OF DAMAGE

Damage to wiper console

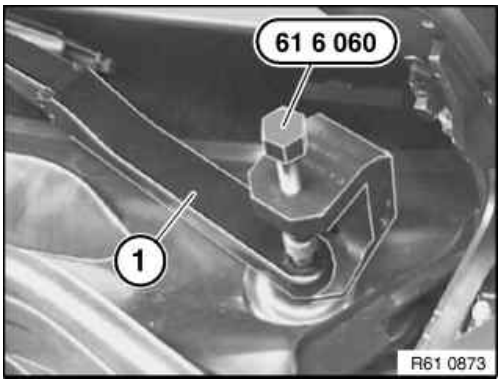
While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.

cardiagn.com



- Remove the protective cap (1).
- Loosen nut (2).



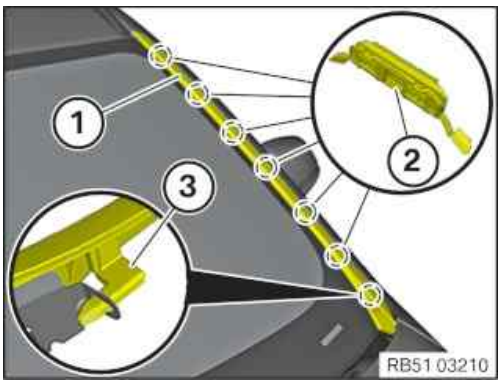
- Pull off the wiper arm (1) using special tool .

4 – Remove the gutter strip on the windscreen on the left and right

NOTICE

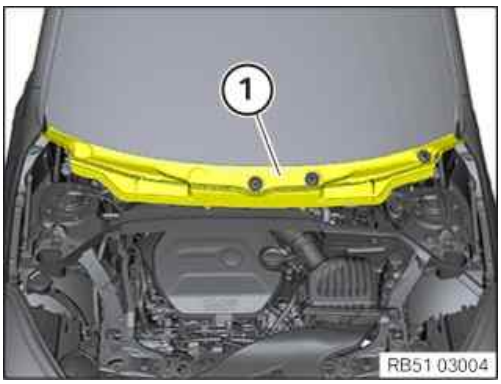
Description is for left component only. Procedure on the right side is identical.

▶ Remove the gutter strip on the windscreen



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

5 – Remove the rear cowl panel cover



- Disengage and guide out the rear cowl panel cover (1) towards the top.

6 – Removing the acoustic cover

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

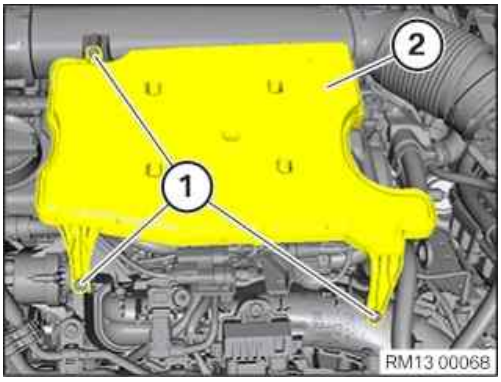
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

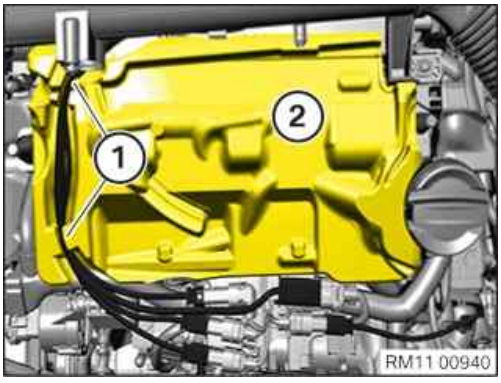
- Unclip the acoustic cover from the marked areas towards the top.

7 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

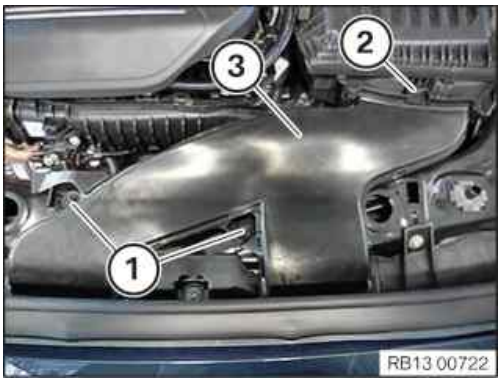
8 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

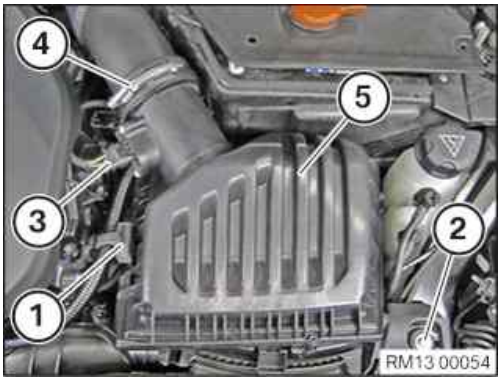
9 – Remove the intake neck for intake silencer housing

cardiagn.com



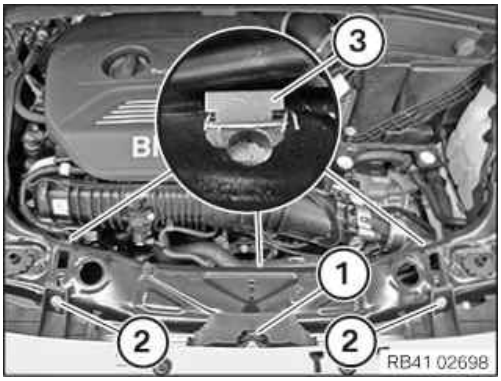
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

10 – Removing intake silencer housing

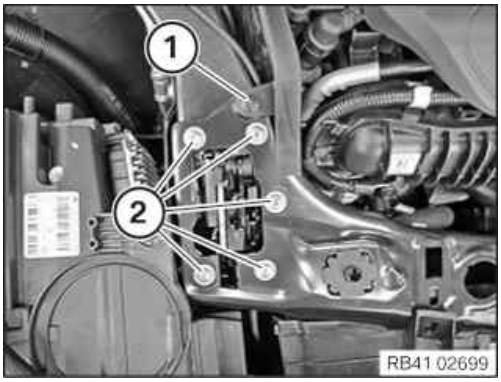


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

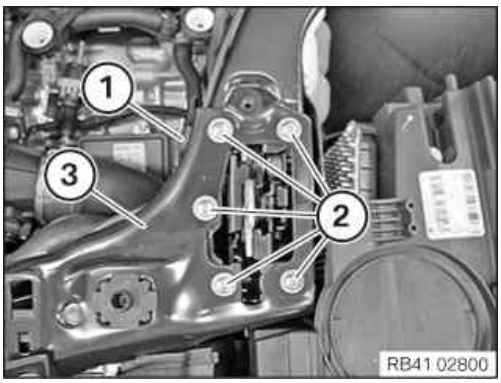
11 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



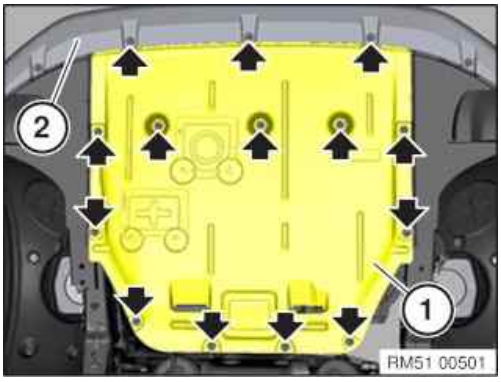
- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

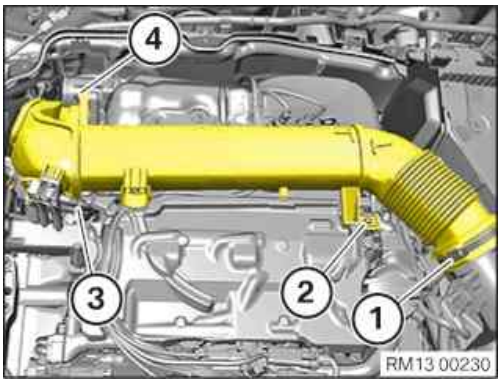
cardiagn.com

12 – Removing the front underbody protection

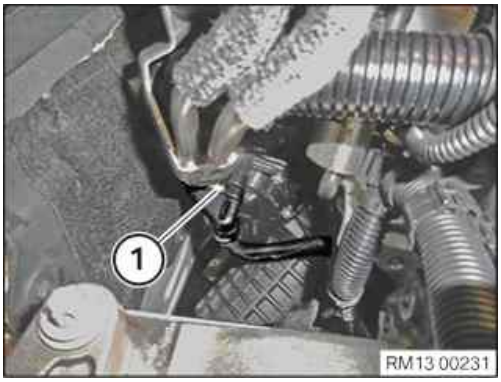


- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

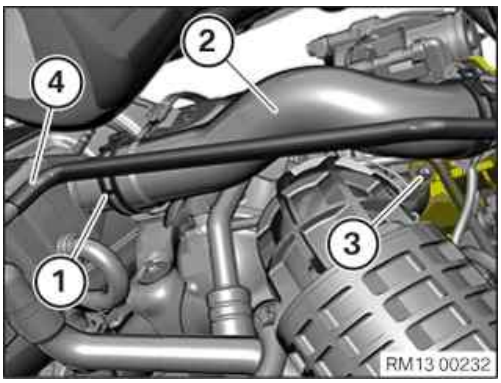
13 – Removing clean air pipe



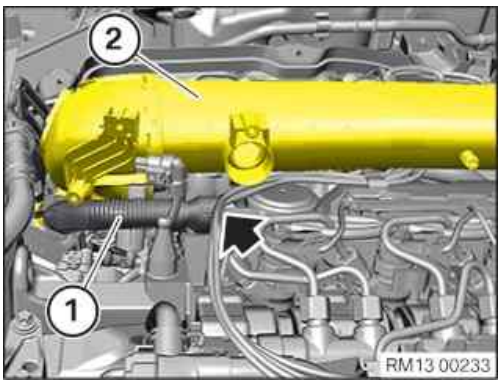
- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).



- Unlock and loosen connector (1).

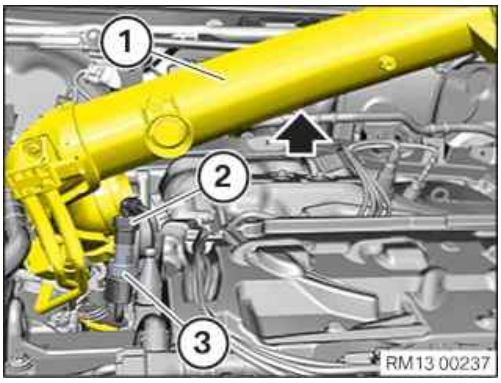


- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

cardiagn.com



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

14 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

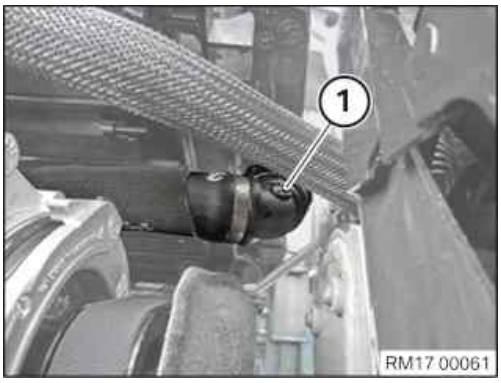
In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

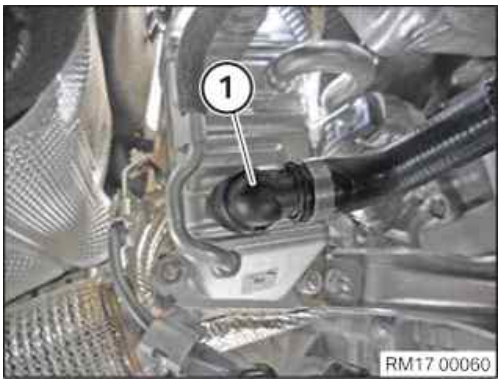
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

cardiagn.com



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

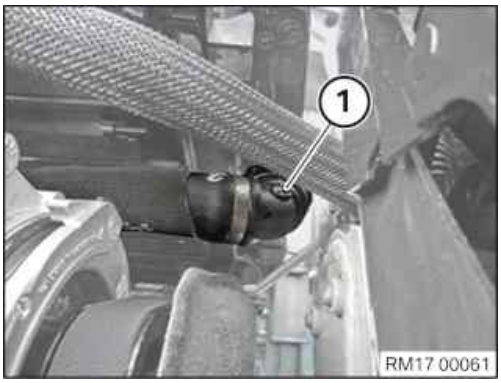


- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

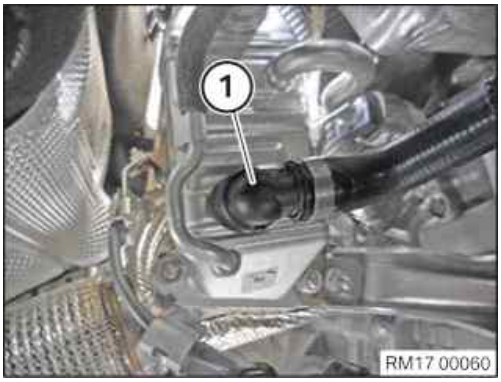
15 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

16 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

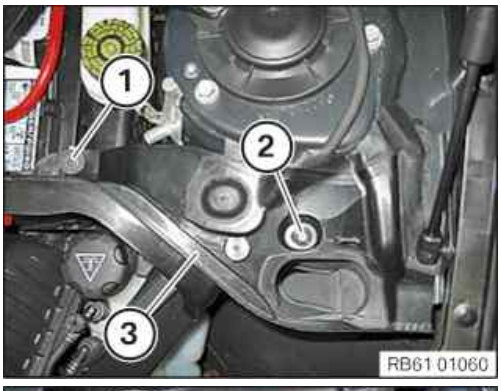
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

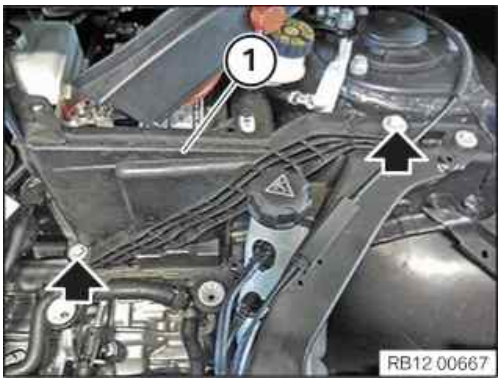
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



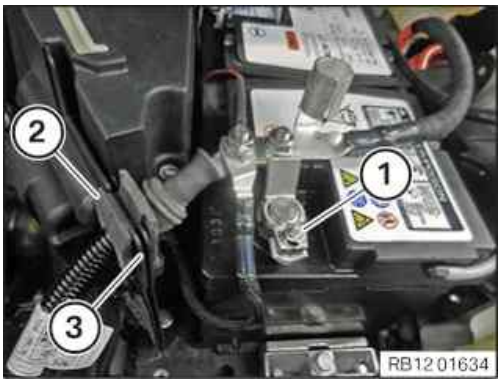
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.

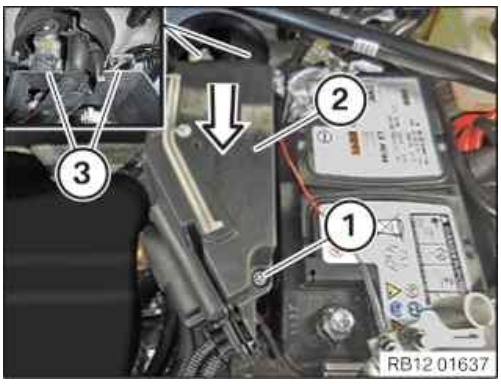
cardiagn.com



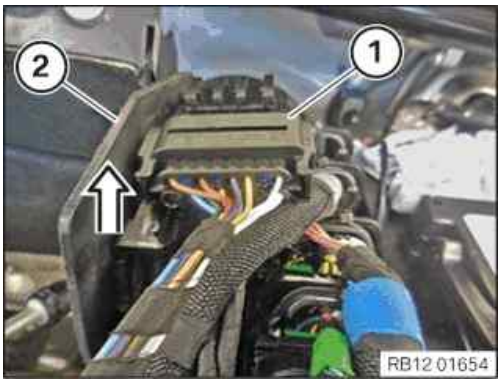
- Remove screws (arrows).
- Guide out tension strut (1) and remove.



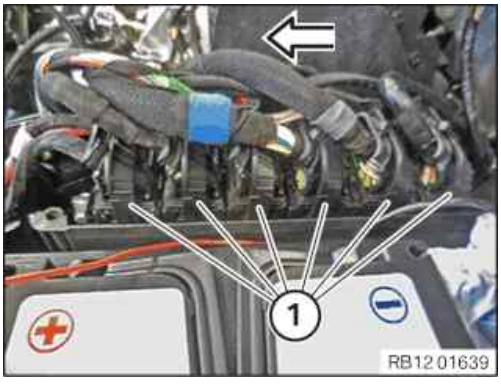
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

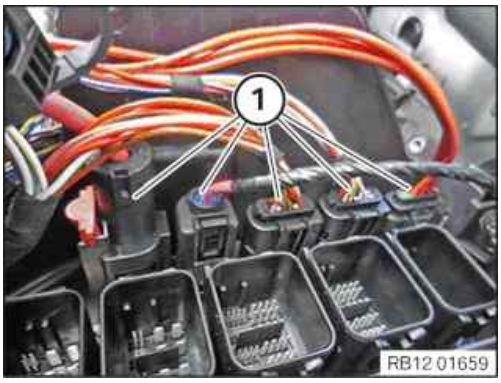


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

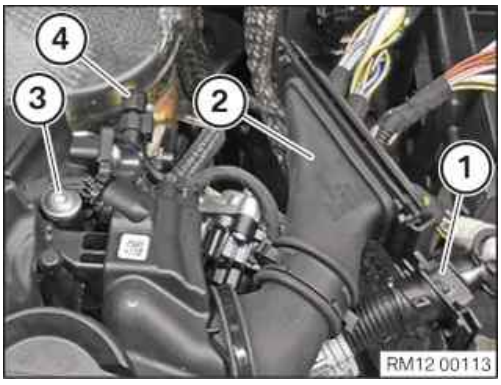


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

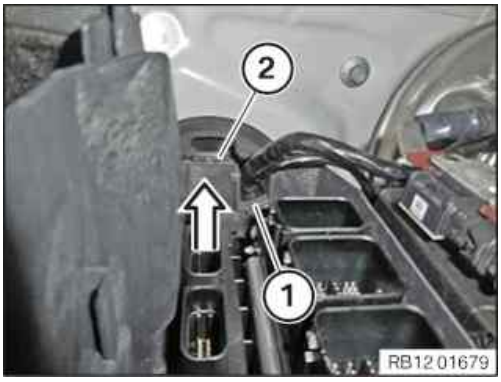
cardiagn.com



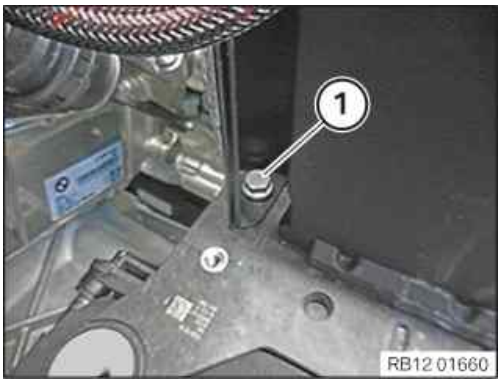
- Unlock and loosen connector (1).



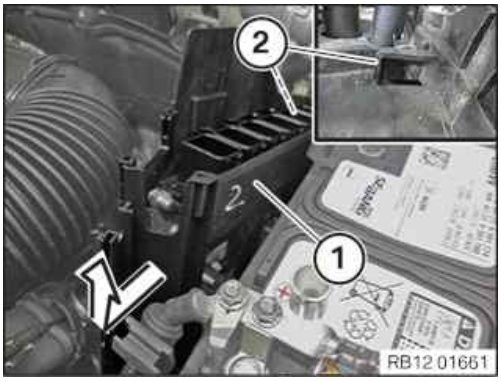
- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.



- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



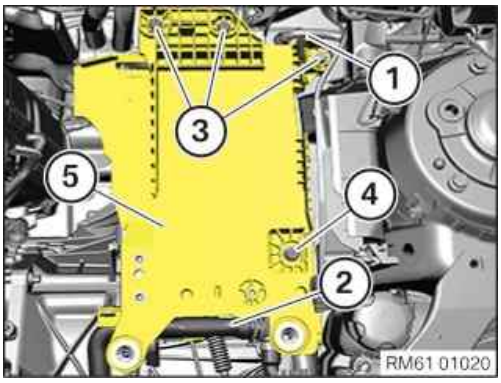
- Loosen screw (1).



- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

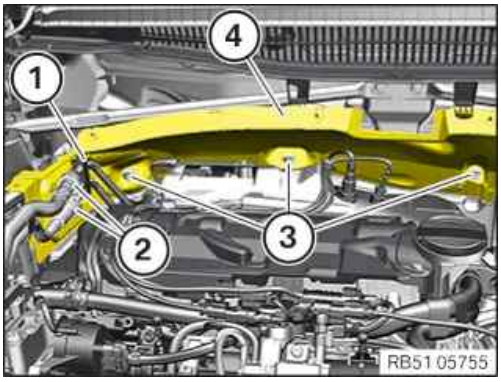
17 – Remove battery holder

cardiagn.com



- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

18 – Remove the rear bulkhead upper part



- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

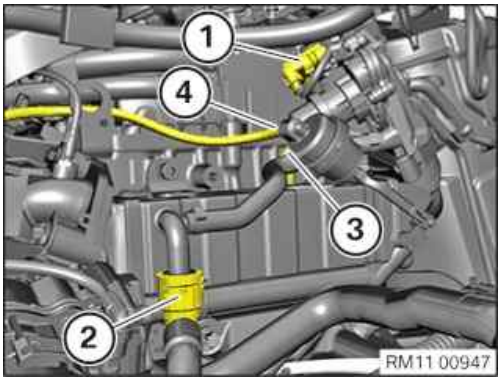
19 – Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

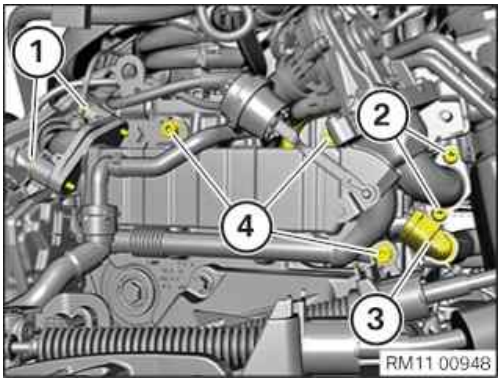
- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

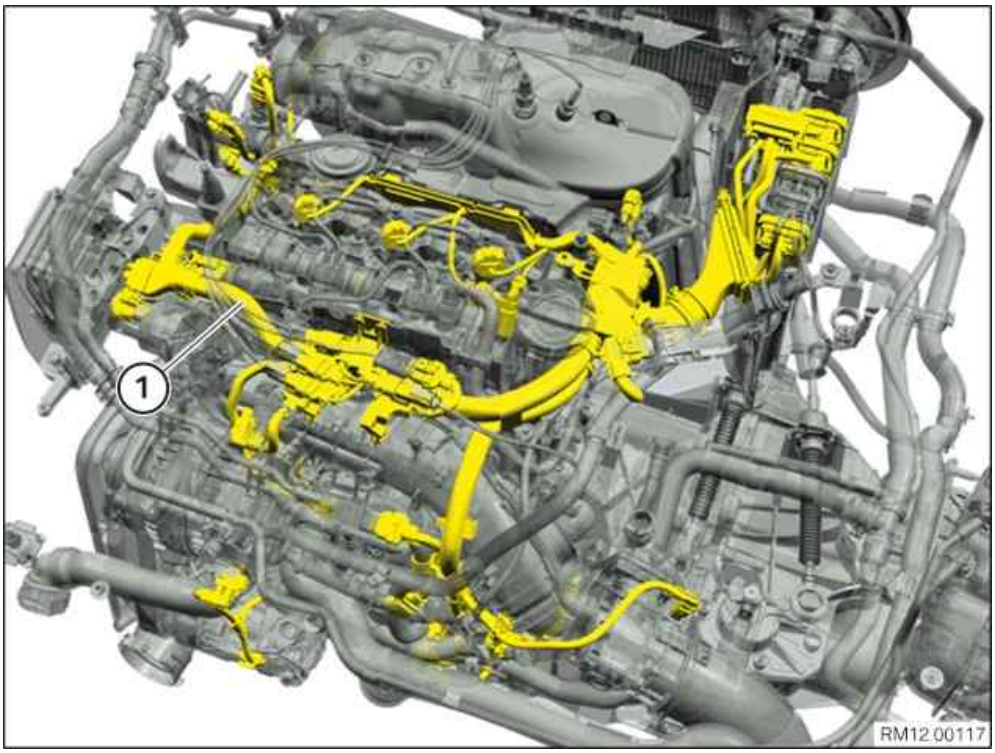


- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

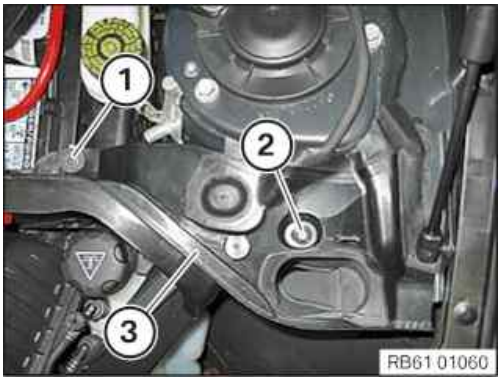
cardiagn.com

20 – Releasing the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine

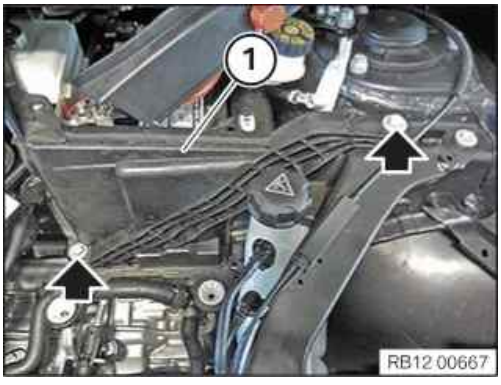


1 Wiring harness section for the engine



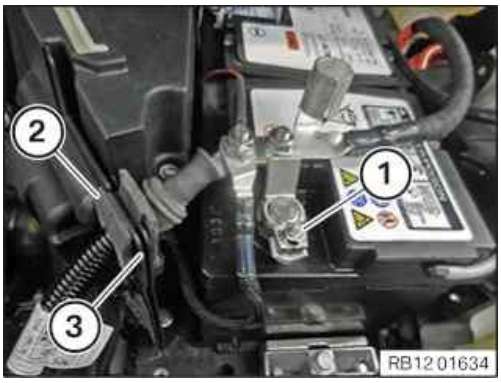
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.

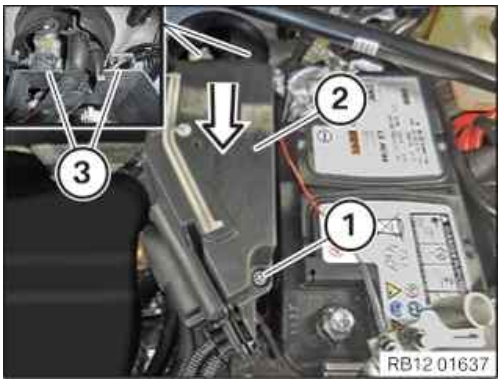


- Remove screws (arrows).
- Guide out tension strut (1) and remove.

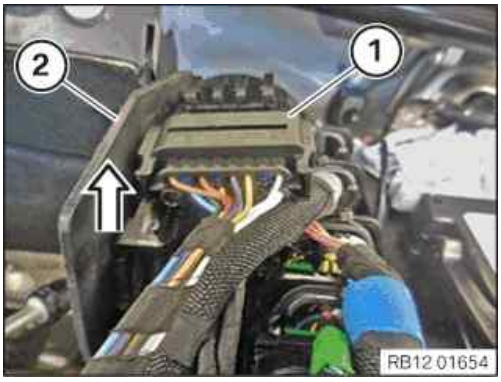
cardiagn.com



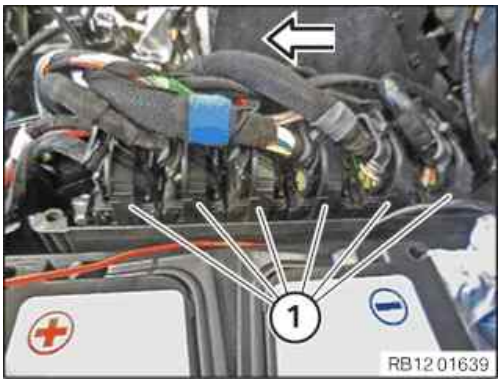
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



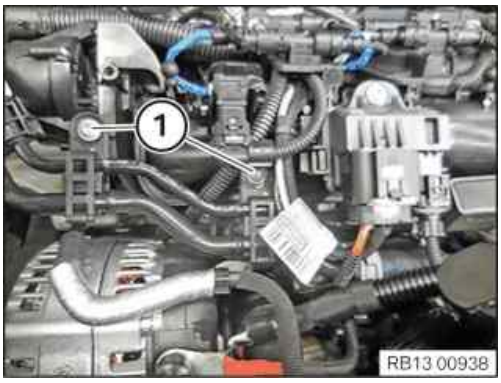
- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).



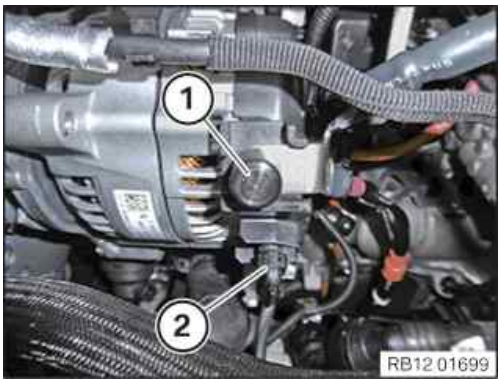
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).

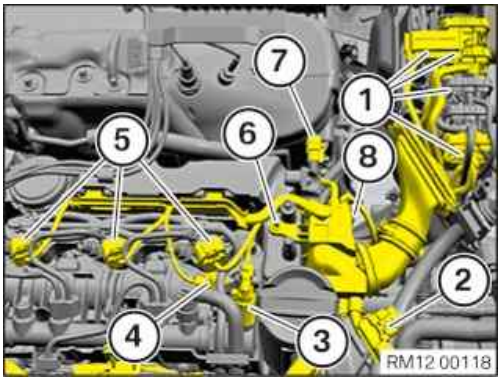
cardiagn.com



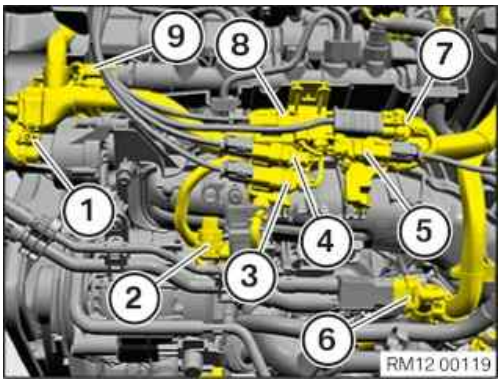
- Loosen screws (1).



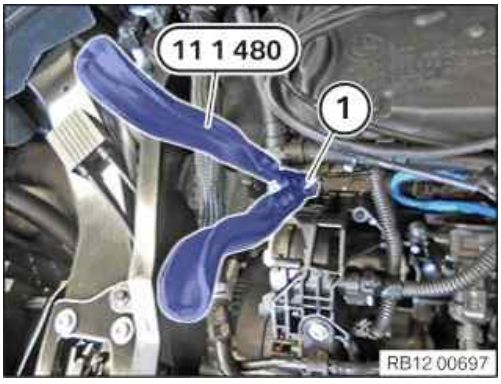
- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock connector (3) and pull off from fuel pressure regulator.
- Unlock connector (4) and disconnect from camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock connector (7) and disconnect from differential pressure sensor.

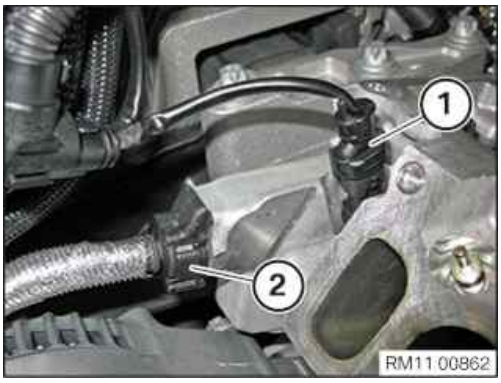


- Unlock connector (1) and pull it off the servomotor for the swirl flap.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock connector (3) and pull off from exhaust temperature sensor downstream from the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock connector (6) and pull off from the fuel pressure and temperature sensor.
- Unlock and disconnect the connector (7) from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.



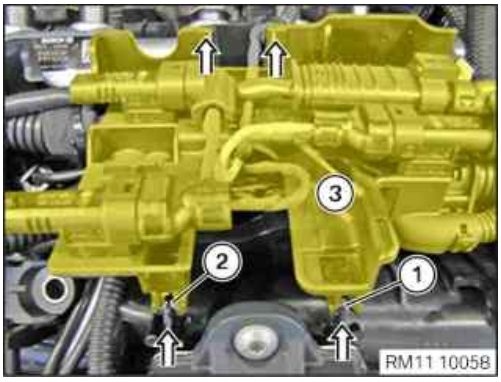
- Unlock connector (1) at all glow elements using special tool **0 490 796 (11 1 480)** and release.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

cardiagn.com



- Unlock and loosen connector (1).
- Unlock the clamp of the coolant line (2) and release the coolant line.

21 – Removing the cable clips from the intake plenum



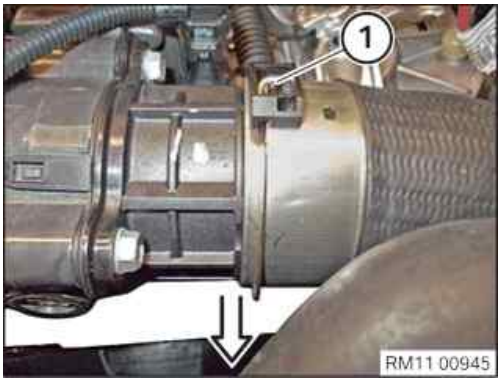
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.

22 – Removing the intake plenum

TECHNICAL INFORMATION

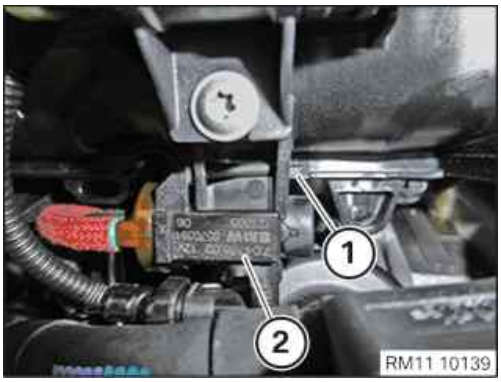
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).

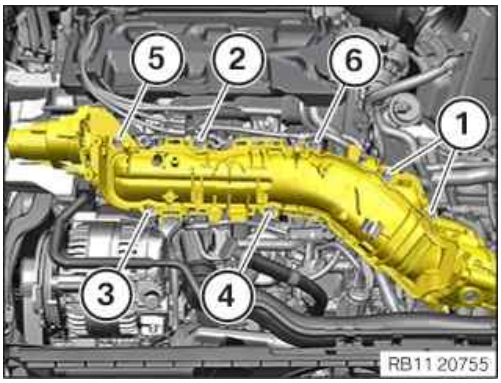


- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

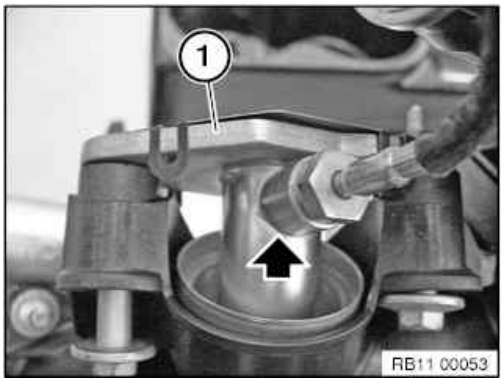
cardiagn.com



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

23 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

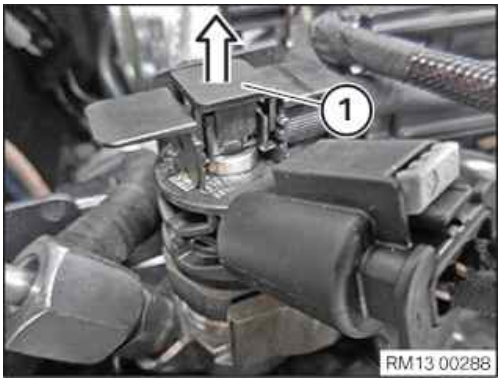
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

24 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

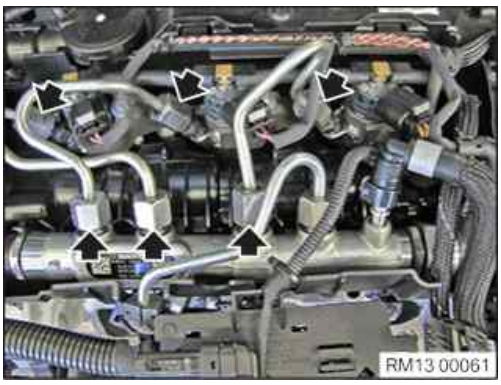
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

25 – Remove the high pressure line between the high pressure pump and the rail

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

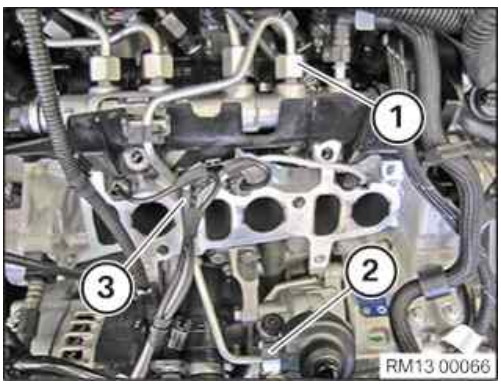
- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Loosen union nut (1) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Loosen union nut (2) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Catch and dispose of escaping fuel.
- Feed the high pressure line (3) out and remove.
- Seal open connections using special tool **2 413 106**.

26 – Remove high-pressure rail

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

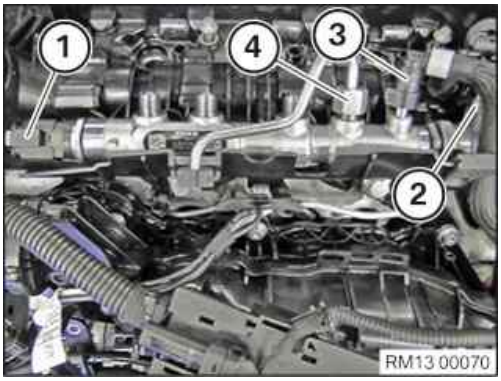
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

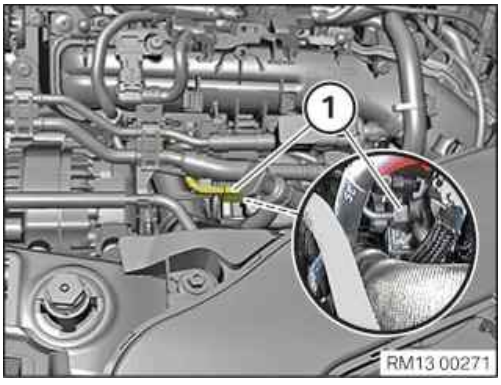
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

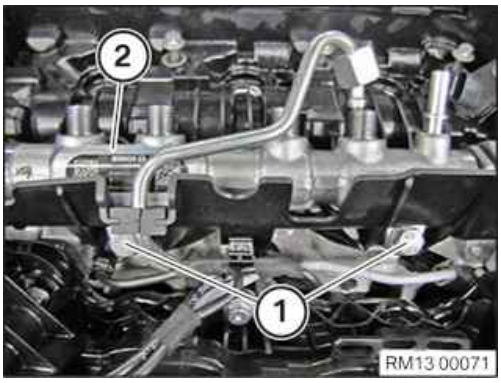


- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.

cardiagn.com



- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

27 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

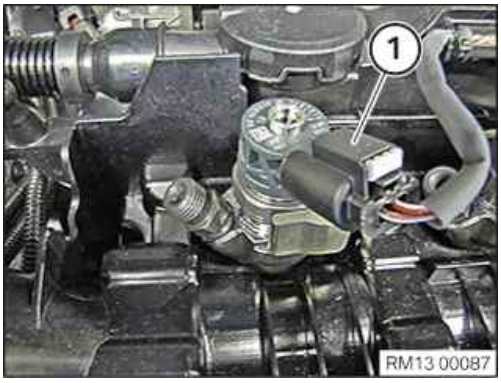
Electrostatic discharge.

Damage to or destruction of electrical components.

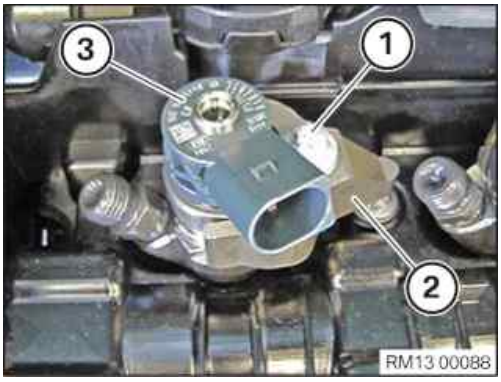
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.



- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

▸ **Loosen stuck injectors**

cardiagn.com

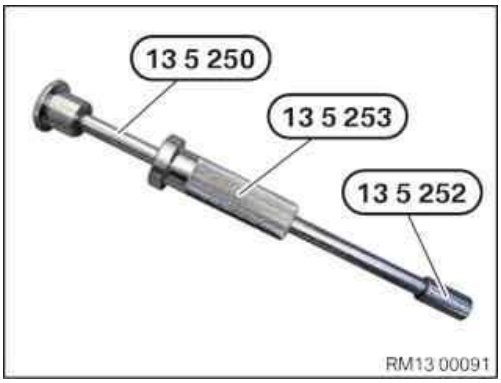
RISK OF DAMAGE

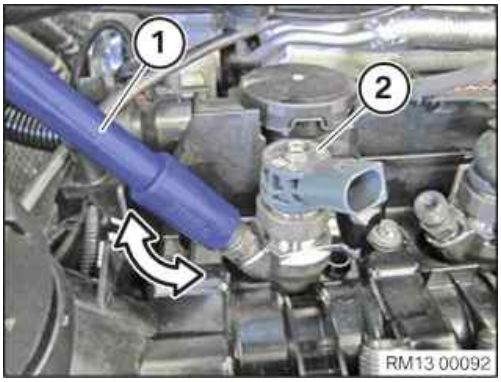
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

28 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

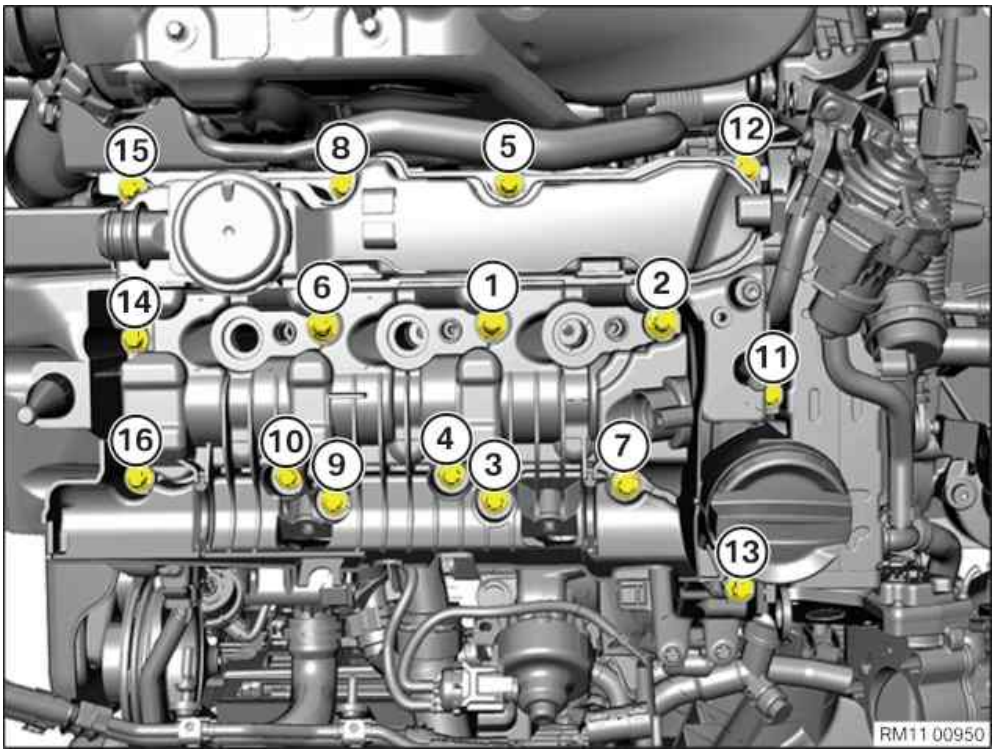
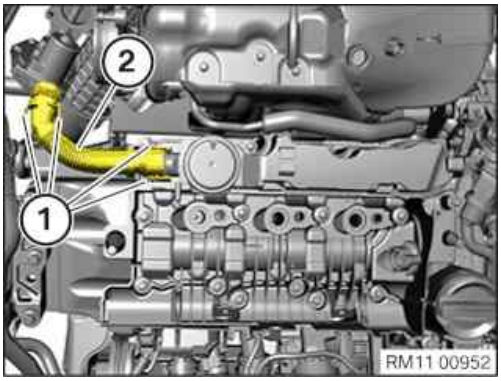
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

29 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

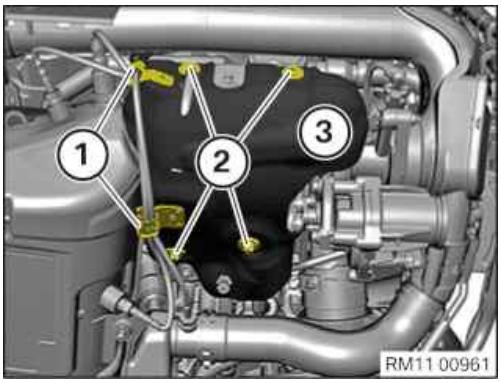
30 – Removing heat shield from top exhaust turbocharger

WARNING

Hot surfaces.

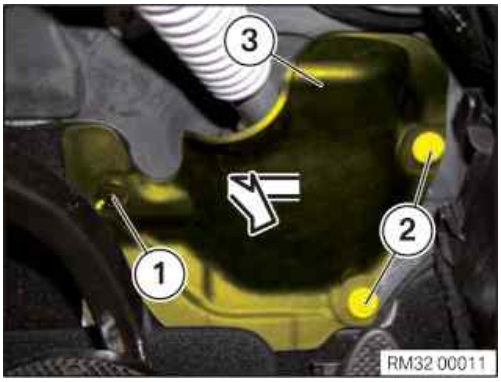
Risk of burning!

- Perform all work only on components that have cooled down.



- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).

31 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

cardiagn.com

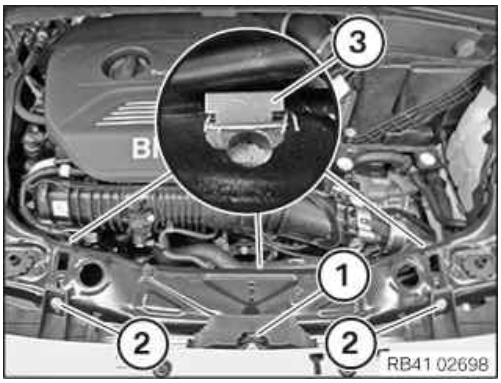
- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

32 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

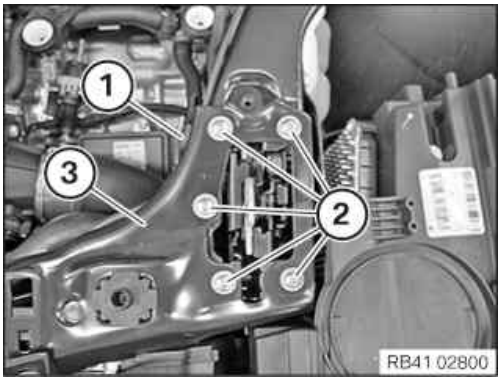
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

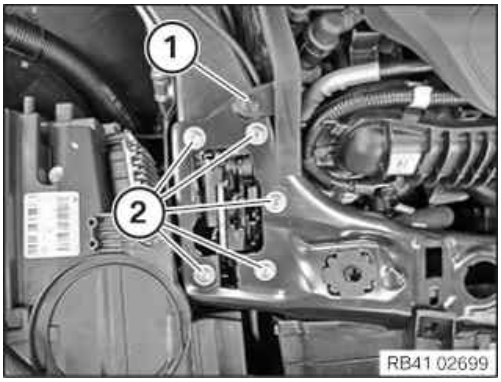


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

33 – Securing radiator on left and right

cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

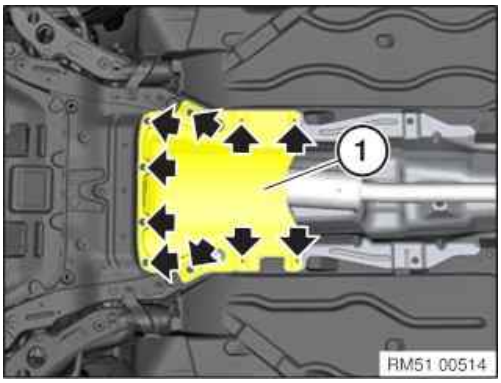
34 – Remove the front left and right wheel

▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

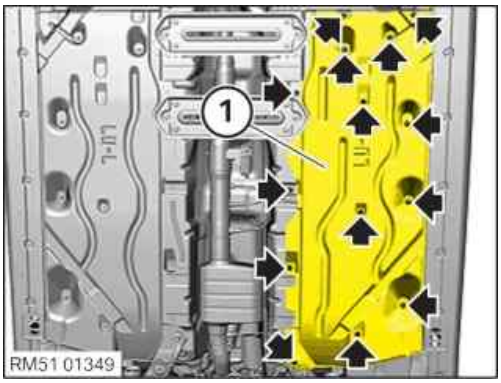
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

35 – If installed: Removing rear underbody protection



- Remove screws (arrows).
- Remove the rear underbody protection (1).

36 – Removing right underbody panelling



- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

37 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

cardiagn.com

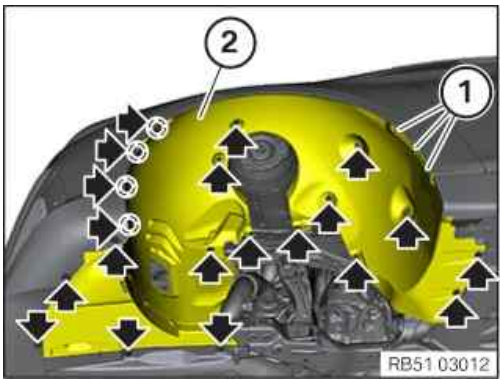
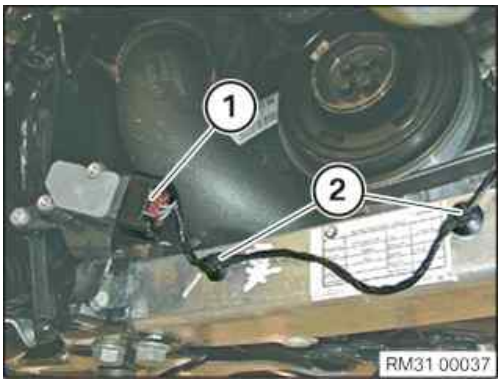
▶ **Remove front wheel arch cover**



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed out front wheel arch cover (2).

38 – With right installation: Detaching ride height sensor cable



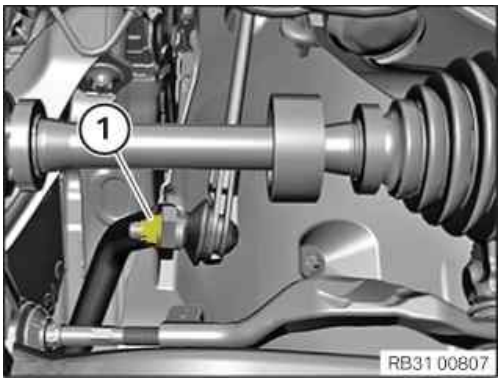
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

39 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**



- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

40 – Detaching rubber mount from front axle support

- Spray rubber mount (1) with lubricant and release from holder on front axle support.

cardiagn.com

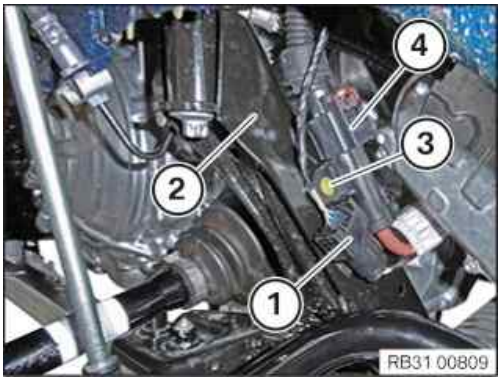
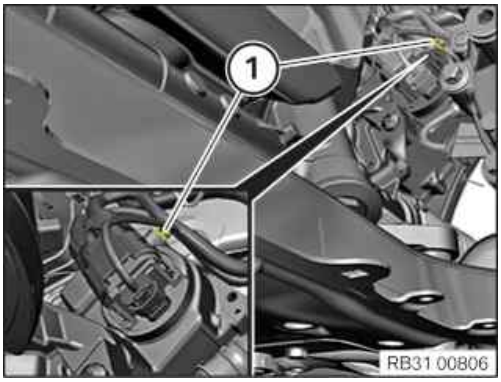
41 – Disconnecting plug connections from steering gear

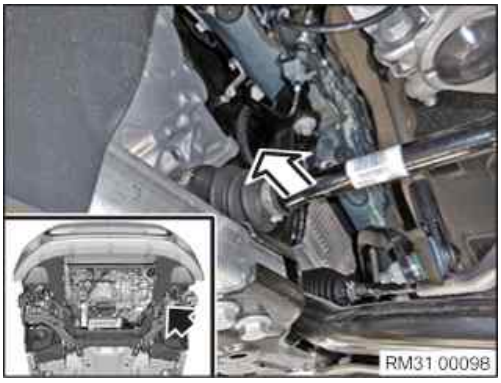
▶ **If installed: Detach connectors from the front axle carrier**



- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).

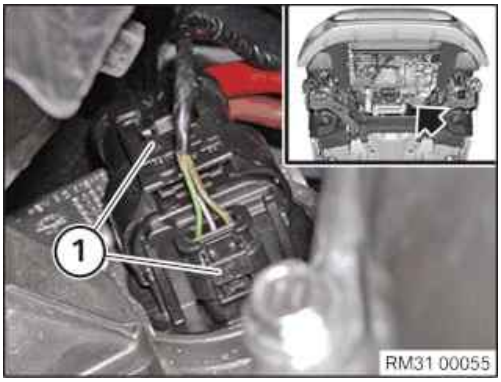


- Disconnect wiring harness (1) from steering gear.



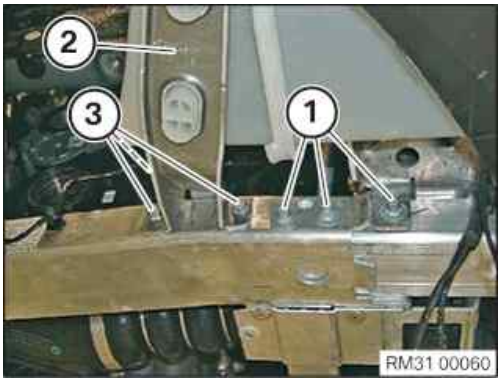
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.



- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

42 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

cardiagn.com

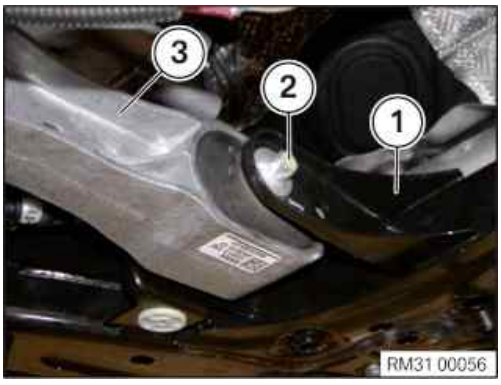
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).



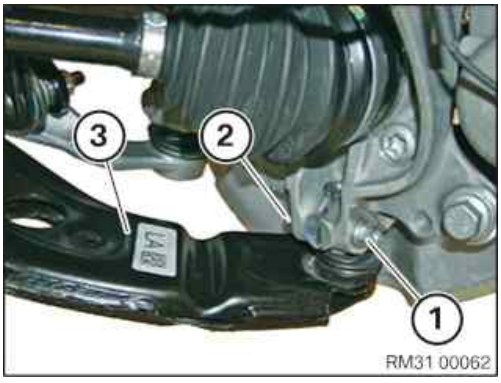
- Loosen screw (2) of the engine support (3) on the front axle (1).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

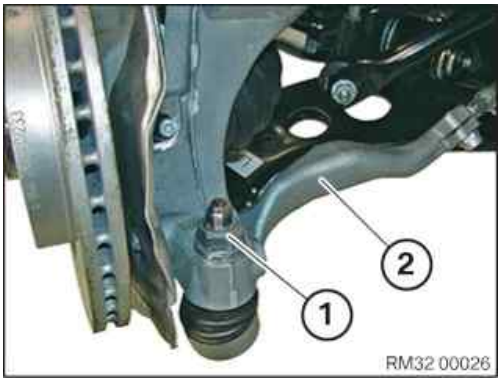
43 – Detaching and removing front axle completely



NOTICE

Perform the operations on the left and right side.

- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .



NOTICE

Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

cardiagn.com

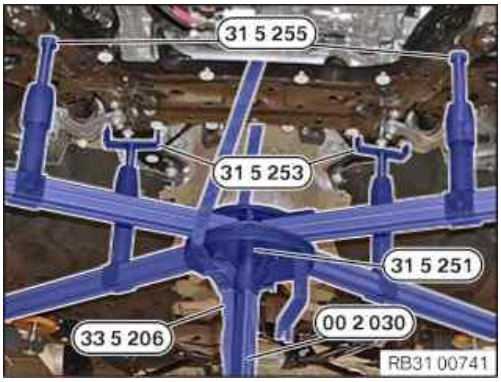
- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

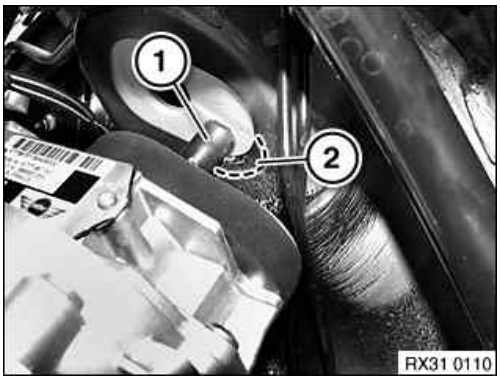
Note: In a profile rail pair, two profile rails are connected to one another by gearing.



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

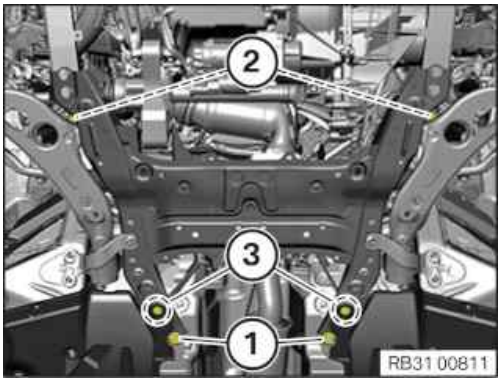


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.

For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

44 – Removing the connecting support from the tunnel in front and back

cardiagn.com

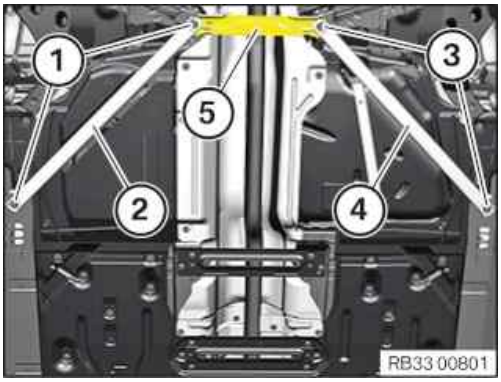
- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

45 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.



- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

46 – Remove exhaust system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

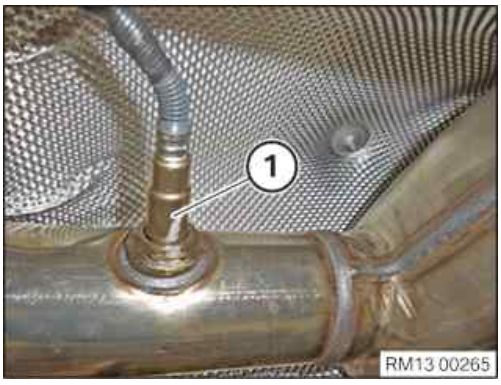
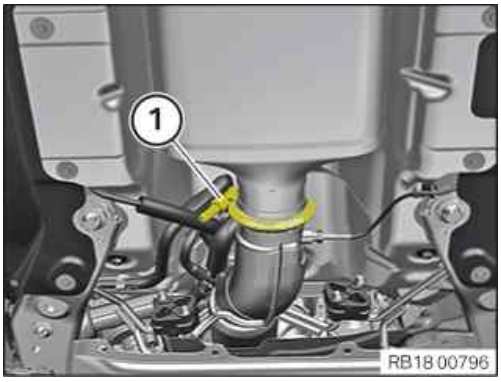
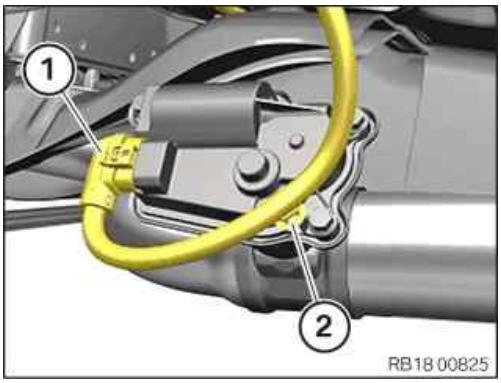
- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.



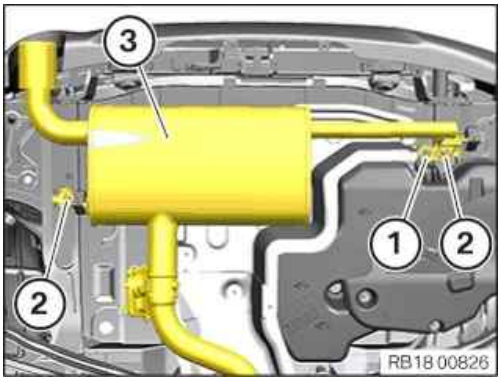
- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).



- Unlock and disconnect connector (1).
- Loosen clamp (2).



- Loosen screw (1).
- Loosen nuts (2).
- Lower the exhaust system (3) with an auxiliary person, guide out and remove.

47 – Removing starter motor

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

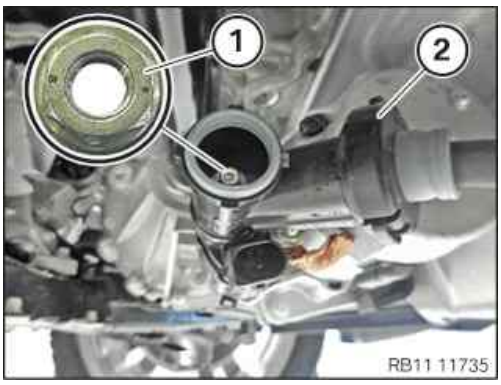
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

cardiagn.com

- Loosen screws (1).
- Feed out starter motor and remove.

48 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

Risk of burning!

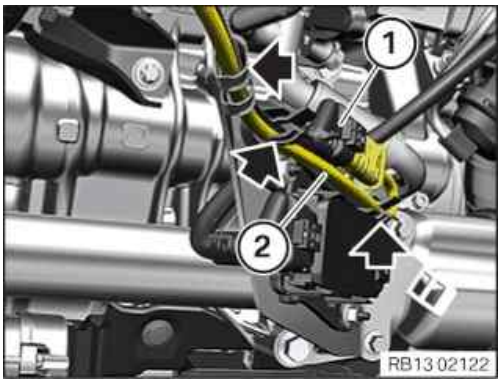
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

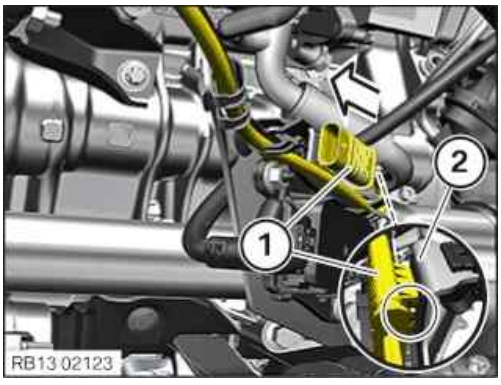
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).



- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

cardiagn.com

- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

49 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

Risk of burning!

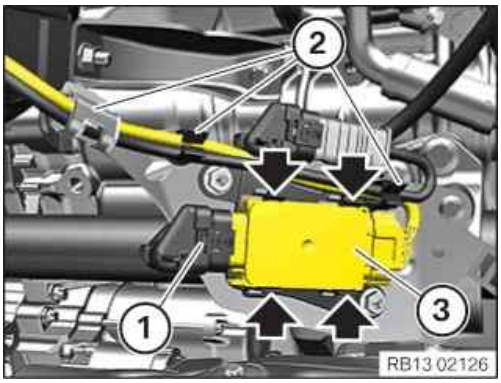
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

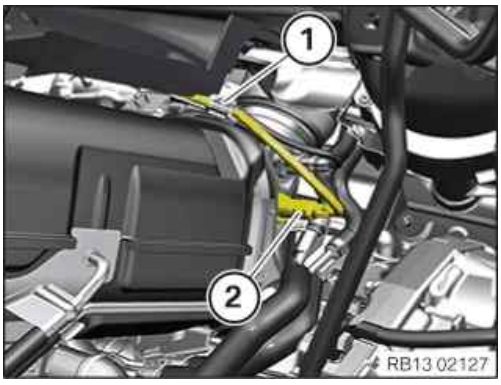
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).



- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

cardiagn.com

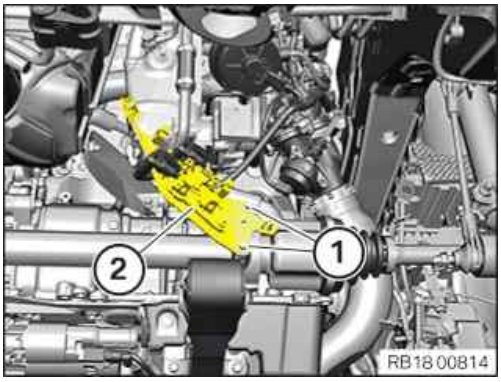
50 – Remove holder for oxygen sensor



- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

51 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

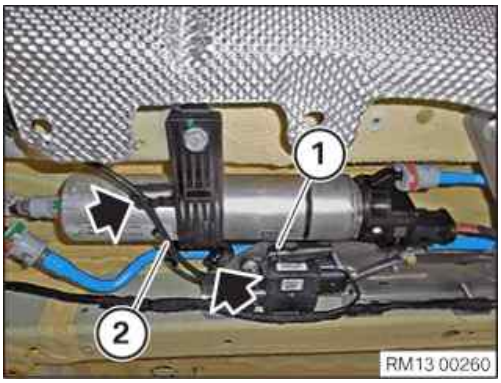
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

cardiagn.com

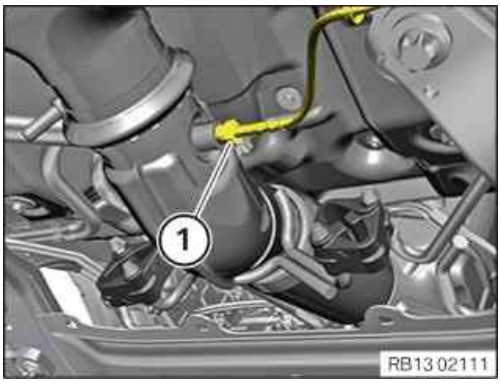
- Loosen the cable clip (1).



- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

52 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

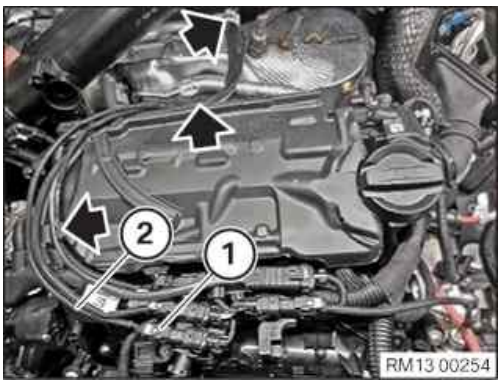
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect the plug connection (1).
- Feed the cable (2) from the temperature sensor out of the clamps (arrows) and remove it.

cardiagn.com

- Release the exhaust temperature sensor (1) with conventional tools (2).

- Feed out and remove exhaust temperature sensor (1).

53 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect the plug connection (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

cardiagn.com

- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

54 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!

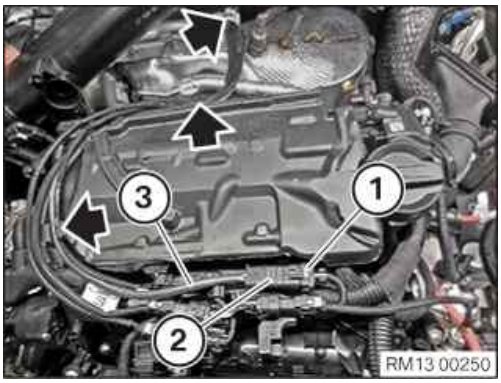
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

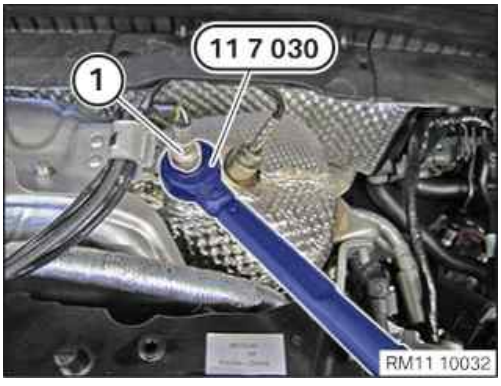
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect the plug connection (1).
- Detach the connector (2) from the holder .
- Feed out and remove cable (3) out of the oxygen control sensor from the clamps (arrows).



- Release the front oxygen control sensor (1) using special tool **0 491 075 (11 7 030)** .
- Feed out and remove the control sensor (1).

cardiagn.com

55 – Removing the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

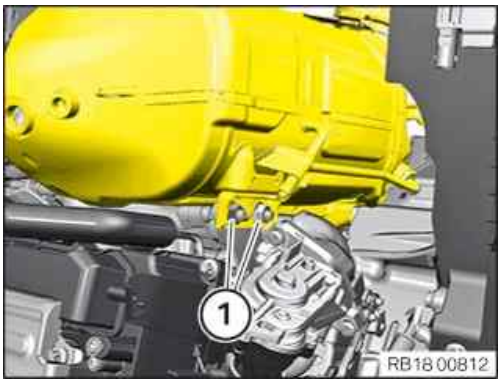
CAUTION

Heavy component.

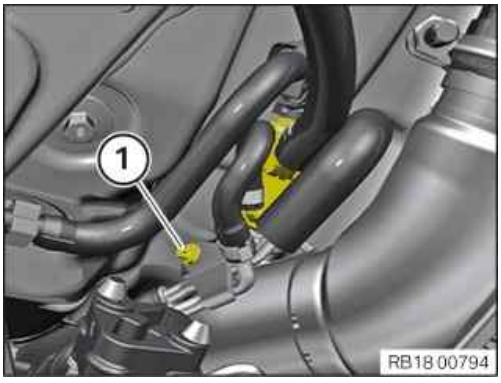
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).



- Loosen screw (1).

cardiagn.com

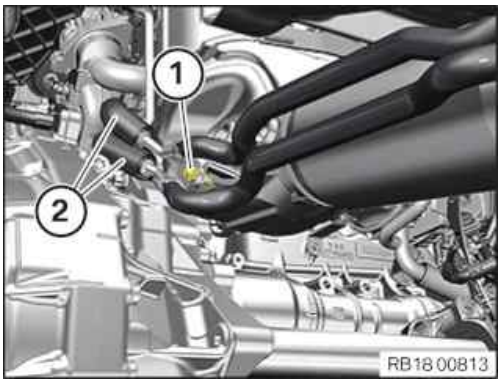
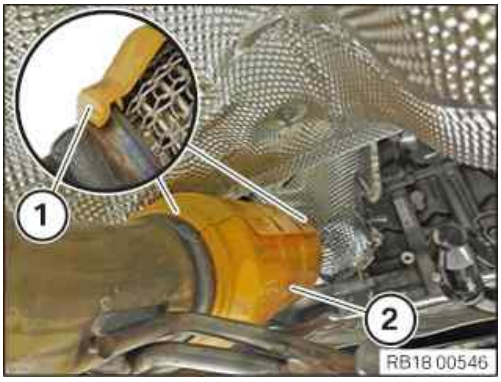
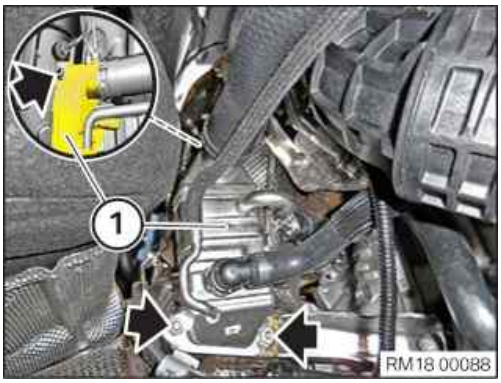
- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.



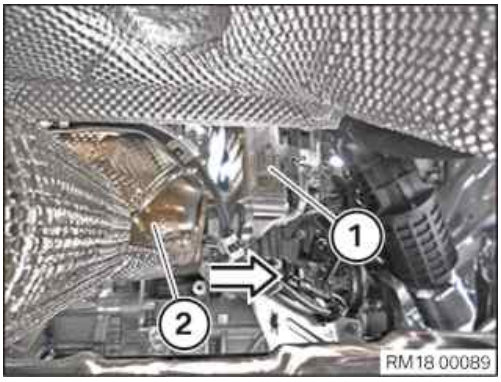
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.



- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.



- Detach nuts (arrows) from low pressure exhaust-gas recirculation cooler (1).



- Feed out low pressure exhaust-gas recirculation cooler (1) from diesel particulate filter (2) in direction of arrow and set aside.

cardiagn.com

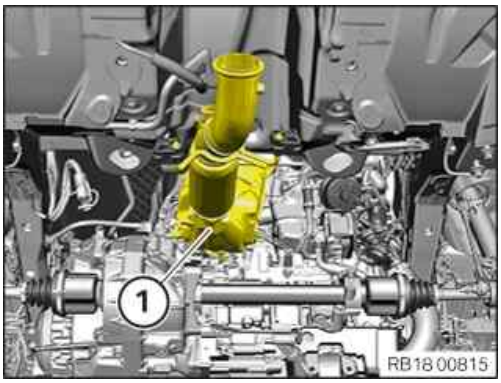
- Unfasten nut (1).



- Feed out diesel particulate filter (1) toward the bottom and remove.

56 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING

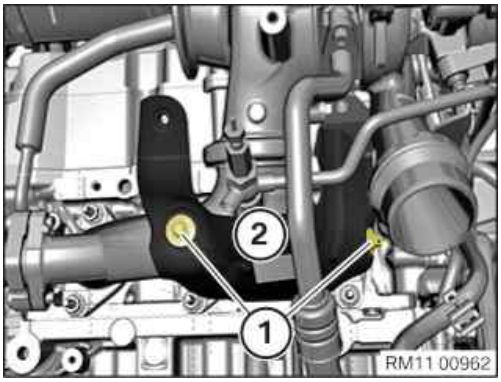
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

57 – Removing heat shield from rear exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

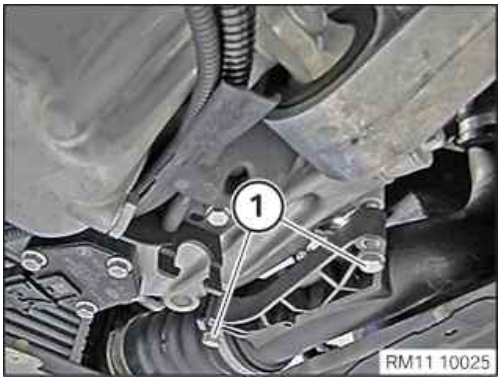
- Loosen screws (1).
- Loosen screw (2).

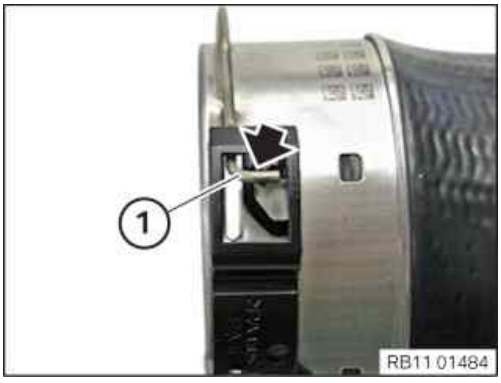
  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

58 – Remove right charge-air line

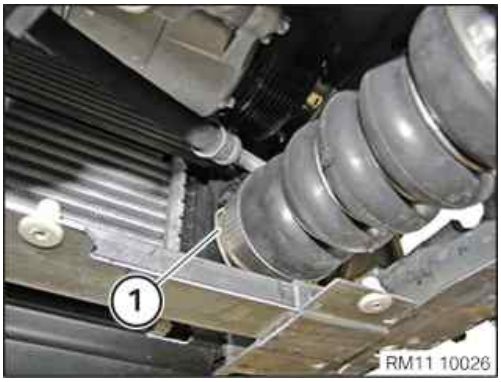


- Release charge air duct screws (1) on oil sump.

- Detach charge air duct screw connection (1) on crankcase.



- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

cardiagn.com

- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

59 – Remove exhaust turbocharger

- Release screw (1) from beneath with a long extension.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).
- Disconnect the oil return line (2) toward the bottom and set it aside.

- Release banjo bolt (1) of oil feed line from exhaust turbocharger and place to one side.

cardiagn.com

- Release screw (1) and remove V-clip.
- Pull exhaust turbocharger up and remove.
- Remove seal between exhaust turbocharger and exhaust manifold.

60 – Remove exhaust manifold

WARNING

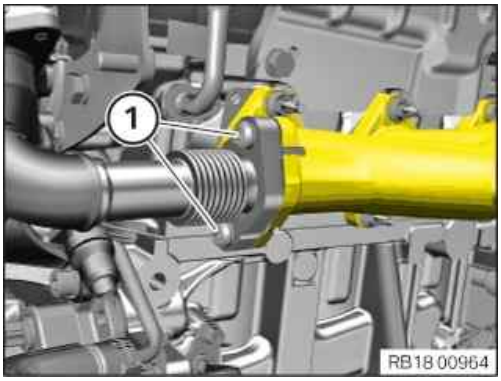
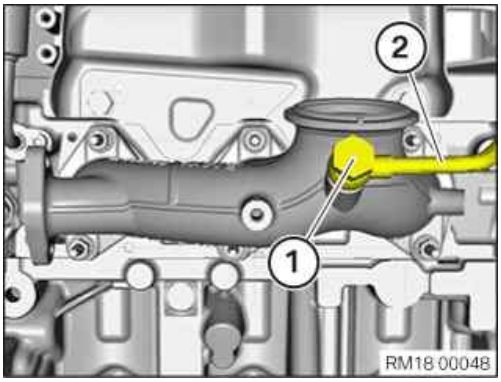
Hot surfaces.

Risk of burning!

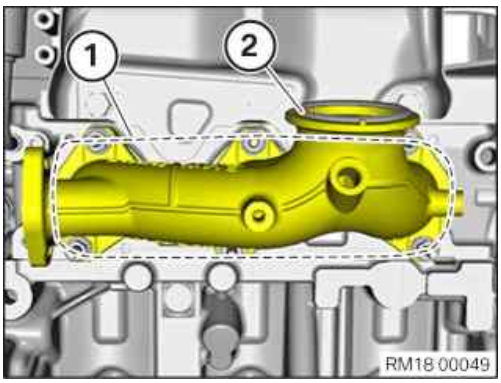
- Perform all work only on components that have cooled down.



- Loosen screws (1).



- Unscrew the banjo bolt (1).
- Feed out exhaust gas pressure pipe (2) and place to one side.



- Evenly release nuts along the dashed line (1) from outer to inner side.
- Feed out exhaust manifold (2) and remove.

61 – Removing the acoustic cover for the engine at the front

cardiagn.com

- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

62 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

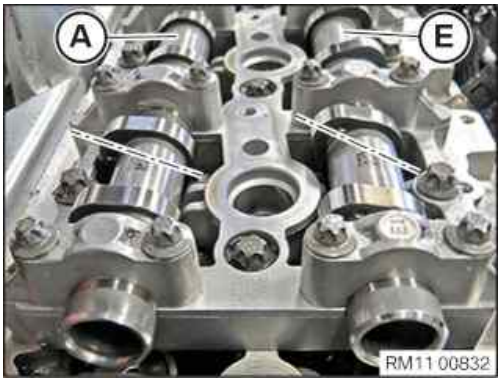
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

cardiagn.com

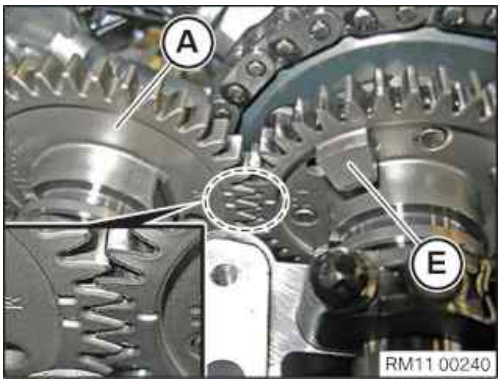
- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

63 – Remove chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

TECHNICAL INFORMATION

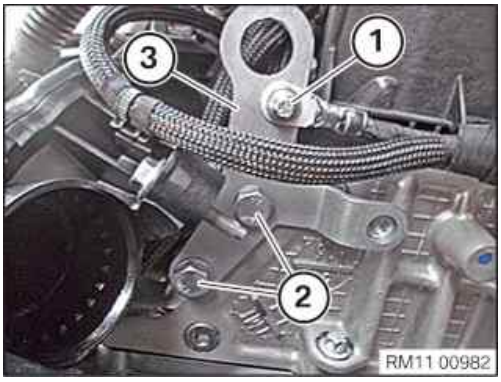
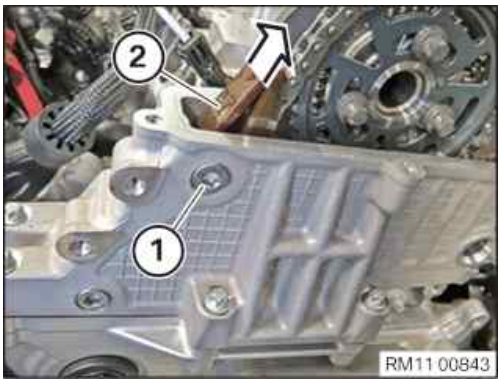
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

64 – Remove the timing chain guide rail

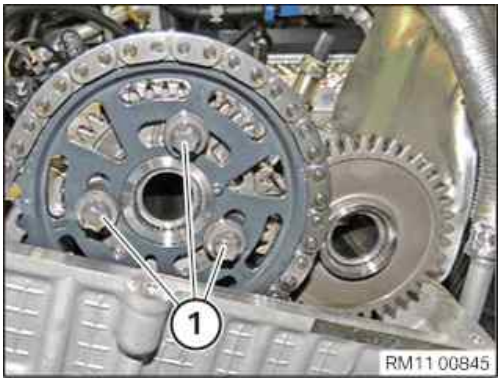


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

65 – Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

66 – Removing the camshaft support

cardiagn.com

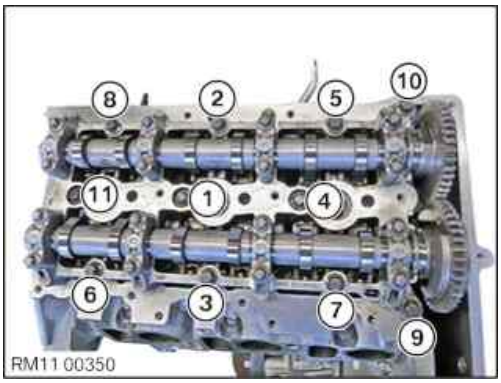
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen all screws step-by-step of the camshaft support in sequence (11) to (1).
- Remove camshaft support in upward direction.

  The camshafts remain installed in the camshaft support.

MAIN WORK

67 – Remove cylinder head.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com

- Position front axle support.
- Bend the underbody panelling to the side in area (3).
- Raise front axle support.
- When raising, insert the charge air cooler into its rubber mount on the transmission cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

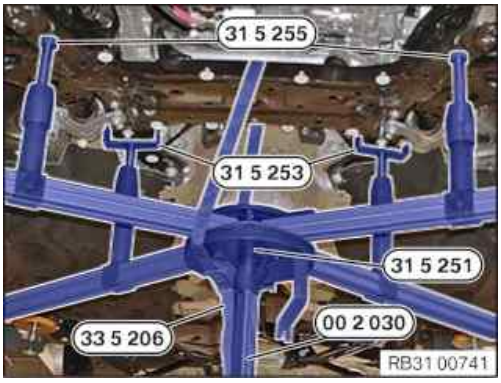
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

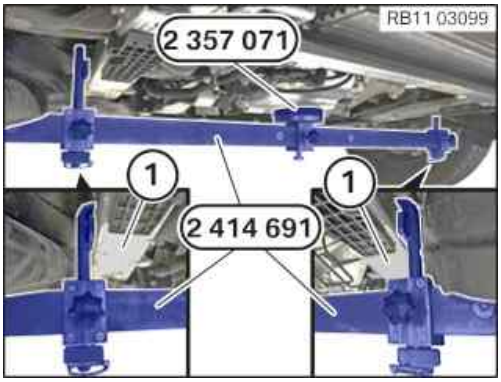
- If applicable, tighten the screws in area (3).

Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower the universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and set it aside.



- Prepare special tool **2 414 691** together with the special tool **2 357 071**.
- Attach special tool **2 414 691** to front axle support and correctly align the special tool **2 357 071** under the oil sump and tighten.
- Turn special tool **2 414 691** at adjusting screw uniformly upwards, until the special tool **2 357 071** makes contact with the oil sump.
- Tighten all adjusting screws of special tools**2 414 691** and **2 357 071**.

- Remove all glow elements with special tool **0 491 068 (11 6 050)** or a standard tool.

cardiagn.com

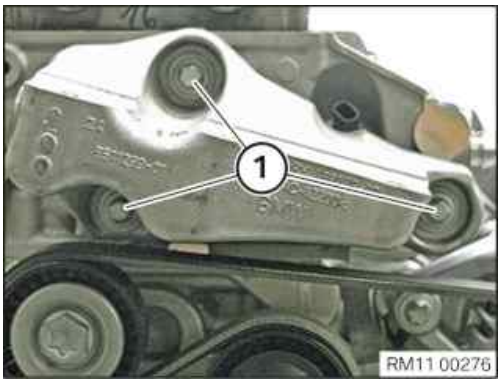
- Loosen screws (1).

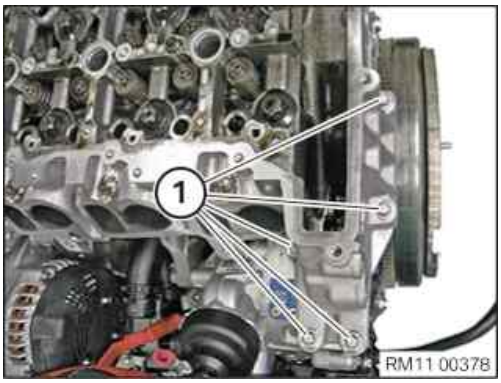


- Loosen screws (1).

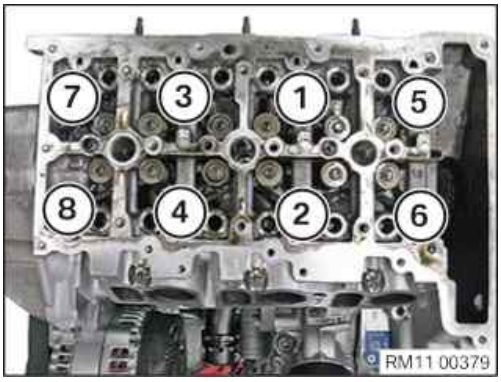
- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm



- Loosen screws (1).



- Loosen the cylinder head bolts in the sequence from (8) to (1).

cardiagn.com

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

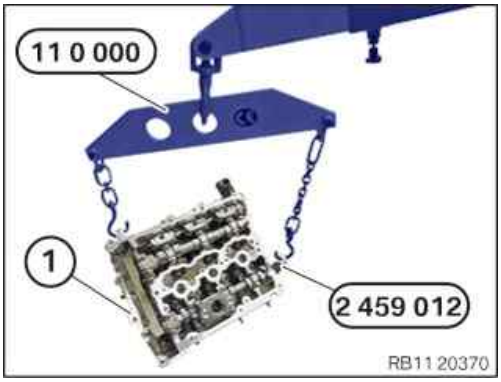
RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- **Carefully** guide out the cylinder head (1) with the engine lifter and the special tool **0 490 561 (11 0 000)** and remove.



- Mount the cylinder head (1) on the special tool **0 494 362 (11 9 000)**.

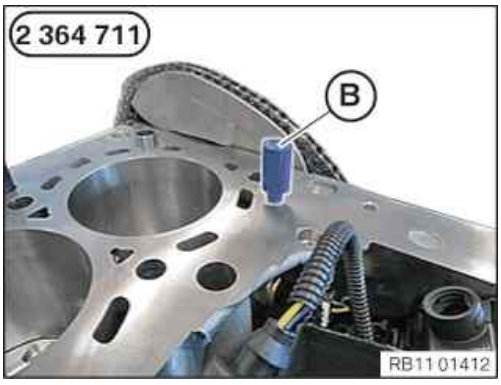
68 – Cleaning the sealing surface

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

cardiagn.com

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

RISK OF DAMAGE

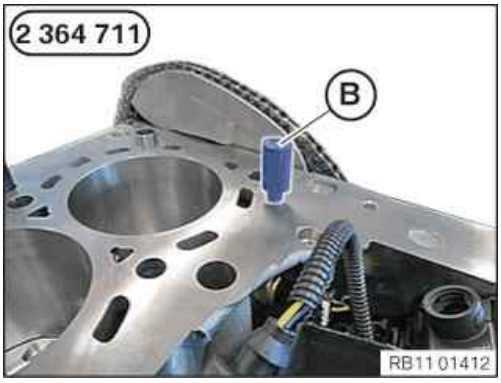
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

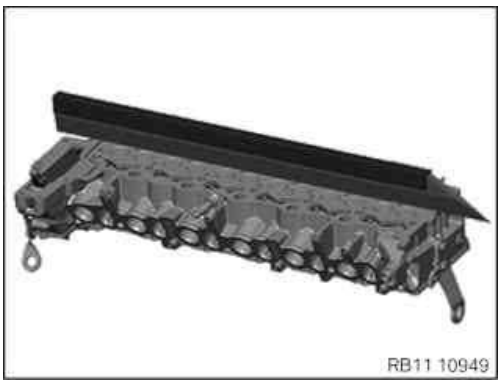
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.



- Remove special tool (B).

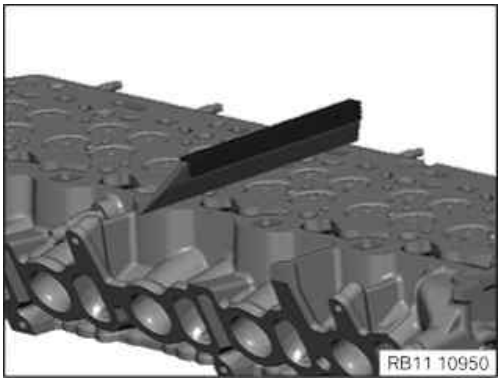
69 – Check the flatness of the cylinder head



- Check the flatness of the cylinder head lengthwise using a straightedge.

Cylinder head flatness

Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm



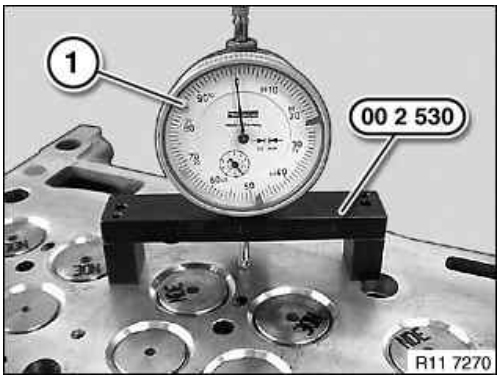
- Check the flatness of the cylinder head crosswise using a straightedge.

Cylinder head flatness

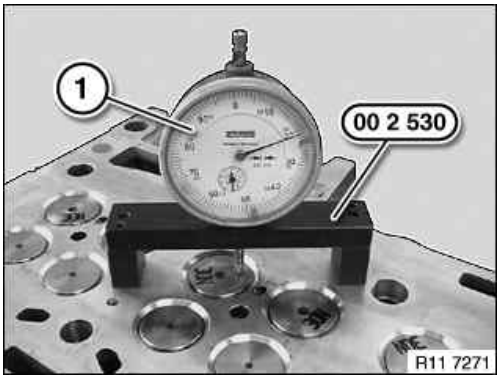
Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

70 – Checking the valve underprotrusion

cardiagn.com



- Set the dial gauge (1) onto the cleaned cylinder sealing surface with slight preload in special tool **0 490 185 (00 2 530)**.
- Set dial gauge in mildly preloaded state to "zero".



Check

- Position the dial gauge (1) on the valve with special tool **0 490 185 (00 2 530)**.
- Measure valve underprotrusion and compare with the setpoint value.

Valve underprotrusion

	0,8 (0,7 - 0,9) mm

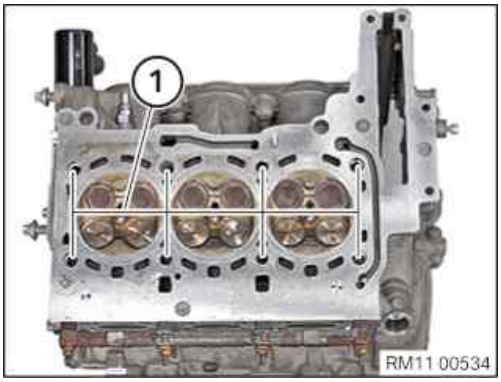
Result

» Valve underprotrusion is outside tolerance.

Measure

- Replace cylinder head.

71 – Renewing the cylinder head gasket



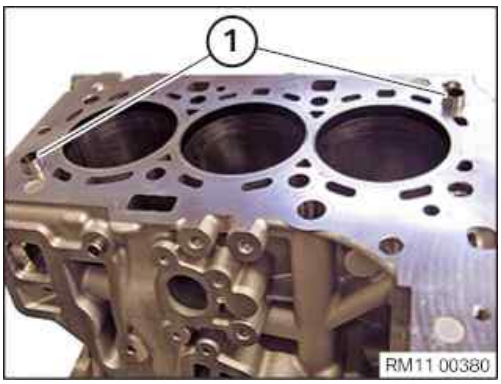
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

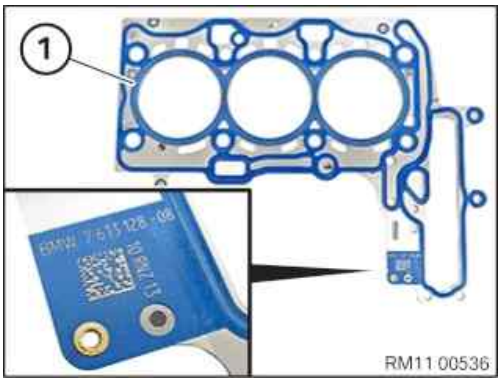
- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

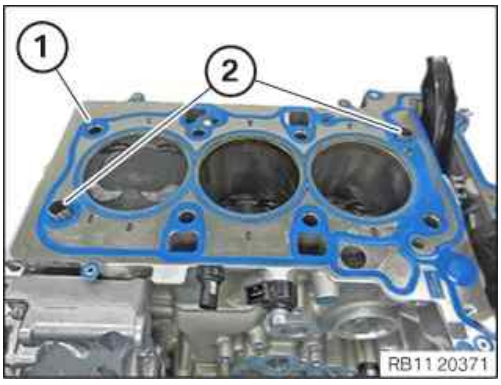


- Check the fitting sleeves (1) for secure fit and damage.

cardiagn.com



- Identify the cylinder head gasket (1) using the part number.
- **After work on the crankshaft drive and processing the cylinder head, the thickness of the cylinder head gasket must be determined.**



- Guide in the cylinder head gasket (1) and install.

  Parts: Cylinder head gasket.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

72 – Installing the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

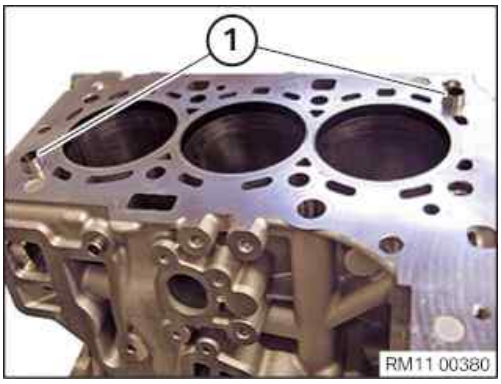
Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

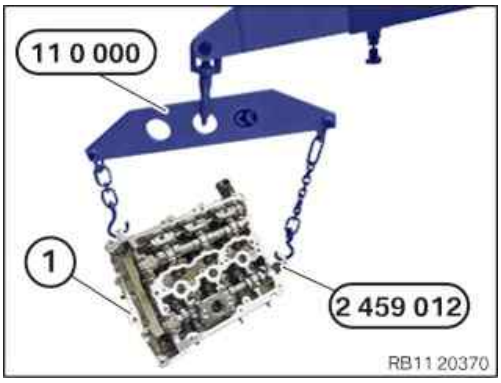
Do not remove bolt coating.



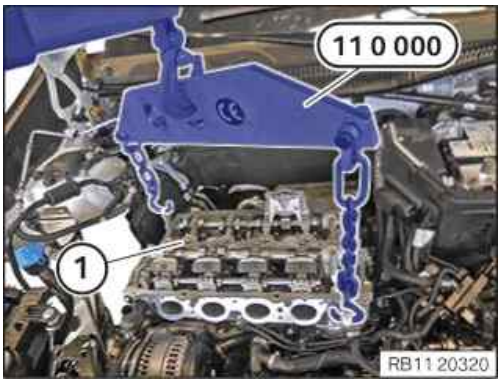
- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.
- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.

cardiagn.com



- Position cylinder head (1) on special tool **0 490 561 (11 0 000)** and engine lifter.



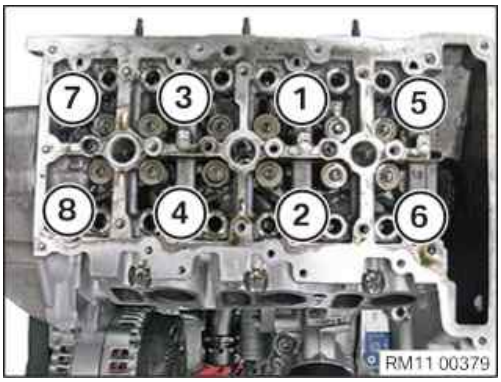
RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- Feed in the cylinder head (1) **carefully** with the engine lifter and the special tool **0 490 561 (11 0 000)** and install.



- Fit new cylinder head bolts.

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

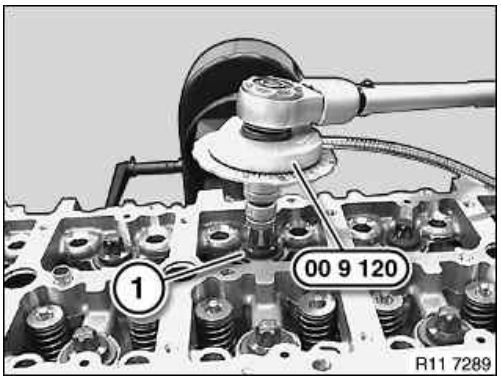
  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolt in the sequence (1) to (8).

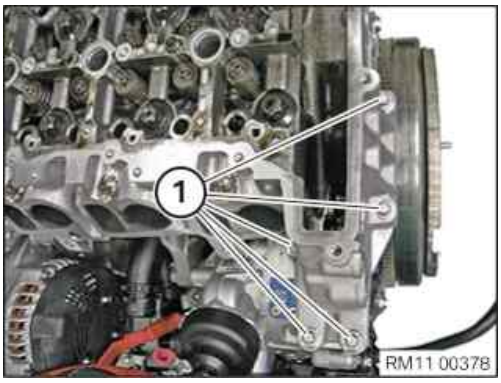


- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

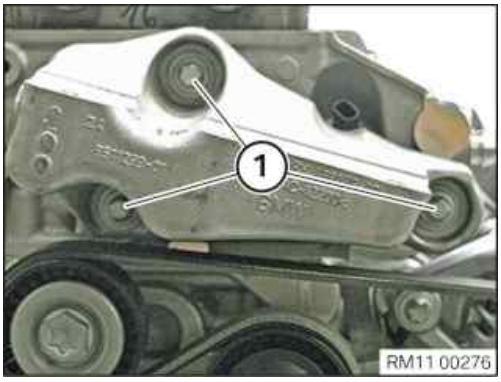


- Tighten the screws (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

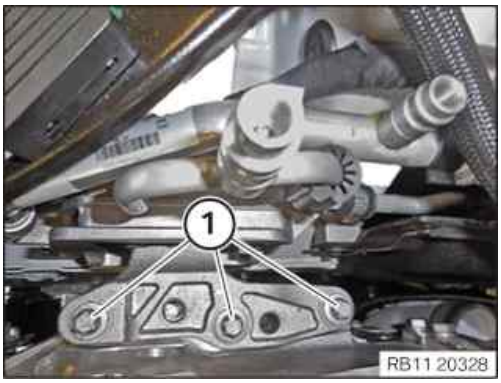
- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.



- Tighten the screws (1).

Engine support to cylinder head

M10X45		Tightening torque	41 Nm



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Right engine mount to cylinder head

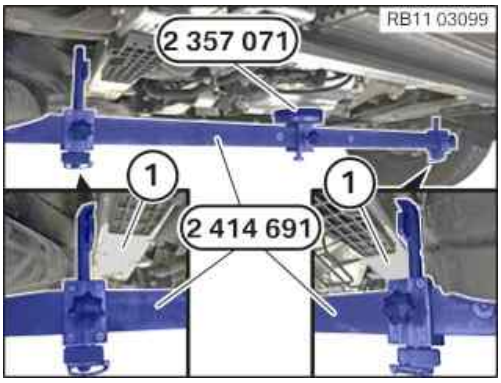
M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

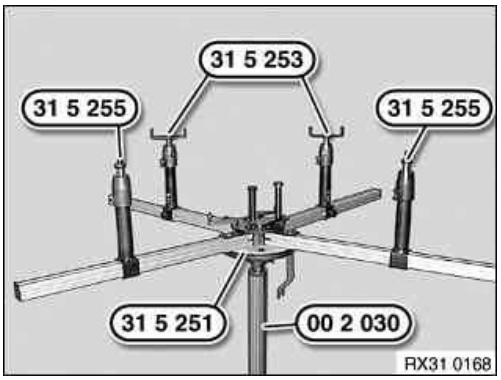
Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

cardiagn.com

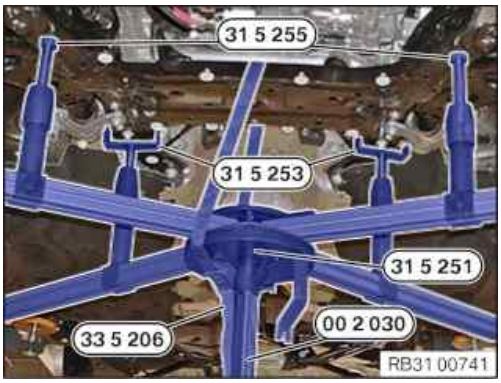


- Disassemble special tool **2 414 691** using special tool **2 357 071**.



- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

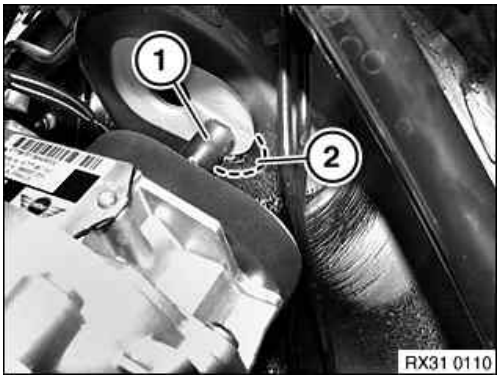
Note: In a profile rail pair, two profile rails are connected to one another by gearing.



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

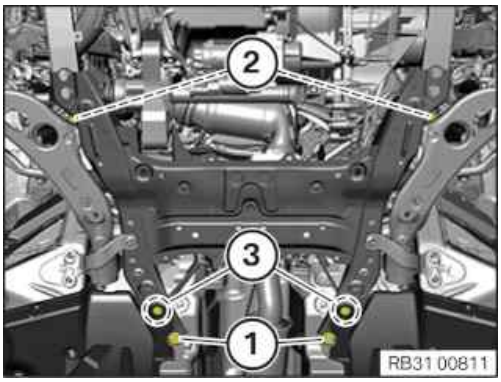


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and the front axle remove.

POSTPROCESSES

cardiagn.com

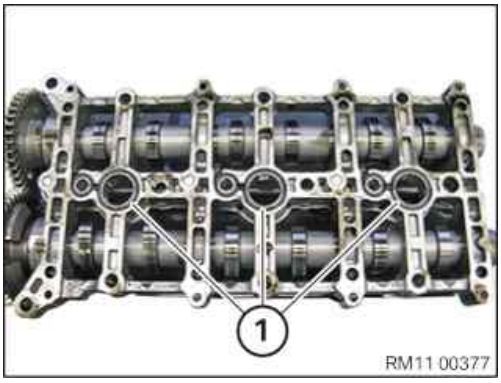
73 – Installing the camshaft support

RISK OF DAMAGE

Damage of the engine and mounted parts.

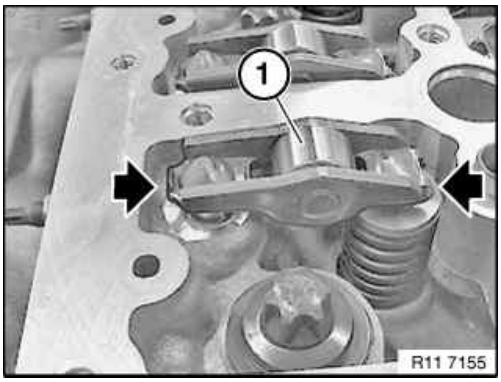
Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.

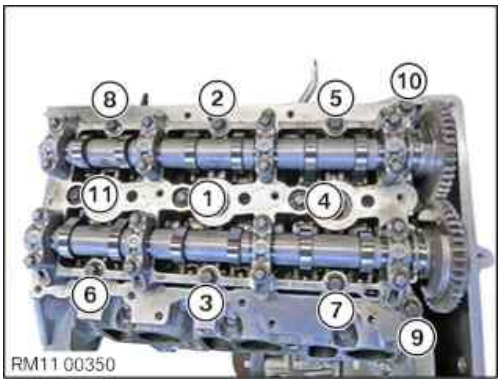


- Renew the seals (1) on the camshaft support.

  Parts: Seals



- Make sure the roller cam followers (1) have the correct mounting orientation.
- Position the camshaft support.

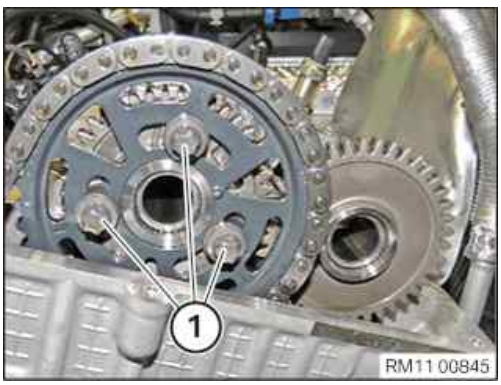


- Tighten the screws of the camshaft support incrementally in the sequence (1) to (11).

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

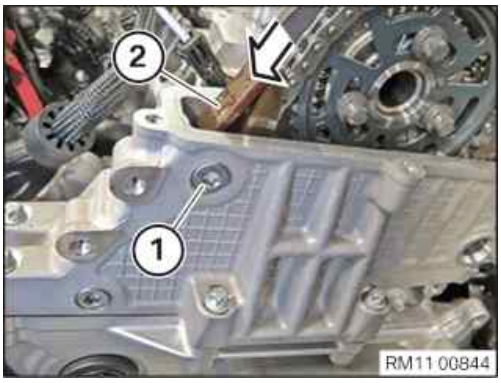
74 – Installing the camshaft sprocket on the intake camshaft



- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

75 – Install the timing chain guide rail

cardiagn.com



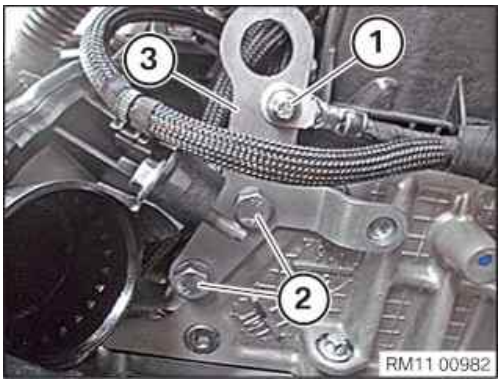
- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm



- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

76 – Installing the chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

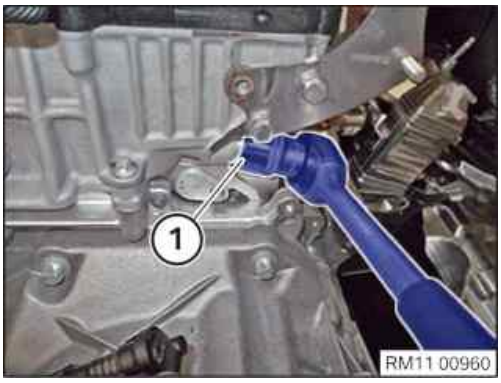
  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com

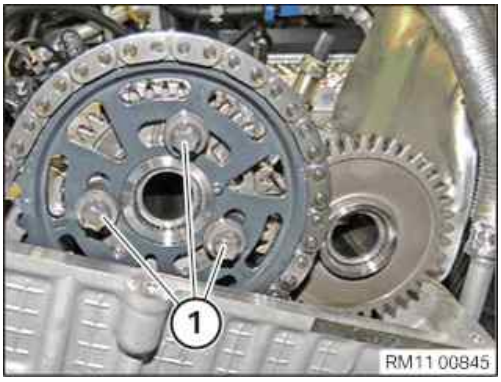


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

77 – Tightening the camshaft sprocket on the intake camshaft



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

78 – Removing the special tool to secure the exhaust camshaft

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

79 – Remove special tool to disconnect the crank shaft

- Remove special tool **2 288 380**.

80 – Checking camshaft timing

cardiagn.com

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

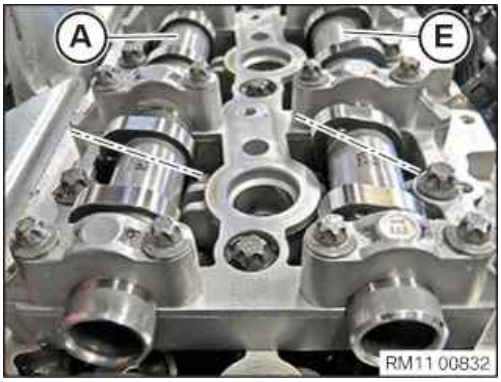
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

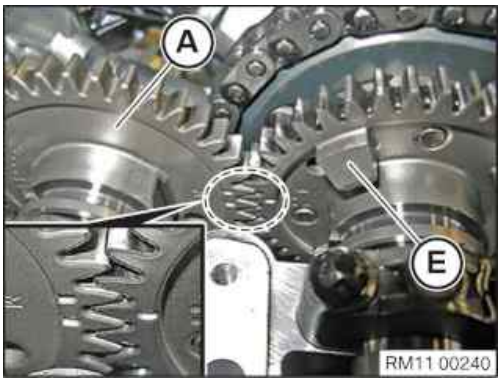
  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

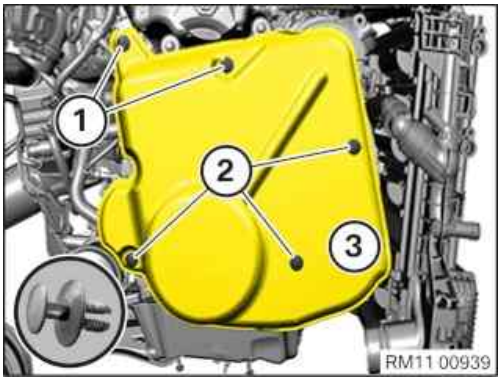
TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

81 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

82 – Installing exhaust manifold

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

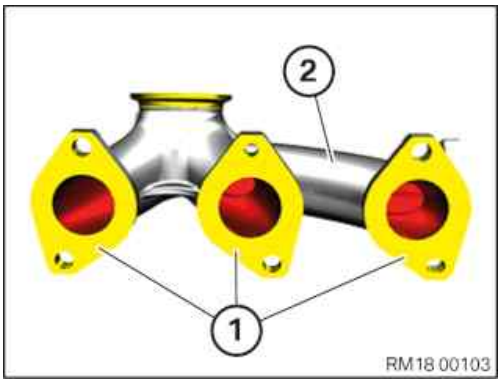
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

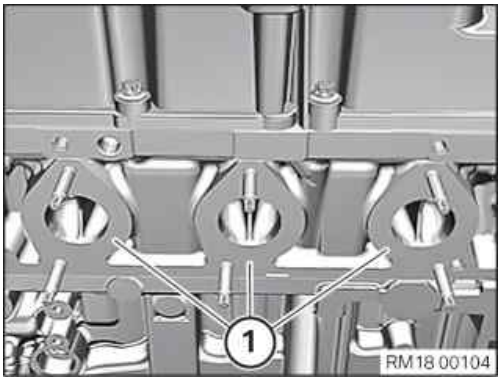
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

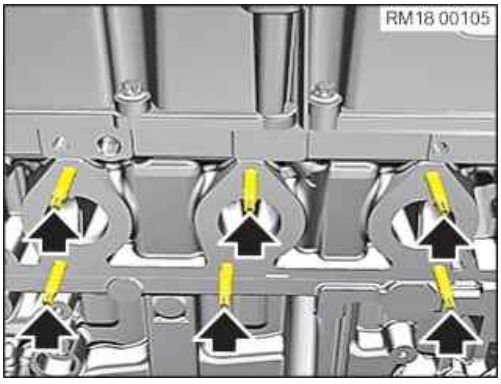
The sealing surfaces must be free from oils, grease and cleaning agents.



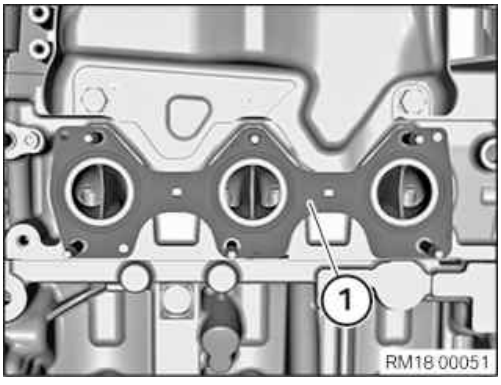
- Clean the connection points (1) on the exhaust manifold (2) with the special tool **0 495 102 (11 4 470)**.



- Clean the connection points (1) on the cylinder head with the special tool **0 495 102 (11 4 470)**.



- Check the stud bolts (arrows) on the cylinder head for **correct** fit.



TECHNICAL INFORMATION

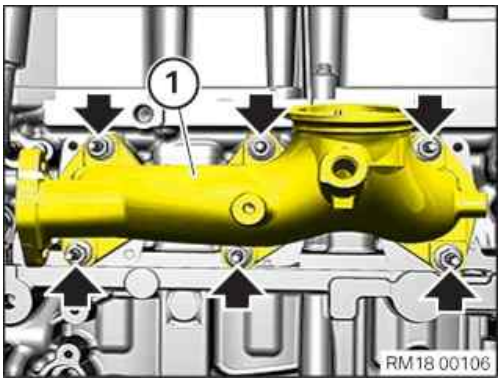
The **coated side of the** seal must be mounted facing towards the exhaust manifold.

- Renew the gasket (1).

  Parts: Gasket

- Insert and install the gasket (1).

cardiagn.com

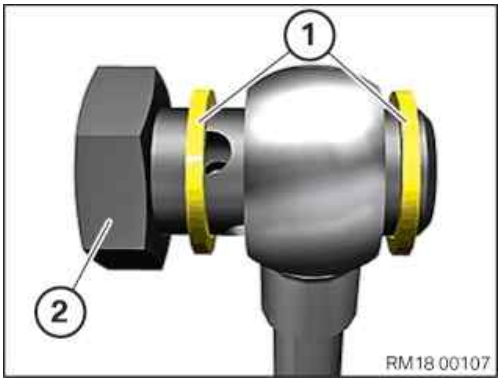


- Insert and install the exhaust manifold (1).
- Renew the nuts (arrows).

  Parts: Nuts
- Hand-tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.
- Tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.

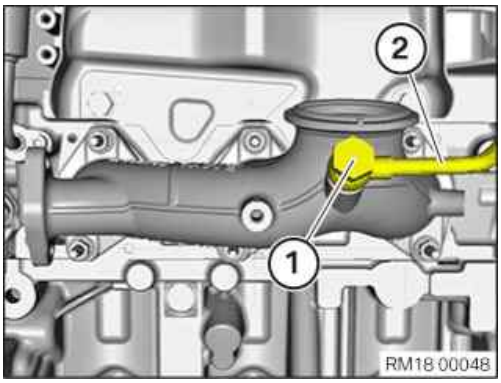
Exhaust manifold to cylinder head

M7	If necessary, renew loose stud bolts.	Tightening torque	11 Nm
	Replace nuts.	Tightening torque	13 Nm



- Renew the sealing rings (1) from the banjo bolt (2).

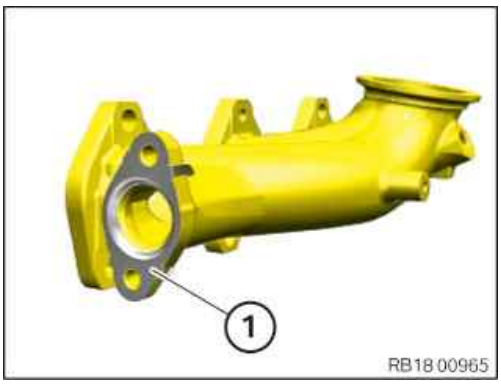
  Parts: Sealing ring



- Insert and install the exhaust gas pressure pipe (2).
- Tighten the banjo bolt (1).

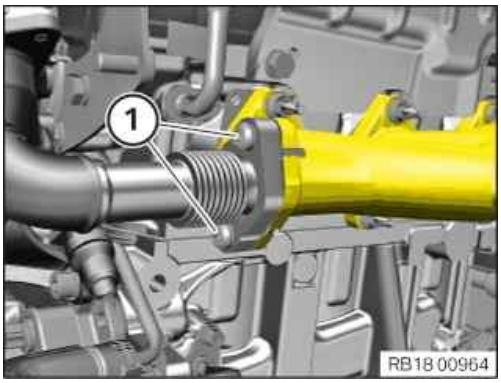
Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt		Renew sealing rings.	30 Nm



- Renew seal (1) between exhaust-gas recirculation cooler and exhaust manifold.

  Parts: Gasket



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

cardiagn.com

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

84 – Installing exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to the exhaust turbocharger

Inadequate initial filling of exhaust turbocharger leads to dry running.

- Make sure the initial filling is correct when replacing exhaust turbocharger.
- Fill the exhaust turbocharger with the suitable additive (see electronic Parts Catalogue).

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.
For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

cardiagn.com

TECHNICAL INFORMATION

- It is imperative to perform certain test steps to prevent subsequent damage in the event of exhaust turbocharger damage. See further information.

TECHNICAL INFORMATION

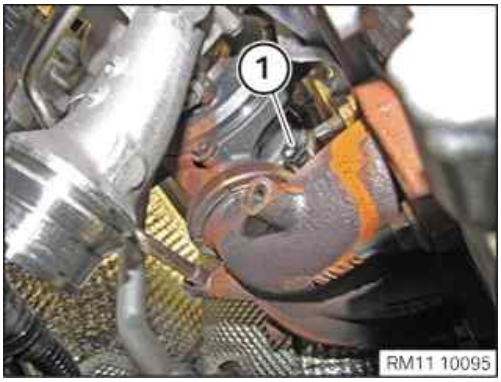
For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger



- Renew gasket.

  Parts: Gasket
- Position seal on exhaust manifold.
- Guide the exhaust turbocharger in from the top and position it.
- **Ensure that gasket is correctly seated.**
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Renew sealing rings.

  Parts: Sealing ring
- Position oil feed line with banjo bolt (1) and sealing rings and tighten hand-tight.

  There are 2 sealing rings fitted on the banjo bolt (1).
- Align oil feed line and tighten banjo bolt (1).

  The oil feed line must not sit on the exhaust turbocharger.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

cardiagn.com

- Renew gasket.

  Parts: Gasket
- Position oil return line (2) with **seal** on exhaust turbocharger.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Feed in and tighten screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

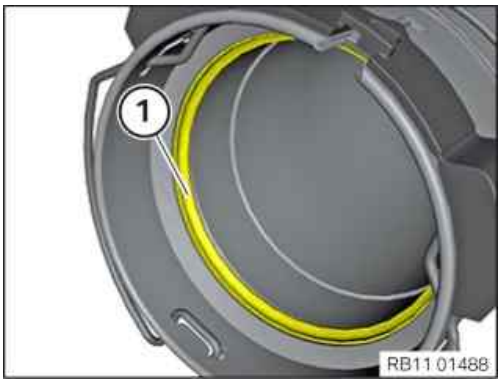
85 – Install right charge air duct

RISK OF DAMAGE

Damage to the exhaust turbocharger.

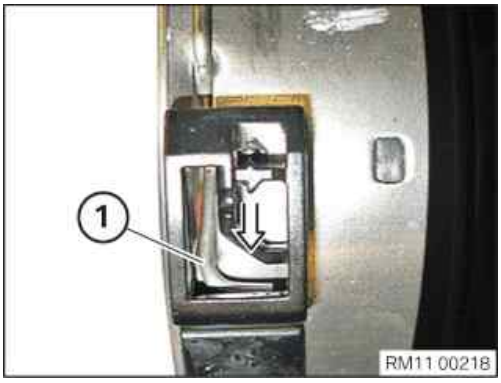
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.



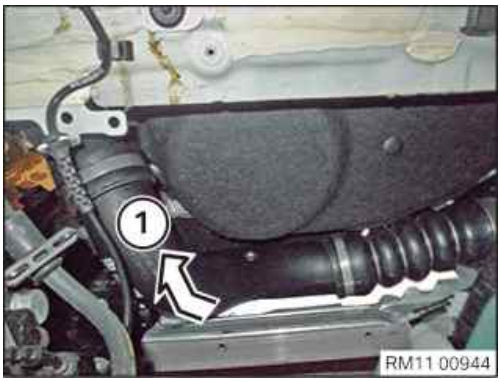
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

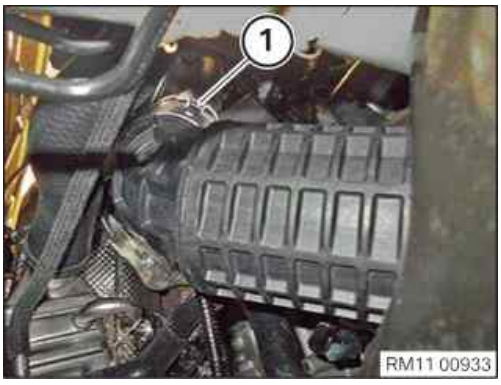


- Let the lock (1) engage at the holder (arrow).

cardiagn.com

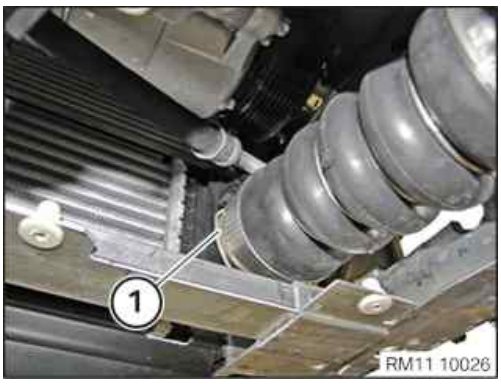


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



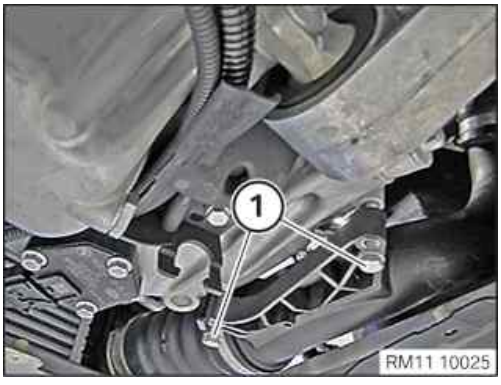
- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm



- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

86 – Installing heat shield on exhaust turbocharger at the rear

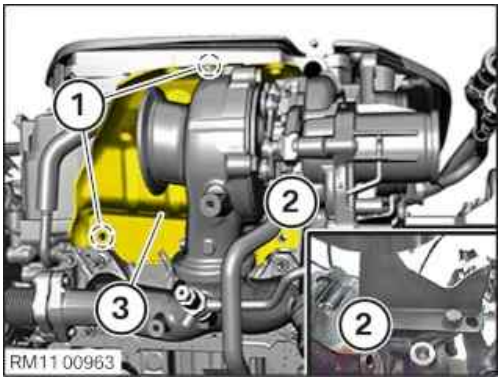
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

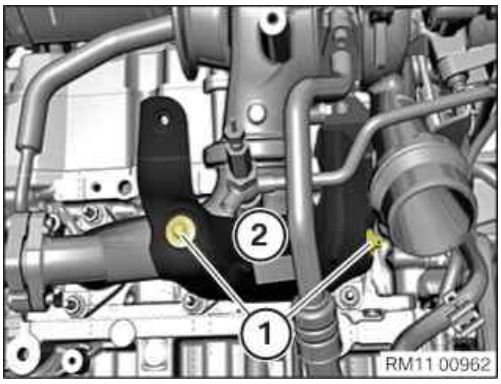
87 – Installing heat shield on exhaust turbocharger at bottom

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (2).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

88 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

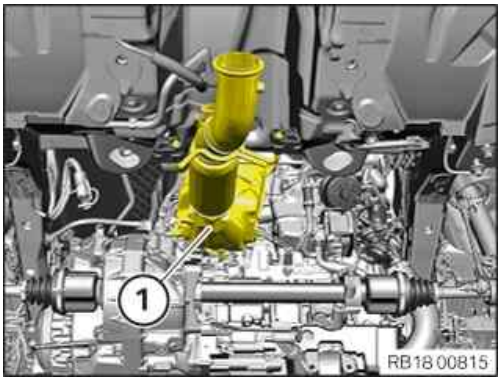
cardiagn.com

- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

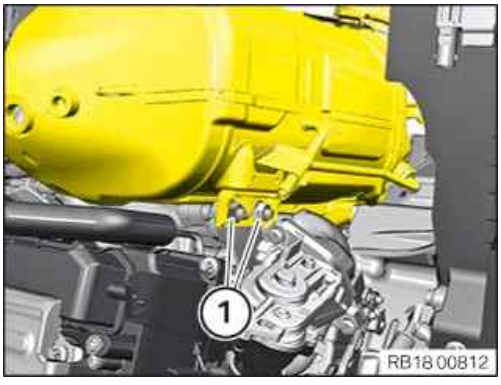
  Parts: Gasket

- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.



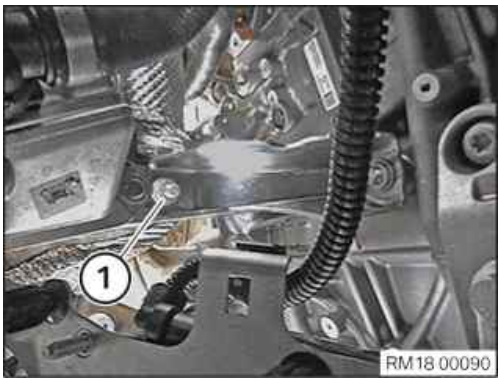
- Carefully insert and install the diesel particulate filter (1).

- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).



- Tighten nuts (1) by hand.

cardiagn.com



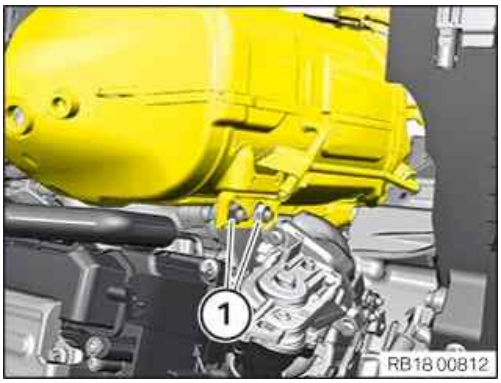
- Tighten the nut (1) hand-tight.

- Remove fitting aid (1) for the flexible tube.

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

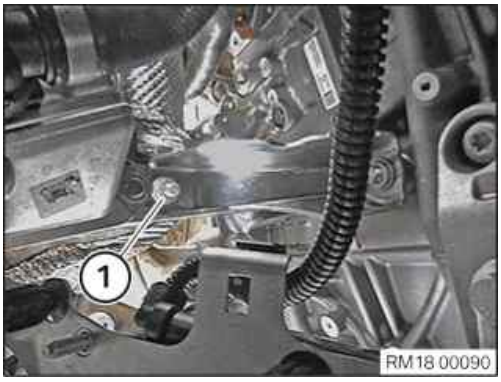
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

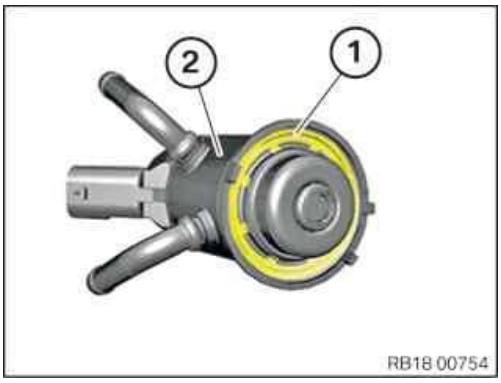


- Tighten nut (1).

Diesel particle filter to holder

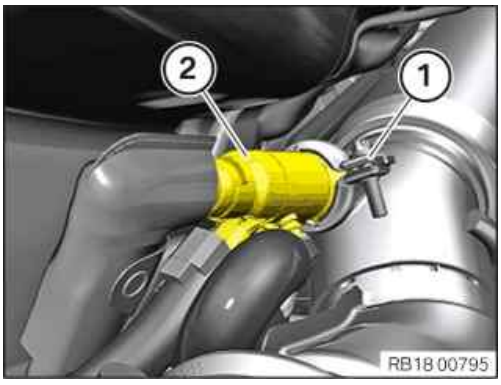
M8 hexagon nut		Tightening torque	19 Nm

cardiagn.com



- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

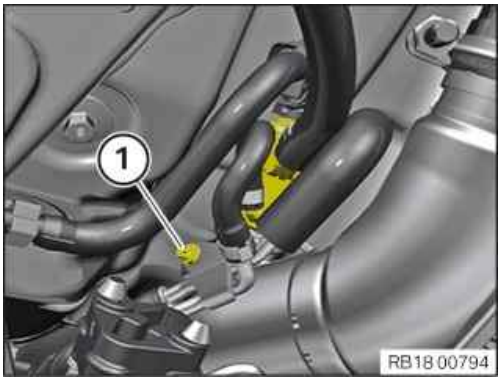


- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

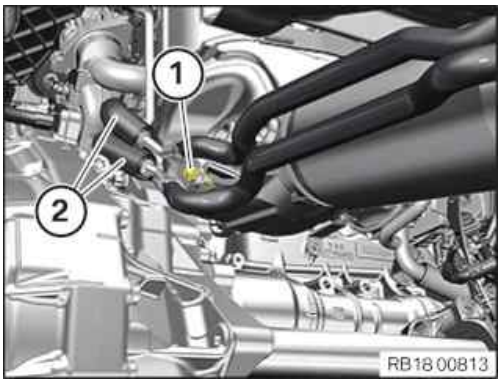
V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm



- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

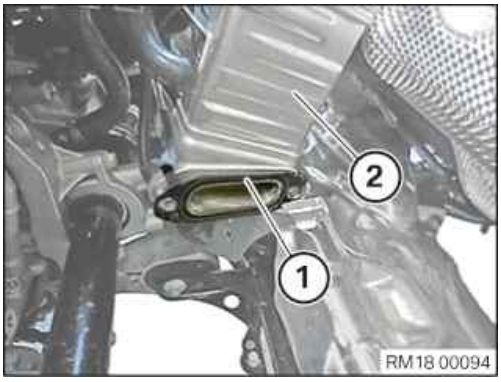
Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

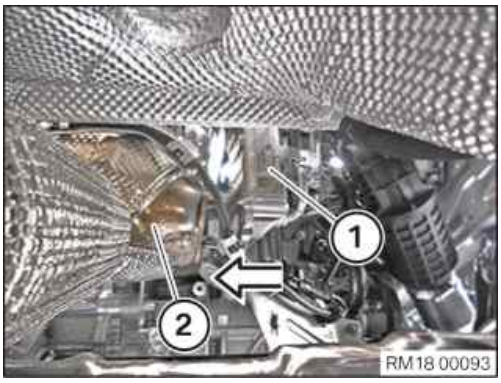
Torx bolt BM6x16		Tightening torque	8 Nm



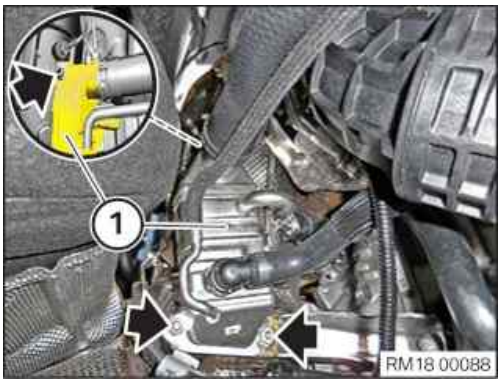
- Replace seal (1) of the low pressure exhaust-gas recirculation cooler (2).

  Parts: Gasket

cardiagn.com



- Feed in and install the low pressure exhaust-gas recirculation cooler (1) in at the diesel particulate filter (2) in the direction of arrow.



- Tighten nuts (arrows) of the low pressure exhaust-gas recirculation coolers (1).

Low-pressure exhaust-gas recirculation cooler to diesel particulate filter

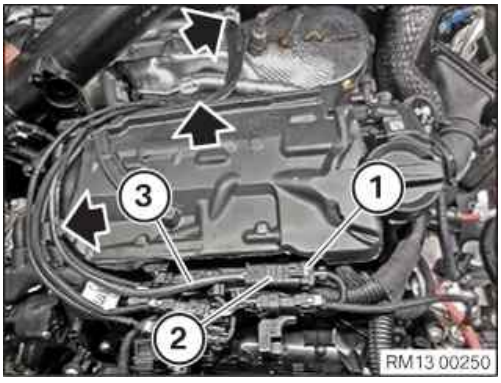
Flange nutM8		Tightening torque	19 Nm

89 – Install the control sensor

- Feed in front oxygen sensor (1) and install.
- Tighten the front oxygen sensor (1) with the special tool **0 491 075 (11 7 030)**.

Control sensor

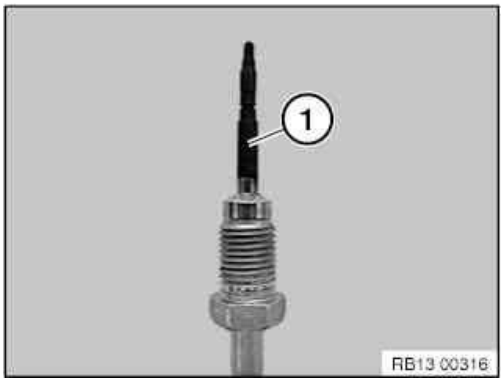
Control sensor		Tightening torque	50 Nm



- Feed in and install cable (3) from the oxygen control sensor into the clamps (arrows).
- Secure connector (2) on holder.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

90 – Install the exhaust-gas temperature sensor on the diesel particulate filter



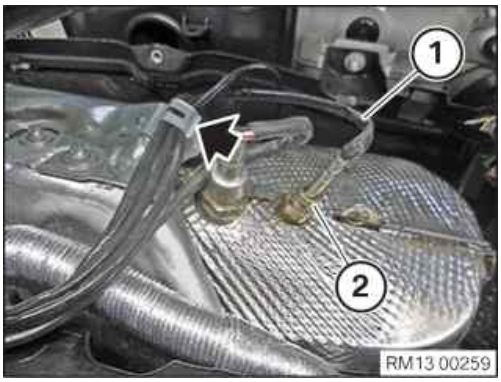
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.
- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

cardiagn.com



- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

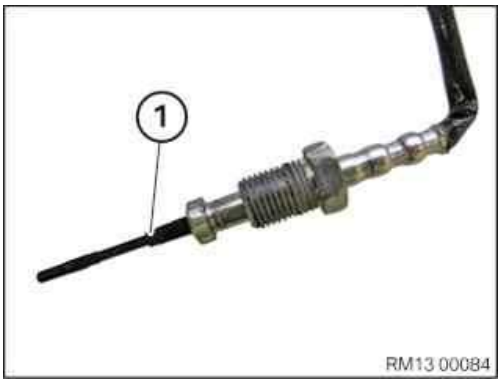
91 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

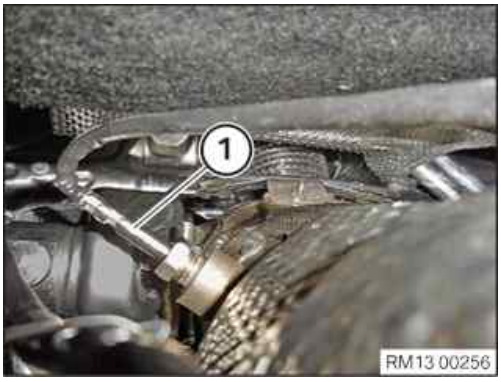
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.



- Make sure the gauge tip (1) is not damaged during installation.



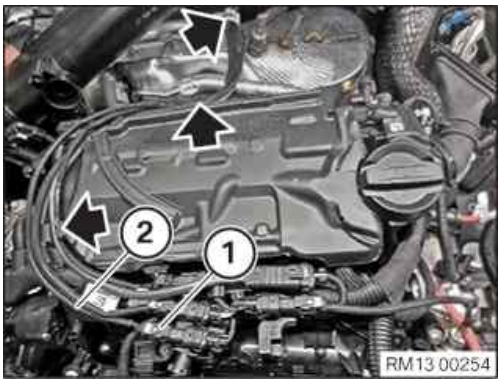
- Feed in and install the exhaust temperature sensor (1).

cardiagn.com

- Tighten the exhaust temperature sensor (1) with conventional tools (2).

Exhaust temperature sensor to diesel particulate filter

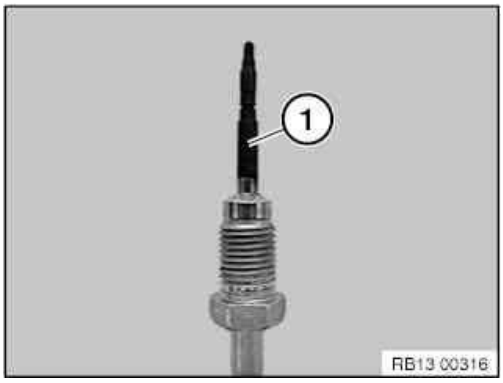
Exhaust-gas temperature sensor		Tightening torque	28 Nm



- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

92 – Installing exhaust temperature sensor on catalytic converter

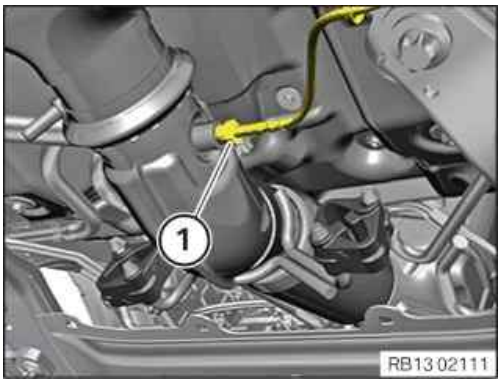


RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.
- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.



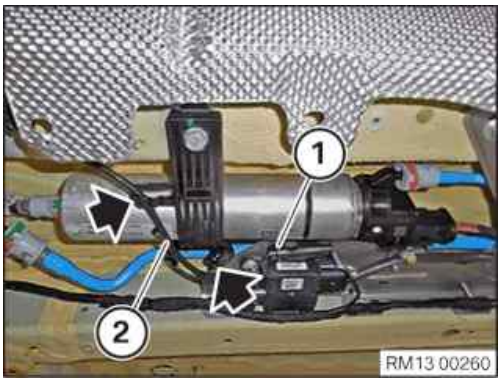
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Secure the cable clips (1).

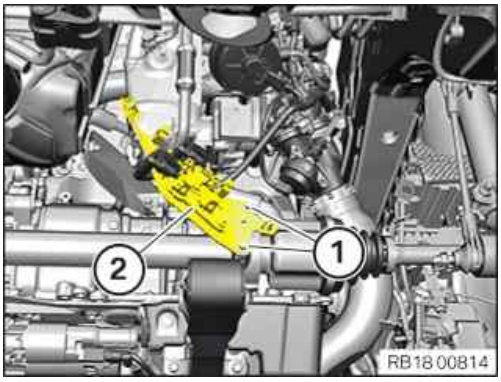
cardiagn.com



- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

93 – Install holder for oxygen sensor

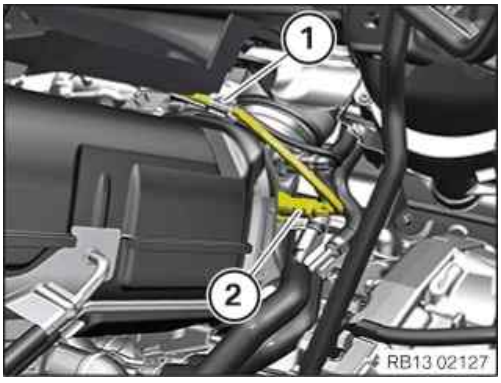


- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm

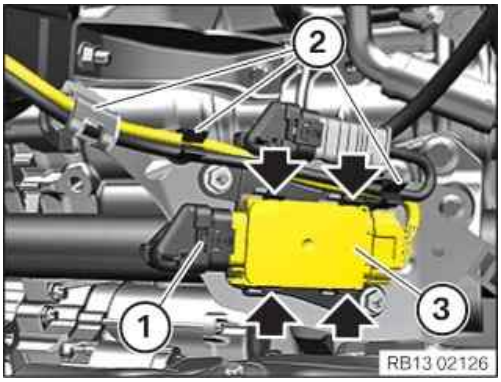
94 – Installing the nitrogen oxide sensor before SCR catalytic converter



- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

Sensor		Tightening torque	50 Nm



- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

95 – Install the monitoring sensor

TECHNICAL INFORMATION

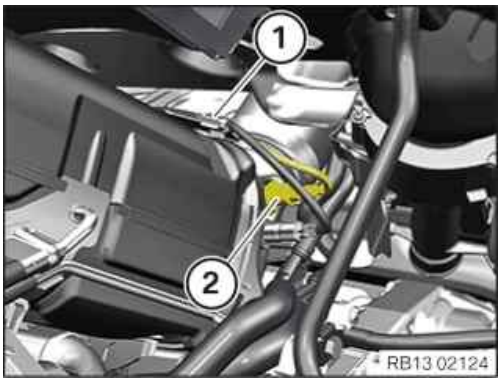
New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

cardiagn.com

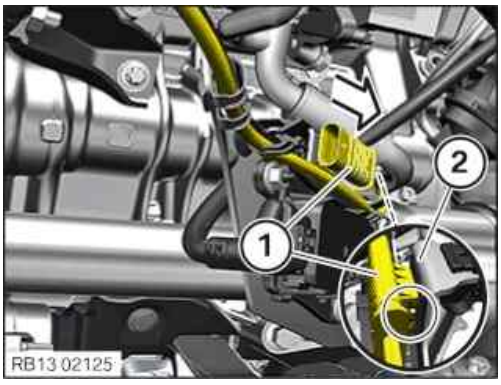


- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor

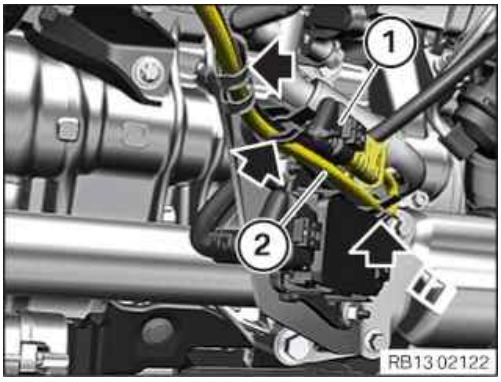
Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.



- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.



- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

96 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

cardiagn.com

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

97 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

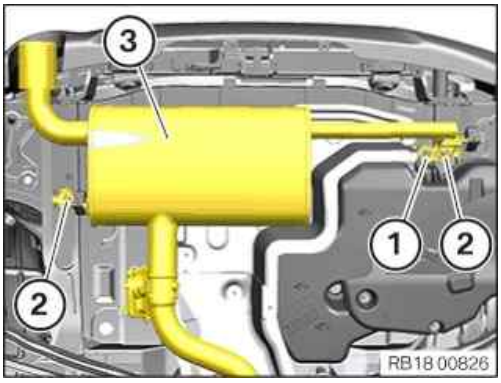
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Insert and install the exhaust system (3) with the help of another person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).

Exhaust bracket on body

Hexagon screw M8x30		Tightening torque	19 Nm

cardiagn.com

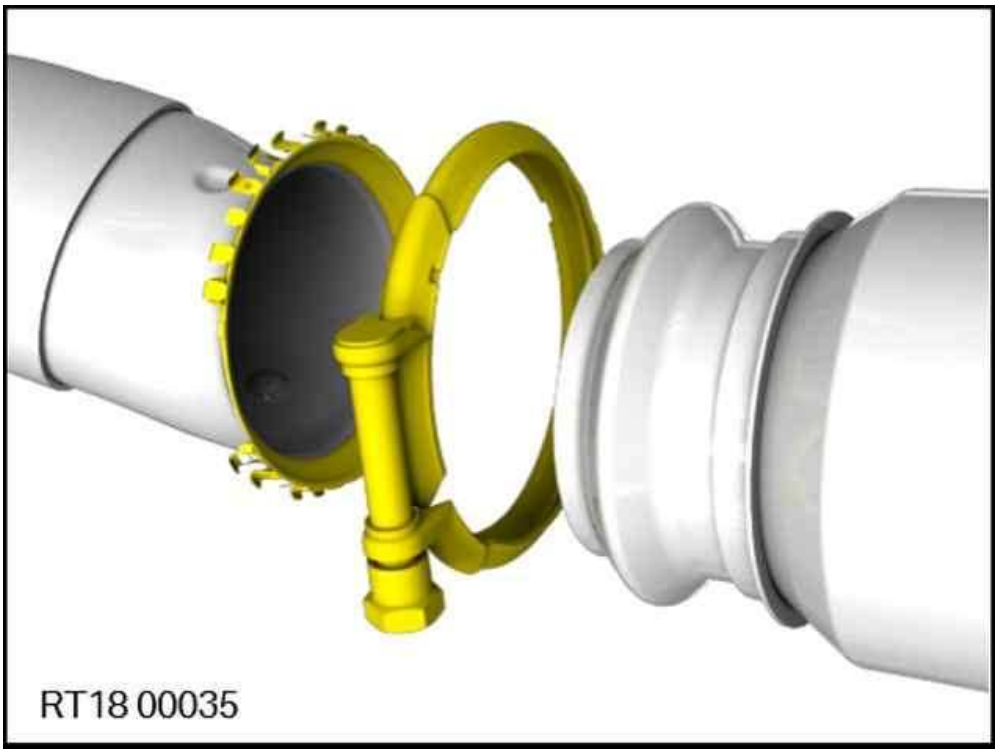
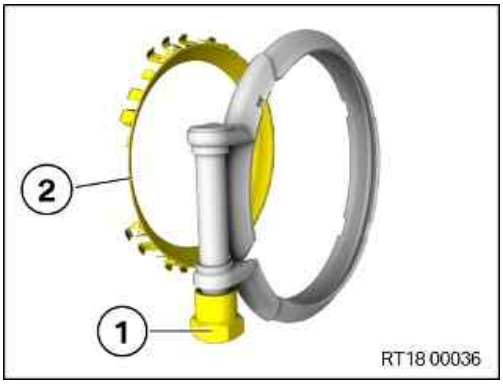
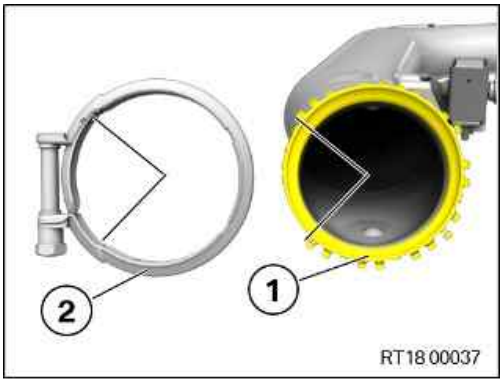
▶ **Install the V-clip**

V-band clamp



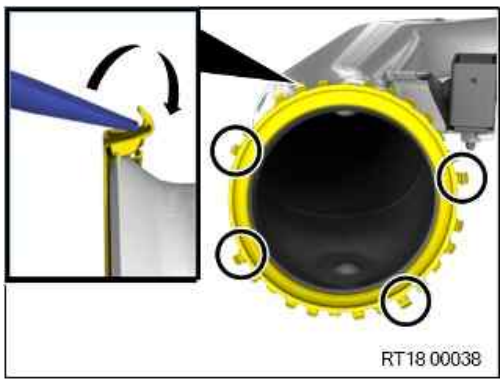


- Unscrew the nut (1) and remove the sealing ring (2).



- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.



- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

cardiagn.com

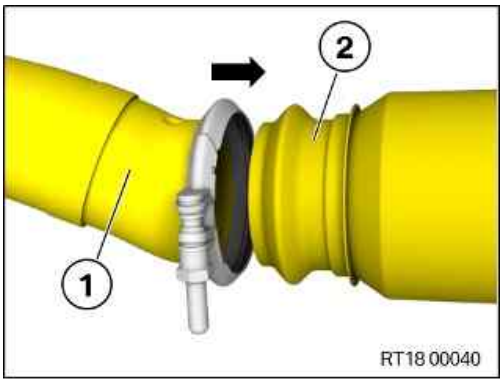
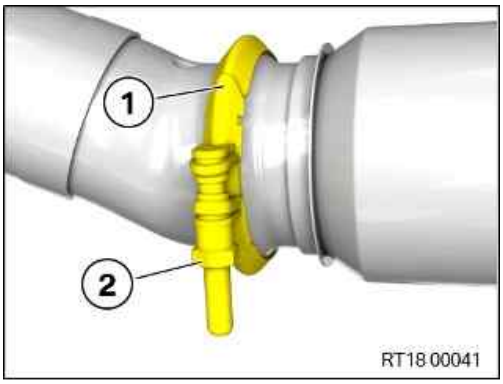
- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).



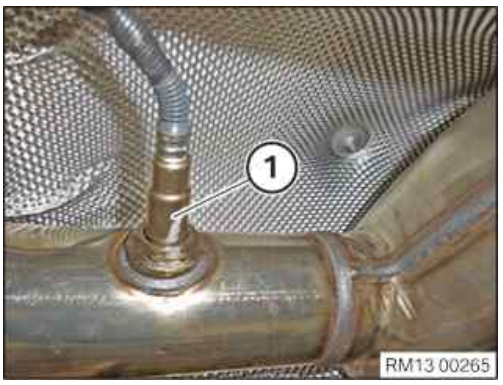
- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.



- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm



- Guide in, position and tighten the diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm

cardiagn.com

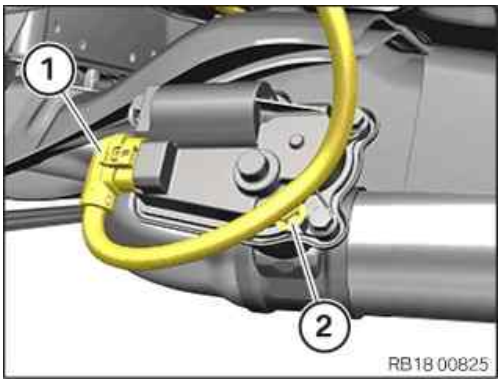
- Guide in, position and tighten the nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

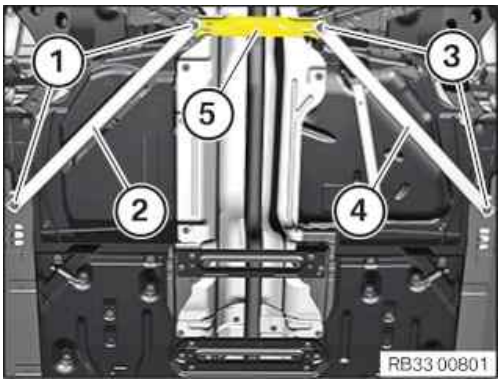
Sensor		Tightening torque	50 Nm



- Secure clamps (2).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

98 – Install the cross-member with torsion struts



- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

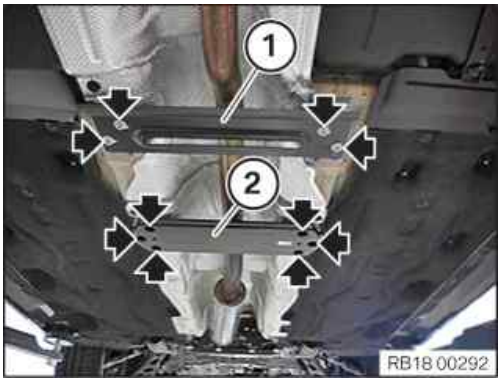
- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

99 – Install the connecting support on the tunnel in front and back



- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

cardiagn.com

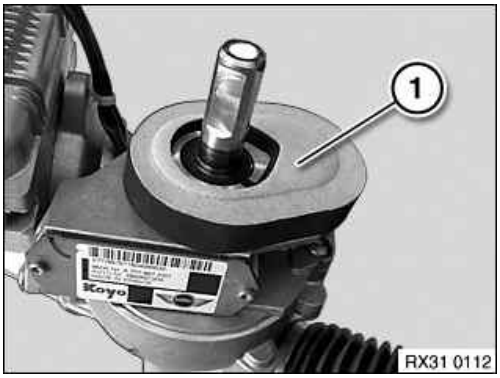
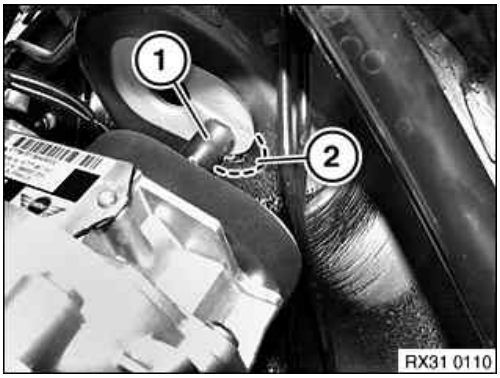
100 – Mount and secure the complete front axle



- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

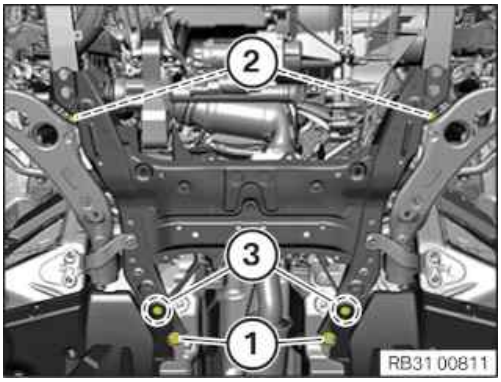


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

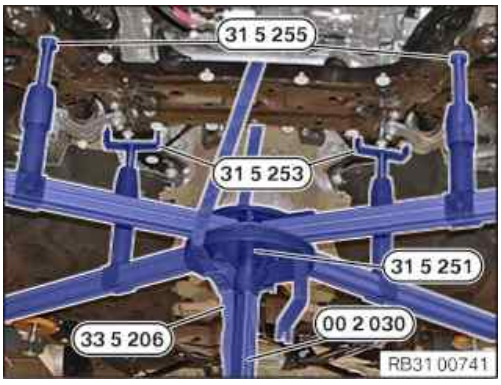
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).

Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and place it to the side.

cardiagn.com

NOTICE

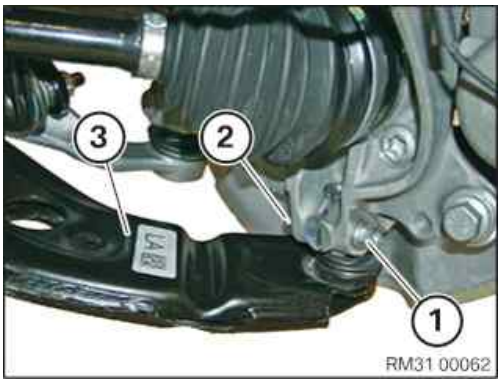
Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm



NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

101 – Install the mounted parts on the front axle support

NOTICE

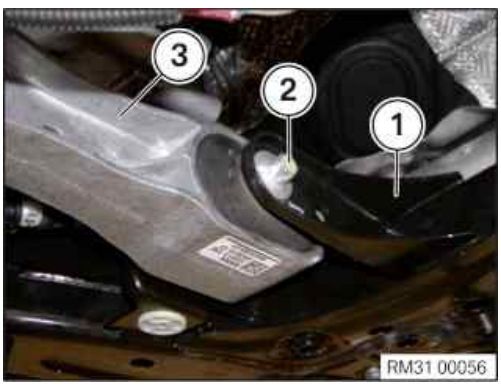
Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °



- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm

cardiagn.com

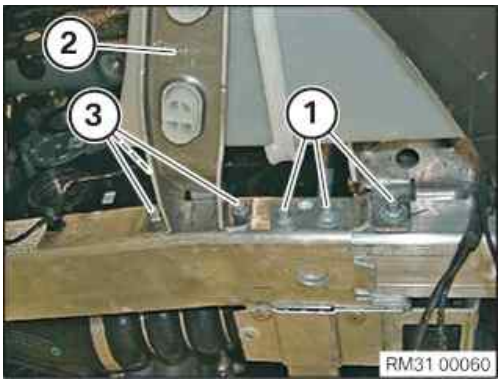
NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.



- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

Perform the operations on the left and right side.

- Tighten the screws (1).

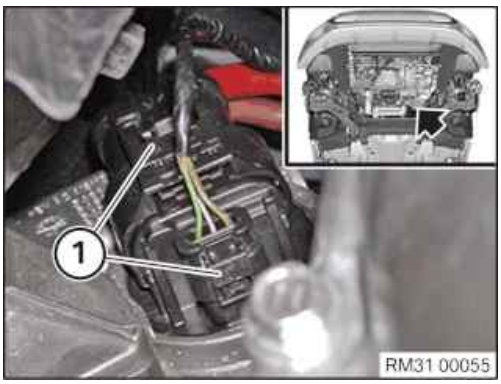
Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm

102 – Attaching connector at steering gear

- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.



- Connect and lock connector (arrow) (1) with the steering gear.

cardiagn.com

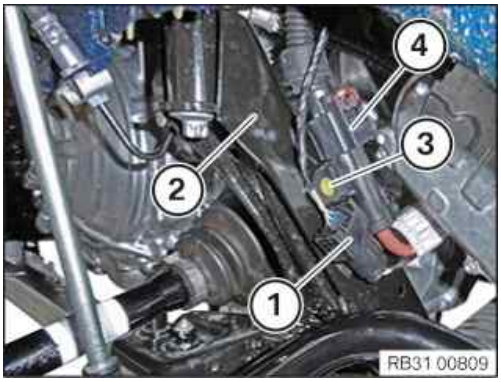
- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

103 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

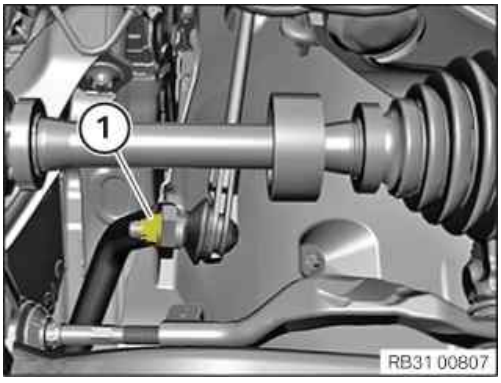
  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

104 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**



- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

105 – With right installation: Securing the cable for the ride height sensor

cardiagn.com

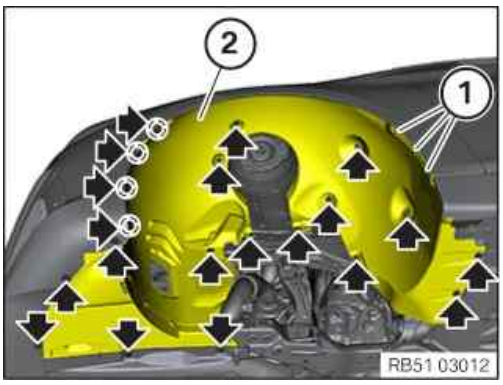
- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

106 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▶ Installing the front wheel arch cover



- Guide the wheel arch cover (2) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

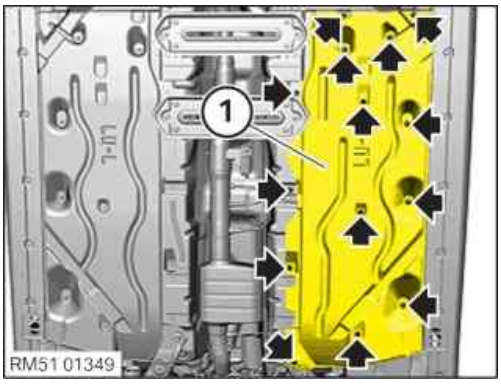
Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

- Secure expanding rivet (1).

107 – Installing underbody panelling , right



- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

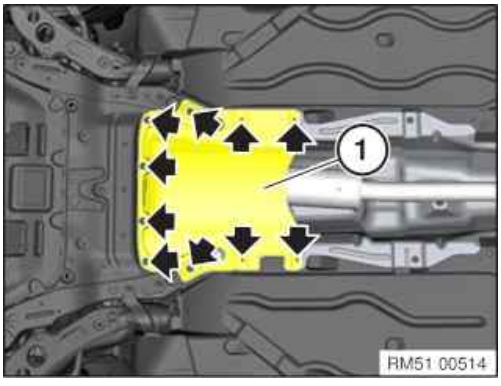
Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

108 – If installed: Installing underbody protection at rear



- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

109 – Mount the front left and right wheels

cardiagn.com

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

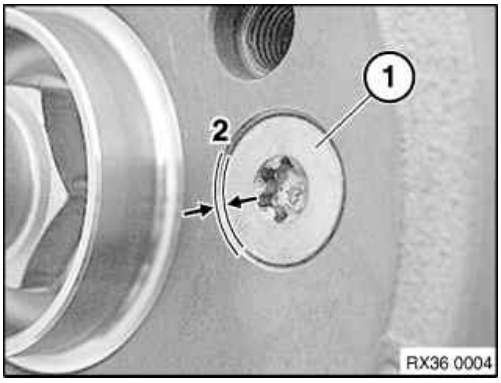
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

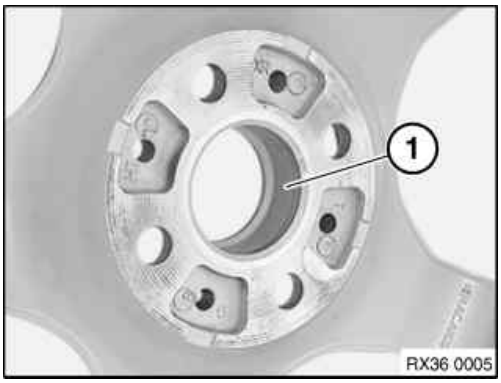
  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

◁

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

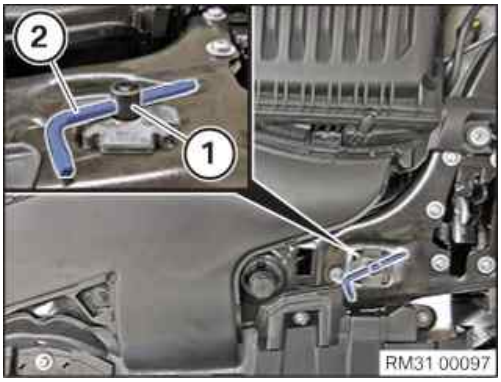
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check wheel bolts (arrows) and threads for damage, renew the wheel bolts if necessary.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

110 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

111 – Secure the steering shaft at the bottom on the steering gear

cardiagn.com

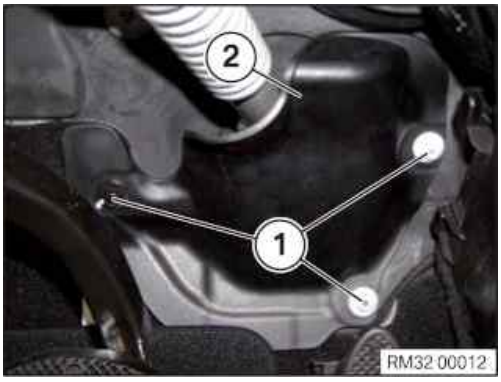
- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm



- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

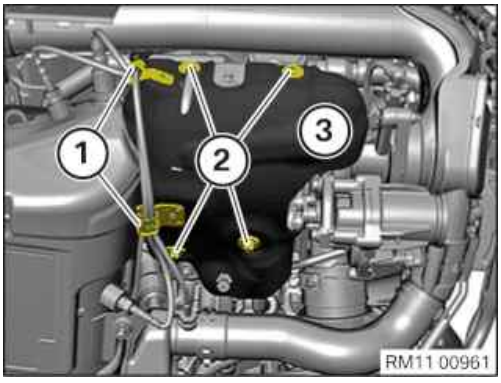
112 – Install the heat shield on the exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



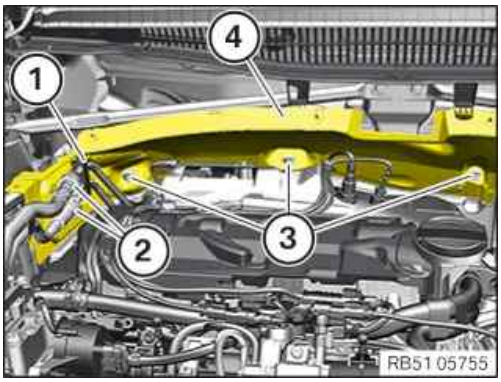
- Feed in and install the heat shield (3).
- Tighten down screws (2).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Secure cable in holders (1).

113 – Installing rear bulkhead upper part



- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

cardiagn.com

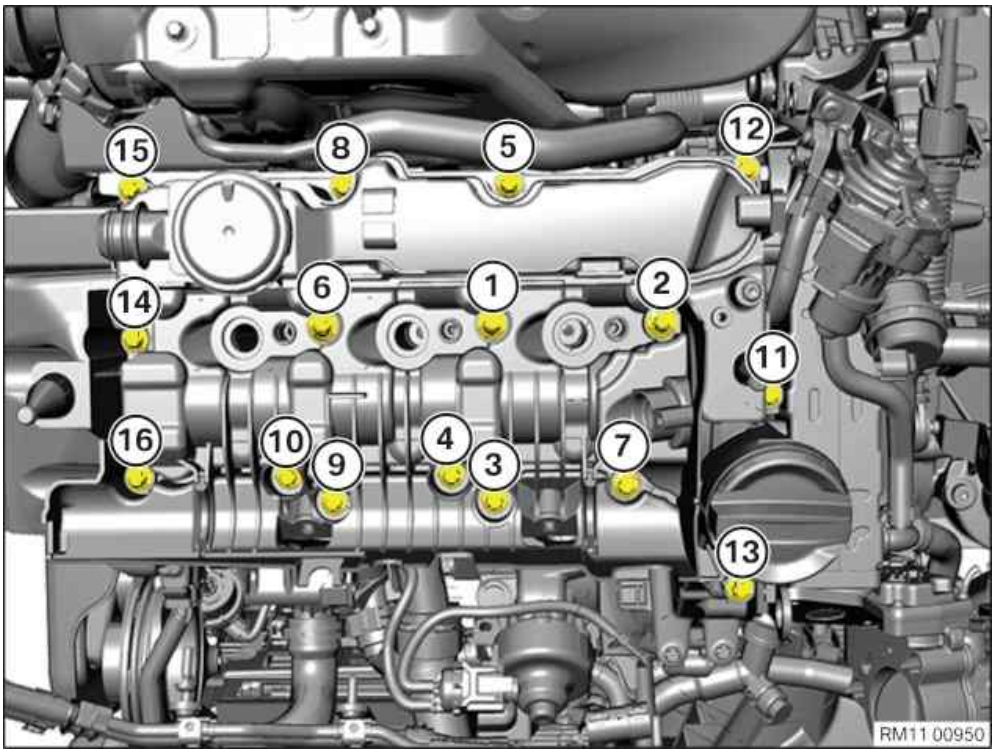
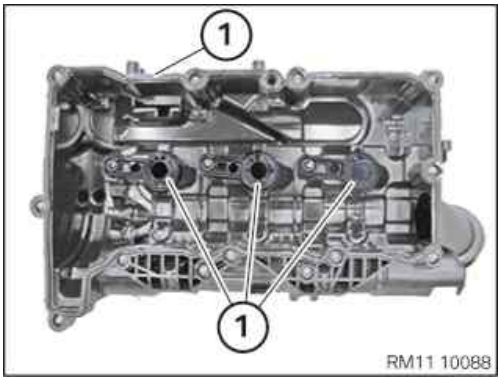
114 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

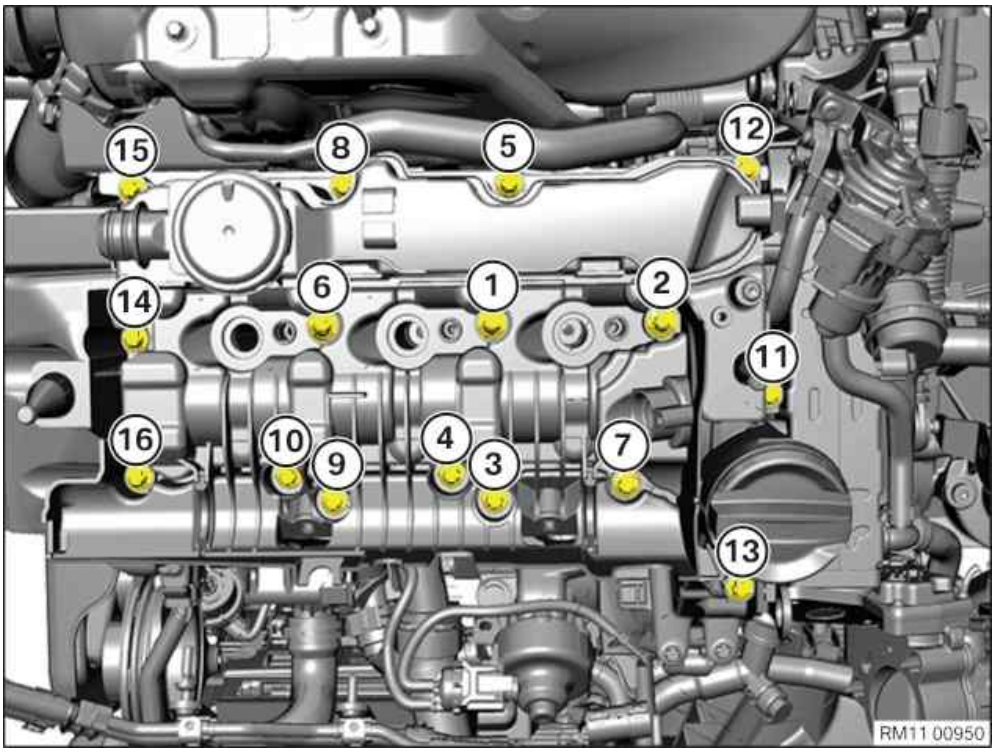


1 to 16 Bolts of the cylinder head cover



- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8,5 Nm

cardiagn.com

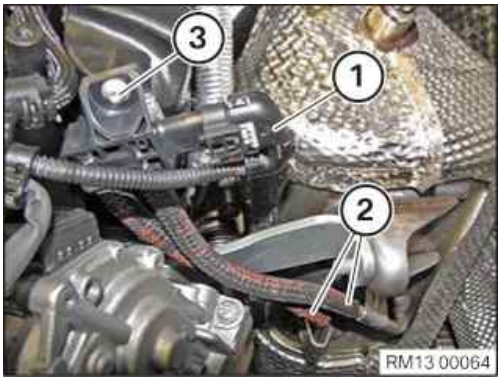
- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

115 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

116 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

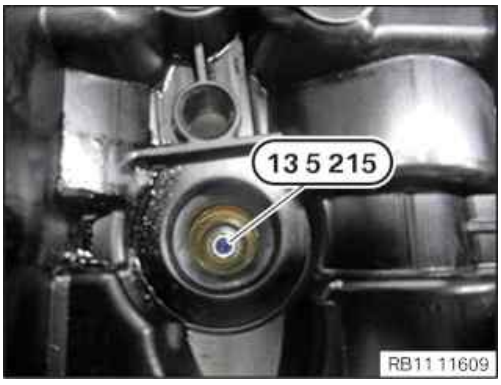
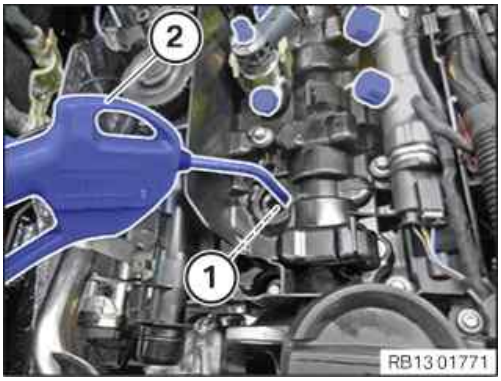
- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.



- Blow out injector shaft (1) with air gun (2).

cardiagn.com

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

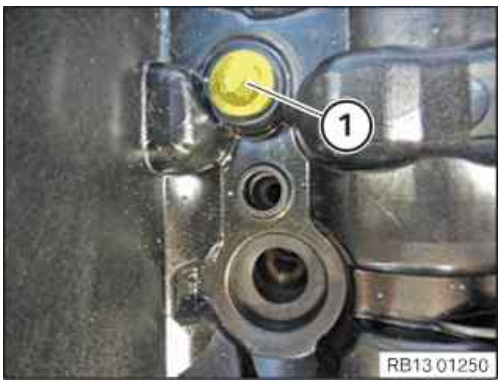
▶ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▶ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

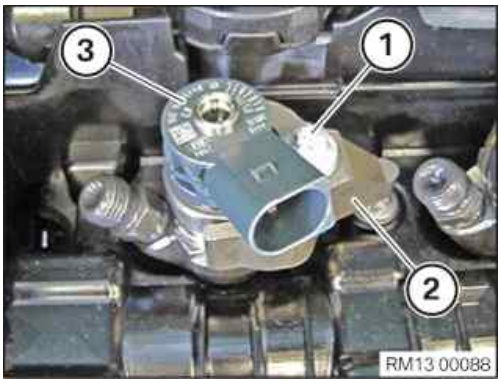
- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

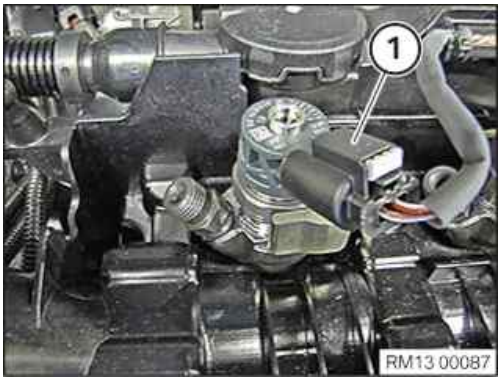
Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

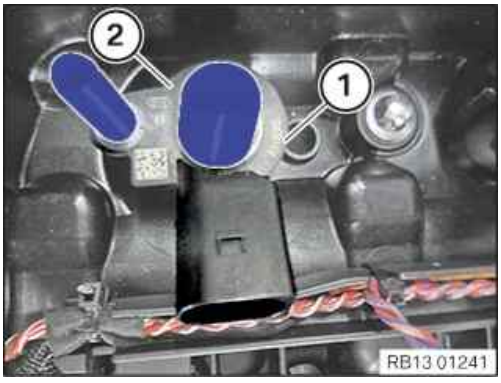
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

cardiagn.com

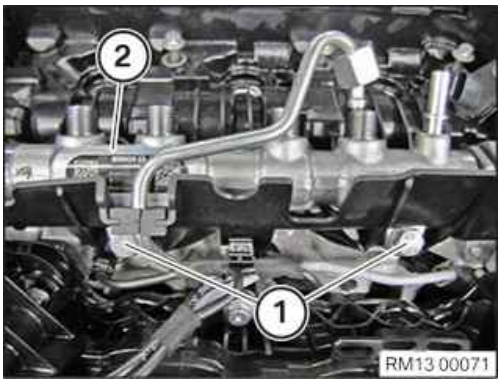
- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

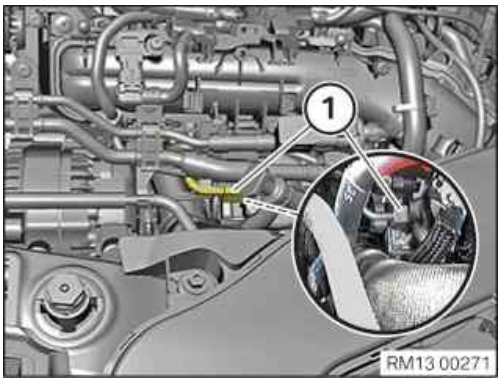
117 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

118 – Installing high pressure line between rail and high pressure pump

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool **2 413 106**.
- Thread in and install the high pressure line (3).
- Make sure that the rubber grommet is positioned correctly in the area of the cylinder head cover.
- Tighten the union nut (1) hand-tight.
- Tighten the union nut (2) hand-tight.
- Ensure that high pressure line (3) is installed without any strain.

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the union nut (1) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Tighten the union nut (2) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

119 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

120 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

121 – Installing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

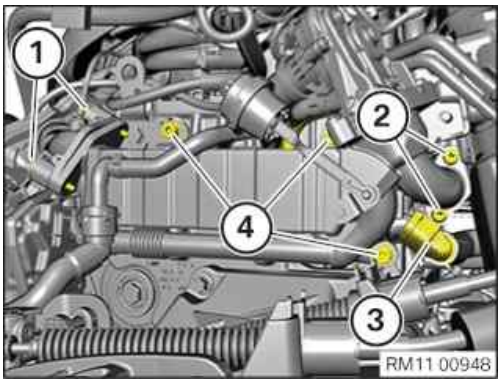
- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.

- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com

TECHNICAL INFORMATION

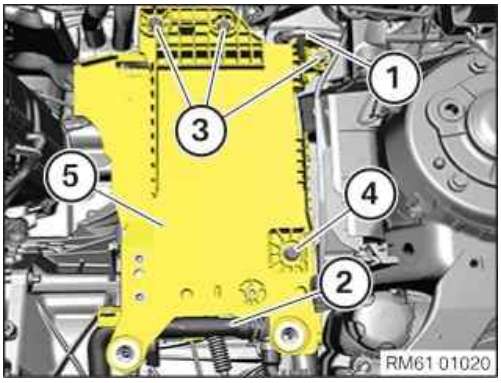
Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

122 – Install the battery holder



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

123 – Install electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

cardiagn.com

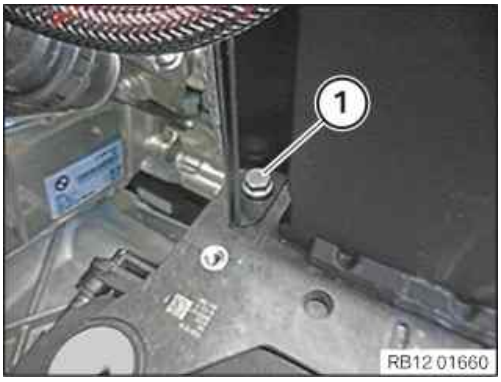
- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

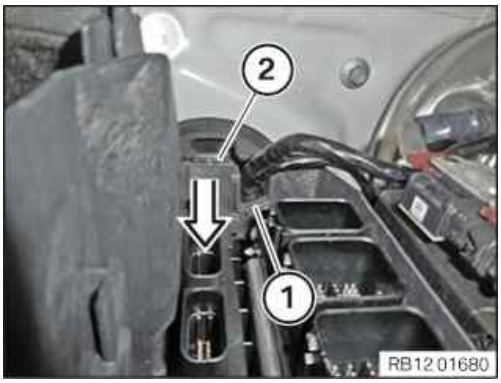
- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



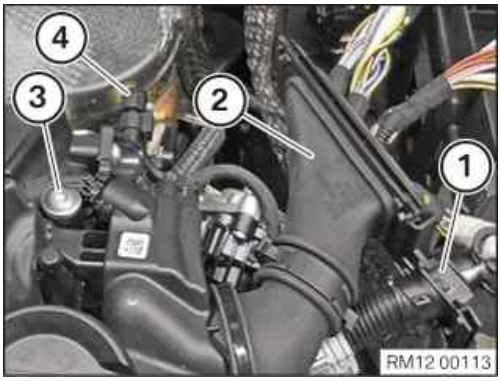
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

cardiagn.com

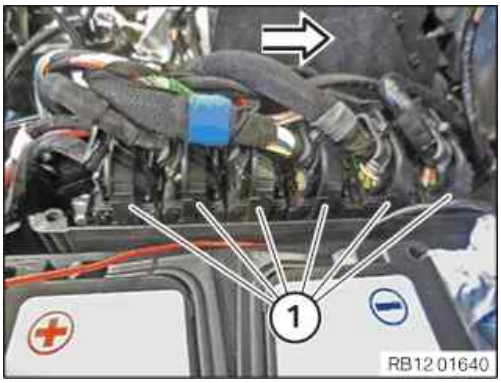
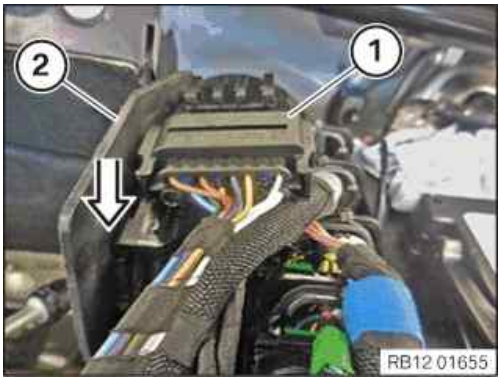
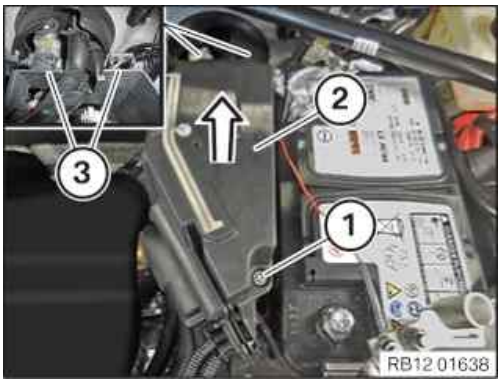
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com

- Feed in and install tension strut (1).
- Tighten screws (arrows).

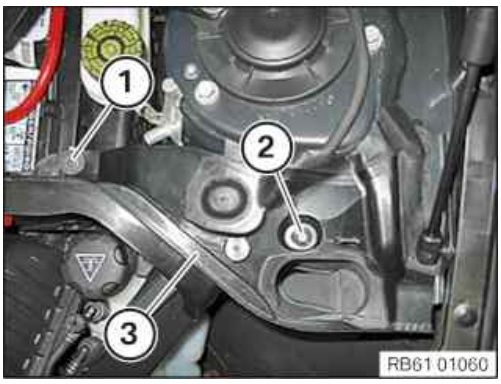
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

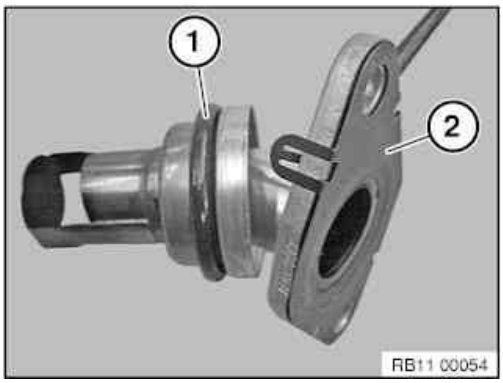


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

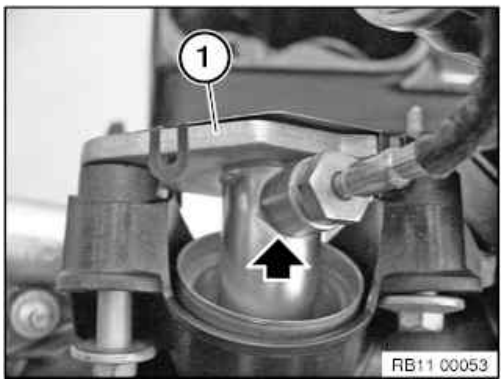
124 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.



- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

cardiagn.com

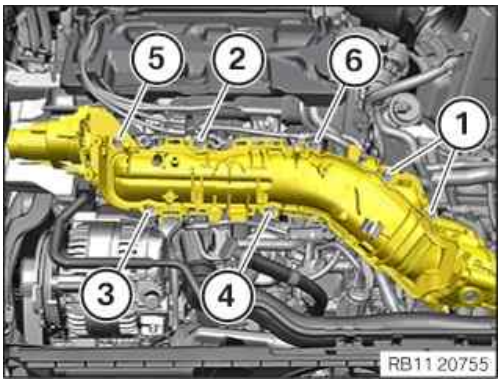
- Renew gaskets (2).

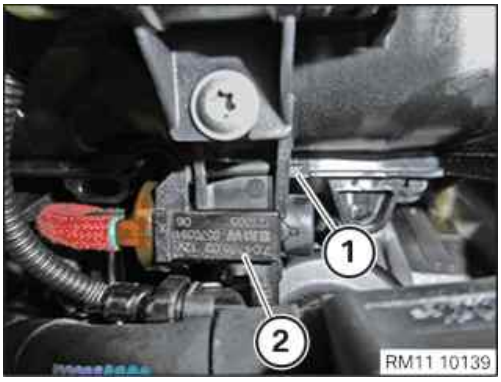
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



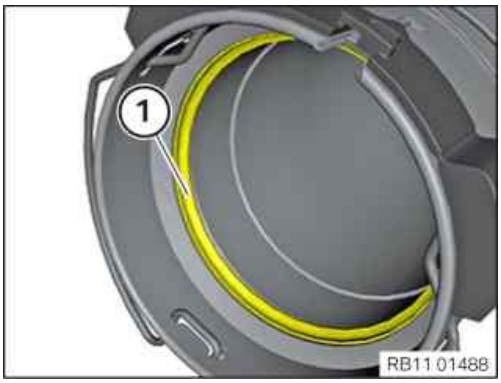
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm

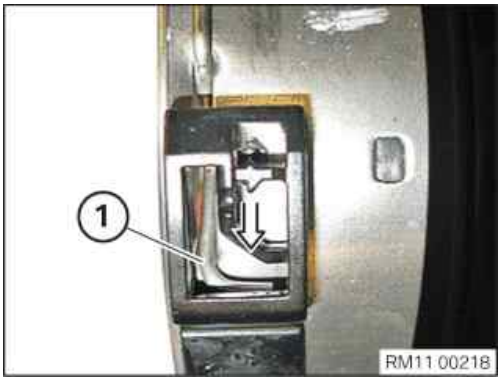


- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring



- Engage the lock (1) on the bracket (arrow).

cardiagn.com

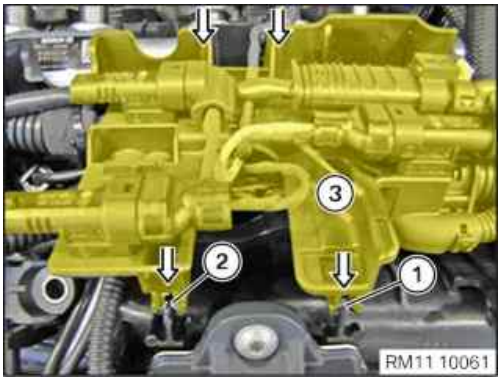
- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

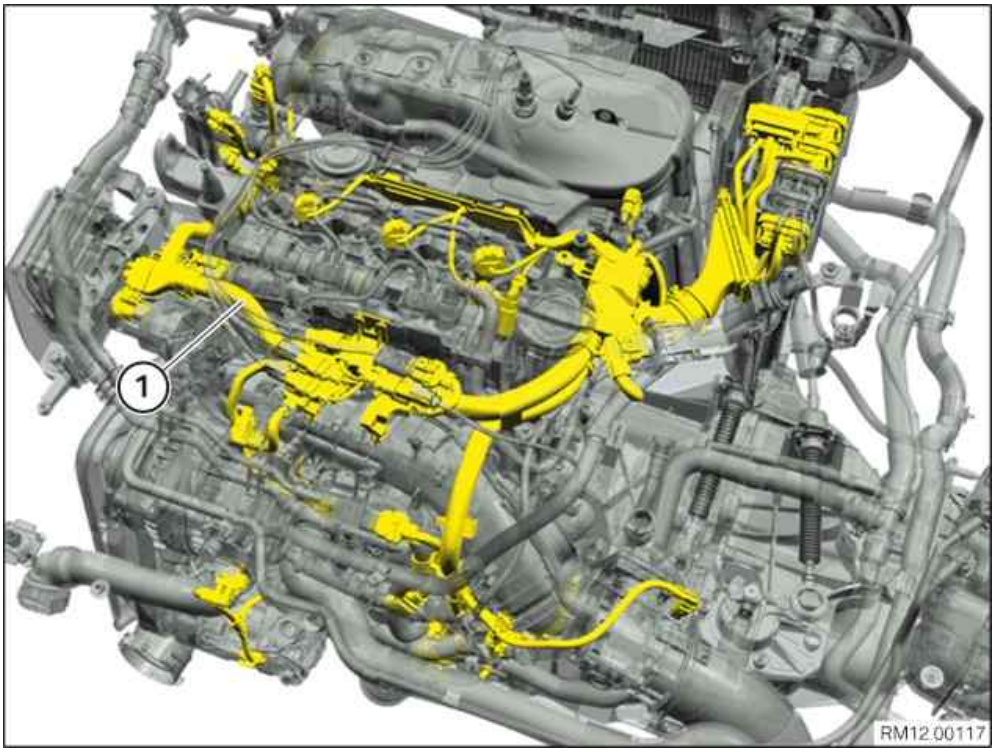
125 – Installing the cable clip for the intake plenum



- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).

126 – Fastening the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine



1 Wiring harness section for the engine

cardiagn.com

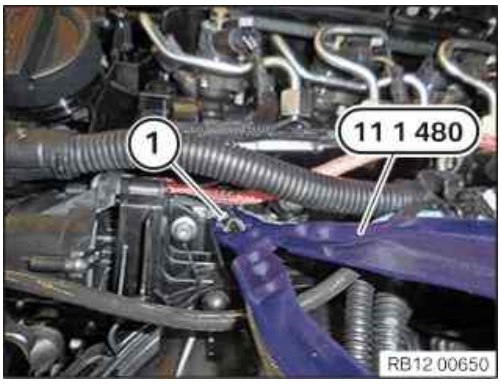
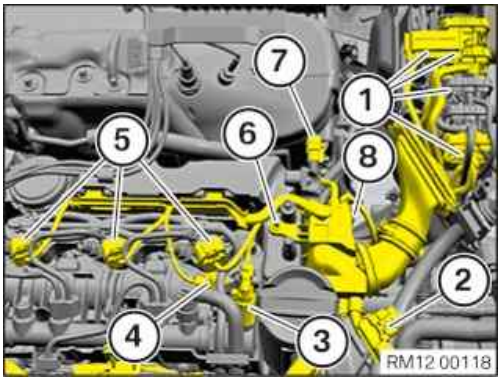
- Connect the coolant line (2) and lock the clamp.
- Connect and lock the connector (1).
- The locks must engage audibly.



- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

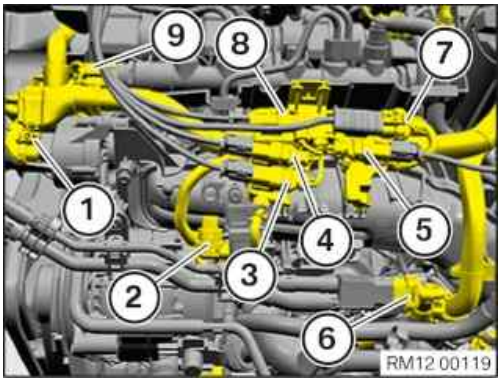


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.



- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.

cardiagn.com

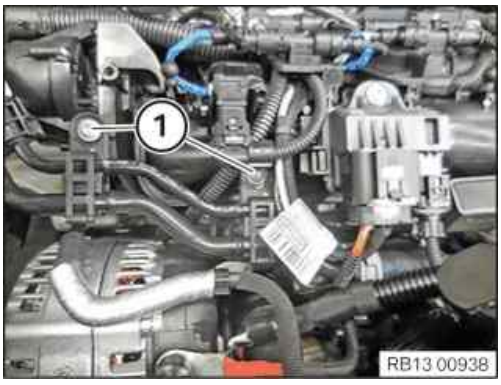
- Connect and lock the connector (2).

  Lock must audibly engage.
- Connect positive battery cable (1) on alternator and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

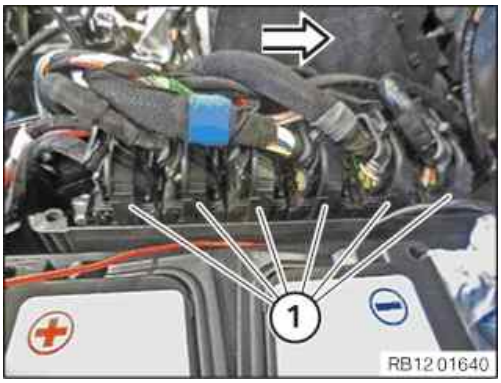


- Position fuel lines.
- Tighten the screws (1).

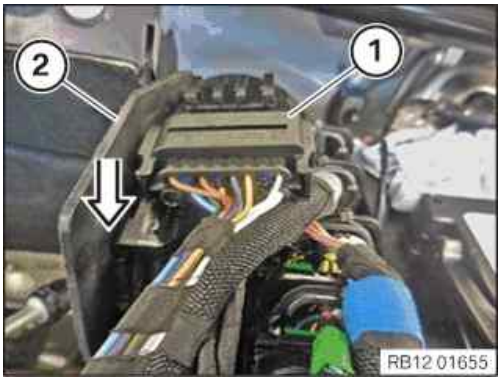
Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

cardiagn.com

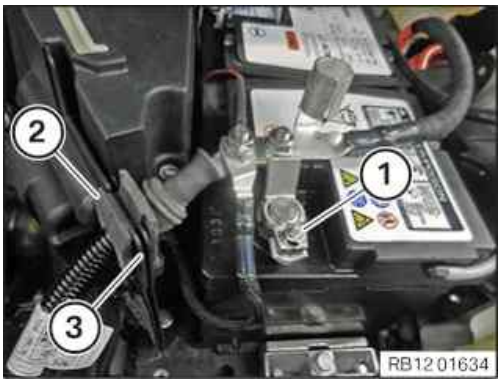
- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

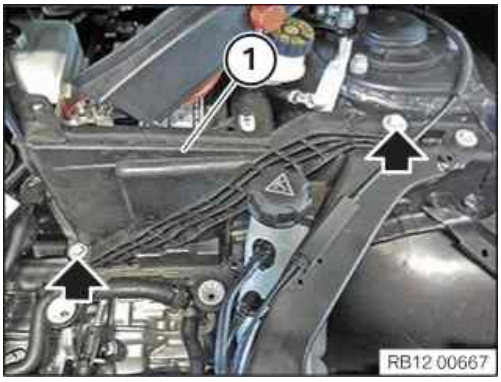
RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (1).
- Tighten screws (arrows).

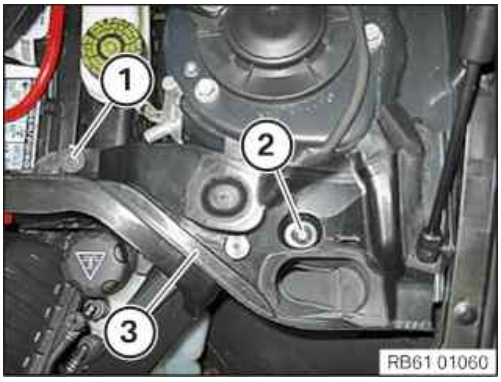
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw			2,8 Nm

127 – Installing clean air pipe

cardiagn.com

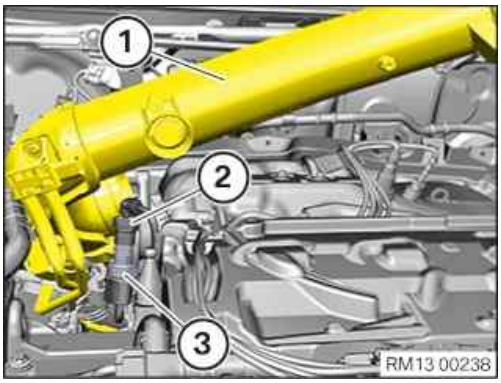
- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.



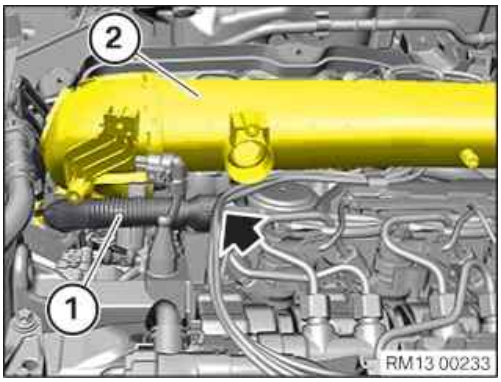
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

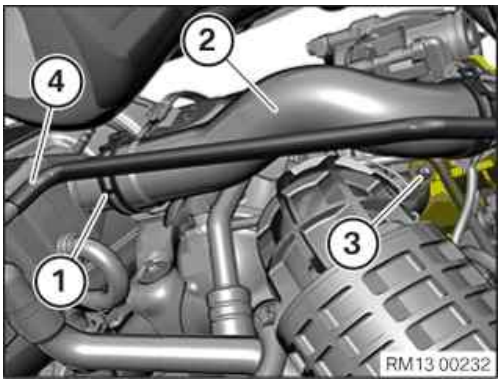
Exhaust gas pressure sensor		Tightening torque	13,5 Nm

- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

cardiagn.com

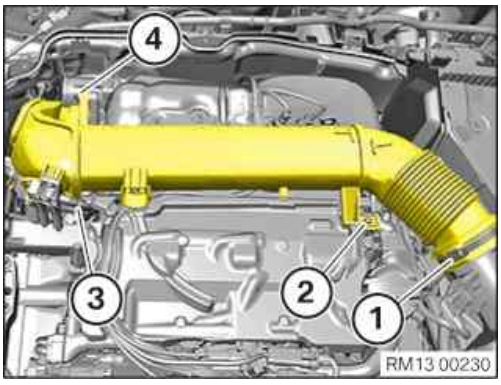
- Connect and lock the connector (1).

  The connector (1) must lock audibly.



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

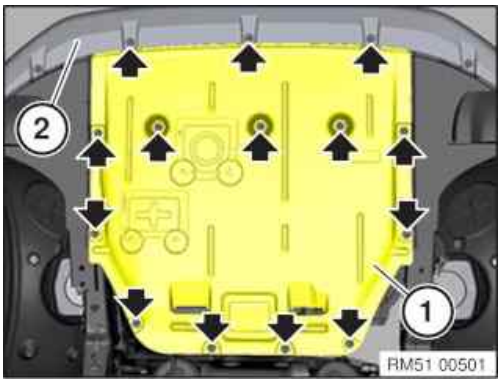
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

128 – Installing the front underbody protection

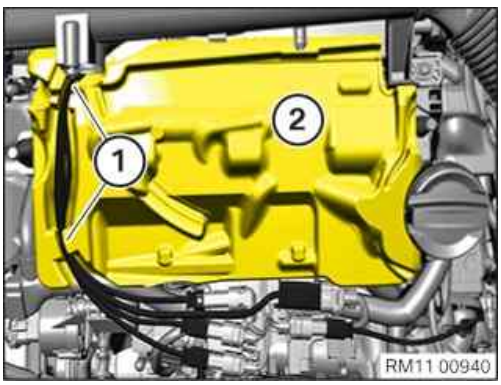


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

129 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

130 – Install resonator

cardiagn.com

- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

131 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

132 – Install the rear cowl panel cover

cardiagn.com

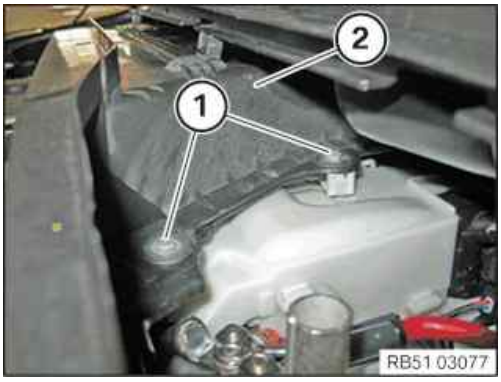
- Feed in and engage the rear cowl panel cover (1).

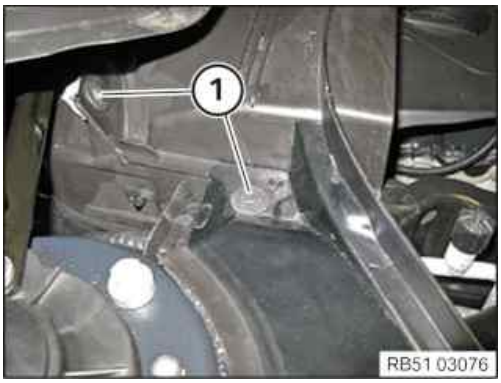
133 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

134 – Install vehicle battery

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com

- Install vehicle battery (1).
- Tighten the holder with the bolt (4).

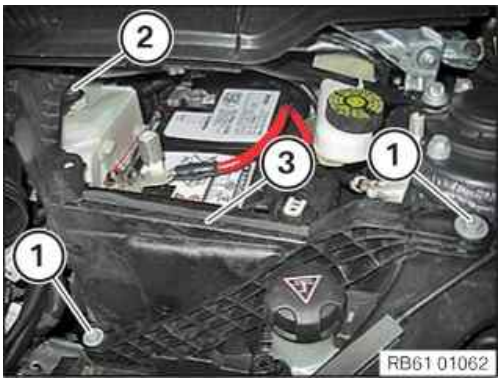
Battery terminal rail to battery tray

M8 screw		19 Nm

- Position the vent hose (2).
- Position the positive terminal.
- Tighten the nut (3) on the positive terminal.

Positive battery terminal

NutM6		5 Nm



- Insert the tension strut (3).
- Tighten down screw (2).

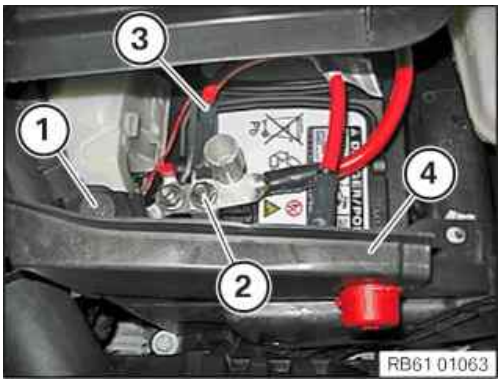
Battery cover

Screw		2,8 Nm

- Tighten the screws (1).

Trailing link

M8 screw		19 Nm



- Position the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten down screw (1).

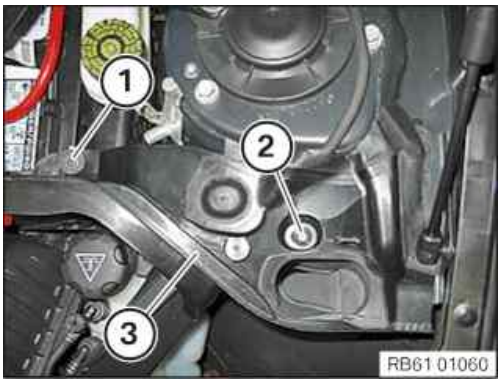
Battery cover

Screw		2,8 Nm

- Tighten the nut (2) on the positive terminal.

Positive battery cable to battery terminal

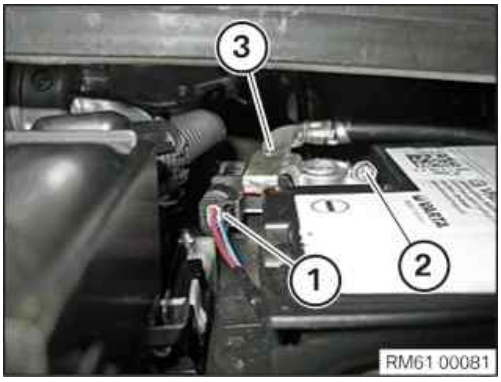
Nut M8		15,2 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm



- Position the negative battery terminal (3).
- Tighten nut (2).

Negative battery terminal (with IBS)

NutM6		5 Nm

- Connect connectors (1) and lock.

cardiagn.com

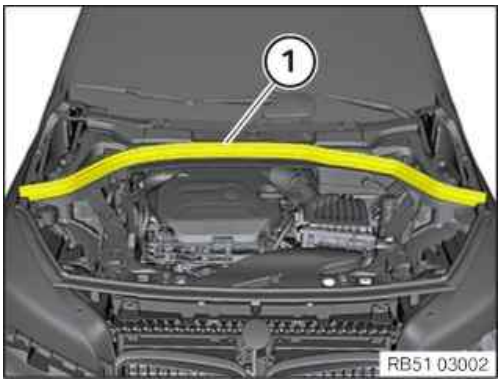
- Feed in the cowl panel cover (1).



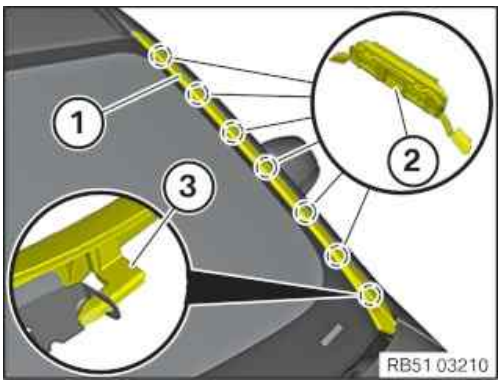
- Press the gasket (1) in a downwards direction.

135 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the gutter strip on the windscreen**



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

136 – Install left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the wiper arm**

cardiagn.com

TECHNICAL INFORMATION

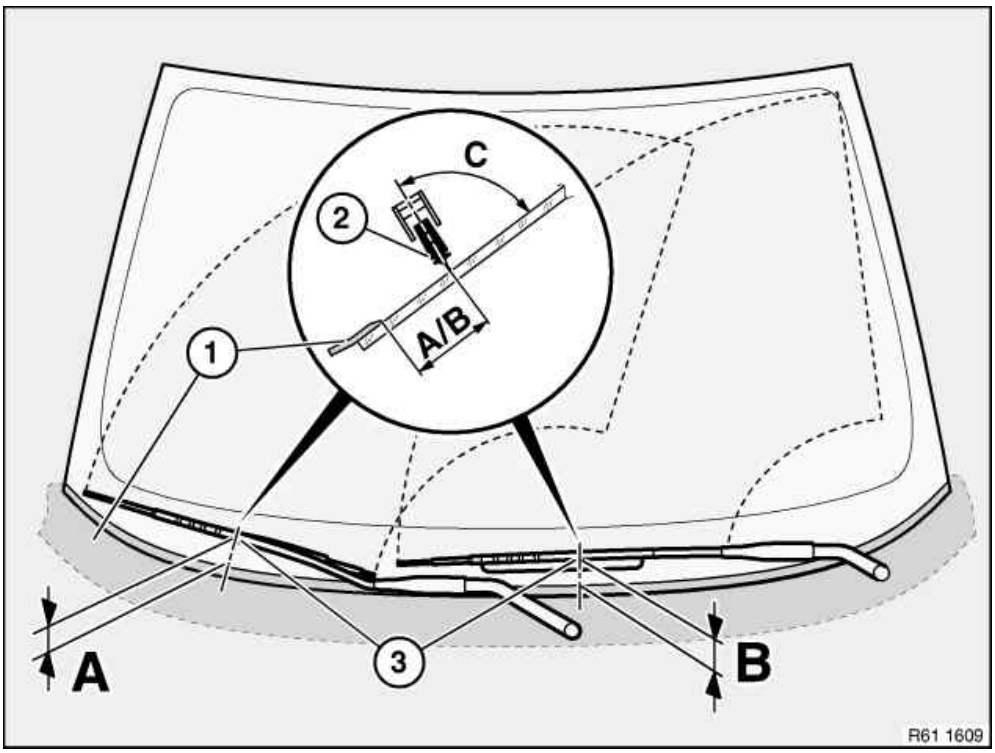
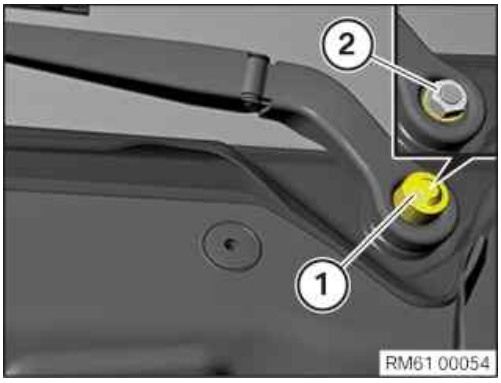
The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

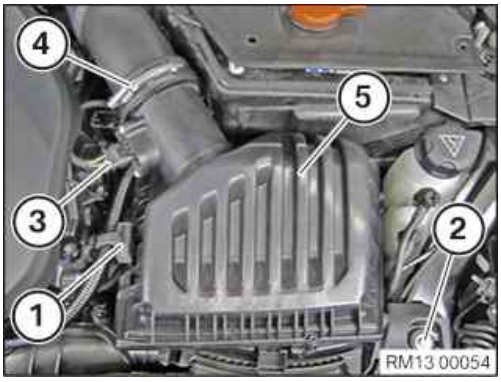
- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

137 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

cardiagn.com

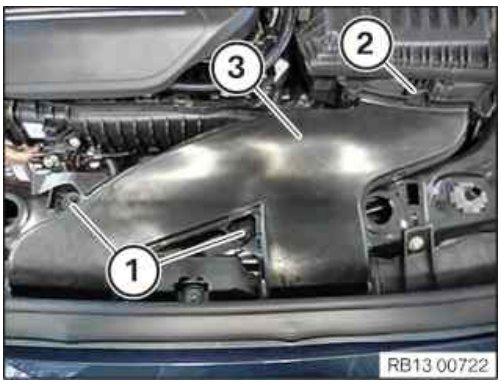
138 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

139 – Check engine oil level

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▶ **Check engine oil level**

TECHNICAL INFORMATION

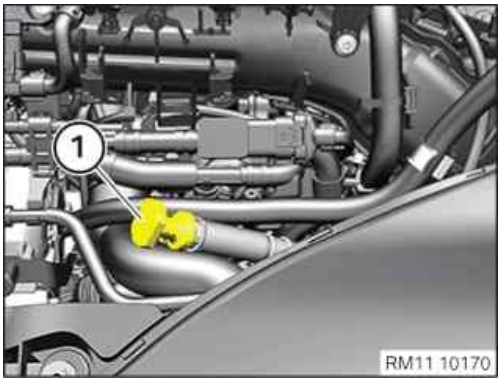
Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).



- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.

TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

140 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

Additional Information

Overview of Tightening Torques

Bracing strut to top cross connection — Used in step 32

M8		Tightening torque	25 Nm

Air duct to deformation element/cross connection — Used in step 32

M6x20 screw		Tightening torque	6 Nm

Cross connection on support for cross connection — Used in step 32

M6x20		Tightening torque	12 Nm

Rear end of front axle support to body — Used in step 67 100

M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body — Used in step 67 100

M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body — Used in step 67 100 108

Screw		Tightening torque	3 Nm

Special tool to cylinder head — Used in step 67

M8		Tightening torque	21,5 Nm

Cylinder head to crankcase — Used in step 72

Used in step 82

Hollow bolt		Renew sealing rings.	30 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 82 121

M8x28	Replace screws	Tightening torque	32 Nm

Exhaust turbocharger to exhaust manifold

Used in step 84

V-band clamp		Tightening torque	19 Nm

Oil feed line to exhaust turbocharger

Used in step 84

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

Oil return line to turbocharger

Used in step 84

M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 84

M8x16		Tightening torque	22 Nm

Charge air line to crankcase

Used in step 85

M6x25		Tightening torque	5 Nm

Charge air duct to oil sump

Used in step 85

M6		Tightening torque	8 Nm

cardiagn.com

Heat shield for exhaust turbocharger

Used in step 86 87 112

Torx screw BM 6x12		Tightening torque	10 Nm

Exhaust turbocharger bracket to cylinder head

Used in step 86

Hexagon screw M 8x16		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger

Used in step 88

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Diesel particle filter to holder

Used in step 88

M8 hexagon nut		Tightening torque	19 Nm

SCR metering module V-clip to exhaust system

Used in step 88

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

Holder for coolant lines to diesel particulate filter

Used in step 88

Torx bolt BM6x16		Tightening torque	8 Nm

Low-pressure exhaust-gas recirculation cooler to diesel particulate filter

Used in step 88

Flange nutM8		Tightening torque	19 Nm

Control sensor

Used in step 89

Control sensor		Tightening torque	50 Nm

Exhaust temperature sensor to diesel particulate filter

Used in step 90 91

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Exhaust-gas temperature sensor to exhaust system

Used in step 92

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Oxygen sensor holder to intermediate shaft

Used in step 93

Hexagon screw M6x16		Tightening torque	8 Nm

Nitrogen oxide sensor before SCR catalytic converter

Used in step 94

Sensor		Tightening torque	50 Nm

Monitoring sensor

Used in step 95

Sensor		Tightening torque	50 Nm

Starter motor to transmission

Used in step 96

M8x45		Tightening torque	19 Nm

Battery positive lead to starter

Used in step 96

M8		Tightening torque	13,5 Nm

Exhaust system to body

Used in step 97

M8	Replace nuts.	Tightening torque	19 Nm

Exhaust bracket on body

Used in step 97

Hexagon screw M8x30		Tightening torque	19 Nm

cardiagn.com

V-clip to catalytic converter

Used in step 97

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Diesel particulate sensor to exhaust system

Used in step 97

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter

Used in step 97

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting

Used in step 98

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

Front connection carrier to body

Used in step 99

M10x18		Tightening torque	56 Nm

Rear connection carrier to body

Used in step 99

M8x18		Tightening torque	28 Nm

Track rod end to swivel bearing

Used in step 100

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing

Used in step 100

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body

Used in step 101

M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °

Holder with rubber mount to front axle support

Used in step 101

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate

Used in step 101

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier

Used in step 101

		Tightening torque	11,8 Nm

Holder to front axle support

Used in step 102

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar

Used in step 104

M10	Renew nut.	Tightening torque	56 Nm

Wheel arch cover to body

Used in step 106

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 106

Plastic nut		Tightening torque	3 Nm

cardiagn.com

Underbody panelling, side

Used in step 107

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Used in step 107

Plastic nut		Tightening torque	2,6 Nm

Brake disc to front wheel hub

Used in step 109

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

Used in step 109

M8	Renew screw.		16 Nm

Wheel bolts

Used in step 109

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 111

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 111

Plastic nut		Tightening torque	3 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 113

Oval-head screw		Tightening torque	5 Nm

Cylinder head cover to cylinder head

Used in step 114

M6		Tightening torque.	8,5 Nm

Differential pressure sensor to holder

Used in step 115

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor

Used in step 115 127

Clamp 15–19mm		Tightening torque	3 Nm

Clamping claw facing to cylinder head cover

Used in step 116

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 116

Screw		Jointing torque Angle of rotation	8 Nm 120 °

Rail on cylinder head cover

Used in step 117

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com

High pressure line between high pressure pump and rail

Used in step 117 118

High-pressure pipe		Tightening torque	28 Nm

High pressure lines between injector and rail

Used in step 119

High pressure lines		Tightening torque	28 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 121

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 121

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 121

M8x20		Tightening torque	19 Nm

Battery holder to engine support

Used in step 122

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray

Used in step 123

M8X16		Tightening torque	15 Nm

Wiring harness to cylinder head cover

Used in step 123 126

TS5x20		Tightening torque	3,5 Nm

Cover to electronics box

Used in step 123 126

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery

Used in step 123 126

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 123 126

M8		Tightening torque	19 Nm

Positive battery connection point cover to engine compartment partition wall

Used in step 123 126

		Tightening torque	3 Nm

Battery cover

Used in step 123 126 134

Screw			2,8 Nm

Intake plenum to cylinder head

Used in step 124

M6		Tightening torque	11 Nm

Positive battery cable to alternator

Used in step 126

M8		Tightening torque	19 Nm

Fuel line to intake plenum

Used in step 126

TS6x20		Tightening torque	5 Nm

Exhaust gas pressure sensor

Used in step 127

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

cardiagn.com

Clean air pipe to exhaust turbocharger — Used in step 127

Torx bolt BM8x25		Tightening torque	8 Nm

Clean air pipe to cylinder head cover — Used in step 127

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 127 137

Clamp		Tightening torque	3 Nm

Underbody protection front — Used in step 128

			3 Nm

Resonator to manifold and clean air pipe — Used in step 130

Screw TS6	Renew screw.	Tightening torque	5 Nm

Bulkhead cover, top — Used in step 133

Screw		Tightening torque	3 Nm

Battery terminal rail to battery tray — Used in step 134

M8 screw		19 Nm

Positive battery terminal — Used in step 134

NutM6		5 Nm

Trailing link — Used in step 134

M8 screw		19 Nm

Positive battery cable to battery terminal — Used in step 134

Nut M8		15,2 Nm

Negative battery terminal (with IBS) — Used in step 134

NutM6		5 Nm

Windscreen wiper arm — Used in step 136

Combination hexagon nut		Tightening torque	35 Nm

Intake silencer housing to lock bridge — Used in step 137

M6X30		Tightening torque	8 Nm

Intake neck to cross connection — Used in step 138

M6		Tightening torque	8 Nm

Overview of Special Tools

cardiagn.com

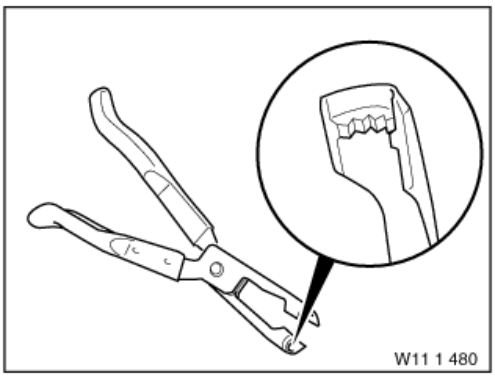
0 490 796 (11 1 480) Pliers



Common	Used in step 20
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 495 910 (37 1 152) Socket wrench

Common	Used in step 24 25 26 117 118 119
Usage	(Socket wrench)SW19
Included in the tool or work	0 495 908
Storage location	B21
Replaced by	
In connection with	
SI-Number	01 01 07 (333)

cardiagn.com

2 413 106 Fastener

Common Used in step 24 25 118 119

Usage	For avoiding contamination and damage of rail, injectors and high pressure pump.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 16 (419)

0 493 321 (13 5 250) Puller

Used in step 27

cardiagn.com

Common

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common

Used in step 27

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

Common

Used in step 27

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

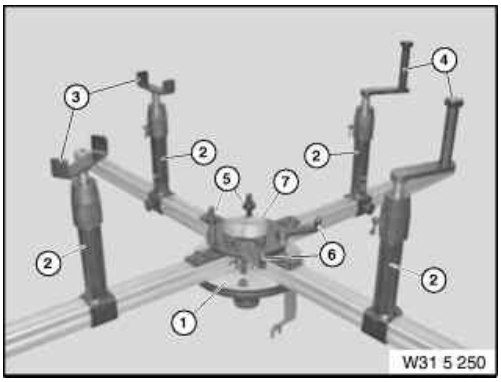
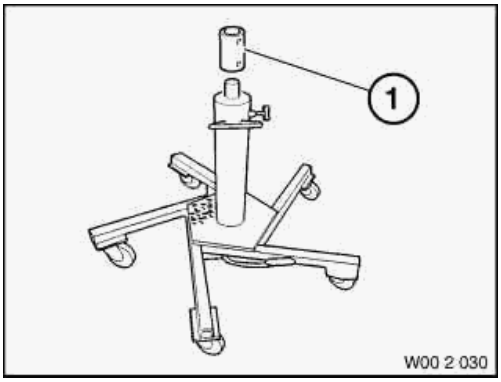
0 495 817 (31 5 251) Basic body



Common Used in step 43 67 72 100

Usage	(Basic body) No longer available separately, only via special tool set 31 5 250 (83 30 0 495 567)
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

0 490 133 (00 2 030) Device



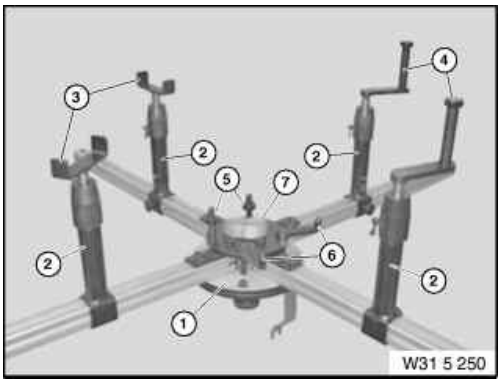
Common Used in step 43 67 72 100

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

0 495 821 (31 5 255) Adapter



Common Used in step 43 72

Usage	(take-up adapter for bore holes (2 x))
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

cardiagn.com

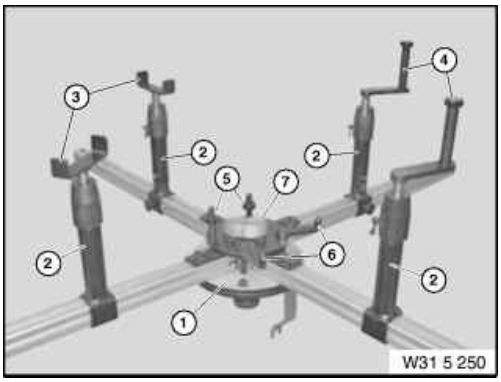
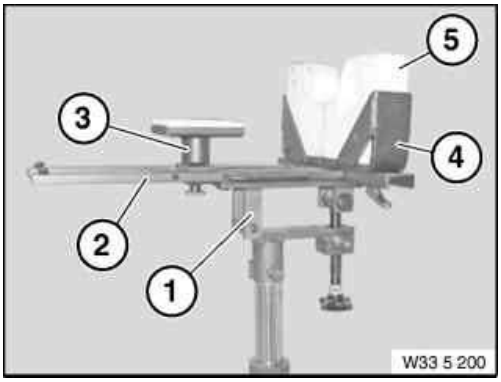
0 495 819 (31 5 253) Adapter



Common	Used in step 43 72
Usage	(take-up adapter U-section (2 x))
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

0 496 080 (33 5 206) Belt



Common	Used in step 43 67 72 100
Usage	(Tensioning strap)
Included in the tool or work	0 496 009
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

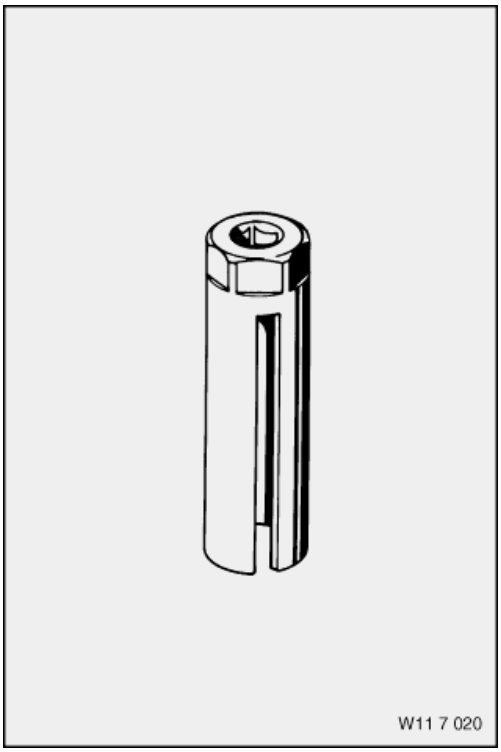
0 491 074 (11 7 020) Socket wrench insert



Common

Used in step 48 49 95

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

cardiagn.com

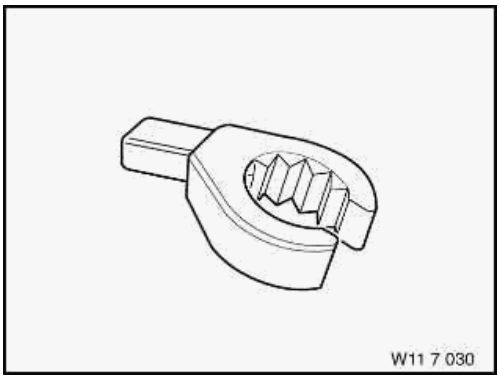
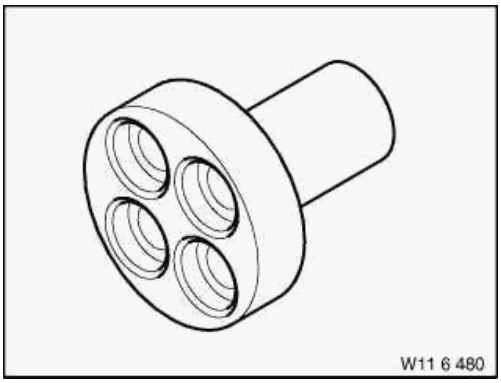
0 491 075 (11 7 030) Socket wrench insert



Common	Used in step 54 89
Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	01 06 95 (963)

0 493 380 (11 6 480) Connector



Common	Used in step 62 80
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

Common	Used in step 62 79 80
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

cardiagn.com

0 496 112 (11 8 760) Gauge

Common	Used in step 62 78 80
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

2 414 691 Support

Common	Used in step 67 72
Usage	To support the engine when the engine support is removed.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	2357071
SI-Number	01 12 16 (406)

2 357 071 Panel

Common	Used in step 67 72
Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

cardiagn.com

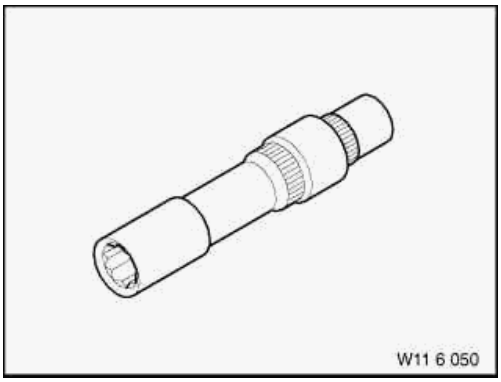
0 491 068 (11 6 050) Socket wrench insert



Common	Used in step 67 72
Usage	(Wrench socket AF 10) bi-hexagon/glow elements
Included in the tool or work	
Storage location	B10
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

2 459 012 Holder

Common	Used in step 67 72
Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

cardiagn.com

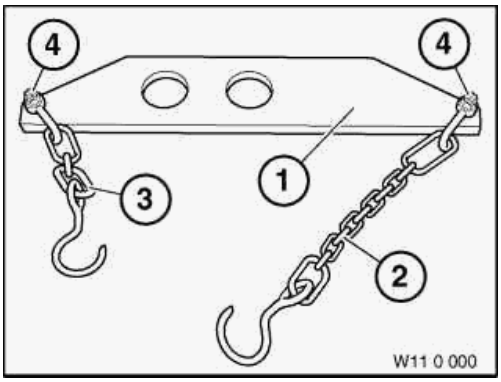
0 490 561 (11 0 000) Lifting gear



Common

Used in step 67 72

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

0 494 362 (11 9 000) Device

Used in step 67

cardiagn.com

Common

Usage	(Cylinder head expander tool)
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 03 02 (833)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 366 (11 9 001)		**Device**	
6	0 494 371 (11 9 006)		**Insert** (Aluminium strip)	
11	0 494 376 (11 9 012)		**Basket** (Valve spring cage) Engine M41, M51, S50	
17	0 495 028 (11 9 017)		**Basket** (Valve spring cage) Engine N52	
2	0 494 367 (11 9 002)		**Rod**	
3	0 494 368 (11 9 003)		**Adapter** (Sliding block)	
4	0 494 369 (11 9 004)		**Tab**	
5	0 494 370 (11 9 005)		**Quick fastener**	
7	0 494 372 (11 9 007)		**Shaped part** (shaped part)	
8	0 494 373 (11 9 008)		**Shaped part** (Shaped part) Shaped part made of plastic	
9	0 494 374 (11 9 009)		**Lever**	
10	0 494 375 (11 9 011)		**Hook**	
12	0 494 377 (11 9 013)		**Basket** (Valve spring cage) Engine M43, M73	
13	0 494 378 (11 9 014)		**Basket** (Valve spring cage) Engine M44, M52, M54, M56, M62, S52, S54, S62	
14	0 494 379 (11 9 015)		**Basket** (Valve spring cage) Engine M47, M47TU, M57, M57TU, N40, N42, N62, N73	
15	0 494 380 (11 9 016)		**Basket** (Valve spring cage) Engine M21, M40	

cardiagn.com

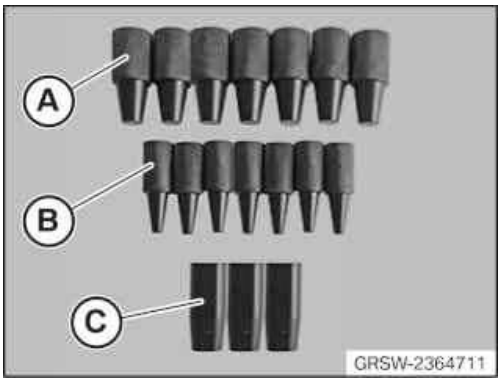
2 364 711 Plug



Common Used in step 68

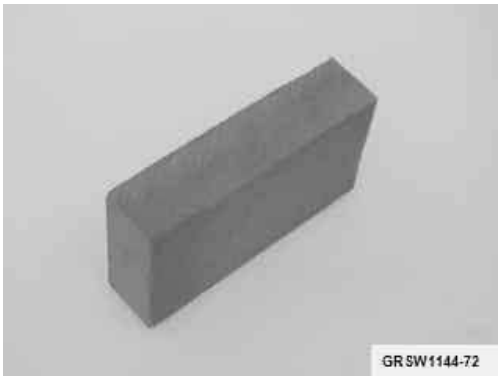
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

0 495 103 (11 4 471) Scraper

Common Used in step 68

Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

0 495 104 (11 4 472) Extractor



Common Used in step 68

Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
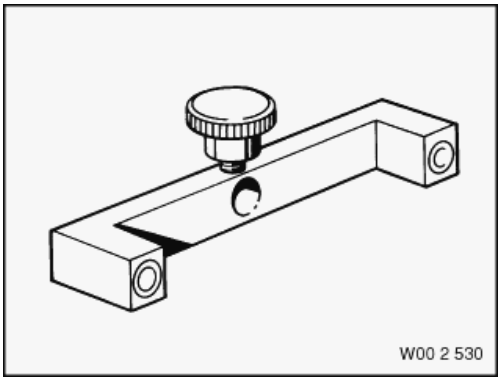
In connection with	
SI-Number	

0 490 185 (00 2 530) Bridge



Common Used in step 70

Usage	(Measuring bridge) For determining the piston projection (Diesel)
Included in the tool or work	
Storage location	A3
Replaced by	
In connection with	
SI-Number	

cardiagn.com

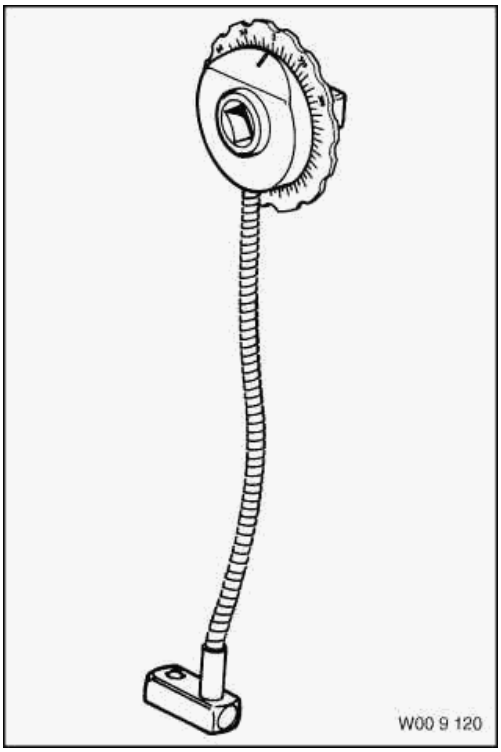
0 490 504 (00 9 120) Torque angle measuring dial



Common Used in step 72

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
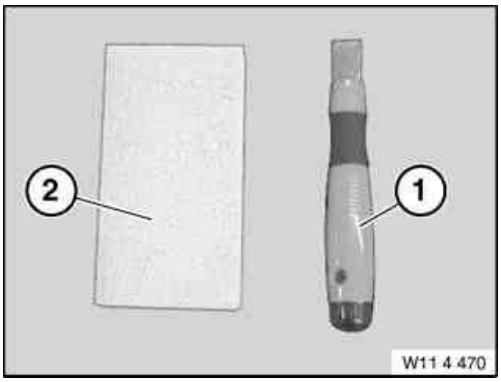
In connection with	
SI-Number	

0 495 102 (11 4 470) Tool



Common Used in step 82

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

cardiagn.com

2 344 011 Tool

Common	Used in step 109
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
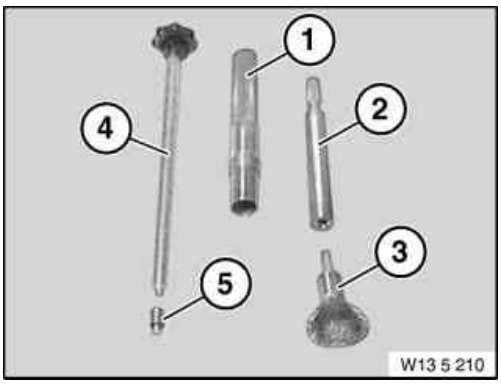
SI-Number	08 08 12 (872)

0 493 763 (13 5 215) Plug



Common	Used in step 116
Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
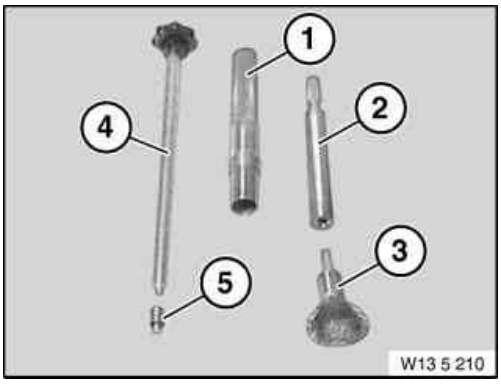
SI-Number	

0 493 762 (13 5 214) Rod



Common	Used in step 116
Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

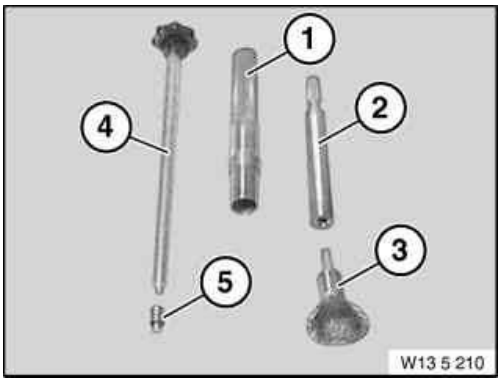
0 493 758 (13 5 210) Tool



Common

Used in step 116

Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

Replacement tools:

cardiagn.com

0 495 221 (36 1 323) Wheel stud

Common	Used in step 34
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 224 (36 1 326) Wheel stud

Common	Used in step 34
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 225 (36 1 327) Wheel stud

Common	Used in step 34
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 226 (36 1 328) Wheel stud

Common	Used in step 34
Usage	(Code 35) With centring bore available separately, (see EPC) under 36 13 6 762 340
Included in the tool or work	0 492 518

Overview Technical Data

Cylinder head flatness	Used in step 69
Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

Valve underprotrusion	Used in step 70
	0,8 (0,7 - 0,9) mm

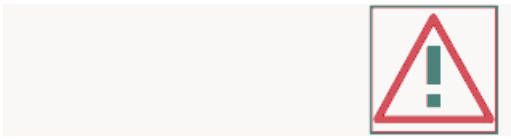
Exhaust-gas recirculation cooler seal on intake plenum	121

cardiagn.com

11 12 100 Removing and installing cylinder head (B37C)

Special tools required:

- 2 414 691
- 2 357 071
- 11 4 470
- 11 4 471
- 11 4 472
- 2 364 711
- 00 2 530
- 00 9 120



Attention!

There must be no coolant, water or engine oil in any of the threaded holes in the engine block.

Fit new cylinder head bolts.

Do not wash off bolt coating.

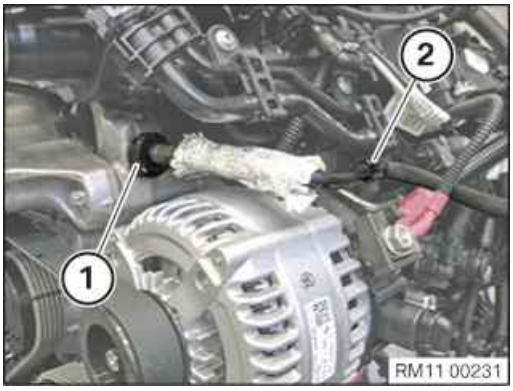
Jointing torque and angle of rotation must be observed without fail (**risk of damage!**).

Necessary preliminary tasks:

- Remove front right wheel arch cover.
- Remove exhaust turbocharger.
- Remove oil feed line.
- Remove diesel particulate filter.
- Remove exhaust-gas recirculation cooler
- Remove cylinder head cover.
- Remove all valve clearance compensating elements.

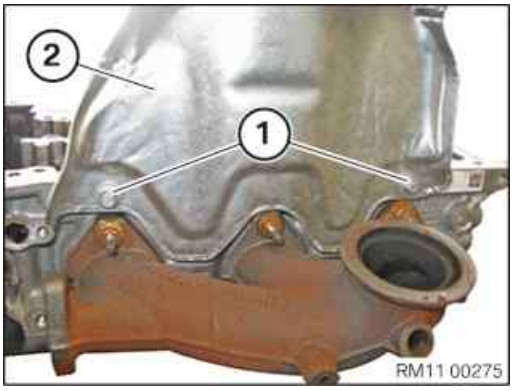
Removal:

cardiagn.com



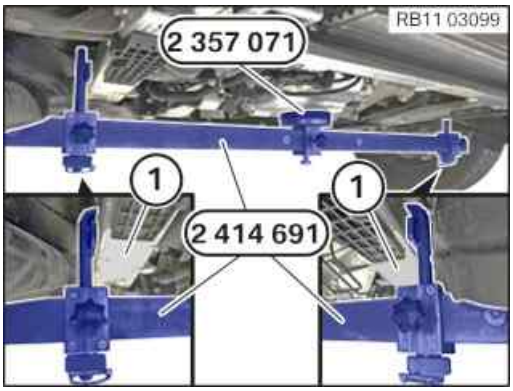
Unlock coolant line (1) and pull off.

Unclip coolant line (1) from holder (2).



Release screws (1).

Remove heat shield (2).

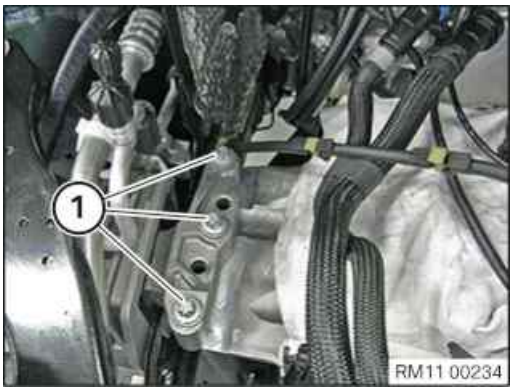


Prepare special tool 2 414 691 together with the special tool 2 357 071 .

Attach the special tool 2 414 691 on the front axle support and correctly align and tighten the special tool 2 357 071 under the oil sump.

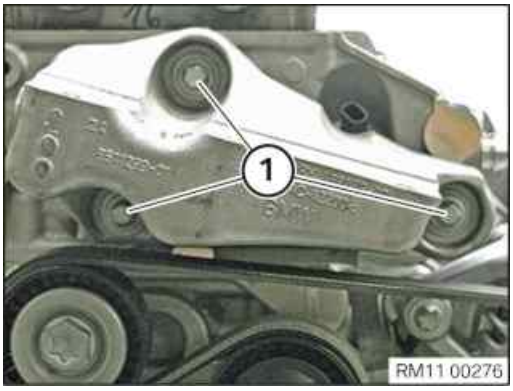
Turn the special tool 2 414 691 on the adjusting screws evenly in an upward direction, until the special tool 2 357 071 touches the oil sump.

Tighten all the adjusting screws of special tools 2 414 691 and 2 357 071 .

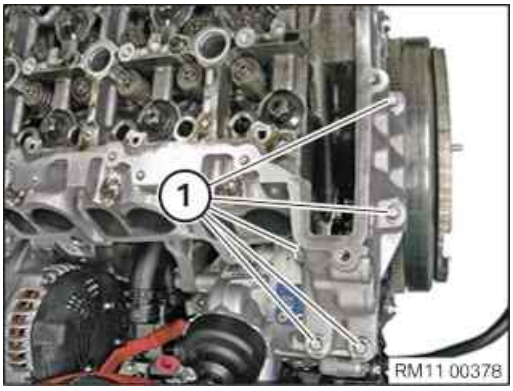


Release screw connection (1) of right engine support.

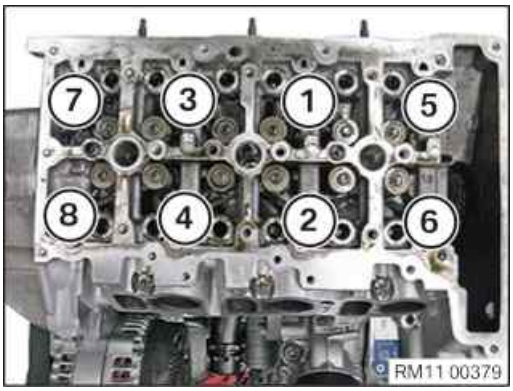
cardiagn.com



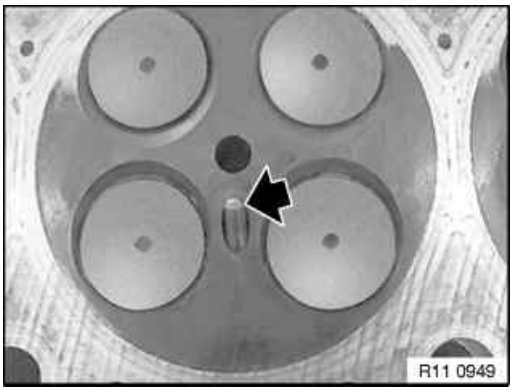
Release screws (1). Remove holder from cylinder head.*Note:* Shown with engine mount removed for purposes of clarity.



Release screws (1).



Slacken cylinder head bolts in sequence 8 to 1.

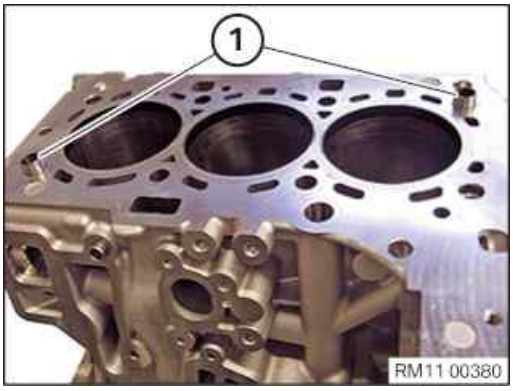


Attention!

Glow elements protrude at the sealing surface and may be damaged when put down.

Remove cylinder head.

cardiagn.com



Check fitting sleeves (1) for damage and correct installation position.

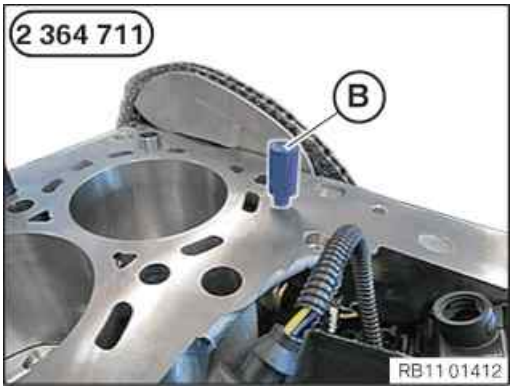
Clean sealing surfaces on the cylinder head and crankcase using special tool 11 4 470 .

Attention!

Do not use any metal-cutting tools (e.g.emery cloth) to clean sealing surfaces!

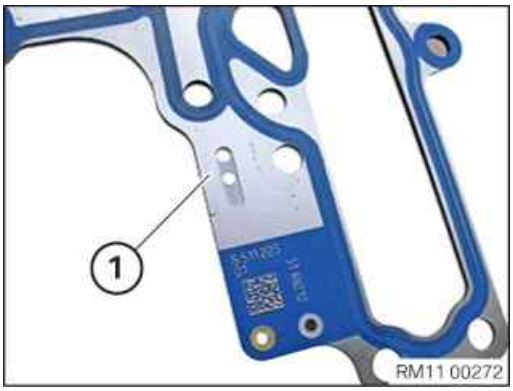
Installation:

Note:
The oil ducts must be sealed before cleaning the sealing surfaces using special tools 11 4 471 and 11 4 472 .



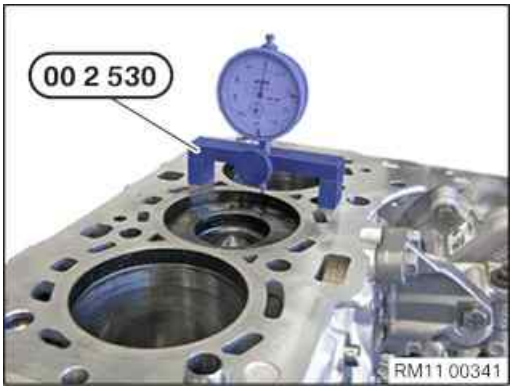
Close oil duct at front using special tool **(B)** from tool set 2 364 711 .**Attention!**

Do not use any metal-cutting tools (e.g. emery cloth).



Installation note:
Without work on the engine block which alters the piston protrusion, use a new cylinder head gasket with the same gasket thickness (number of holes).

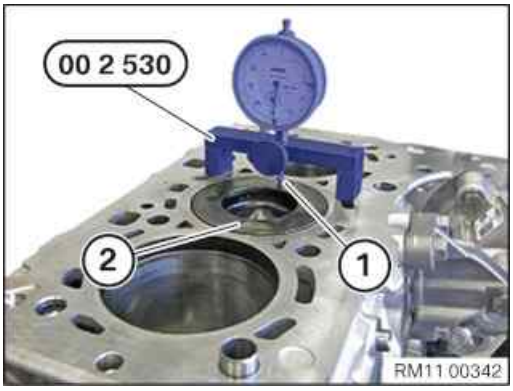
cardiagn.com



If work was carried out on the crankshaft drive or piston, the gasket thickness must be redetermined.

Measuring the piston protrusion:

Place dial gauge on the cleaned cylinder sealing surface using special tool 00 2 530 . Set dial gauge to zero under preload.

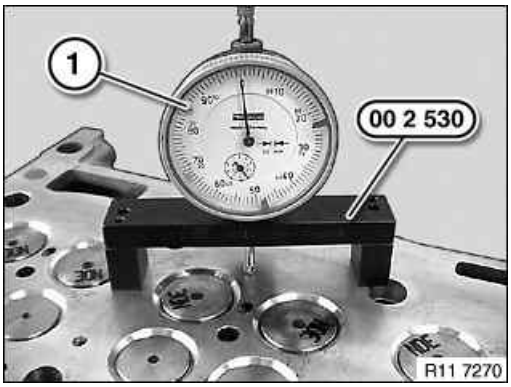


Clean piston at measuring points (1 and 2).

Place dial gauge on the measuring points (1 and 2) on the cleaned piston. Determine highest point by turning crankshaft.

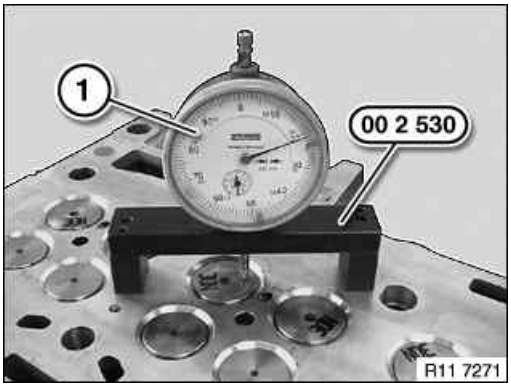
Measure and note down piston protrusion at measuring points (1 and 2) on all 3 pistons.

Installation note:
Determine thickness of cylinder head gasket.



Position special tool 00 2 530 with dial gauge (1) on cylinder head.

Set dial gauge (1) to zero.



Position special tool 00 2 530 with dial gauge (1) on valve.

Determine valve underprotrusion.

cardiagn.com

Attention!

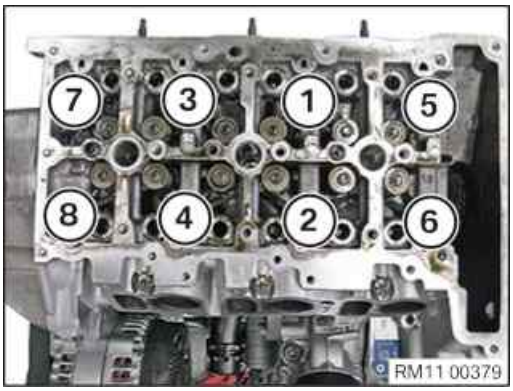
There must be no coolant, water and engine oil in any of the threaded holes in the engine block.

Fit new cylinder head bolts.

Do not wash off bolt coating.

Lightly oil screw head support.

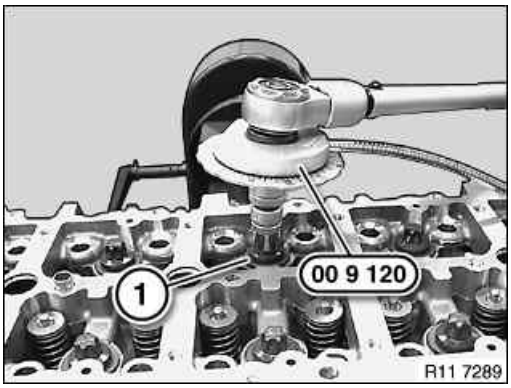
Jointing torque and angle of rotation must be observed without fail (**risk of damage!**).



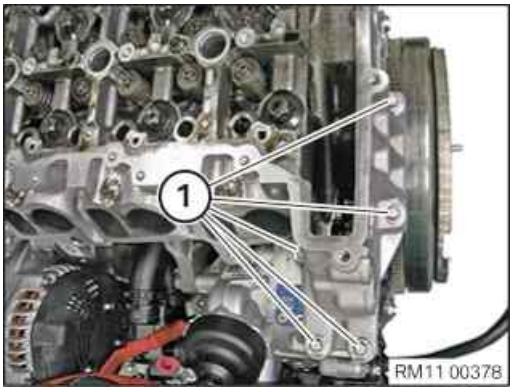
Position the new cylinder head gasket with the previously determined gasket thickness.

Fit cylinder head and secure with new bolts, tightening in the sequence 1 to 8.

Tightening torque: 11 12 1AZ.



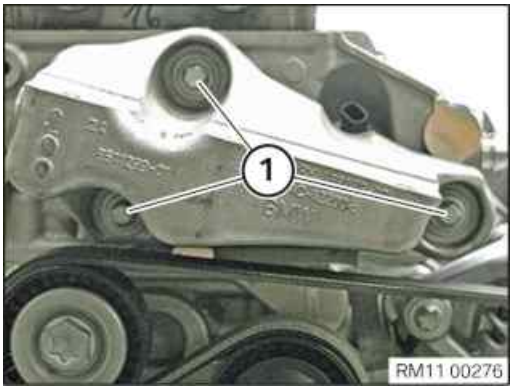
Secure cylinder head bolts (1) with special tool 00 9 120 .



Install and tighten down screws (1).

Tightening torque: 11 12 2AZ.

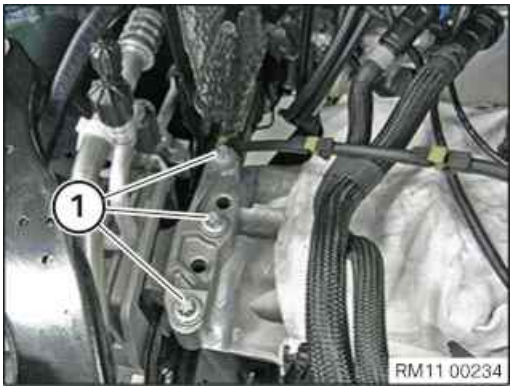
cardiagn.com



Fit holder to cylinder head. Tighten down screws (1).

Tightening torque: 22 11 3AZ.

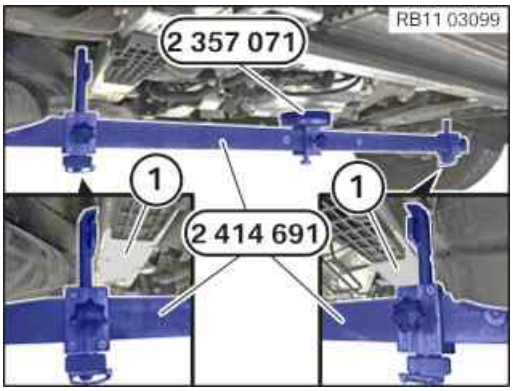
Note:
Shown with engine mount removed for purposes of clarity.



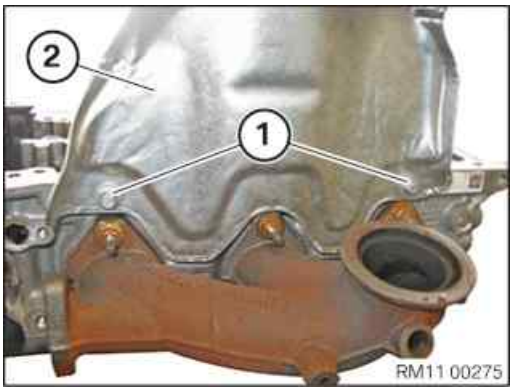
Parts: Renew screws (1).

Screw engine mount to engine mounting bracket (1).

Tightening torque: 22 11 1AZ.



Disassemble the special tool 2 414 691 .

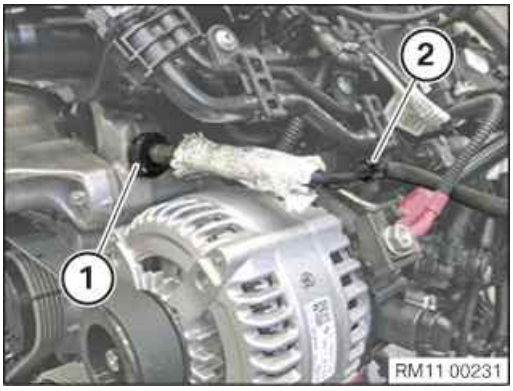


Mount heat shield (2).

Tighten down screws (1).

Tightening torque: 11 65 5AZ.

cardiagn.com



Connect coolant line (1) and clip in (2).

Required follow-up work:

- Install all valve clearance compensating elements.
- Install cylinder head cover.
- Install exhaust-gas recirculation cooler.
- Install diesel particulate filter.
- Install oil feed line.
- Install exhaust turbocharger.
- Install front right wheel arch cover.

cardiagn.com

11 12 000 Removing and installing/sealing cylinder head cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

PRELIMINARY WORK

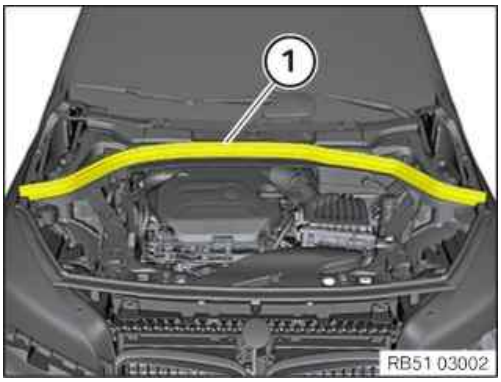
1 – Disconnecting all battery earth leads

- See additional information.

2 – Remove the seal for the rear bonnet

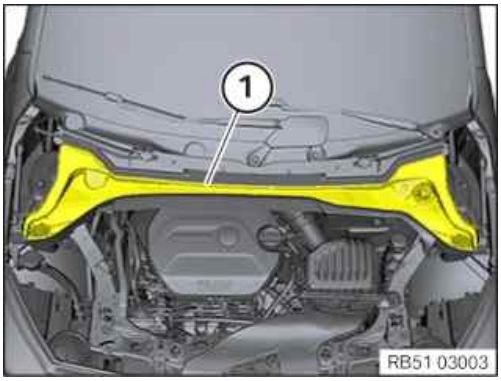
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

3 – Removing front cowl panel cover



- Guide the front cowl panel cover (1) out toward the top and remove it.

4 – Remove left and right wiper arm

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

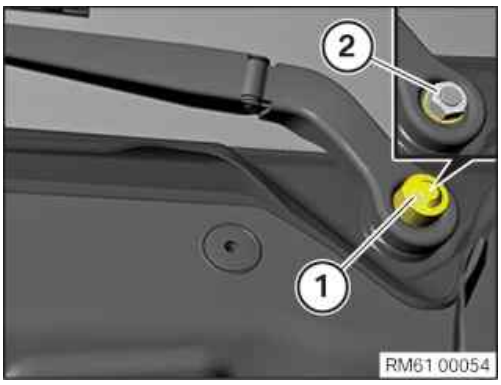
▶ **Remove the wiper arm**

RISK OF DAMAGE

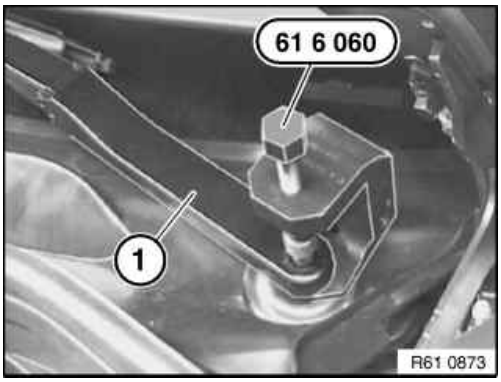
Damage to wiper console

While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.



- Remove the protective cap (1).
- Loosen nut (2).



- Pull off the wiper arm (1) using special tool .

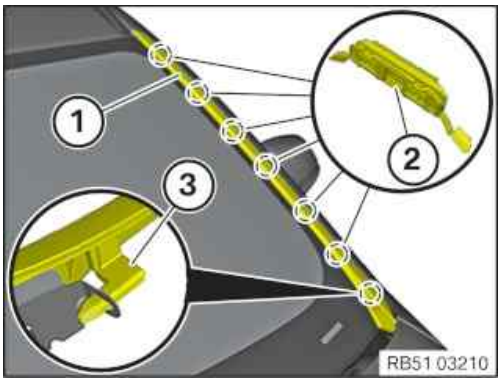
5 – Remove the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

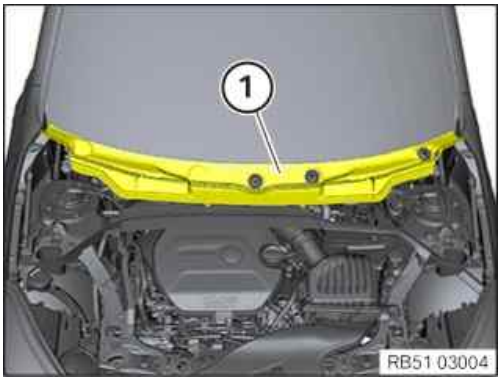
▶ **Remove the gutter strip on the windscreen**

cardiagn.com



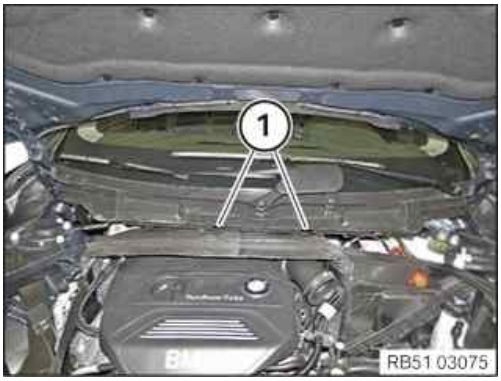
- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

6 – Remove the rear cowl panel cover

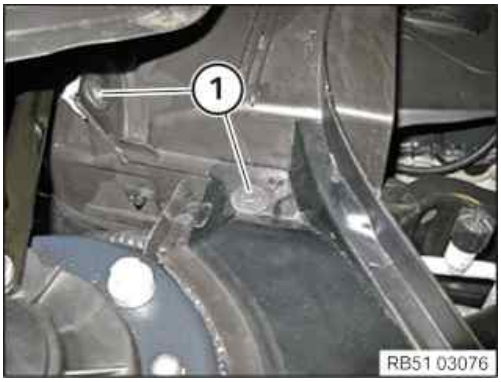


- Disengage and guide out the rear cowl panel cover (1) towards the top.

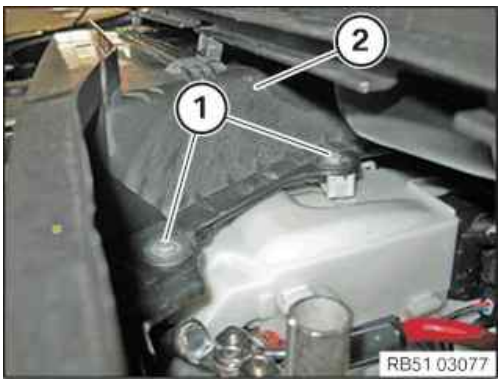
7 – Removing the upper bulkhead cover



- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

cardiagn.com

8 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

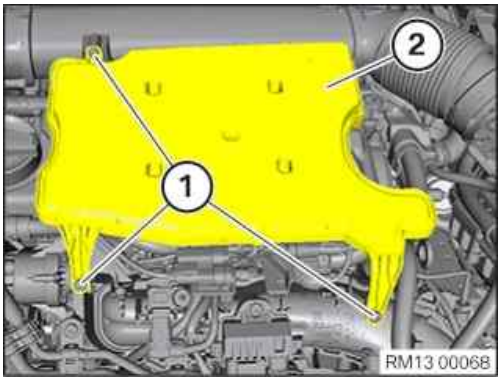
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

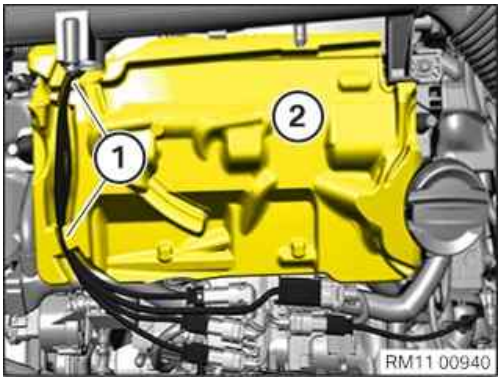
- Unclip the acoustic cover from the marked areas towards the top.

9 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

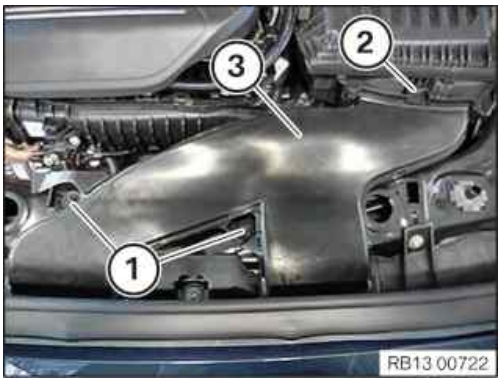
10 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

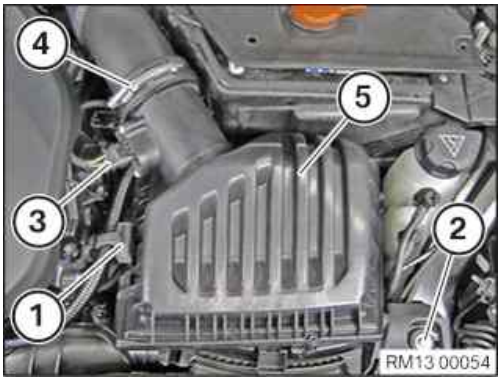
11 – Remove the intake neck for intake silencer housing

cardiagn.com



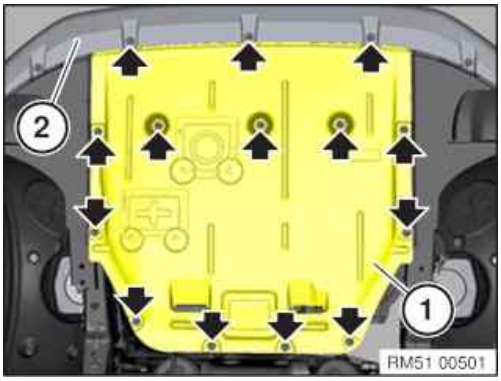
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

12 – Removing intake silencer housing



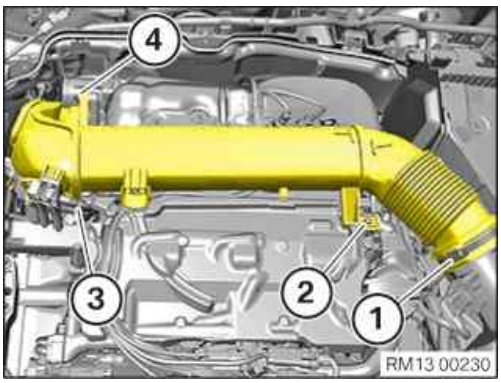
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

13 – Removing the front underbody protection



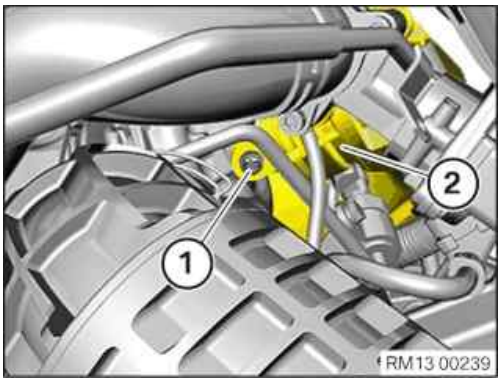
- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

14 – Partially detach the clean air pipe

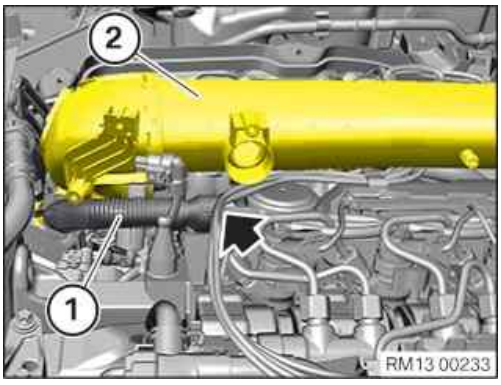


- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).

cardiagn.com



- Unscrew the screw (1) from the clean air pipe (2).

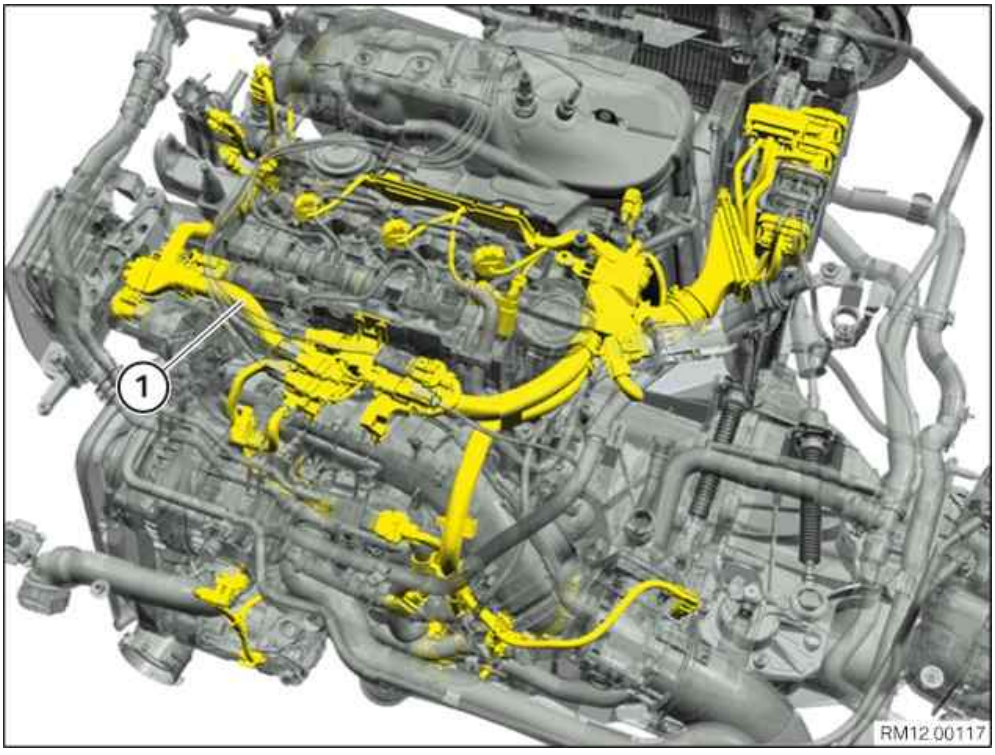


- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

- Thread out the clean air pipe (1) and set it aside as shown.

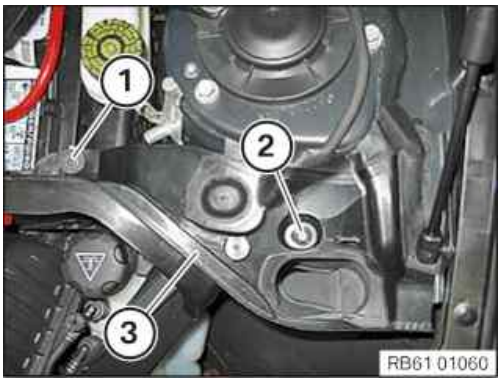
15 – Releasing the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine



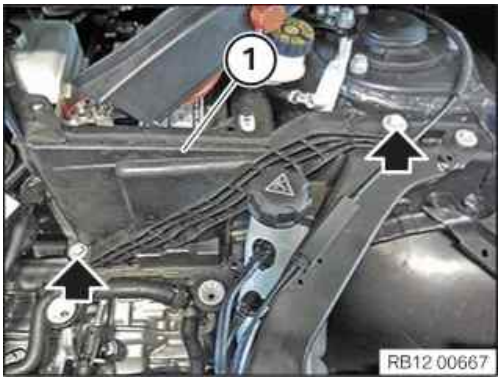
1 Wiring harness section for the engine

cardiagn.com

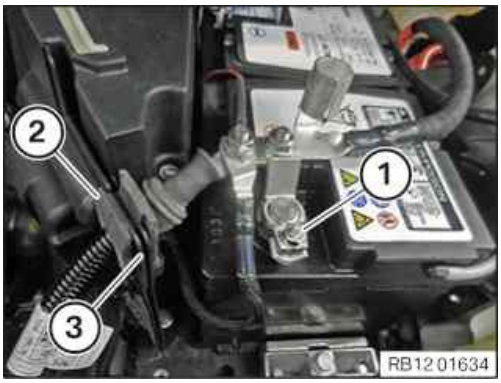


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

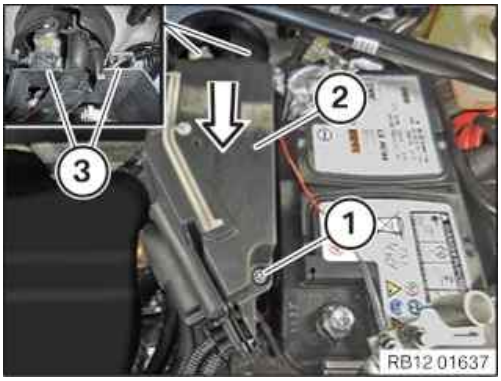
- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.



- Remove screws (arrows).
- Guide out tension strut (1) and remove.

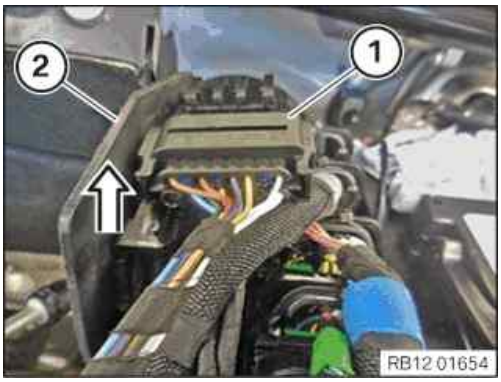


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

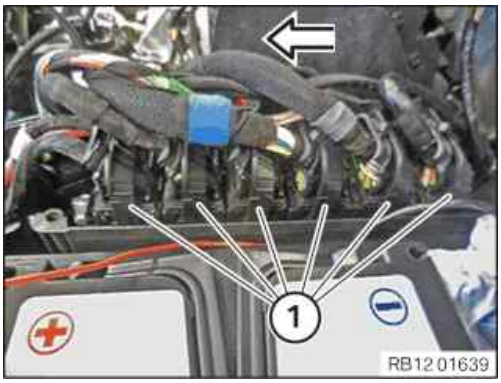


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

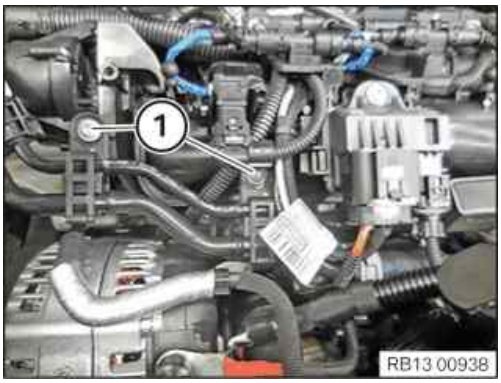


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

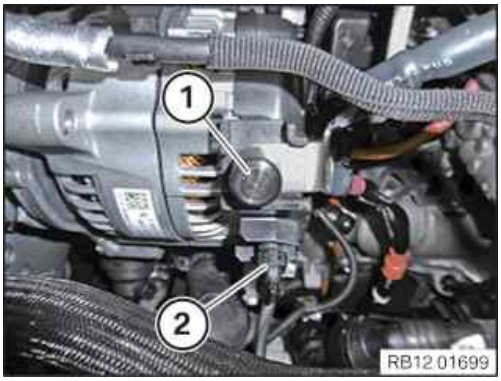


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).

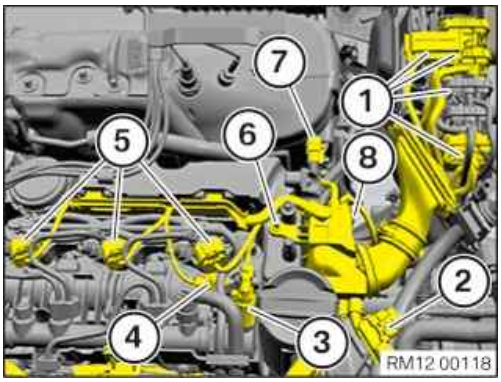


- Loosen screws (1).

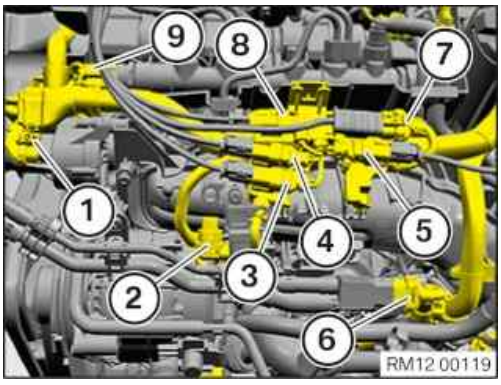


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.

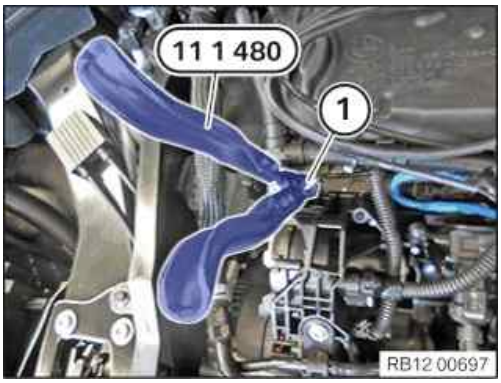
cardiagn.com



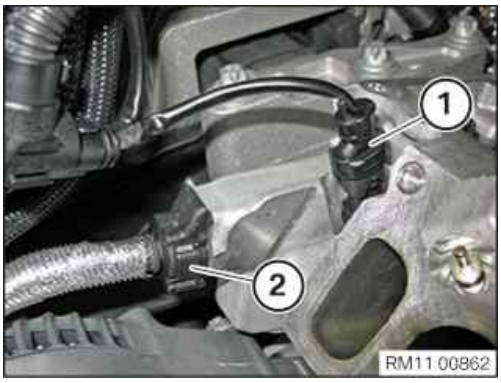
- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock connector (3) and pull off from fuel pressure regulator.
- Unlock connector (4) and disconnect from camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock connector (7) and disconnect from differential pressure sensor.



- Unlock connector (1) and pull it off the servomotor for the swirl flap.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock connector (3) and pull off from exhaust temperature sensor downstream from the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock connector (6) and pull off from the fuel pressure and temperature sensor.
- Unlock and disconnect the connector (7) from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.

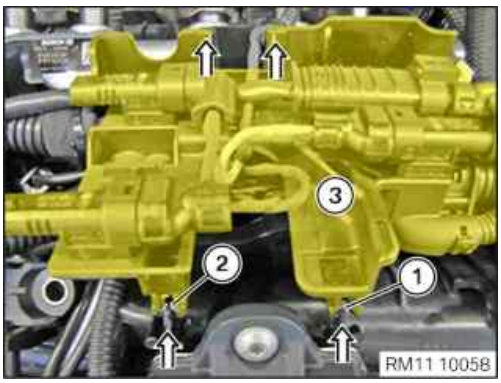


- Unlock connector (1) at all glow elements using special tool **0 490 796 (11 1 480)** and release.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.



- Unlock and loosen connector (1).
- Unlock the clamp of the coolant line (2) and release the coolant line.

16 – Removing the cable clips from the intake plenum



- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.

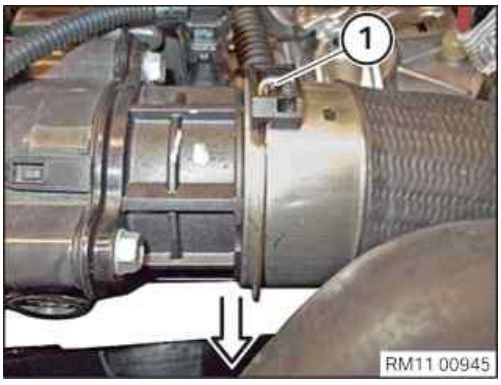
cardiagn.com

17 – Removing the intake plenum

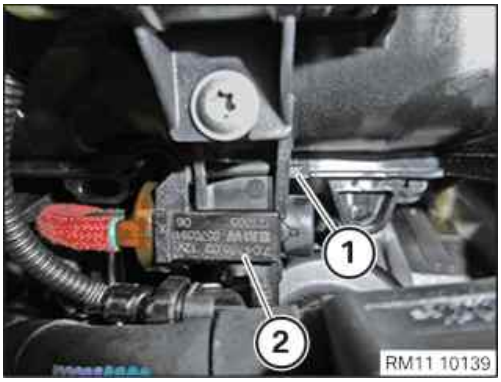
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

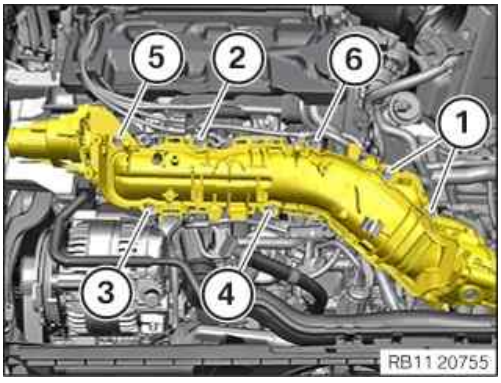
- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

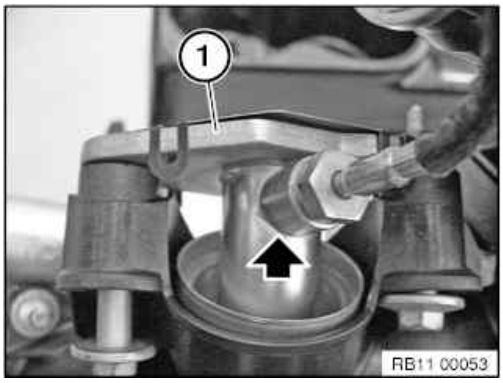


- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.

cardiagn.com



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

18 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

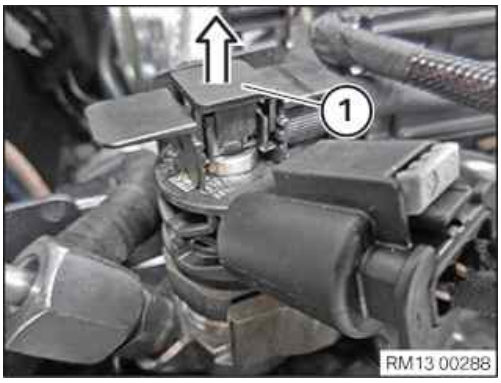
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

19 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

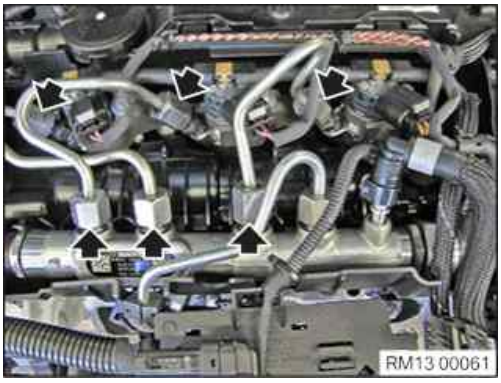
cardiagn.com

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

20 – Remove the high pressure line between the high pressure pump and the rail

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

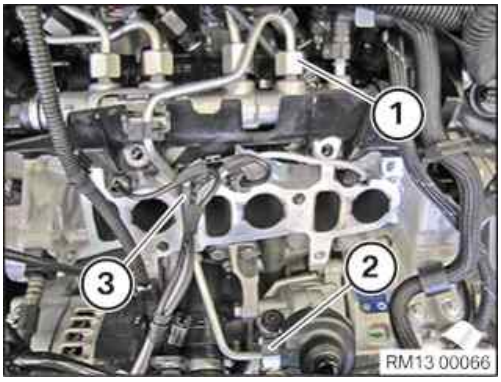
- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Loosen union nut (1) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Loosen union nut (2) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Catch and dispose of escaping fuel.
- Feed the high pressure line (3) out and remove.
- Seal open connections using special tool **2 413 106**.

21 – Remove high-pressure rail

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

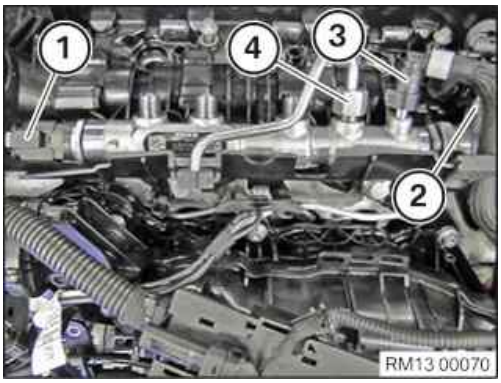
cardiagn.com

TECHNICAL INFORMATION

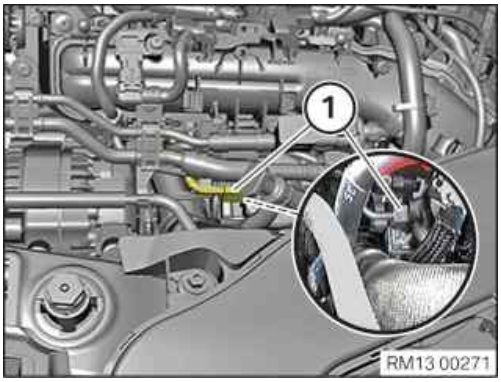
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

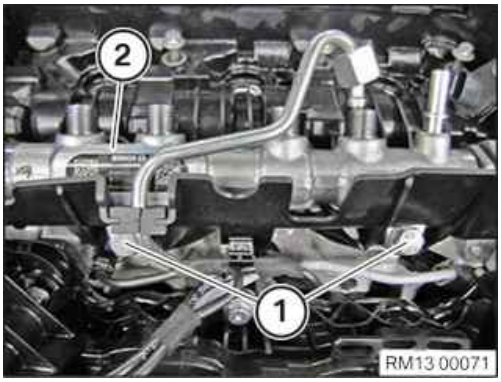
Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.



- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

22 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Electrostatic discharge.

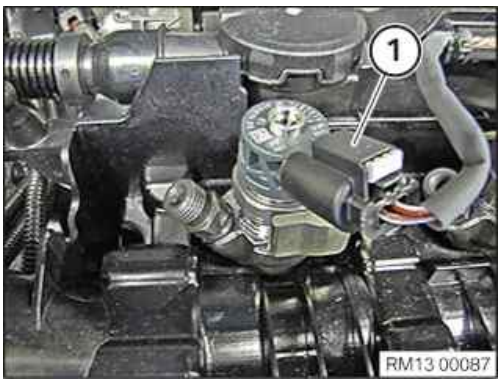
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

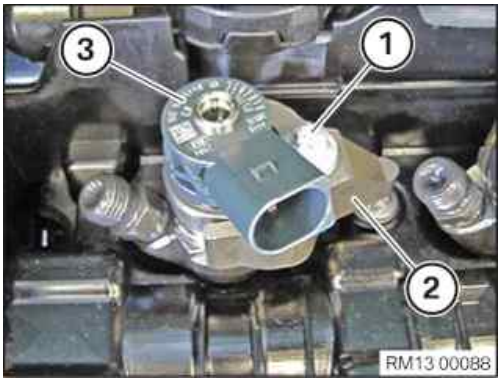
cardiagn.com

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.



- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

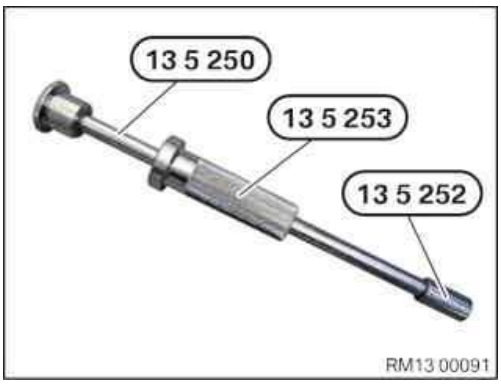
▶ **Loosen stuck injectors**

RISK OF DAMAGE

Contaminant or foreign body.

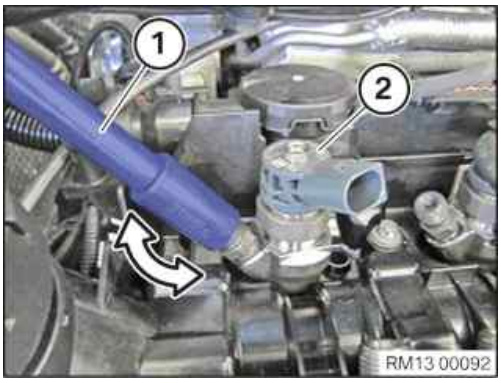
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

cardiagn.com



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

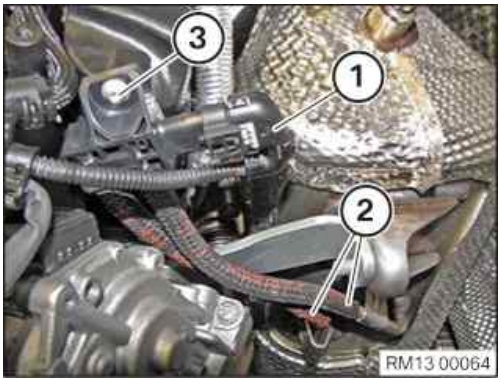
23 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



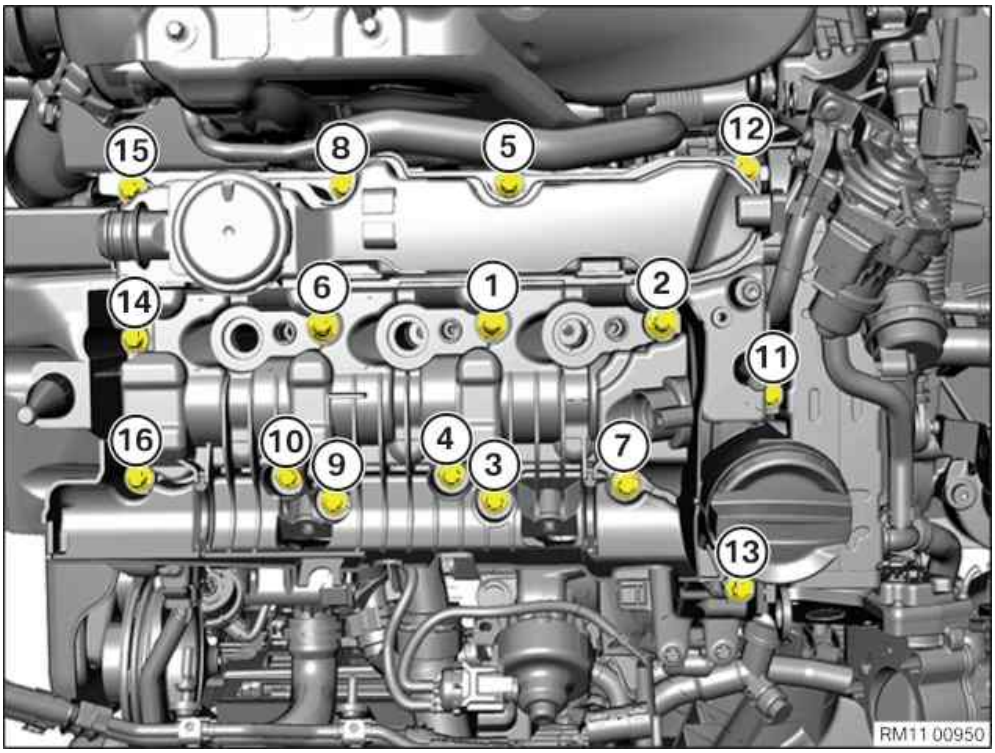
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

MAIN WORK

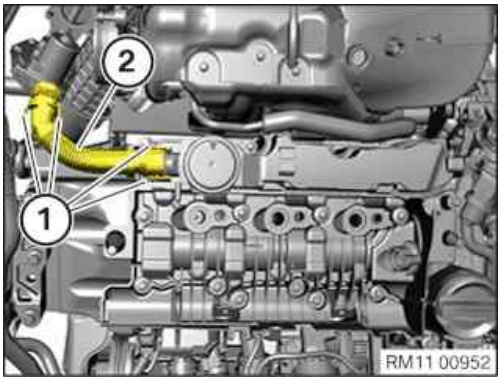
24 – Removing the cylinder head cover

cardiagn.com

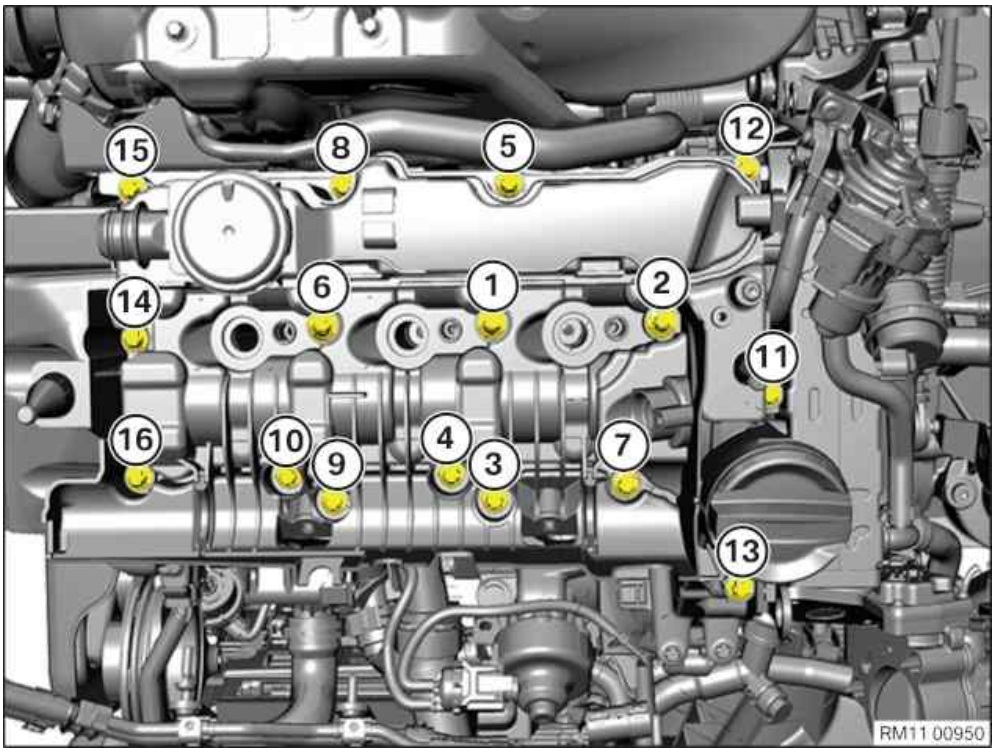
Overview: Screw connection of the cylinder head cover



1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

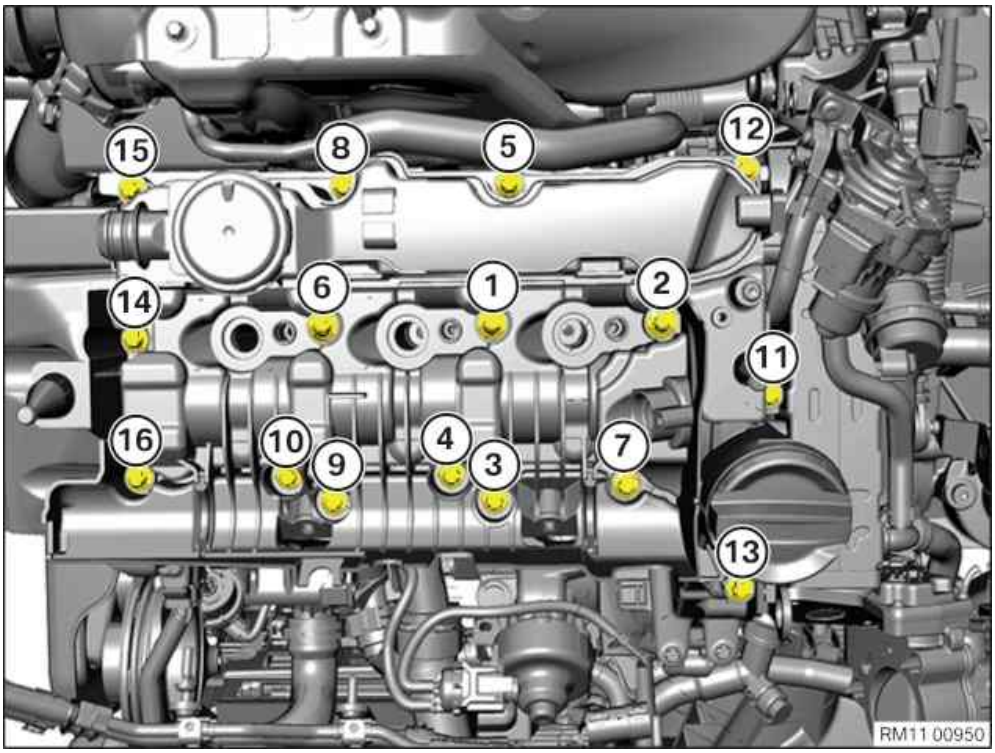


- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

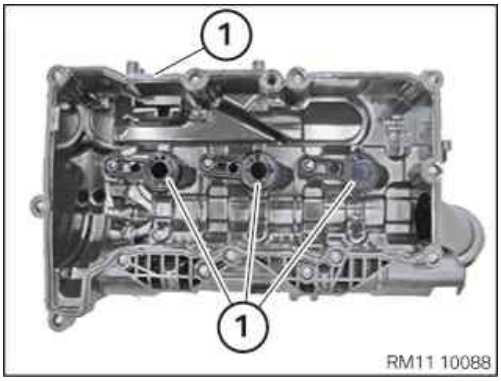
25 – Installing cylinder head cover

cardiagn.com

Overview: Screw connection of the cylinder head cover

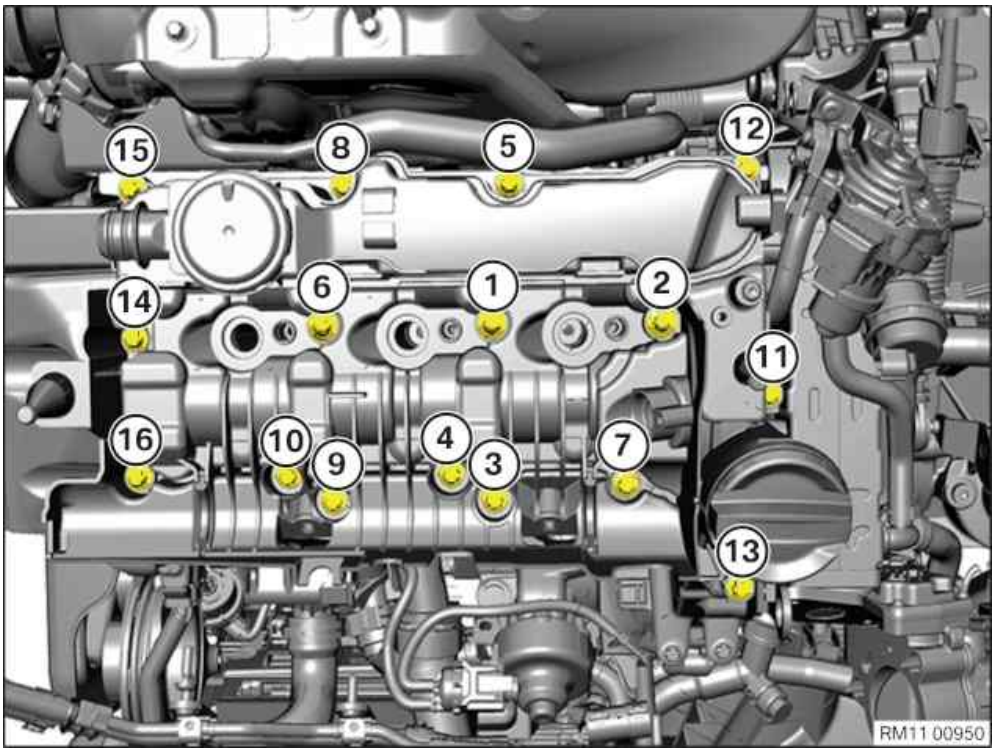


1 to 16 Bolts of the cylinder head cover



- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

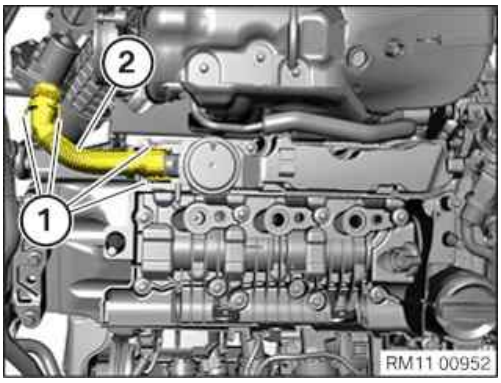


- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8,5 Nm

cardiagn.com

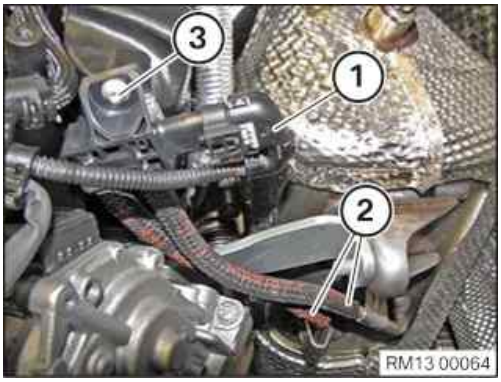


- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

POSTPROCESSES

26 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

27 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.

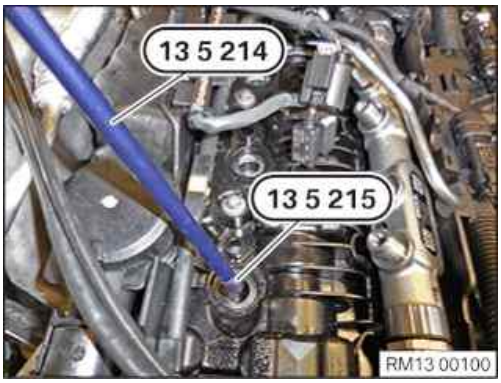
cardiagn.com

RISK OF DAMAGE

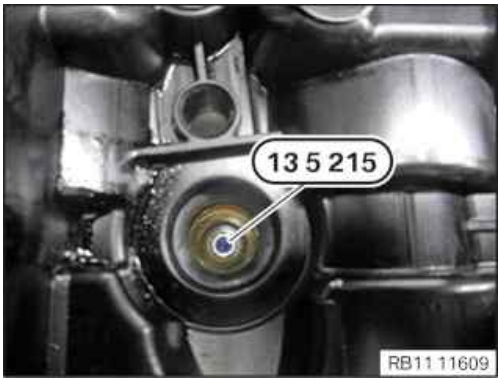
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

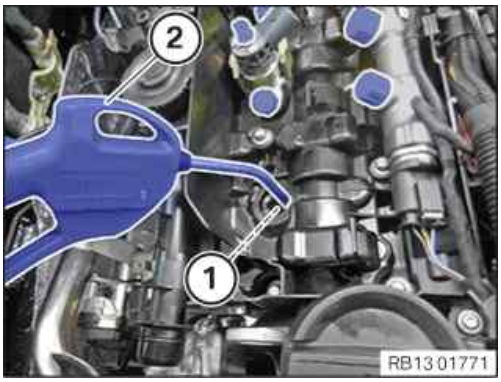


- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

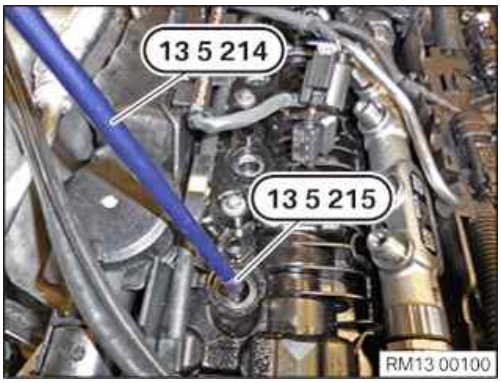
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

cardiagn.com



- Blow out injector shaft (1) with air gun (2).



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

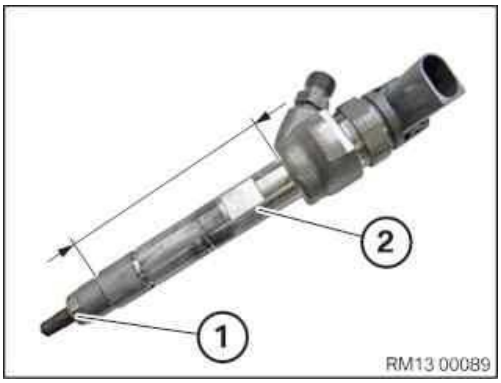
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

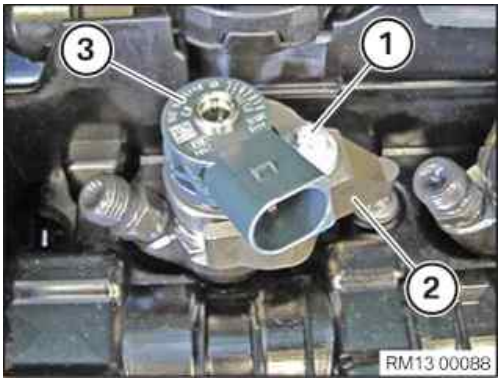


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

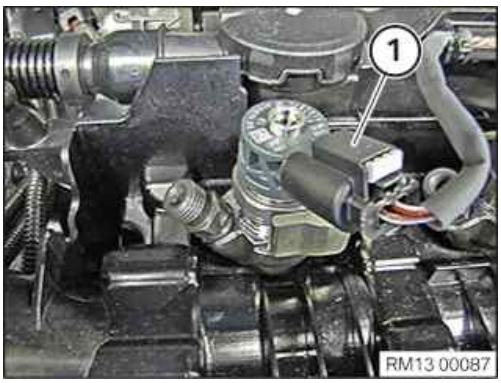
Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▸ **Replacement: Perform injection quantity compensation**

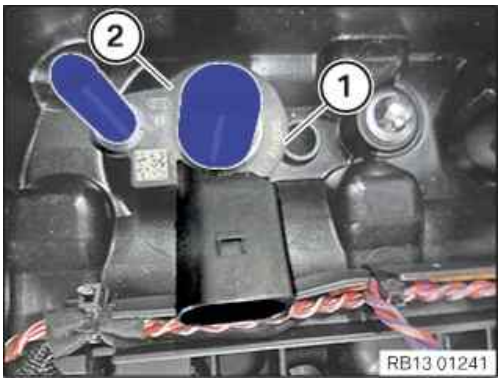
TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

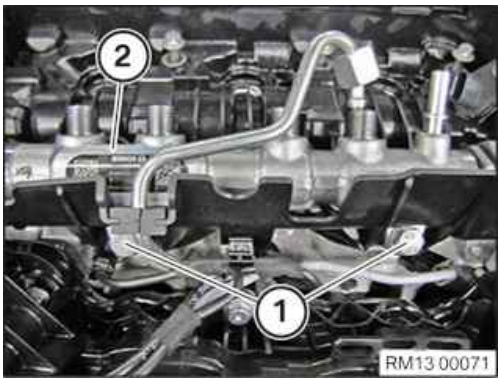
cardiagn.com



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

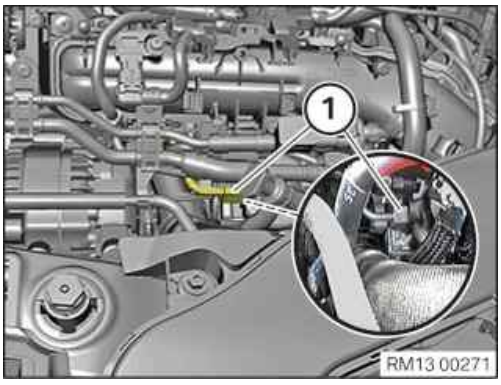
28 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm



TECHNICAL INFORMATION

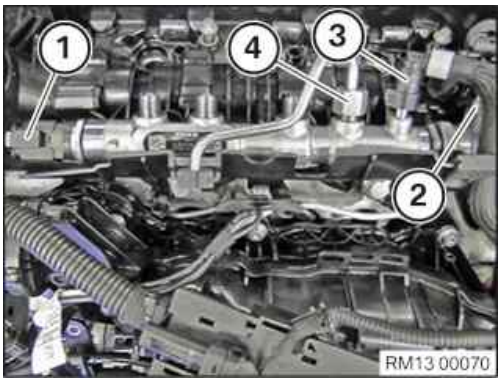
Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

29 – Installing high pressure line between rail and high pressure pump

WARNING

Working on fuel system.

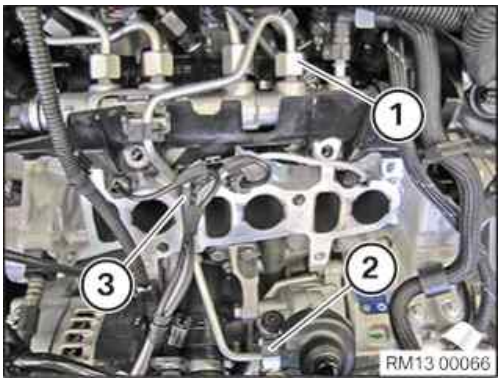
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com



- Remove special tool **2 413 106**.
- Thread in and install the high pressure line (3).
- Make sure that the rubber grommet is positioned correctly in the area of the cylinder head cover.
- Tighten the union nut (1) hand-tight.
- Tighten the union nut (2) hand-tight.
- Ensure that high pressure line (3) is installed without any strain.

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the union nut (1) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Tighten the union nut (2) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

30 – Installing high pressure lines between rail and injectors

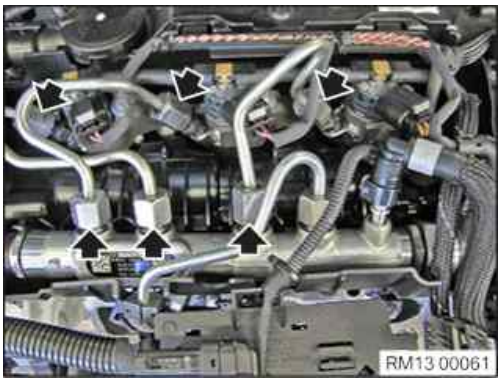
TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

31 – Connect the leakage oil line on the injector

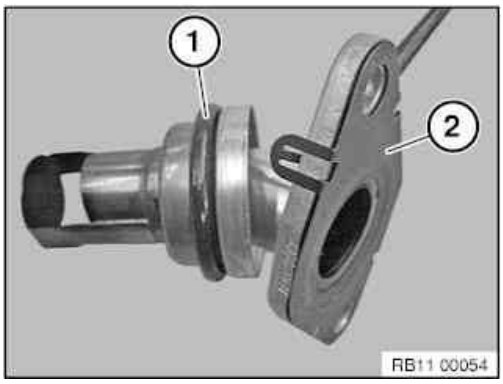
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

32 – Installing the intake plenum

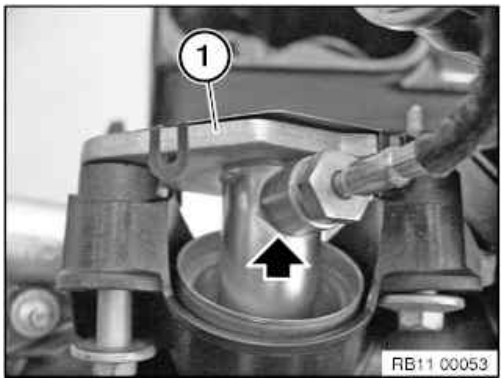


- Renew O-ring (1).

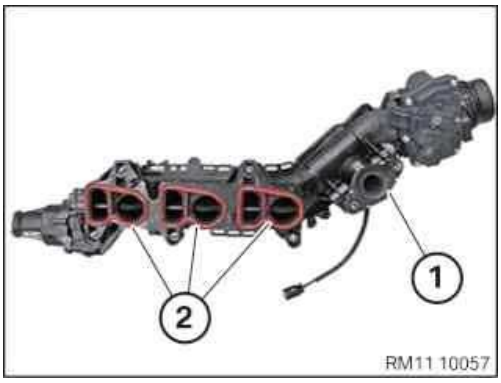
  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.

cardiagn.com

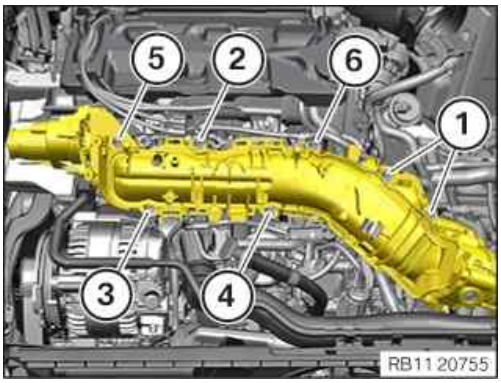


- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

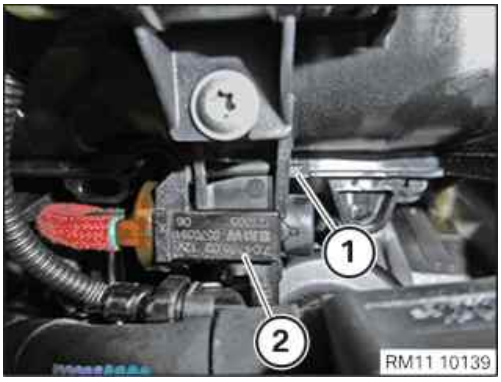
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



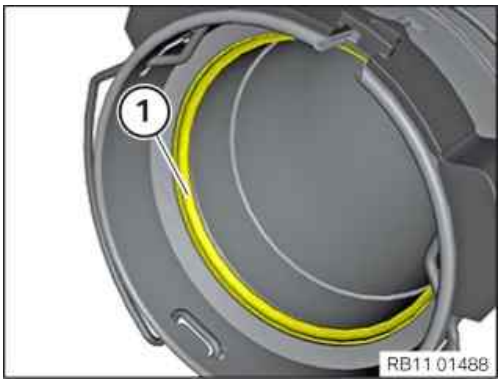
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



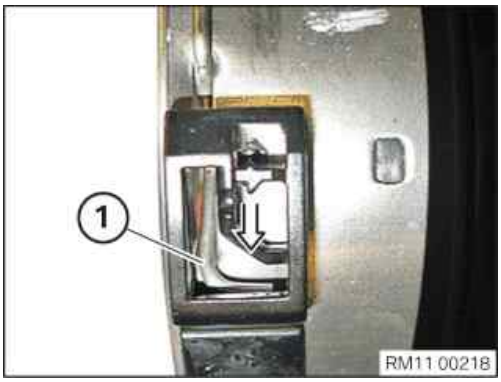
- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.



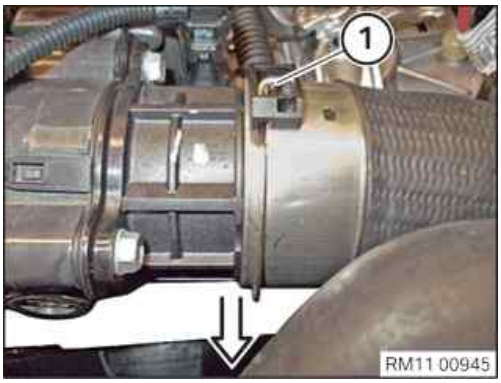
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com

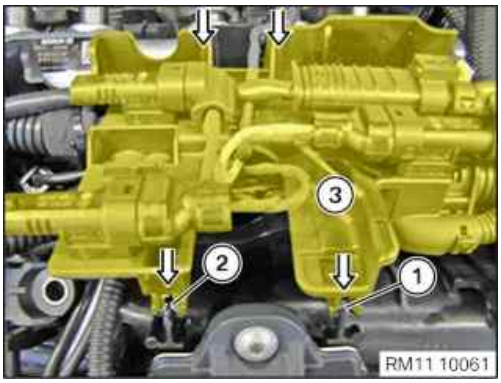


- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.
  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

33 – Installing the cable clip for the intake plenum

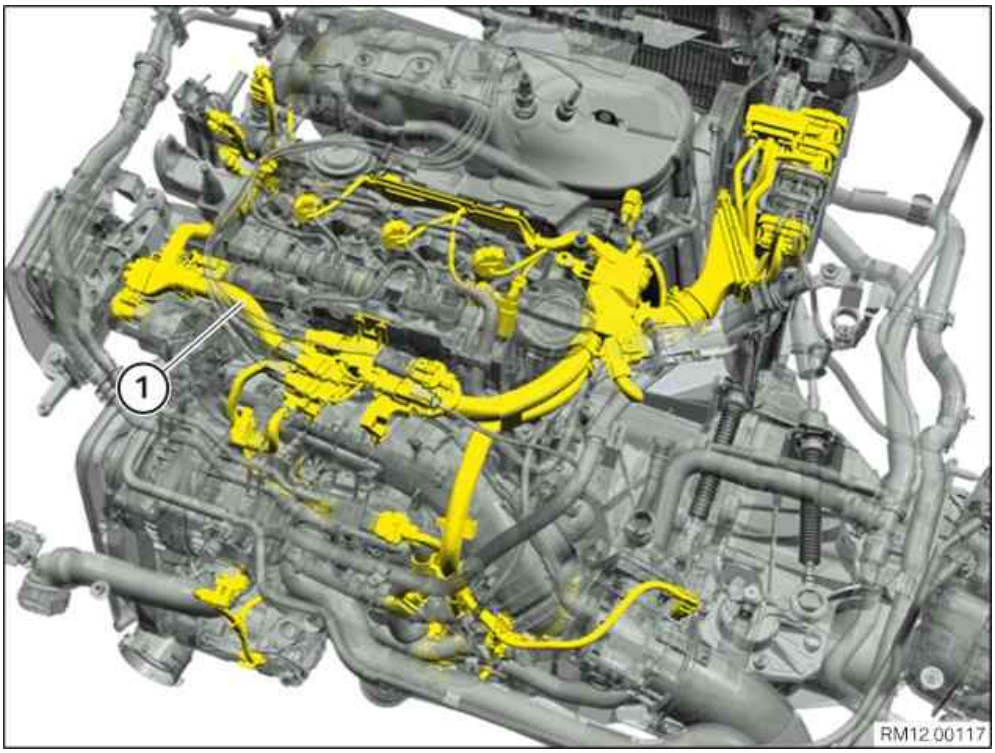


- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).

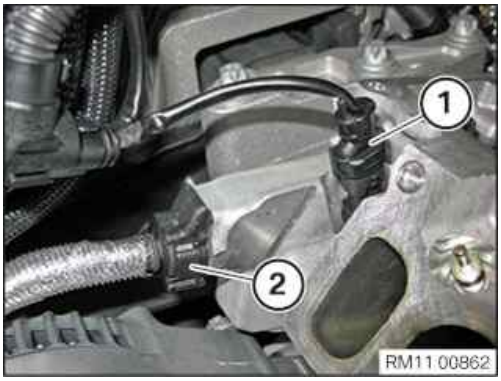
34 – Fastening the wiring harness section for the intake plenum

cardiagn.com

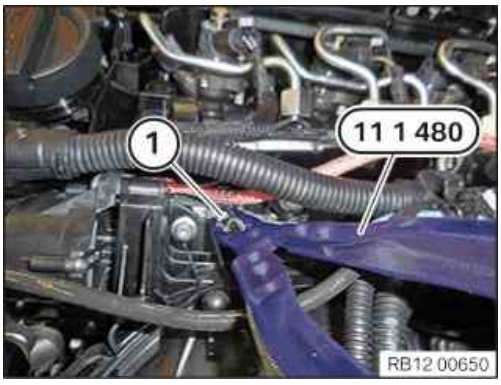
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine



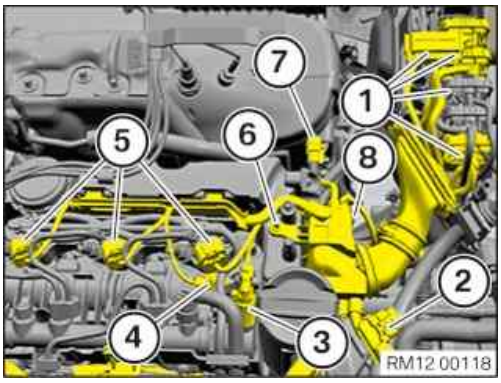
- Connect the coolant line (2) and lock the clamp.
- Connect and lock the connector (1).
- The locks must engage audibly.



- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

cardiagn.com

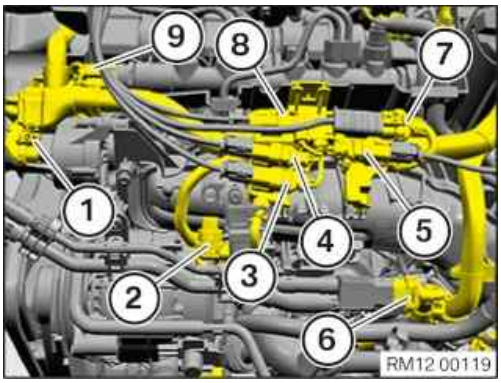


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

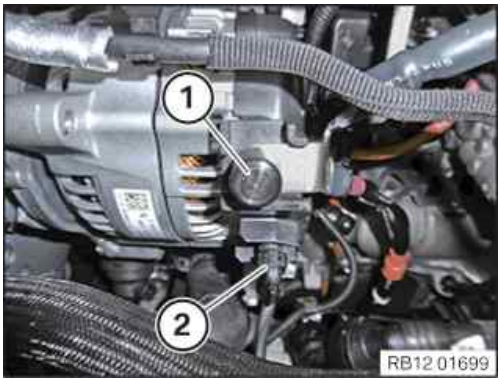
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.



- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.

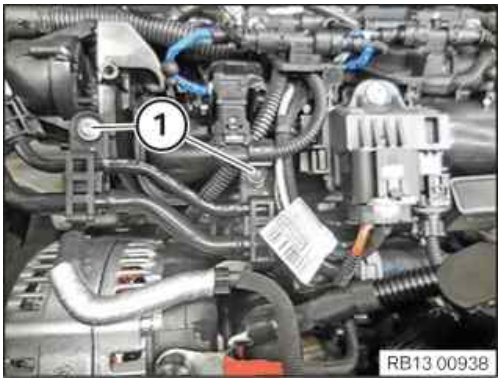


- Connect and lock the connector (2).

  Lock must audibly engage.
- Connect positive battery cable (1) on alternator and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

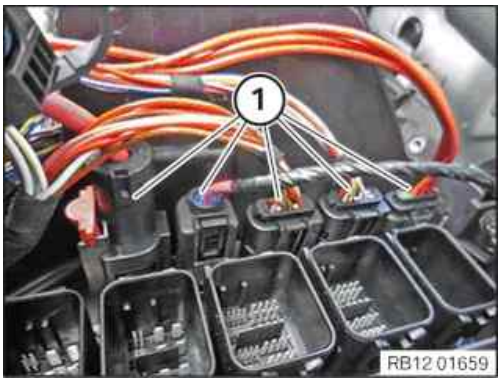


- Position fuel lines.
- Tighten the screws (1).

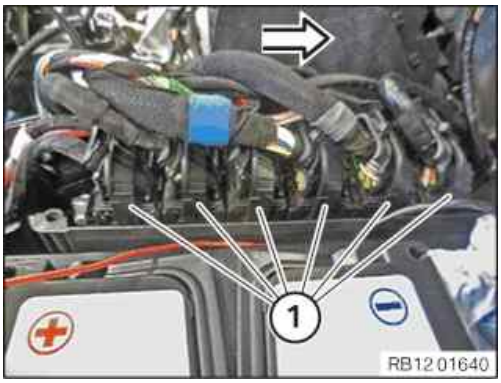
Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

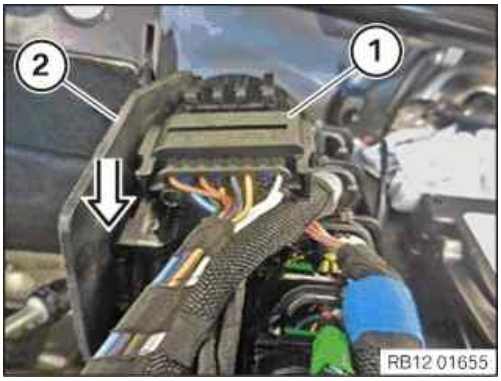
cardiagn.com



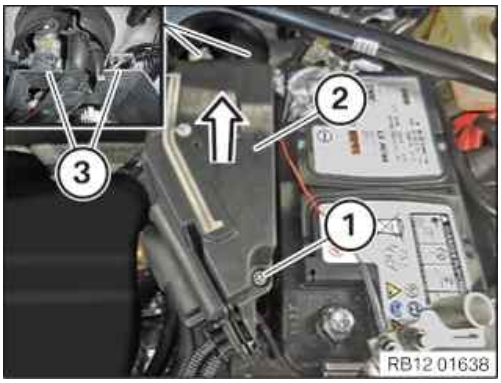
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

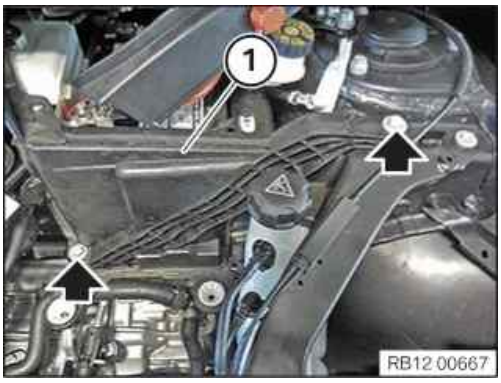
RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (1).
- Tighten screws (arrows).

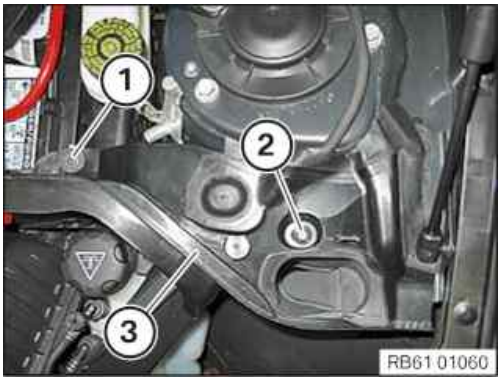
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

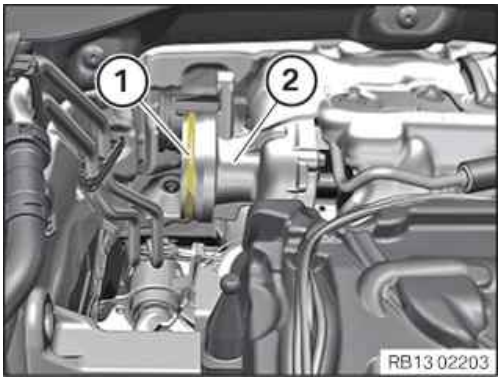


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

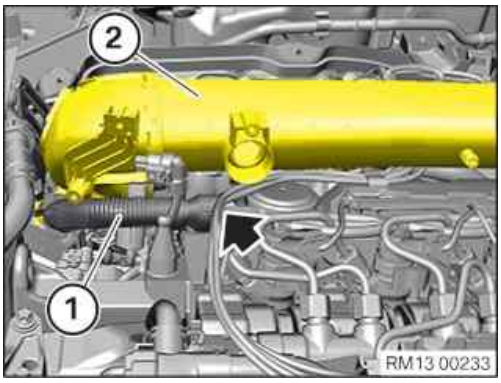
35 – Partially securing clean air pipe



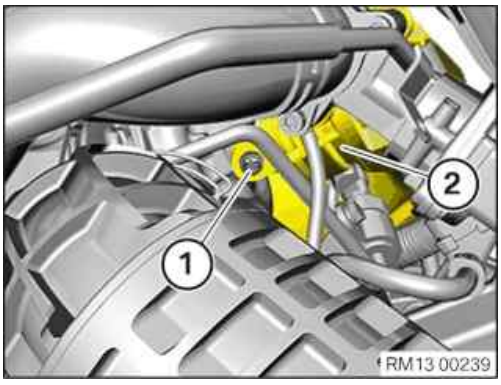
- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

- Feed in clean air pipe (1) and install.

cardiagn.com



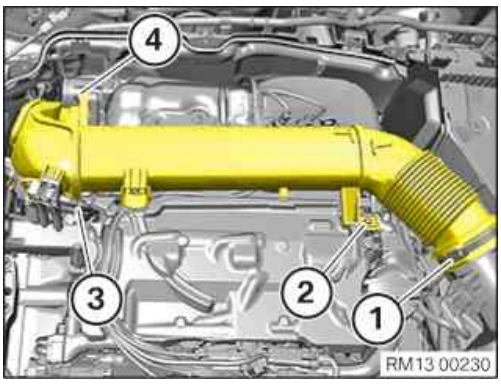
- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten screw (1) from clean air pipe (2).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

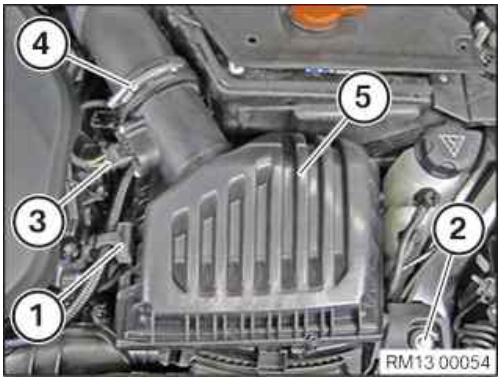
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

36 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing

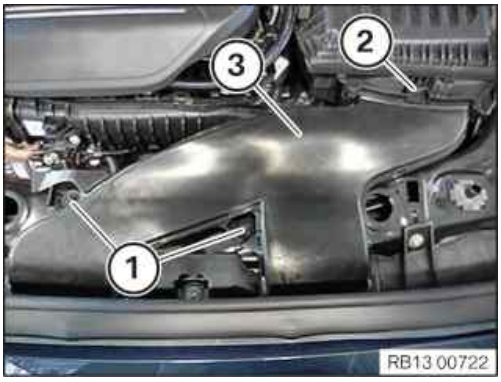
Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

cardiagn.com

37 – Install the intake neck for the intake filter housing



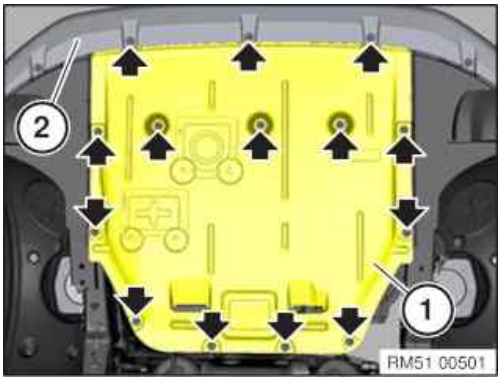
- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

38 – Installing the front underbody protection

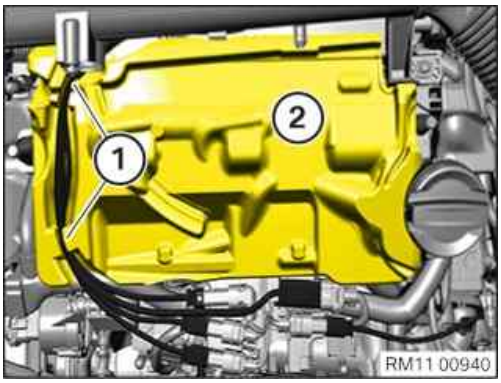


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

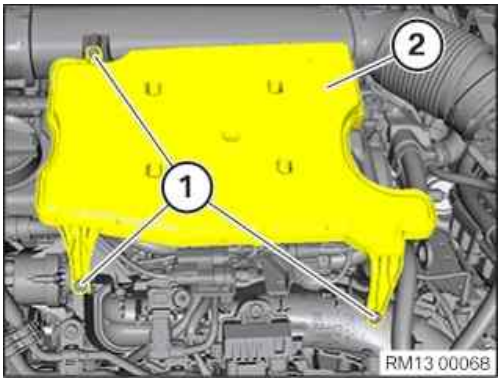
			3 Nm

39 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

40 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

41 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

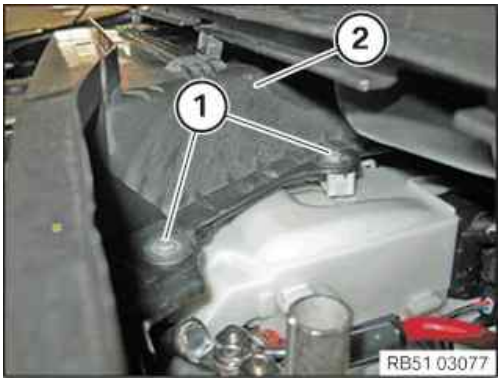
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

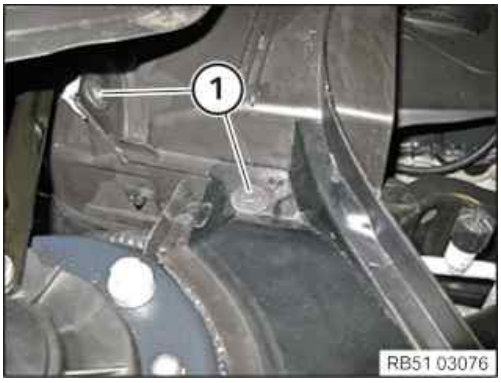
42 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

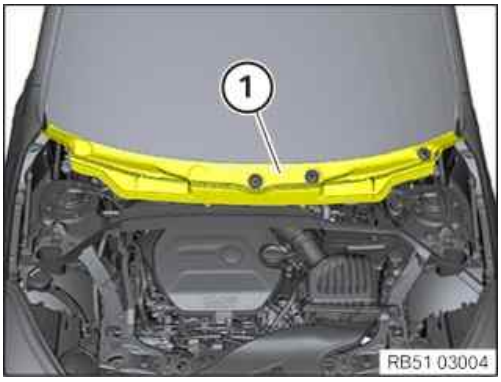
cardiagn.com

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

43 – Install the rear cowl panel cover



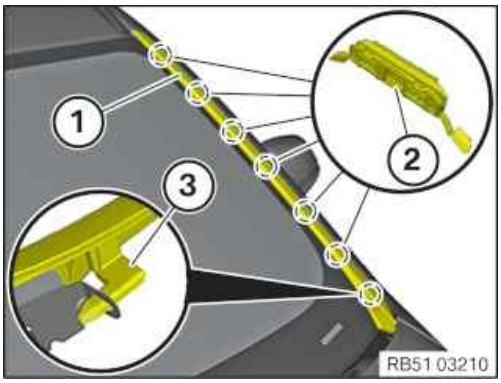
- Feed in and engage the rear cowl panel cover (1).

44 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▶ **Install the gutter strip on the windscreen**



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

45 – Install left and right wiper arm

NOTICE

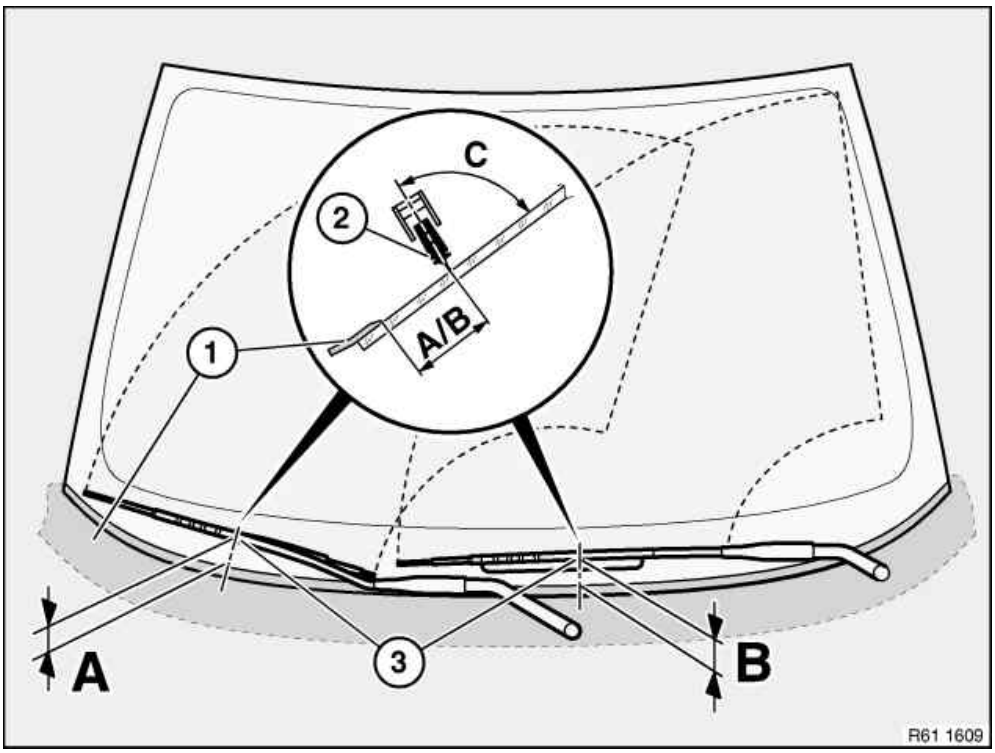
Description is for left component only. Procedure on the right side is identical.

▶ **Install the wiper arm**

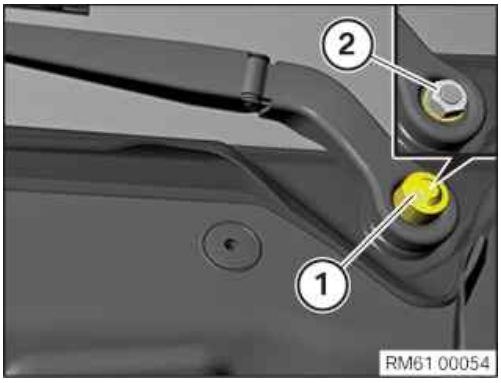
cardiagn.com

TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

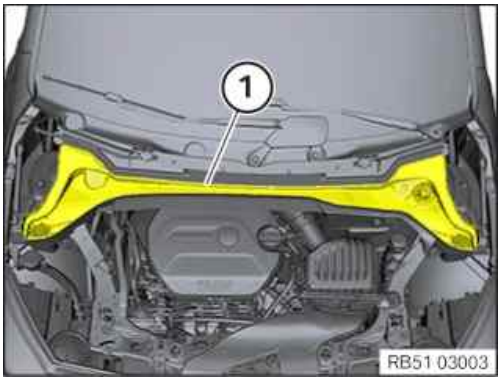
- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

46 – Installing front cowl panel cover



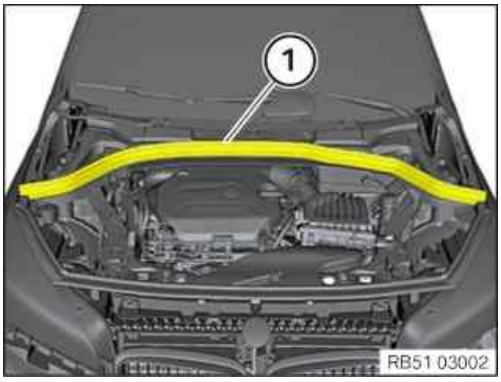
- Insert the cowl panel cover front (1) to the rear and install.
- Check cowl panel cover at front is correctly seated (1).

47 – Install the seal for the bonnet

cardiagn.com

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

48 – Disconnecting all battery earth leads

- See additional information.

11 12 000 Removing and installing/sealing cylinder head cover (B37C)

Important!

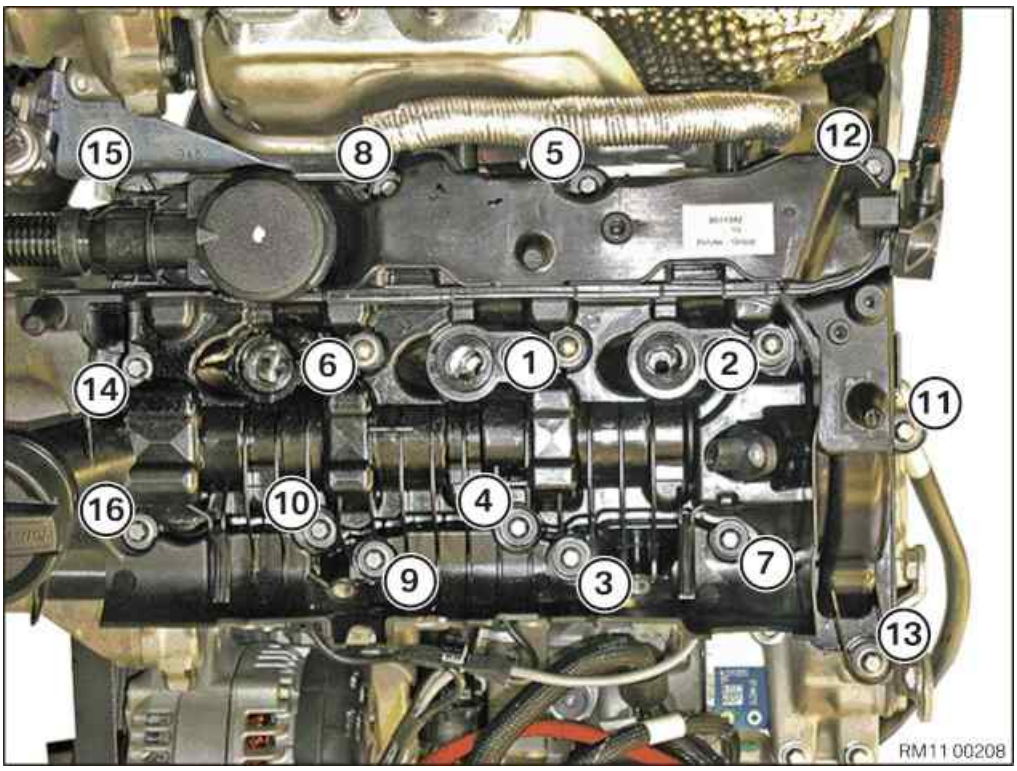
When carrying out repair work on the oil, coolant or fuel circuit, the alternator must be protected against dirt contamination.

Cover alternator with suitable materials.

Necessary preliminary tasks:

- Remove intake silencer housing.
- Remove intake plenum.
- Remove injectors.
- Remove pressure accumulator.
- Undo engine wiring harness in the area of the cylinder head cover.

Removal:



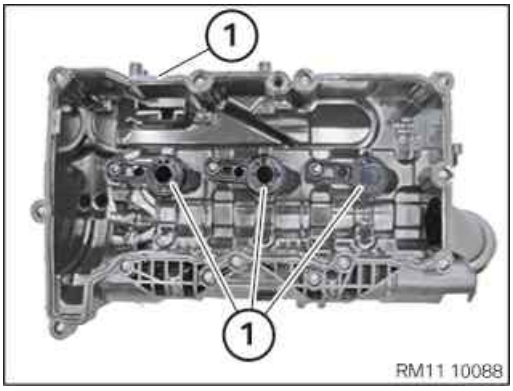
Release bolts in sequence **16 to 1**.

Remove cylinder head cover by lifting it out.

Preparation for installation:

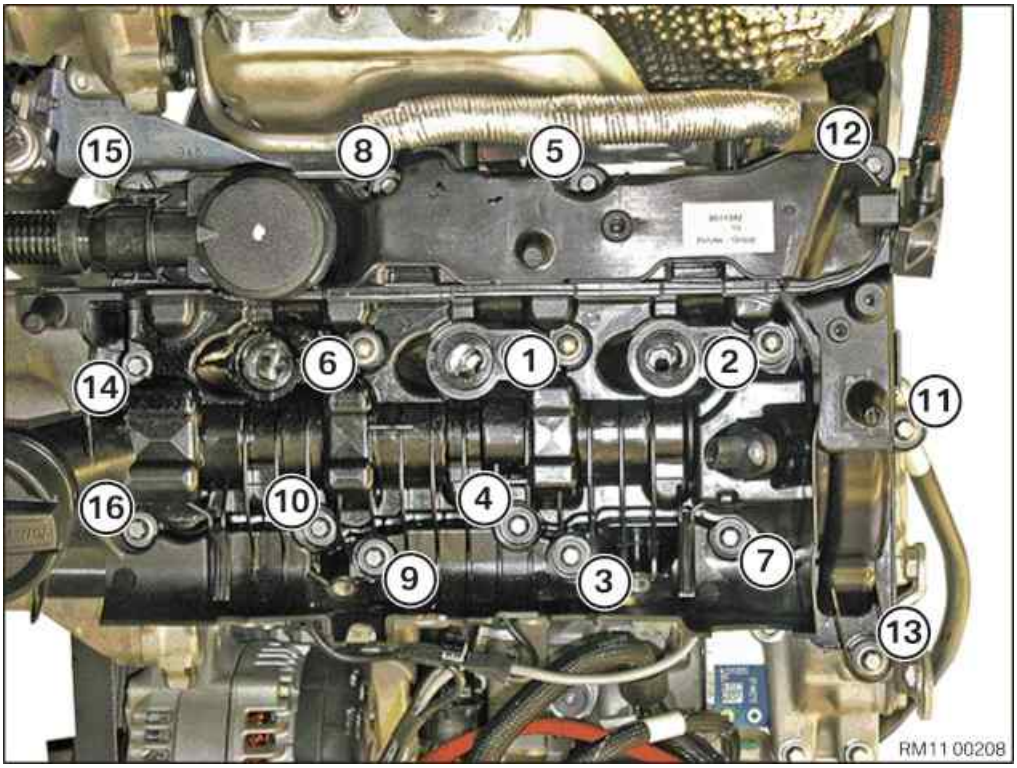
Replace seals.

cardiagn.com



Parts: Replace profile seals (1).

Installation:



Position cylinder head cover.

Tighten down bolts in sequence **1 to 16**.

Tightening torque 11 12 3AZ.

Required follow-up work:

- Install pressure accumulator.
- Install injectors.
- Install intake plenum.
- Route and connect engine wiring harness in area of cylinder head cover.
- Install intake silencer housing.

cardiagn.com

11 12 161 replace cylinder head

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.

For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

TECHNICAL INFORMATION

Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Maintain conditions of absolute cleanliness.

cardiagn.com

1 – Remove vehicle battery

WARNING

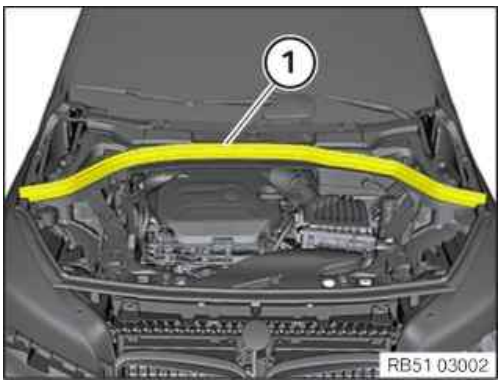
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

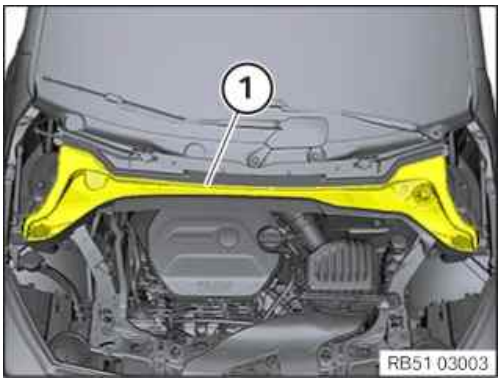
- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

TECHNICAL INFORMATION

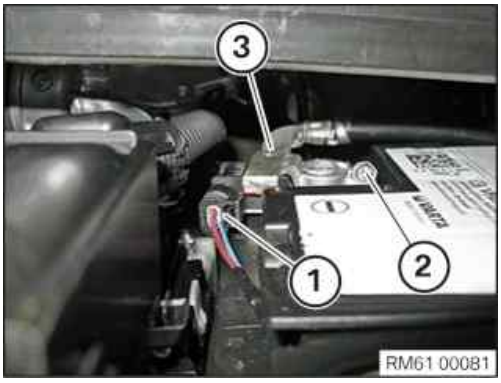
For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



- pull off gasket (1) upwards.

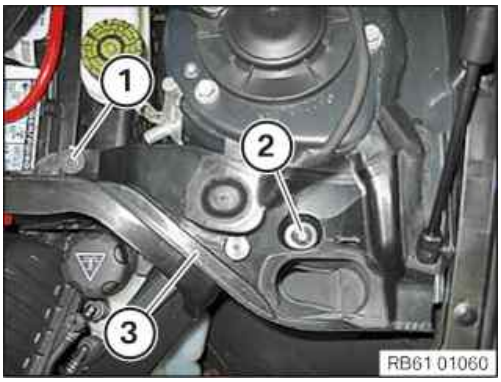


- Remove the cowl panel cover (1) to the top.

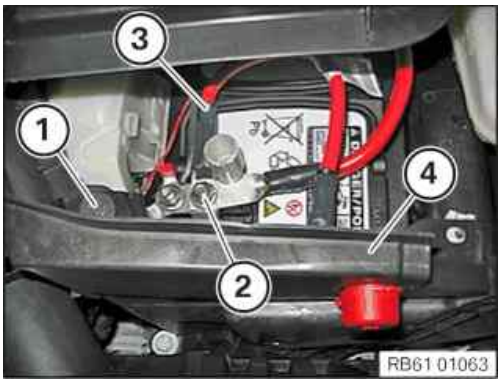


- Unlock and disconnect connector (1).
- Slacken nut (2).
- Disconnect the negative battery terminal (3).

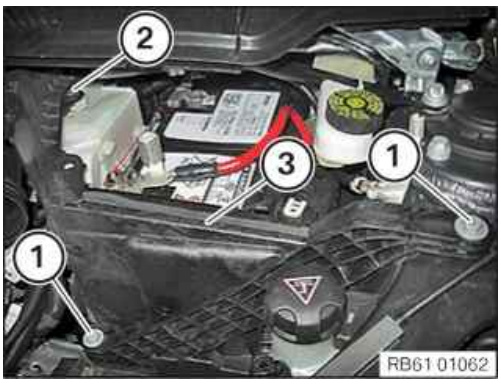
cardiagn.com



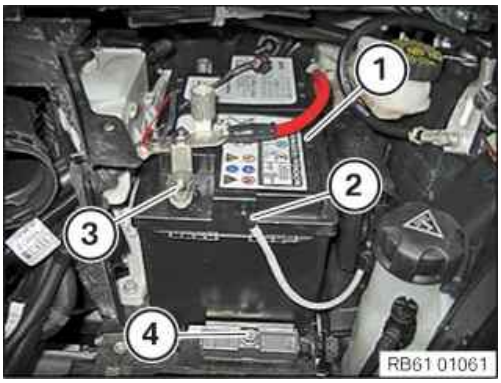
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



- Loosen screw (1).
- Unscrew the nut (2) and remove the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten nuts (2) on the positive terminal hand-tight.



- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.



- Pull off the vent hose (2).
- Slacken the nut (3) on the positive terminal and remove the positive terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

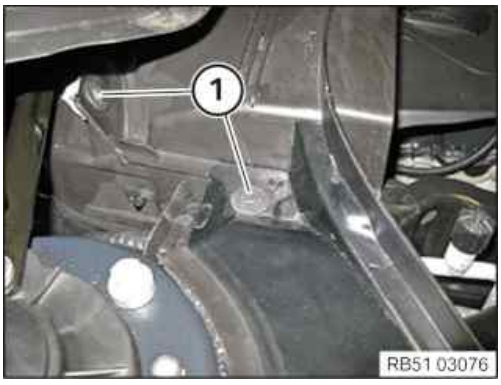
- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

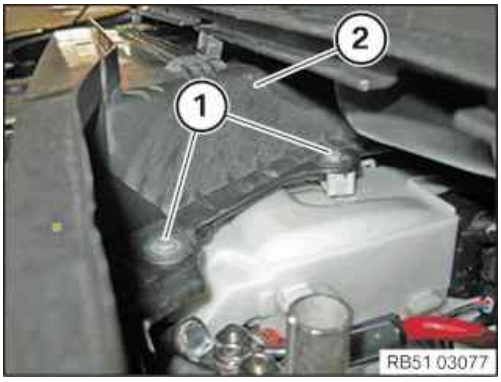
2 – Removing the upper bulkhead cover

cardiagn.com

- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

3 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

▶ **Remove the wiper arm**

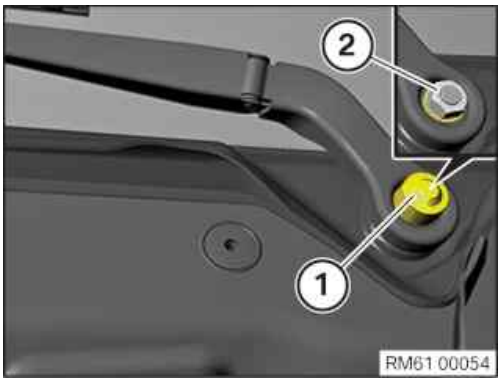
RISK OF DAMAGE

Damage to wiper console

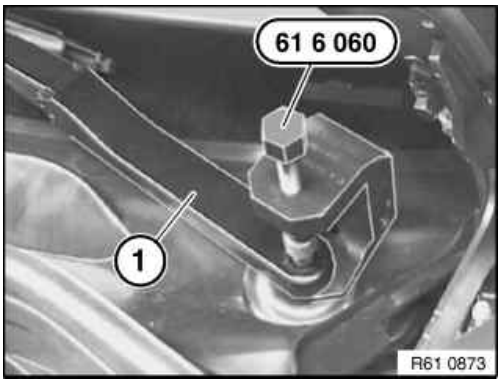
While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.

cardiagn.com



- Remove the protective cap (1).
- Loosen nut (2).



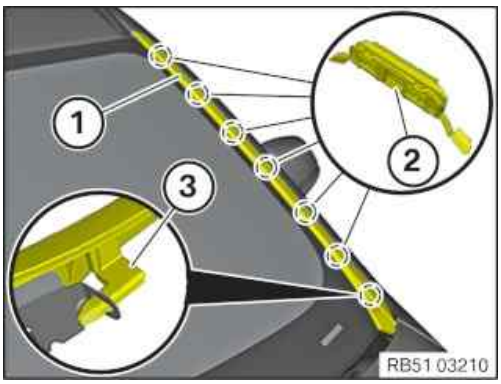
- Pull off the wiper arm (1) using special tool .

4 – Remove the gutter strip on the windscreen on the left and right

NOTICE

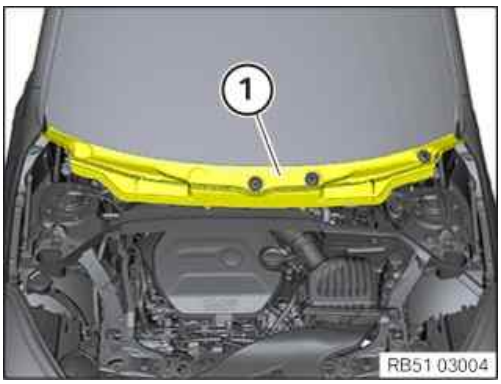
Description is for left component only. Procedure on the right side is identical.

▶ Remove the gutter strip on the windscreen



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

5 – Remove the rear cowl panel cover



- Disengage and guide out the rear cowl panel cover (1) towards the top.

6 – Removing the acoustic cover

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

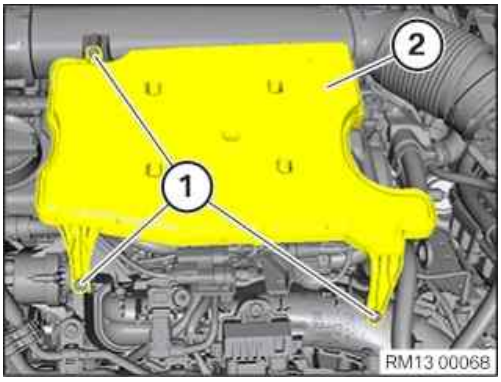
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

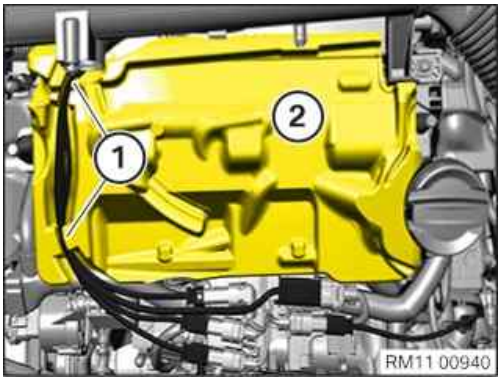
- Unclip the acoustic cover from the marked areas towards the top.

7 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

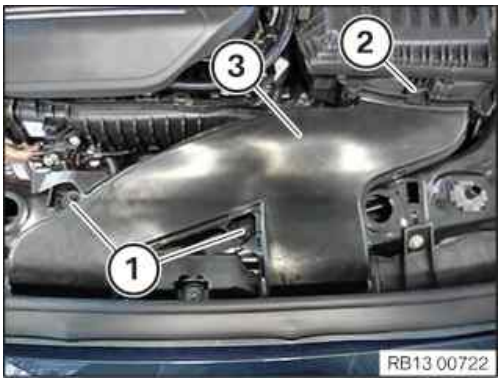
8 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

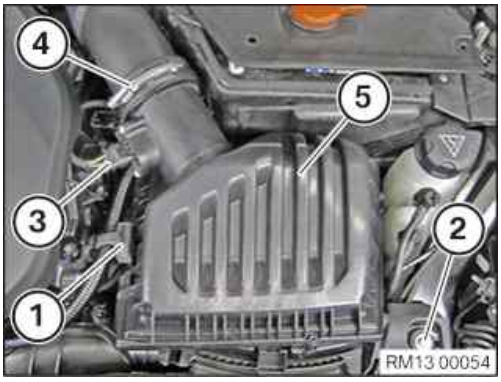
9 – Remove the intake neck for intake silencer housing

cardiagn.com



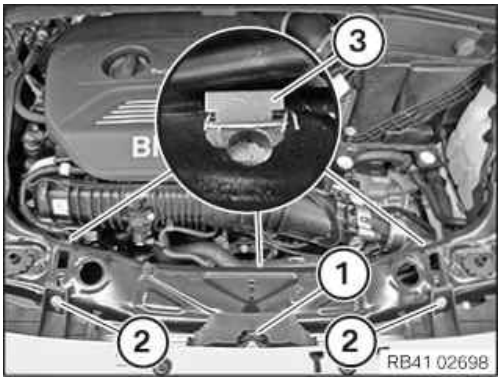
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

10 – Removing intake silencer housing

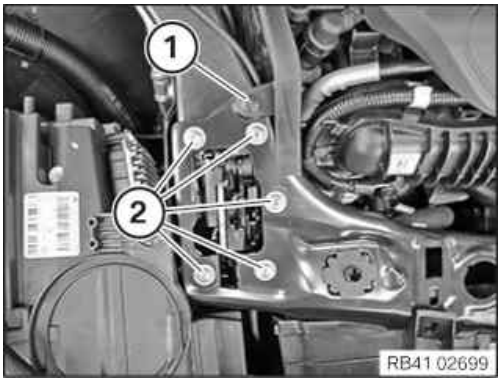


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

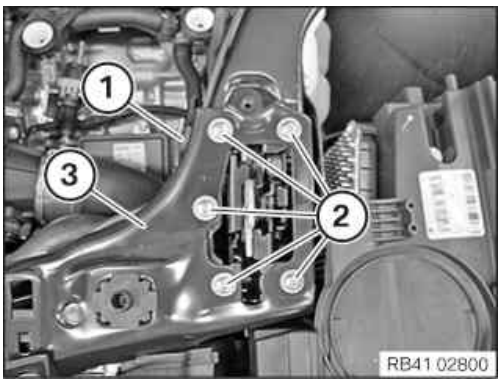
11 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



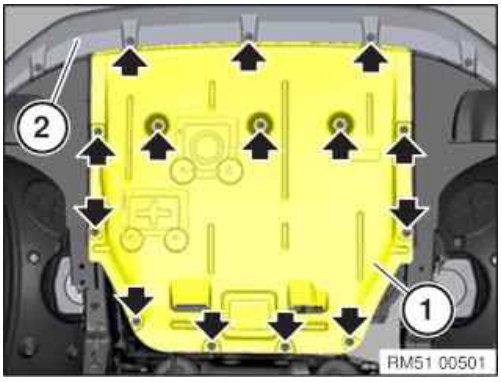
- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

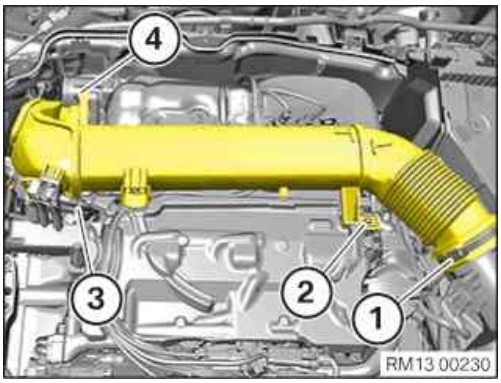
cardiagn.com

12 – Removing the front underbody protection

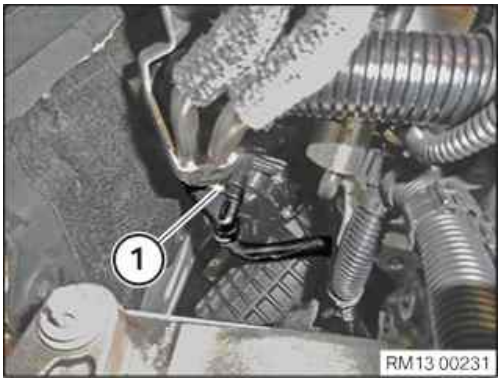


- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

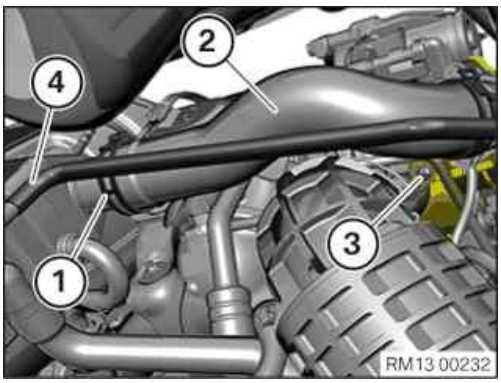
13 – Removing clean air pipe



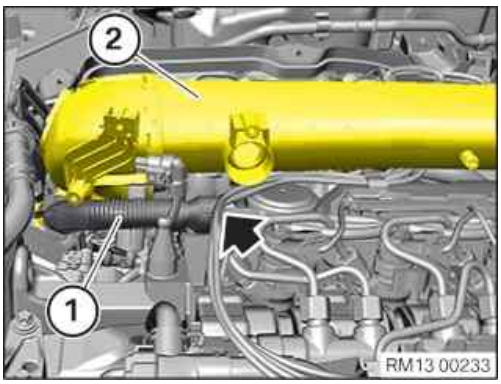
- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).



- Unlock and loosen connector (1).

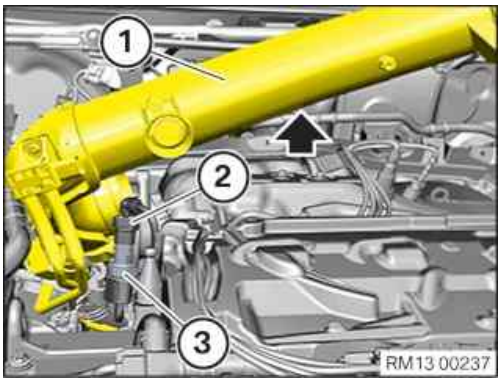


- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

cardiagn.com



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

14 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

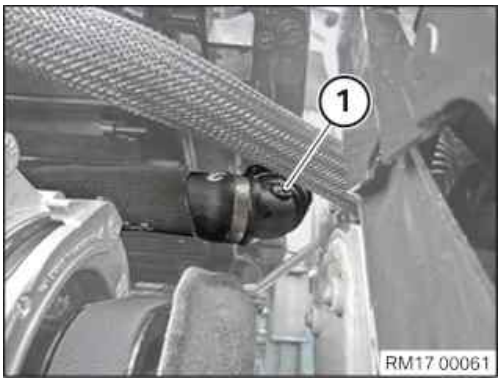
In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

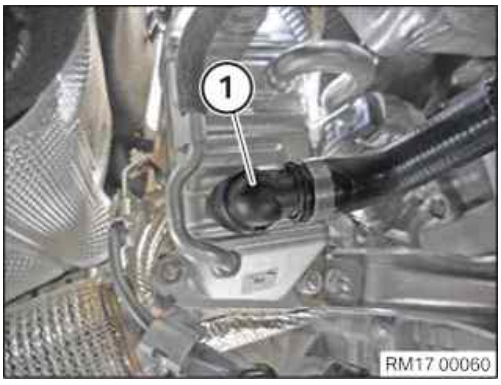
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

cardiagn.com



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

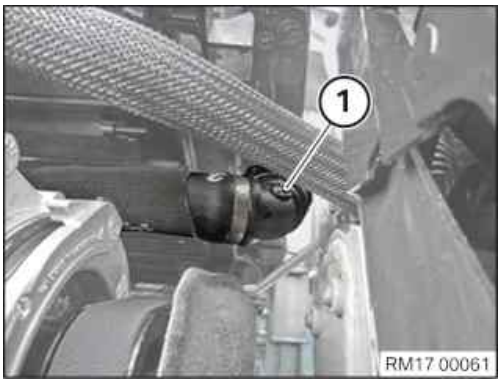


- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

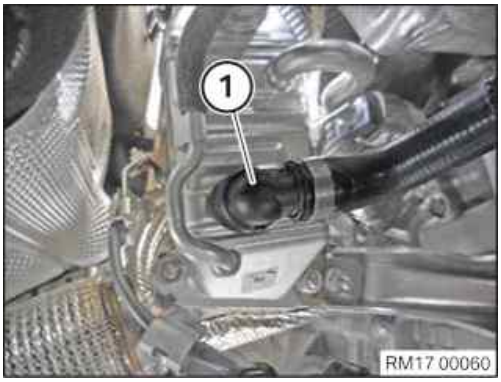
15 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

16 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

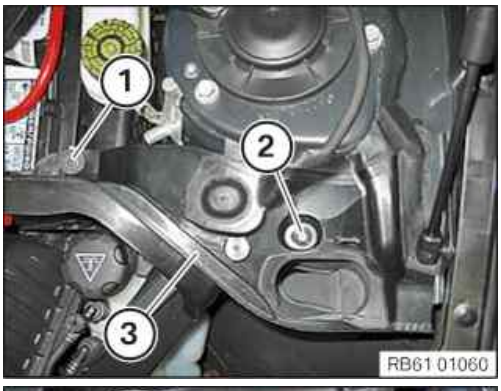
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

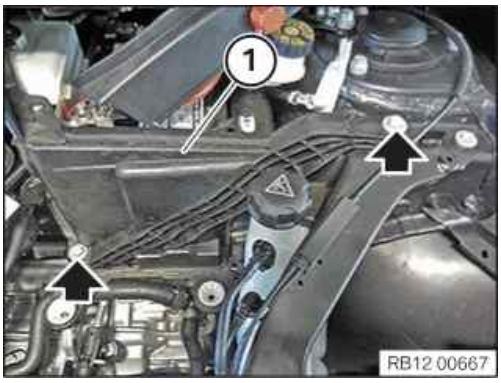
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



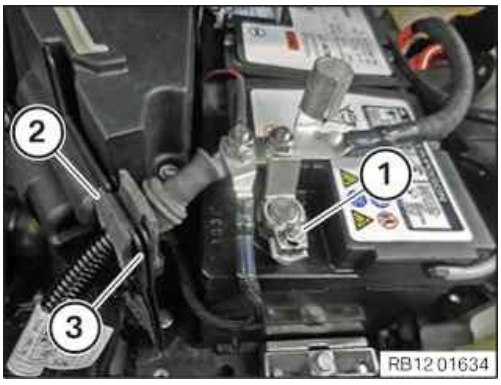
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.

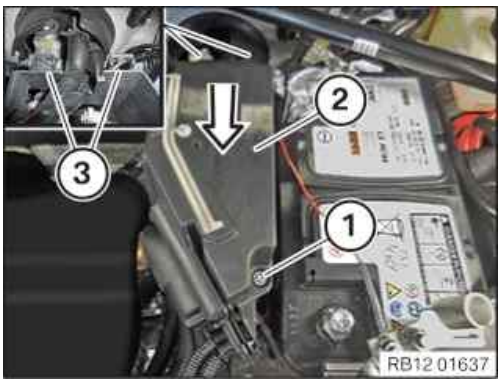
cardiagn.com



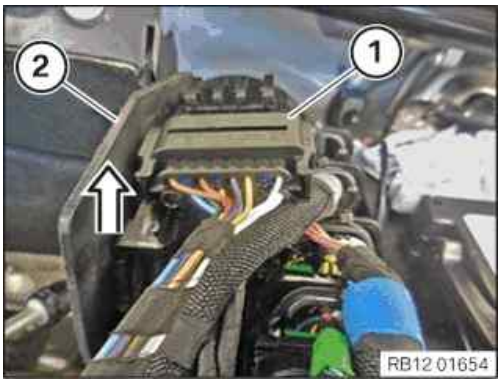
- Remove screws (arrows).
- Guide out tension strut (1) and remove.



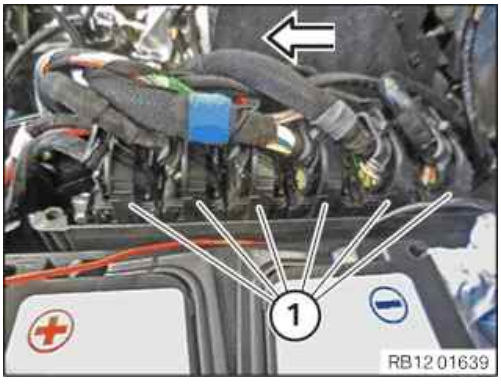
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

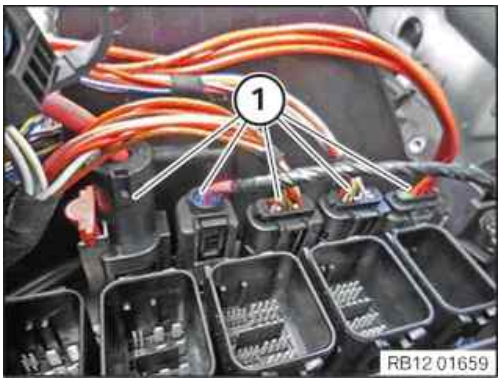


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

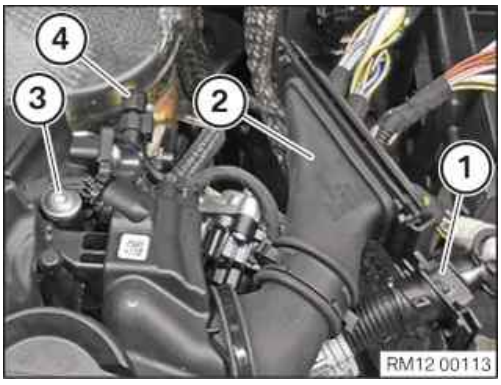


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

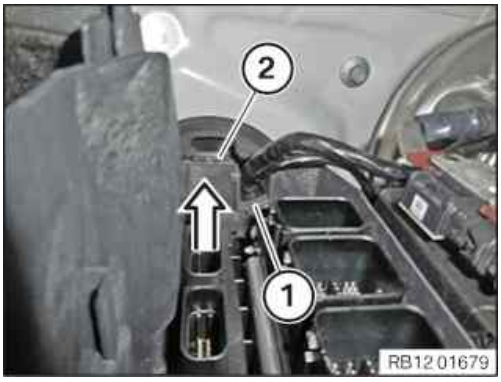
cardiagn.com



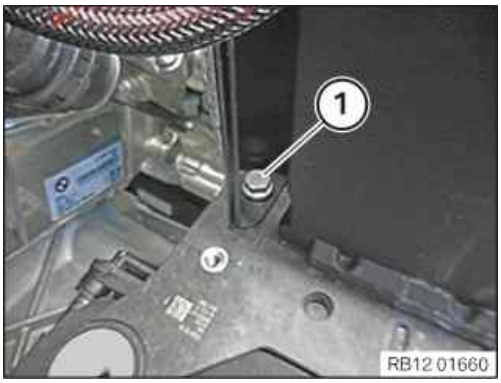
- Unlock and loosen connector (1).



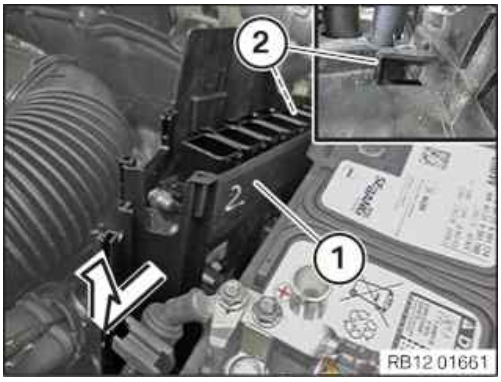
- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.



- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



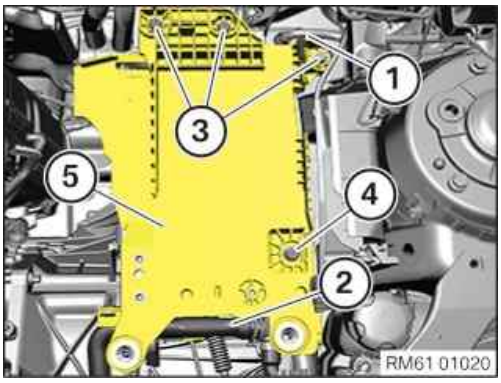
- Loosen screw (1).



- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

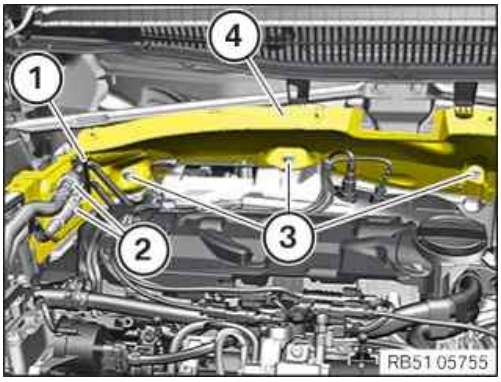
17 – Remove battery holder

cardiagn.com



- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

18 – Remove the rear bulkhead upper part



- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

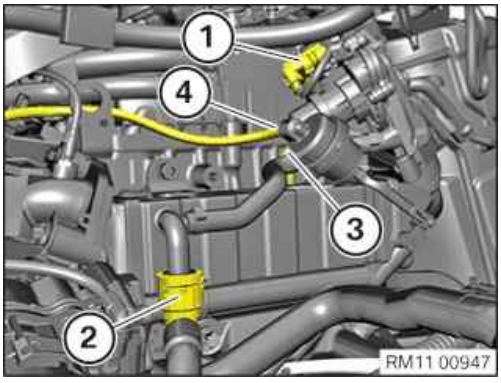
19 – Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

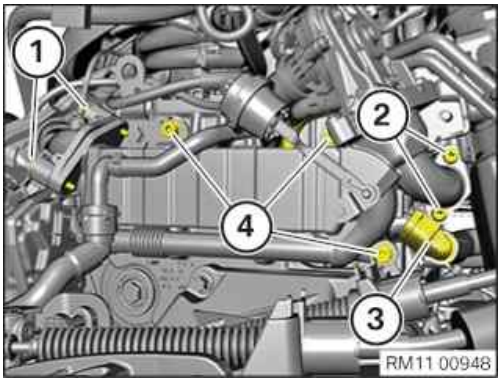
- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

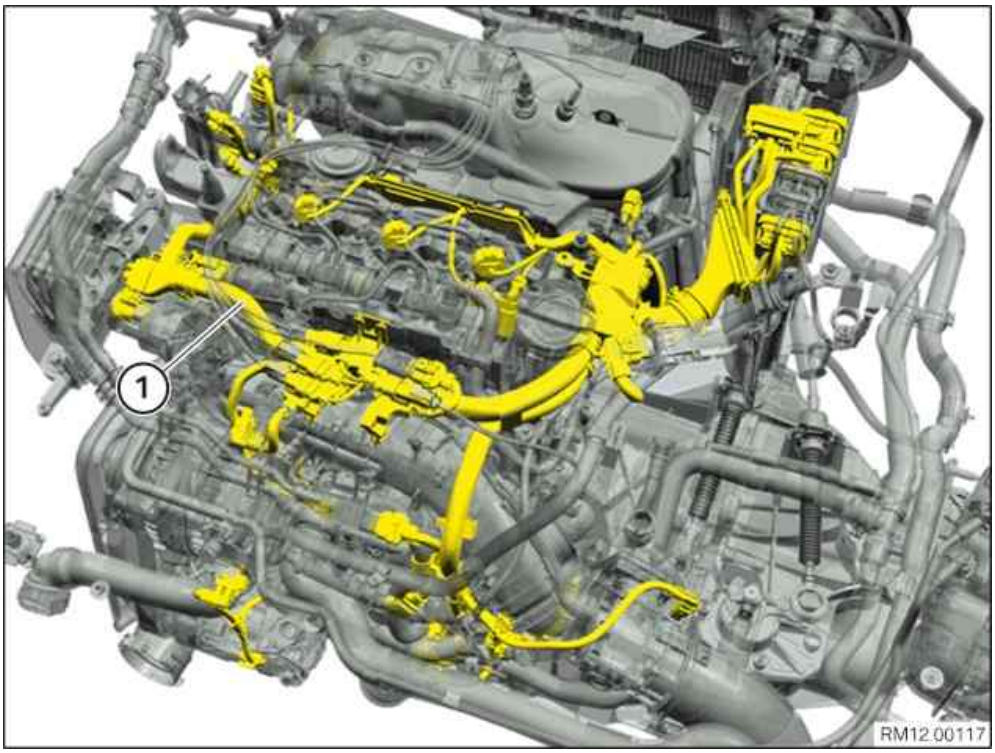


- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

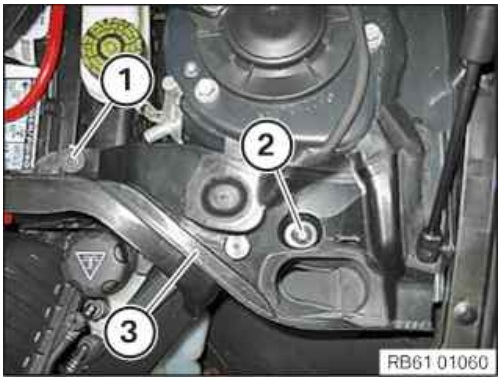
cardiagn.com

20 – Releasing the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine

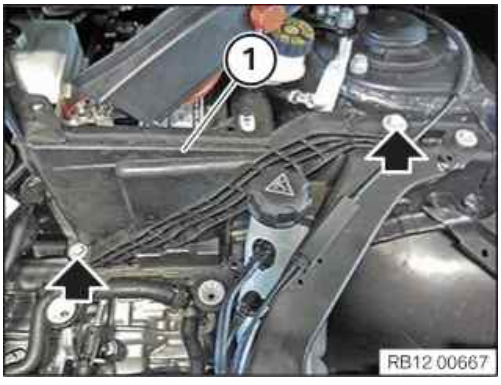


1 Wiring harness section for the engine



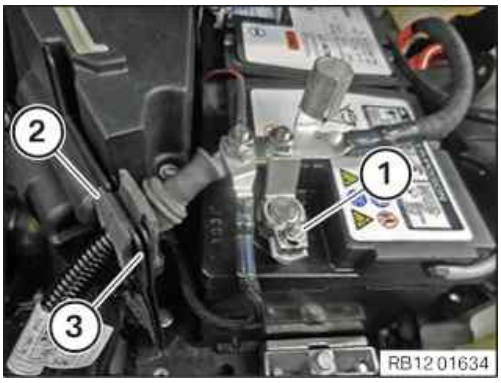
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.

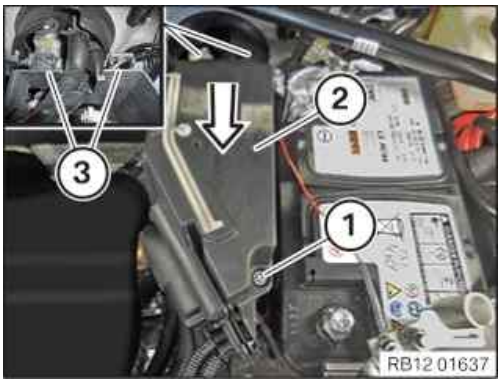


- Remove screws (arrows).
- Guide out tension strut (1) and remove.

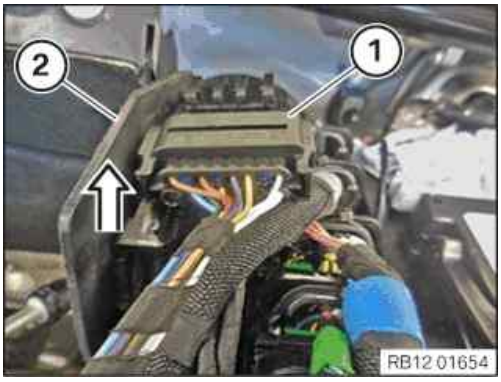
cardiagn.com



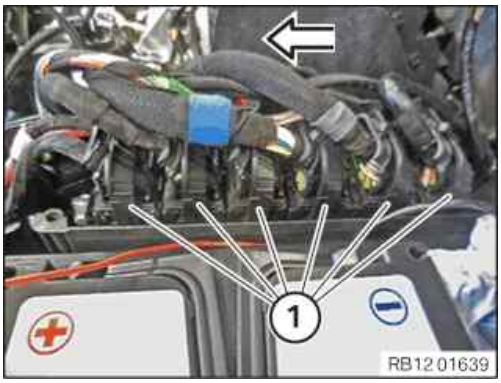
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



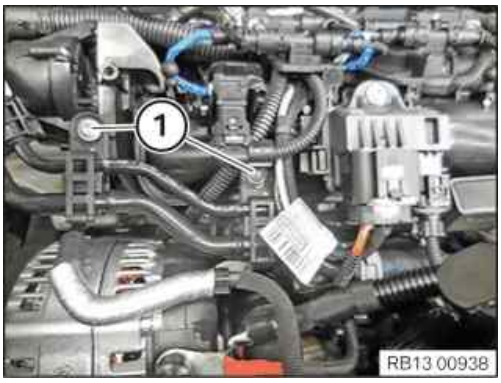
- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).



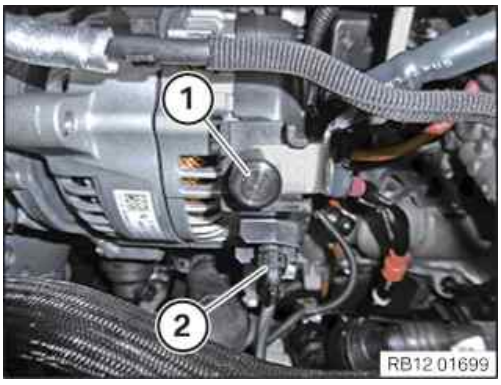
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).

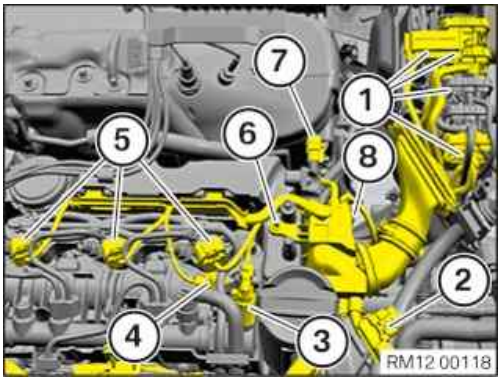
cardiagn.com



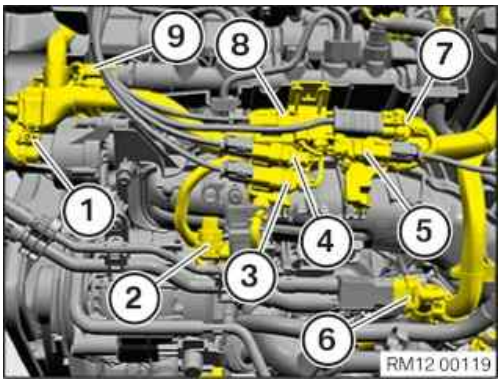
- Loosen screws (1).



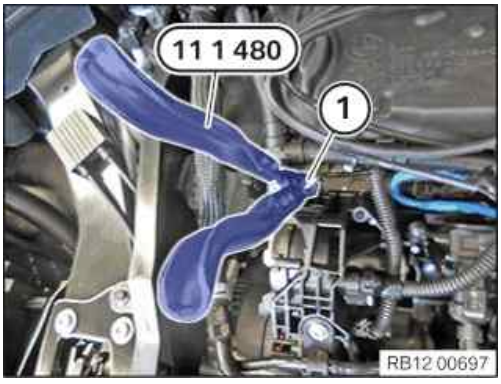
- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock connector (3) and pull off from fuel pressure regulator.
- Unlock connector (4) and disconnect from camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock connector (7) and disconnect from differential pressure sensor.

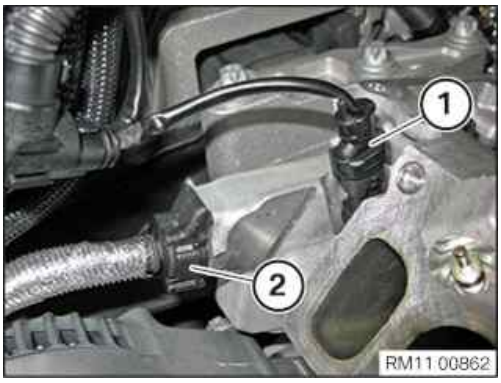


- Unlock connector (1) and pull it off the servomotor for the swirl flap.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock connector (3) and pull off from exhaust temperature sensor downstream from the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock connector (6) and pull off from the fuel pressure and temperature sensor.
- Unlock and disconnect the connector (7) from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.



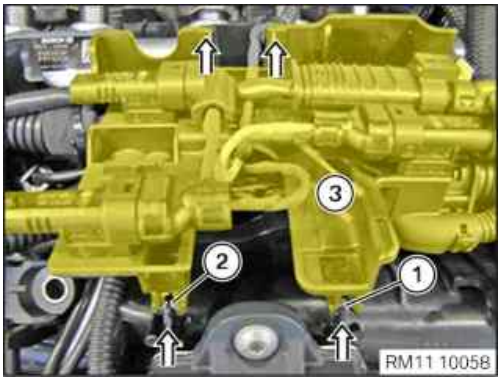
- Unlock connector (1) at all glow elements using special tool **0 490 796 (11 1 480)** and release.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

cardiagn.com



- Unlock and loosen connector (1).
- Unlock the clamp of the coolant line (2) and release the coolant line.

21 – Removing the cable clips from the intake plenum



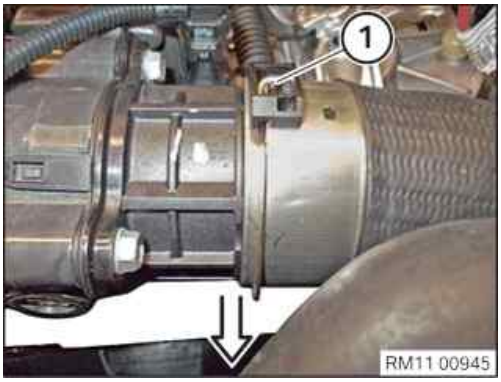
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.

22 – Removing the intake plenum

TECHNICAL INFORMATION

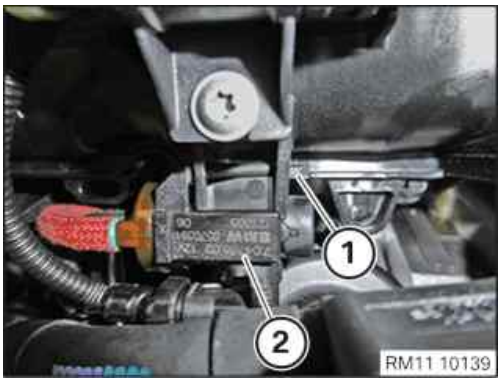
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).

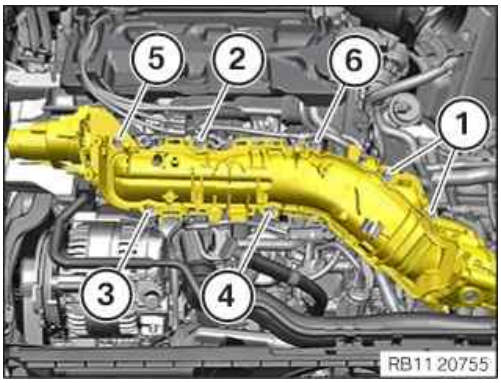


- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

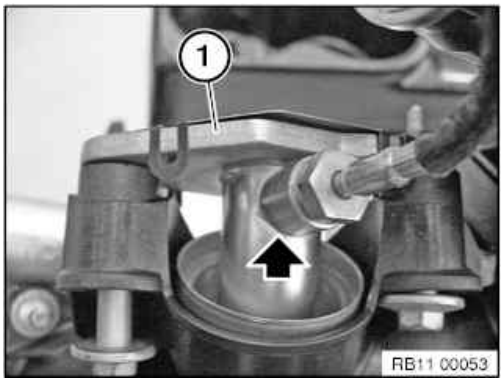
cardiagn.com



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

23 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

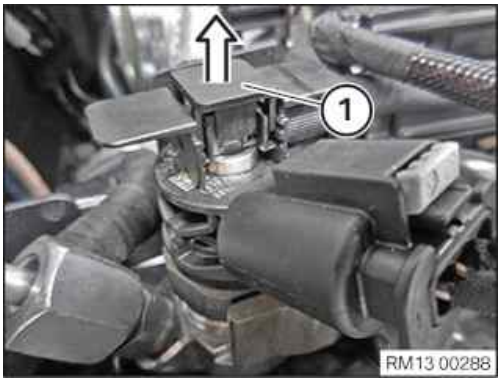
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

24 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

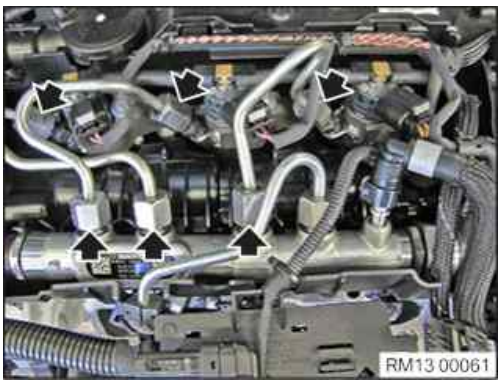
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

25 – Remove the high pressure line between the high pressure pump and the rail

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

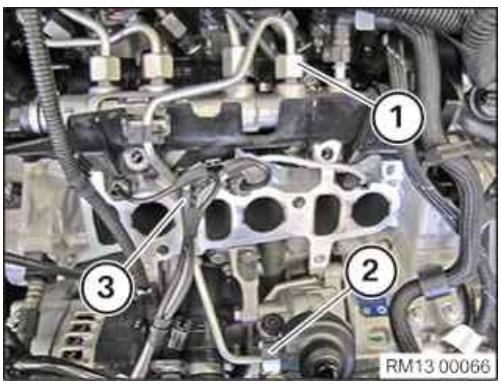
- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Loosen union nut (1) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Loosen union nut (2) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Catch and dispose of escaping fuel.
- Feed the high pressure line (3) out and remove.
- Seal open connections using special tool **2 413 106**.

26 – Remove high-pressure rail

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

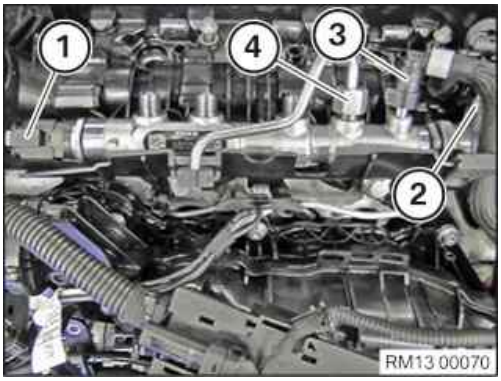
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

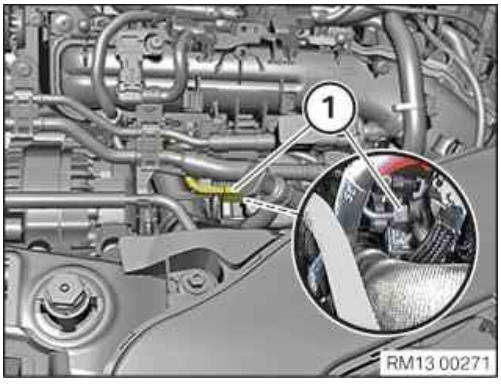
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

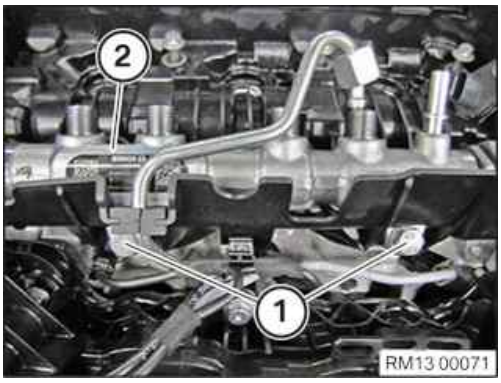


- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.

cardiagn.com



- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

27 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

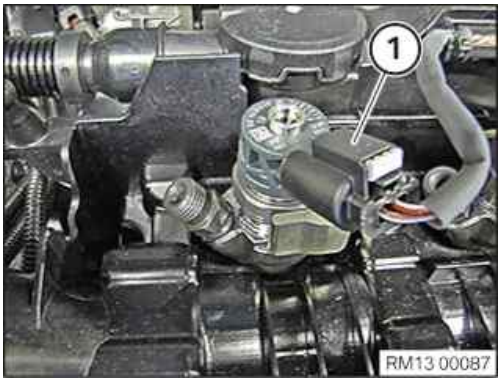
Electrostatic discharge.

Damage to or destruction of electrical components.

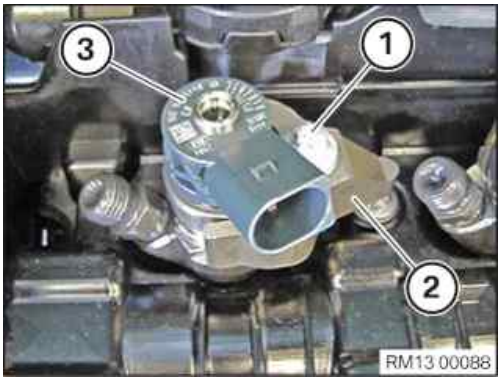
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.



- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

▸ **Loosen stuck injectors**

cardiagn.com

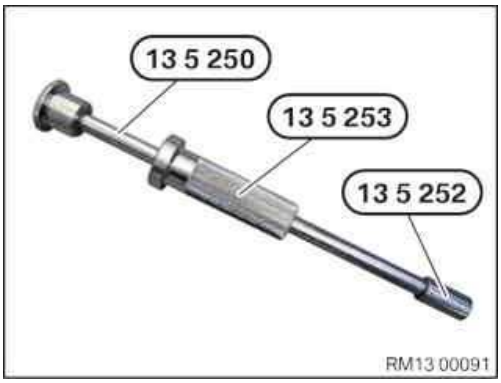
RISK OF DAMAGE

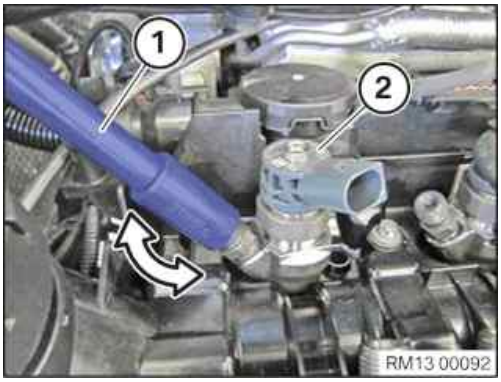
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

28 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

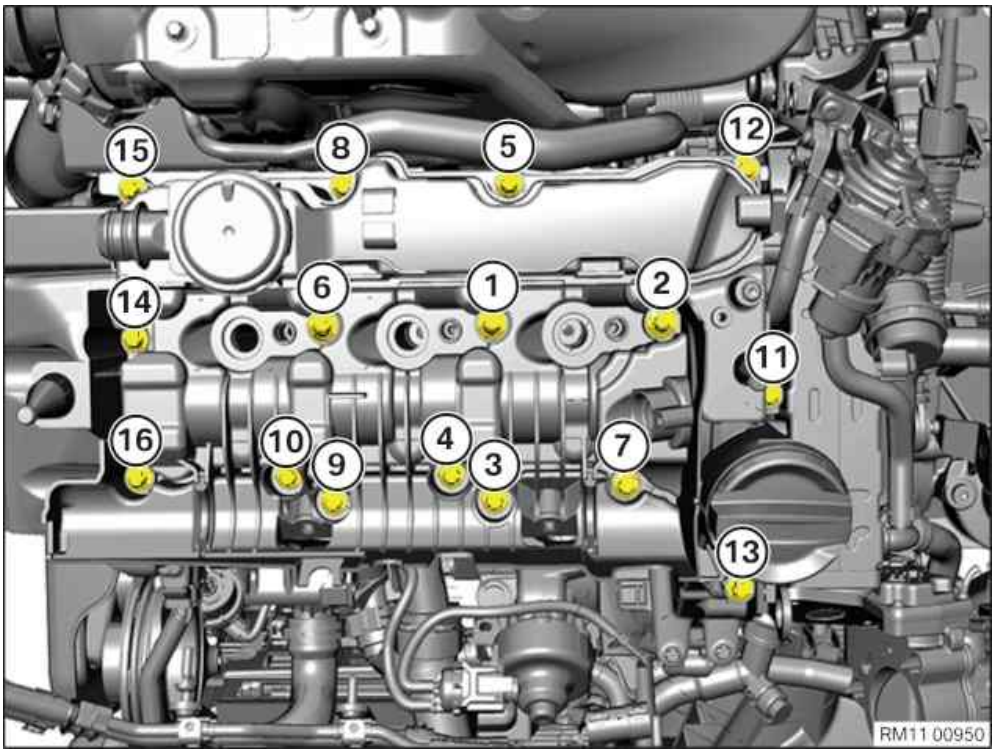
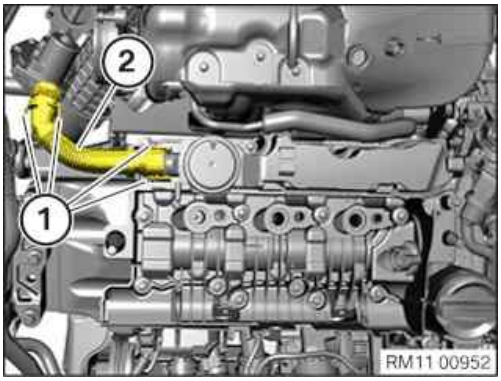
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

29 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

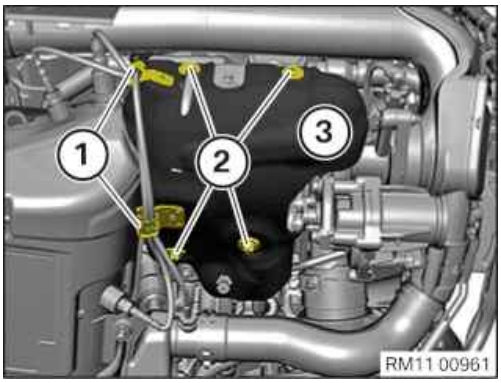
30 – Removing heat shield from top exhaust turbocharger

WARNING

Hot surfaces.

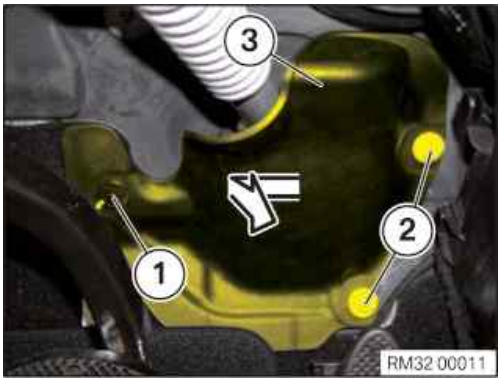
Risk of burning!

- Perform all work only on components that have cooled down.



- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).

31 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

cardiagn.com

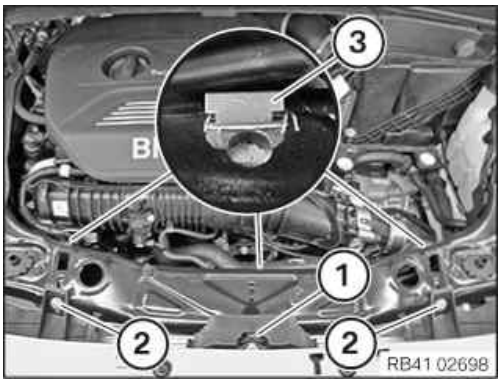
- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

32 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

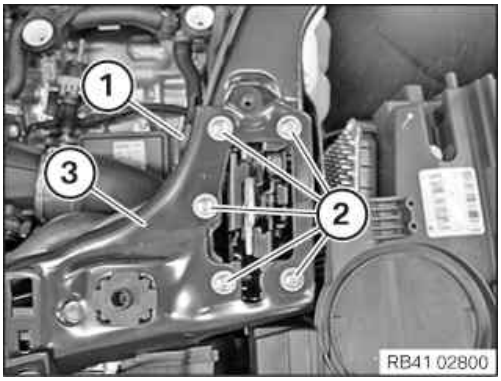
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

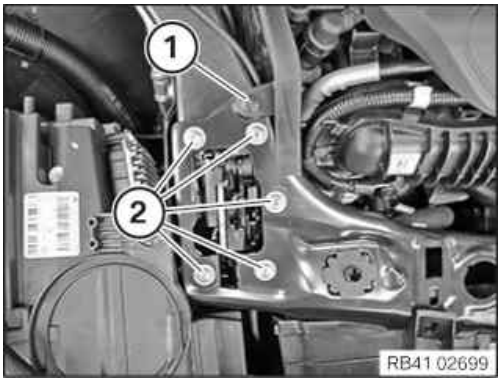


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

33 – Securing radiator on left and right

cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

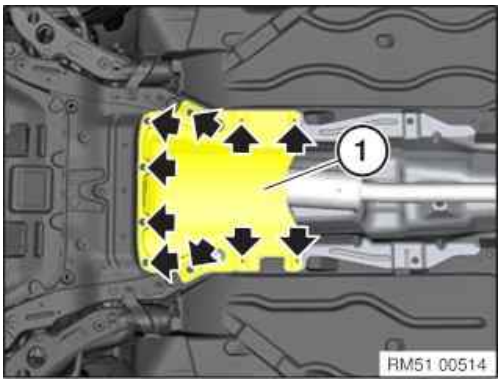
34 – Remove the front left and right wheel

▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

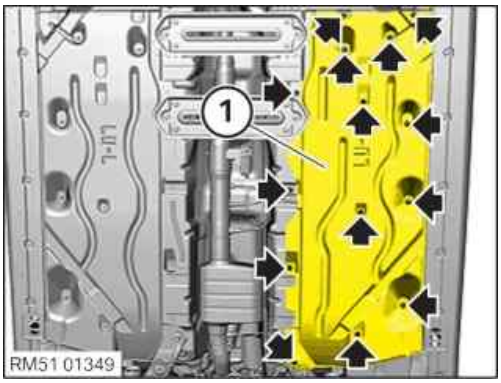
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

35 – If installed: Removing rear underbody protection



- Remove screws (arrows).
- Remove the rear underbody protection (1).

36 – Removing right underbody panelling



- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

37 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

cardiagn.com

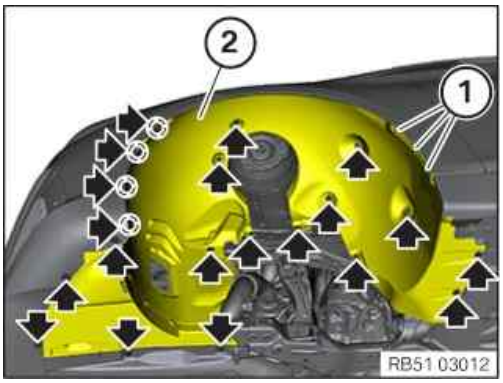
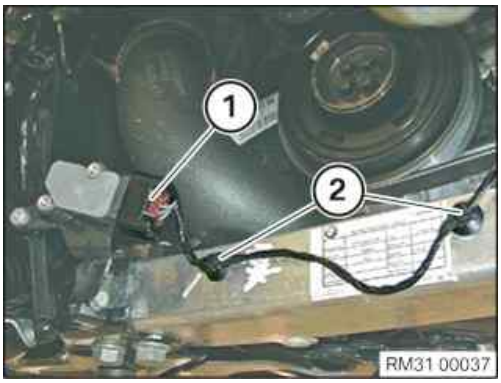
▶ **Remove front wheel arch cover**



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed out front wheel arch cover (2).

38 – With right installation: Detaching ride height sensor cable



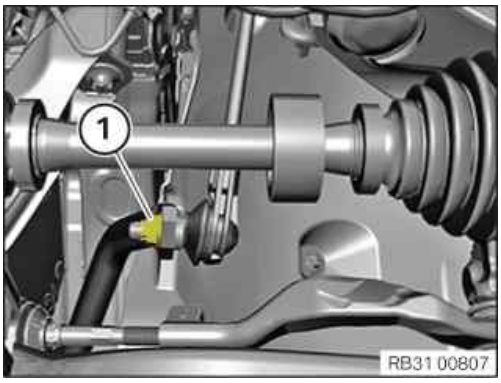
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

39 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**



- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

40 – Detaching rubber mount from front axle support

- Spray rubber mount (1) with lubricant and release from holder on front axle support.

cardiagn.com

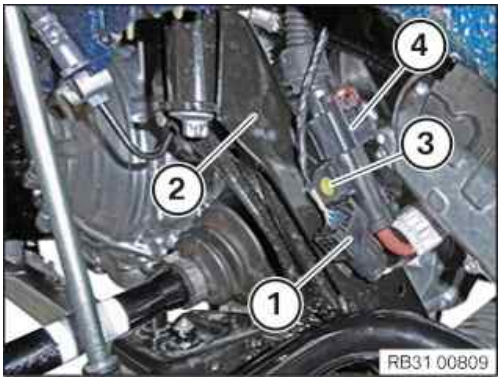
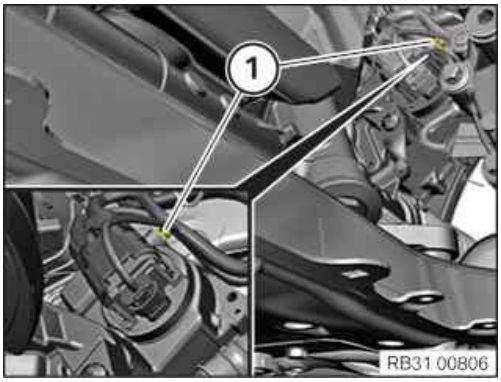
41 – Disconnecting plug connections from steering gear

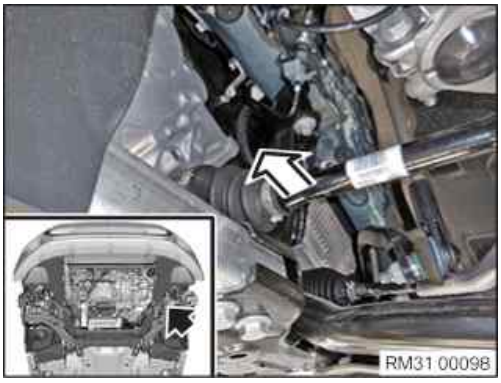
▶ **If installed: Detach connectors from the front axle carrier**



- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).

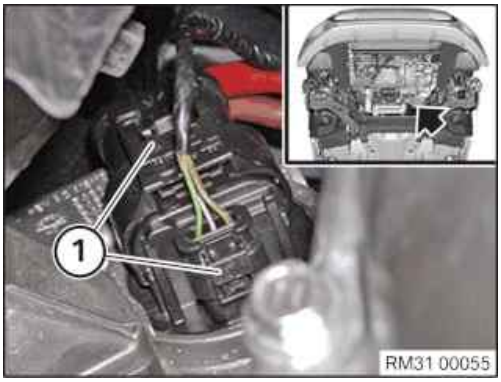


- Disconnect wiring harness (1) from steering gear.



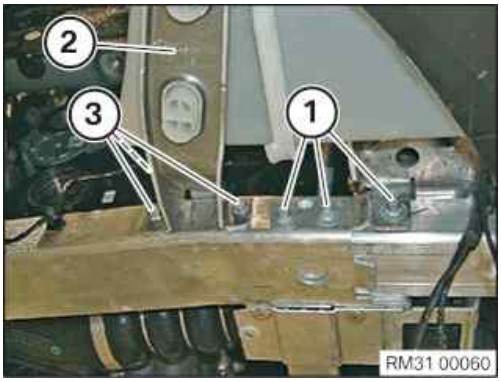
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.



- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

42 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

cardiagn.com

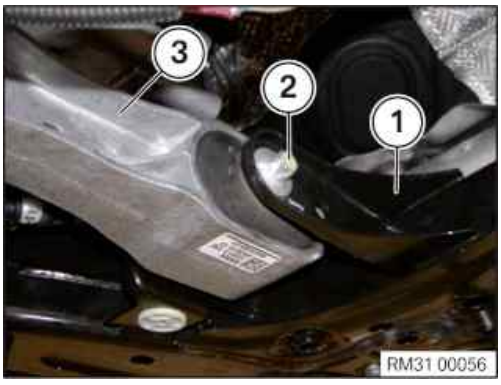
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).



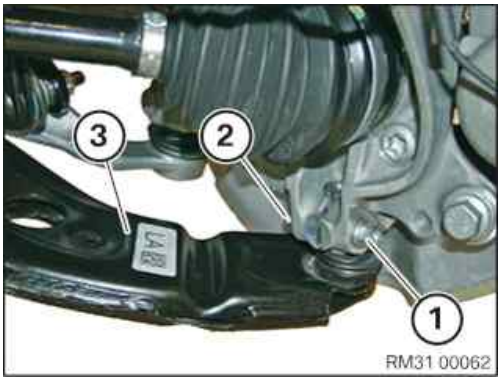
- Loosen screw (2) of the engine support (3) on the front axle (1).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

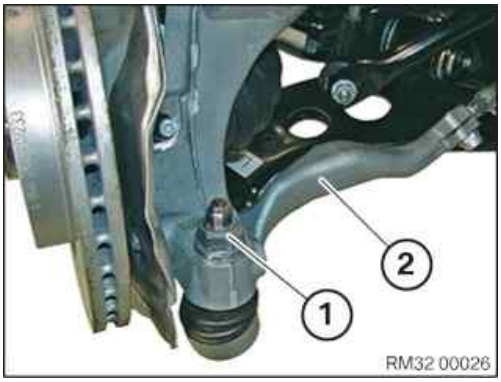
43 – Detaching and removing front axle completely



NOTICE

Perform the operations on the left and right side.

- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .



NOTICE

Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

cardiagn.com

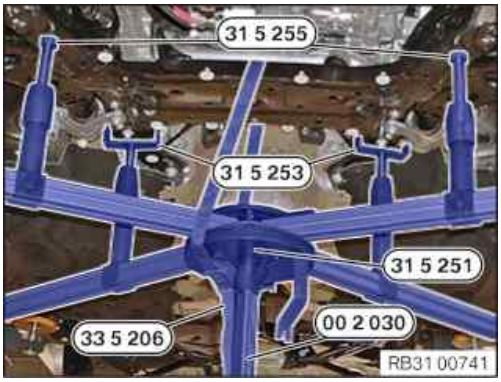
- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

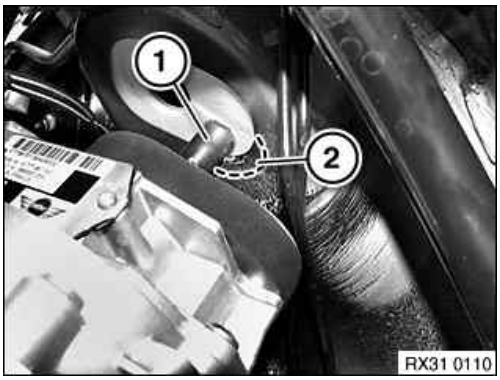
Note: In a profile rail pair, two profile rails are connected to one another by gearing.



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

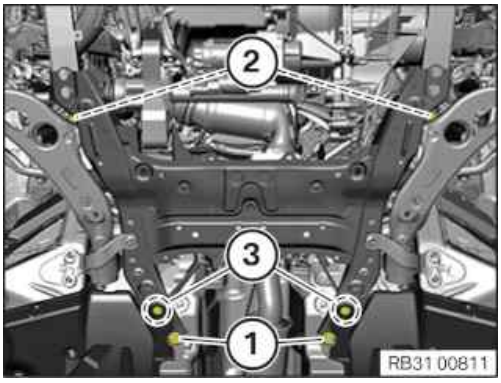


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.

For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

44 – Removing the connecting support from the tunnel in front and back

cardiagn.com

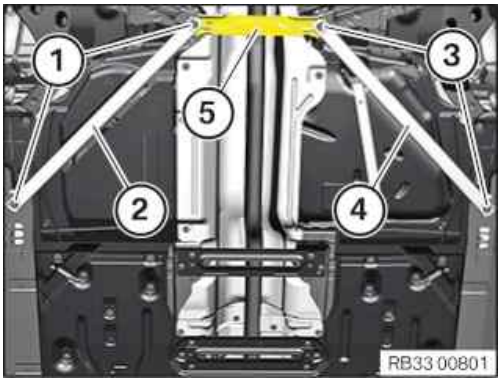
- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

45 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.



- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

46 – Remove exhaust system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

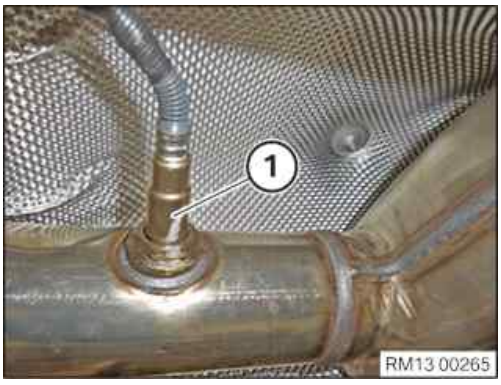
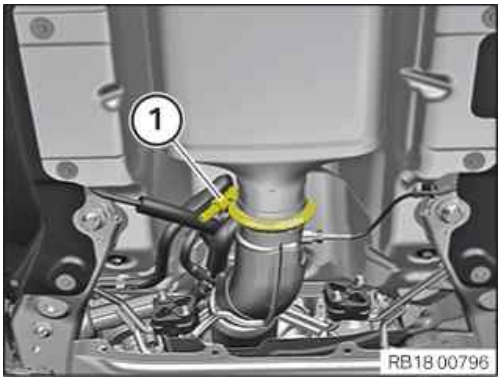
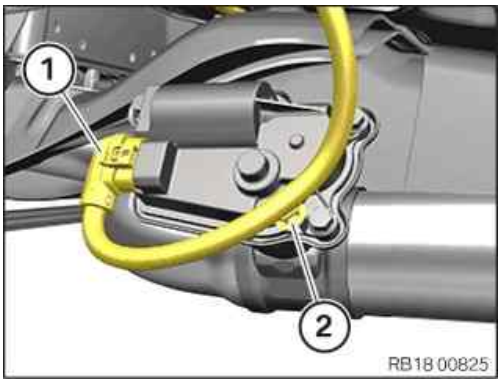
- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.



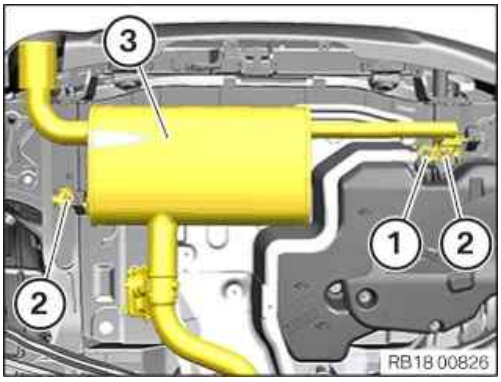
- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).



- Unlock and disconnect connector (1).
- Loosen clamp (2).



- Loosen screw (1).
- Loosen nuts (2).
- Lower the exhaust system (3) with an auxiliary person, guide out and remove.

47 – Removing starter motor

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

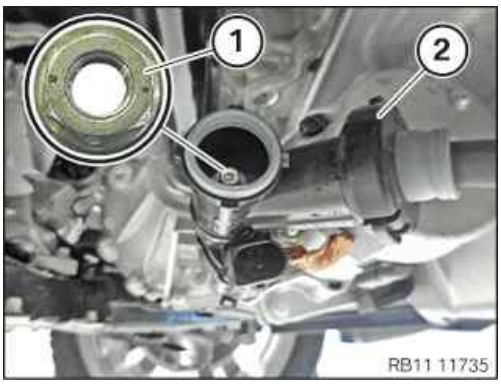
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

cardiagn.com

- Loosen screws (1).
- Feed out starter motor and remove.

48 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

Risk of burning!

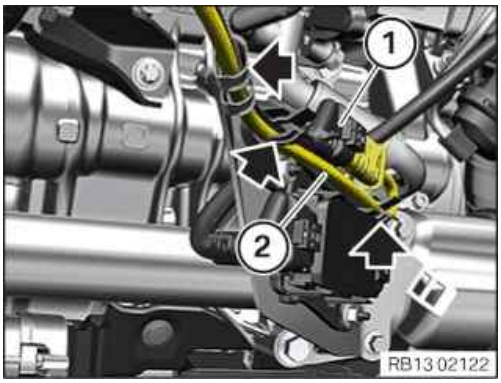
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

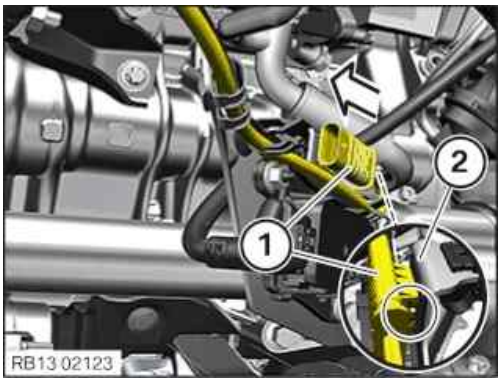
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).



- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

cardiagn.com

- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

49 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

Risk of burning!

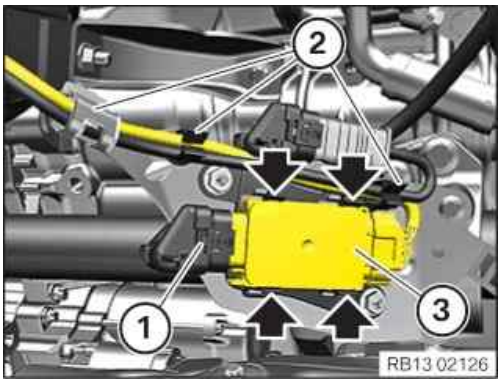
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

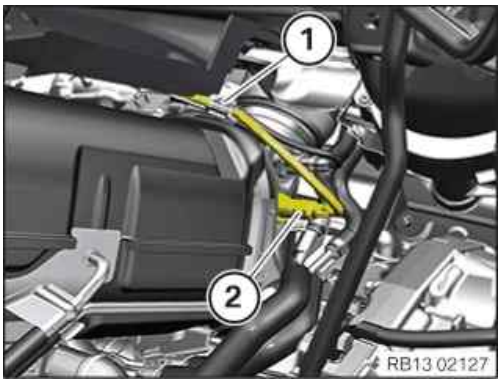
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).



- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

cardiagn.com

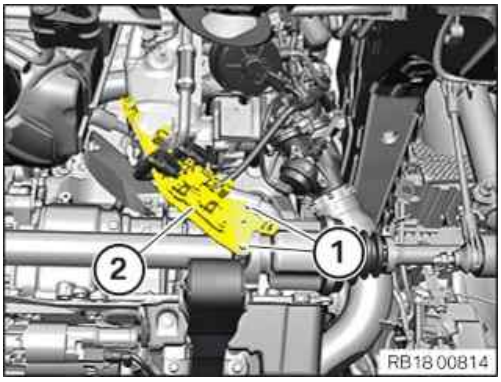
50 – Remove holder for oxygen sensor



- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

51 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

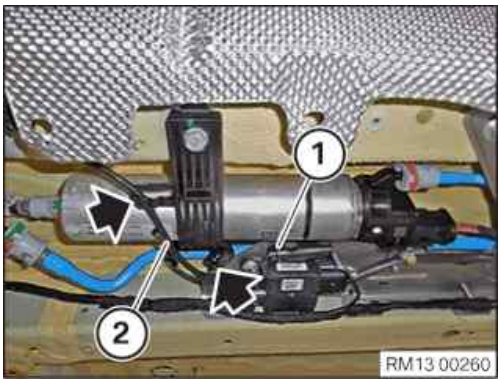
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

cardiagn.com

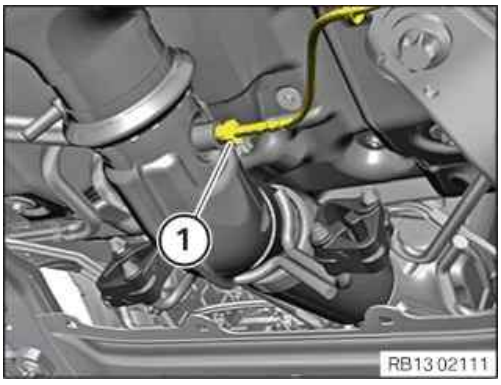
- Loosen the cable clip (1).



- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

52 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

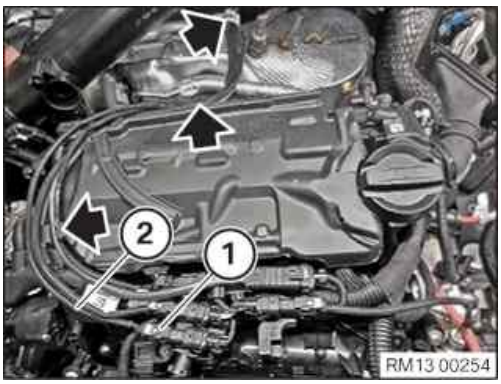
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect the plug connection (1).
- Feed the cable (2) from the temperature sensor out of the clamps (arrows) and remove it.

cardiagn.com

- Release the exhaust temperature sensor (1) with conventional tools (2).

- Feed out and remove exhaust temperature sensor (1).

53 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect the plug connection (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

cardiagn.com

- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

54 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!

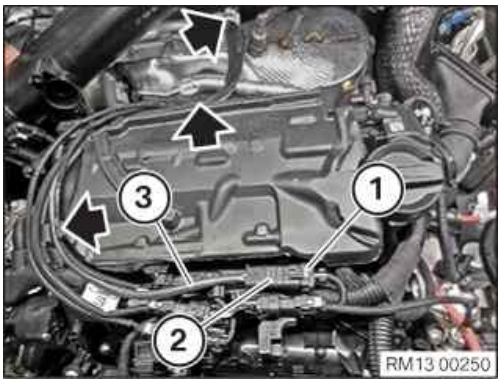
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

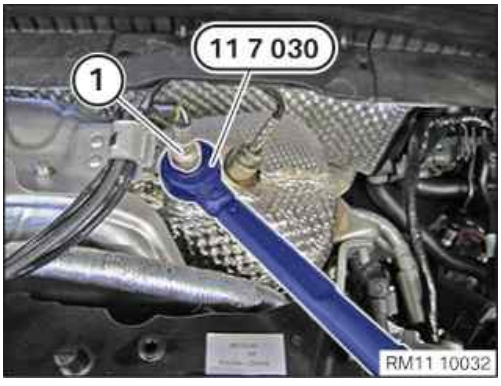
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect the plug connection (1).
- Detach the connector (2) from the holder .
- Feed out and remove cable (3) out of the oxygen control sensor from the clamps (arrows).



- Release the front oxygen control sensor (1) using special tool **0 491 075 (11 7 030)** .
- Feed out and remove the control sensor (1).

cardiagn.com

55 – Removing the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

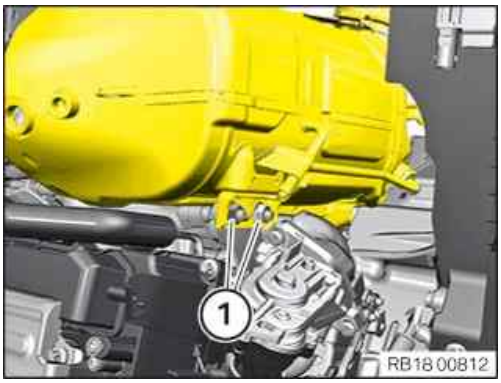
CAUTION

Heavy component.

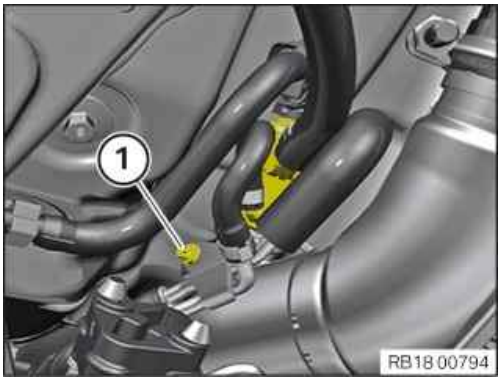
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).



- Loosen screw (1).

cardiagn.com

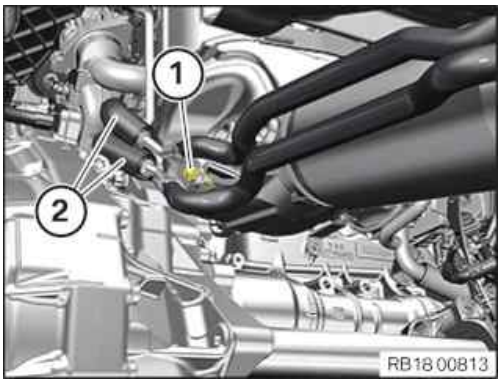
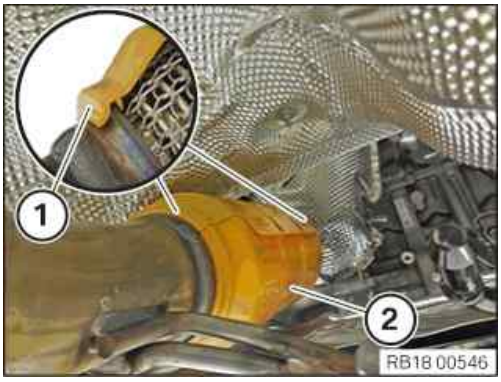
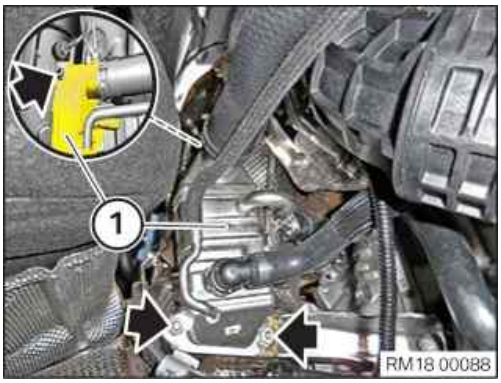
- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.



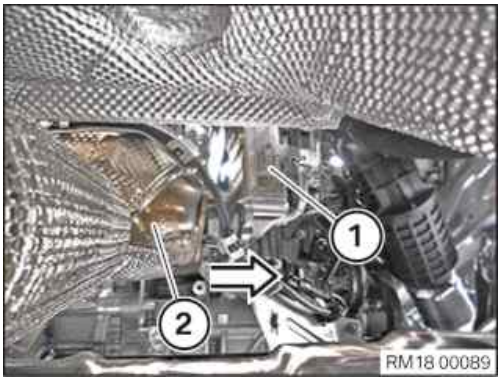
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.



- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.



- Detach nuts (arrows) from low pressure exhaust-gas recirculation cooler (1).



- Feed out low pressure exhaust-gas recirculation cooler (1) from diesel particulate filter (2) in direction of arrow and set aside.

cardiagn.com

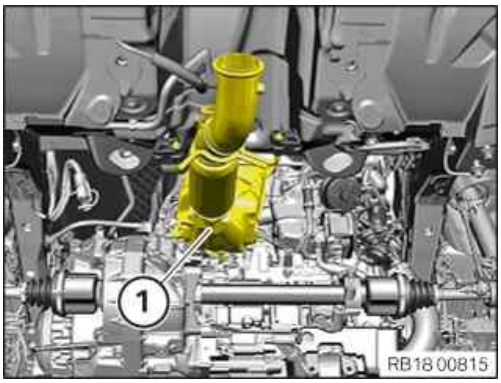
- Unfasten nut (1).



- Feed out diesel particulate filter (1) toward the bottom and remove.

56 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING

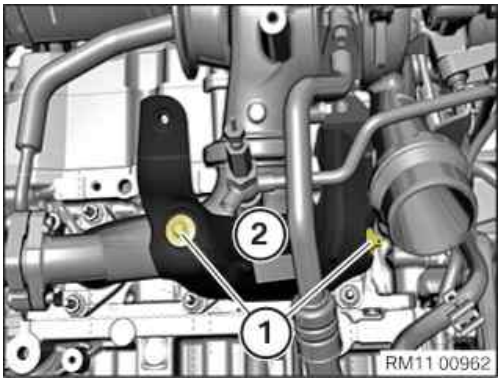
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

57 – Removing heat shield from rear exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

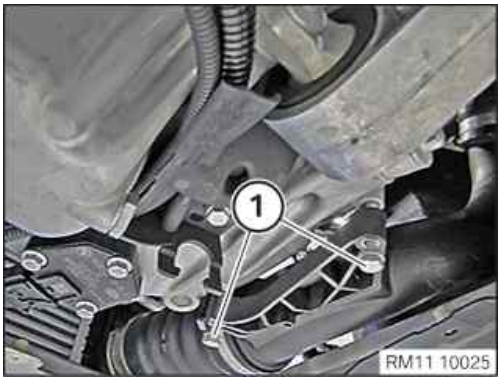
- Loosen screws (1).
- Loosen screw (2).

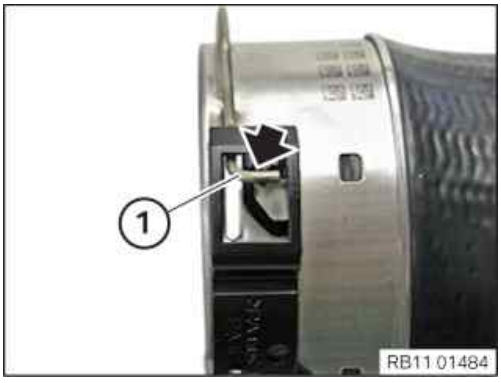
  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

58 – Remove right charge-air line

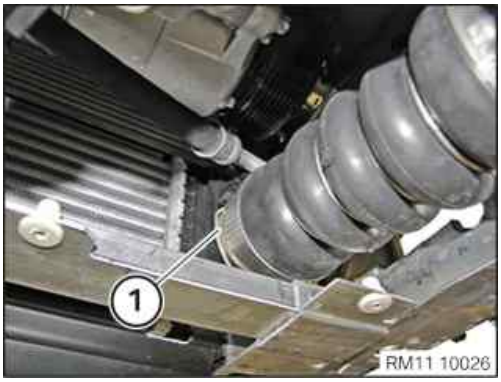


- Release charge air duct screws (1) on oil sump.

- Detach charge air duct screw connection (1) on crankcase.



- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

cardiagn.com

- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

59 – Remove exhaust turbocharger

- Release screw (1) from beneath with a long extension.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).
- Disconnect the oil return line (2) toward the bottom and set it aside.

- Release banjo bolt (1) of oil feed line from exhaust turbocharger and place to one side.

cardiagn.com

- Release screw (1) and remove V-clip.
- Pull exhaust turbocharger up and remove.
- Remove seal between exhaust turbocharger and exhaust manifold.

60 – Remove exhaust manifold

WARNING

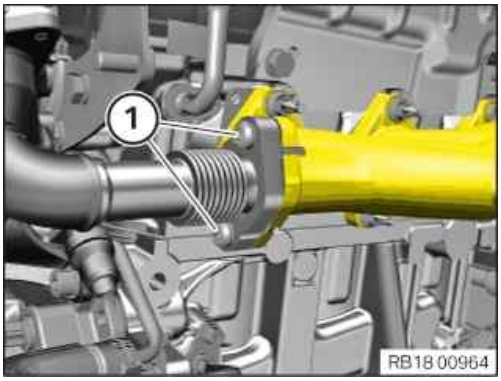
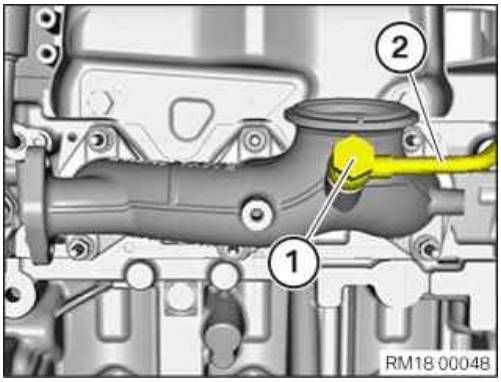
Hot surfaces.

Risk of burning!

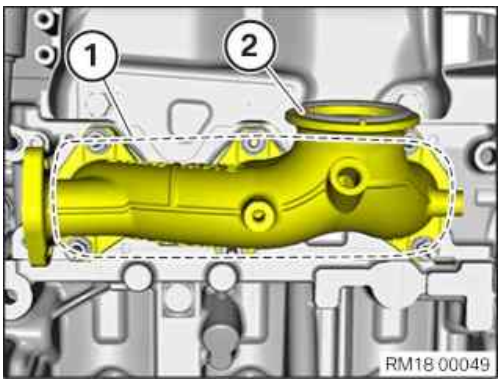
- Perform all work only on components that have cooled down.



- Loosen screws (1).



- Unscrew the banjo bolt (1).
- Feed out exhaust gas pressure pipe (2) and place to one side.



- Evenly release nuts along the dashed line (1) from outer to inner side.
- Feed out exhaust manifold (2) and remove.

61 – Removing the acoustic cover for the engine at the front

cardiagn.com

- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

62 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

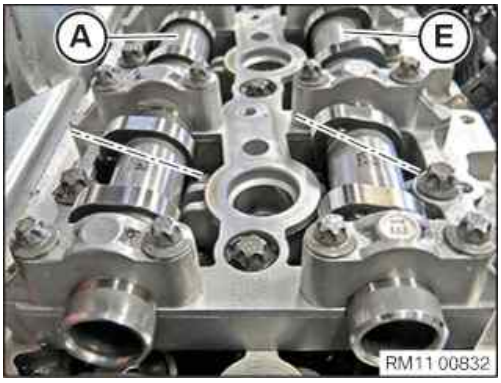
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

cardiagn.com

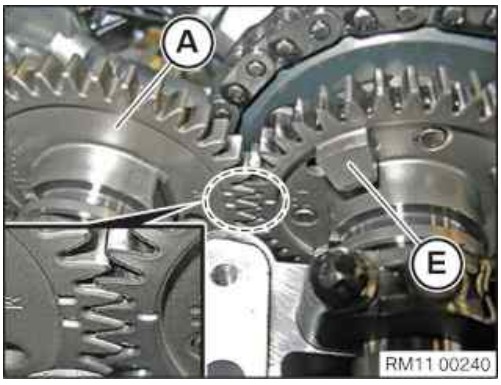
- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

63 – Remove chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

TECHNICAL INFORMATION

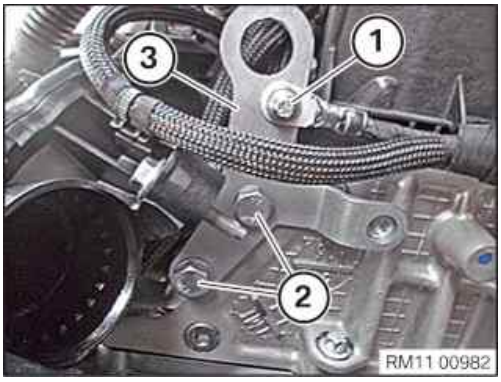
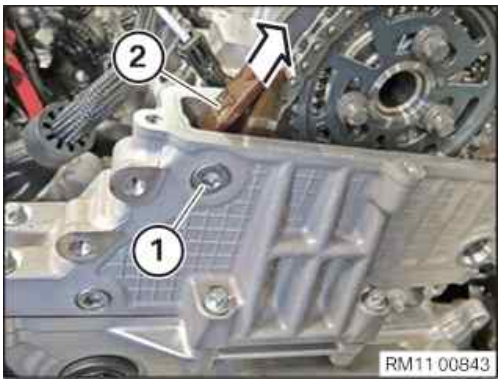
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

64 – Remove the timing chain guide rail

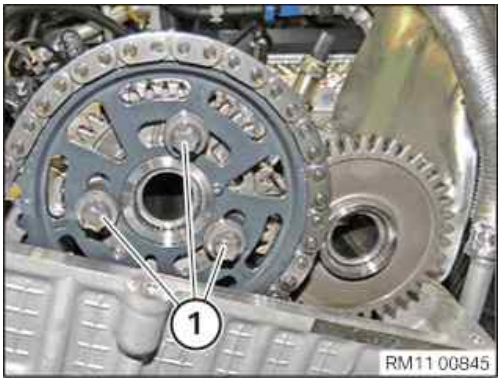


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

65 – Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

66 – Removing the camshaft support

cardiagn.com

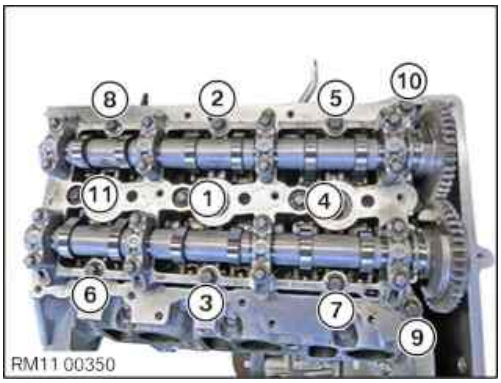
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen all screws step-by-step of the camshaft support in sequence (11) to (1).
- Remove camshaft support in upward direction.

  The camshafts remain installed in the camshaft support.

67 – Remove cylinder head.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com

- Position front axle support.
- Bend the underbody panelling to the side in area (3).
- Raise front axle support.
- When raising, insert the charge air cooler into its rubber mount on the transmission cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

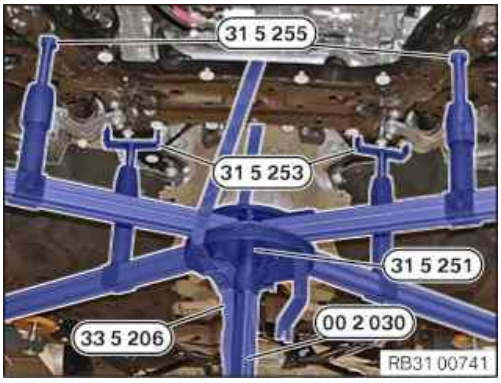
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

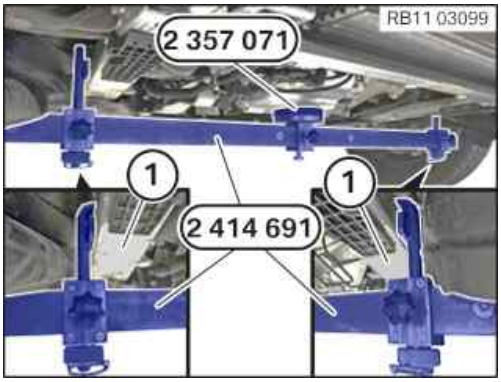
- If applicable, tighten the screws in area (3).

Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower the universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and set it aside.



- Prepare special tool **2 414 691** together with the special tool **2 357 071**.
- Attach special tool **2 414 691** to front axle support and correctly align the special tool **2 357 071** under the oil sump and tighten.
- Turn special tool **2 414 691** at adjusting screw uniformly upwards, until the special tool **2 357 071** makes contact with the oil sump.
- Tighten all adjusting screws of special tools**2 414 691** and **2 357 071**.

- Remove all glow elements with special tool **0 491 068 (11 6 050)** or a standard tool.

cardiagn.com

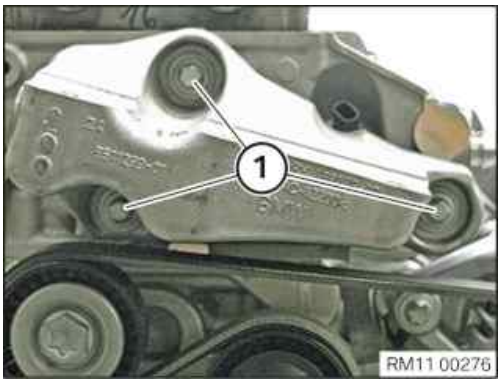
- Loosen screws (1).

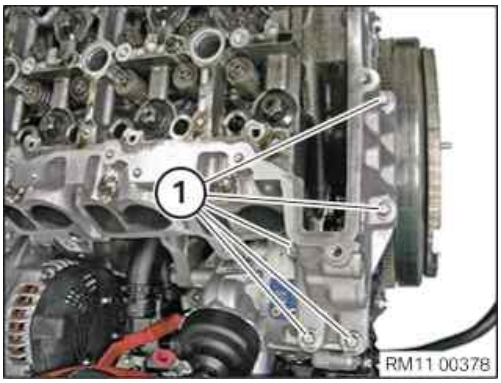


- Loosen screws (1).

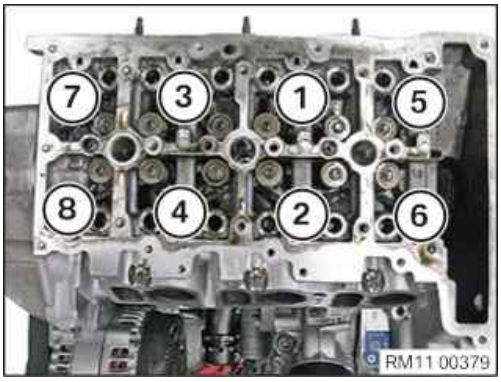
- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm



- Loosen screws (1).



- Loosen the cylinder head bolts in the sequence from (8) to (1).

cardiagn.com

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

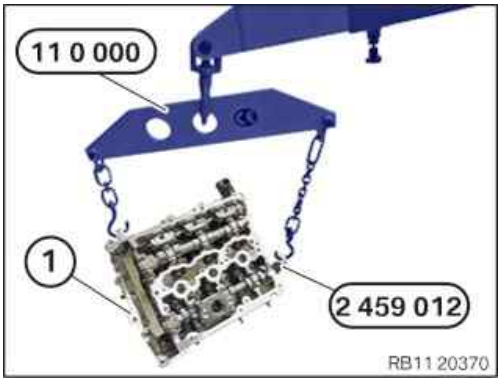
RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- **Carefully** guide out the cylinder head (1) with the engine lifter and the special tool **0 490 561 (11 0 000)** and remove.

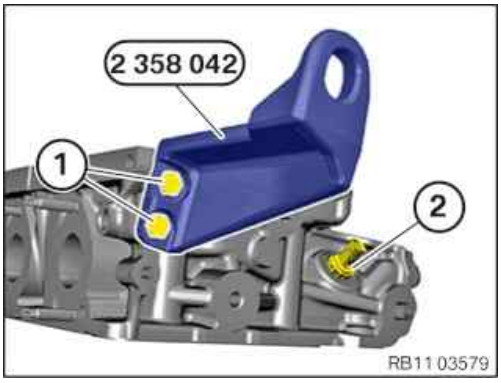


- Mount the cylinder head (1) on the special tool **0 494 362 (11 9 000)**.

MAIN WORK

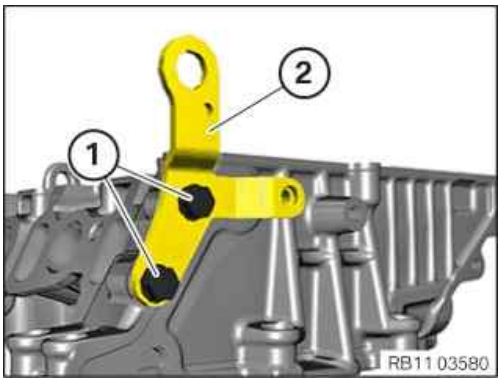
68 – replace cylinder head

- Unscrew the preheating elements with special tool **0 491 068 (11 6 050)**.



- Loosen screws (1).
- Remove the special tool **2 358 042** from the cylinder head.
- Loosen the coolant temperature sensor (2).

cardiagn.com



- Loosen screws (1).
- Remove mounting lug (2) from cylinder head.

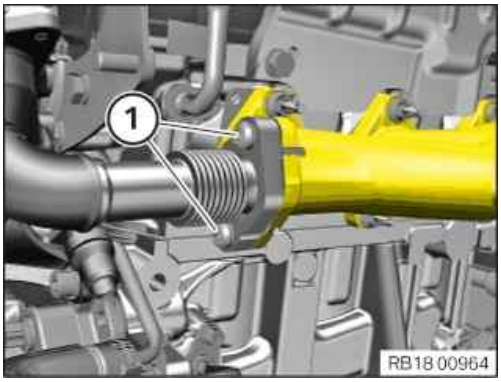
▶ **Remove exhaust manifold**

WARNING

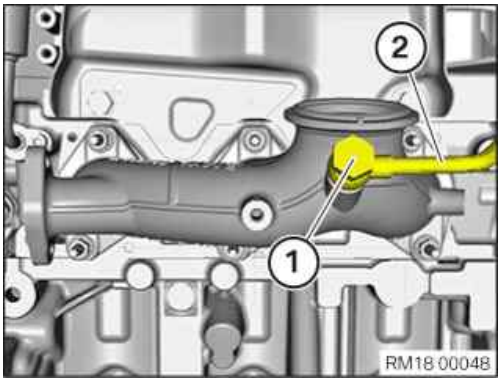
Hot surfaces.

Risk of burning!

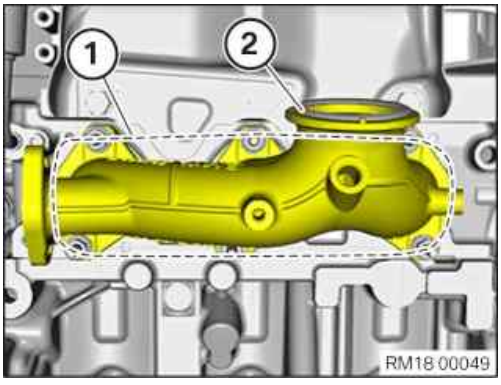
- Perform all work only on components that have cooled down.



- Loosen screws (1).



- Unscrew the banjo bolt (1).
- Feed out exhaust gas pressure pipe (2) and place to one side.



- Evenly release nuts along the dashed line (1) from outer to inner side.
- Feed out exhaust manifold (2) and remove.

▶ **Remove all valve springs**

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

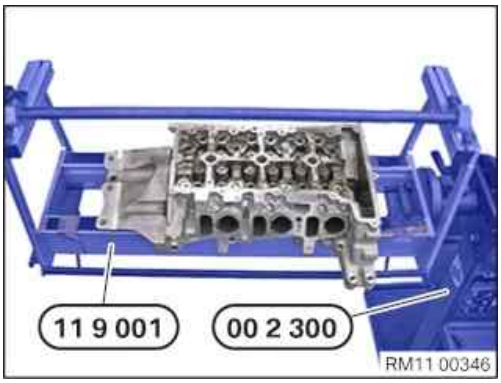
- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

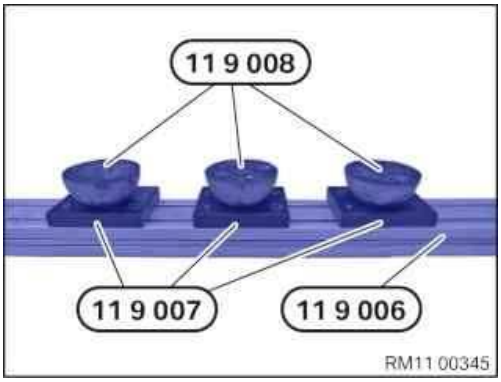
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

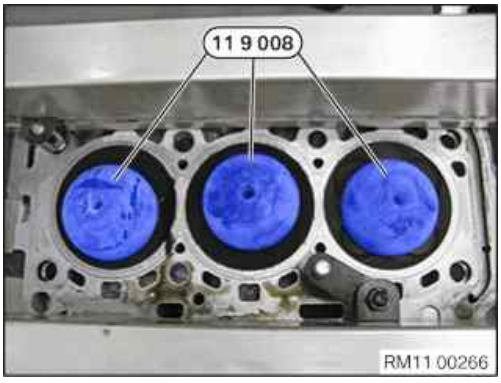
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Mount and bolt special tool **0 494 366 (11 9 001)** on special tool **0 495 187 (00 2 300)**.
- Mount and bolt the cylinder head to the special tool **0 494 366 (11 9 001)**.

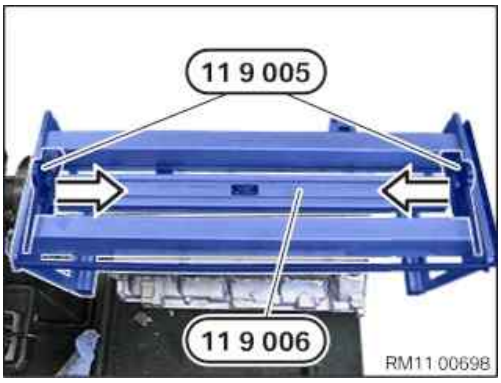


- Prepare special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.



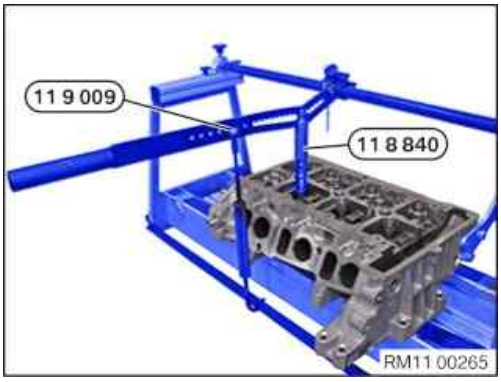
- Make sure that the special tools **0 494 373 (11 9 008)** are positioned as shown in the next operation.

cardiagn.com



- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Slide the special tool **0 494 370 (11 9 005)** in the direction of the arrow.

- Lock special tool 1**0 494 370 (11 9 005)** in the direction of the arrow.
- Rotate the cylinder head with the special tool **0 494 362 (11 9 000)** by 180° into the installation position.



- Align special tool **0 494 374 (11 9 009)** in direction of valve axis.

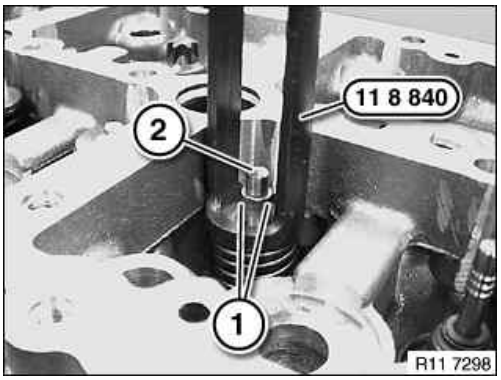
CAUTION

Component with preload.

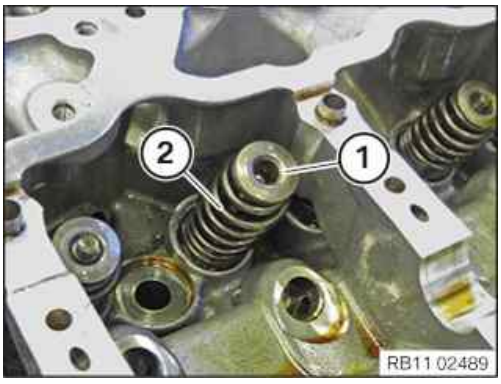
Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.



- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Remove the valve shims (1) with a magnet from the valve (2).
- Carefully relieve the valve spring.



- Set the spring cup (1) and the valve spring (2) down in the special tool **0 495 105 (11 4 480)** in order.

▸ **Remove valve stem seals**

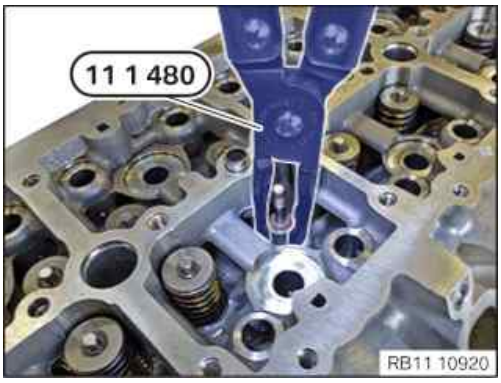
cardiagn.com

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



- Disassemble the valve stem seal (1) using the special tool **0 490 796 (11 1 480)**.

▸ **Remove all valves**

RISK OF DAMAGE

Contaminant or foreign body.

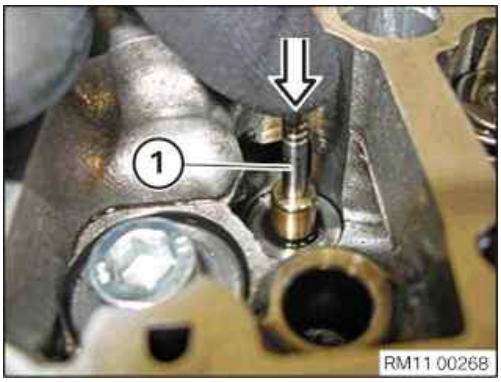
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

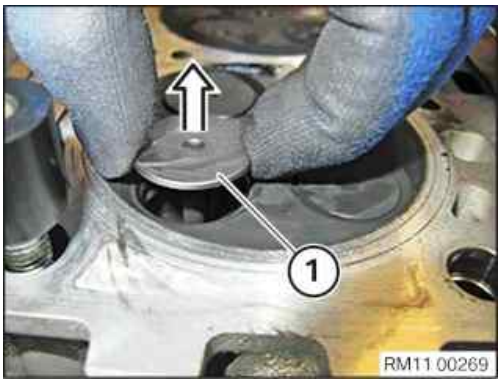
- Turn the cylinder head with the special tool **0 494 362 (11 9 000)**.
- Unlock the special tool **0 494 370 (11 9 005)** in the direction of the arrow.
- Remove special tool **0 494 371 (11 9 006)**.

- Remove special tool **0 494 373 (11 9 008)** if necessary.

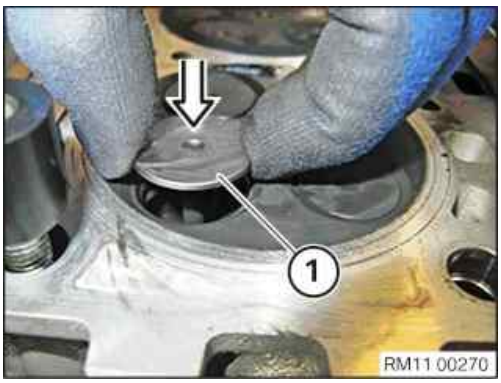
cardiagn.com



- Push the valve stem (1) into the cylinder head in the direction of the arrow.

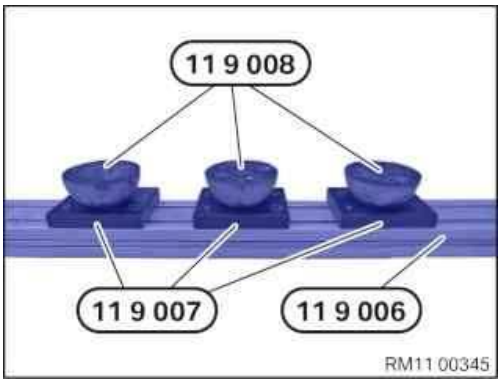


- Remove the valve (1) in the direction of arrow and store it properly in the special tool **0 495 105 (11 4 480)**.

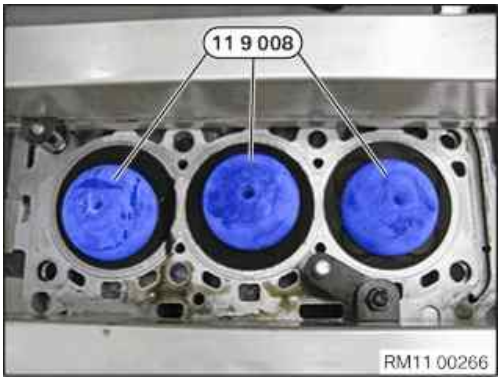


- Install valves (1) in the new cylinder head.

  Parts: Cylinder head
- Feed valves (1) in the direction of arrow and install.
- **Check the valves for tightness.**

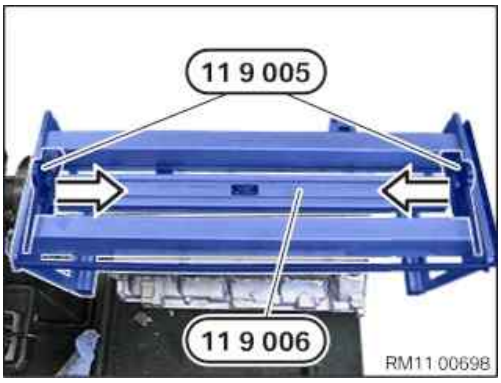


- Prepare the special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.



- The special tools **0 494 373 (11 9 008)** must be set up accordingly in the next operation.

cardiagn.com



- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Lock special tool **0 494 370 (11 9 005)** in direction of arrow.

- Lock special tool **0 494 370 (11 9 005)** in direction of arrow.
- Use the special tool **0 494 362 (11 9 000)** to bring the cylinder head into the installation position by 180°.

▶ **Installing valve stem seals**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

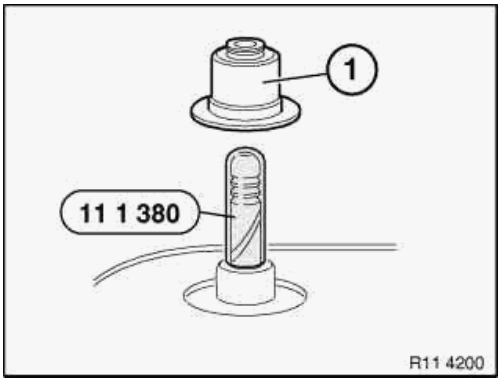
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

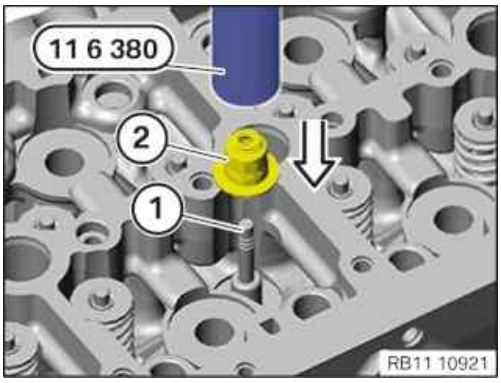
- Clean the contact surfaces (1).



- Fit special tool **0 490 746 (11 1 380)**.
- Oil the valve stem seal (1) and install it.

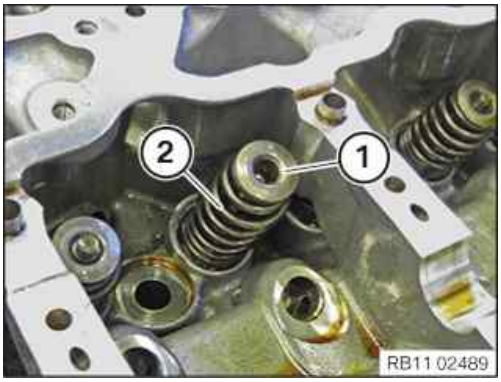
  Parts: Valve stem seal

cardiagn.com

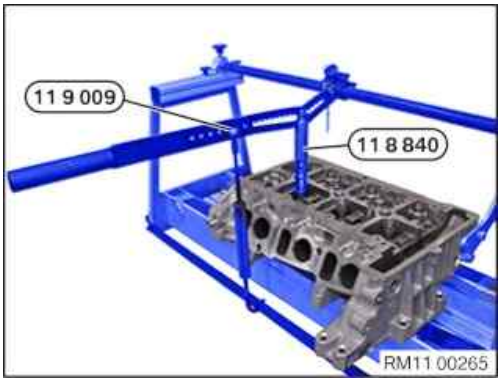


- Position the valve stem seals (2) on the valve (1).
- Use special tool **0 493 249 (11 6 380)** to press down the valve stem seal (2) until they are in contact with the cylinder head.

► **Install all valve springs**



- The mounting orientation of the valve springs (2) can be freely chosen.
- Install the valve spring (2) and spring cup (1).



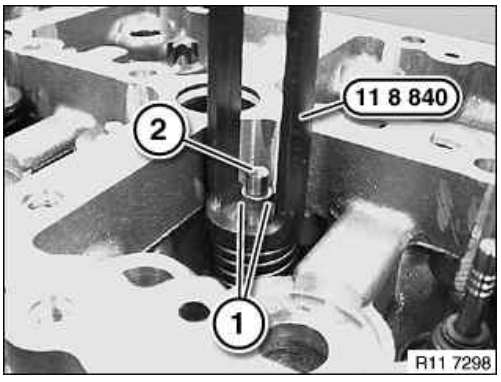
CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

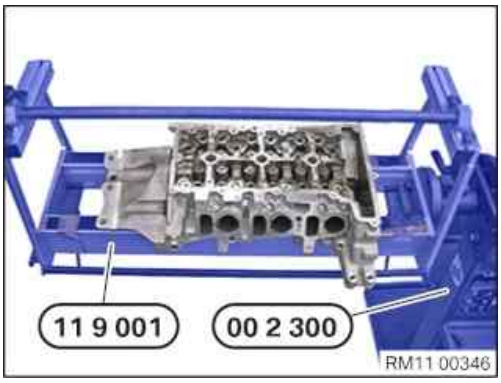
- Align special tool in direction of valve axis.
- Select the corresponding groove using special tool **0 496 143 (11 8 840)**.
- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.



- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Install the valve shims (1) of the valve (2) with a magnet.
- Relieve load on valve spring.

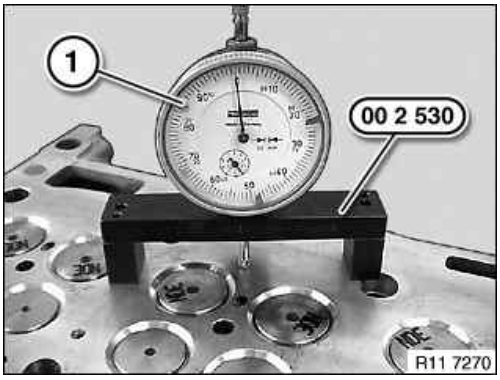
- Unlock special tool **0 494 370 (11 9 005)** in the direction of arrow and remove.

cardiagn.com



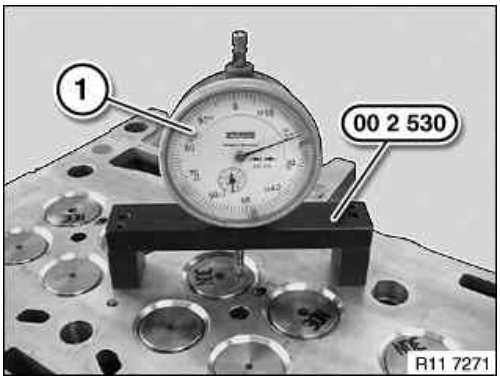
- Remove cylinder head from special tools **0 494 366 (11 9 001)** and **0 495 187 (00 2 300)**.

▸ **Checking the valve underprotrusion**



- Set the dial gauge (1) onto the cleaned cylinder sealing surface with slight preload in special tool **0 490 185 (00 2 530)**.
- Set dial gauge in mildly preloaded state to "zero".

Check



- Position the dial gauge (1) on the valve with special tool **0 490 185 (00 2 530)**.
- Measure valve underprotrusion and compare with the setpoint value.

Valve underprotrusion

	0,8 (0,7 - 0,9) mm

Result

» Valve underprotrusion is outside tolerance.

Measure

- Replace cylinder head.

▸ **Installing exhaust manifold**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

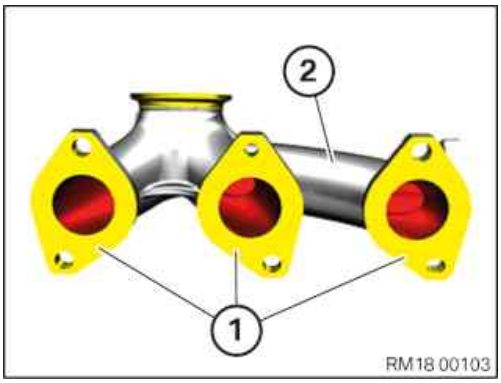
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

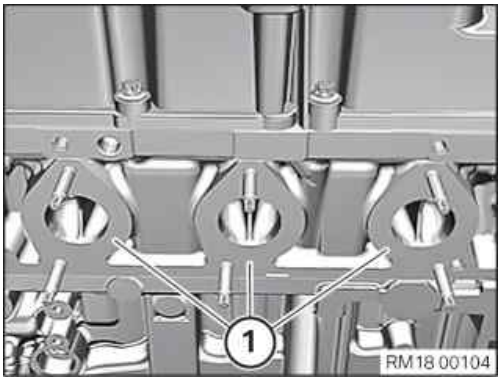
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

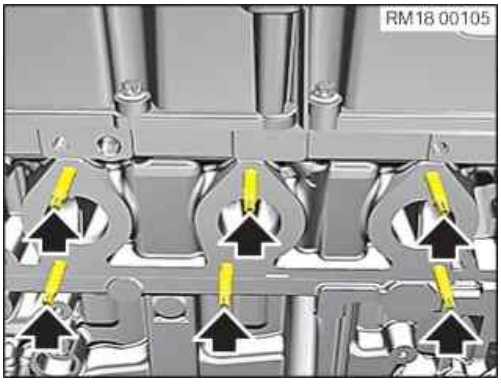
The sealing surfaces must be free from oils, grease and cleaning agents.



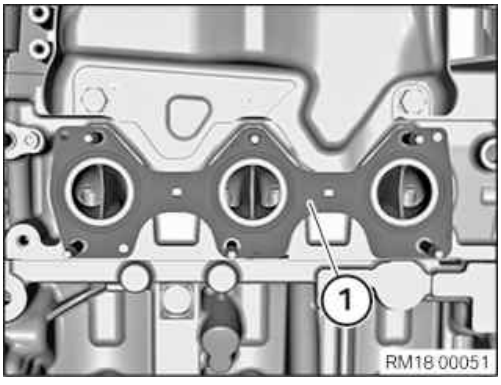
- Clean the connection points (1) on the exhaust manifold (2) with the special tool **0 495 102 (11 4 470)**.



- Clean the connection points (1) on the cylinder head with the special tool **0 495 102 (11 4 470)**.



- Check the stud bolts (arrows) on the cylinder head for **correct** fit.



TECHNICAL INFORMATION

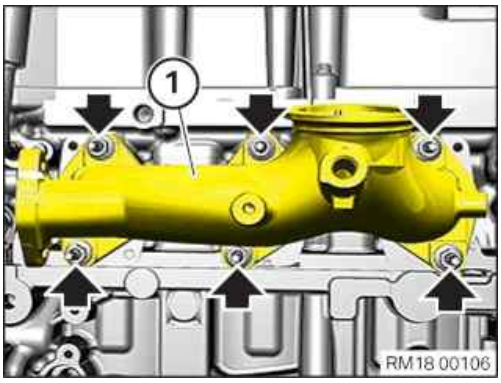
The **coated side of the** seal must be mounted facing towards the exhaust manifold.

- Renew the gasket (1).

  Parts: Gasket

- Insert and install the gasket (1).

cardiagn.com

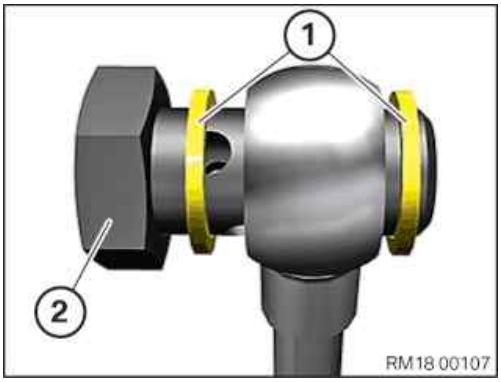


- Insert and install the exhaust manifold (1).
- Renew the nuts (arrows).

  Parts: Nuts
- Hand-tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.
- Tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.

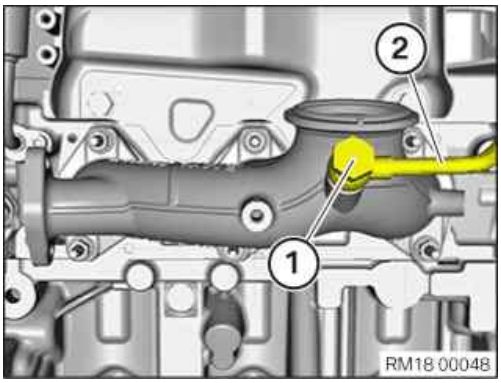
Exhaust manifold to cylinder head

M7	If necessary, renew loose stud bolts. Replace nuts.	Tightening torque Tightening torque	11 Nm 13 Nm



- Renew the sealing rings (1) from the banjo bolt (2).

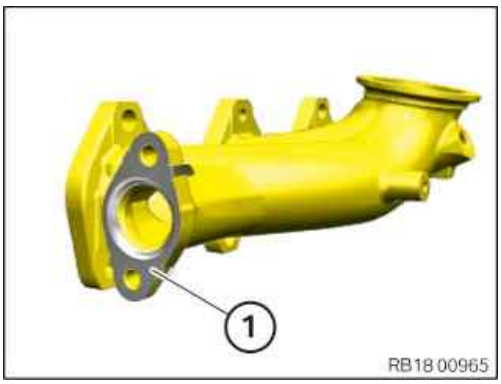
  Parts: Sealing ring



- Insert and install the exhaust gas pressure pipe (2).
- Tighten the banjo bolt (1).

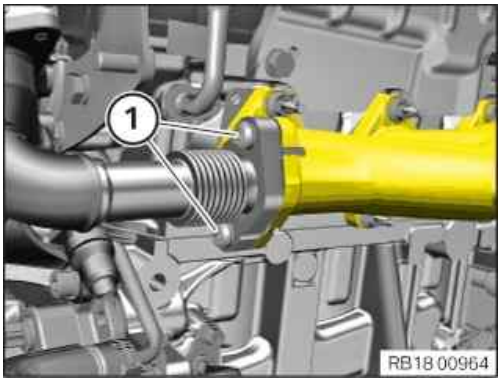
Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt		Renew sealing rings.	30 Nm



- Renew seal (1) between exhaust-gas recirculation cooler and exhaust manifold.

  Parts: Gasket



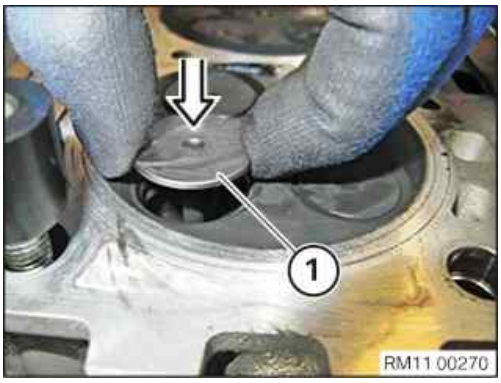
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold

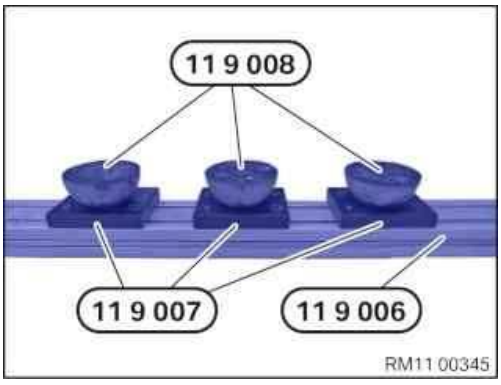
M8x28	Replace screws	Tightening torque	32 Nm

cardiagn.com

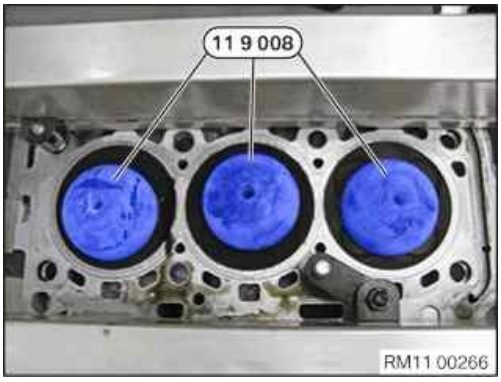


- Install valves (1) in the new cylinder head.

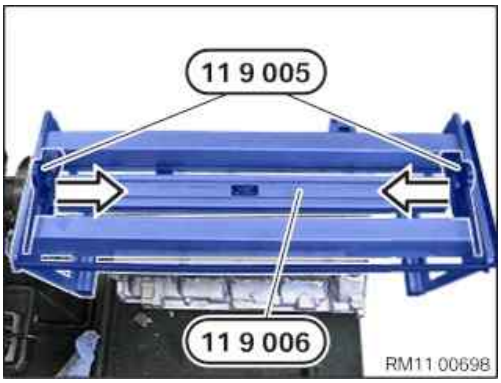
  Parts: Cylinder head
- Feed valves (1) in the direction of arrow and install.
- **Check the valves for tightness.**



- Prepare the special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.



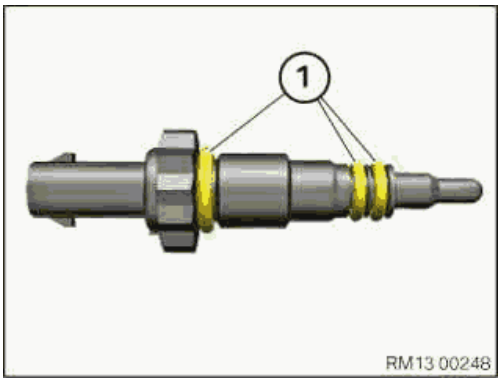
- The special tools **0 494 373 (11 9 008)** must be set up accordingly in the next operation.



- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Lock special tool **0 494 370 (11 9 005)**in direction of arrow.

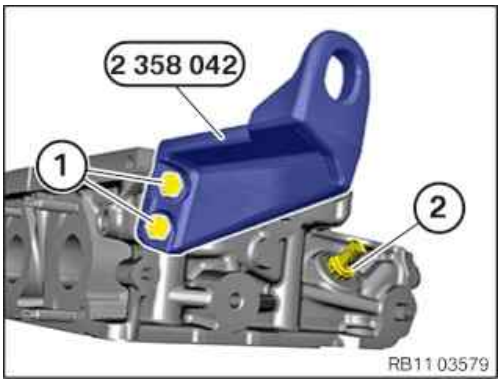
- Lock special tool **0 494 370 (11 9 005)**in direction of arrow.
- Use the special tool **0 494 362 (11 9 000)** to bring the cylinder head into the installation position by 180°.

cardiagn.com



- When reusing coolant temperature sensor sealing rings (1), check for damage, renew if necessary.

  Parts: Sealing ring



- Attach the special tool **2 358 042** on the cylinder head.
- Tighten the screws (1).

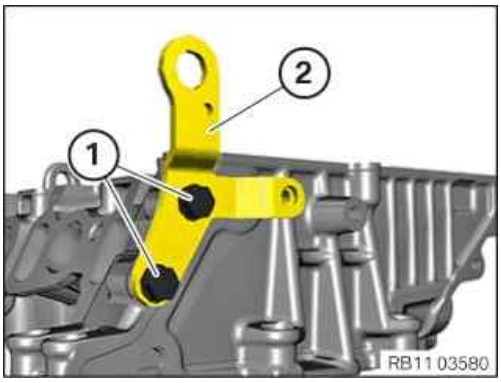
Special tool to cylinder head

M8		Tightening torque	21,5 Nm

- Tighten the coolant temperature sensor (2).

Coolant temperature sensor at cylinder head

Temperature sensor		Tightening torque	3,5 Nm



- Install mounting lug (2) on the rear cylinder head.
- Tighten the screws (1).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Screw in preheating elements using special tool **0 491 068 (11 6 050)** and tighten.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

POSTPROCESSES

69 – Cleaning the sealing surface

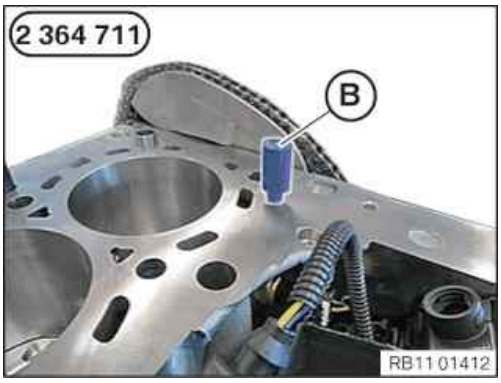
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com



- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

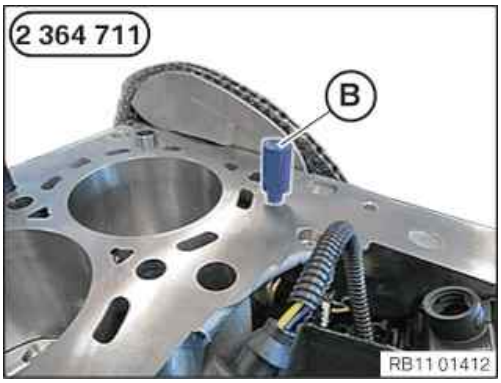
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

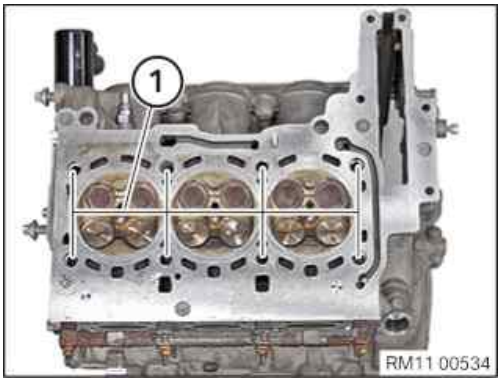
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.



- Remove special tool (B).

70 – Renewing the cylinder head gasket



RISK OF DAMAGE

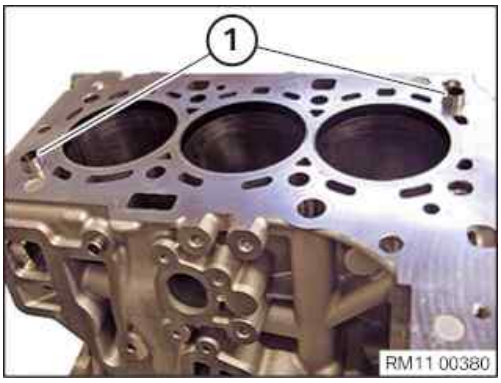
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

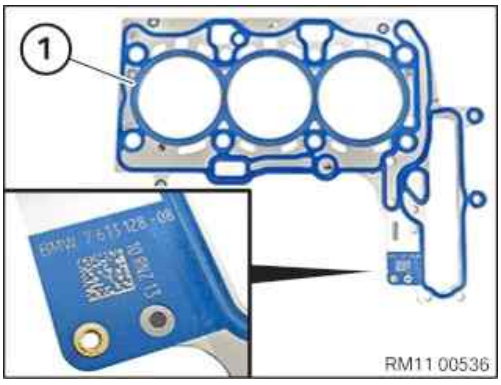
- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

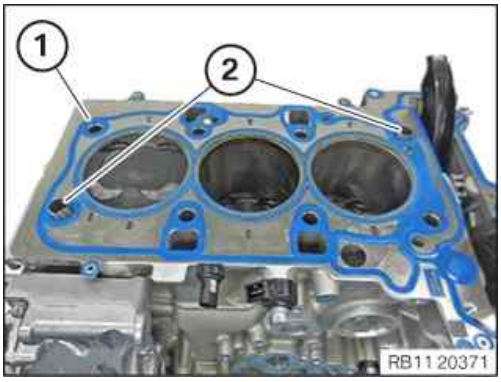
cardiagn.com



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.
- **After work on the crankshaft drive and processing the cylinder head, the thickness of the cylinder head gasket must be determined.**



- Guide in the cylinder head gasket (1) and install.

  Parts: Cylinder head gasket.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

71 – Installing the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Damage to threads.

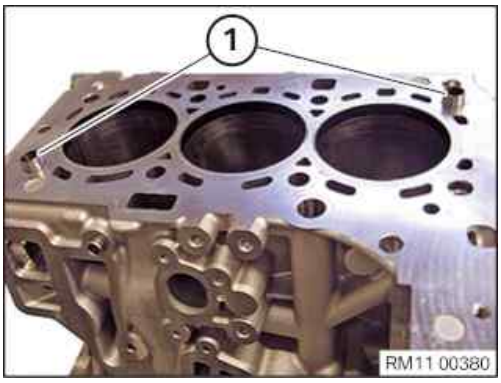
Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

Do not remove bolt coating.

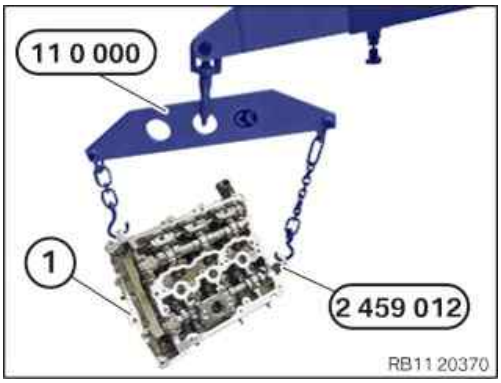
cardiagn.com



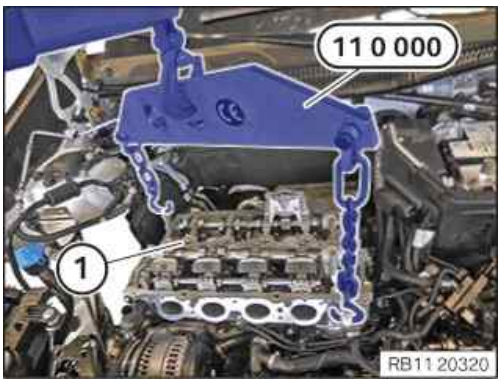
- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.

- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.



- Position cylinder head (1) on special tool **0 490 561 (11 0 000)** and engine lifter.



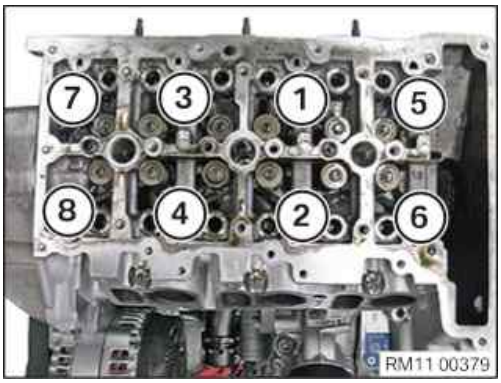
RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- Feed in the cylinder head (1) **carefully** with the engine lifter and the special tool **0 490 561 (11 0 000)** and install.



- Fit new cylinder head bolts.

  Parts: Cylinder head bolts

- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

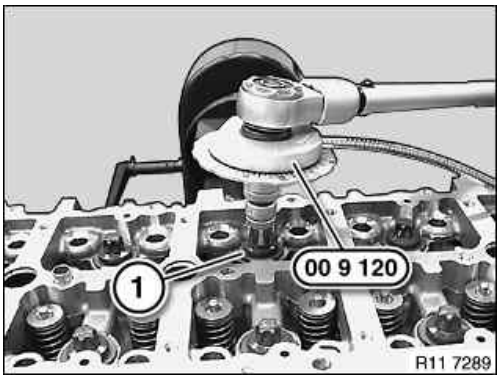
  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolt in the sequence (1) to (8).

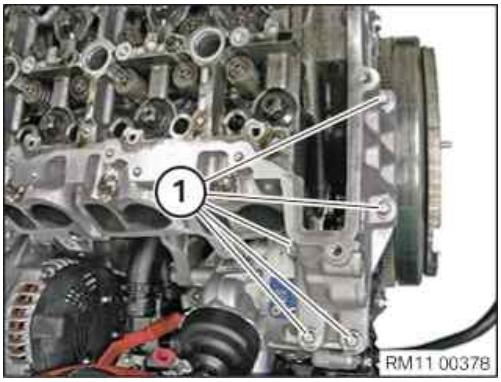
cardiagn.com



- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

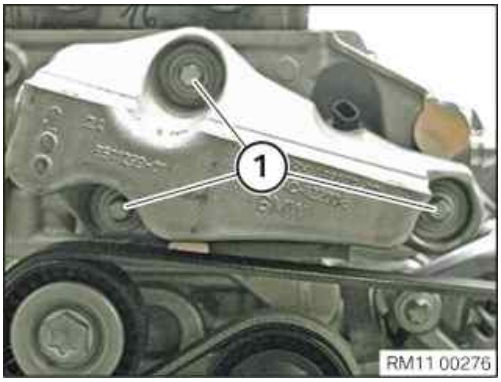


- Tighten the screws (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

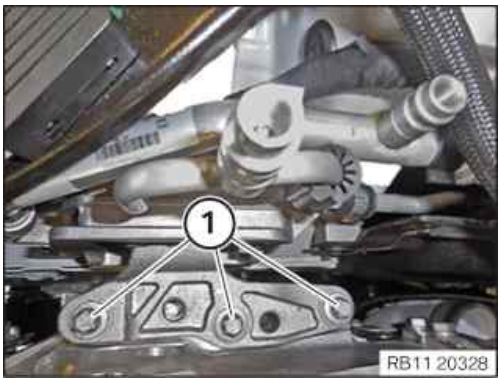
- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.



- Tighten the screws (1).

Engine support to cylinder head

M10X45		Tightening torque	41 Nm



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Right engine mount to cylinder head

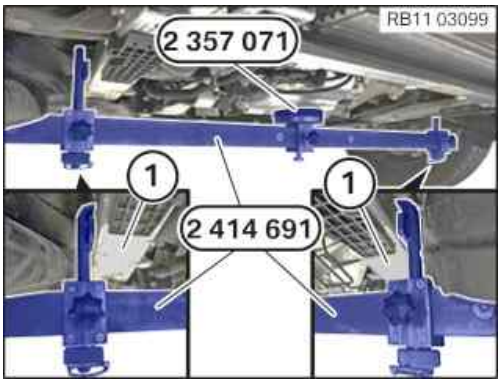
M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

cardiagn.com

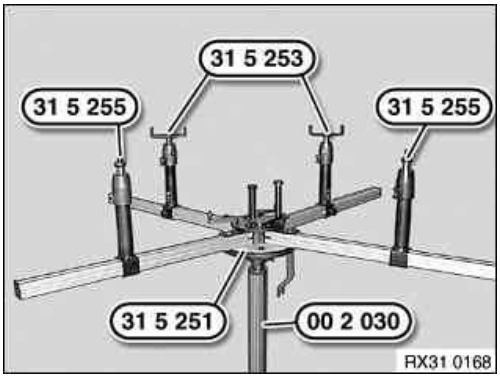
- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

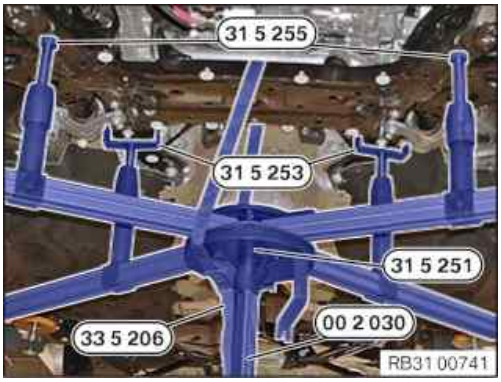


- Disassemble special tool **2 414 691** using special tool **2 357 071**.



- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

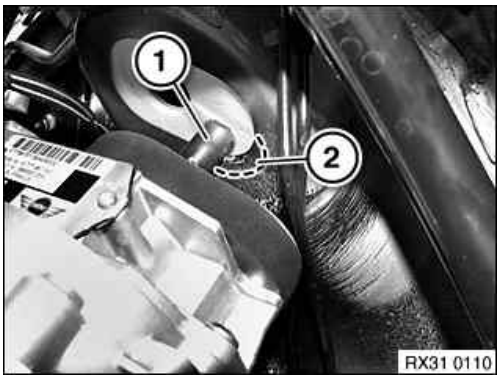
Note: In a profile rail pair, two profile rails are connected to one another by gearing.



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.



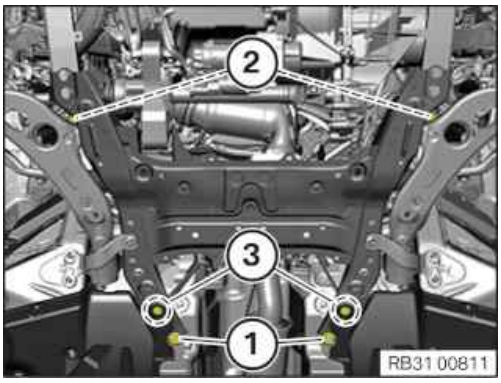
TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and the front axle remove.

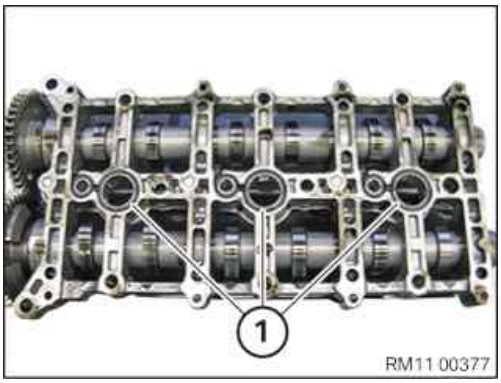
72 – Installing the camshaft support

RISK OF DAMAGE

Damage of the engine and mounted parts.

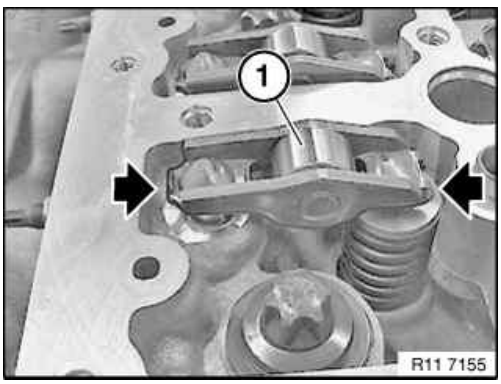
Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.

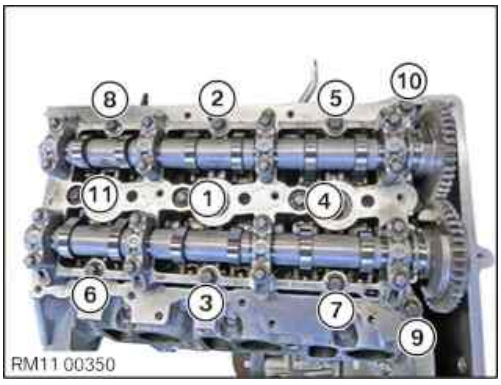


- Renew the seals (1) on the camshaft support.

  Parts: Seals



- Make sure the roller cam followers (1) have the correct mounting orientation.
- Position the camshaft support.



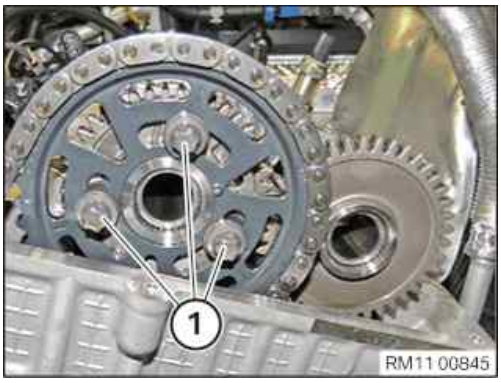
- Tighten the screws of the camshaft support incrementally in the sequence (1) to (11).

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

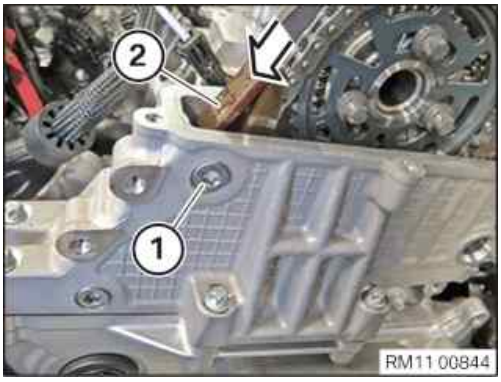
73 – Installing the camshaft sprocket on the intake camshaft

cardiagn.com



- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

74 – Install the timing chain guide rail



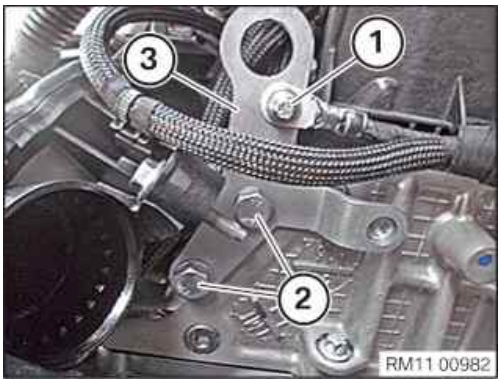
- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm



- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

75 – Installing the chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

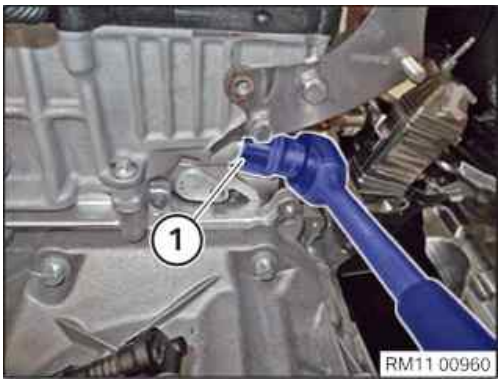
  Parts: Sealing ring

cardiagn.com

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

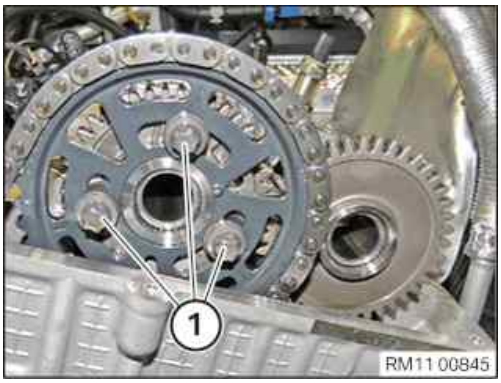


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

76 – Tightening the camshaft sprocket on the intake camshaft



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

77 – Removing the special tool to secure the exhaust camshaft

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

78 – Remove special tool to disconnect the crank shaft

cardiagn.com

- Remove special tool **2 288 380**.

79 – Checking camshaft timing

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

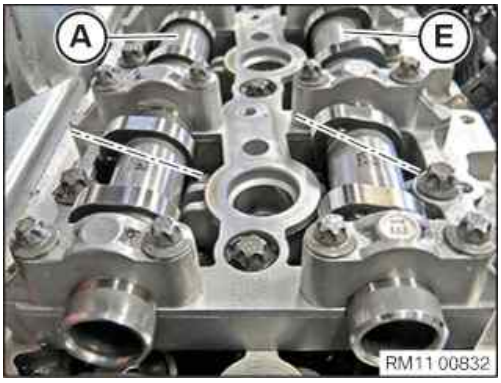
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

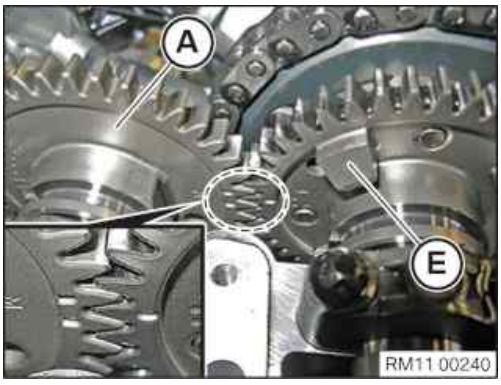
  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

cardiagn.com

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

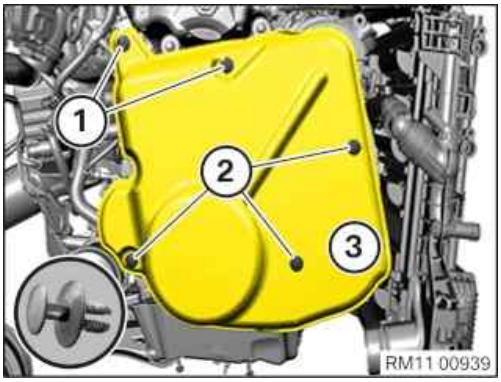
TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

80 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

81 – Installing exhaust manifold

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

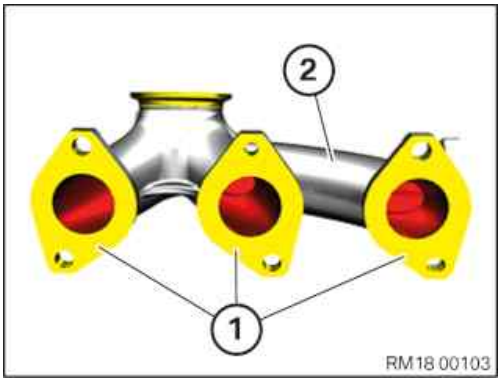
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

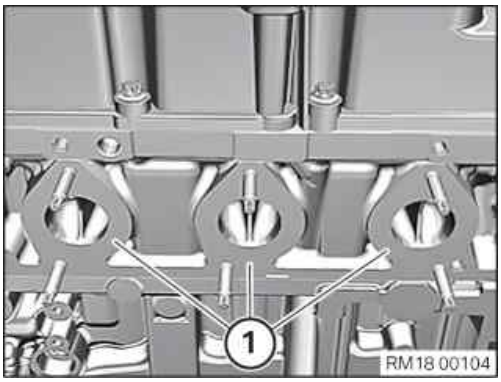
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

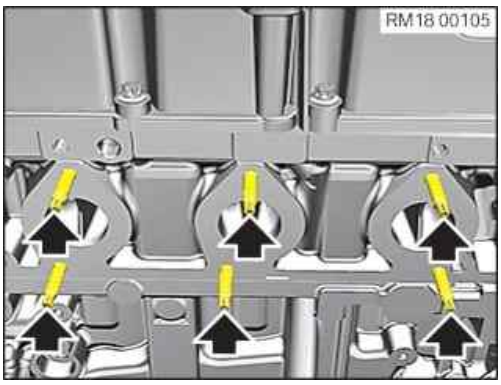
The sealing surfaces must be free from oils, grease and cleaning agents.



- Clean the connection points (1) on the exhaust manifold (2) with the special tool **0 495 102 (11 4 470)**.

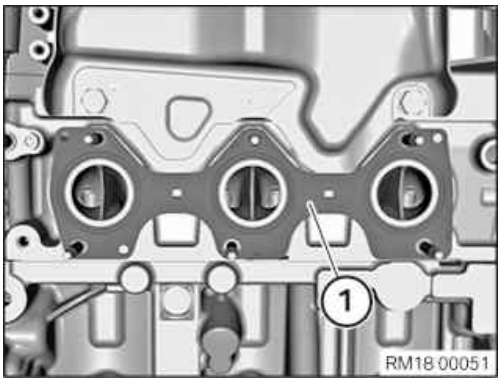


- Clean the connection points (1) on the cylinder head with the special tool **0 495 102 (11 4 470)**.



- Check the stud bolts (arrows) on the cylinder head for **correct** fit.

cardiagn.com

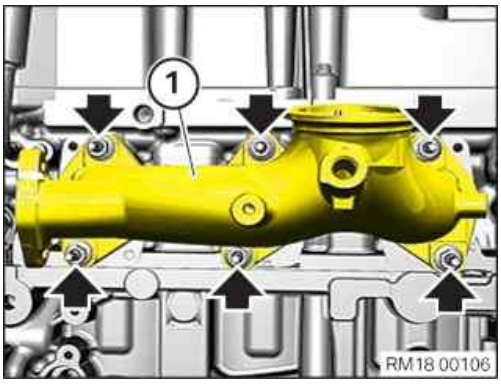


TECHNICAL INFORMATION

The **coated side of the** seal must be mounted facing towards the exhaust manifold.

- Renew the gasket (1).

  Parts: Gasket
- Insert and install the gasket (1).

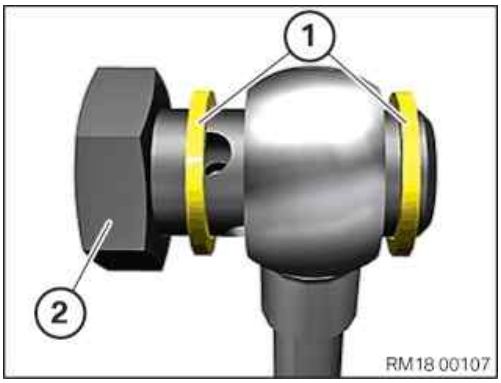


- Insert and install the exhaust manifold (1).
- Renew the nuts (arrows).

  Parts: Nuts
- Hand-tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.
- Tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.

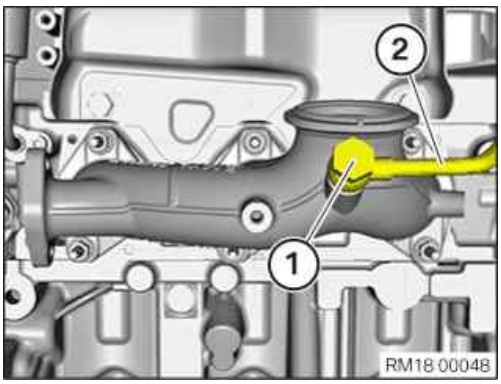
Exhaust manifold to cylinder head

M7	If necessary, renew loose stud bolts.	Tightening torque	11 Nm
	Replace nuts.	Tightening torque	13 Nm



- Renew the sealing rings (1) from the banjo bolt (2).

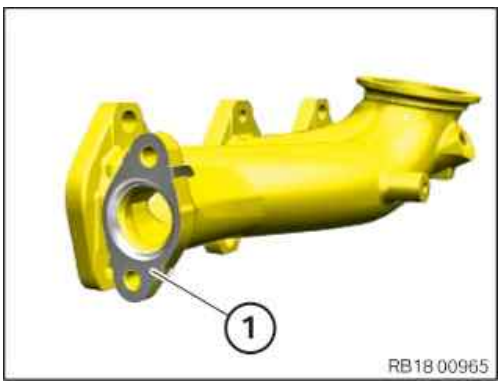
  Parts: Sealing ring



- Insert and install the exhaust gas pressure pipe (2).
- Tighten the banjo bolt (1).

Banjo bolt for exhaust pressure pipe to exhaust manifold

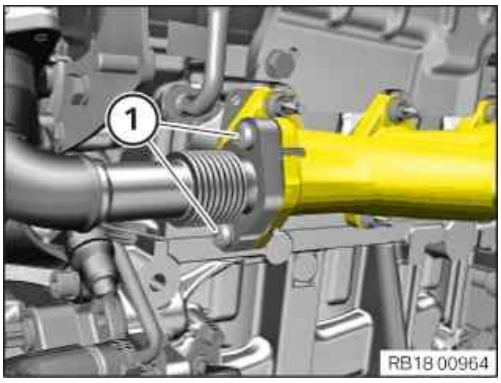
Hollow bolt		Renew sealing rings.	30 Nm



- Renew seal (1) between exhaust-gas recirculation cooler and exhaust manifold.

  Parts: Gasket

cardiagn.com



- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

82 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

83 – Installing exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to the exhaust turbocharger

Inadequate initial filling of exhaust turbocharger leads to dry running.

- Make sure the initial filling is correct when replacing exhaust turbocharger.
- Fill the exhaust turbocharger with the suitable additive (see electronic Parts Catalogue).

cardiagn.com

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.

For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

TECHNICAL INFORMATION

- It is imperative to perform certain test steps to prevent subsequent damage in the event of exhaust turbocharger damage. See further information.

TECHNICAL INFORMATION

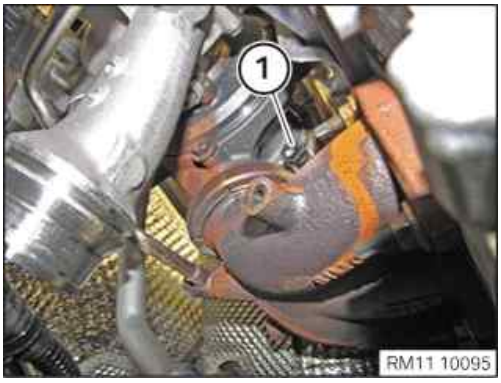
For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger



- Renew gasket.

  Parts: Gasket
- Position seal on exhaust manifold.
- Guide the exhaust turbocharger in from the top and position it.
- **Ensure that gasket is correctly seated.**
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Renew sealing rings.

  Parts: Sealing ring
- Position oil feed line with banjo bolt (1) and sealing rings and tighten hand-tight.

  There are 2 sealing rings fitted on the banjo bolt (1).
- Align oil feed line and tighten banjo bolt (1).

  The oil feed line must not sit on the exhaust turbocharger.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

cardiagn.com

- Renew gasket.

  Parts: Gasket
- Position oil return line (2) with **seal** on exhaust turbocharger.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Feed in and tighten screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

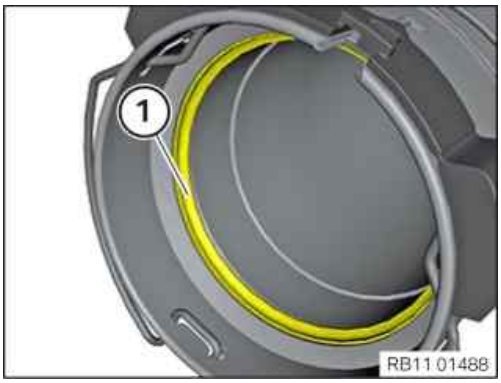
84 – Install right charge air duct

RISK OF DAMAGE

Damage to the exhaust turbocharger.

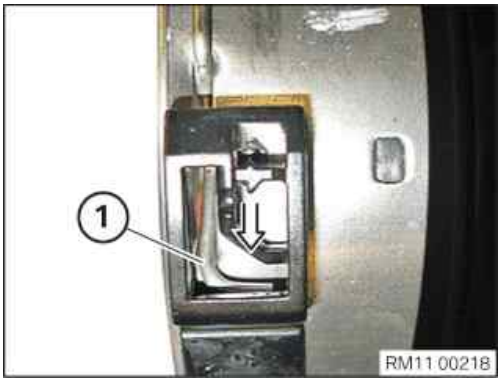
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.



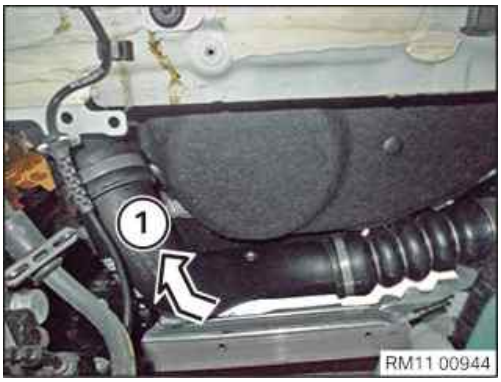
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

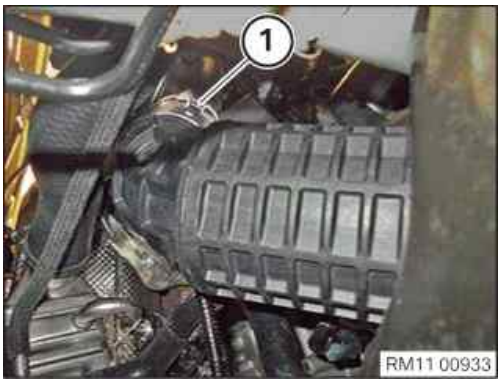


- Let the lock (1) engage at the holder (arrow).

cardiagn.com

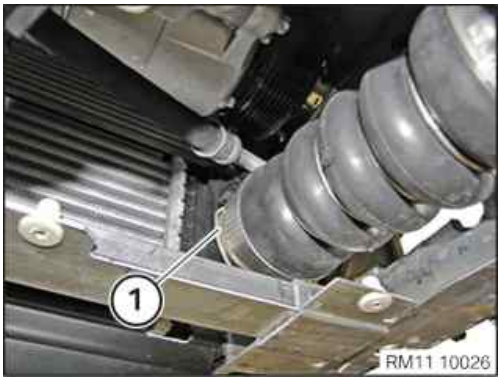


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



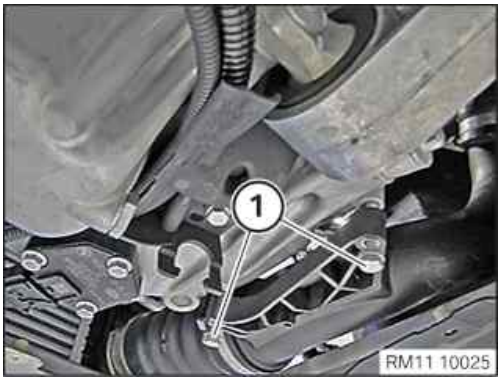
- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm



- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

85 – Installing heat shield on exhaust turbocharger at the rear

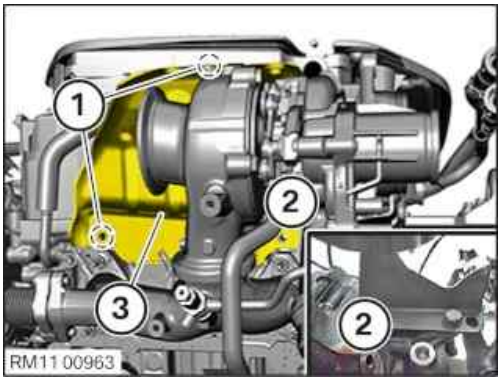
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

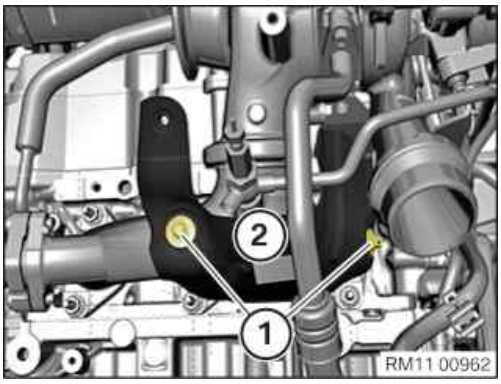
86 – Installing heat shield on exhaust turbocharger at bottom

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (2).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

87 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

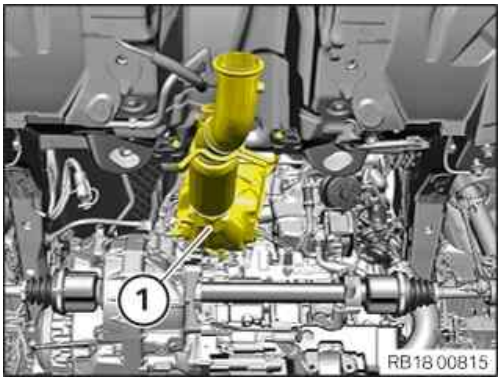
cardiagn.com

- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

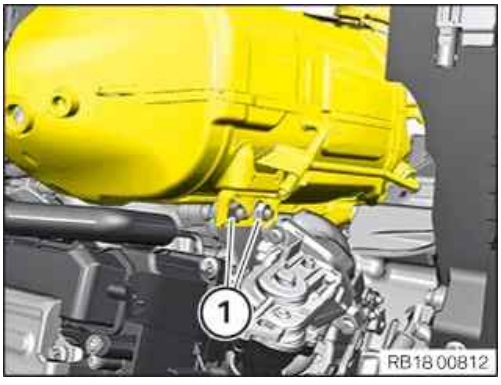
  Parts: Gasket

- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.



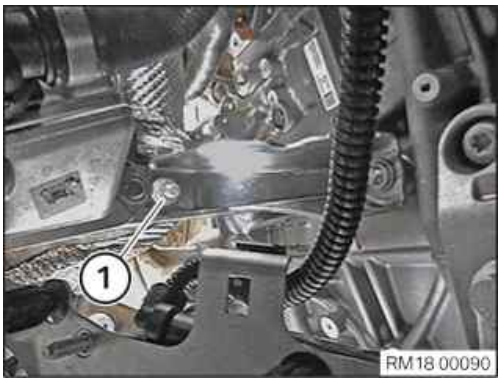
- Carefully insert and install the diesel particulate filter (1).

- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).



- Tighten nuts (1) by hand.

cardiagn.com



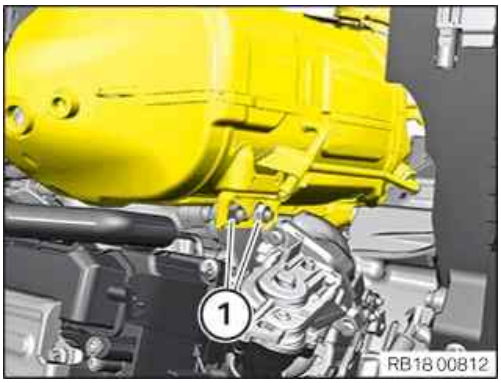
- Tighten the nut (1) hand-tight.

- Remove fitting aid (1) for the flexible tube.

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

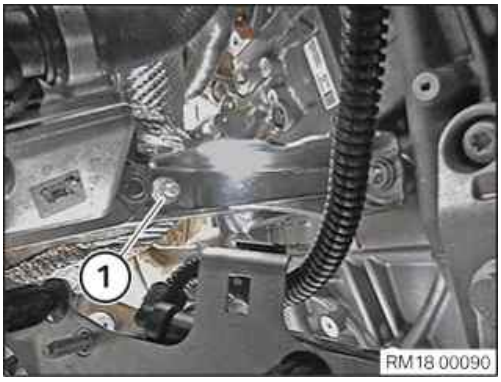
V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



- Tighten nuts (1).

Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

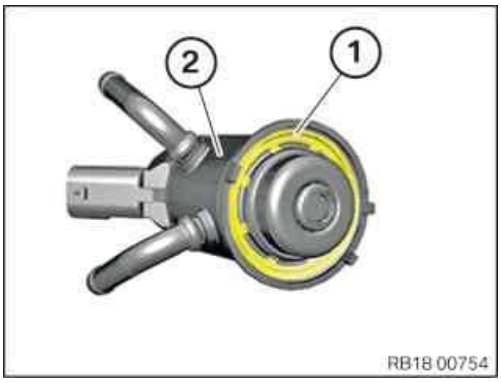


- Tighten nut (1).

Diesel particle filter to holder

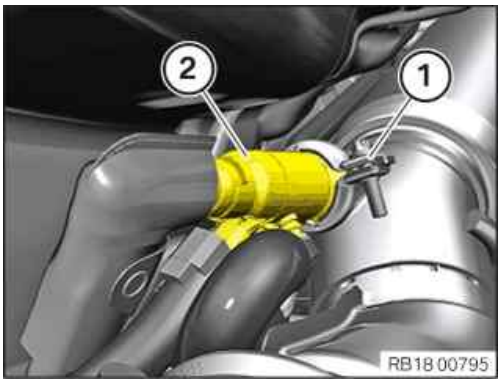
M8 hexagon nut		Tightening torque	19 Nm

cardiagn.com



- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

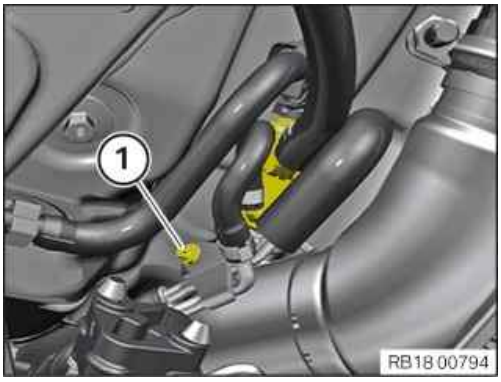


- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

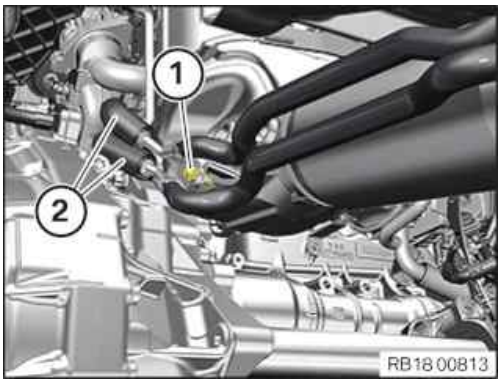
V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm



- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

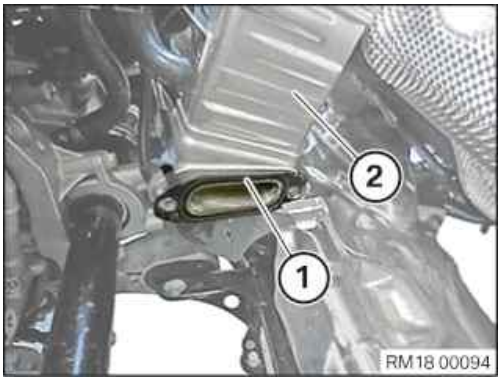
Torx bolt BM6x16		Tightening torque	8 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

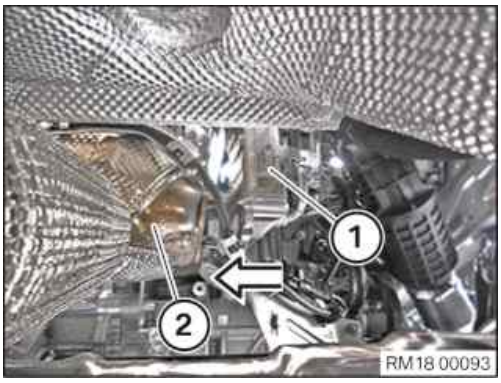
Torx bolt BM6x16		Tightening torque	8 Nm



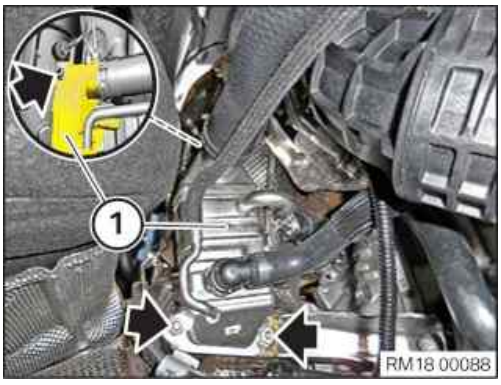
- Replace seal (1) of the low pressure exhaust-gas recirculation cooler (2).

  Parts: Gasket

cardiagn.com



- Feed in and install the low pressure exhaust-gas recirculation cooler (1) in at the diesel particulate filter (2) in the direction of arrow.



- Tighten nuts (arrows) of the low pressure exhaust-gas recirculation coolers (1).

Low-pressure exhaust-gas recirculation cooler to diesel particulate filter

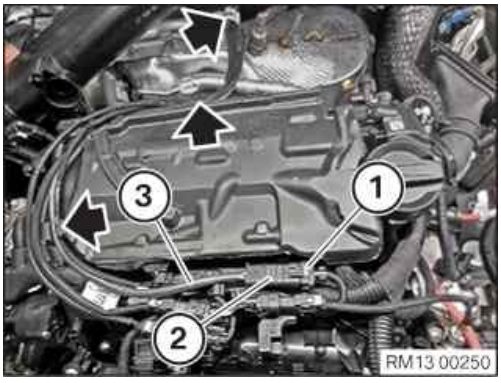
Flange nutM8		Tightening torque	19 Nm

88 – Install the control sensor

- Feed in front oxygen sensor (1) and install.
- Tighten the front oxygen sensor (1) with the special tool **0 491 075 (11 7 030)**.

Control sensor

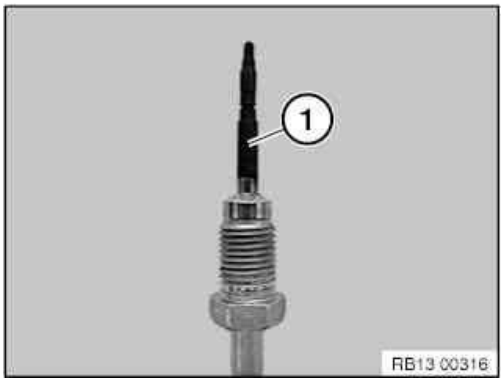
Control sensor		Tightening torque	50 Nm



- Feed in and install cable (3) from the oxygen control sensor into the clamps (arrows).
- Secure connector (2) on holder.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

89 – Install the exhaust-gas temperature sensor on the diesel particulate filter



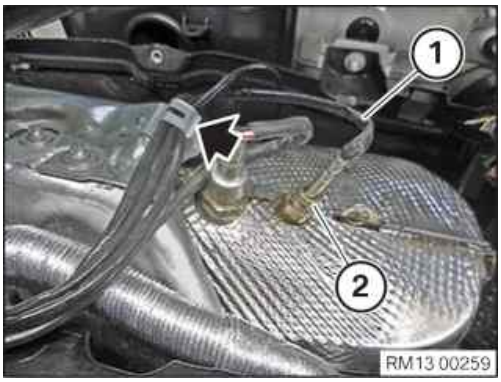
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.
- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.

cardiagn.com



- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

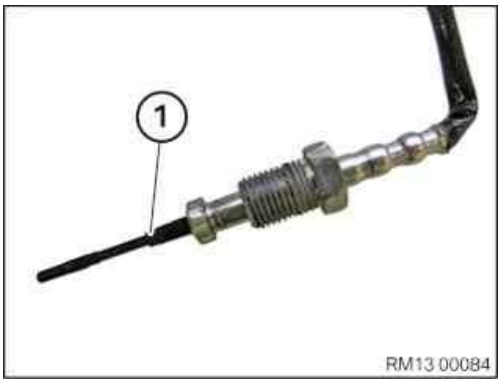
90 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

RISK OF DAMAGE

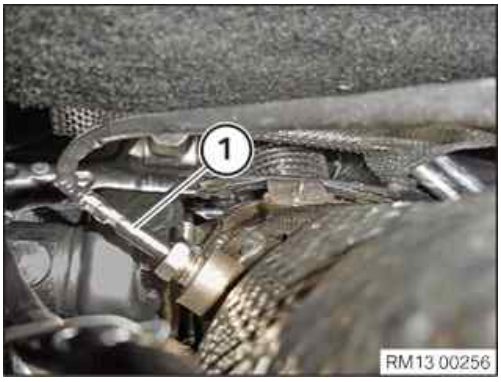
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.



- Make sure the gauge tip (1) is not damaged during installation.



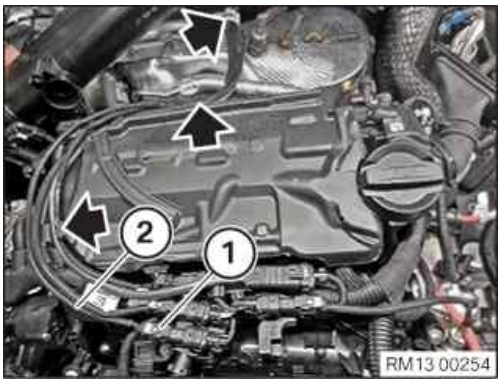
- Feed in and install the exhaust temperature sensor (1).

cardiagn.com

- Tighten the exhaust temperature sensor (1) with conventional tools (2).

Exhaust temperature sensor to diesel particulate filter

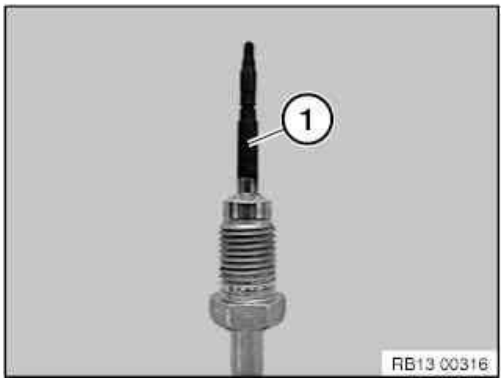
Exhaust-gas temperature sensor		Tightening torque	28 Nm



- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

91 – Installing exhaust temperature sensor on catalytic converter



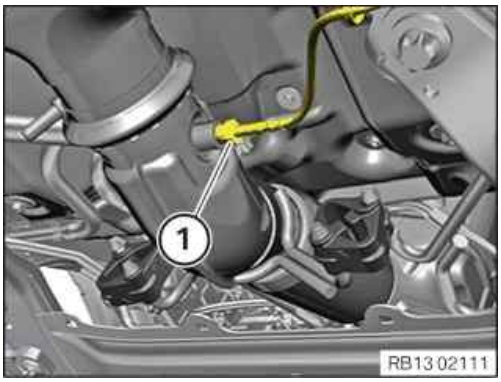
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.



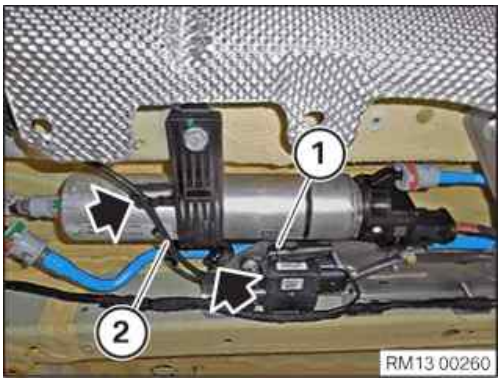
- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Secure the cable clips (1).

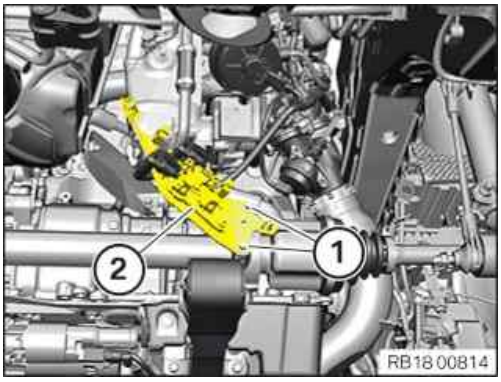
cardiagn.com



- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

92 – Install holder for oxygen sensor

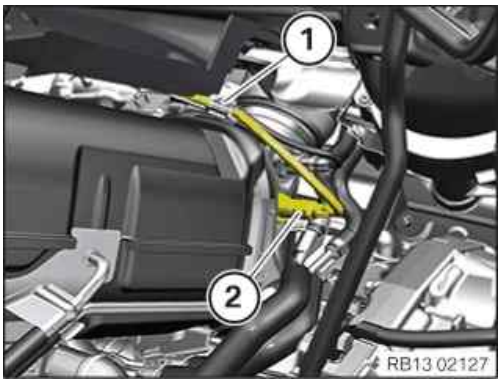


- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm

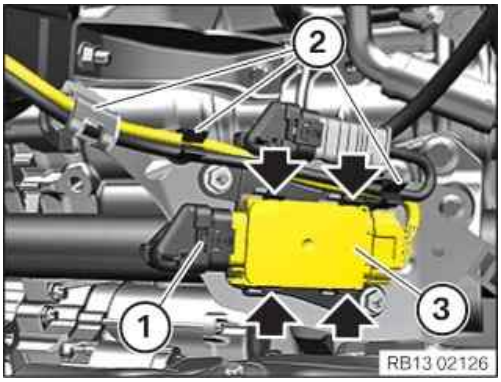
93 – Installing the nitrogen oxide sensor before SCR catalytic converter



- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

Sensor		Tightening torque	50 Nm



- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

94 – Install the monitoring sensor

TECHNICAL INFORMATION

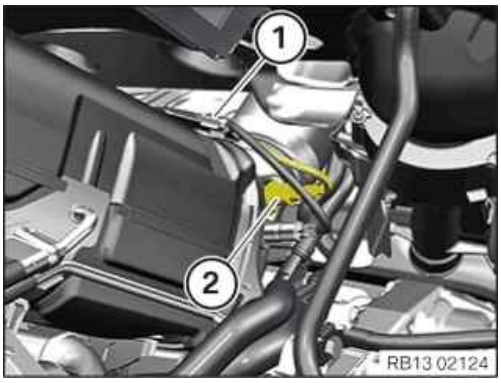
New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

cardiagn.com

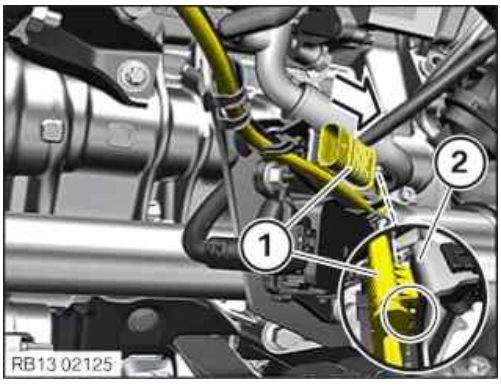


- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor

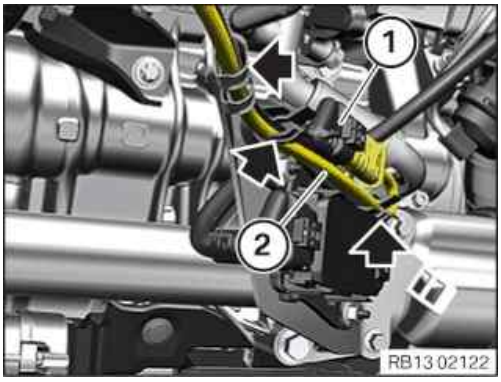
Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.



- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.



- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

95 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

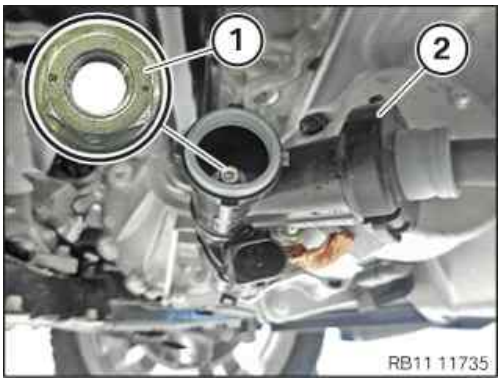
- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

cardiagn.com



- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

96 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

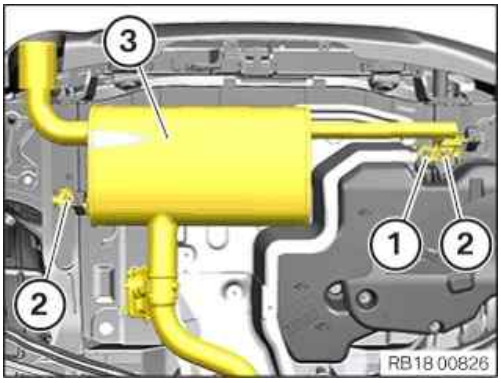
- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Insert and install the exhaust system (3) with the help of another person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

- Tighten down screw (1).

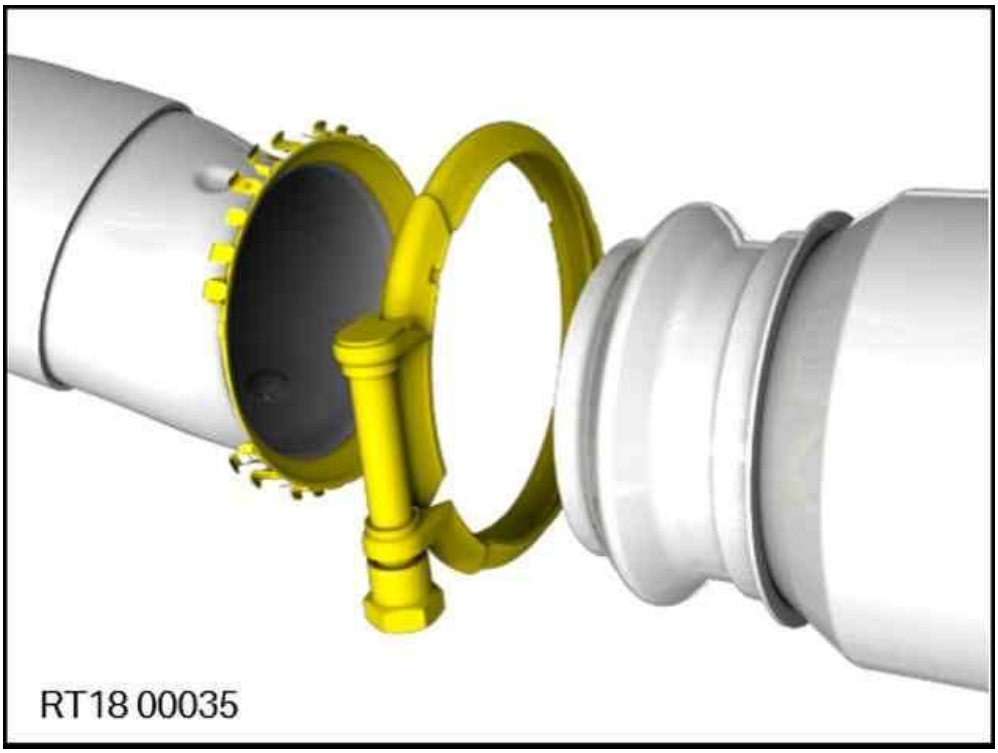
Exhaust bracket on body

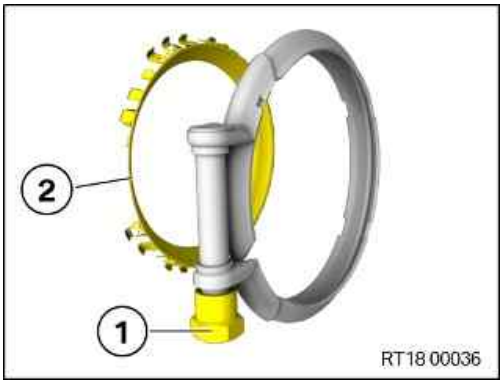
Hexagon screw M8x30		Tightening torque	19 Nm

cardiagn.com

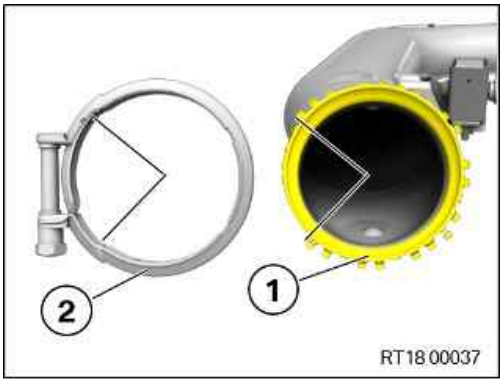
▶ **Install the V-clip**

V-band clamp



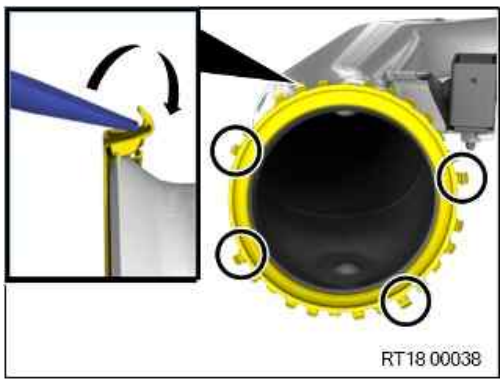


- Unscrew the nut (1) and remove the sealing ring (2).



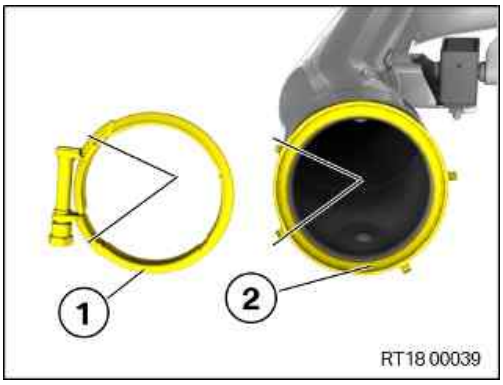
- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.



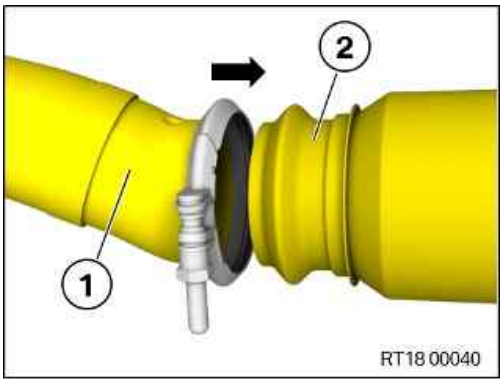
- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.

cardiagn.com

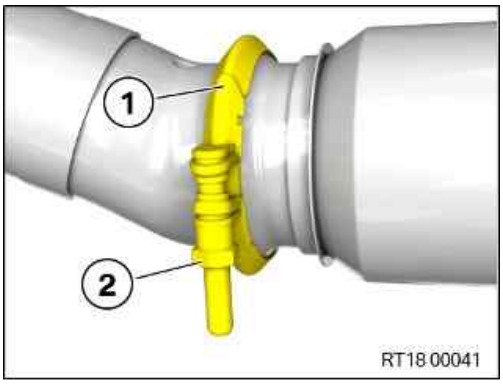


- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).



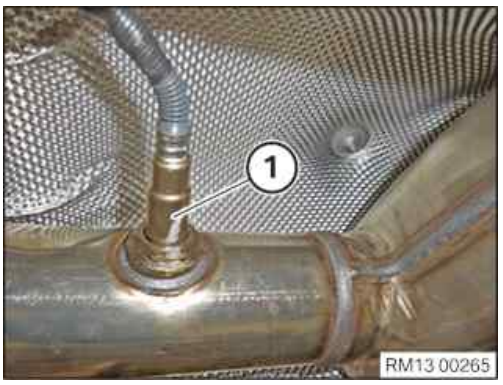
- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.



- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

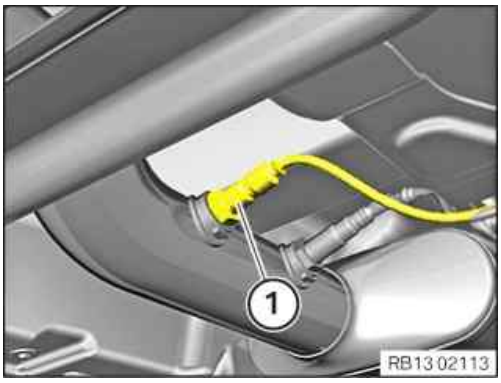


- Guide in, position and tighten the diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

Sensor		Tightening torque	50 Nm

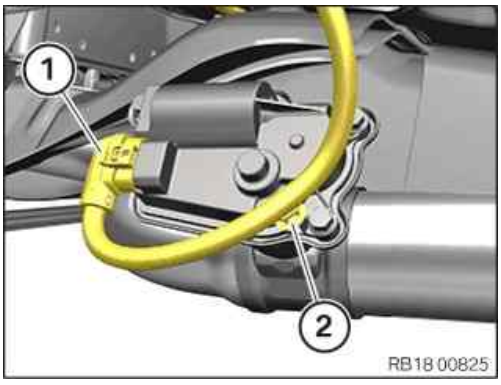
cardiagn.com



- Guide in, position and tighten the nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

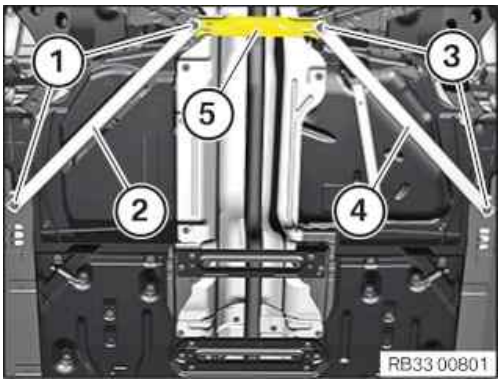
Sensor		Tightening torque	50 Nm



- Secure clamps (2).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

97 – Install the cross-member with torsion struts



- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

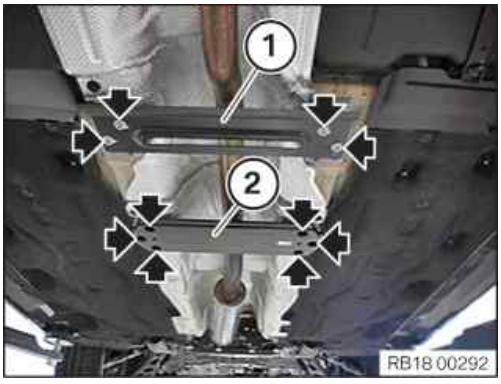
- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

98 – Install the connecting support on the tunnel in front and back



- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

M10x18		Tightening torque	56 Nm

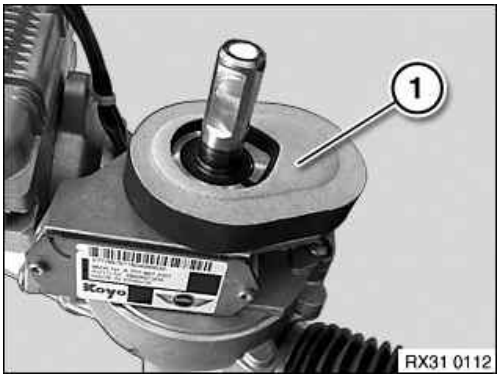
- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

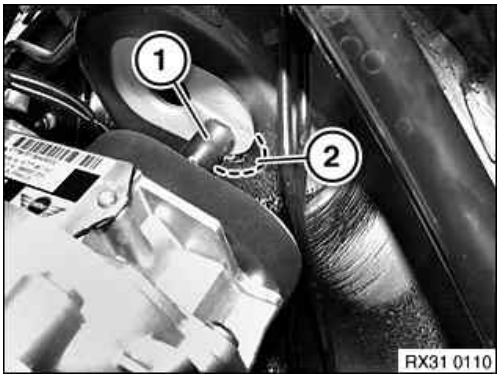
cardiagn.com

99 – Mount and secure the complete front axle



- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

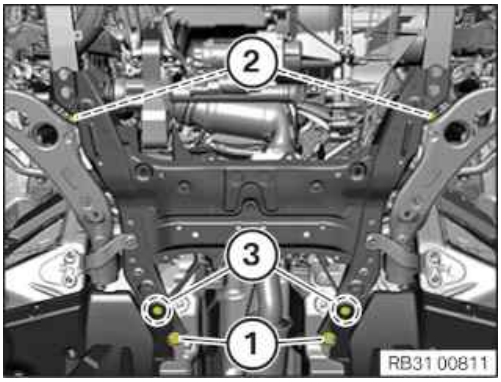


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

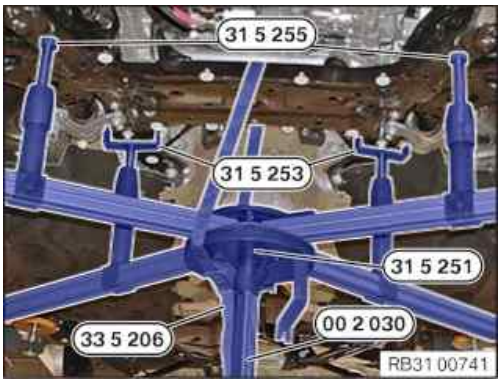
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).

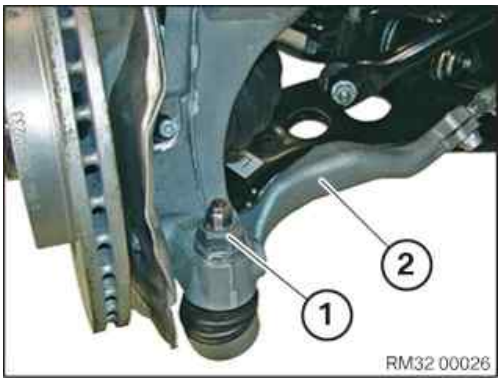
Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and place it to the side.

cardiagn.com



NOTICE

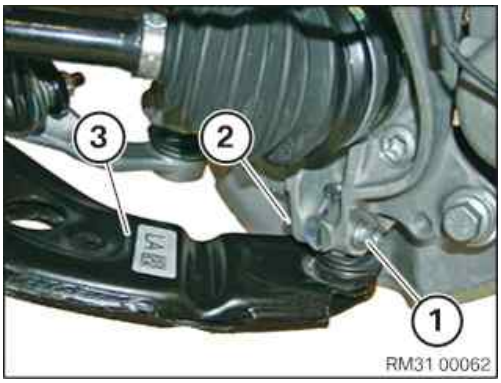
Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm



NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

100 – Install the mounted parts on the front axle support

NOTICE

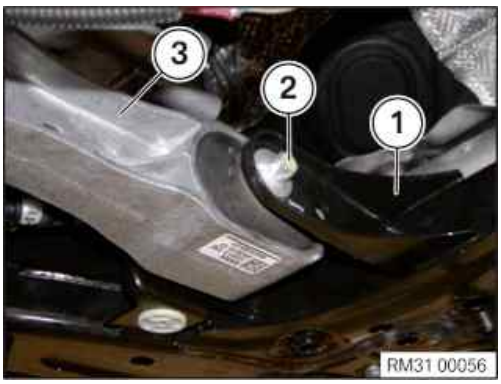
Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

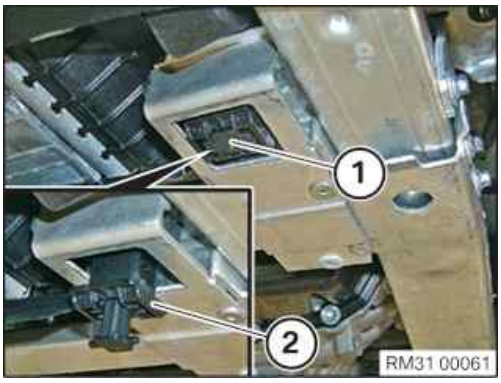


- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm

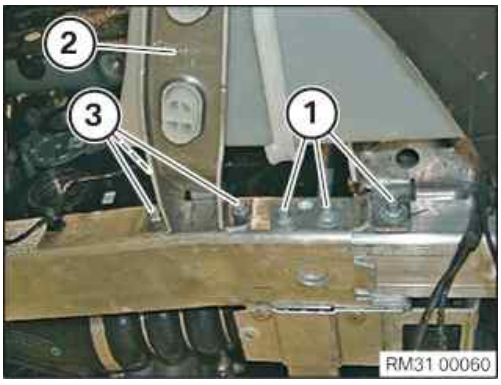
cardiagn.com



NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.



- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

Perform the operations on the left and right side.

- Tighten the screws (1).

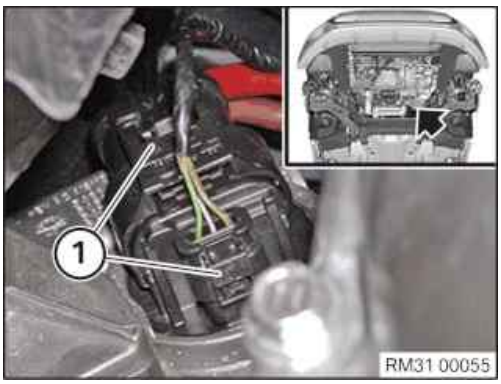
Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm

101 – Attaching connector at steering gear

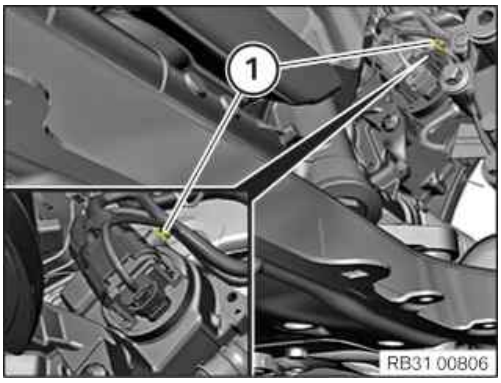
- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.



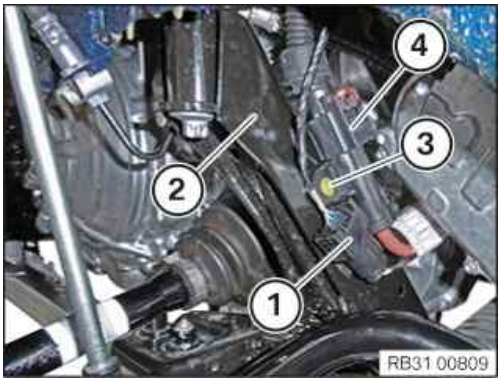
- Connect and lock connector (arrow) (1) with the steering gear.

cardiagn.com



- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

102 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

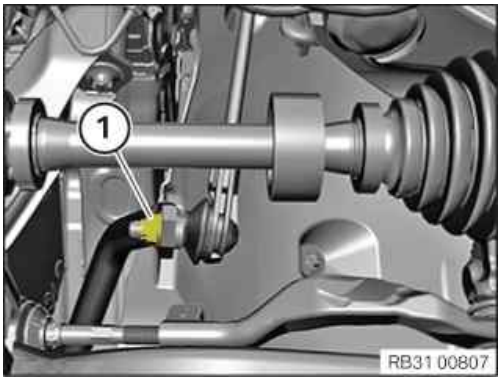
  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

103 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**



- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

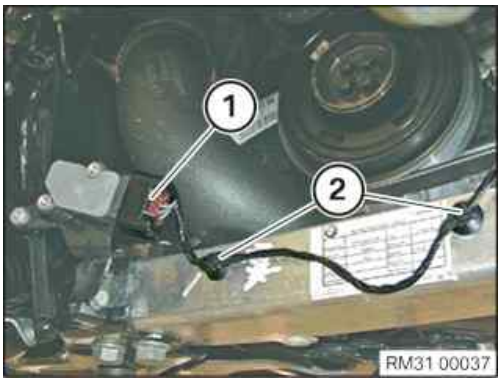
Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

104 – With right installation: Securing the cable for the ride height sensor

cardiagn.com



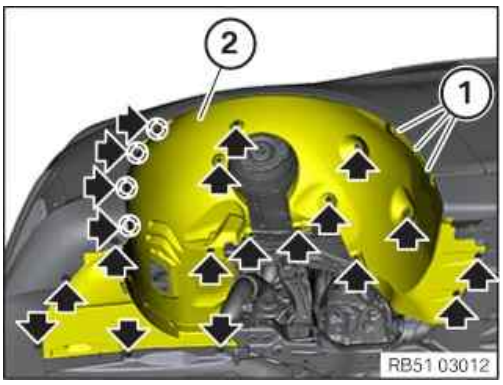
- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

105 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▶ Installing the front wheel arch cover



- Guide the wheel arch cover (2) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

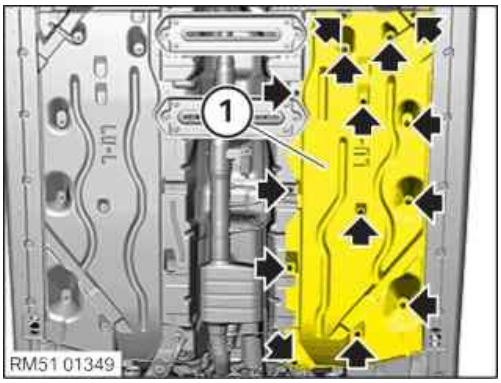
Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

- Secure expanding rivet (1).

106 – Installing underbody panelling , right



- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

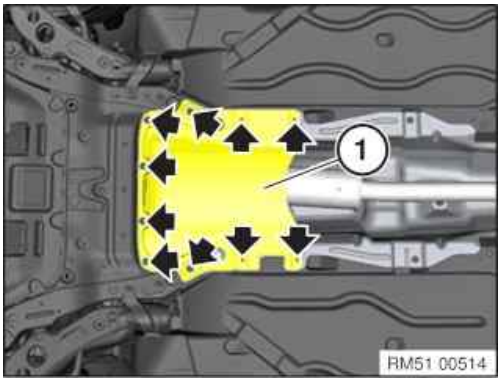
Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

107 – If installed: Installing underbody protection at rear



- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

108 – Mount the front left and right wheels

cardiagn.com

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

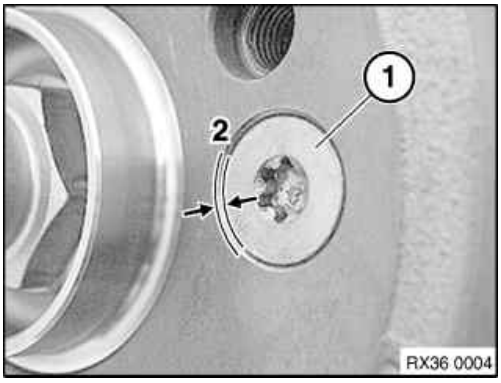
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

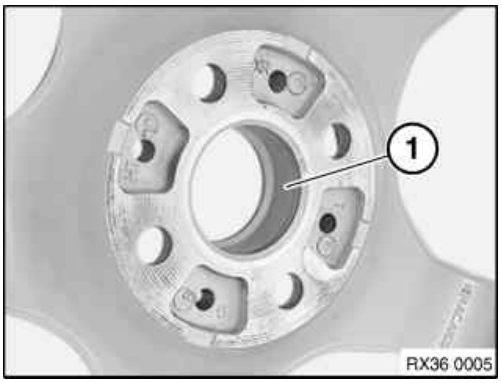
  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

◁

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

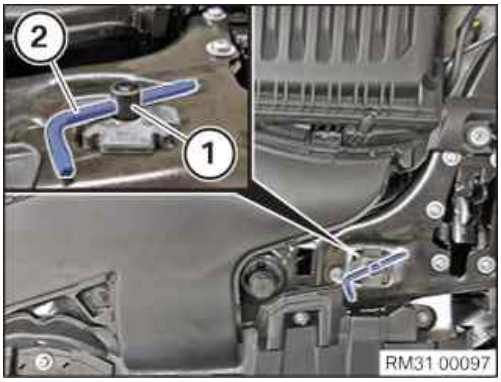
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check wheel bolts (arrows) and threads for damage, renew the wheel bolts if necessary.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

109 – Removing fastener for left and right radiator



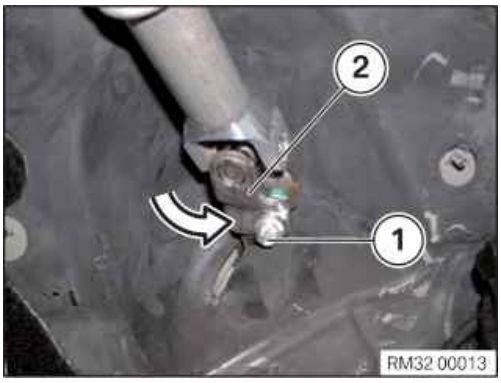
NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

110 – Secure the steering shaft at the bottom on the steering gear

cardiagn.com

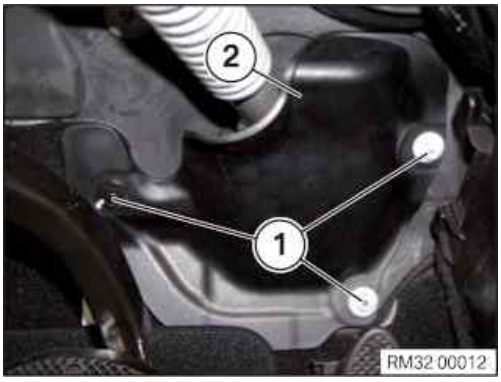


- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm



- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

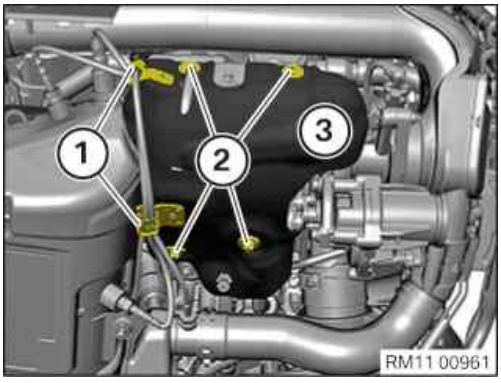
111 – Install the heat shield on the exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



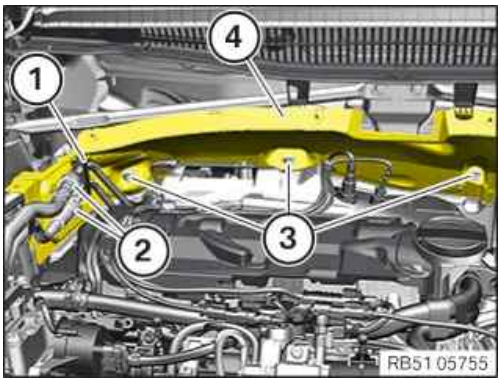
- Feed in and install the heat shield (3).
- Tighten down screws (2).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Secure cable in holders (1).

112 – Installing rear bulkhead upper part



- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

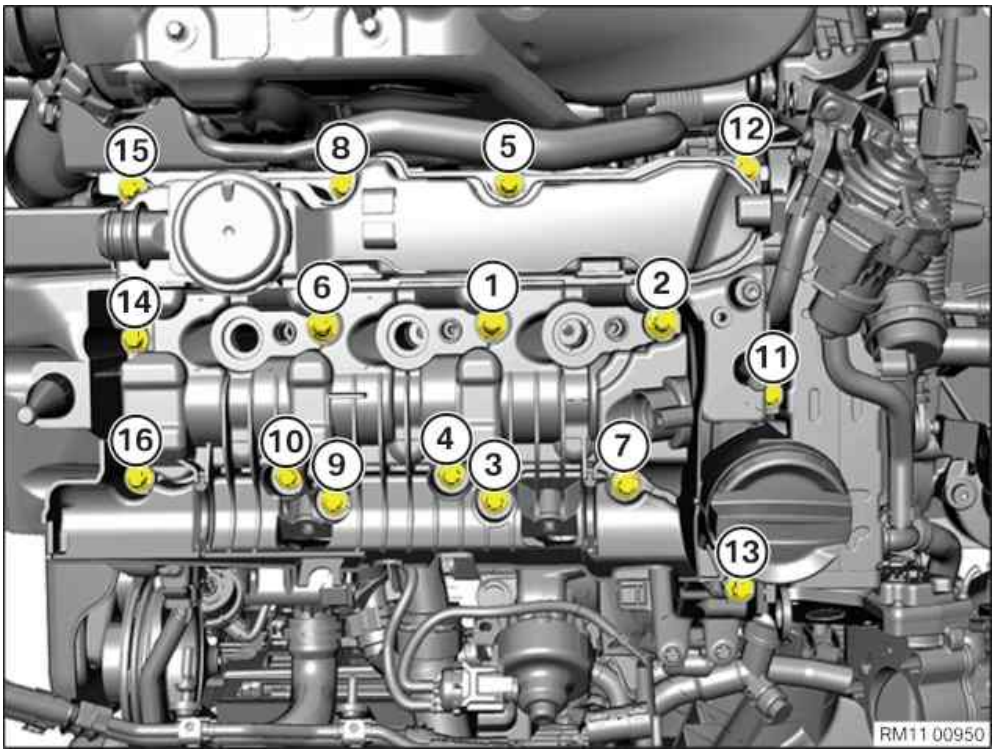
- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

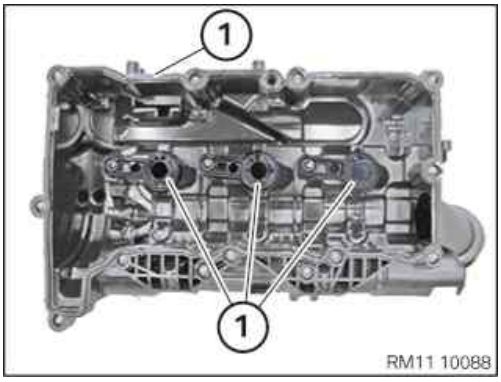
cardiagn.com

113 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

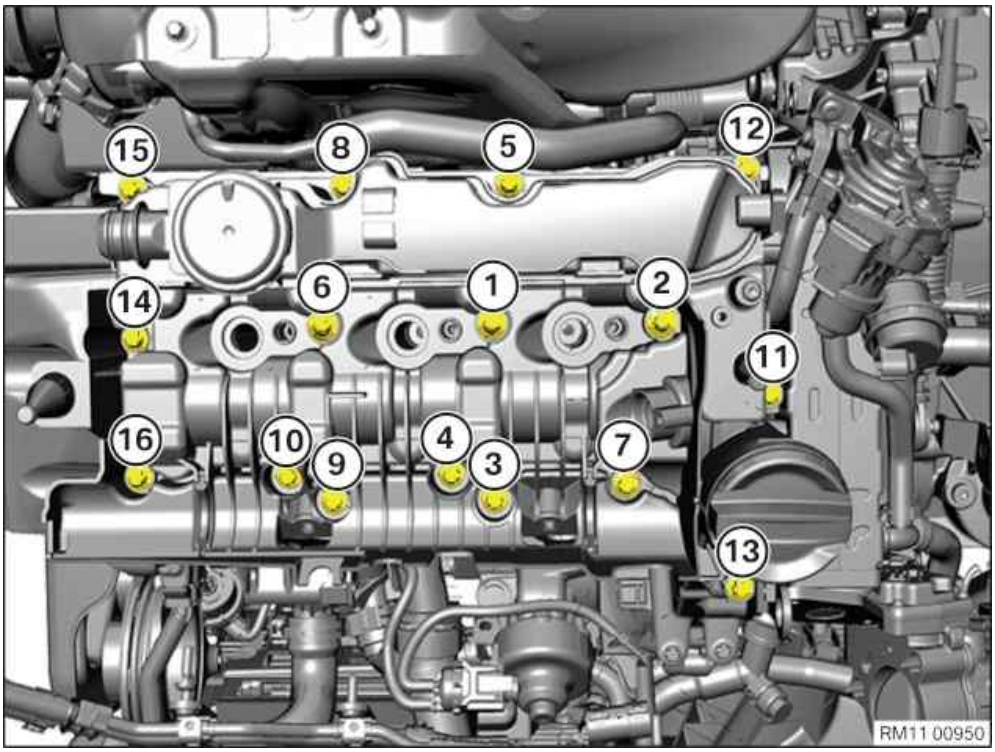


1 to 16 Bolts of the cylinder head cover



- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

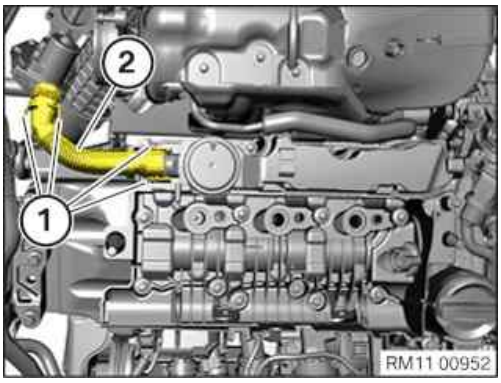


- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8,5 Nm

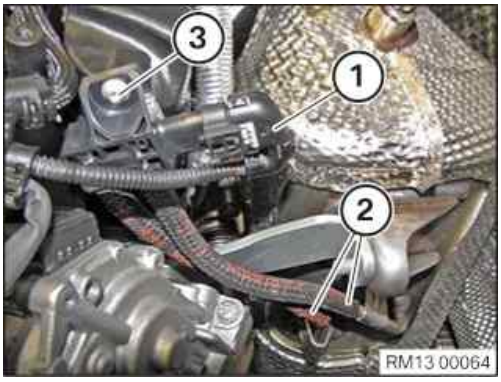
cardiagn.com



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

114 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

115 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.

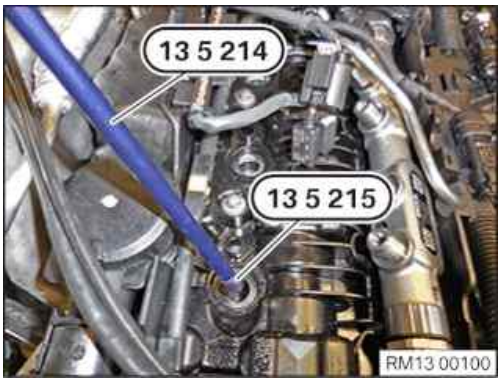
RISK OF DAMAGE

Contaminant or foreign body.

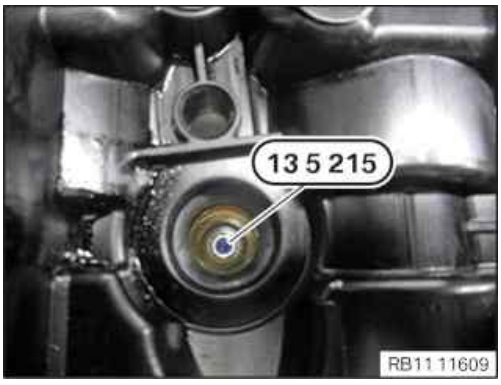
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com



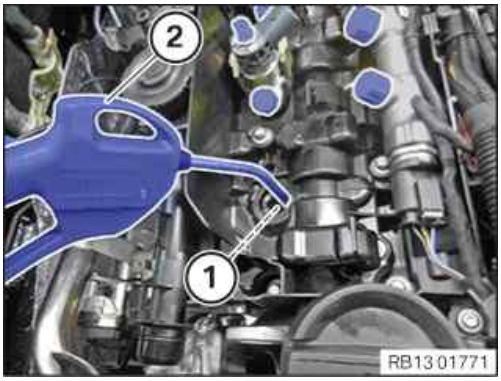
- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

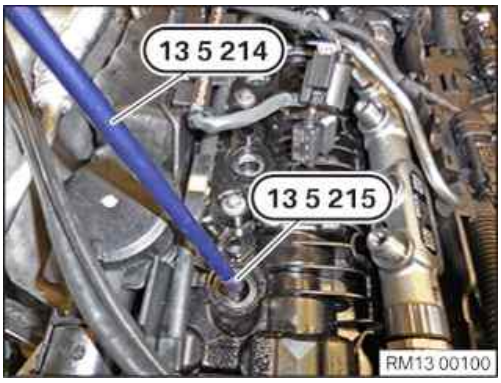
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.



- Blow out injector shaft (1) with air gun (2).

cardiagn.com



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

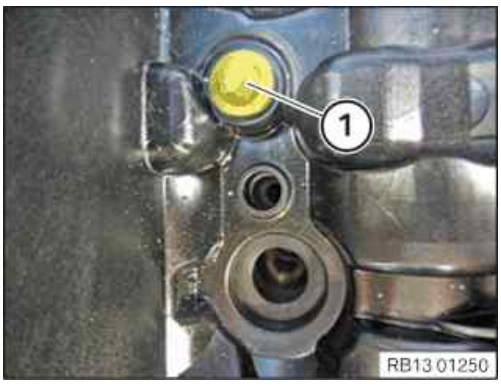
▶ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▶ **Prepare the injector for installation**

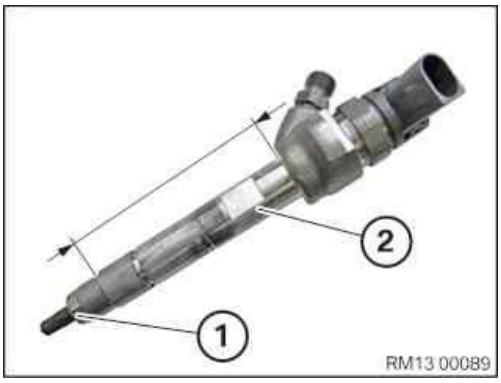
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com



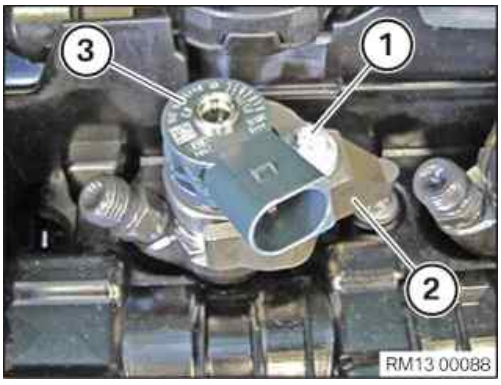
- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

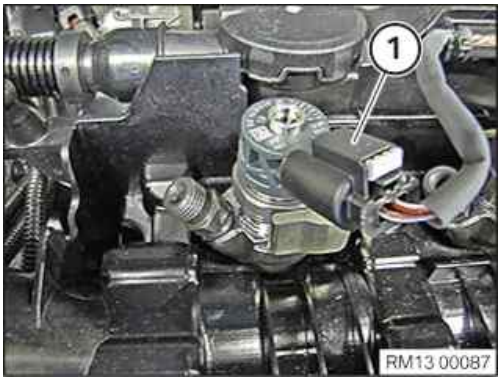
Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

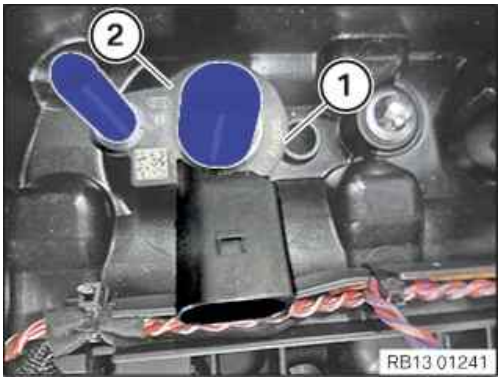
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

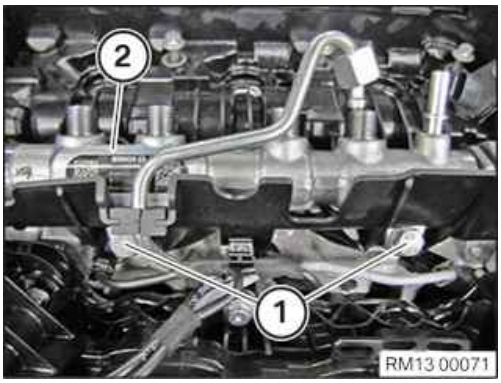


- Read off the adjustment value (1) on the new injector (2).

cardiagn.com

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

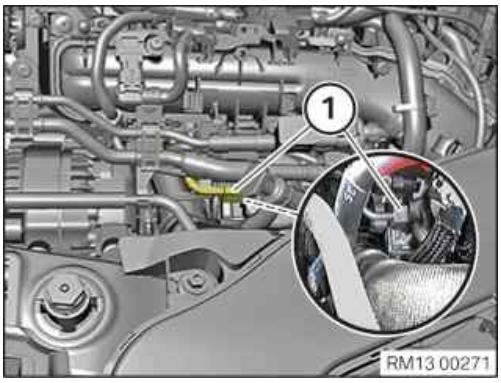
116 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm



TECHNICAL INFORMATION

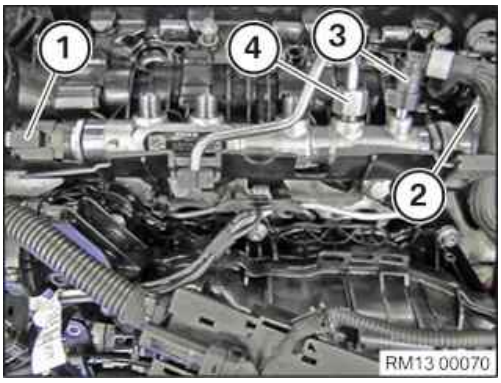
Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

117 – Installing high pressure line between rail and high pressure pump

WARNING

Working on fuel system.

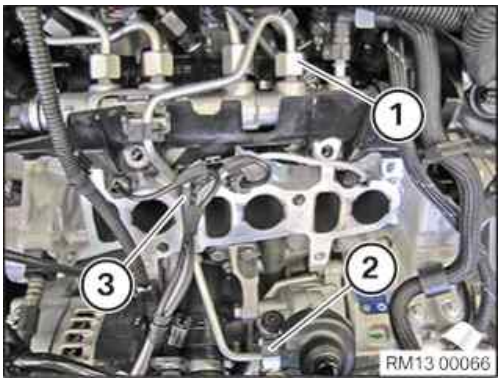
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com



- Remove special tool **2 413 106**.
- Thread in and install the high pressure line (3).
- Make sure that the rubber grommet is positioned correctly in the area of the cylinder head cover.
- Tighten the union nut (1) hand-tight.
- Tighten the union nut (2) hand-tight.
- Ensure that high pressure line (3) is installed without any strain.

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the union nut (1) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Tighten the union nut (2) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

118 – Installing high pressure lines between rail and injectors

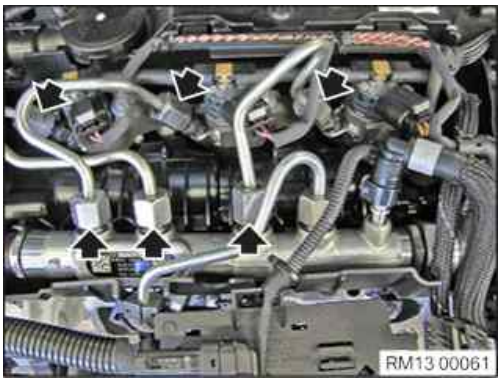
TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

119 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

120 – Installing the exhaust-gas recirculation cooler

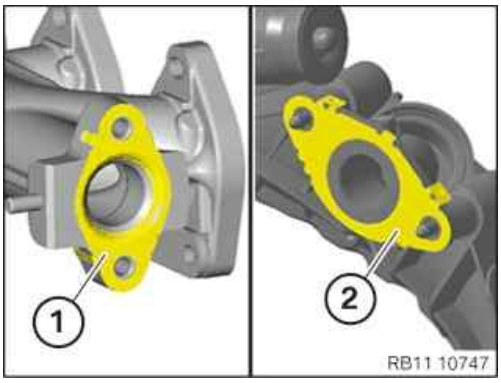
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

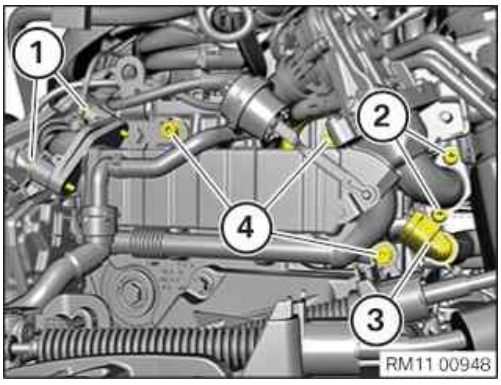


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

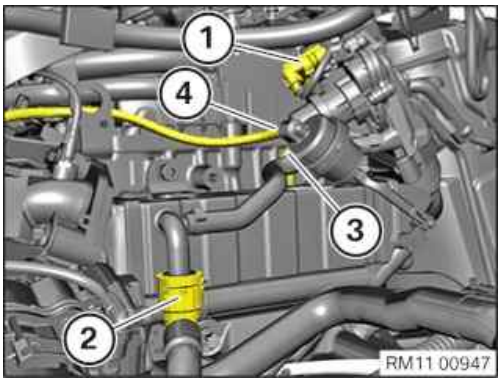
  The coolant hose (3) must audibly engage.

- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com



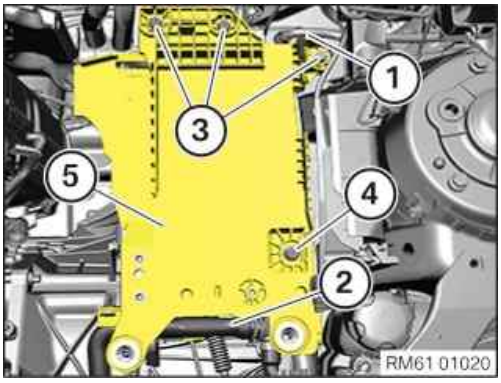
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

121 – Install the battery holder



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

122 – Install electronics box

Prerequisite

Battery earth lead is disconnected.

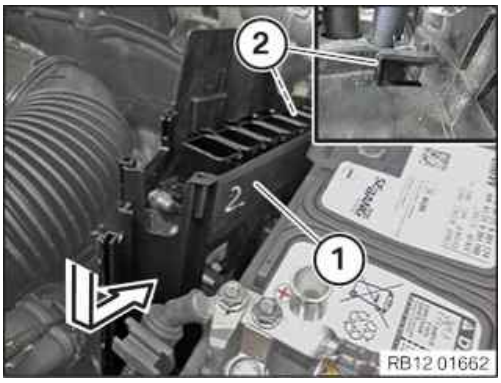
RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

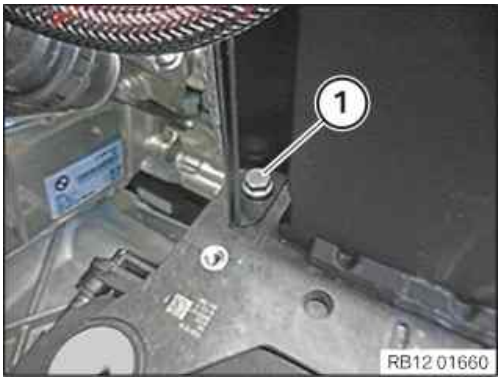
- Route all cables without abrasions, do not trap and crush.

cardiagn.com



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

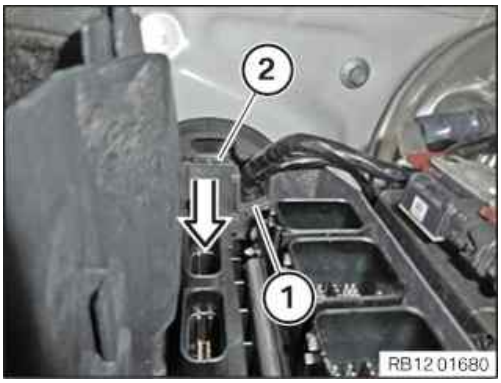
- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



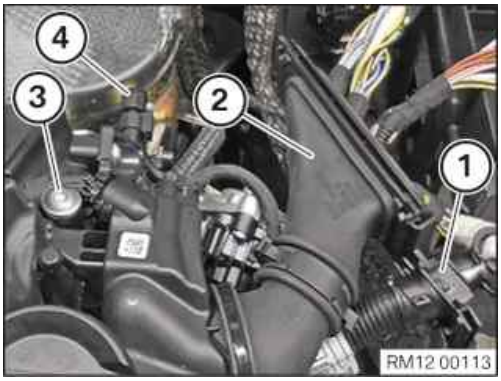
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



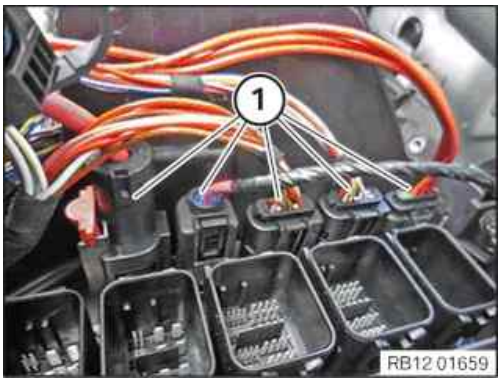
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

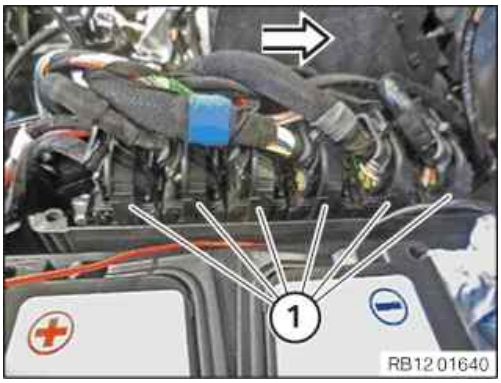
TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

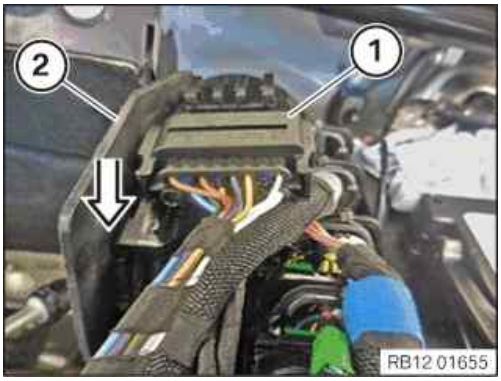
cardiagn.com



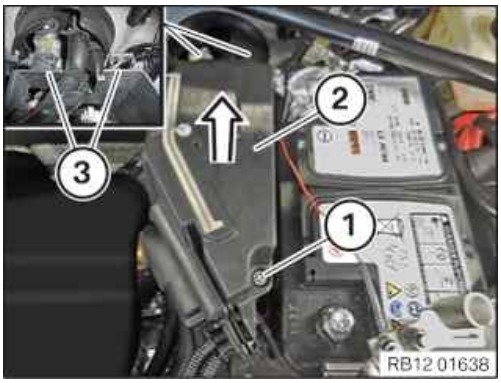
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

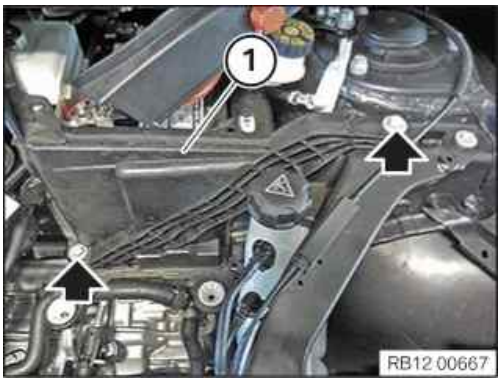
RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (1).
- Tighten screws (arrows).

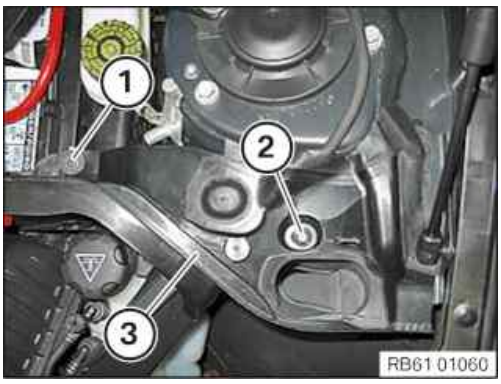
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

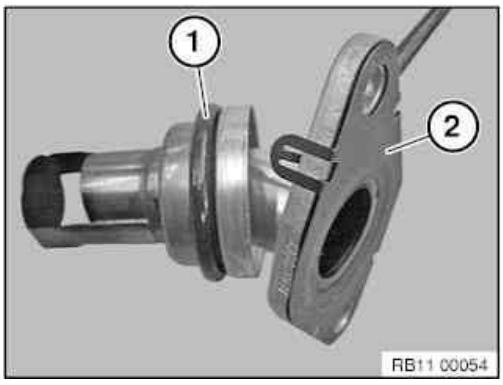


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

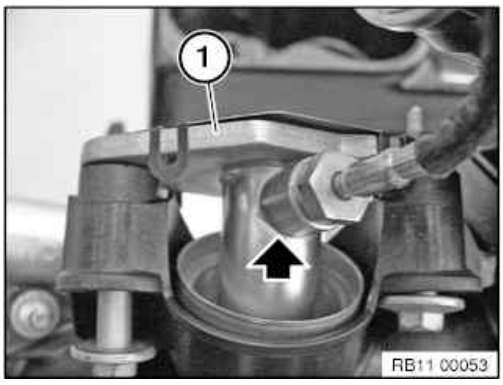
123 – Installing the intake plenum



- Renew O-ring (1).

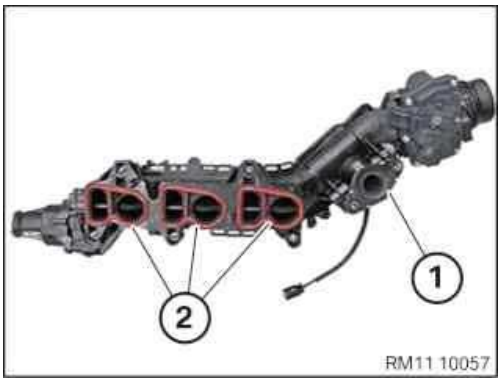
  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.



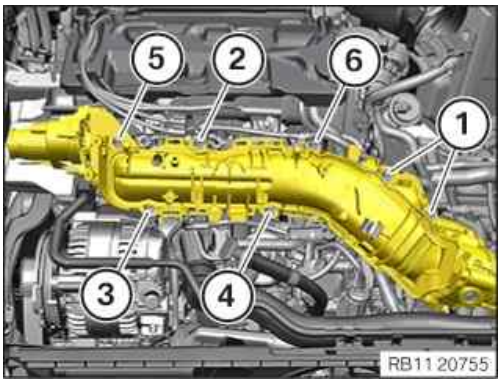
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

cardiagn.com



- Renew gaskets (2).

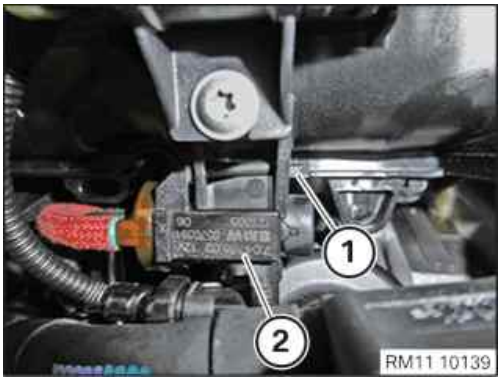
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



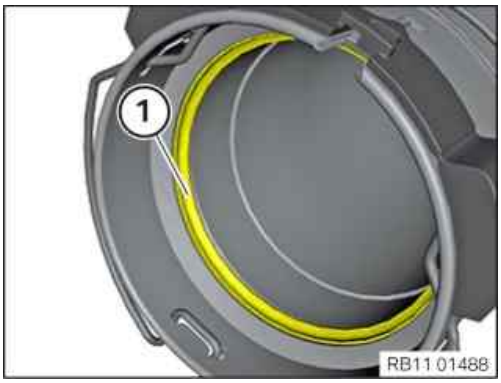
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm

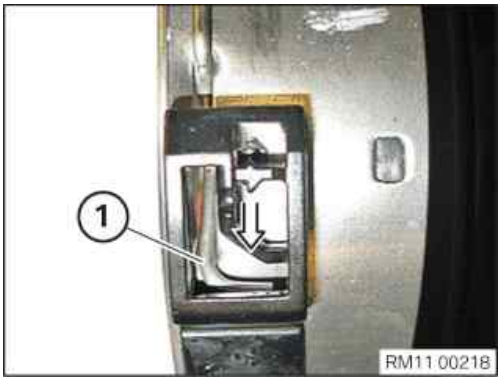


- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.



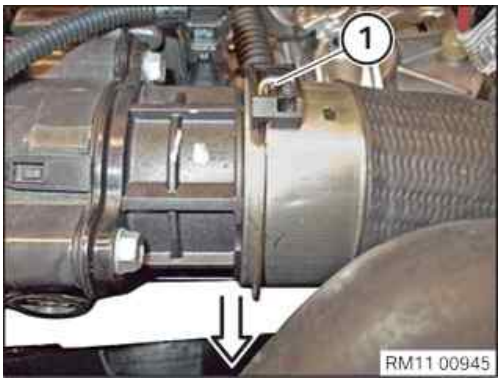
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring



- Engage the lock (1) on the bracket (arrow).

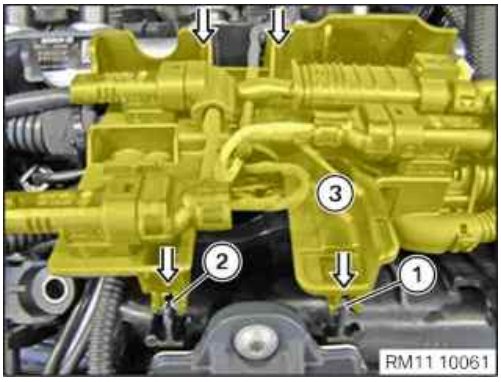
cardiagn.com



- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

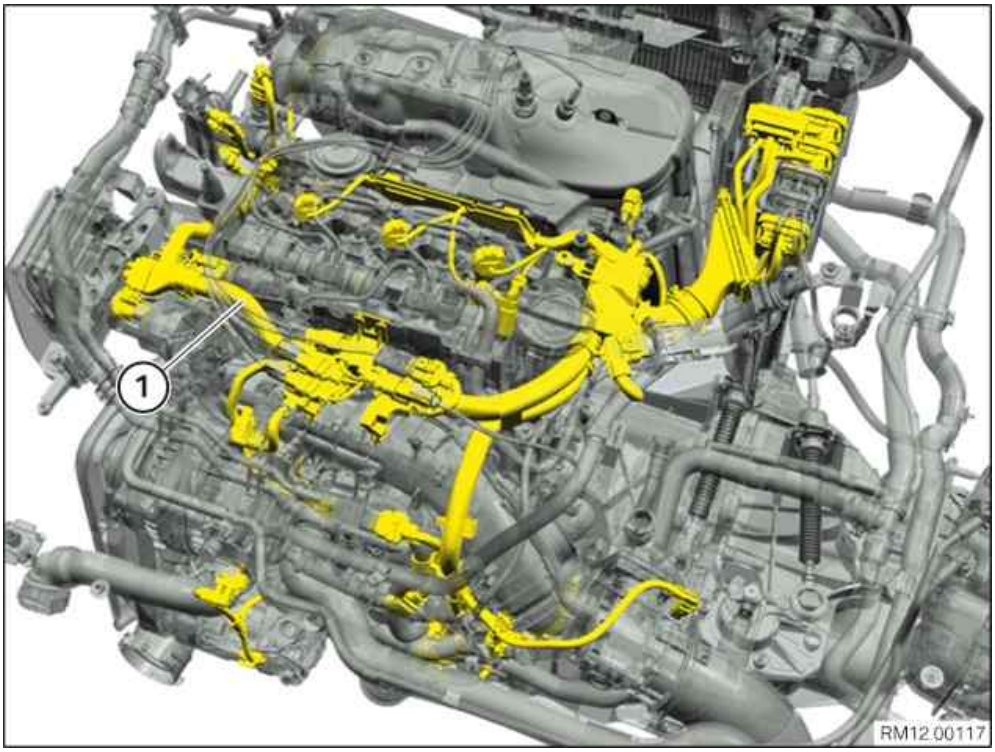
124 – Installing the cable clip for the intake plenum



- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).

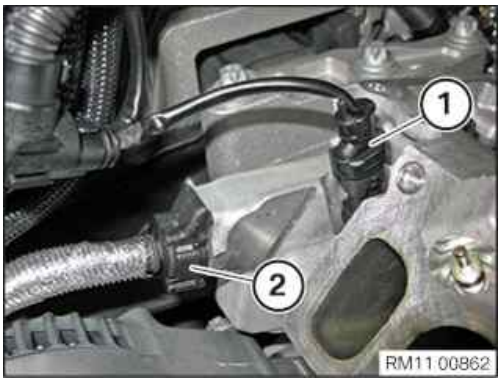
125 – Fastening the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine

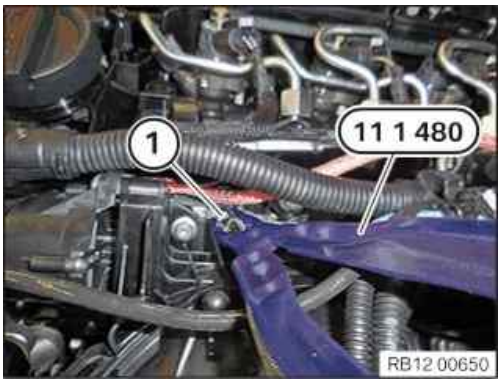


1 Wiring harness section for the engine

cardiagn.com

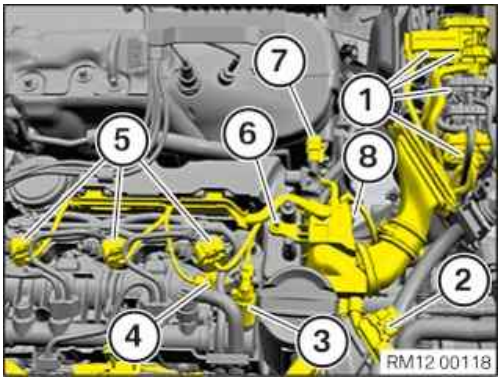


- Connect the coolant line (2) and lock the clamp.
- Connect and lock the connector (1).
- The locks must engage audibly.



- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

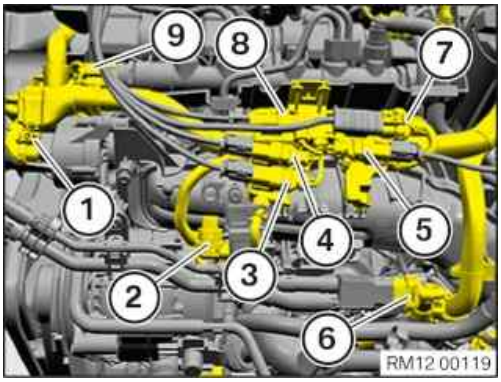


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

Wiring harness to cylinder head cover

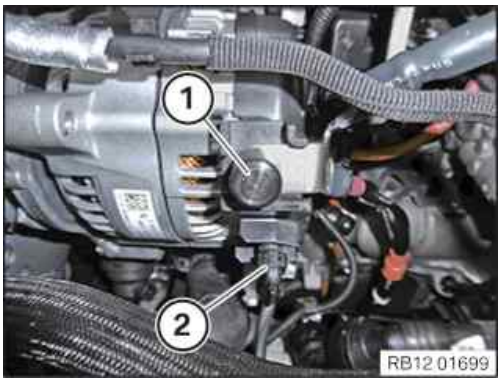
TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.



- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.

cardiagn.com

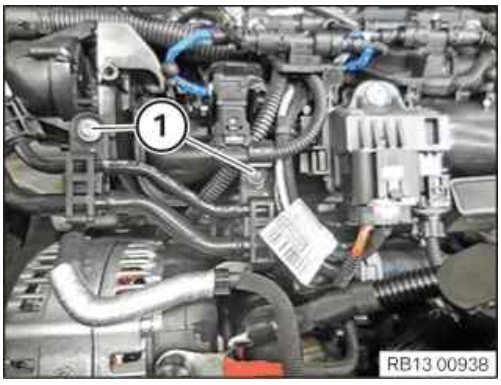


- Connect and lock the connector (2).

  Lock must audibly engage.
- Connect positive battery cable (1) on alternator and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

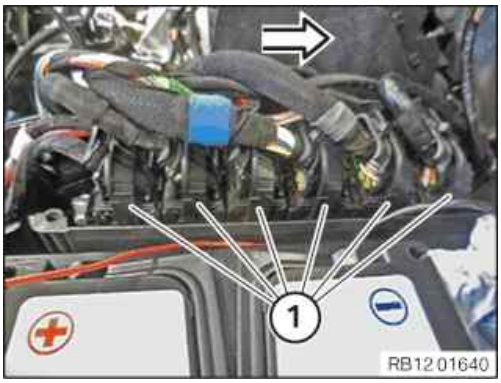


- Position fuel lines.
- Tighten the screws (1).

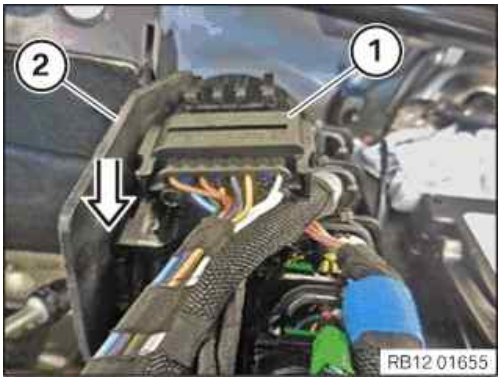
Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

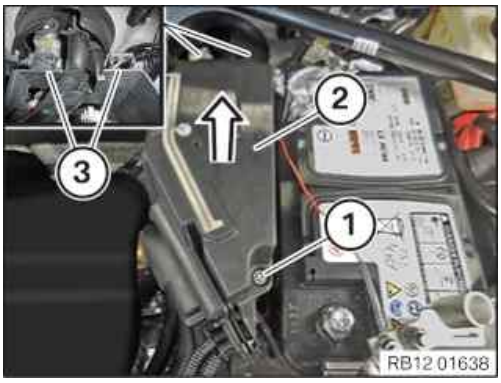


- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

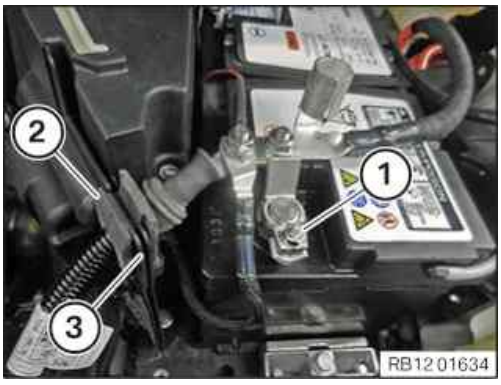
cardiagn.com



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

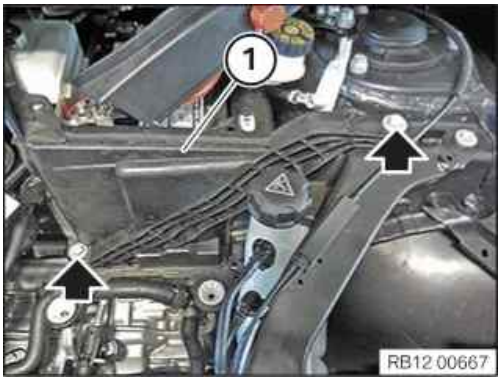
RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (1).
- Tighten screws (arrows).

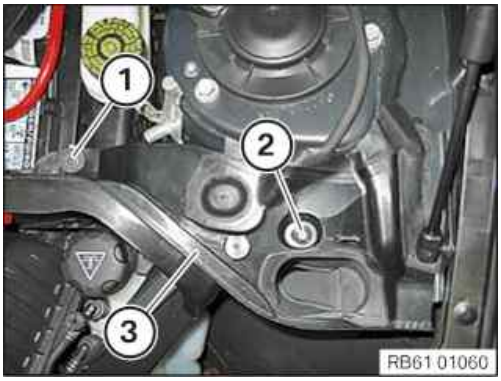
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

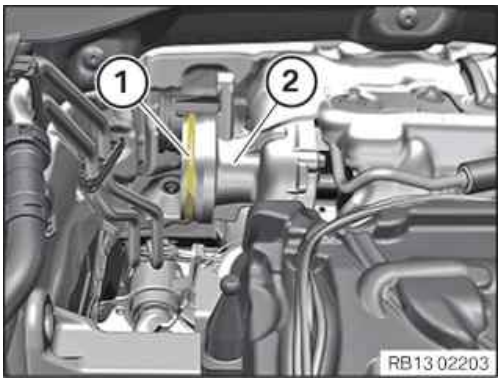


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

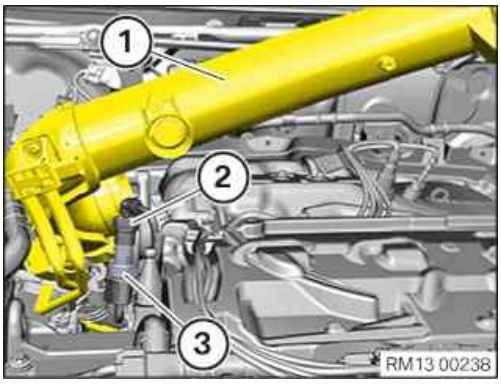
Battery cover

Screw		2,8 Nm

cardiagn.com



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.



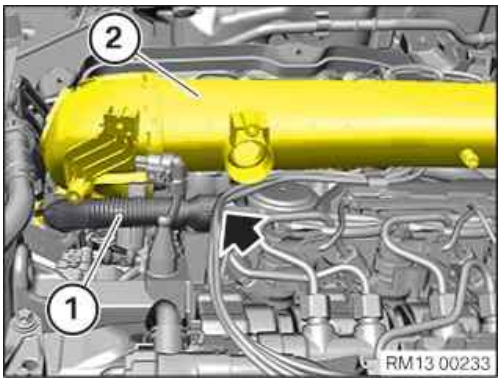
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

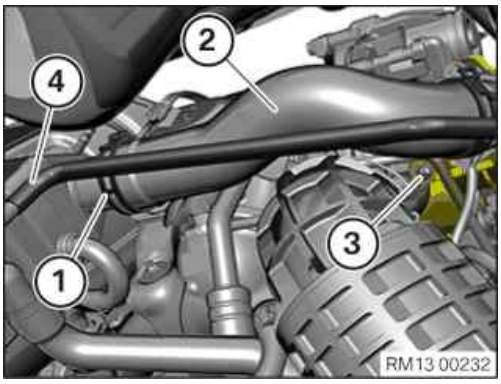
Exhaust gas pressure sensor		Tightening torque	13,5 Nm

- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

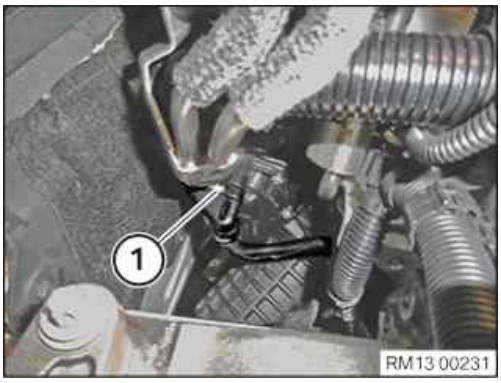
- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

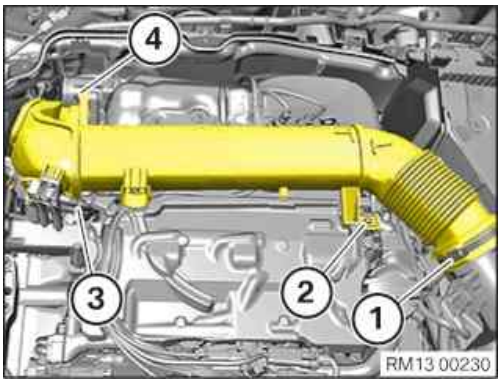
Clamp 15–19mm		Tightening torque	3 Nm

cardiagn.com



- Connect and lock the connector (1).

  The connector (1) must lock audibly.



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

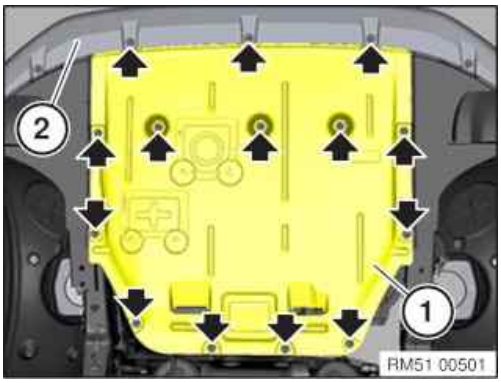
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

127 – Installing the front underbody protection

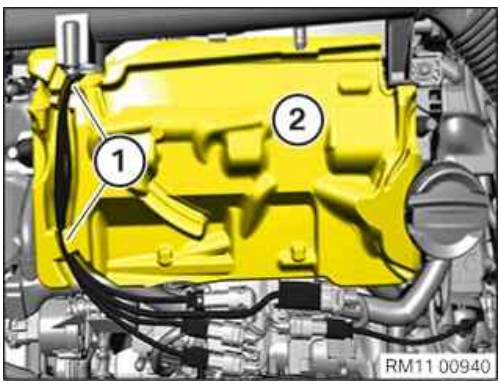


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

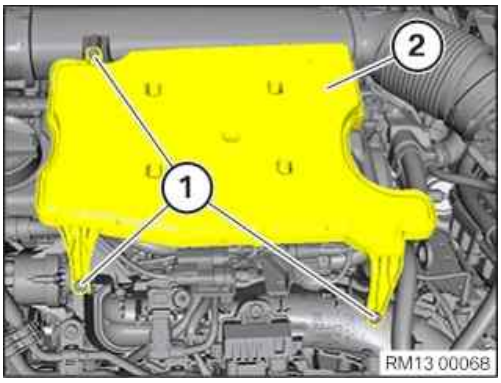
128 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

129 – Install resonator

cardiagn.com



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

130 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

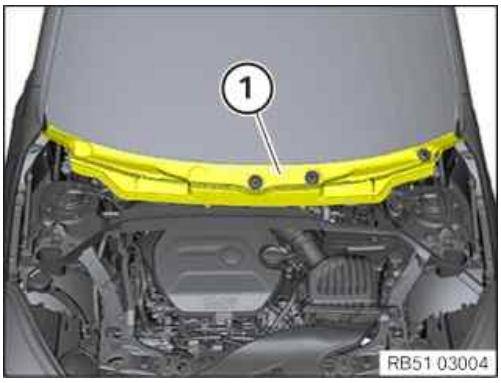
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

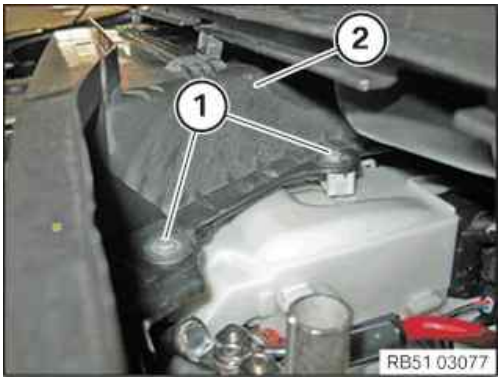
131 – Install the rear cowl panel cover

cardiagn.com



- Feed in and engage the rear cowl panel cover (1).

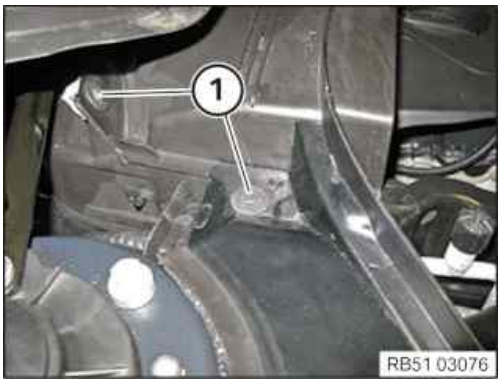
132 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

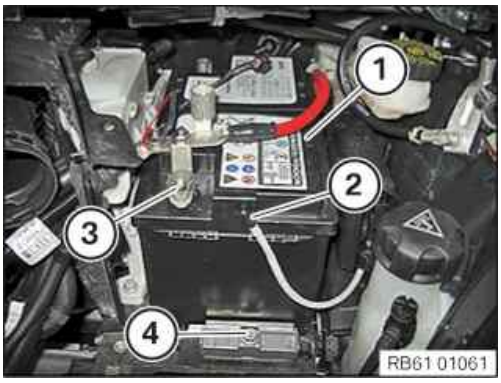
Screw		Tightening torque	3 Nm

133 – Install vehicle battery

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com



- Install vehicle battery (1).
- Tighten the holder with the bolt (4).

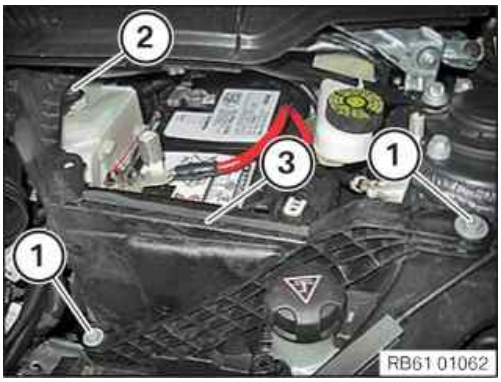
Battery terminal rail to battery tray

M8 screw		19 Nm

- Position the vent hose (2).
- Position the positive terminal.
- Tighten the nut (3) on the positive terminal.

Positive battery terminal

NutM6		5 Nm



- Insert the tension strut (3).
- Tighten down screw (2).

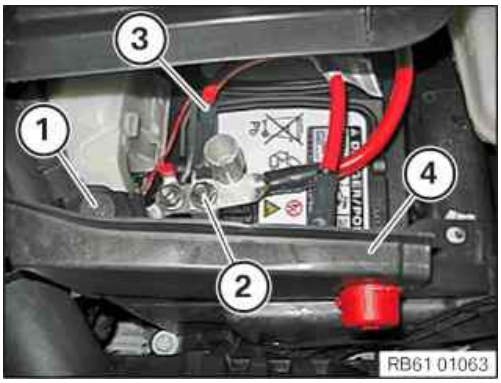
Battery cover

Screw		2,8 Nm

- Tighten the screws (1).

Trailing link

M8 screw		19 Nm



- Position the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten down screw (1).

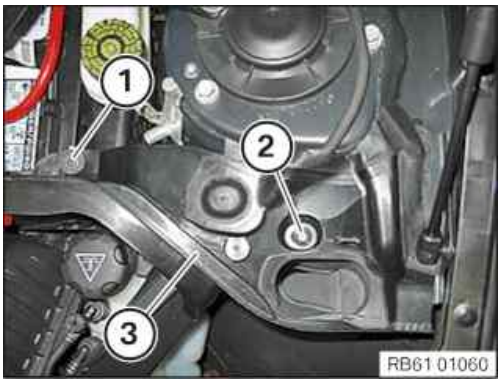
Battery cover

Screw		2,8 Nm

- Tighten the nut (2) on the positive terminal.

Positive battery cable to battery terminal

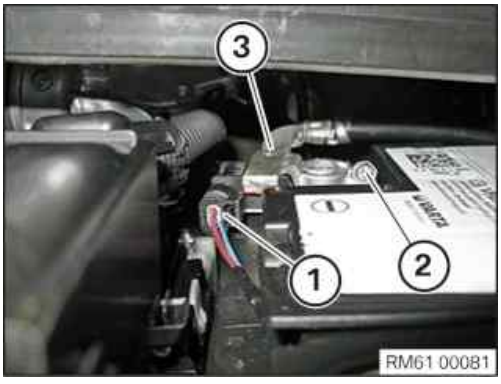
Nut M8		15,2 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm



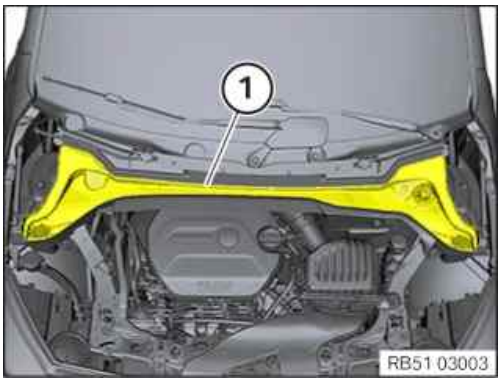
- Position the negative battery terminal (3).
- Tighten nut (2).

Negative battery terminal (with IBS)

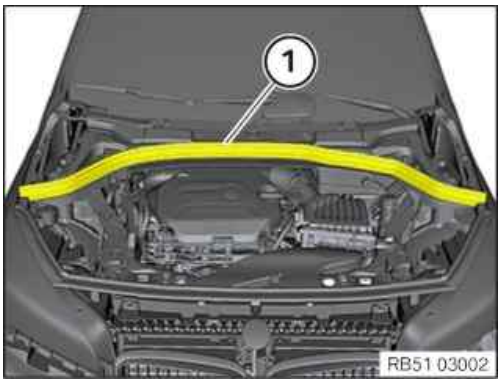
NutM6		5 Nm

- Connect connectors (1) and lock.

cardiagn.com



- Feed in the cowl panel cover (1).



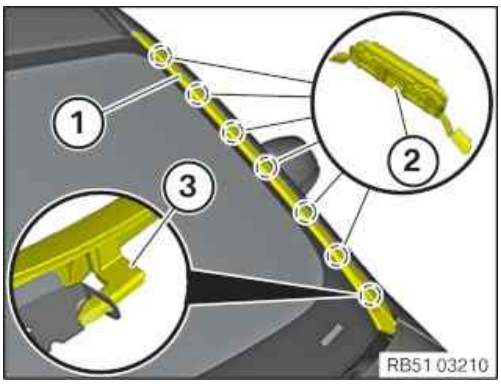
- Press the gasket (1) in a downwards direction.

134 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the gutter strip on the windscreen**



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

135 – Install left and right wiper arm

NOTICE

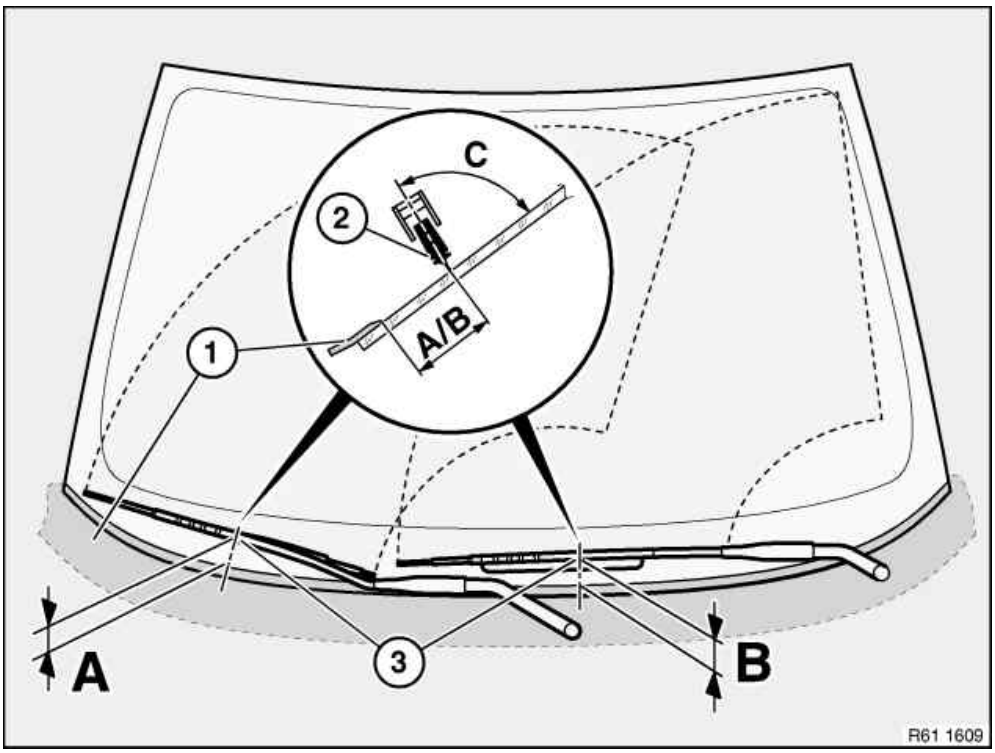
Description is for left component only. Procedure on the right side is identical.

▸ **Install the wiper arm**

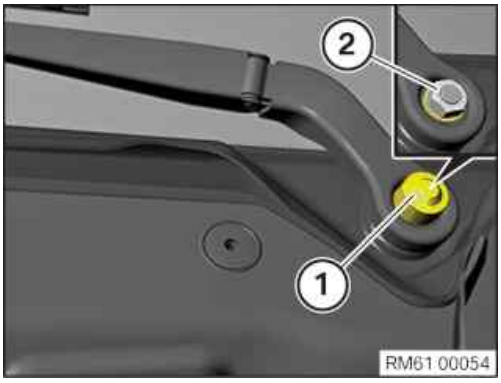
cardiagn.com

TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

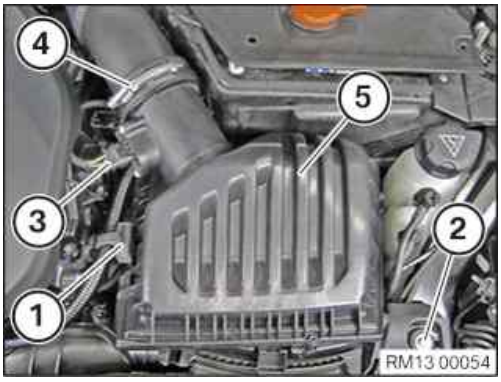
- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

136 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

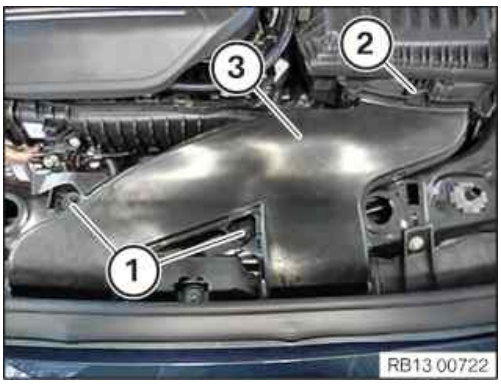
Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

cardiagn.com

137 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

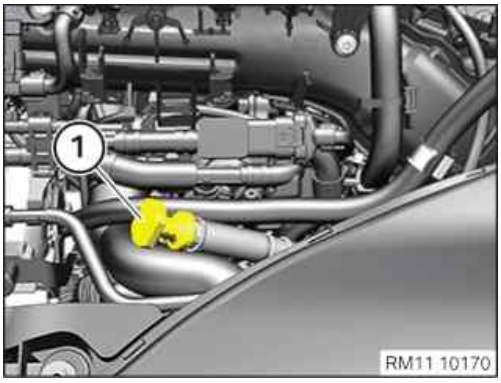
138 – Check engine oil level

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▶ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

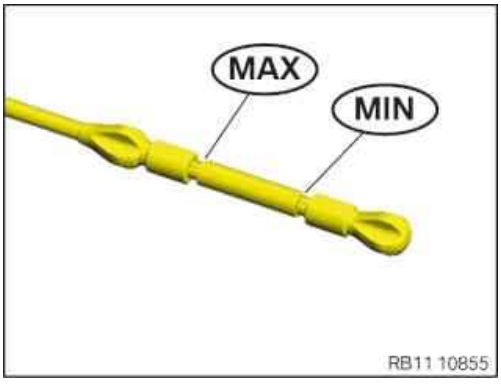


- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.



TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

139 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

Additional Information

Overview of Tightening Torques

Bracing strut to top cross connection — Used in step 32

M8		Tightening torque	25 Nm

Air duct to deformation element/cross connection — Used in step 32

M6x20 screw		Tightening torque	6 Nm

Cross connection on support for cross connection — Used in step 32

M6x20		Tightening torque	12 Nm

Rear end of front axle support to body — Used in step 67 99

M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body — Used in step 67 99

M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body — Used in step 67 99 107

Screw		Tightening torque	3 Nm

Special tool to cylinder head — Used in step 67 68

M8		Tightening torque	21,5 Nm

Exhaust manifold to cylinder head — Used in step 68 81

M7	If necessary, renew loose stud bolts.	Tightening torque	11 Nm
	Replace nuts.	Tightening torque	13 Nm

Banjo bolt for exhaust pressure pipe to exhaust manifold — Used in step 68 81

Hollow bolt		Renew sealing rings.	30 Nm

Exhaust-gas recirculation cooler to exhaust manifold — Used in step 68 81 120

M8x28	Replace screws	Tightening torque	32 Nm

Coolant temperature sensor at cylinder head — Used in step 68

Temperature sensor		Tightening torque	3,5 Nm

Standard screw connection M8 — Used in step 68 74

M8		Tightening torque	19 Nm

cardiagn.com

Glow elements to cylinder head

Used in step 68 71

Glow element		Tightening torque	13 Nm

Cylinder head to crankcase

Used in step 71

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

Cylinder head bolt to timing case cover

Used in step 71

M8x40		Tightening torque	19 Nm

Engine support to cylinder head

Used in step 71

M10X45		Tightening torque	41 Nm

Right engine mount to cylinder head

Used in step 71

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

Camshaft carrier to cylinder head

Used in step 72

M7x35		Tightening torque	13 Nm

Bearing journal to cylinder head

Used in step 74

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

Standard screw connection M6

Used in step 74

M6			8 Nm

Chain tensioner piston to cylinder head

Used in step 75

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Camshaft sprocket to camshaft

Used in step 76

M7x17.			17 Nm

Exhaust turbocharger to exhaust manifold

Used in step 83

V-band clamp		Tightening torque	19 Nm

Oil feed line to exhaust turbocharger

Used in step 83

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

Oil return line to turbocharger

Used in step 83

M6x12		Tightening torque	8 Nm

Holder to exhaust turbocharger and crankcase

Used in step 83

M8x16		Tightening torque	22 Nm

Charge air line to crankcase

Used in step 84

M6x25		Tightening torque	5 Nm

Charge air duct to oil sump

Used in step 84

M6		Tightening torque	8 Nm

cardiagn.com

Heat shield for exhaust turbocharger — Used in step 85 86 111

Torx screw BM 6x12		Tightening torque	10 Nm

Exhaust turbocharger bracket to cylinder head — Used in step 85

Hexagon screw M 8x16		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger — Used in step 87

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Diesel particle filter to holder — Used in step 87

M8 hexagon nut		Tightening torque	19 Nm

SCR metering module V-clip to exhaust system — Used in step 87

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

Holder for coolant lines to diesel particulate filter — Used in step 87

Torx bolt BM6x16		Tightening torque	8 Nm

Low-pressure exhaust-gas recirculation cooler to diesel particulate filter — Used in step 87

Flange nutM8		Tightening torque	19 Nm

Control sensor — Used in step 88

Control sensor		Tightening torque	50 Nm

Exhaust temperature sensor to diesel particulate filter — Used in step 89 90

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Exhaust-gas temperature sensor to exhaust system — Used in step 91

Exhaust-gas temperature sensor		Tightening torque	28 Nm

Oxygen sensor holder to intermediate shaft — Used in step 92

Hexagon screw M6x16		Tightening torque	8 Nm

Nitrogen oxide sensor before SCR catalytic converter — Used in step 93

Sensor		Tightening torque	50 Nm

Monitoring sensor — Used in step 94

Sensor		Tightening torque	50 Nm

Starter motor to transmission — Used in step 95

M8x45		Tightening torque	19 Nm

Battery positive lead to starter — Used in step 95

M8		Tightening torque	13,5 Nm

Exhaust system to body — Used in step 96

M8	Replace nuts.	Tightening torque	19 Nm

Exhaust bracket on body — Used in step 96

Hexagon screw M8x30		Tightening torque	19 Nm

cardiagn.com

V-clip to catalytic converter

Used in step 96

V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm

Diesel particulate sensor to exhaust system

Used in step 96

Sensor		Tightening torque	50 Nm

Nitrogen oxide sensor downstream of SCR catalytic converter

Used in step 96

Sensor		Tightening torque	50 Nm

Cross-member/torsion strut to axle support and mounting

Used in step 97

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

Front connection carrier to body

Used in step 98

M10x18		Tightening torque	56 Nm

Rear connection carrier to body

Used in step 98

M8x18		Tightening torque	28 Nm

Track rod end to swivel bearing

Used in step 99

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing

Used in step 99

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

Holder, wishbone rubber mount, to body

Used in step 100

M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °

Holder with rubber mount to front axle support

Used in step 100

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate

Used in step 100

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier

Used in step 100

		Tightening torque	11,8 Nm

Holder to front axle support

Used in step 101

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar

Used in step 103

M10	Renew nut.	Tightening torque	56 Nm

Wheel arch cover to body

Used in step 105

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Used in step 105

Plastic nut		Tightening torque	3 Nm

cardiagn.com

Underbody panelling, side

Used in step 106

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Used in step 106

Plastic nut		Tightening torque	2,6 Nm

Brake disc to front wheel hub

Used in step 108

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

Used in step 108

M8	Renew screw.		16 Nm

Wheel bolts

Used in step 108

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear

Used in step 110

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead

Used in step 110

Plastic nut		Tightening torque	3 Nm

Rear bulkhead upper part to lower section of bulkhead

Used in step 112

Oval-head screw		Tightening torque	5 Nm

Cylinder head cover to cylinder head

Used in step 113

M6		Tightening torque.	8,5 Nm

Differential pressure sensor to holder

Used in step 114

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor

Used in step 114 126

Clamp 15–19mm		Tightening torque	3 Nm

Clamping claw facing to cylinder head cover

Used in step 115

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 115

Screw		Jointing torque Angle of rotation	8 Nm 120 °

Rail on cylinder head cover

Used in step 116

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com

High pressure line between high pressure pump and rail

Used in step 116 117

High-pressure pipe		Tightening torque	28 Nm

High pressure lines between injector and rail

Used in step 118

High pressure lines		Tightening torque	28 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 120

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 120

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 120

M8x20		Tightening torque	19 Nm

Battery holder to engine support

Used in step 121

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray

Used in step 122

M8X16		Tightening torque	15 Nm

Wiring harness to cylinder head cover

Used in step 122 125

TS5x20		Tightening torque	3,5 Nm

Cover to electronics box

Used in step 122 125

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery

Used in step 122 125

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 122 125

M8		Tightening torque	19 Nm

Positive battery connection point cover to engine compartment partition wall

Used in step 122 125

		Tightening torque	3 Nm

Battery cover

Used in step 122 125 133

Screw			2,8 Nm

Intake plenum to cylinder head

Used in step 123

M6		Tightening torque	11 Nm

Positive battery cable to alternator

Used in step 125

M8		Tightening torque	19 Nm

Fuel line to intake plenum

Used in step 125

TS6x20		Tightening torque	5 Nm

Exhaust gas pressure sensor

Used in step 126

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

cardiagn.com

Clean air pipe to exhaust turbocharger — Used in step 126

Torx bolt BM8x25		Tightening torque	8 Nm

Clean air pipe to cylinder head cover — Used in step 126

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 126 136

Clamp		Tightening torque	3 Nm

Underbody protection front — Used in step 127

			3 Nm

Resonator to manifold and clean air pipe — Used in step 129

Screw TS6	Renew screw.	Tightening torque	5 Nm

Bulkhead cover, top — Used in step 132

Screw		Tightening torque	3 Nm

Battery terminal rail to battery tray — Used in step 133

M8 screw		19 Nm

Positive battery terminal — Used in step 133

NutM6		5 Nm

Trailing link — Used in step 133

M8 screw		19 Nm

Positive battery cable to battery terminal — Used in step 133

Nut M8		15,2 Nm

Negative battery terminal (with IBS) — Used in step 133

NutM6		5 Nm

Windscreen wiper arm — Used in step 135

Combination hexagon nut		Tightening torque	35 Nm

Intake silencer housing to lock bridge — Used in step 136

M6X30		Tightening torque	8 Nm

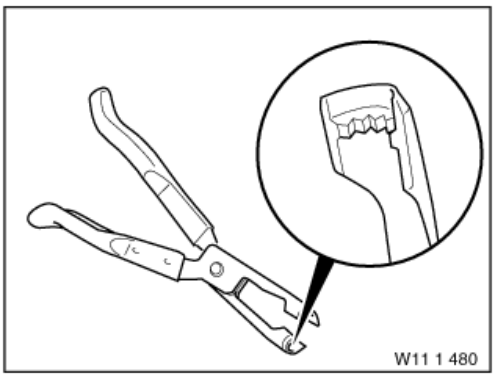
Intake neck to cross connection — Used in step 137

M6		Tightening torque	8 Nm

Overview of Special Tools

cardiagn.com

0 490 796 (11 1 480) Pliers



Common	Used in step 20 68
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 495 910 (37 1 152) Socket wrench

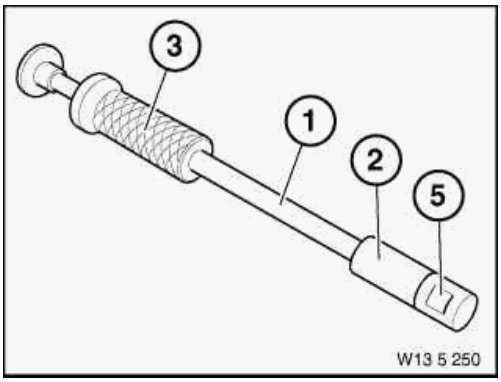
Common	Used in step 24 25 26 116 117 118
Usage	(Socket wrench)SW19
Included in the tool or work	0 495 908
Storage location	B21
Replaced by	
In connection with	
SI-Number	01 01 07 (333)

2 413 106 Fastener

Common	Used in step 24 25 117 118
Usage	For avoiding contamination and damage of rail, injectors and high pressure pump.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 16 (419)

cardiagn.com

0 493 321 (13 5 250) Puller



Common Used in step 27

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common Used in step 27

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

Common Used in step 27

Usage	(Weight)
Included in the tool or work	0 493 321

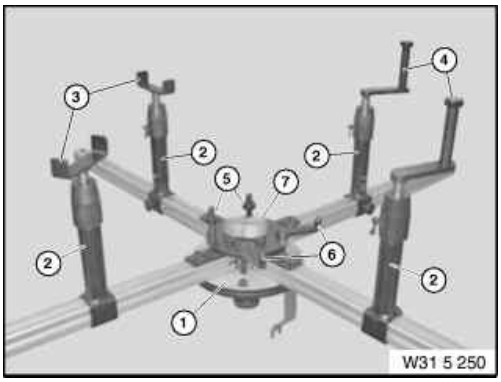
Replaced by	
In connection with	
SI-Number	

cardiagn.com

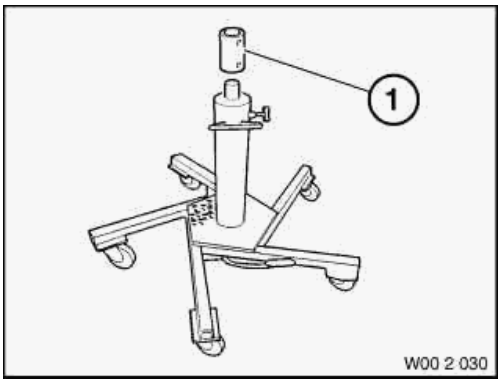
0 495 817 (31 5 251) Basic body



Common Used in step 43 67 71 99

Usage	(Basic body) No longer available separately, only via special tool set 31 5 250 (83 30 0 495 567)
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

0 490 133 (00 2 030) Device



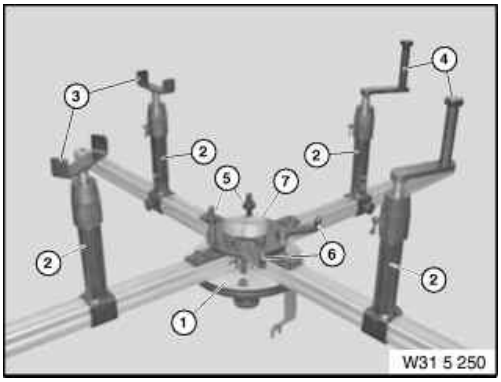
Common Used in step 43 67 71 99

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

0 495 821 (31 5 255) Adapter

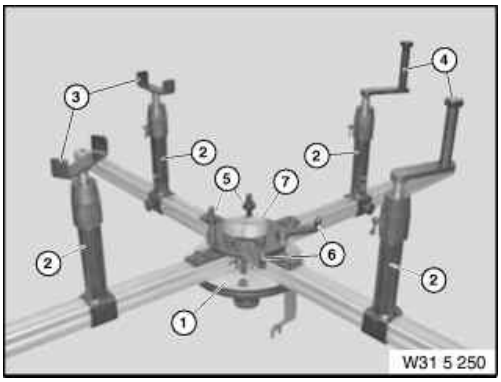


Common Used in step 43 71

Usage	(take-up adapter for bore holes (2 x))
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

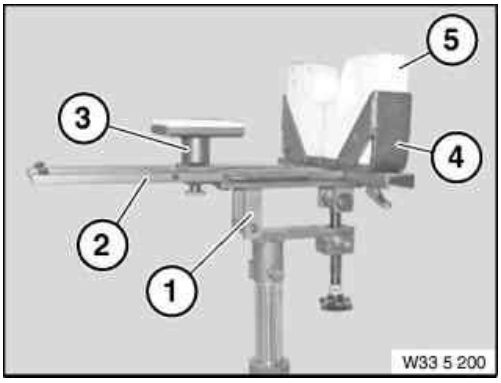
cardiagn.com

0 495 819 (31 5 253) Adapter



Common	Used in step 43 71
Usage	(take-up adapter U-section (2 x))
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

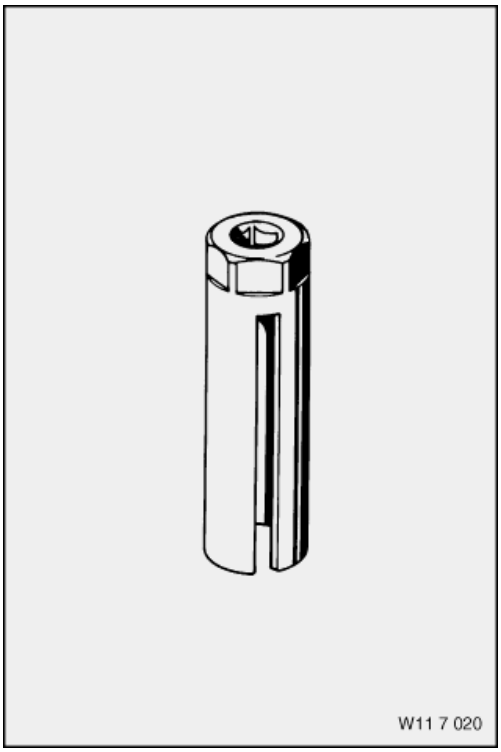
0 496 080 (33 5 206) Belt



Common	Used in step 43 67 71 99
Usage	(Tensioning strap)
Included in the tool or work	0 496 009
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

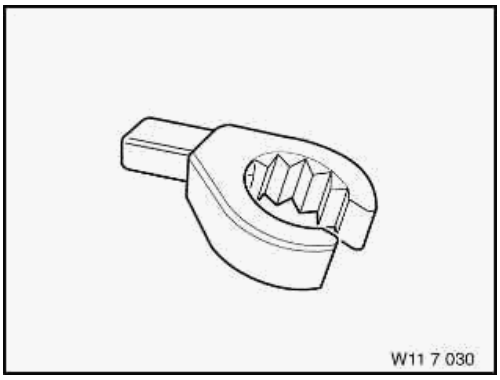
0 491 074 (11 7 020) Socket wrench insert



Common	Used in step 48 49 94
Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

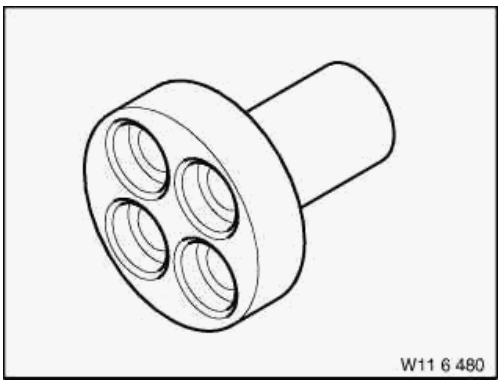
cardiagn.com

0 491 075 (11 7 030) Socket wrench insert



Common	Used in step 54 88
Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	01 06 95 (963)

0 493 380 (11 6 480) Connector



Common	Used in step 62 79
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

Common	Used in step 62 78 79
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common	Used in step 62 77 79
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

2 414 691 Support

Common Used in step 67 71

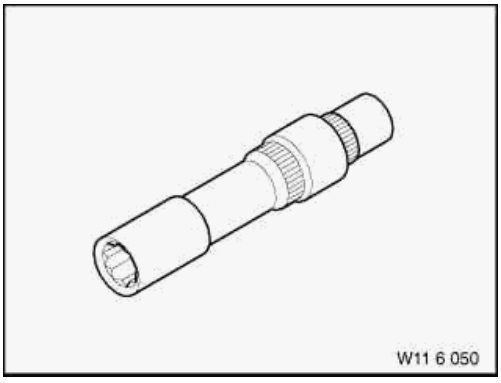
Usage	To support the engine when the engine support is removed.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	2357071
SI-Number	01 12 16 (406)

2 357 071 Panel

Common Used in step 67 71

Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

0 491 068 (11 6 050) Socket wrench insert



Common Used in step 67 68 71

Usage	(Wrench socket AF 10) bi-hexagon/glow elements
Included in the tool or work	
Storage location	B10
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

cardiagn.com

2 459 012 Holder

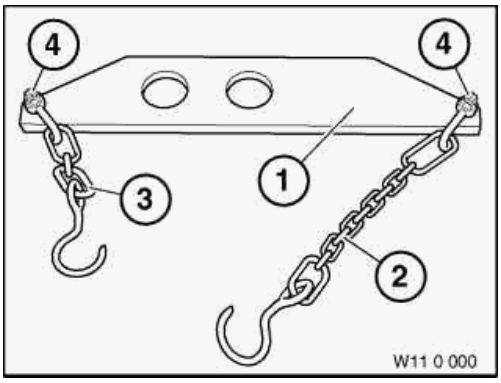
Common Used in step 67 71

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 490 561 (11 0 000) Lifting gear

Used in step 67 71

cardiagn.com



Common

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.

Parts

Parts required

Designation	Used in step
Chain tensioner piston seal on cylinder head	75
Exhaust-gas recirculation cooler seal on exhaust manifold	120
Exhaust-gas recirculation cooler seal on intake plenum	120

cardiagn.com

11 12 631 replace cylinder head

PRELIMINARY WORK

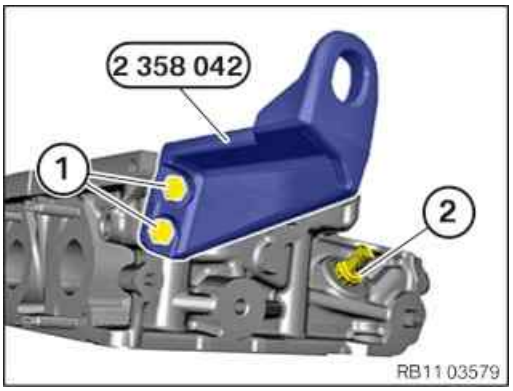
1 – Remove cylinder head.

- See additional information.

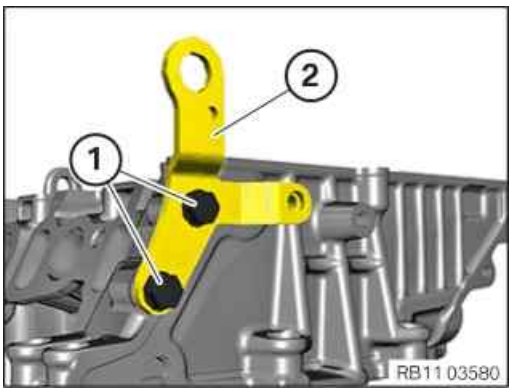
MAIN WORK

2 – replace cylinder head

- Unscrew the preheating elements with special tool **0 491 068 (11 6 050)**.



- Loosen screws (1).
- Remove the special tool **2 358 042** from the cylinder head.
- Loosen the coolant temperature sensor (2).



- Loosen screws (1).
- Remove mounting lug (2) from cylinder head.

▸ **Remove exhaust manifold**

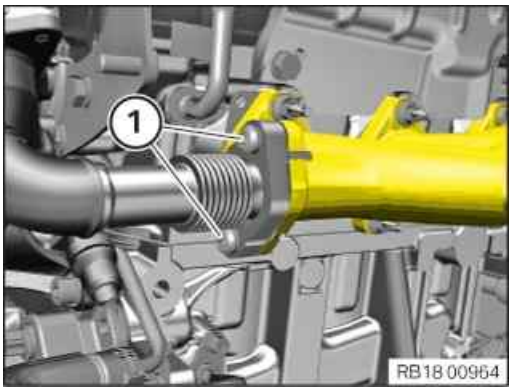
WARNING

Hot surfaces.

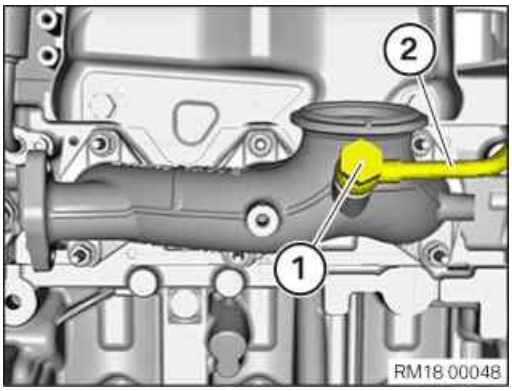
Risk of burning!

- Perform all work only on components that have cooled down.

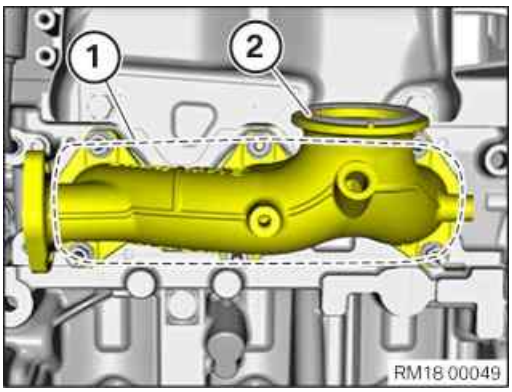
cardiagn.com



- Loosen screws (1).



- Unscrew the banjo bolt (1).
- Feed out exhaust gas pressure pipe (2) and place to one side.



- Evenly release nuts along the dashed line (1) from outer to inner side.
- Feed out exhaust manifold (2) and remove.

▸ **Remove all valve springs**

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

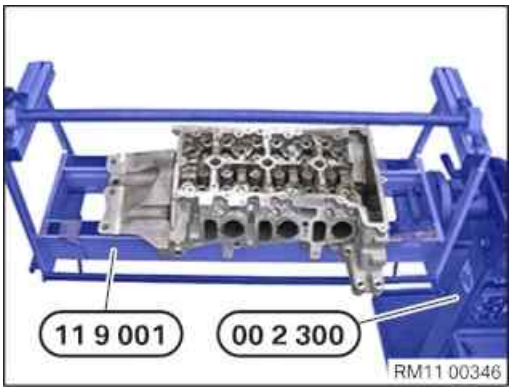
RISK OF DAMAGE

Contaminant or foreign body.

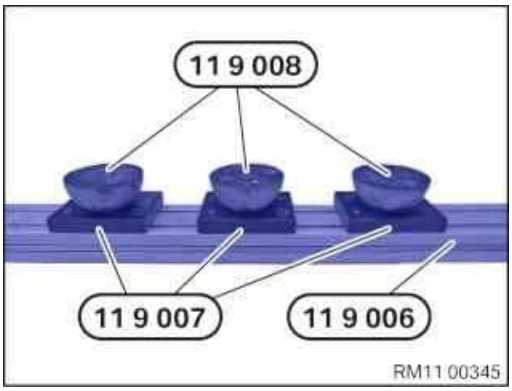
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

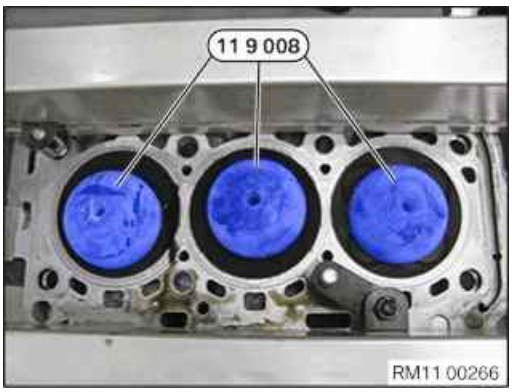
cardiagn.com



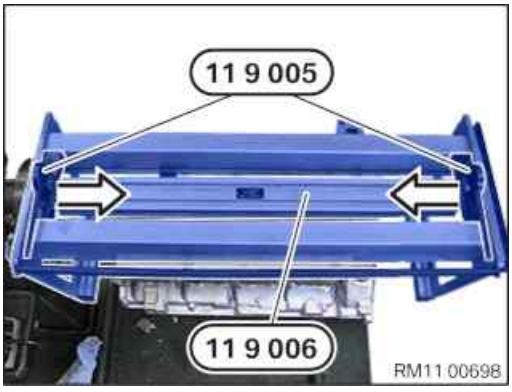
- Mount and bolt special tool **0 494 366 (11 9 001)** on special tool **0 495 187 (00 2 300)**.
- Mount and bolt the cylinder head to the special tool **0 494 366 (11 9 001)**.



- Prepare special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.



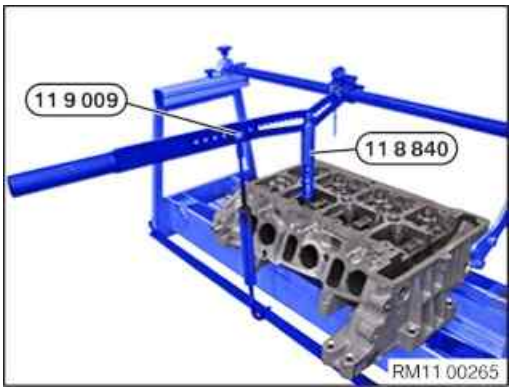
- Make sure that the special tools **0 494 373 (11 9 008)** are positioned as shown in the next operation.



- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Slide the special tool **0 494 370 (11 9 005)** in the direction of the arrow.

- Lock special tool 1**0 494 370 (11 9 005)** in the direction of the arrow.
- Rotate the cylinder head with the special tool **0 494 362 (11 9 000)** by 180° into the installation position.

cardiagn.com



- Align special tool **0 494 374 (11 9 009)** in direction of valve axis.

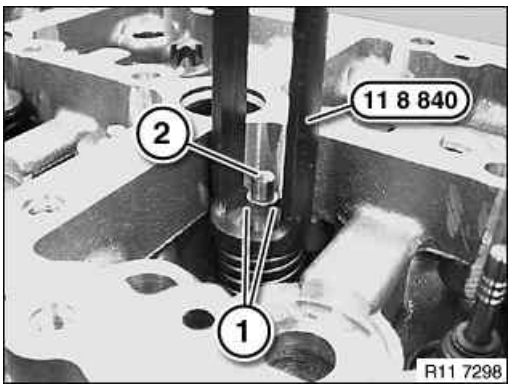
CAUTION

Component with preload.

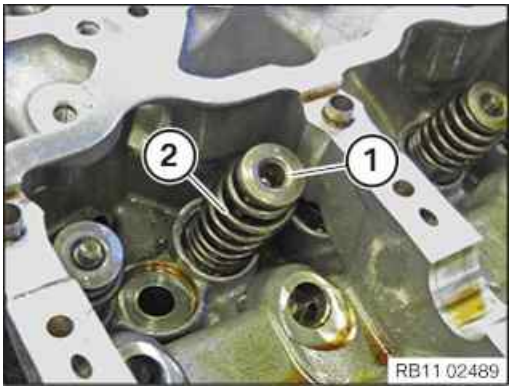
Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.



- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Remove the valve shims (1) with a magnet from the valve (2).
- Carefully relieve the valve spring.



- Set the spring cup (1) and the valve spring (2) down in the special tool **0 495 105 (11 4 480)** in order.

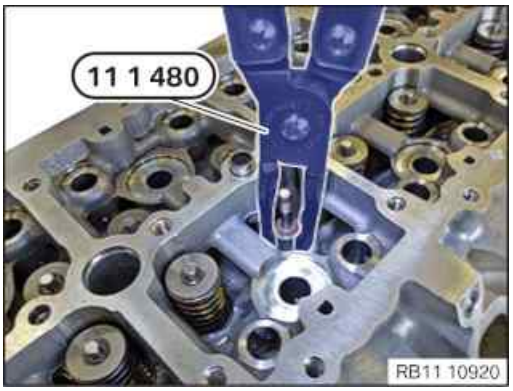
▸ **Remove valve stem seals**

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.



- Disassemble the valve stem seal (1) using the special tool **0 490 796 (11 1 480)** .

cardiagn.com

▶ **Remove all valves**

RISK OF DAMAGE

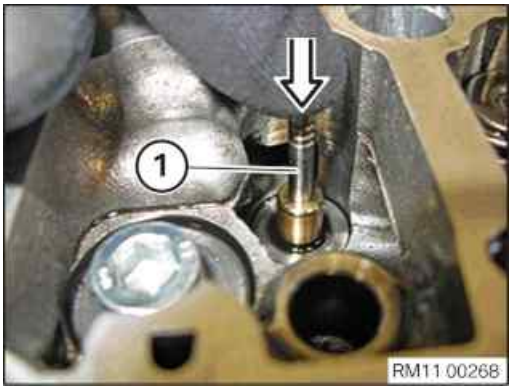
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

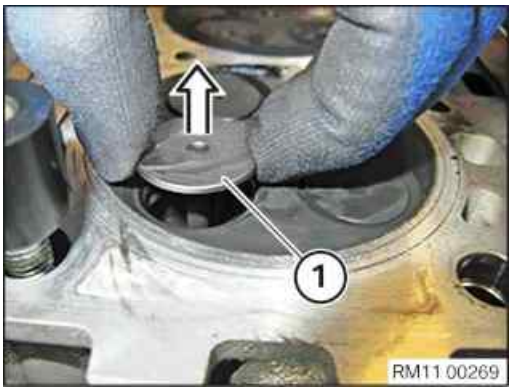
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Turn the cylinder head with the special tool **0 494 362 (11 9 000)**.
- Unlock the special tool **0 494 370 (11 9 005)** in the direction of the arrow.
- Remove special tool **0 494 371 (11 9 006)**.

- Remove special tool **0 494 373 (11 9 008)** if necessary.

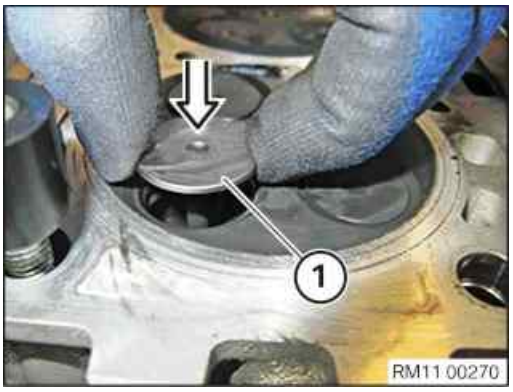


- Push the valve stem (1) into the cylinder head in the direction of the arrow.



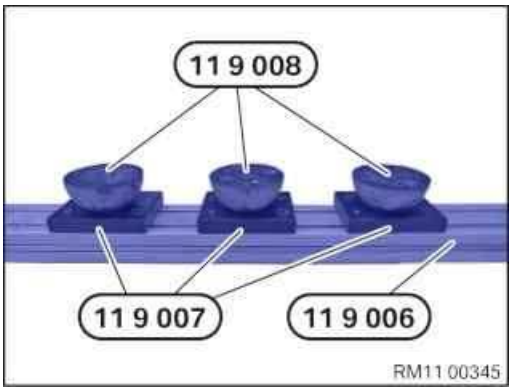
- Remove the valve (1) in the direction of arrow and store it properly in the special tool **0 495 105 (11 4 480)**.

cardiagn.com

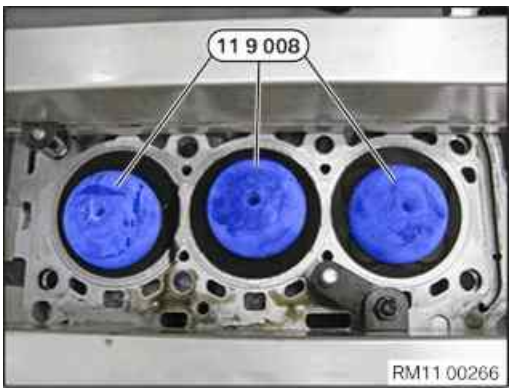


- Install valves (1) in the new cylinder head.

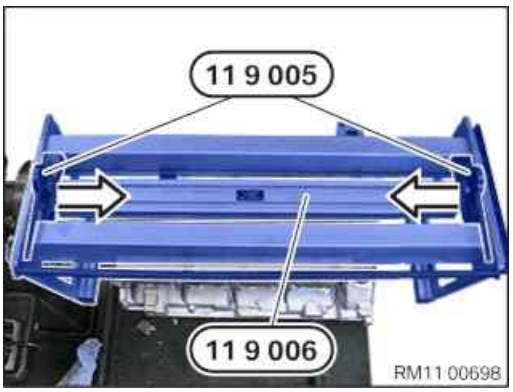
  Parts: Cylinder head
- Feed valves (1) in the direction of arrow and install.
- **Check the valves for tightness.**



- Prepare the special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.



- The special tools **0 494 373 (11 9 008)** must be set up accordingly in the next operation.



- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Lock special tool **0 494 370 (11 9 005)**in direction of arrow.

- Lock special tool **0 494 370 (11 9 005)**in direction of arrow.
- Use the special tool **0 494 362 (11 9 000)** to bring the cylinder head into the installation position by 180°.

▸ **Installing valve stem seals**

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

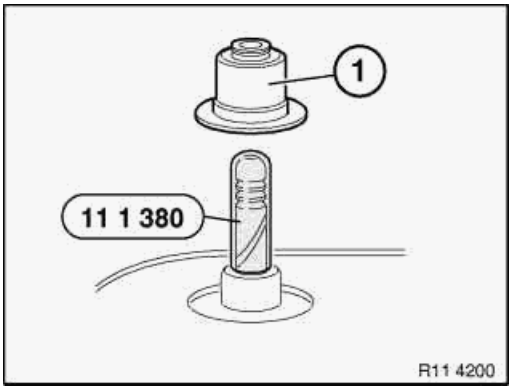
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

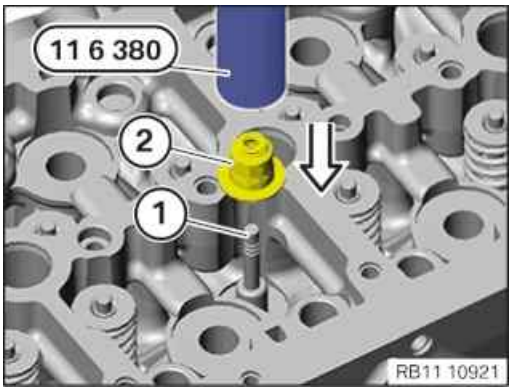
- Do not use any metal-cutting tools.

- Clean the contact surfaces (1).



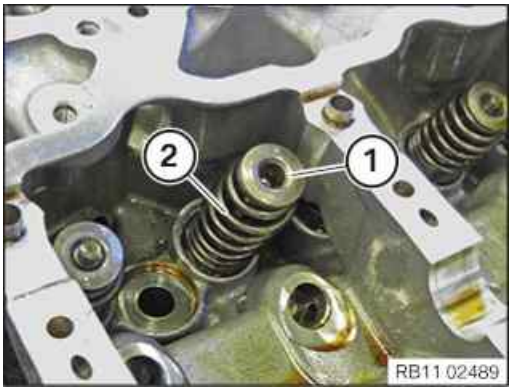
- Fit special tool **0 490 746 (11 1 380)**.
- Oil the valve stem seal (1) and install it.

  Parts: Valve stem seal



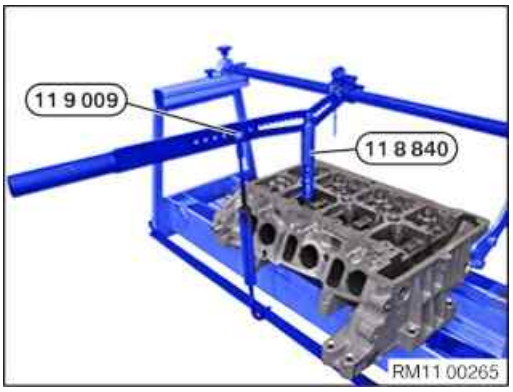
- Position the valve stem seals (2) on the valve (1).
- Use special tool **0 493 249 (11 6 380)** to press down the valve stem seal (2) until they are in contact with the cylinder head.

▸ **Install all valve springs**



- The mounting orientation of the valve springs (2) can be freely chosen.
- Install the valve spring (2) and spring cup (1).

cardiagn.com



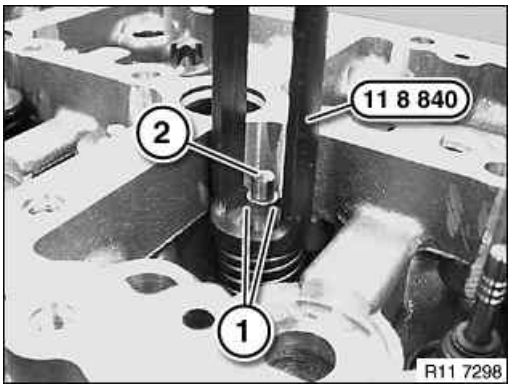
CAUTION

Component with preload.

Danger of injury!

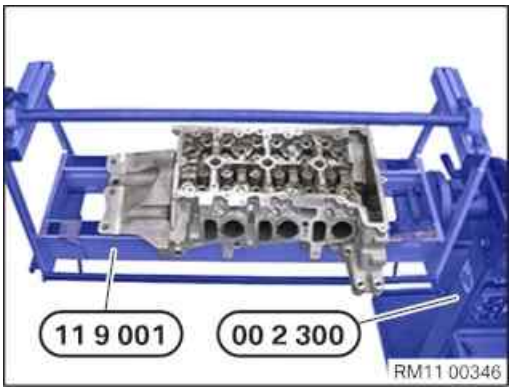
- Reduce preload as far as possible before disassembly. Relieve component.

- Align special tool in direction of valve axis.
- Select the corresponding groove using special tool **0 496 143 (11 8 840)**.
- Press down the valve spring on the upper spring cup with the special tools **0 494 374 (11 9 009)** and **0 496 143 (11 8 840)**.



- Keep the valve spring pressed down with the special tool **0 496 143 (11 8 840)**.
- Install the valve shims (1) of the valve (2) with a magnet.
- Relieve load on valve spring.

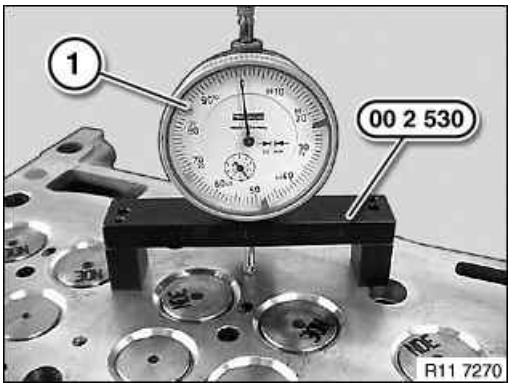
- Unlock special tool **0 494 370 (11 9 005)** in the direction of arrow and remove.



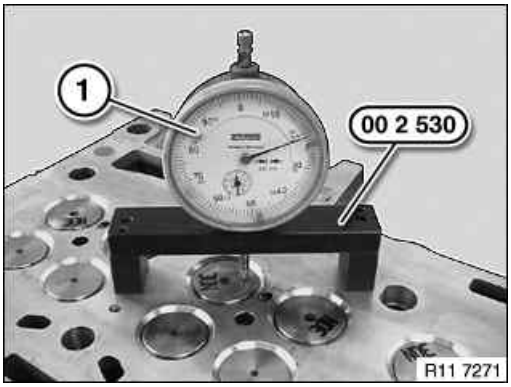
- Remove cylinder head from special tools **0 494 366 (11 9 001)** and **0 495 187 (00 2 300)**.

▸ **Checking the valve underprotrusion**

cardiagn.com



- Set the dial gauge (1) onto the cleaned cylinder sealing surface with slight preload in special tool **0 490 185 (00 2 530)**.
- Set dial gauge in mildly preloaded state to "zero".



Check

- Position the dial gauge (1) on the valve with special tool **0 490 185 (00 2 530)**.
- Measure valve underprotrusion and compare with the setpoint value.

Valve underprotrusion

	0,8 (0,7 - 0,9) mm

Result

» Valve underprotrusion is outside tolerance.

Measure

- Replace cylinder head.

▸ **Installing exhaust manifold**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to the surface.

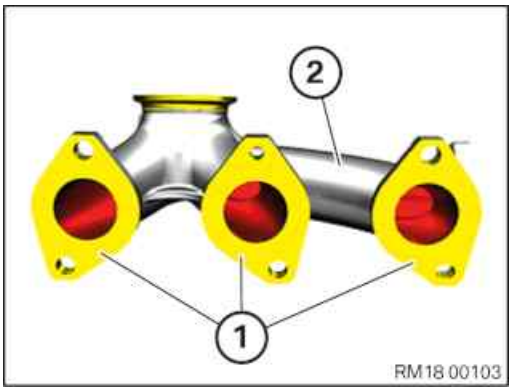
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

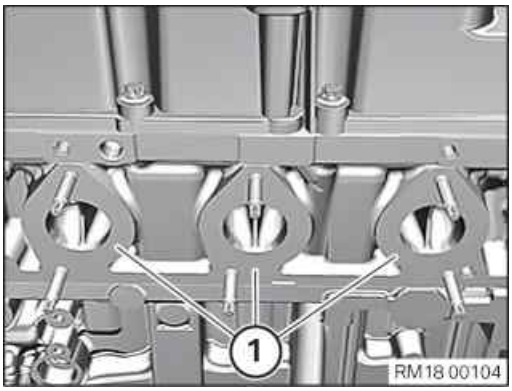
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

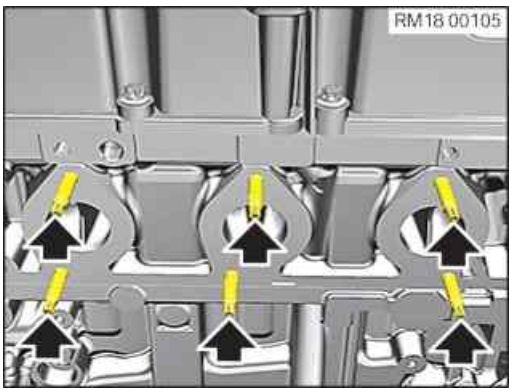
cardiagn.com



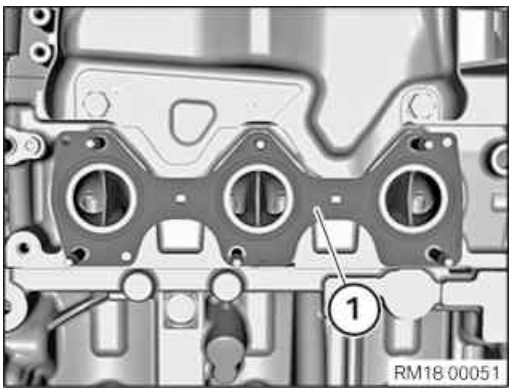
- Clean the connection points (1) on the exhaust manifold (2) with the special tool **0 495 102 (11 4 470)**.



- Clean the connection points (1) on the cylinder head with the special tool **0 495 102 (11 4 470)**.



- Check the stud bolts (arrows) on the cylinder head for **correct** fit.

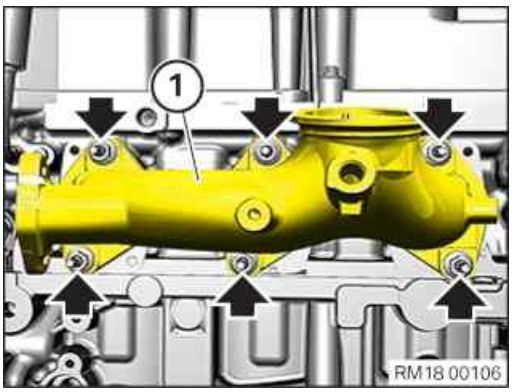


TECHNICAL INFORMATION

The **coated side of the** seal must be mounted facing towards the exhaust manifold.

- Renew the gasket (1).

  Parts: Gasket
- Insert and install the gasket (1).



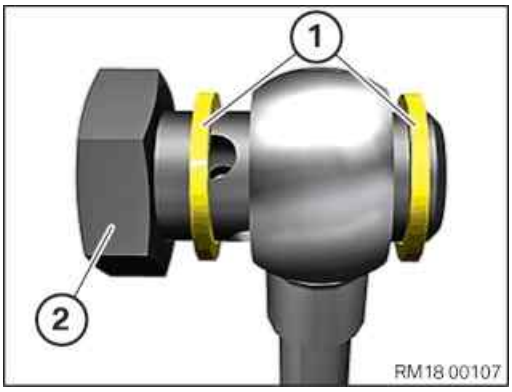
- Insert and install the exhaust manifold (1).
- Renew the nuts (arrows).

  Parts: Nuts
- Hand-tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.
- Tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.

Exhaust manifold to cylinder head

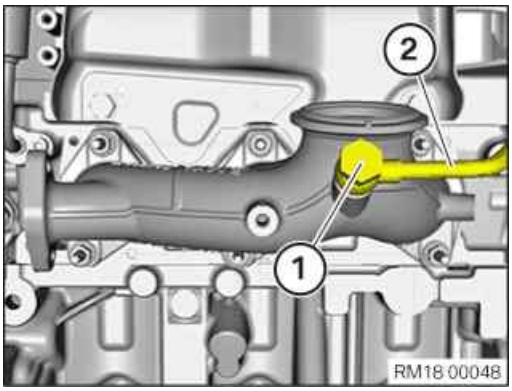
M7	If necessary, renew loose stud bolts.	Tightening torque	11 Nm
	Replace nuts.	Tightening torque	13 Nm

cardiagn.com



- Renew the sealing rings (1) from the banjo bolt (2).

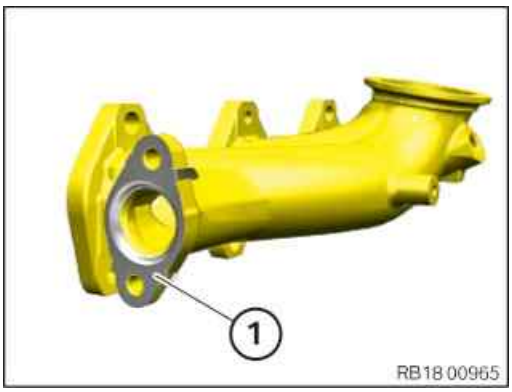
  Parts: Sealing ring



- Insert and install the exhaust gas pressure pipe (2).
- Tighten the banjo bolt (1).

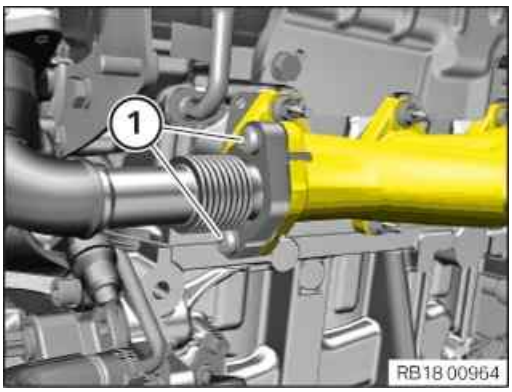
Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt		Renew sealing rings.	30 Nm



- Renew seal (1) between exhaust-gas recirculation cooler and exhaust manifold.

  Parts: Gasket



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

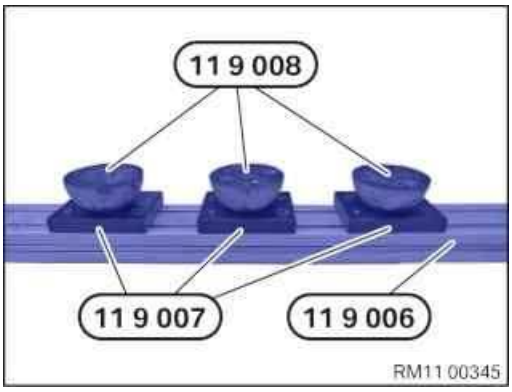
Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

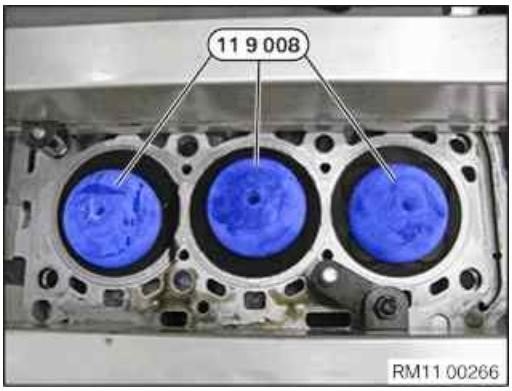
- Install valves (1) in the new cylinder head.

  Parts: Cylinder head
- Feed valves (1) in the direction of arrow and install.
- **Check the valves for tightness.**

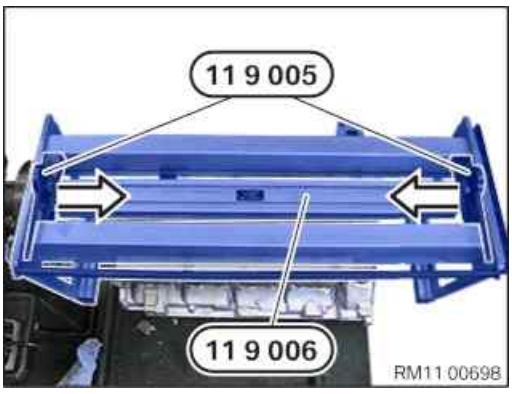
cardiagn.com



- Prepare the special tools **0 494 371 (11 9 006)**, **0 494 372 (11 9 007)** and **0 494 373 (11 9 008)** as shown.

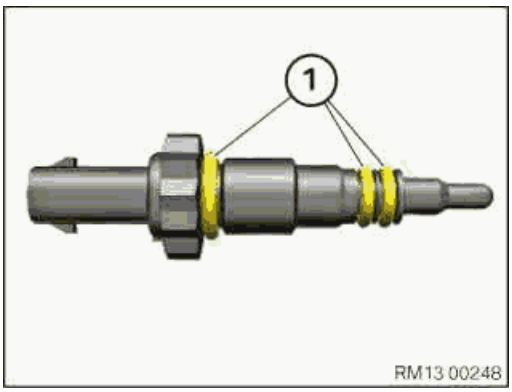


- The special tools **0 494 373 (11 9 008)** must be set up accordingly in the next operation.



- Turn round special tool **0 494 371 (11 9 006)** and insert as shown.
- Lock special tool **0 494 370 (11 9 005)**in direction of arrow.

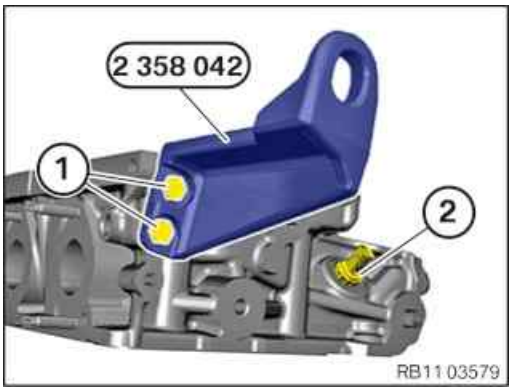
- Lock special tool **0 494 370 (11 9 005)**in direction of arrow.
- Use the special tool **0 494 362 (11 9 000)** to bring the cylinder head into the installation position by 180°.



- When reusing coolant temperature sensor sealing rings (1), check for damage, renew if necessary.

  Parts: Sealing ring

cardiagn.com



- Attach the special tool **2 358 042** on the cylinder head.
- Tighten the screws (1).

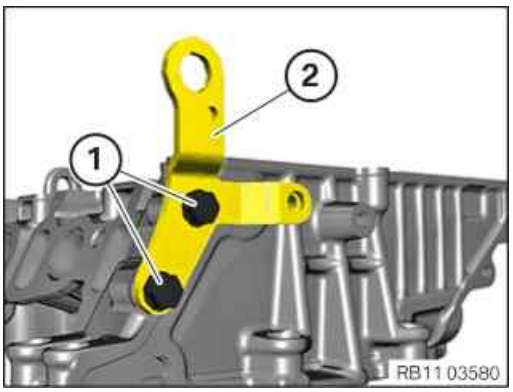
Special tool to cylinder head

M8		Tightening torque	21,5 Nm

- Tighten the coolant temperature sensor (2).

Coolant temperature sensor at cylinder head

Temperature sensor		Tightening torque	3,5 Nm



- Install mounting lug (2) on the rear cylinder head.
- Tighten the screws (1).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Screw in preheating elements using special tool **0 491 068 (11 6 050)** and tighten.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

POSTPROCESSES

3 – Installing the cylinder head

- See additional information.

cardiagn.com

11 12 101 Replace cylinder head gasket

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.

For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

TECHNICAL INFORMATION

Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Maintain conditions of absolute cleanliness.

cardiagn.com

1 – Remove vehicle battery

WARNING

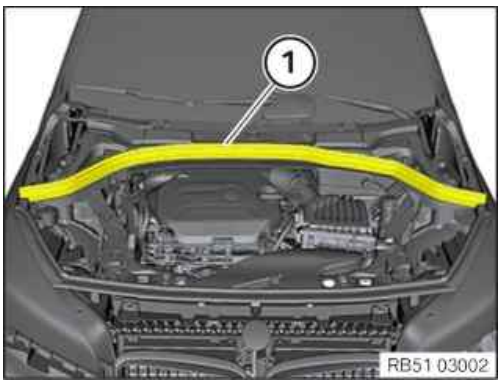
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

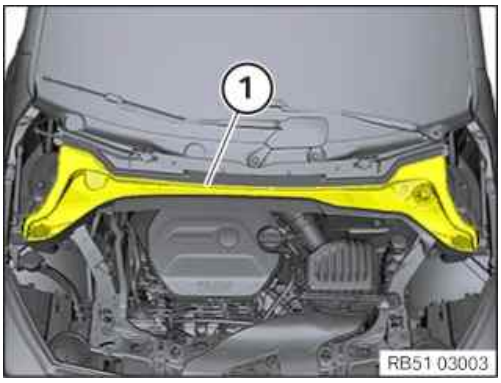
- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

TECHNICAL INFORMATION

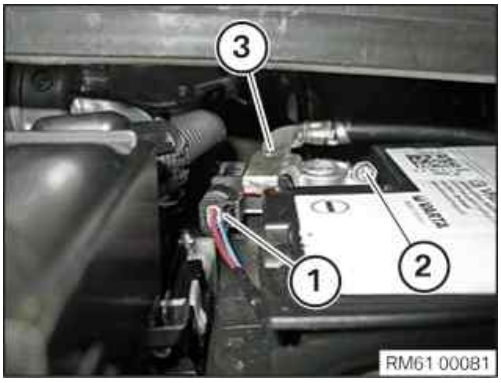
For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



- pull off gasket (1) upwards.

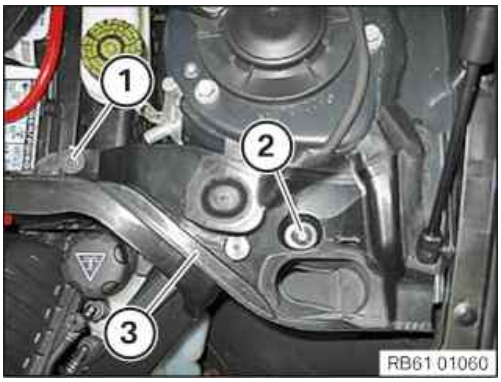


- Remove the cowl panel cover (1) to the top.

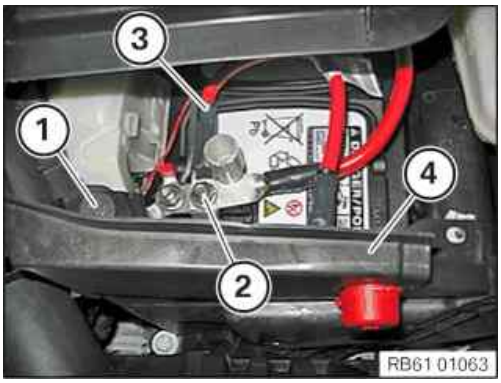


- Unlock and disconnect connector (1).
- Slacken nut (2).
- Disconnect the negative battery terminal (3).

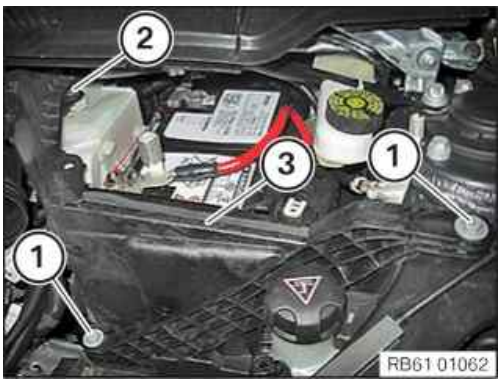
cardiagn.com



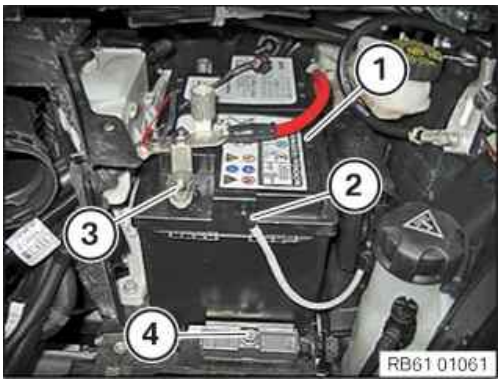
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).



- Loosen screw (1).
- Unscrew the nut (2) and remove the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten nuts (2) on the positive terminal hand-tight.



- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.



- Pull off the vent hose (2).
- Slacken the nut (3) on the positive terminal and remove the positive terminal.

WARNING

Unprotected battery terminals.

Risk of short circuits! Risk of fire!

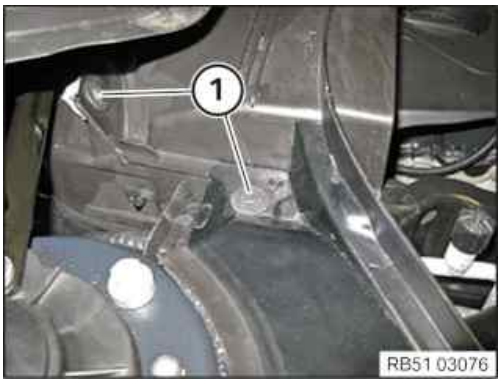
- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

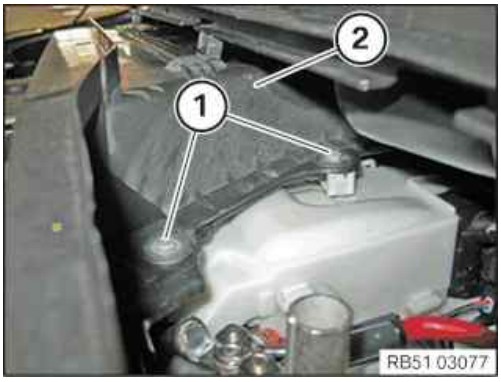
2 – Removing the upper bulkhead cover

cardiagn.com

- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

3 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

▶ **Remove the wiper arm**

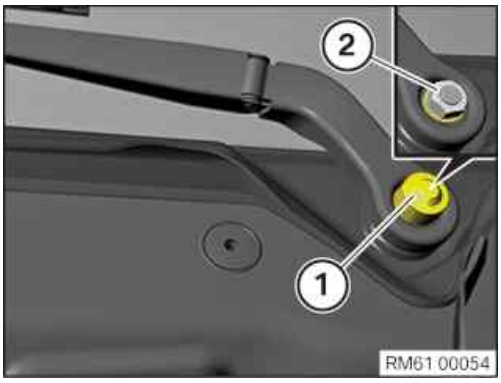
RISK OF DAMAGE

Damage to wiper console

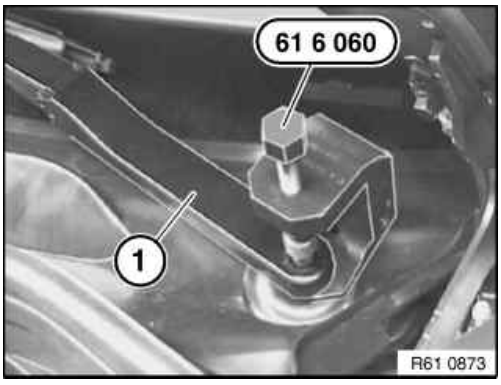
While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.

cardiagn.com



- Remove the protective cap (1).
- Loosen nut (2).



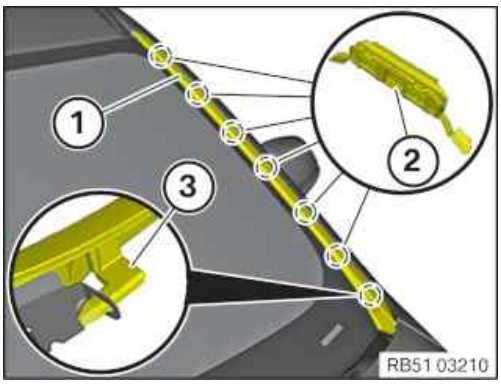
- Pull off the wiper arm (1) using special tool .

4 – Remove the gutter strip on the windscreen on the left and right

NOTICE

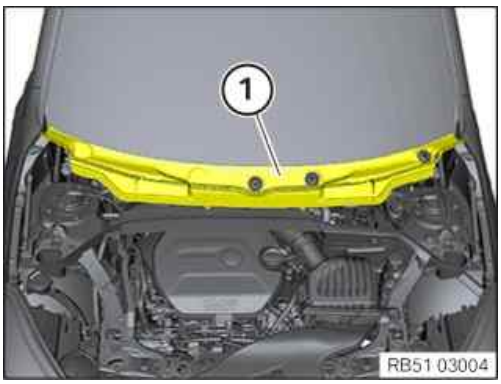
Description is for left component only. Procedure on the right side is identical.

▶ Remove the gutter strip on the windscreen



- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

5 – Remove the rear cowl panel cover



- Disengage and guide out the rear cowl panel cover (1) towards the top.

6 – Removing the acoustic cover

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

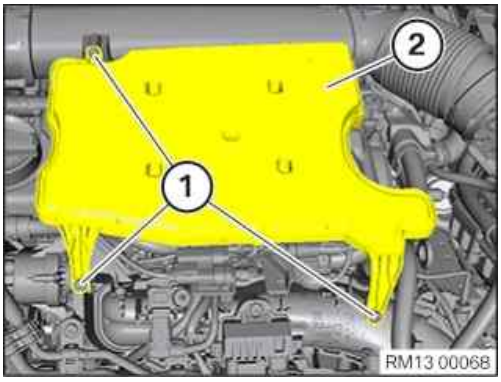
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

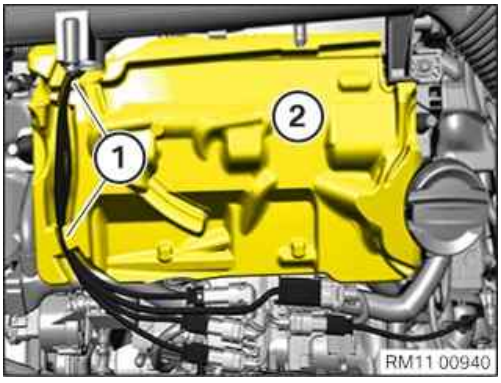
- Unclip the acoustic cover from the marked areas towards the top.

7 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

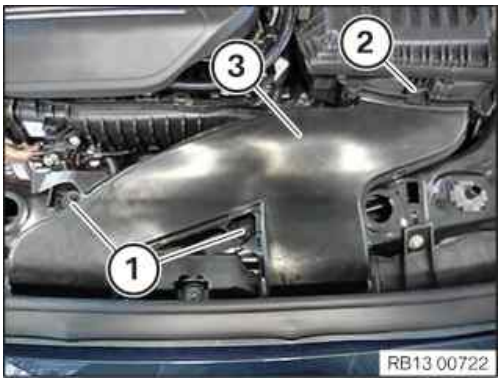
8 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

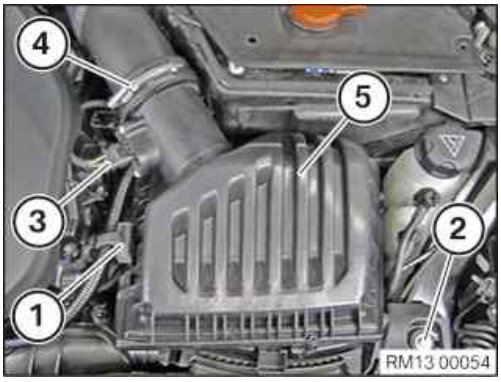
9 – Remove the intake neck for intake silencer housing

cardiagn.com



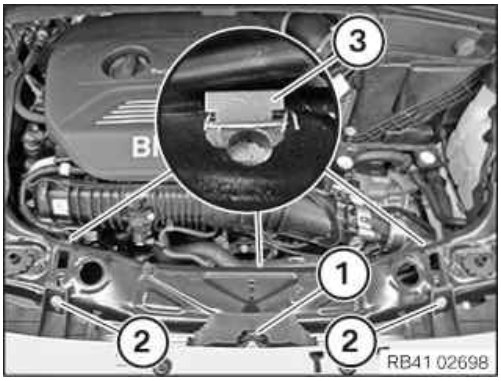
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

10 – Removing intake silencer housing

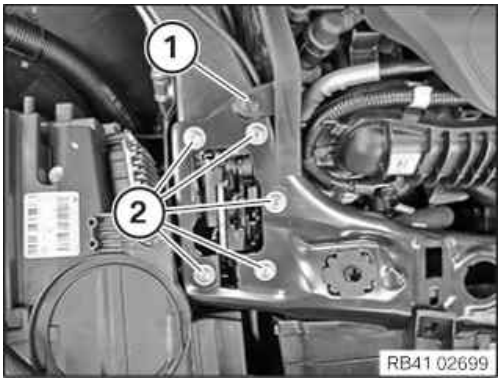


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

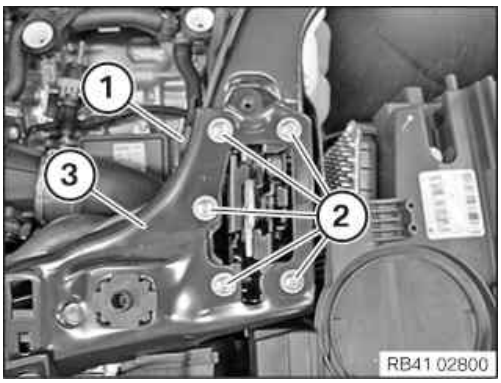
11 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



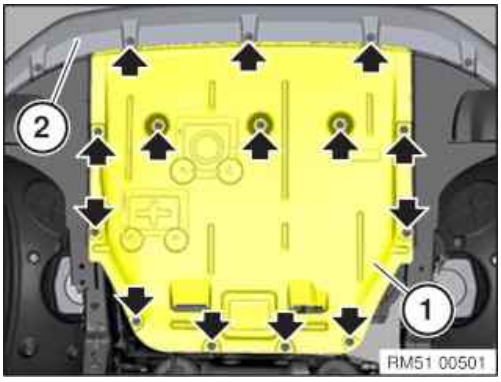
- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

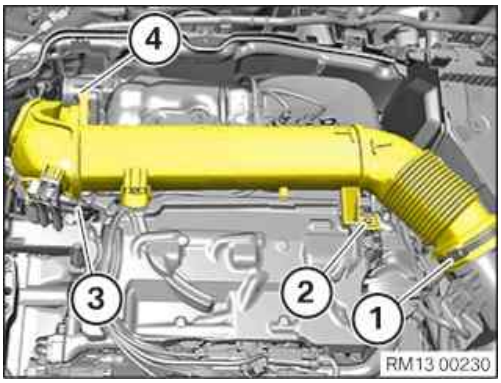
cardiagn.com

12 – Removing the front underbody protection

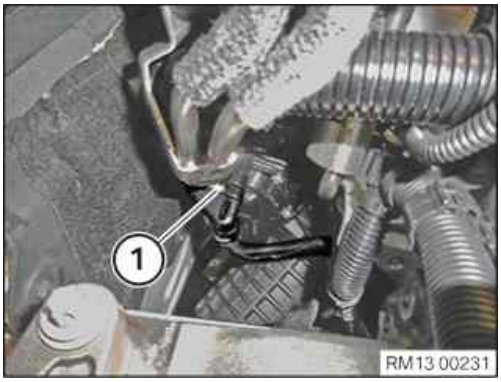


- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

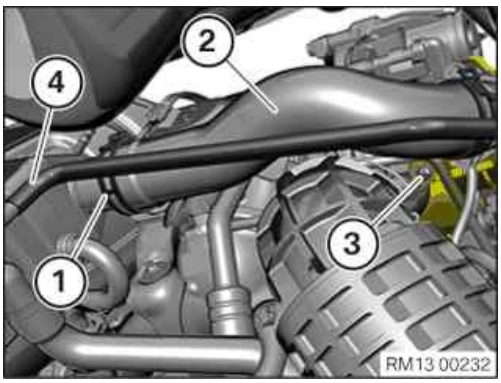
13 – Removing clean air pipe



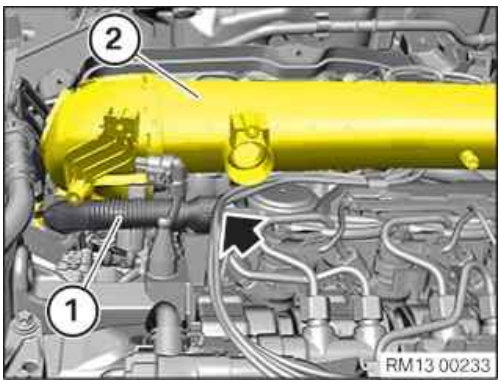
- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).



- Unlock and loosen connector (1).

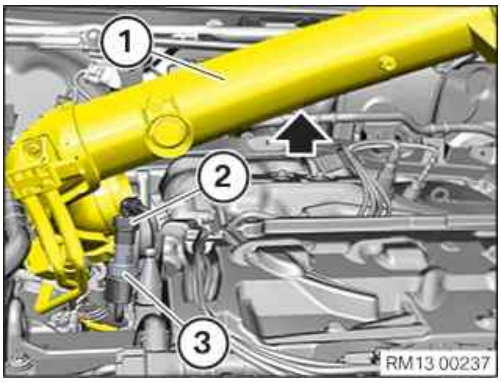


- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

cardiagn.com



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

14 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

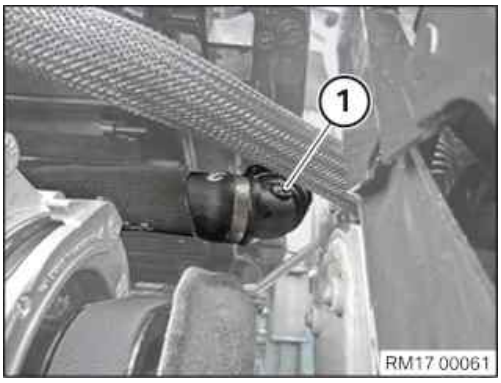
In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

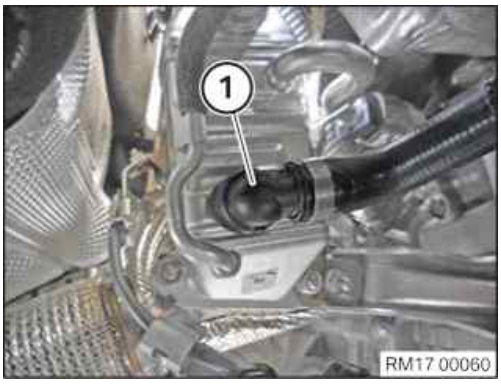
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

cardiagn.com



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

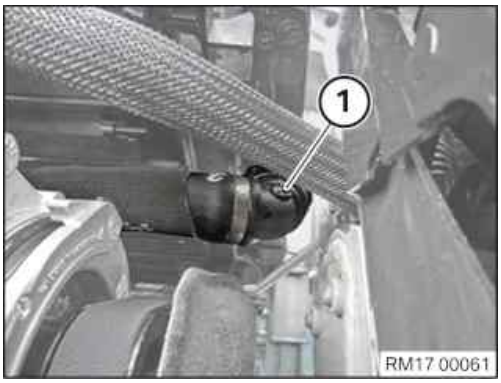


- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

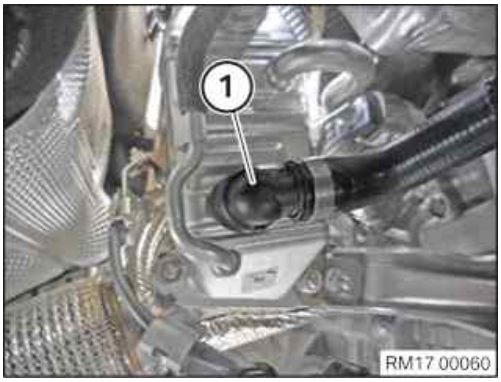
15 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

16 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

cardiagn.com

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

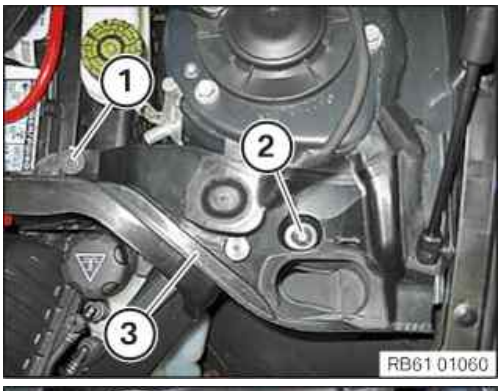
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

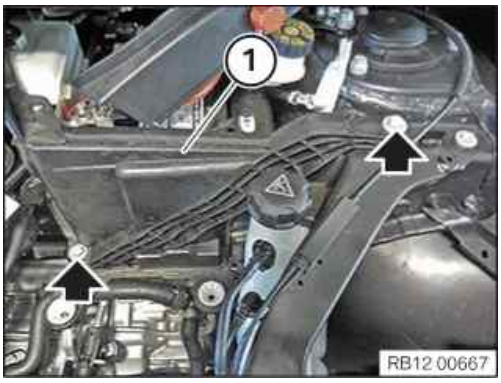
Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



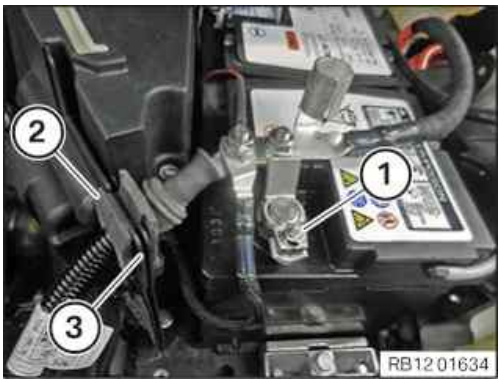
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.

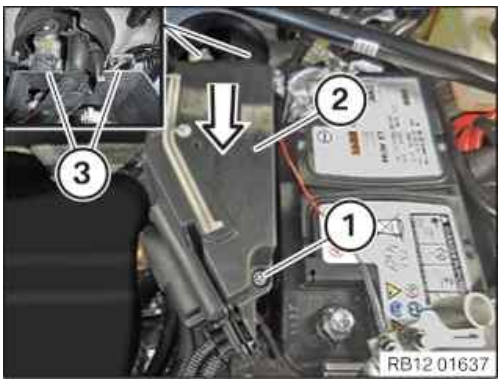
cardiagn.com



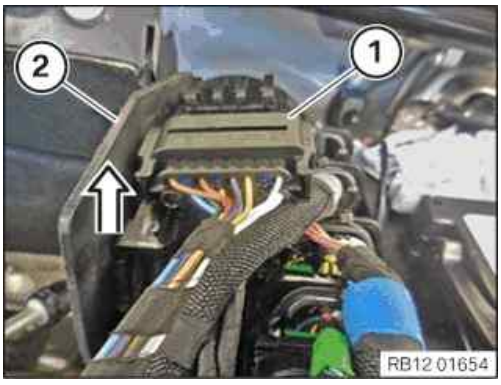
- Remove screws (arrows).
- Guide out tension strut (1) and remove.



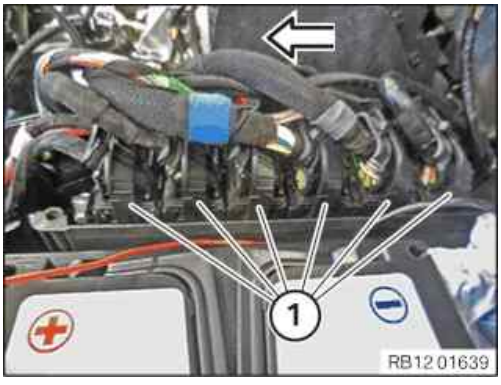
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

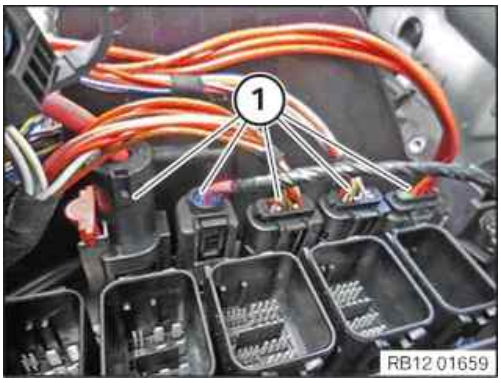


- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

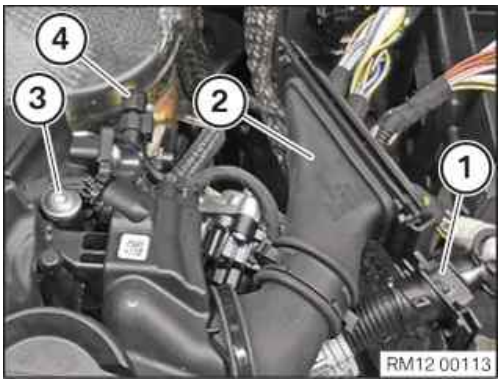


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

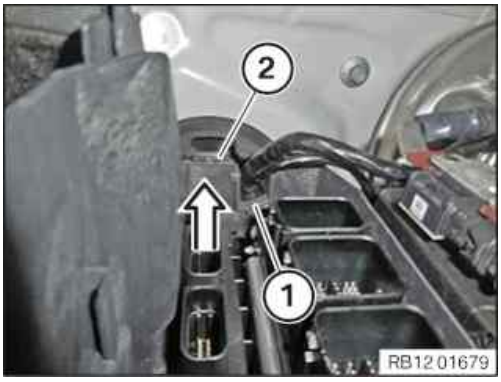
cardiagn.com



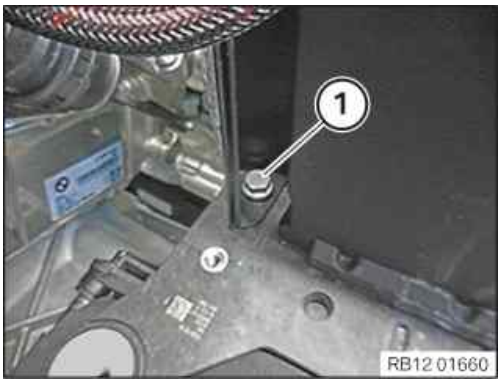
- Unlock and loosen connector (1).



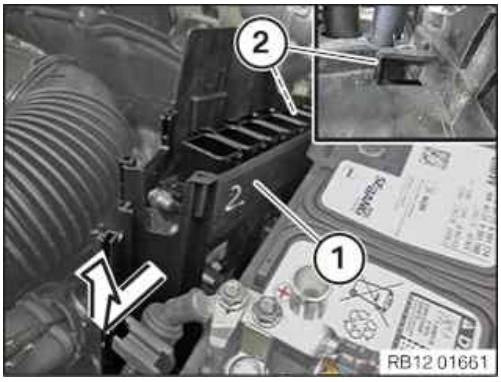
- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.



- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.



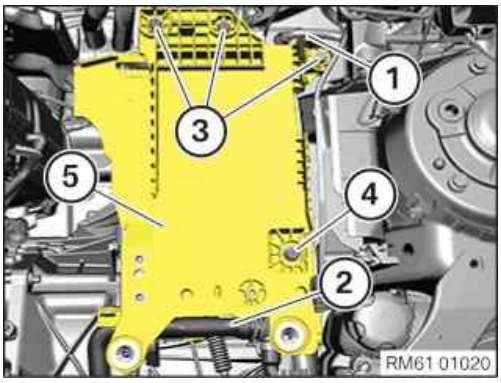
- Loosen screw (1).



- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

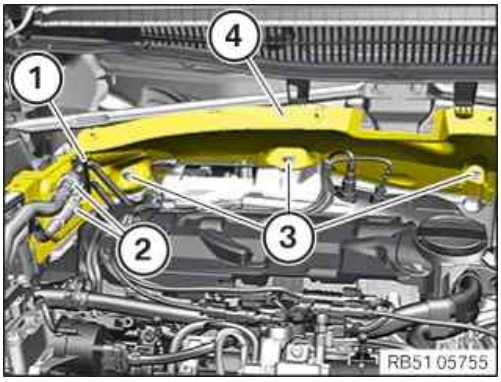
17 – Remove battery holder

cardiagn.com



- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

18 – Remove the rear bulkhead upper part



- Unlock the holder (1) and disconnect.
- Guide out and remove the fuel lines (2).
- Loosen screws (3).
- Guide out the rear bulkhead upper part (4) and remove.

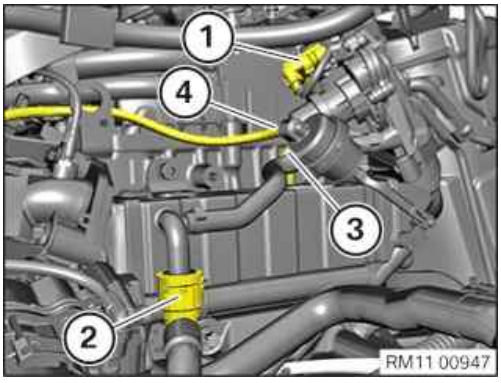
19 – Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

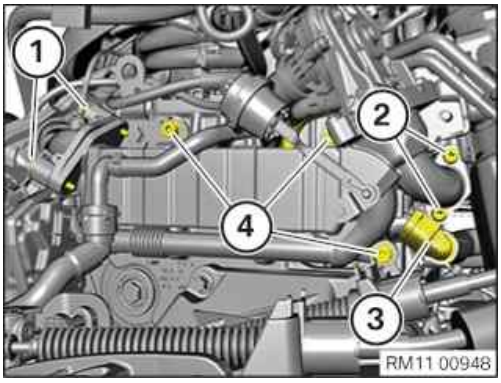
- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

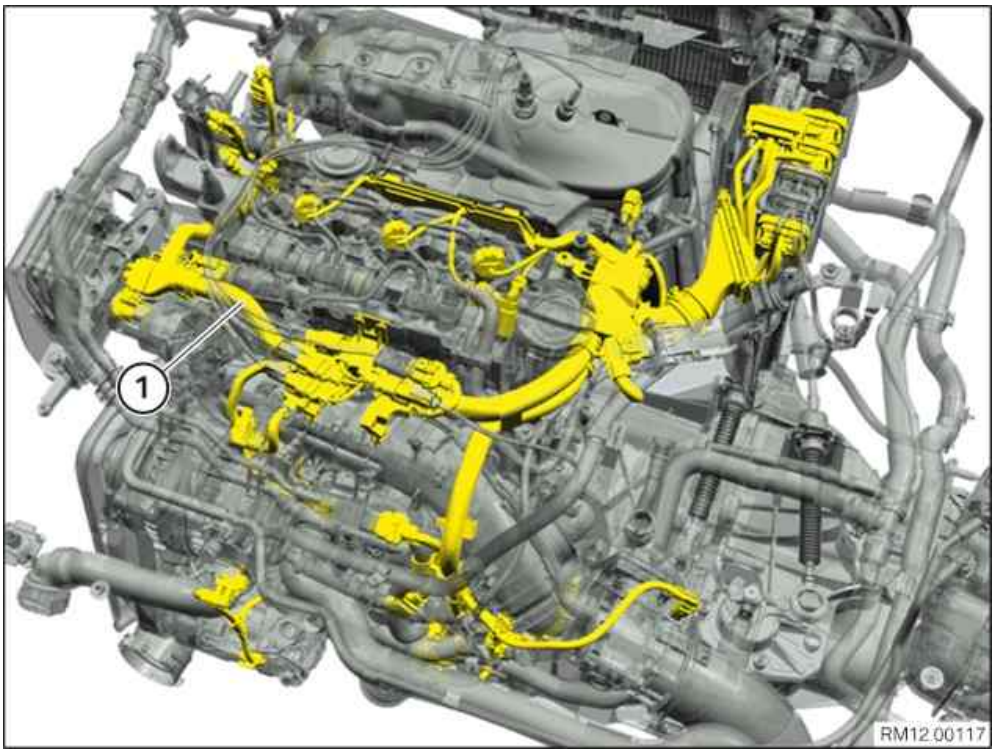


- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

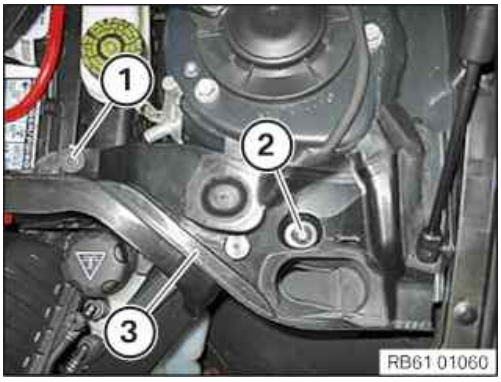
cardiagn.com

20 – Releasing the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine

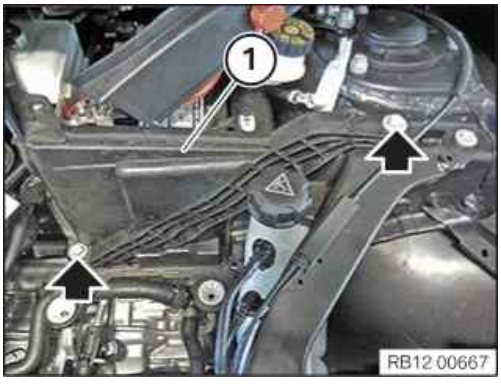


1 Wiring harness section for the engine



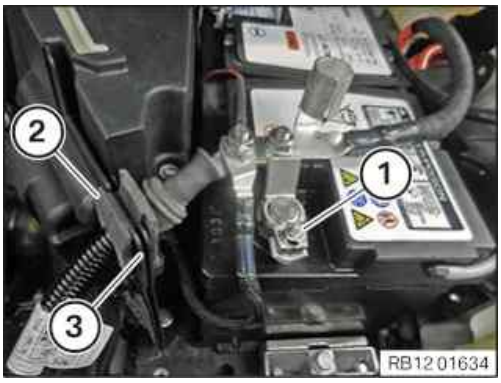
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.

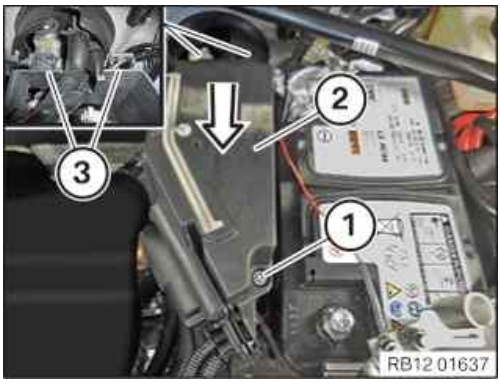


- Remove screws (arrows).
- Guide out tension strut (1) and remove.

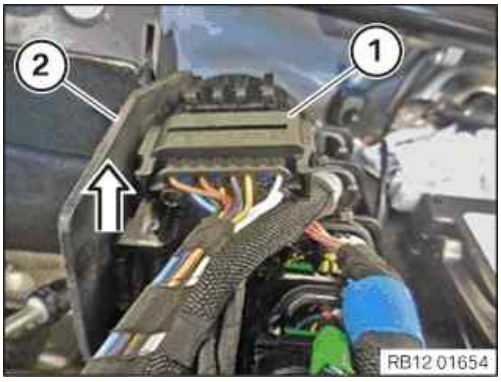
cardiagn.com



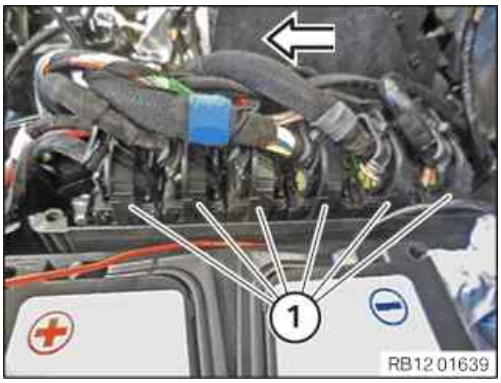
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



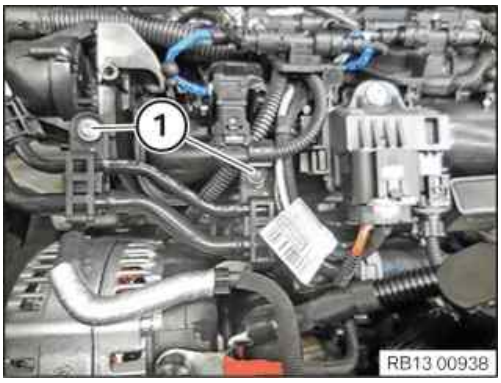
- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).



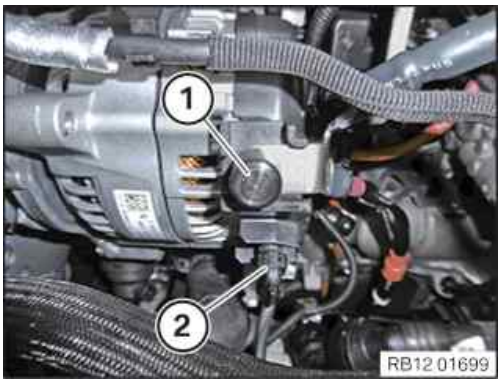
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).

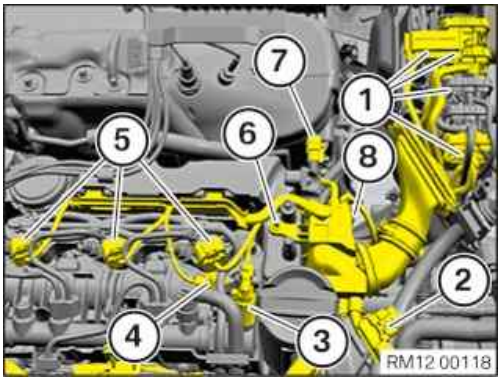
cardiagn.com



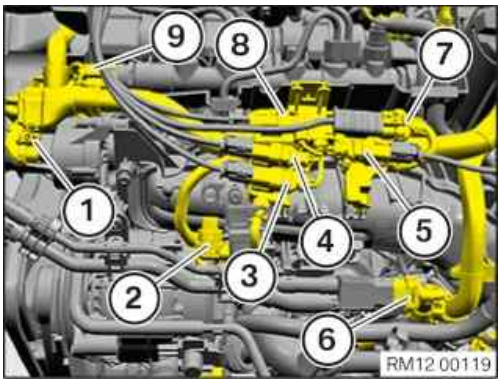
- Loosen screws (1).



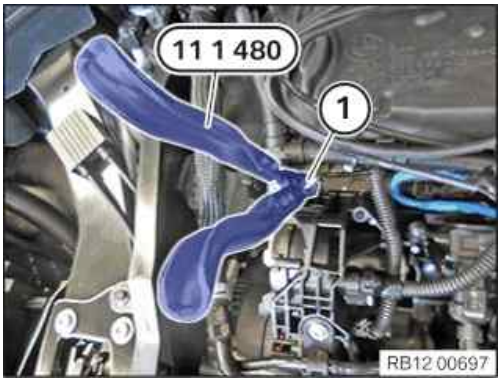
- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.



- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock connector (3) and pull off from fuel pressure regulator.
- Unlock connector (4) and disconnect from camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock connector (7) and disconnect from differential pressure sensor.

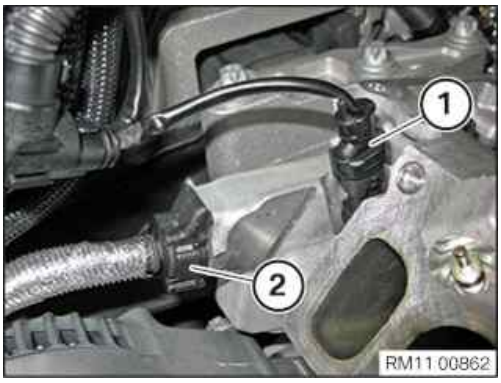


- Unlock connector (1) and pull it off the servomotor for the swirl flap.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock connector (3) and pull off from exhaust temperature sensor downstream from the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock connector (6) and pull off from the fuel pressure and temperature sensor.
- Unlock and disconnect the connector (7) from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.



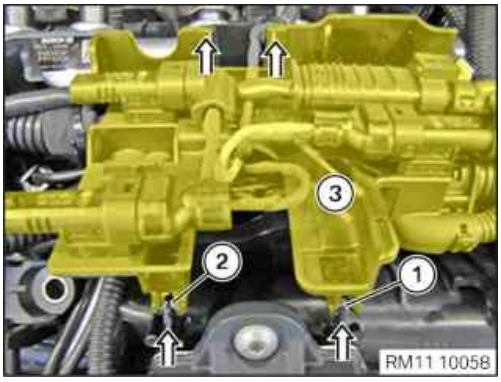
- Unlock connector (1) at all glow elements using special tool **0 490 796 (11 1 480)** and release.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

cardiagn.com



- Unlock and loosen connector (1).
- Unlock the clamp of the coolant line (2) and release the coolant line.

21 – Removing the cable clips from the intake plenum



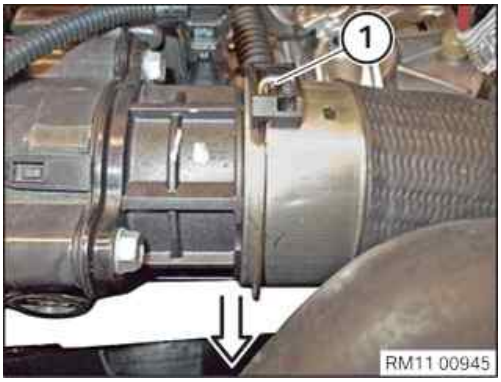
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.

22 – Removing the intake plenum

TECHNICAL INFORMATION

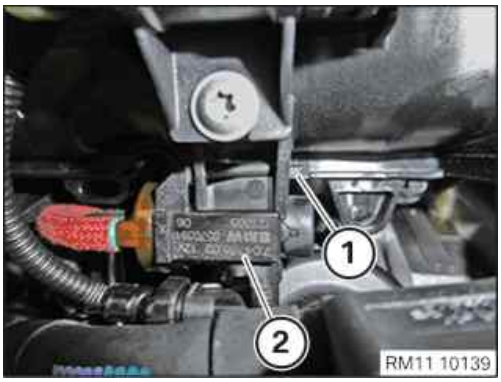
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).

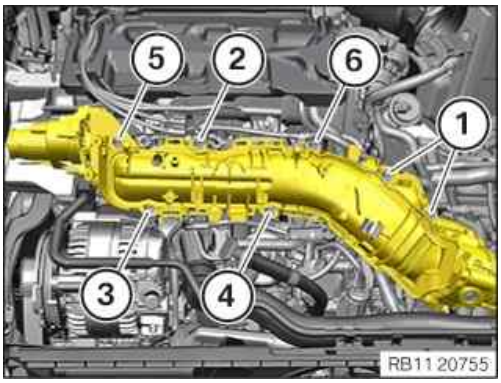


- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

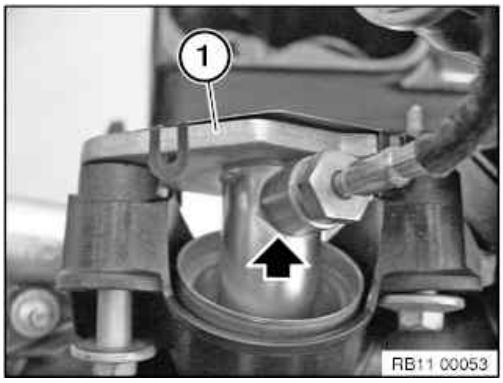
cardiagn.com



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

23 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

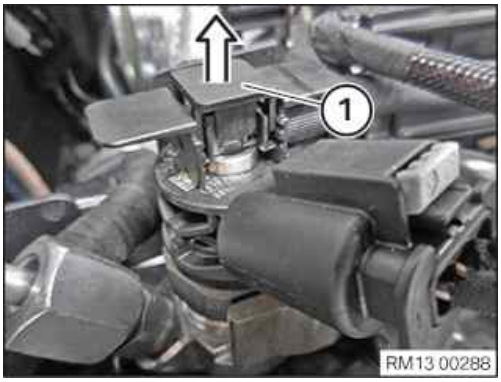
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

24 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

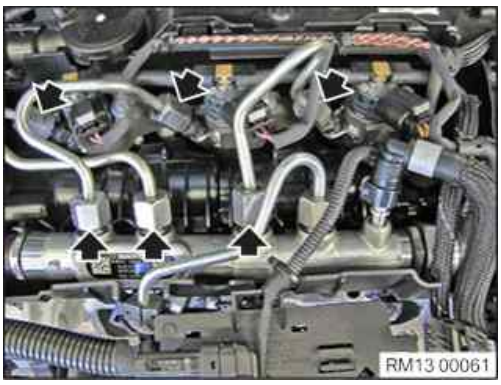
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

25 – Remove the high pressure line between the high pressure pump and the rail

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

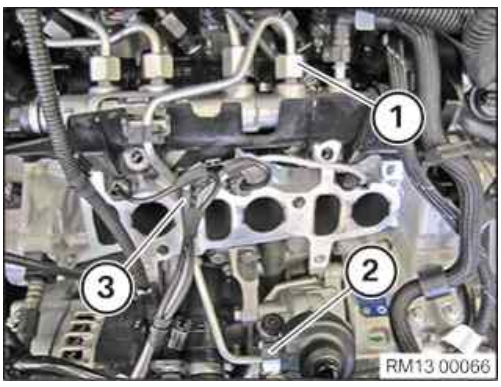
- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Loosen union nut (1) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Loosen union nut (2) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Catch and dispose of escaping fuel.
- Feed the high pressure line (3) out and remove.
- Seal open connections using special tool **2 413 106**.

26 – Remove high-pressure rail

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

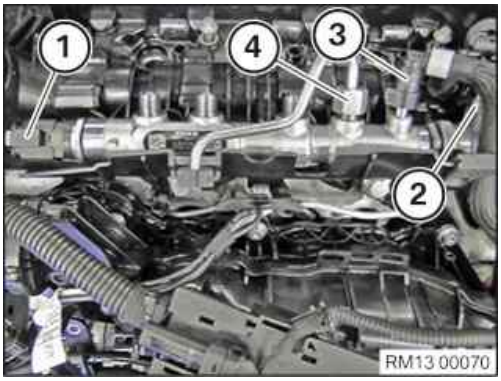
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

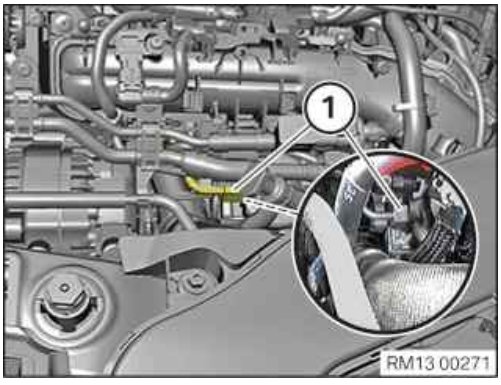
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

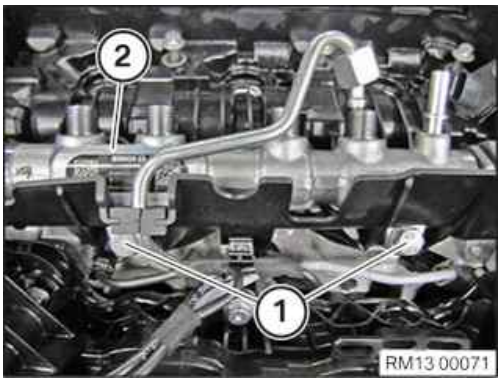


- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.

cardiagn.com



- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

27 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

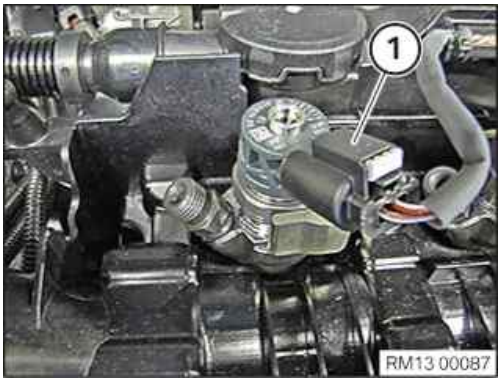
Electrostatic discharge.

Damage to or destruction of electrical components.

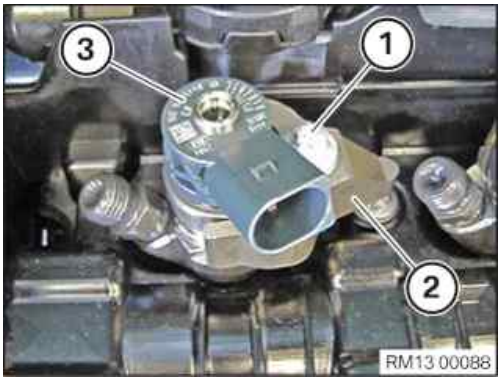
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.



- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

▸ **Loosen stuck injectors**

cardiagn.com

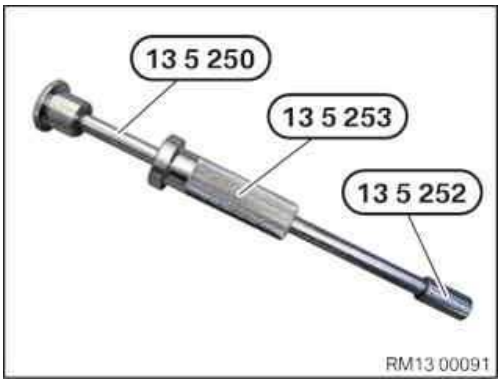
RISK OF DAMAGE

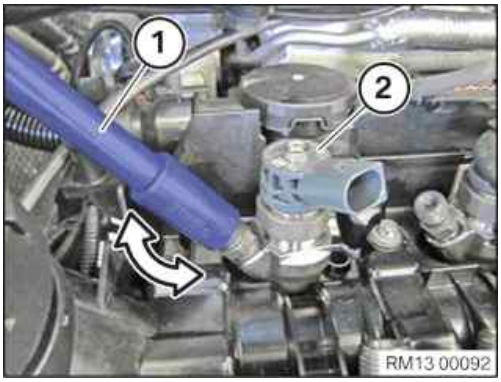
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

28 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

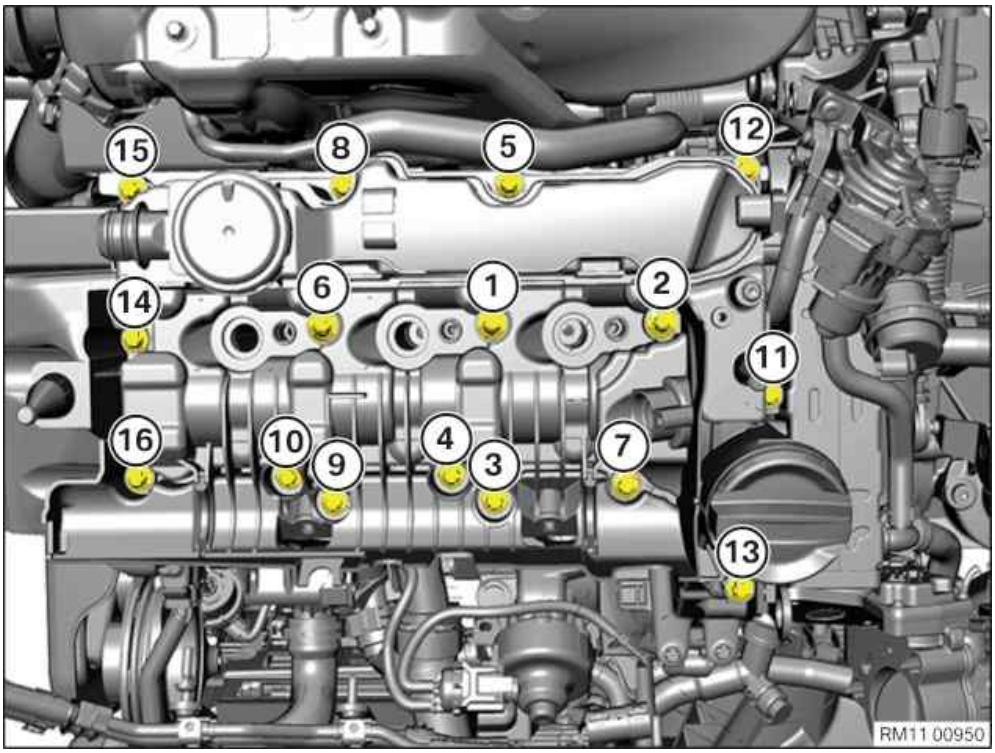
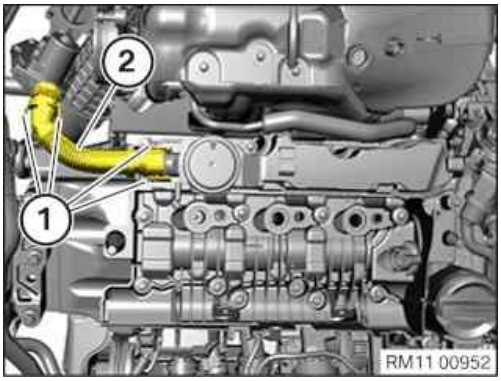
- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

29 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

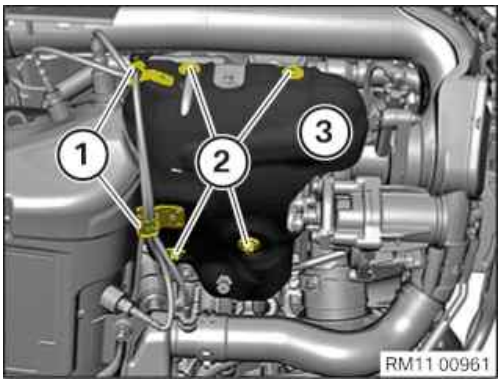
30 – Removing heat shield from top exhaust turbocharger

WARNING

Hot surfaces.

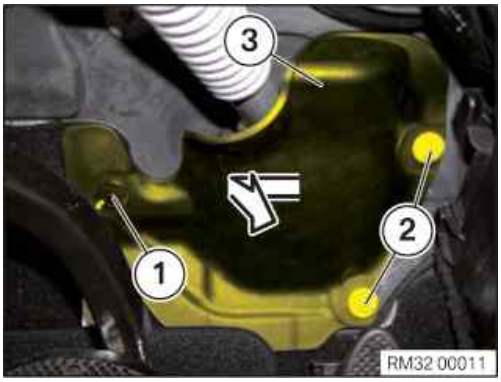
Risk of burning!

- Perform all work only on components that have cooled down.



- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).

31 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

cardiagn.com

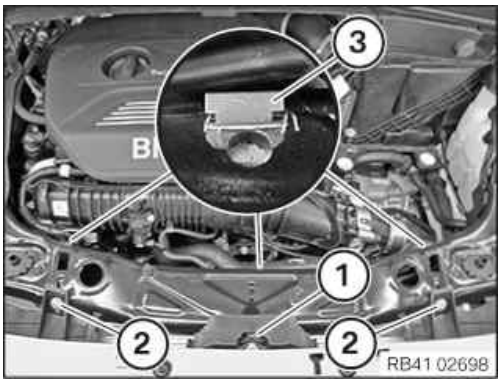
- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

32 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

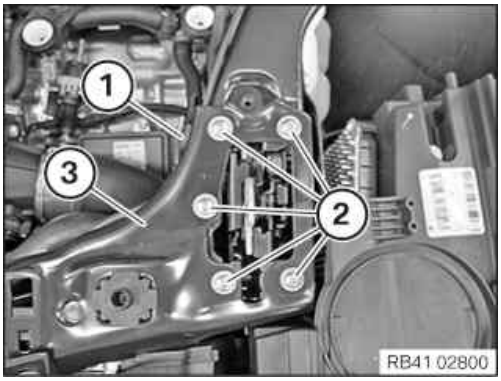
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

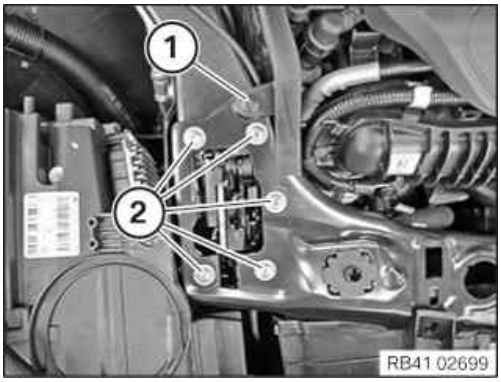


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

33 – Securing radiator on left and right

cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

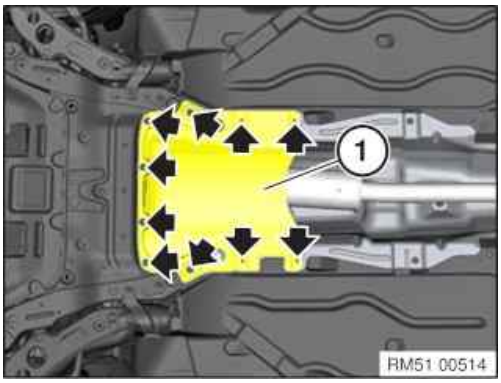
34 – Remove the front left and right wheel

▶ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

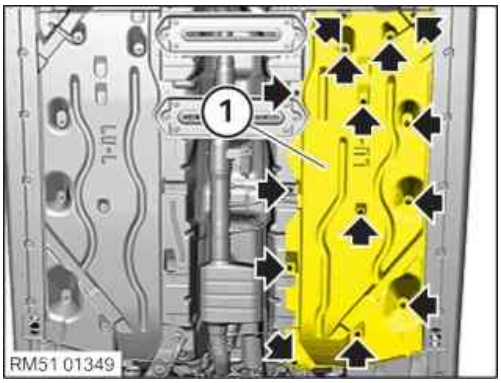
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

35 – If installed: Removing rear underbody protection



- Remove screws (arrows).
- Remove the rear underbody protection (1).

36 – Removing right underbody panelling



- Unscrew all bolts and nuts (arrows).
- Remove the underbody panelling (1).

37 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

cardiagn.com

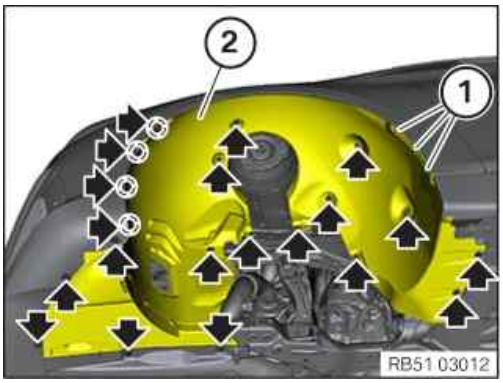
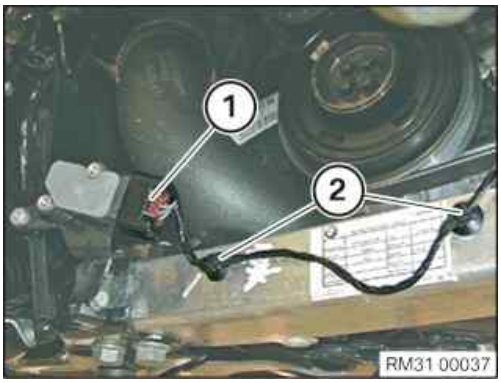
▶ **Remove front wheel arch cover**



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed out front wheel arch cover (2).

38 – With right installation: Detaching ride height sensor cable



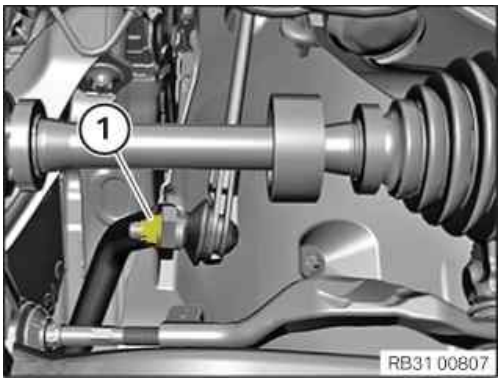
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

39 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Detach the anti-roll bar from the anti-roll bar link**



- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

40 – Detaching rubber mount from front axle support

- Spray rubber mount (1) with lubricant and release from holder on front axle support.

cardiagn.com

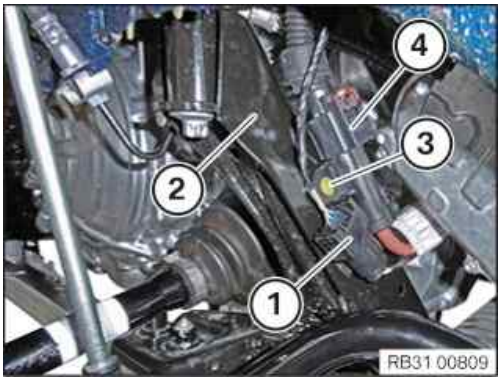
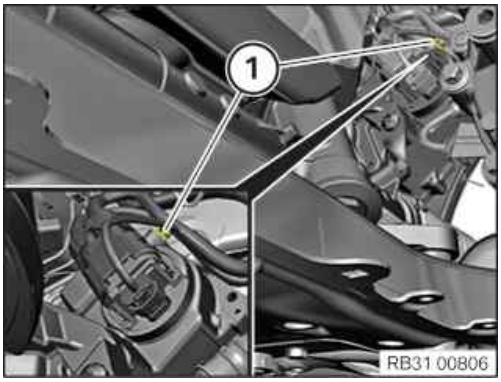
41 – Disconnecting plug connections from steering gear

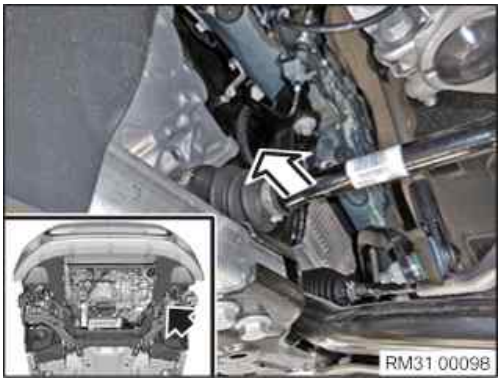
▶ **If installed: Detach connectors from the front axle carrier**



- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).

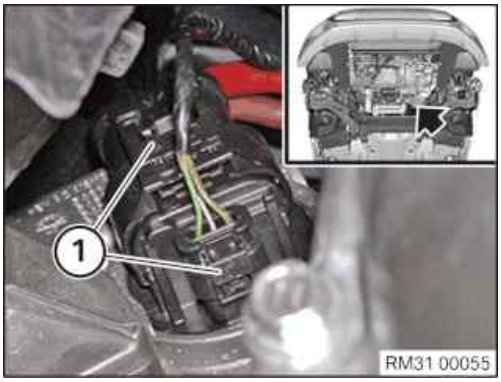


- Disconnect wiring harness (1) from steering gear.



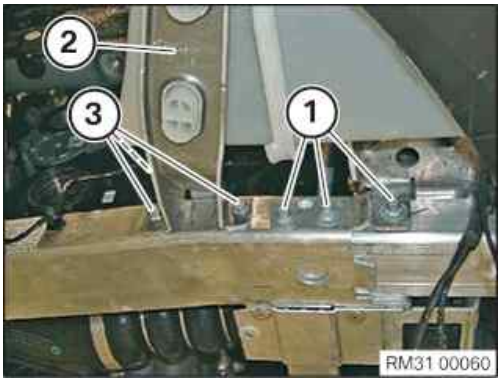
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.



- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

42 – Releasing the mounted part from the front axle support



- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

cardiagn.com

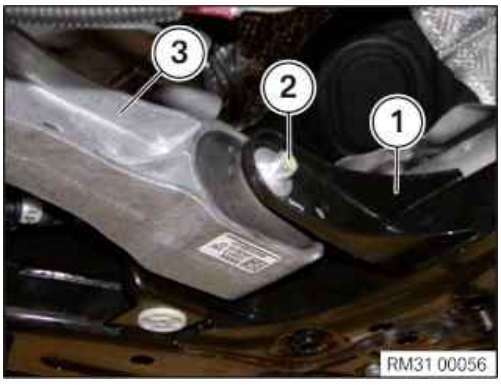
NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).



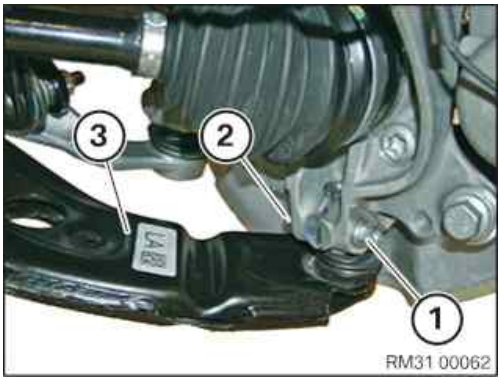
- Loosen screw (2) of the engine support (3) on the front axle (1).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

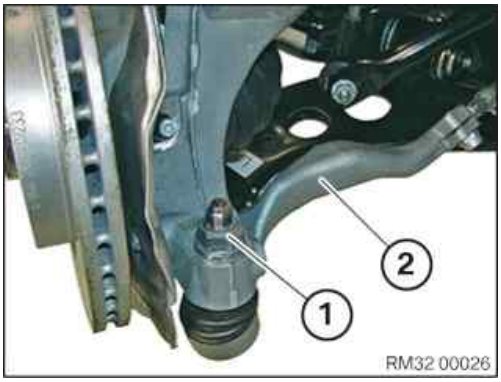
43 – Detaching and removing front axle completely



NOTICE

Perform the operations on the left and right side.

- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .



NOTICE

Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

cardiagn.com

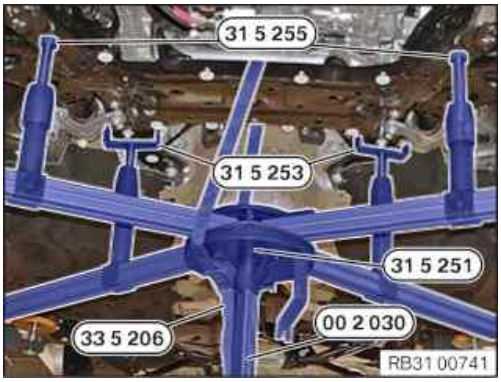
- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

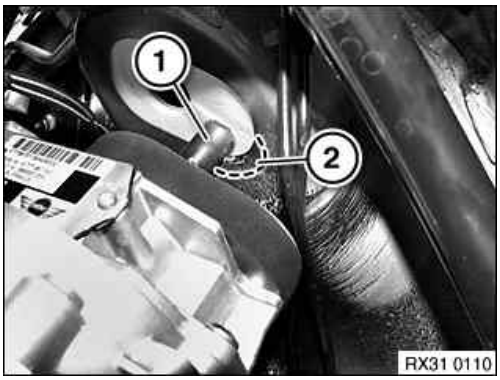
Note: In a profile rail pair, two profile rails are connected to one another by gearing.



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

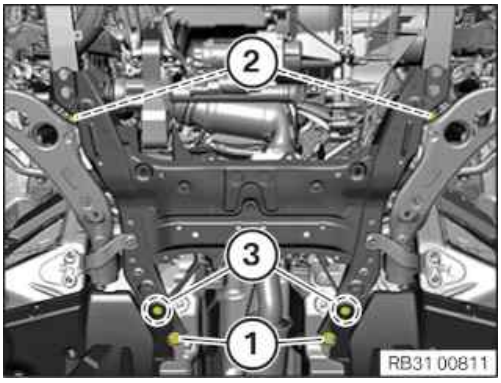


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.

For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

44 – Removing the connecting support from the tunnel in front and back

cardiagn.com

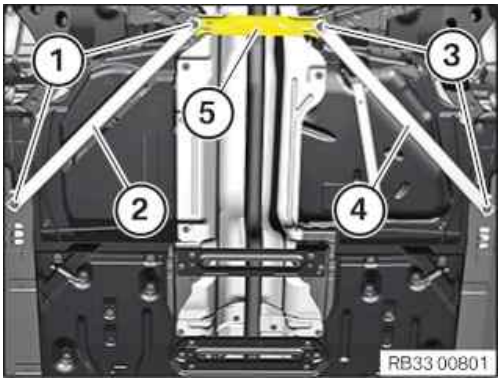
- Unscrew the bolts (arrows) from the connecting support (1).
- Feed out and remove the crossbeam (1).
- Unscrew the bolts (arrows) from the connecting support (2).
- Feed out and remove the crossbeam (2).

45 – Remove the cross strut with the torsion strut

TECHNICAL INFORMATION

Driving without a torsion strut is not permitted.



- Loosen screws (1).
- Thread out torsion strut (2) at left and remove.
- Loosen screws (3).
- Thread out torsion strut (4) at right and remove.
- Feed out and remove the cross-member (5).

46 – Remove exhaust system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

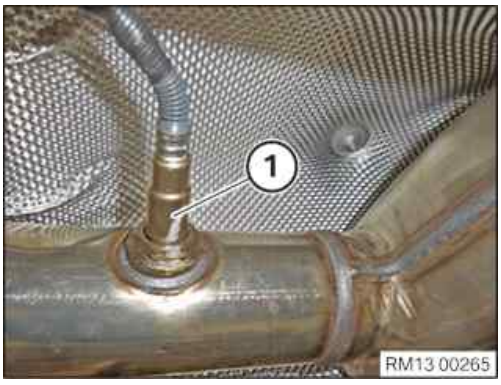
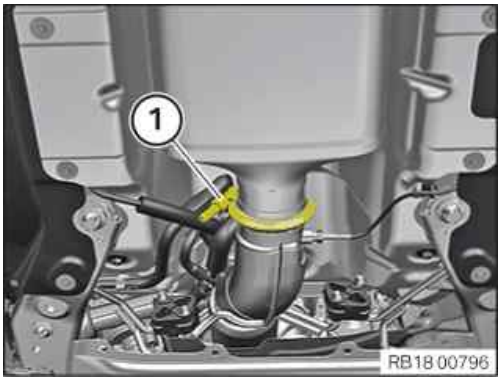
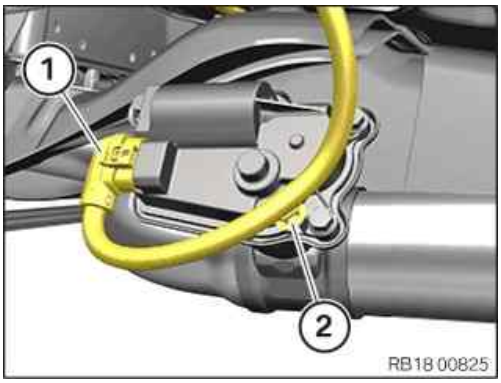
- Release the nitrogen oxide sensor (1) downstream of the SCR catalytic converter, guide it out and set it aside.



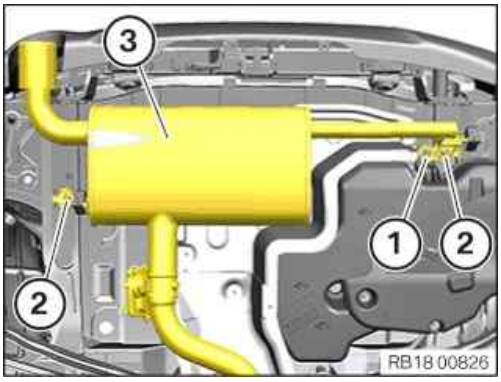
- Release the diesel particulate sensor (1), guide it out and set it aside.



- Loosen V-band clamp (1).



- Unlock and disconnect connector (1).
- Loosen clamp (2).



- Loosen screw (1).
- Loosen nuts (2).
- Lower the exhaust system (3) with an auxiliary person, guide out and remove.

47 – Removing starter motor

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

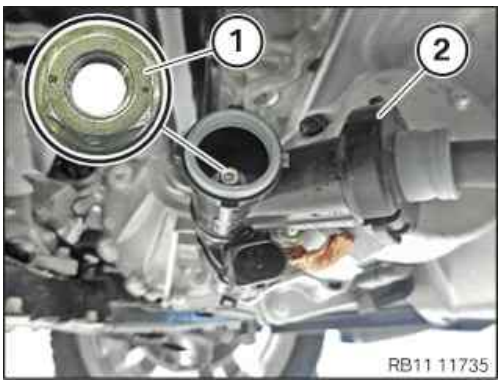
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

cardiagn.com

- Loosen screws (1).
- Feed out starter motor and remove.

48 – Remove the monitoring oxygen sensor

WARNING

Hot surfaces.

Risk of burning!

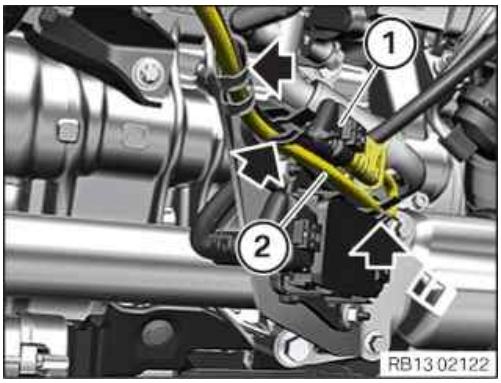
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

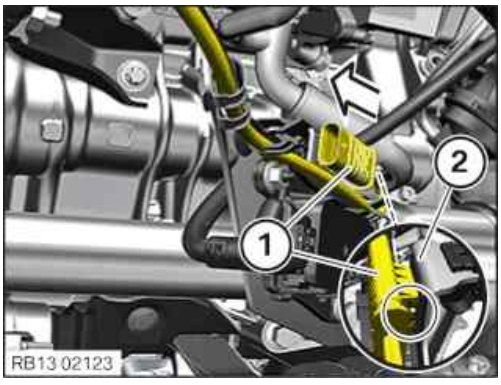
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Feed oxygen monitor sensor cable (1) out of the clamps (arrows).



- Unlock the connector (1) in the marked area and disconnect it from the holder (2) in the direction of arrow.

cardiagn.com

- Guide the cable of the monitoring oxygen sensor (2) out of the clamp (1).
- Release the monitoring oxygen sensor (2) using special tool **0 491 074 (11 7 020)**.
- Remove the monitoring oxygen sensor (2).

49 – Removing the nitrogen oxide sensor before SCR catalytic converter

WARNING

Hot surfaces.

Risk of burning!

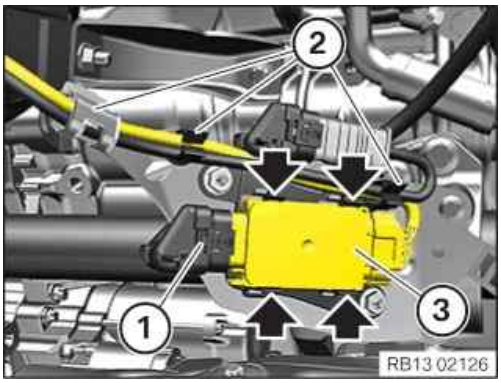
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

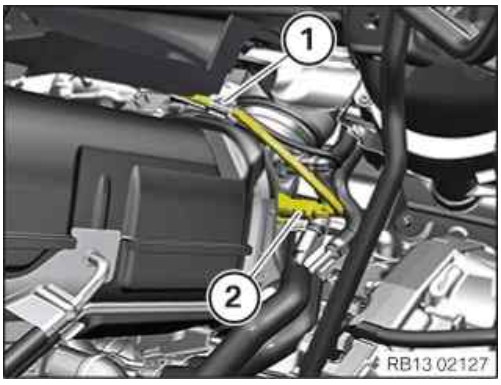
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock plug connection (1) and disconnect.
- Slide the cable of the nitrogen oxide sensor evaluation electronics (3) out of the clamps (2) and remove.
- Unlock (arrows) and remove the evaluation electronics for the nitrogen oxide sensor (3).



- Slide the cable of the nitrogen oxide sensor before the SCR catalytic converter (2) out of the clamps (1) and remove.
- Detach the nitrogen oxide sensor before the SCR catalytic converter (2) using the special tool **0 491 074 (11 7 020)**.
- Guide out and remove the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

cardiagn.com

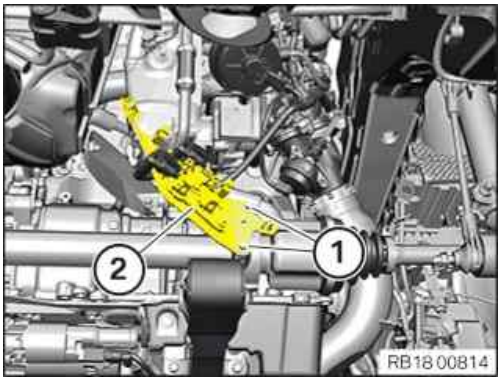
50 – Remove holder for oxygen sensor



- Loosen screws (1).
- Thread out the holder (2) for the oxygen sensor and remove.

51 – Remove the exhaust temperature sensor on the catalytic converter

WARNING

Hot surfaces.

Risk of burning!

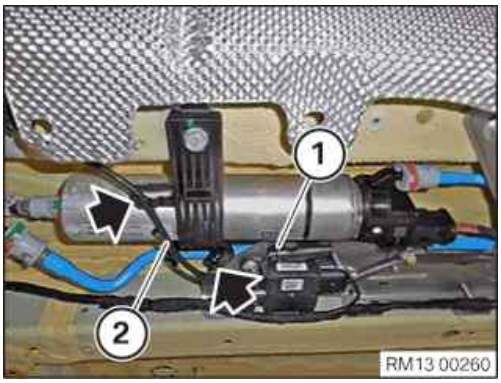
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and loosen connector (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

cardiagn.com

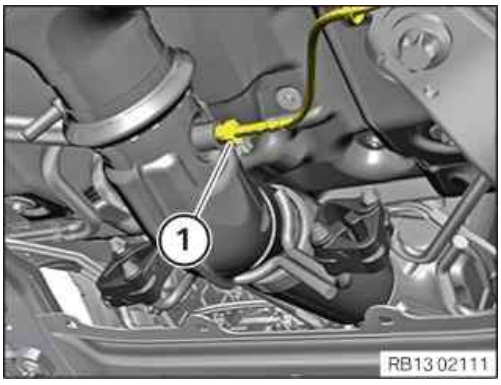
- Loosen the cable clip (1).



- Loosen exhaust temperature sensor (1).
- Feed out and remove exhaust temperature sensor (1).

52 – Removing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

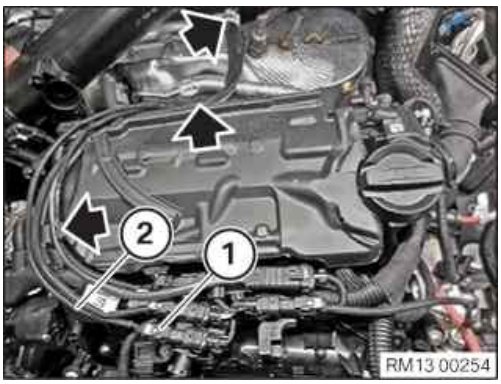
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect the plug connection (1).
- Feed the cable (2) from the temperature sensor out of the clamps (arrows) and remove it.

cardiagn.com

- Release the exhaust temperature sensor (1) with conventional tools (2).

- Feed out and remove exhaust temperature sensor (1).

53 – Remove the exhaust temperature sensor on the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and disconnect the plug connection (1).
- Feed out the cable (2) of the exhaust temperature sensor from the clamps (arrows) and remove.

cardiagn.com

- Guide cable (1) of the exhaust temperature sensor out of the clamp (arrow) and remove it.
- Loosen exhaust temperature sensor (2).
- Feed out and remove exhaust temperature sensor (2).

54 – Remove the control sensor

WARNING

Hot surfaces.

Risk of burning!

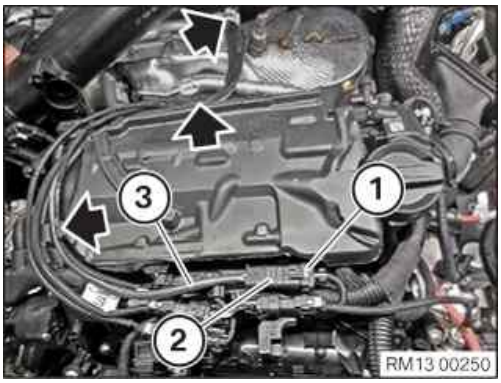
- Perform all work only on components that have cooled down.

RISK OF DAMAGE

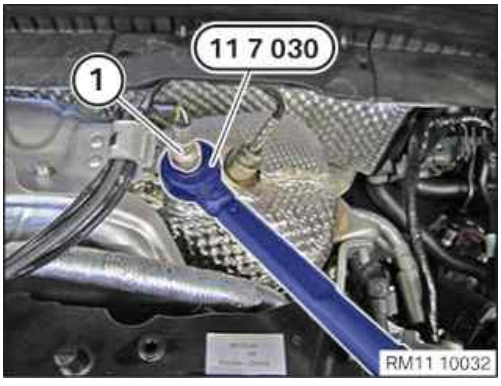
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect the plug connection (1).
- Detach the connector (2) from the holder .
- Feed out and remove cable (3) out of the oxygen control sensor from the clamps (arrows).



- Release the front oxygen control sensor (1) using special tool **0 491 075 (11 7 030)** .
- Feed out and remove the control sensor (1).

cardiagn.com

55 – Removing the diesel particulate filter

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

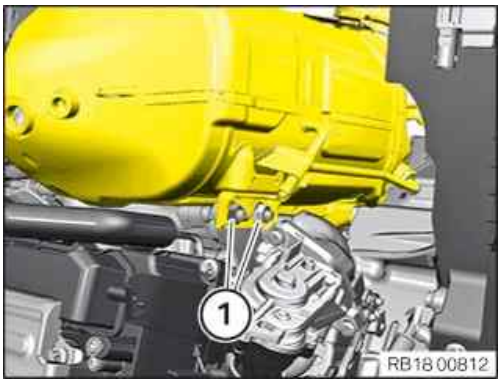
CAUTION

Heavy component.

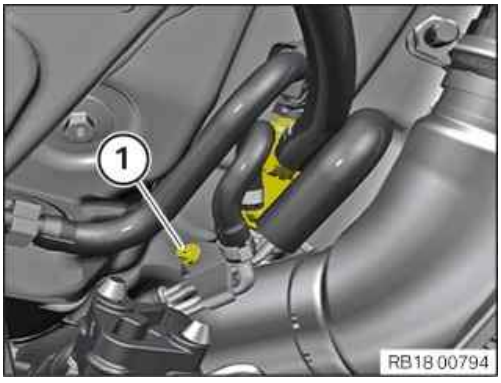
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.



- Loosen nuts (1).



- Loosen screw (1).

cardiagn.com

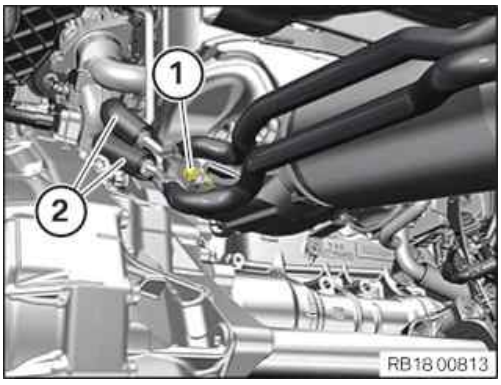
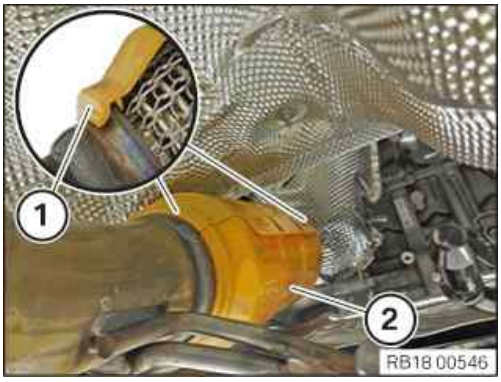
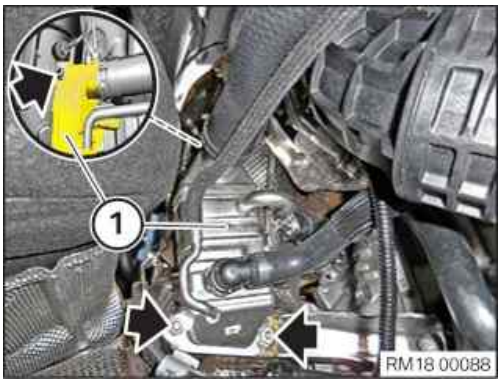
- Loosen V-band clamp (1).
- Remove the SCR metering module (2) and set it aside.



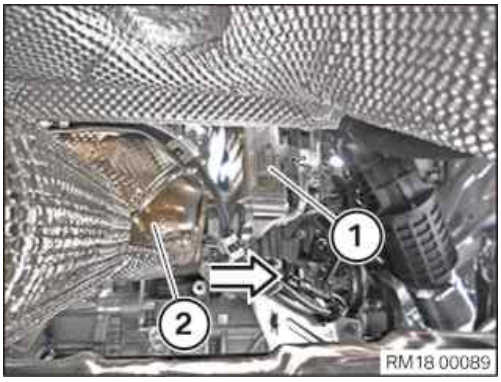
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.



- Mount fitting aid (2).
- Make sure that the fitting aid is correctly position on the edges (1) of the flexible tube.



- Detach nuts (arrows) from low pressure exhaust-gas recirculation cooler (1).



- Feed out low pressure exhaust-gas recirculation cooler (1) from diesel particulate filter (2) in direction of arrow and set aside.

cardiagn.com

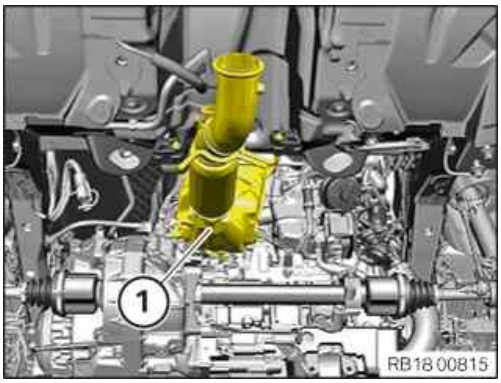
- Unfasten nut (1).



- Feed out diesel particulate filter (1) toward the bottom and remove.

56 – Remove the heat shield from the exhaust turbocharger at the bottom

WARNING

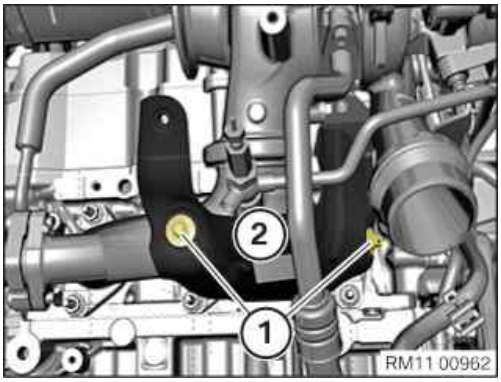
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

57 – Removing heat shield from rear exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

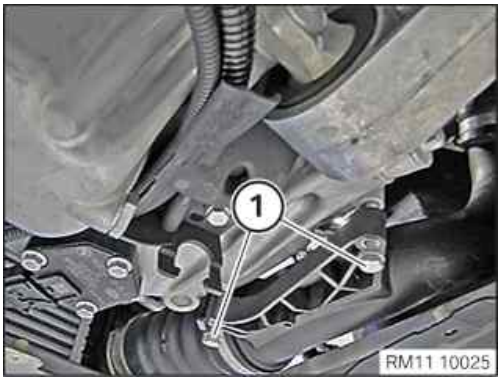
- Loosen screws (1).
- Loosen screw (2).

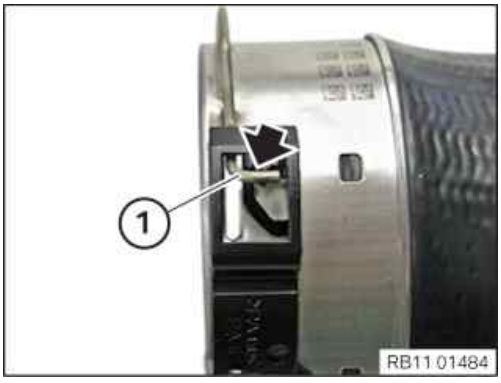
  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

58 – Remove right charge-air line

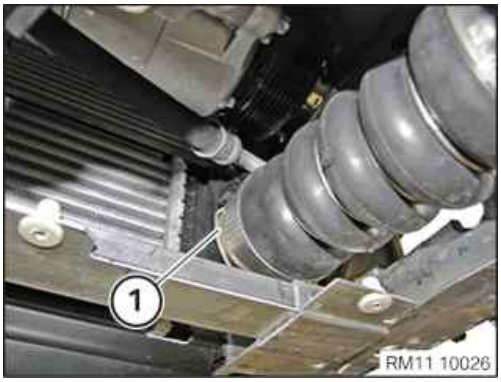


- Release charge air duct screws (1) on oil sump.

- Detach charge air duct screw connection (1) on crankcase.



- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

cardiagn.com

- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

59 – Remove exhaust turbocharger

- Release screw (1) from beneath with a long extension.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).
- Disconnect the oil return line (2) toward the bottom and set it aside.

- Release banjo bolt (1) of oil feed line from exhaust turbocharger and place to one side.

cardiagn.com

- Release screw (1) and remove V-clip.
- Pull exhaust turbocharger up and remove.
- Remove seal between exhaust turbocharger and exhaust manifold.

60 – Remove exhaust manifold

WARNING

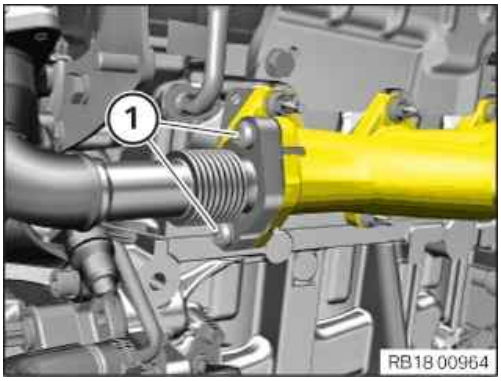
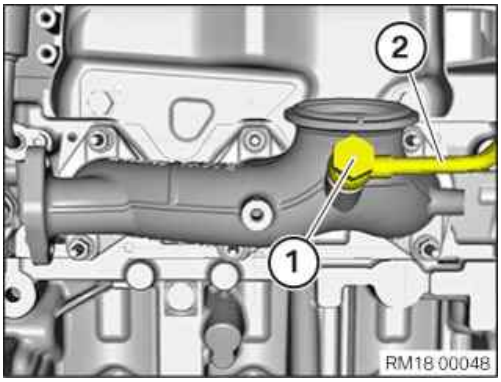
Hot surfaces.

Risk of burning!

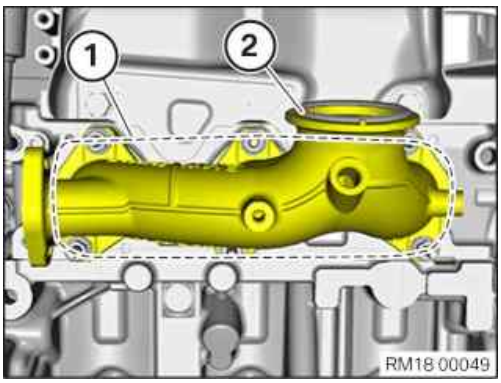
- Perform all work only on components that have cooled down.



- Loosen screws (1).



- Unscrew the banjo bolt (1).
- Feed out exhaust gas pressure pipe (2) and place to one side.



- Evenly release nuts along the dashed line (1) from outer to inner side.
- Feed out exhaust manifold (2) and remove.

61 – Removing the acoustic cover for the engine at the front

cardiagn.com

- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

62 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

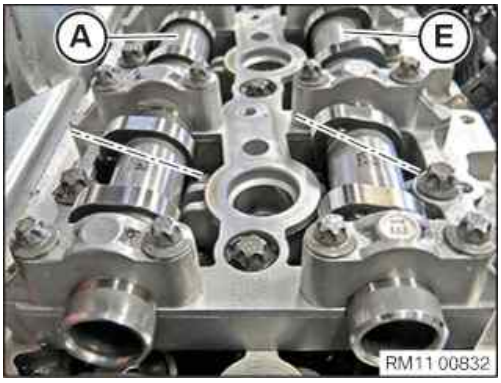
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

cardiagn.com

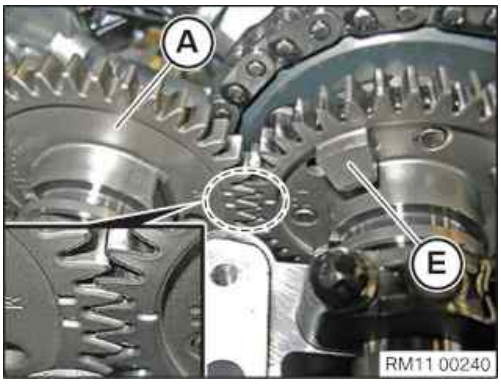
- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

63 – Remove chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

TECHNICAL INFORMATION

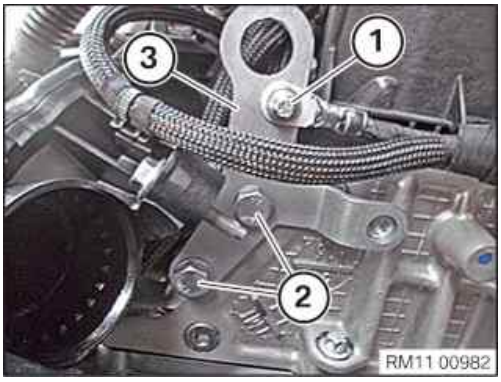
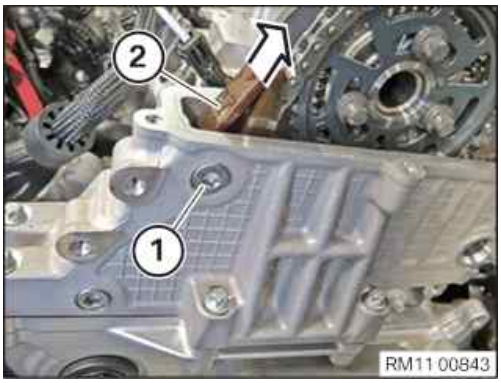
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

64 – Remove the timing chain guide rail

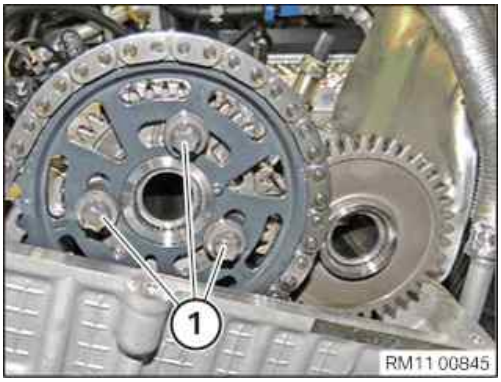


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

65 – Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

66 – Removing the camshaft support

cardiagn.com

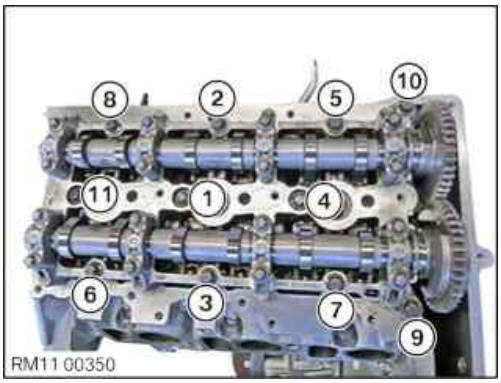
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen all screws step-by-step of the camshaft support in sequence (11) to (1).
- Remove camshaft support in upward direction.

  The camshafts remain installed in the camshaft support.

67 – Remove cylinder head.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com

- Position front axle support.
- Bend the underbody panelling to the side in area (3).
- Raise front axle support.
- When raising, insert the charge air cooler into its rubber mount on the transmission cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

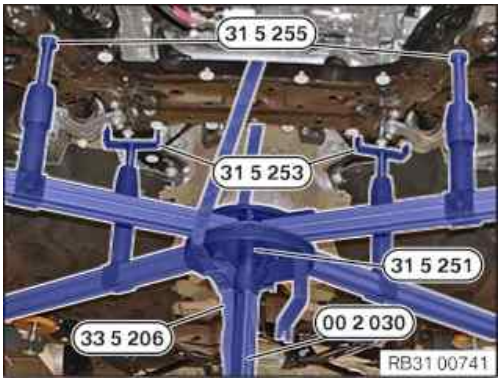
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

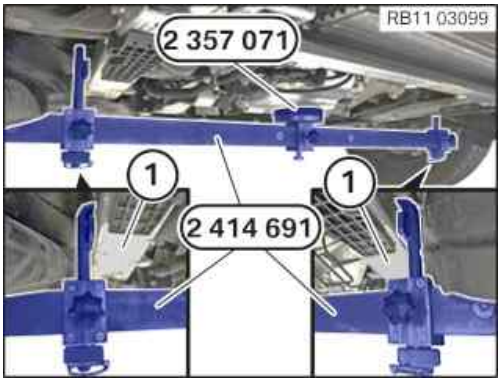
- If applicable, tighten the screws in area (3).

Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower the universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and set it aside.



- Prepare special tool **2 414 691** together with the special tool **2 357 071**.
- Attach special tool **2 414 691** to front axle support and correctly align the special tool **2 357 071** under the oil sump and tighten.
- Turn special tool **2 414 691** at adjusting screw uniformly upwards, until the special tool **2 357 071** makes contact with the oil sump.
- Tighten all adjusting screws of special tools**2 414 691** and **2 357 071**.

- Remove all glow elements with special tool **0 491 068 (11 6 050)** or a standard tool.

cardiagn.com

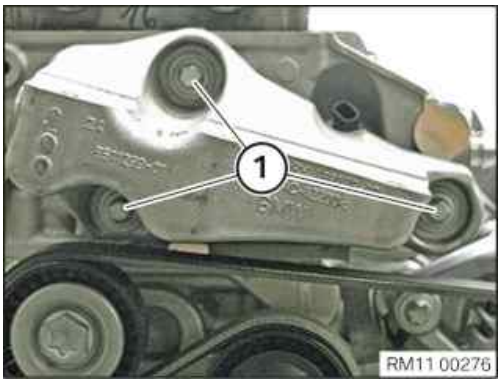
- Loosen screws (1).

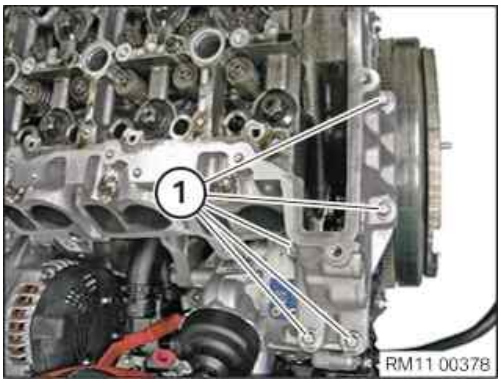


- Loosen screws (1).

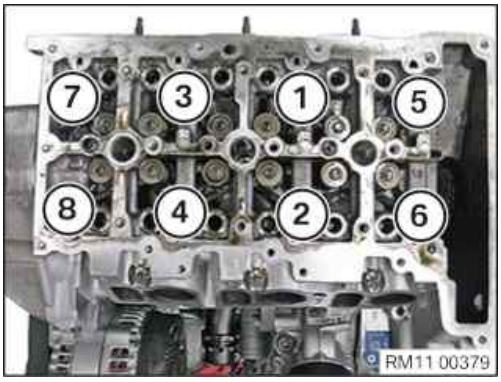
- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm



- Loosen screws (1).



- Loosen the cylinder head bolts in the sequence from (8) to (1).

cardiagn.com

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

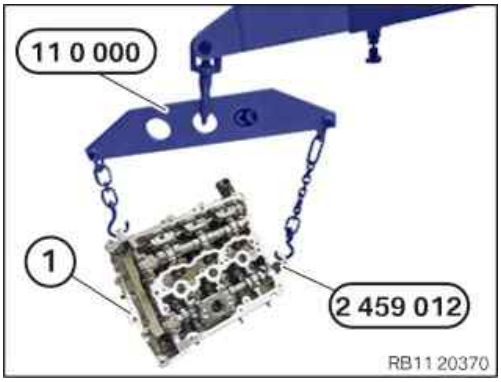
RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- **Carefully** guide out the cylinder head (1) with the engine lifter and the special tool **0 490 561 (11 0 000)** and remove.



- Mount the cylinder head (1) on the special tool **0 494 362 (11 9 000)**.

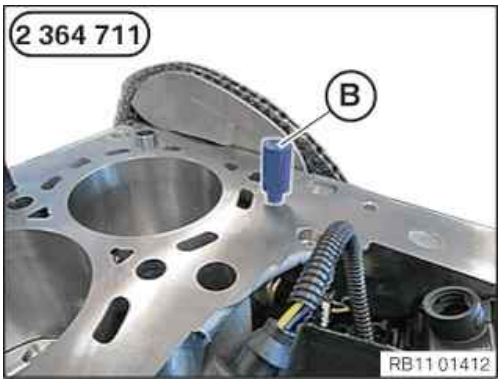
68 – Cleaning the sealing surface

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

cardiagn.com

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

RISK OF DAMAGE

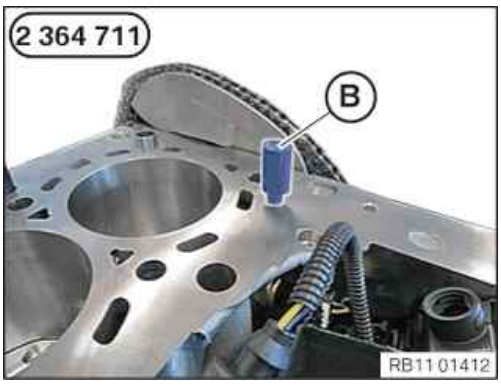
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.



- Remove special tool (B).

cardiagn.com

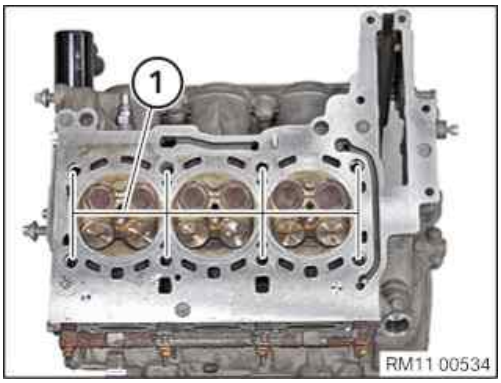
69 – Renewing the cylinder head gasket



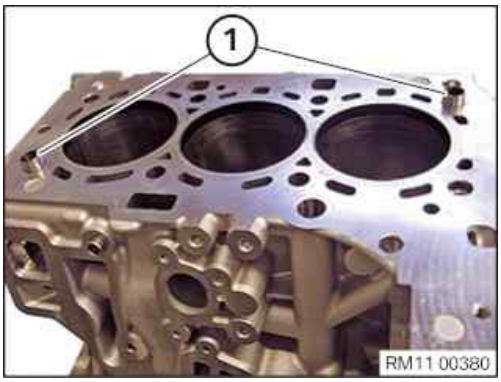
RISK OF DAMAGE

Damage to the surface.

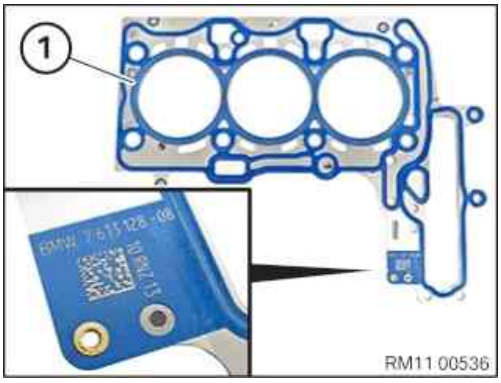
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

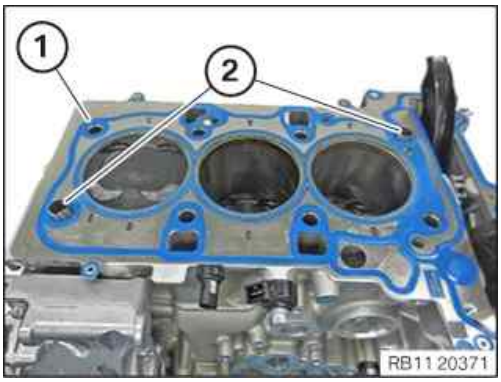
- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.
- **After work on the crankshaft drive and processing the cylinder head, the thickness of the cylinder head gasket must be determined.**

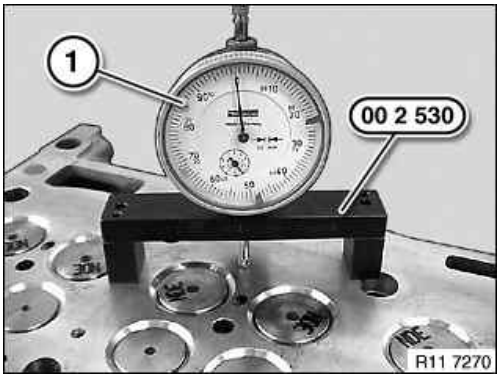


- Guide in the cylinder head gasket (1) and install.

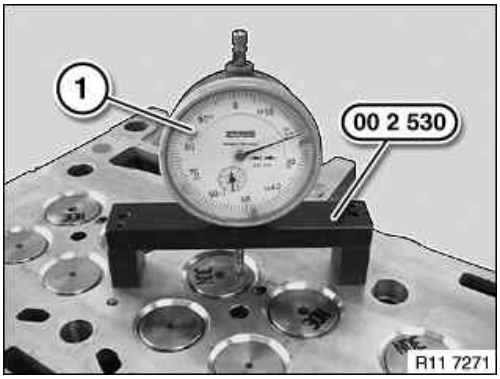
  Parts: Cylinder head gasket.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

70 – Checking the valve underprotrusion



- Set the dial gauge (1) onto the cleaned cylinder sealing surface with slight preload in special tool **0 490 185 (00 2 530)**.
- Set dial gauge in mildly preloaded state to "zero".



Check

- Position the dial gauge (1) on the valve with special tool **0 490 185 (00 2 530)**.
- Measure valve underprotrusion and compare with the setpoint value.

Valve underprotrusion

	0,8 (0,7 - 0,9) mm

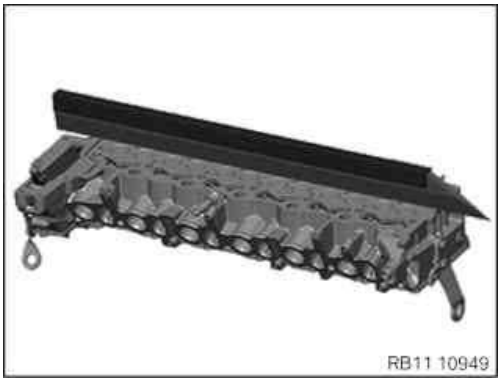
Result

» Valve underprotrusion is outside tolerance.

Measure

- Replace cylinder head.

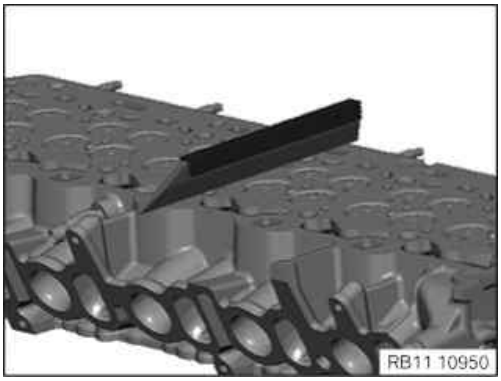
71 – Check the flatness of the cylinder head



- Check the flatness of the cylinder head lengthwise using a straightedge.

Cylinder head flatness

Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm



- Check the flatness of the cylinder head crosswise using a straightedge.

Cylinder head flatness

Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

72 – Installing the cylinder head

cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

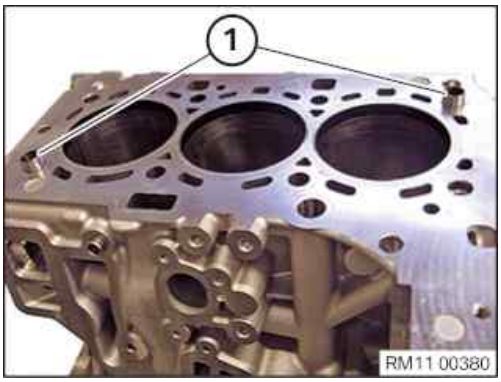
Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

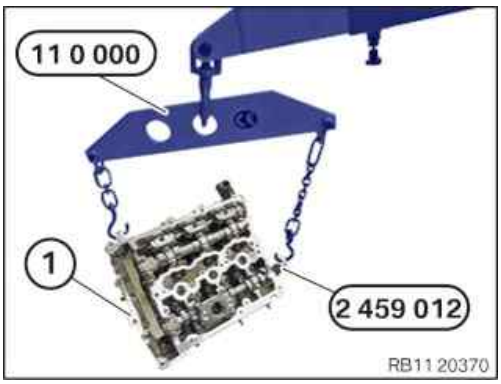
Do not remove bolt coating.



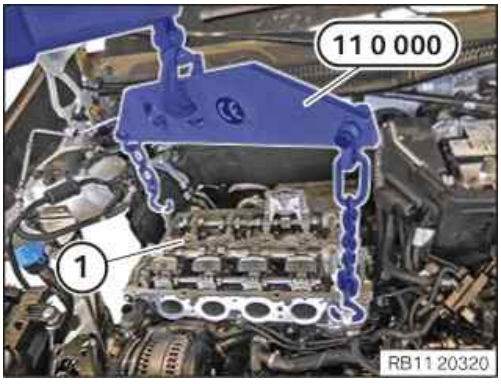
- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.

- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.



- Position cylinder head (1) on special tool **0 490 561 (11 0 000)** and engine lifter.



RISK OF DAMAGE

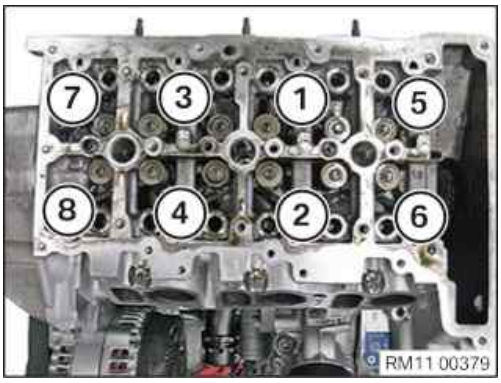
Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- Feed in the cylinder head (1) **carefully** with the engine lifter and the special tool **0 490 561 (11 0 000)** and install.

cardiagn.com



- Fit new cylinder head bolts.

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

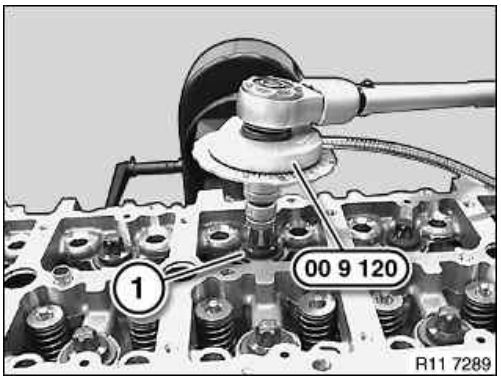
  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

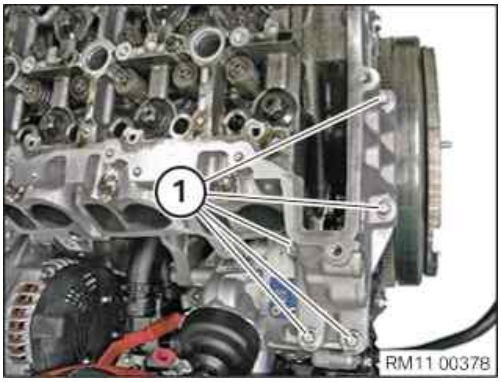
- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolt in the sequence (1) to (8).



- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °



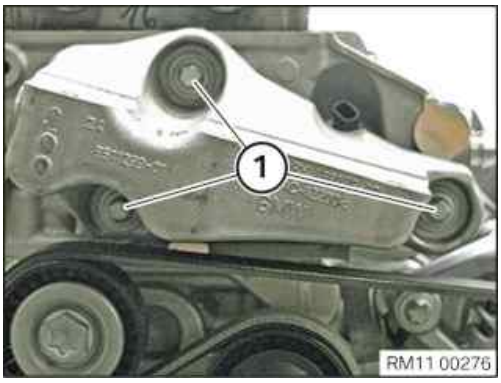
- Tighten the screws (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

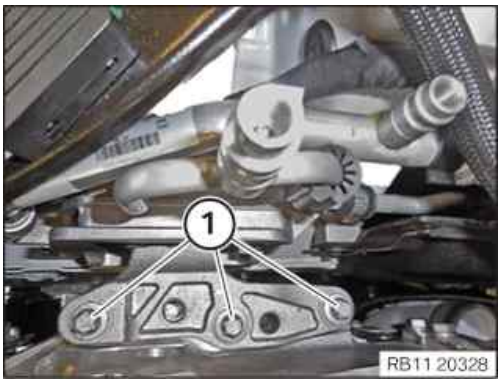
cardiagn.com



- Tighten the screws (1).

Engine support to cylinder head

M10X45		Tightening torque	41 Nm



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

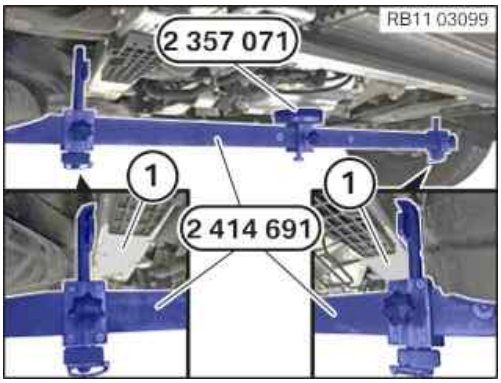
Right engine mount to cylinder head

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

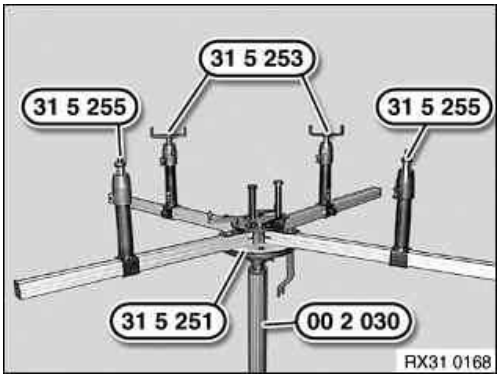
- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm



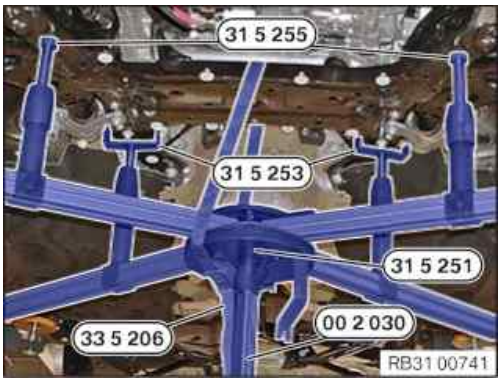
- Disassemble special tool **2 414 691** using special tool **2 357 071**.



- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

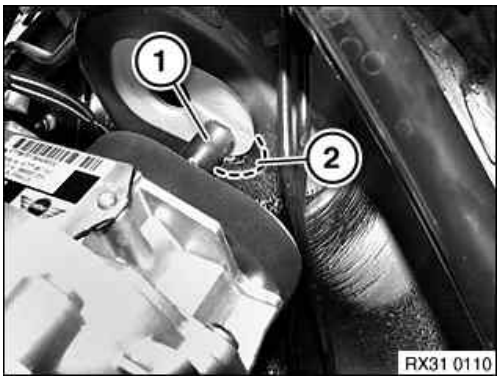
cardiagn.com



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

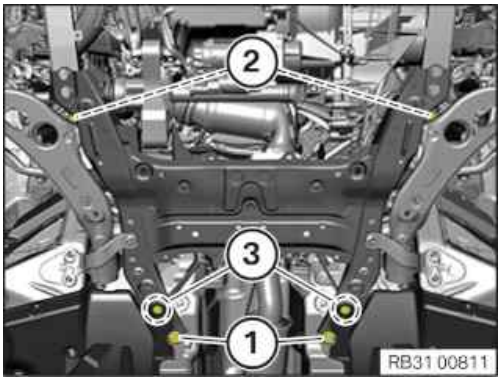


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and the front axle remove.

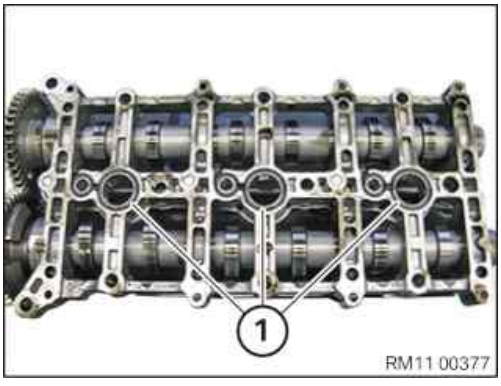
73 – Installing the camshaft support

RISK OF DAMAGE

Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

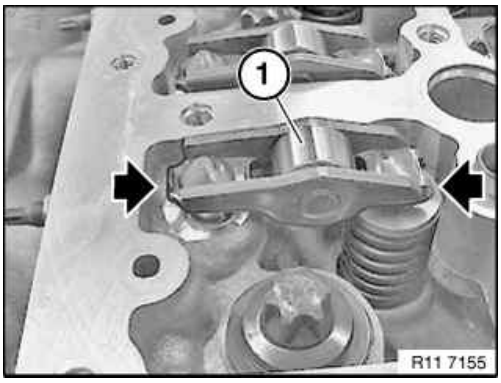
- Comply with the regulations for the installation and disassembly.
- Perform work with care.



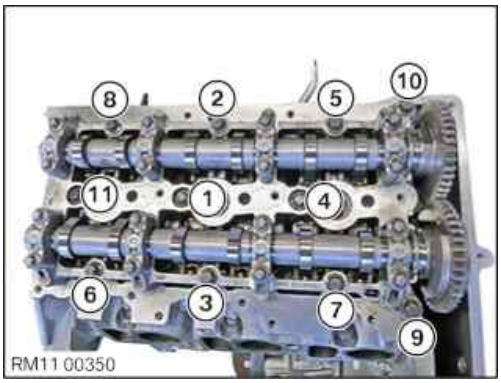
- Renew the seals (1) on the camshaft support.

Parts: Seals

cardiagn.com



- Make sure the roller cam followers (1) have the correct mounting orientation.
- Position the camshaft support.

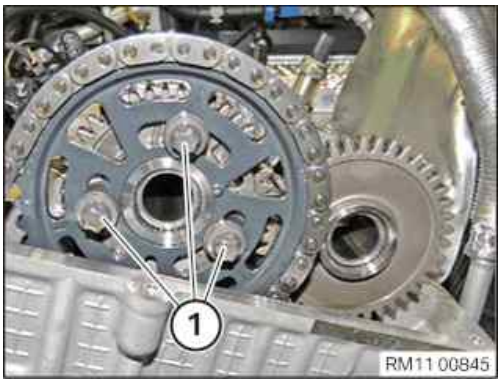


- Tighten the screws of the camshaft support incrementally in the sequence (1) to (11).

Camshaft carrier to cylinder head

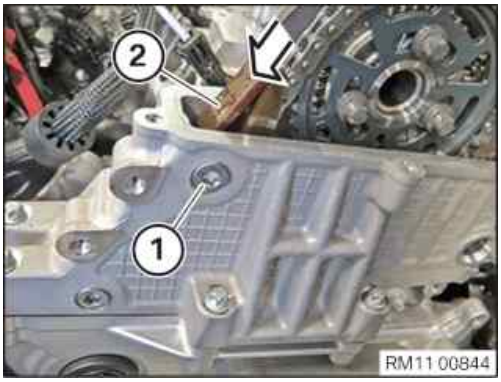
M7x35		Tightening torque	13 Nm

74 – Installing the camshaft sprocket on the intake camshaft



- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

75 – Install the timing chain guide rail



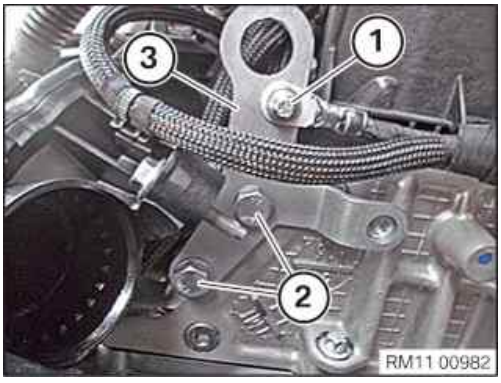
- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm



- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

cardiagn.com

76 – Installing the chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

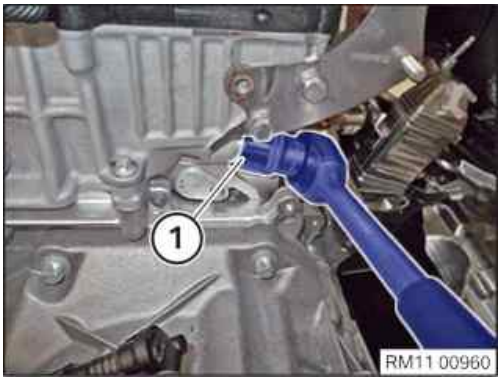
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

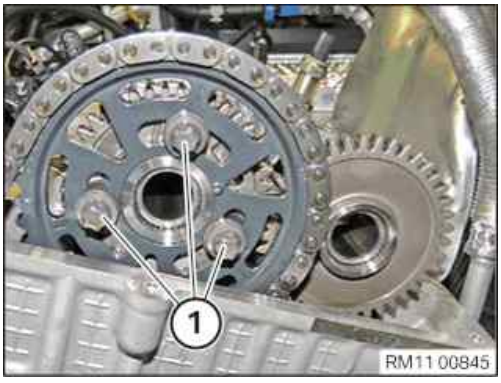


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

77 – Tightening the camshaft sprocket on the intake camshaft



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

78 – Removing the special tool to secure the exhaust camshaft

cardiagn.com

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

79 – Remove special tool to disconnect the crank shaft

- Remove special tool **2 288 380**.

80 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

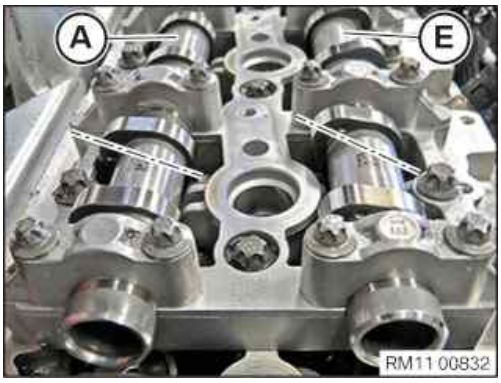
The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

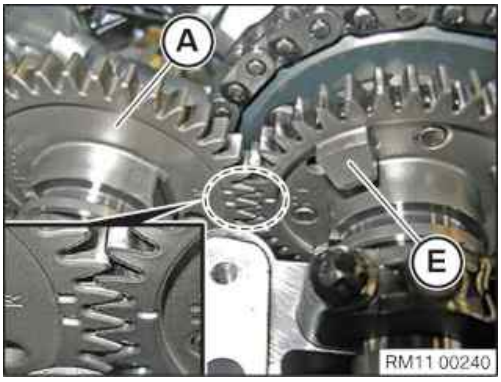
  Do **not** crank the engine in reverse.

cardiagn.com



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

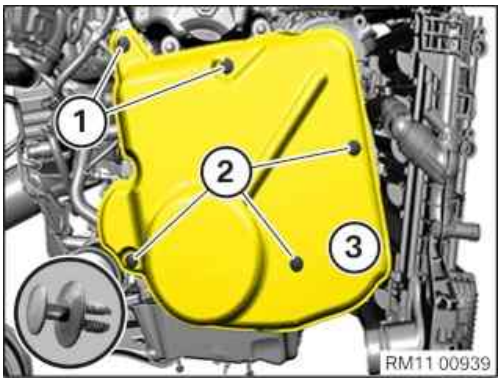
If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

81 – Install the acoustic cover for the engine at the front

cardiagn.com



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

82 – Installing exhaust manifold

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

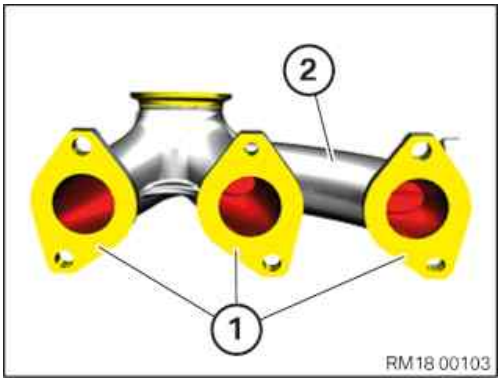
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

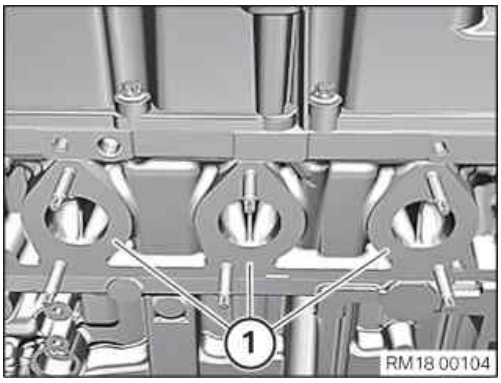
TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

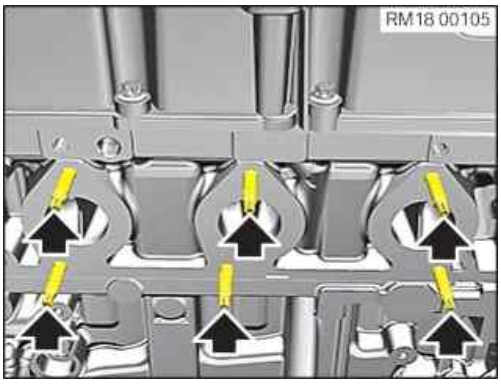


- Clean the connection points (1) on the exhaust manifold (2) with the special tool **0 495 102 (11 4 470)**.

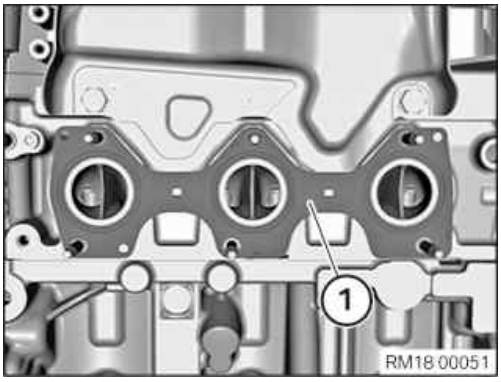
cardiagn.com



- Clean the connection points (1) on the cylinder head with the special tool **0 495 102 (11 4 470)**.



- Check the stud bolts (arrows) on the cylinder head for **correct** fit.



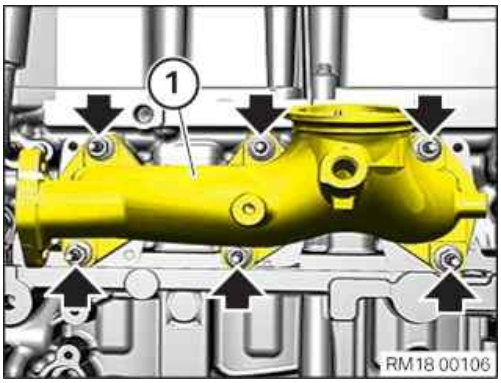
TECHNICAL INFORMATION

The **coated side of the** seal must be mounted facing towards the exhaust manifold.

- Renew the gasket (1).

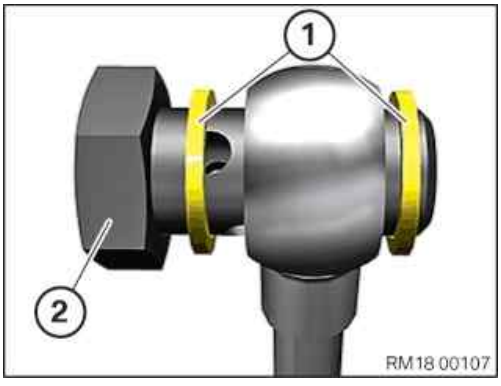
  Parts: Gasket
- Insert and install the gasket (1).
- Insert and install the exhaust manifold (1).
- Renew the nuts (arrows).

  Parts: Nuts
- Hand-tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.
- Tighten the nuts (arrows) on the exhaust manifold (1) evenly from the inside to the outside.



Exhaust manifold to cylinder head

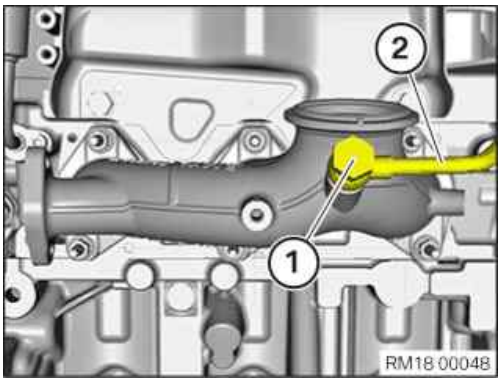
M7	If necessary, renew loose stud bolts.	Tightening torque	11 Nm
	Replace nuts.	Tightening torque	13 Nm



- Renew the sealing rings (1) from the banjo bolt (2).

  Parts: Sealing ring

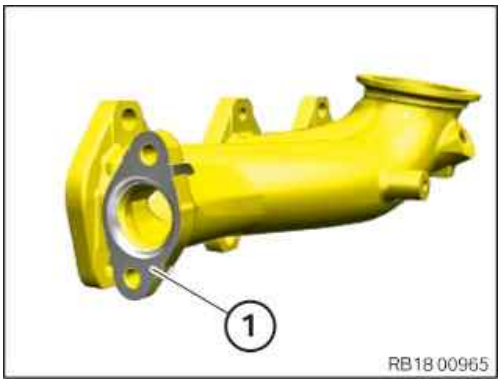
cardiagn.com



- Insert and install the exhaust gas pressure pipe (2).
- Tighten the banjo bolt (1).

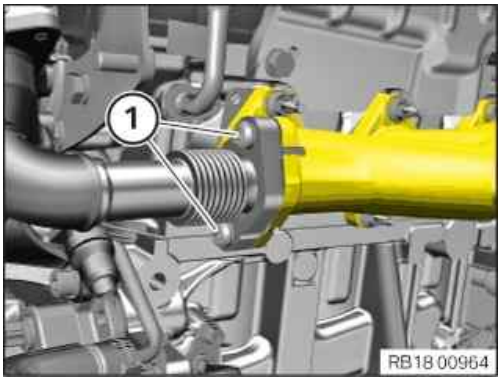
Banjo bolt for exhaust pressure pipe to exhaust manifold

Hollow bolt		Renew sealing rings.	30 Nm



- Renew seal (1) between exhaust-gas recirculation cooler and exhaust manifold.

  Parts: Gasket



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

83 – Prepare for the installation of the exhaust turbocharger

- Check the oil feed lines and the oil return lines for contamination or obstruction, clean or renew if necessary.
- If the oil feed lines and/or oil return lines are heavily contaminated, we recommend changing the engine oil and the oil filter.
- If installed: Check the coolant feed lines and the coolant return lines for the exhaust turbocharger for contamination or obstruction, clean or renew if necessary.
- Check that the screw connections and the plug connections of all the lines are correct.
- Check air cleaner for contamination and clean or renew as needed.
- Check correct functioning of crankcase ventilation.
- Replace all gaskets.

  Parts: Seals

84 – Installing exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to the exhaust turbocharger

Inadequate initial filling of exhaust turbocharger leads to dry running.

- Make sure the initial filling is correct when replacing exhaust turbocharger.
- Fill the exhaust turbocharger with the suitable additive (see electronic Parts Catalogue).

TECHNICAL INFORMATION

With exhaust turbocharger damage, it is imperative to observe the additional information.

For additional information see: 11 65 020 Exhaust turbocharger damage due to plugged oil supply lines

TECHNICAL INFORMATION

- It is imperative to perform certain test steps to prevent subsequent damage in the event of exhaust turbocharger damage. See further information.

TECHNICAL INFORMATION

For exhaust turbocharger damage: Check the pressure pipes, charge air cooler and intake plenum for foreign matter, damage and correct functionality.

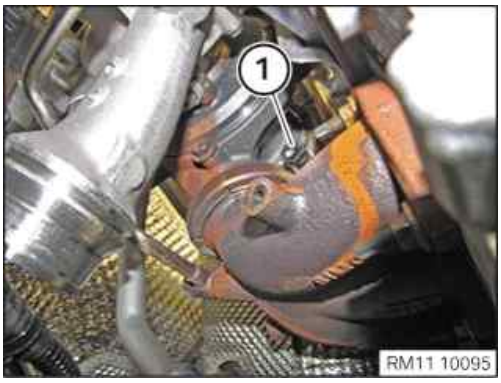
If the oil return line is exchanged, then the connecting pipe to the oil sump must ALWAYS be cleaned, as the connecting pipe can coke.

TECHNICAL INFORMATION

Prior to replacing the exhaust turbocharger: Observe the notes on troubleshooting on the exhaust turbocharger.

For additional information see: FUB-FUB-FB-130003-A10 Troubleshooting on the exhaust turbocharger

cardiagn.com



- Renew gasket.

  Parts: Gasket
- Position seal on exhaust manifold.
- Guide the exhaust turbocharger in from the top and position it.
- **Ensure that gasket is correctly seated.**
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Renew sealing rings.

  Parts: Sealing ring
- Position oil feed line with banjo bolt (1) and sealing rings and tighten hand-tight.

  There are 2 sealing rings fitted on the banjo bolt (1).
- Align oil feed line and tighten banjo bolt (1).

  The oil feed line must not sit on the exhaust turbocharger.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

- Renew gasket.

  Parts: Gasket
- Position oil return line (2) with **seal** on exhaust turbocharger.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

- Feed in and tighten screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

85 – Install right charge air duct

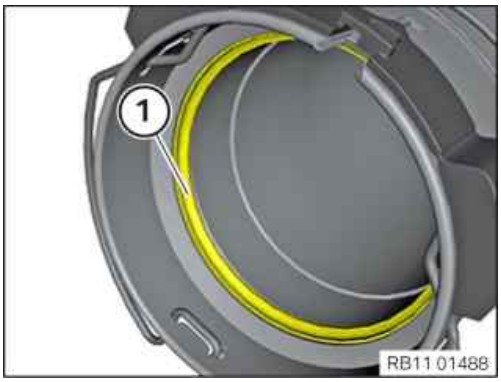
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

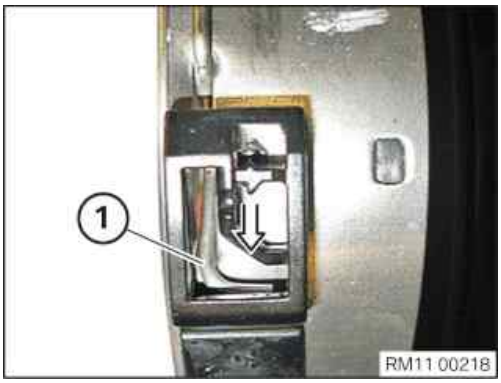
- Replace the gaskets and pressure pipe if necessary.

cardiagn.com

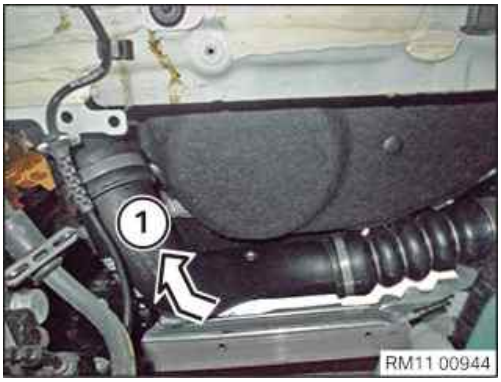


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

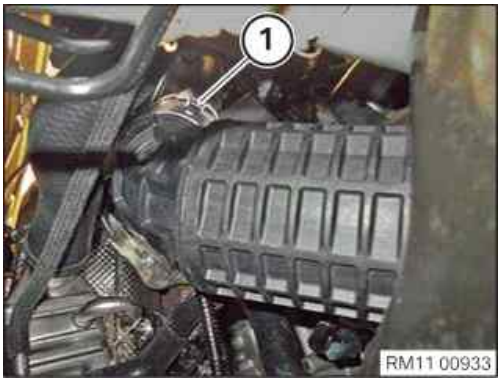
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).

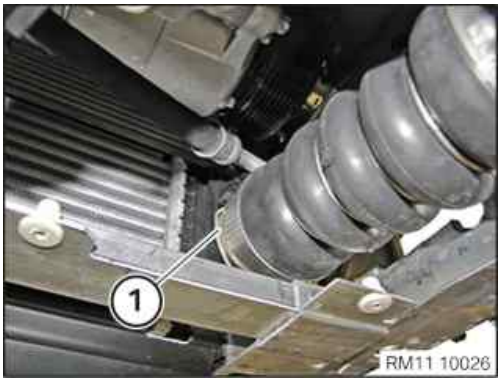


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

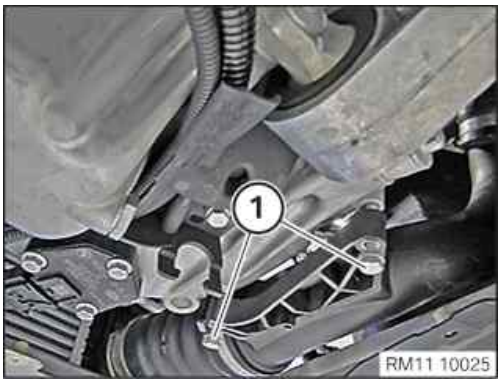
  The lock (1) must audibly engage.

cardiagn.com

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm



- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

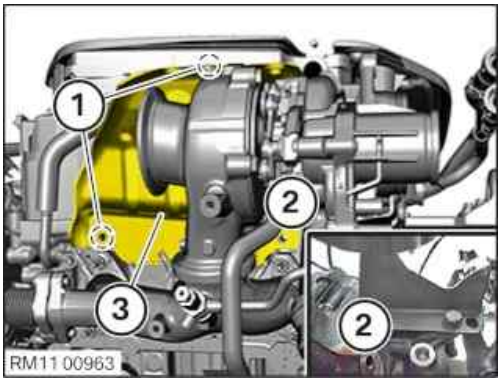
86 – Installing heat shield on exhaust turbocharger at the rear

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

87 – Installing heat shield on exhaust turbocharger at bottom

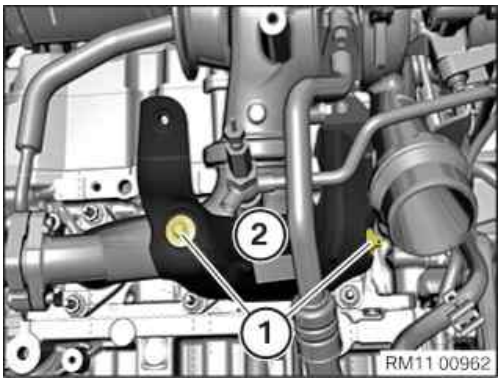
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Feed in and install the heat shield (2).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

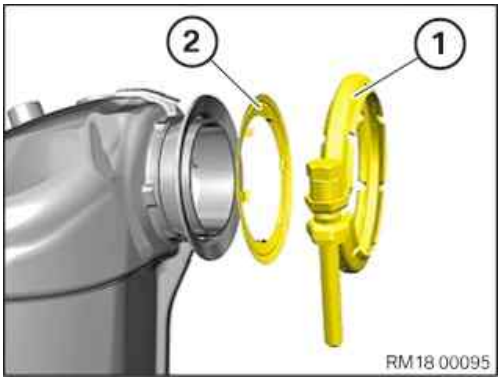
88 – Installing the diesel particulate filter

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

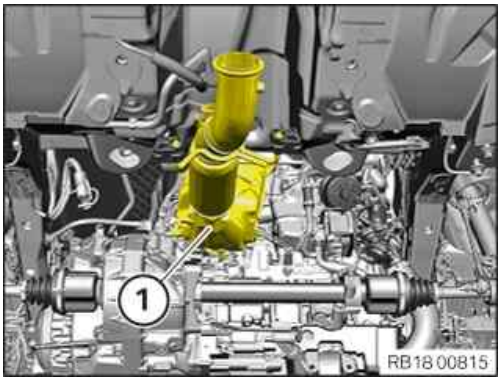


- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket

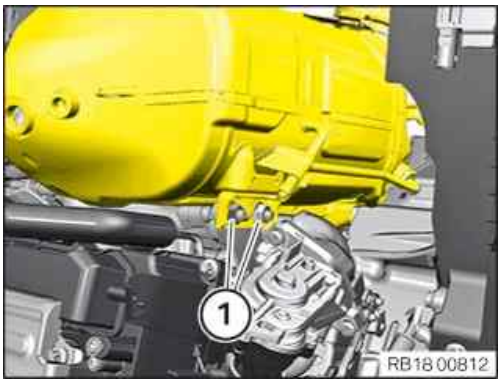
- Before installing the diesel particulate filter: Mount fitting aid (1) for the flexible tube.



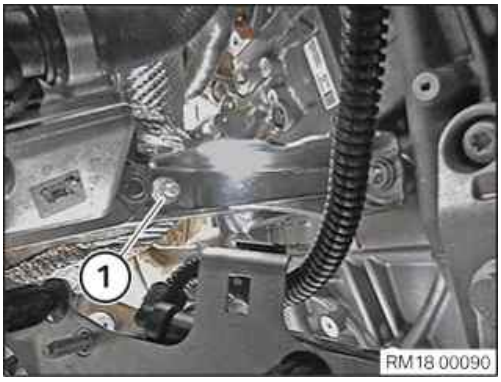
- Carefully insert and install the diesel particulate filter (1).

cardiagn.com

- Feed in and install V-band clamp (1).
- Make sure that the seal between the diesel particulate filter and the exhaust turbocharger is installed correctly.
- Align the diesel particulate filter on the exhaust turbocharger.
- Position V-clip (1).
- Hand-tighten the V-clip (1).



- Tighten nuts (1) by hand.



- Tighten the nut (1) hand-tight.

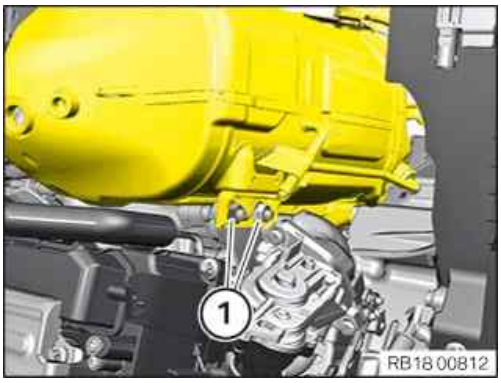
- Remove fitting aid (1) for the flexible tube.

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

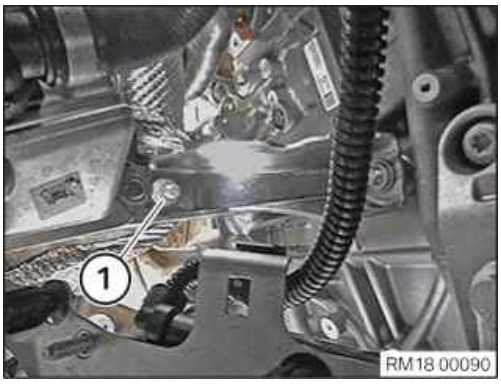
cardiagn.com



- Tighten nuts (1).

Diesel particle filter to holder

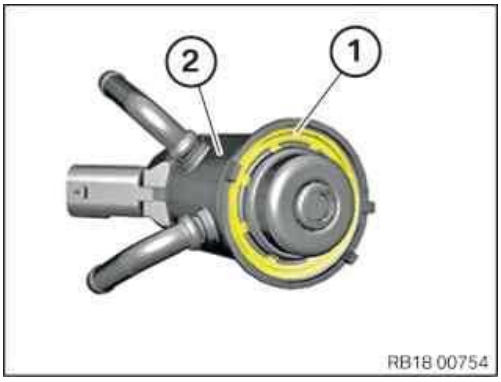
M8 hexagon nut		Tightening torque	19 Nm



- Tighten nut (1).

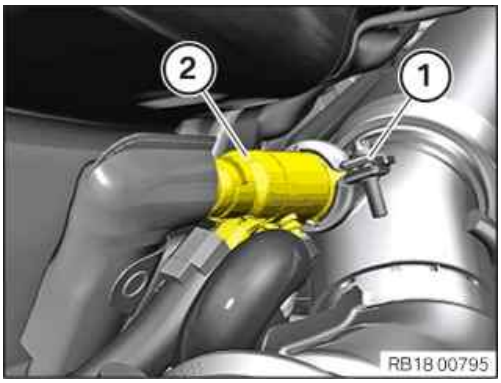
Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm



- Renew sealing ring (1) of the SCR metering module (2).

  Parts: Sealing ring

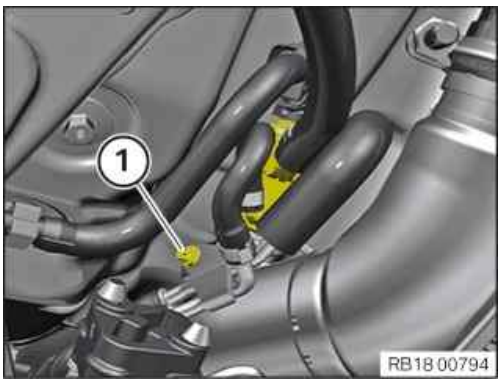


- Insert and install the SCR metering module (2).
- Renew the V-clip (1).

  Parts: V-band clamp
- Tighten V-band clamp (1).

SCR metering module V-clip to exhaust system

V-band clamp	Renew V-band clamp.	Tightening torque	8 Nm

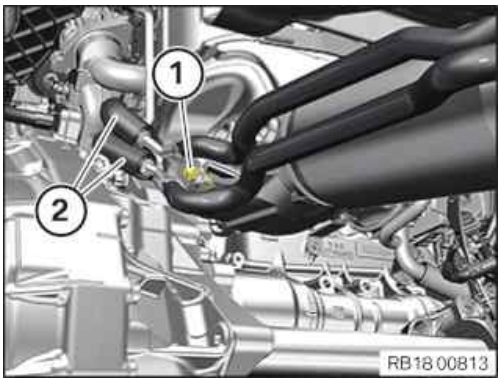


- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

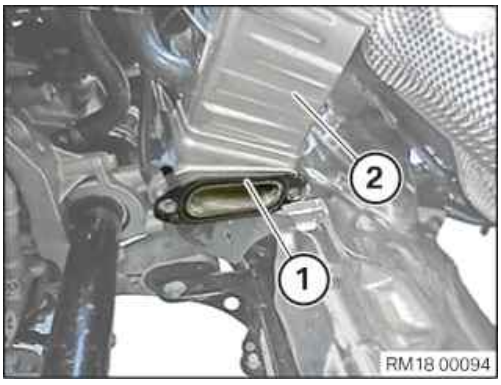
cardiagn.com



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

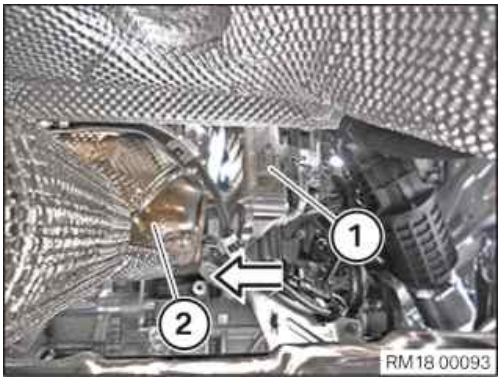
Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

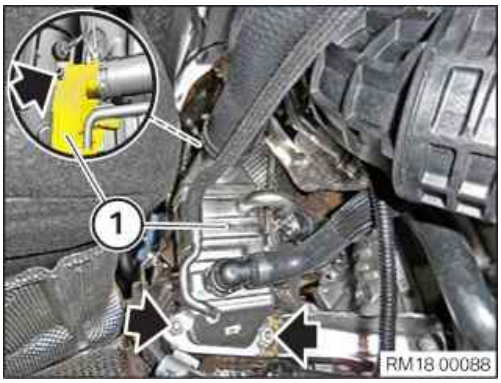


- Replace seal (1) of the low pressure exhaust-gas recirculation cooler (2).

  Parts: Gasket



- Feed in and install the low pressure exhaust-gas recirculation cooler (1) in at the diesel particulate filter (2) in the direction of arrow.

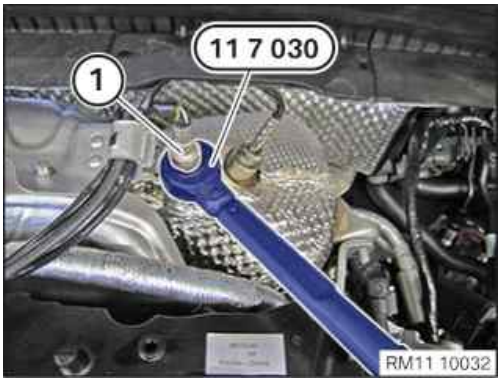


- Tighten nuts (arrows) of the low pressure exhaust-gas recirculation coolers (1).

Low-pressure exhaust-gas recirculation cooler to diesel particulate filter

Flange nutM8		Tightening torque	19 Nm

89 – Install the control sensor

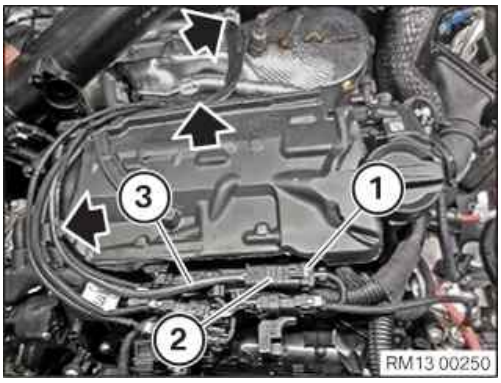


- Feed in front oxygen sensor (1) and install.
- Tighten the front oxygen sensor (1) with the special tool **0 491 075 (11 7 030)**.

Control sensor

Control sensor		Tightening torque	50 Nm

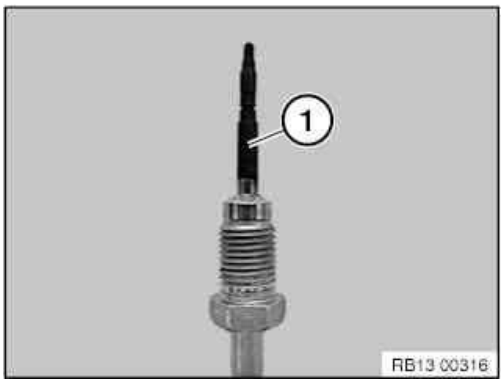
cardiagn.com



- Feed in and install cable (3) from the oxygen control sensor into the clamps (arrows).
- Secure connector (2) on holder.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

90 – Install the exhaust-gas temperature sensor on the diesel particulate filter



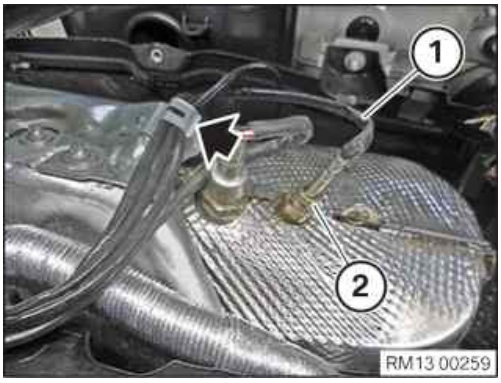
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and renew the exhaust temperature sensor as needed.



- Feed in and install the exhaust temperature sensor (2).
- Tighten the exhaust temperature sensor (2).

Exhaust temperature sensor to diesel particulate filter

Exhaust-gas temperature sensor		Tightening torque	28 Nm

- Insert and install cable (1) of the exhaust temperature sensor in the clamp (arrow).

- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

91 – Installing the exhaust temperature sensor downstream from the catalytic converter on the diesel particulate filter

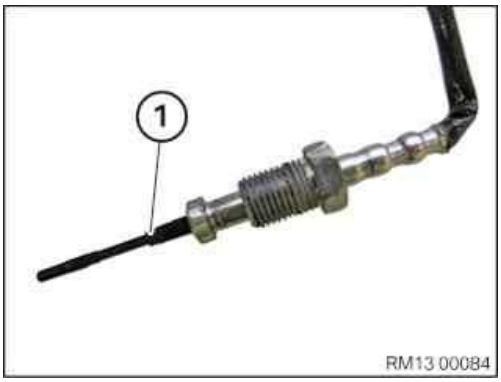
RISK OF DAMAGE

Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

cardiagn.com



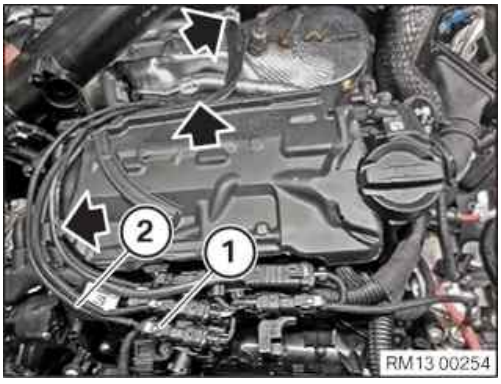
- Make sure the gauge tip (1) is not damaged during installation.

- Feed in and install the exhaust temperature sensor (1).

- Tighten the exhaust temperature sensor (1) with conventional tools (2).

Exhaust temperature sensor to diesel particulate filter

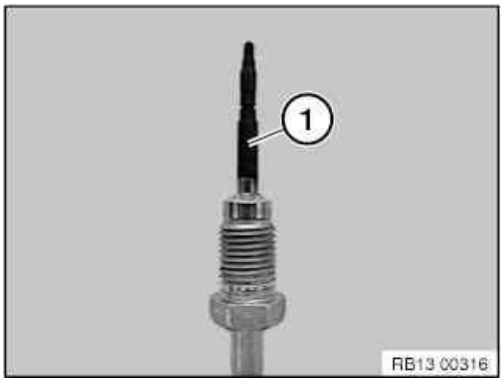
Exhaust-gas temperature sensor		Tightening torque	28 Nm



- Insert and install the cable (2) of the exhaust temperature sensor in the clamps (arrows).
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

92 – Installing exhaust temperature sensor on catalytic converter



RISK OF DAMAGE

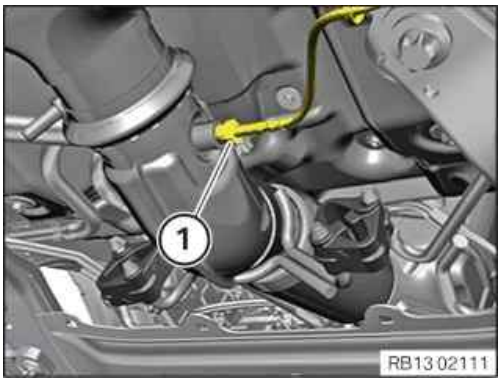
Damage of exhaust temperature sensor.

Damage to exhaust temperature sensors leads to malfunctions.

- Make sure that the gauge tip is not damaged.

- Check the gauge tip (1) for damage and replace the exhaust temperature sensor as needed.

cardiagn.com

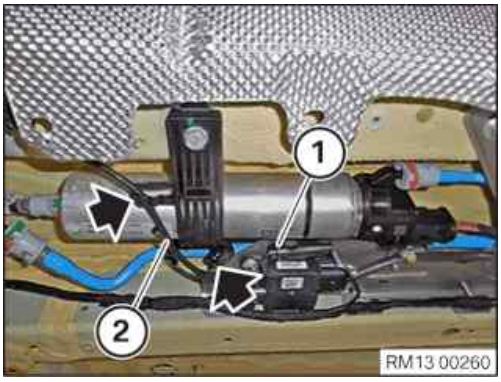


- Feed in and install the exhaust temperature sensor (1).
- Tighten the exhaust temperature sensor (1).

Exhaust-gas temperature sensor to exhaust system

Exhaust-gas temperature sensor		Tightening torque	28 Nm

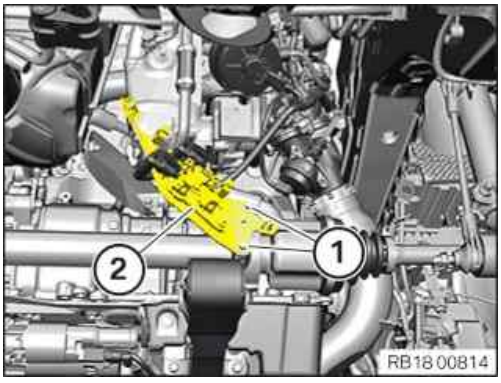
- Secure the cable clips (1).



- Feed cable (2) from exhaust temperature sensor into the clamps (arrows) and install.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

93 – Install holder for oxygen sensor

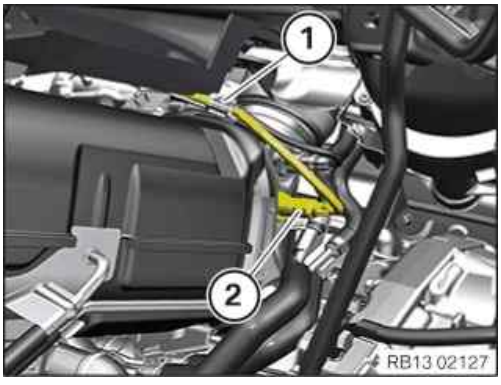


- Insert and install the holder (2).
- Tighten the screws (1).

Oxygen sensor holder to intermediate shaft

Hexagon screw M6x16		Tightening torque	8 Nm

94 – Installing the nitrogen oxide sensor before SCR catalytic converter

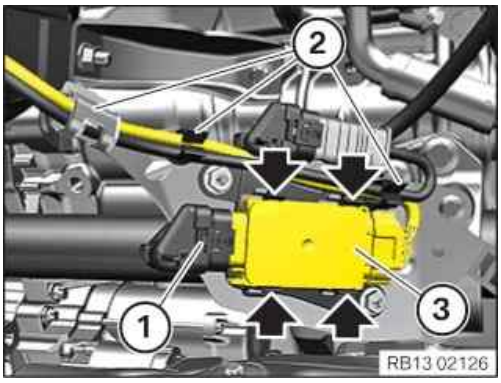


- Insert nitrogen oxide sensor before the SCR catalytic converter (2) and install.
- Tighten the nitrogen oxide sensor upstream of the SCR catalytic converter (2).

Nitrogen oxide sensor before SCR catalytic converter

Sensor		Tightening torque	50 Nm

cardiagn.com



- Install and lock the evaluation electronics for the nitrogen oxide sensor (3) (arrows).
- Insert the evaluation electronics cable for the nitrogen oxide sensor (3) into the clamps (2) and install.
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

95 – Install the monitoring sensor

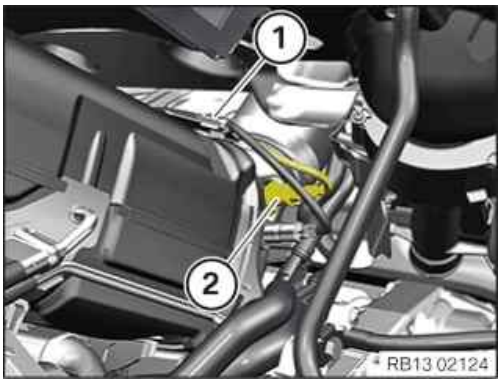
TECHNICAL INFORMATION

New oxygen sensors are to be greased lightly and evenly on the thread.

For oxygen sensors that are reused, the following should be observed:

Lightly and evenly grease the oxygen sensor only on the thread. Do not clean and grease that part of the oxygen sensor which protrudes in the exhaust branch (sensor ceramics).

For additional information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

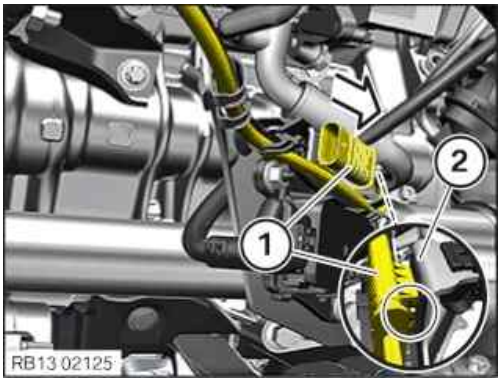


- Feed in the monitoring oxygen sensor (2) and install.
- Tighten the monitoring oxygen sensor (2) with special tool **0 491 074 (11 7 020)**.

Monitoring sensor

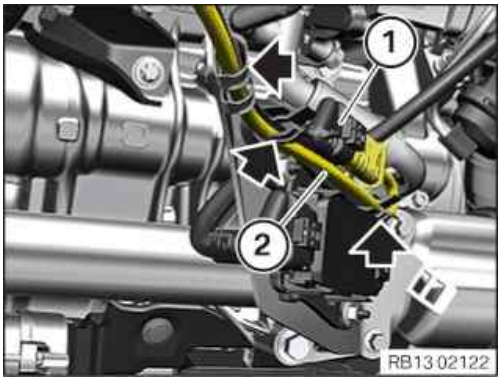
Sensor		Tightening torque	50 Nm

- Insert the cable of the monitoring oxygen sensor (2) into the clamp (1) and secure it.



- Connect the connector (1) with the bracket (2) in the direction of arrow.
- Make sure that the connector (1) is locked correctly in the marked area.

  The connector (1) must engage audibly.



- Insert and attach the cable of the monitoring oxygen sensor (2) to the clamps (arrows).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

96 – Installing starter motor

cardiagn.com

CAUTION

Improper routing of the positive battery cable.

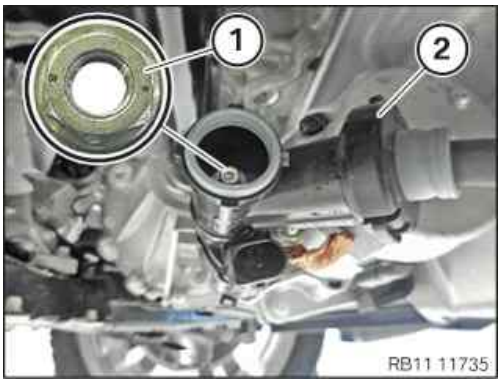
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm



- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

97 – Install exhaust system

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

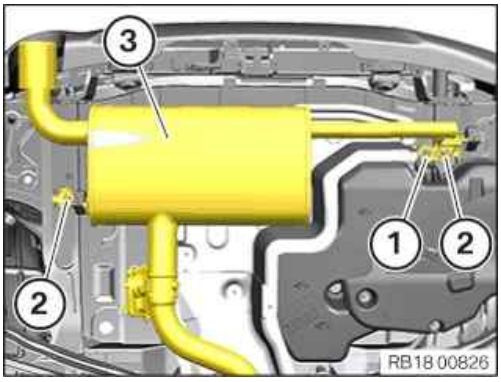
cardiagn.com

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Insert and install the exhaust system (3) with the help of another person.
- Renew nuts (2).

  Parts: Nuts
- Tighten nuts (2).

Exhaust system to body

M8	Replace nuts.	Tightening torque	19 Nm

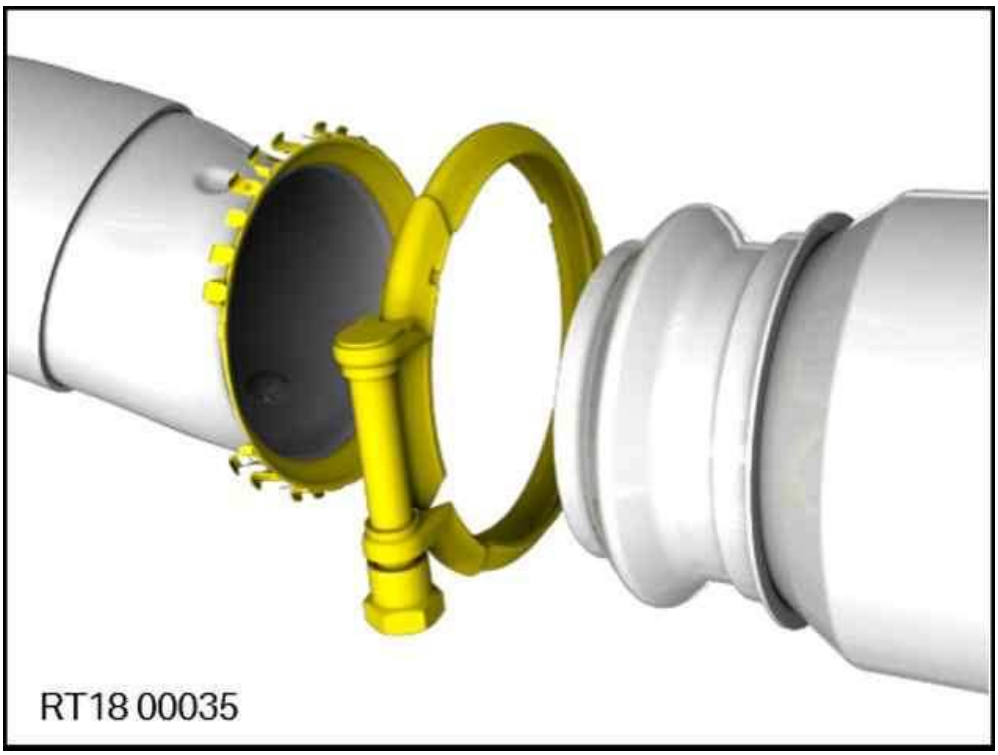
- Tighten down screw (1).

Exhaust bracket on body

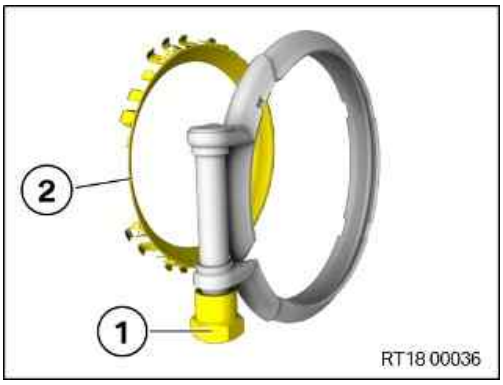
Hexagon screw M8x30		Tightening torque	19 Nm

▸ **Install the V-clip**

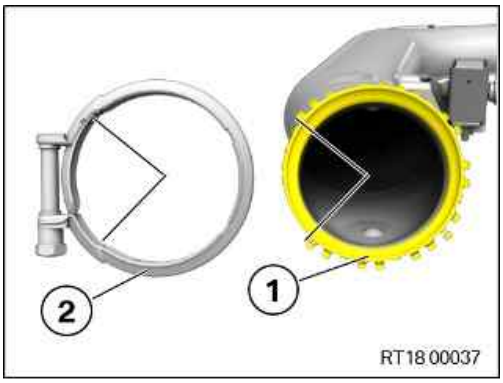
V-band clamp



cardiagn.com

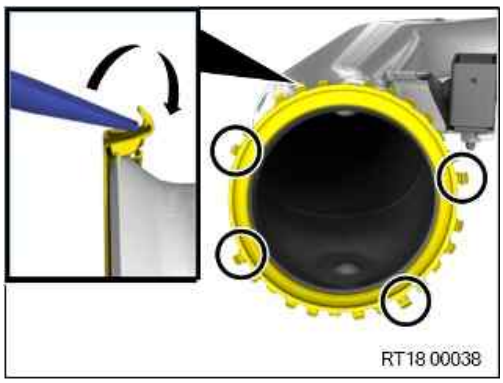


- Unscrew the nut (1) and remove the sealing ring (2).

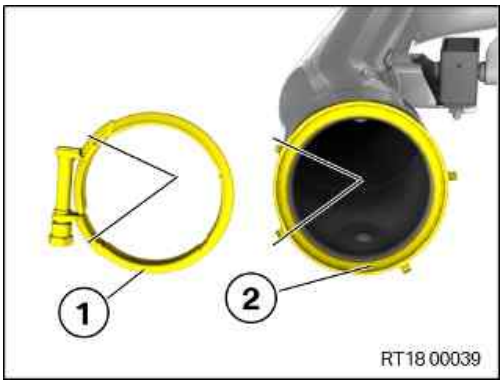


- Renew the V-clip (2).

  Parts: V-band clamp
- Mount the sealing ring (1) on the exhaust system.
- Ensure that the sealing ring (1) for the V-clip (2) is positioned correctly.



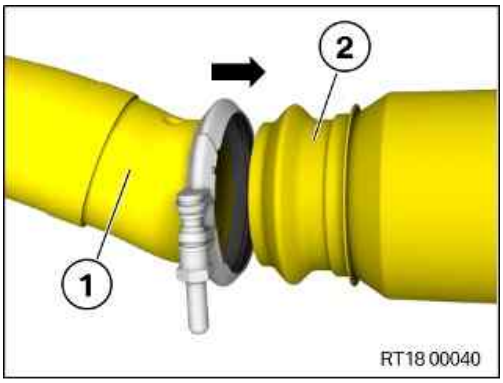
- Bend all sheet metal tabs over with a suitable tool, except those in the marked areas.



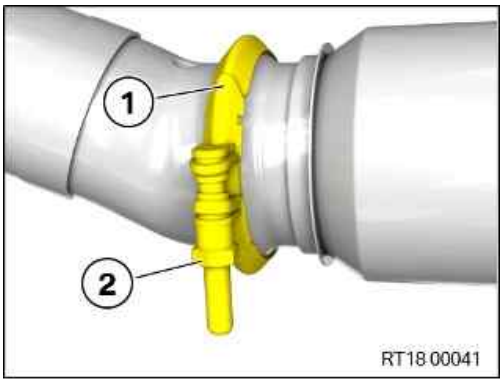
- Mount the V-clip (1) on the sealing ring (2).
- Make sure that the V-clip (1) is positioned correctly on the sealing ring (2).

- Make sure that the V-clip rests against the sheet metal tabs after mounting (marks).

cardiagn.com



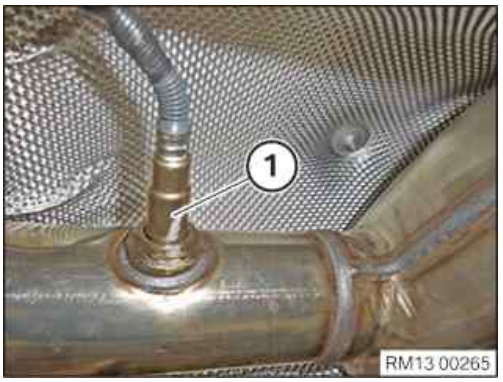
- Connect the exhaust system (1) with the catalytic converter (2) and position correctly.



- Make sure that V-clip (1) is fitted correctly.
- Tighten down screw (2).

V-clip to catalytic converter

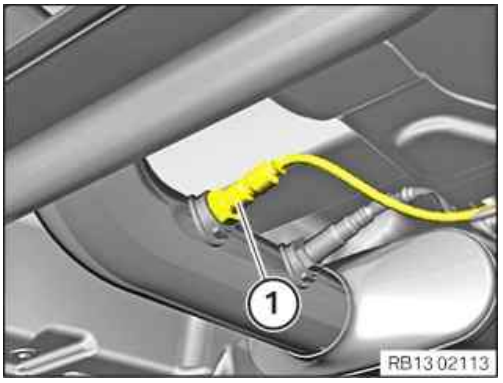
V-band clamp	Renew V-band clamp.	Tightening torque	22 Nm



- Guide in, position and tighten the diesel particulate sensor (1).

Diesel particulate sensor to exhaust system

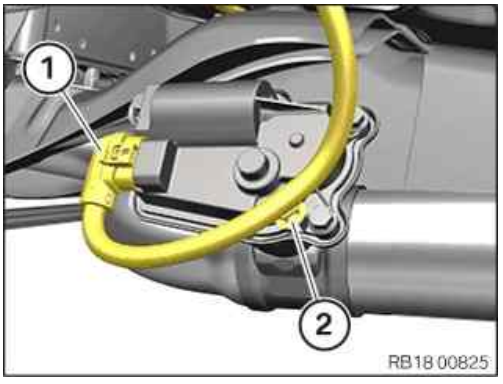
Sensor		Tightening torque	50 Nm



- Guide in, position and tighten the nitrogen oxide sensor (1).

Nitrogen oxide sensor downstream of SCR catalytic converter

Sensor		Tightening torque	50 Nm

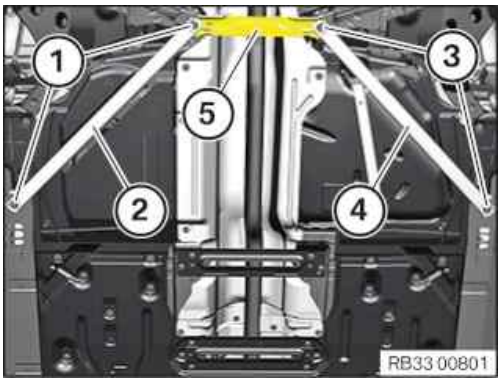


- Secure clamps (2).
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

98 – Install the cross-member with torsion struts

cardiagn.com



- Insert and install the cross-member (5).
- Thread in torsion strut (4) at right and install.
- Renew screws (3).

  Parts: Bolts
- Tighten down screws (3).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

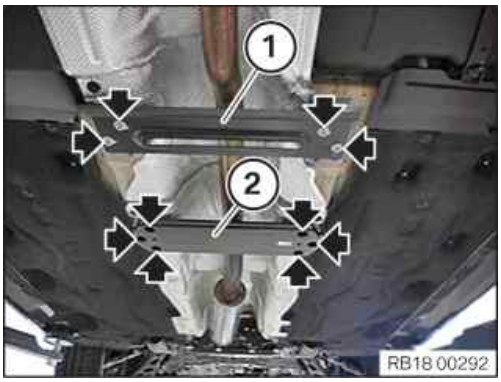
- Guide in and install the left torsion strut (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Cross-member/torsion strut to axle support and mounting

M12x48	Renew screws.	Jointing torque	100 Nm
		Angle of rotation	90 °

99 – Install the connecting support on the tunnel in front and back



- Insert and install connecting supports (2).
- Tighten the screws (arrows) from the connecting support (2).

Front connection carrier to body

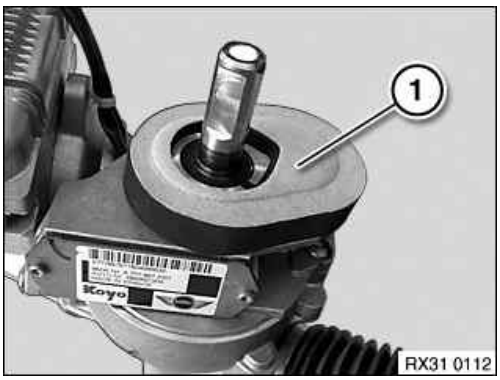
M10x18		Tightening torque	56 Nm

- Insert and install connecting supports (1).
- Tighten the screws (arrows) from the connecting support (1).

Rear connection carrier to body

M8x18		Tightening torque	28 Nm

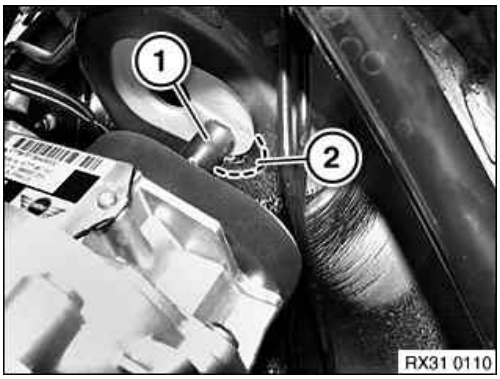
100 – Mount and secure the complete front axle



- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

cardiagn.com

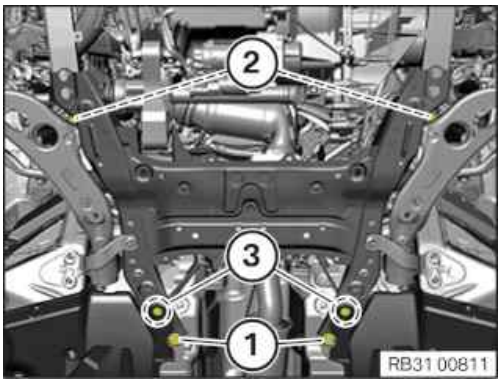


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

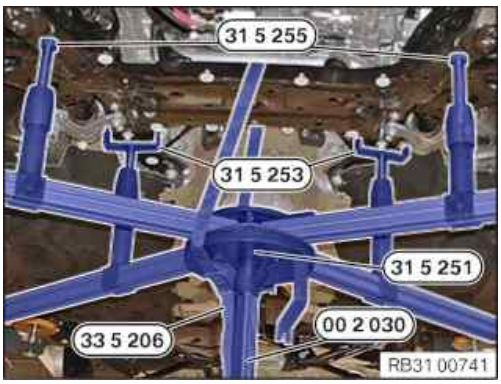
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).

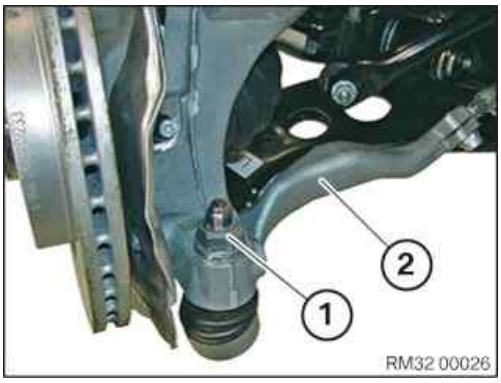
Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and place it to the side.

cardiagn.com



NOTICE

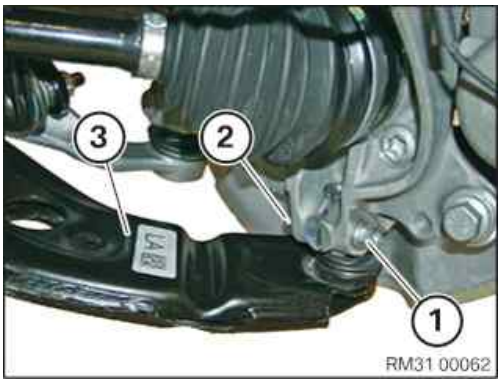
Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm



NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

101 – Install the mounted parts on the front axle support

NOTICE

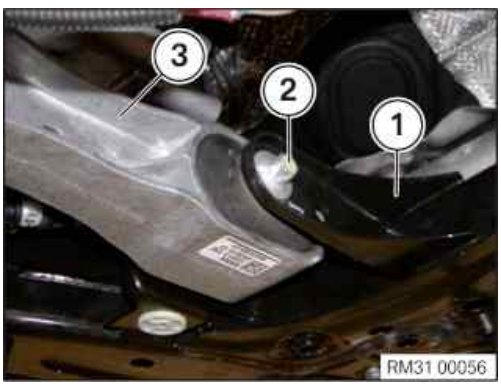
Perform the operations on the left and right side.

- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

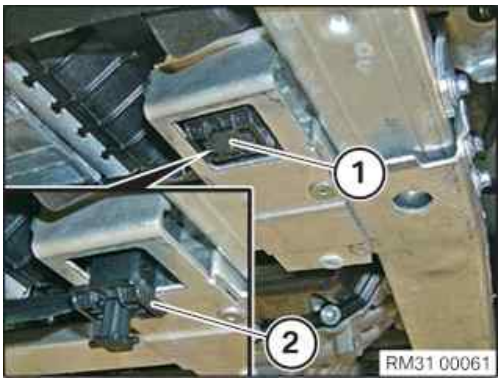


- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

M12 screw		100 Nm

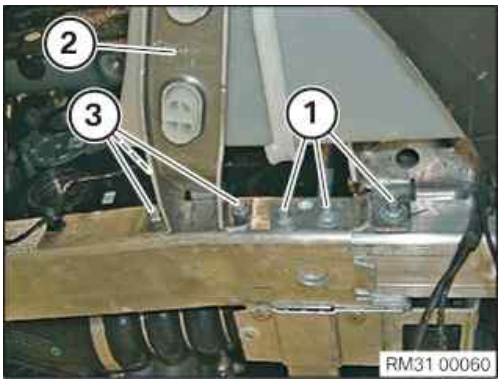
cardiagn.com



NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.



- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

Perform the operations on the left and right side.

- Tighten the screws (1).

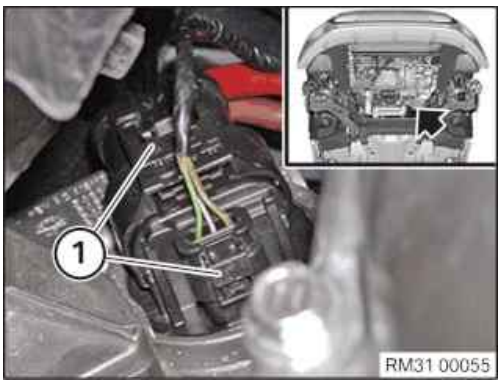
Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm

102 – Attaching connector at steering gear

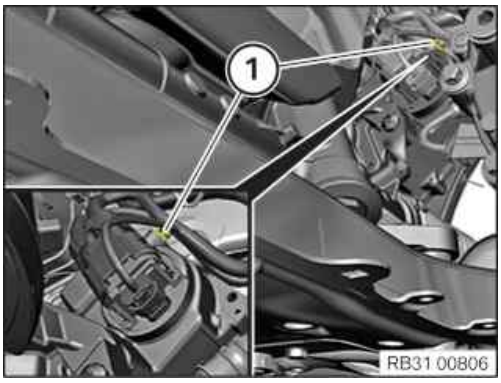
- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.



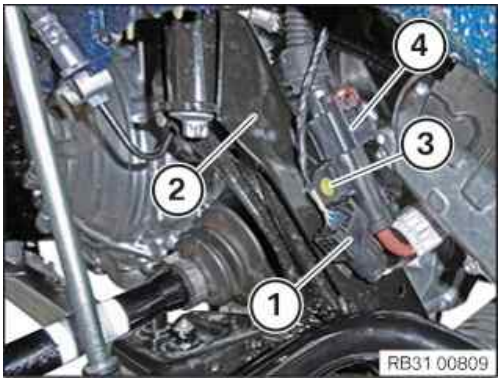
- Connect and lock connector (arrow) (1) with the steering gear.

cardiagn.com



- Fasten the wiring harness (1) on the steering gear.

▶ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

103 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

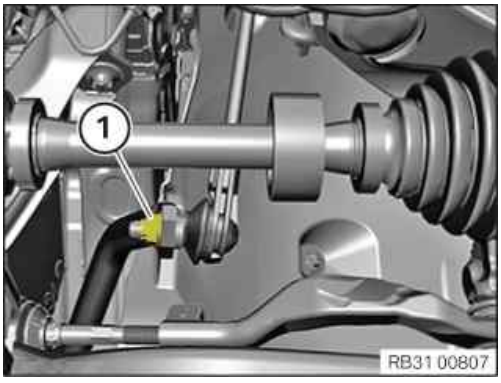
  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

104 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▶ **Fastening anti-roll bar on the anti-roll bar link**



- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

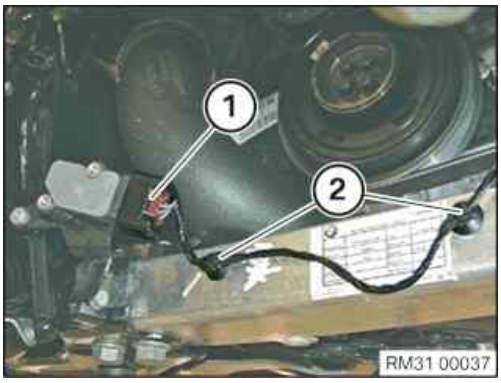
Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

105 – With right installation: Securing the cable for the ride height sensor

cardiagn.com



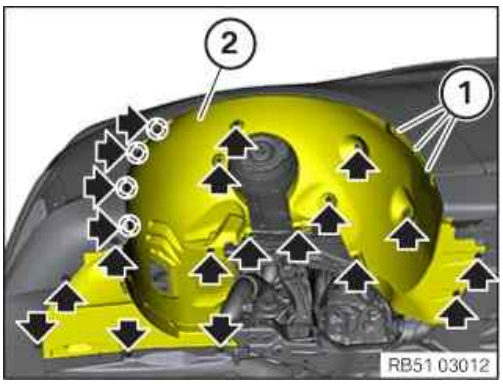
- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

106 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▶ **Installing the front wheel arch cover**



- Guide the wheel arch cover (2) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

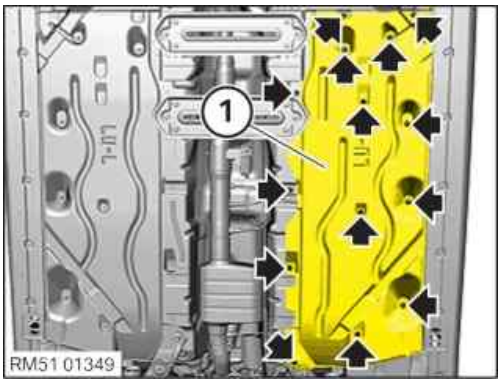
Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

- Secure expanding rivet (1).

107 – Installing underbody panelling , right



- Correctly position the underbody panelling (1).
- Tighten all bolts and nuts (arrows).

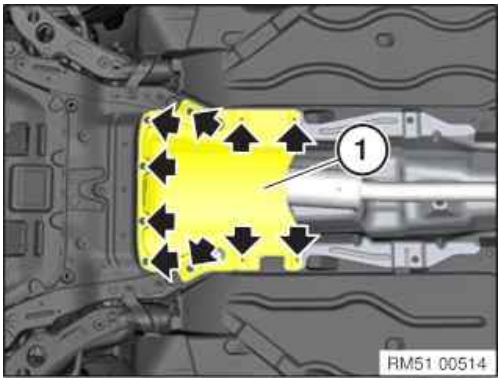
Underbody panelling, side

Hexagon screw		Tightening torque	2,6 Nm

Underbody panelling, side

Plastic nut		Tightening torque	2,6 Nm

108 – If installed: Installing underbody protection at rear



- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

109 – Mount the front left and right wheels

cardiagn.com

▶ **Mounting the wheel**

▷ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

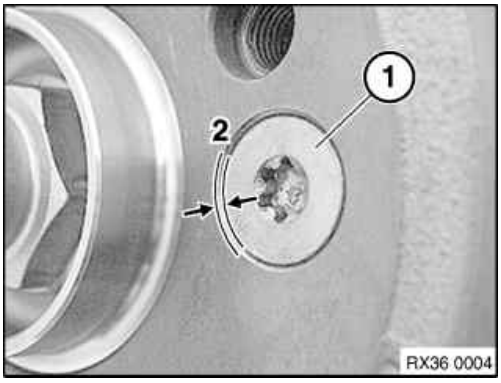
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

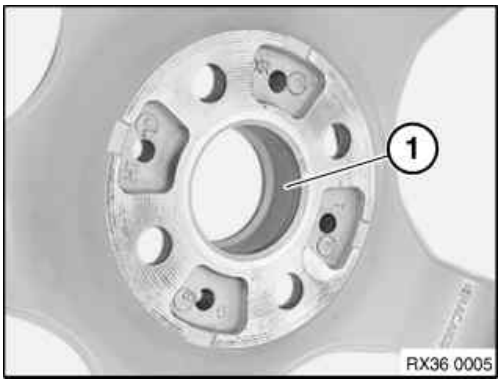
  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

◁

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

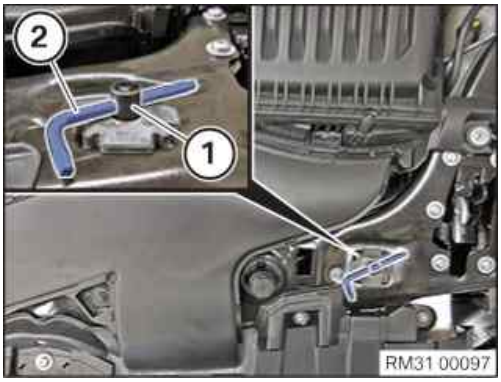
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check wheel bolts (arrows) and threads for damage, renew the wheel bolts if necessary.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

110 – Removing fastener for left and right radiator



NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

111 – Secure the steering shaft at the bottom on the steering gear

cardiagn.com

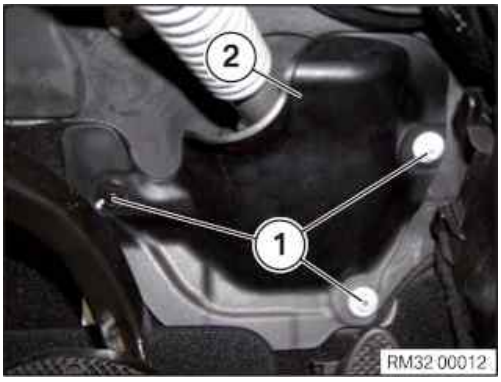
- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm



- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

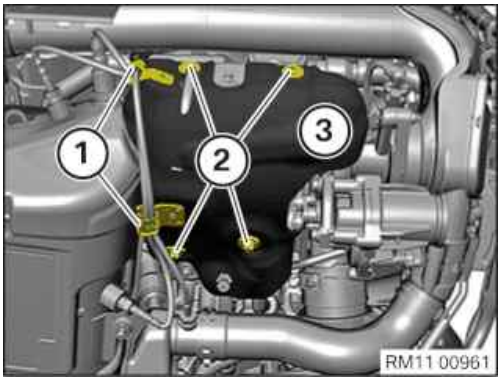
112 – Install the heat shield on the exhaust turbocharger

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



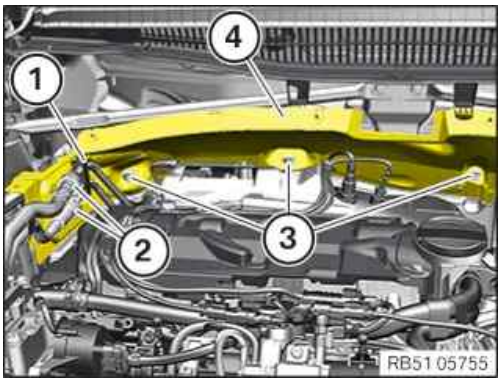
- Feed in and install the heat shield (3).
- Tighten down screws (2).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Secure cable in holders (1).

113 – Installing rear bulkhead upper part



- Feed in and install the rear bulkhead upper part (4).
- Tighten down screws (3).

Rear bulkhead upper part to lower section of bulkhead

Oval-head screw		Tightening torque	5 Nm

- Feed the fuel line (2) into the holder (1) and install.
- Connect and lock the holder (1).

  The holder (1) must engage audibly.

cardiagn.com

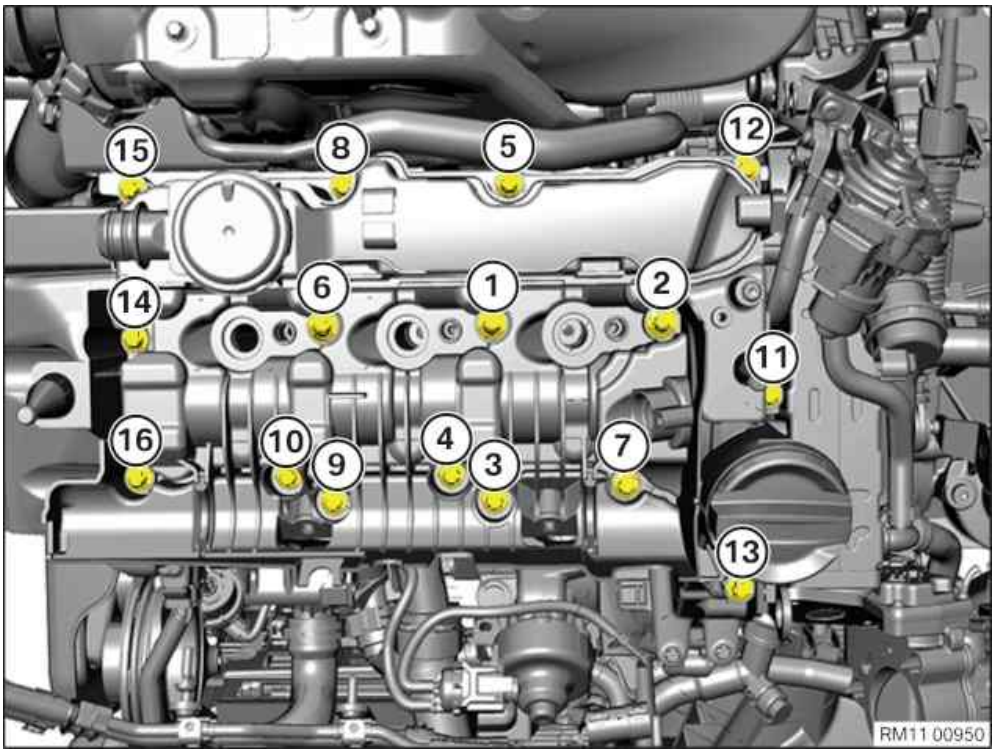
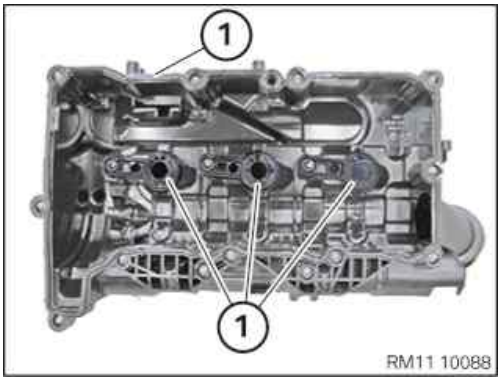
114 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover

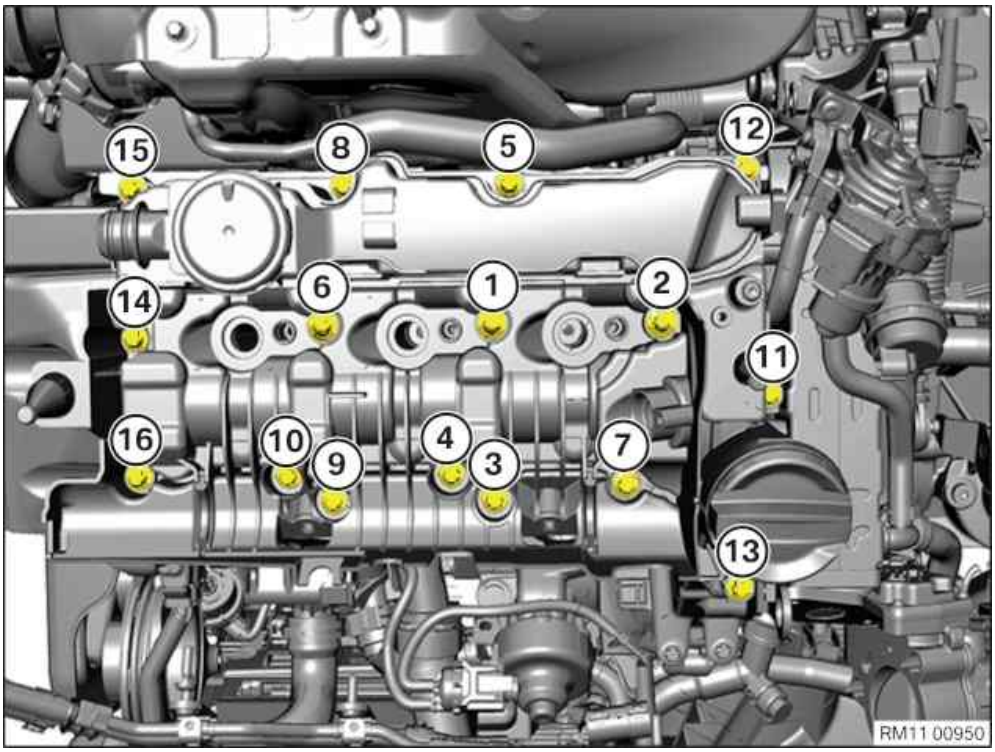


1 to 16 Bolts of the cylinder head cover



- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8,5 Nm

cardiagn.com

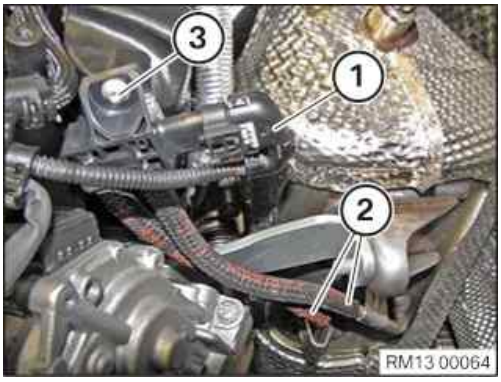
- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

115 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

116 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

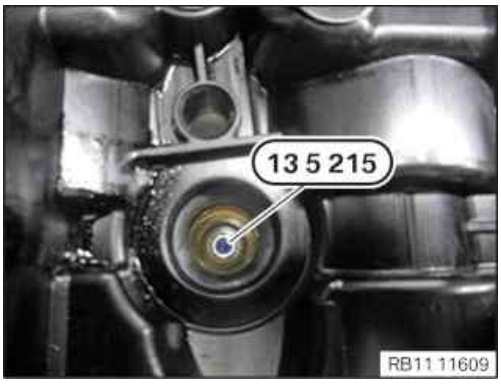
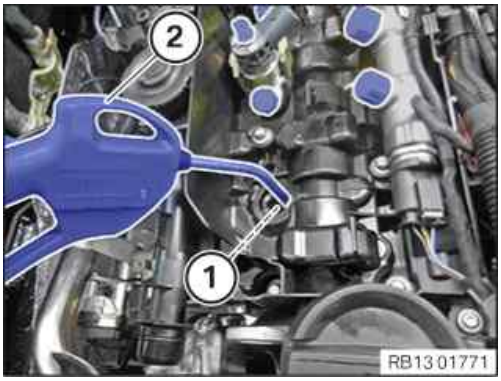
- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.



- Blow out injector shaft (1) with air gun (2).

cardiagn.com

- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

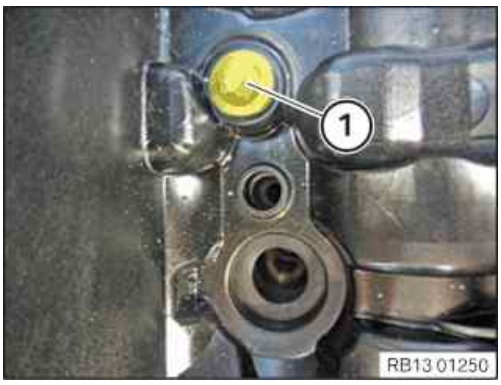
▶ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▶ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

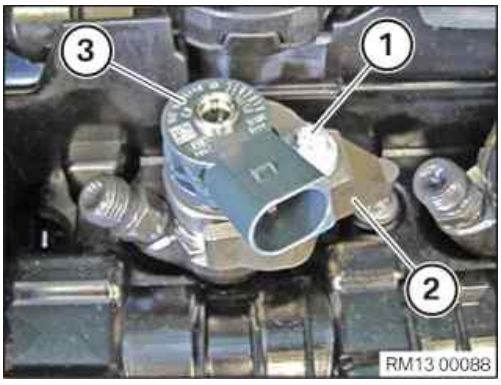
- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

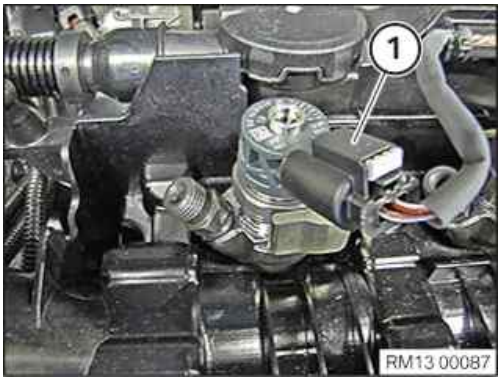
Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

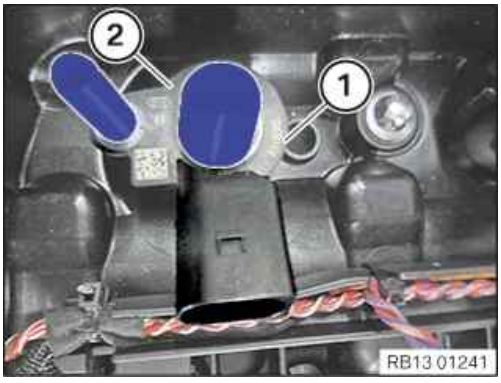
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

cardiagn.com

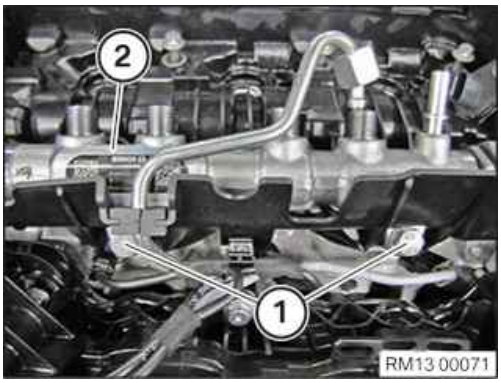
- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

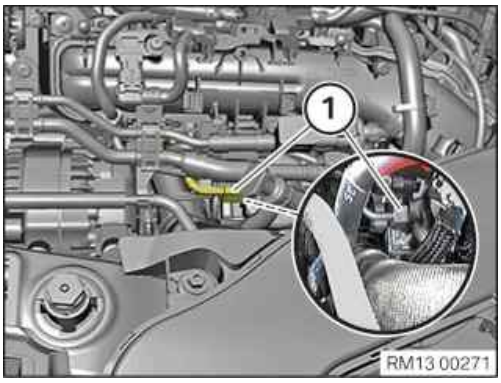
117 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

118 – Installing high pressure line between rail and high pressure pump

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool **2 413 106**.
- Thread in and install the high pressure line (3).
- Make sure that the rubber grommet is positioned correctly in the area of the cylinder head cover.
- Tighten the union nut (1) hand-tight.
- Tighten the union nut (2) hand-tight.
- Ensure that high pressure line (3) is installed without any strain.

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the union nut (1) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Tighten the union nut (2) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

119 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com

- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

120 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

121 – Installing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

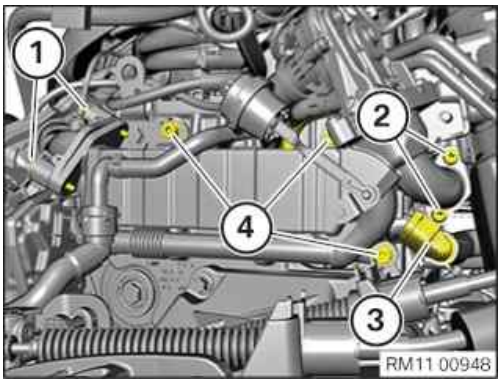
- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.

- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com

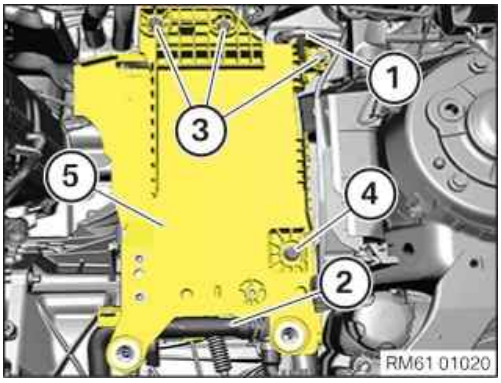
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

122 – Install the battery holder



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

123 – Install electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

cardiagn.com

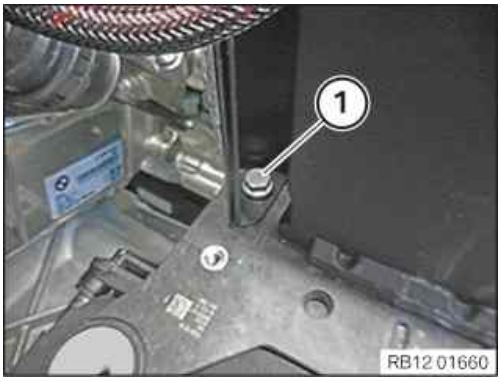
- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

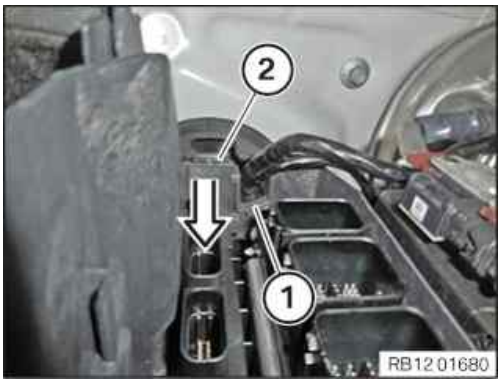
- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



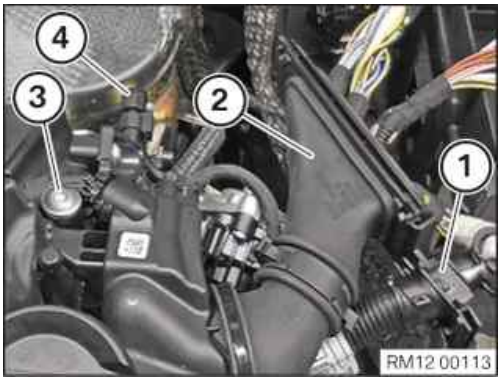
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

cardiagn.com

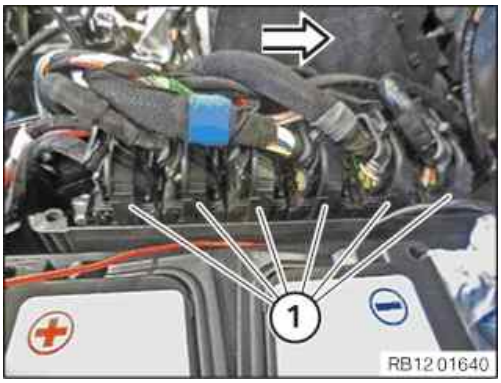
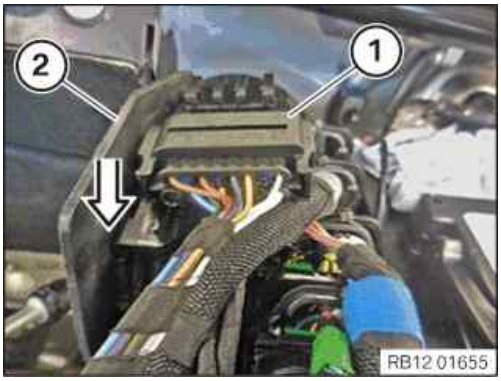
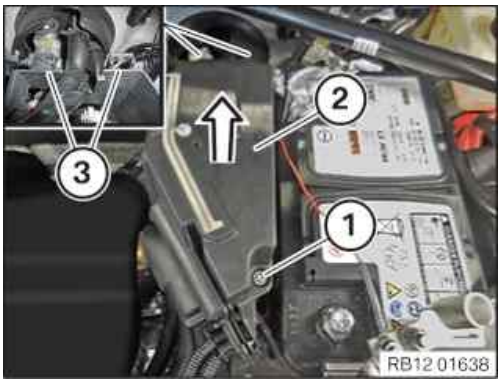
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com

- Feed in and install tension strut (1).
- Tighten screws (arrows).

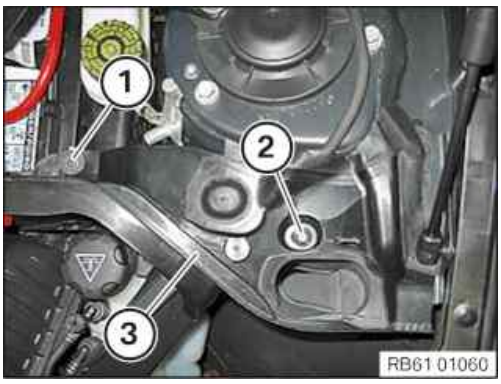
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

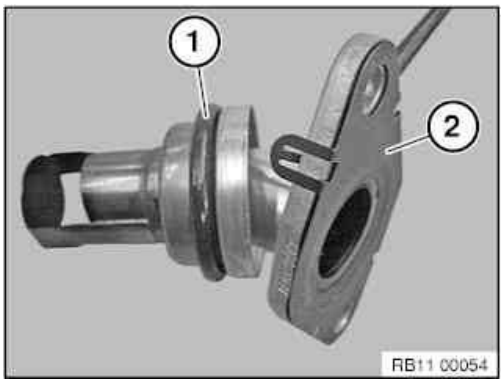


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

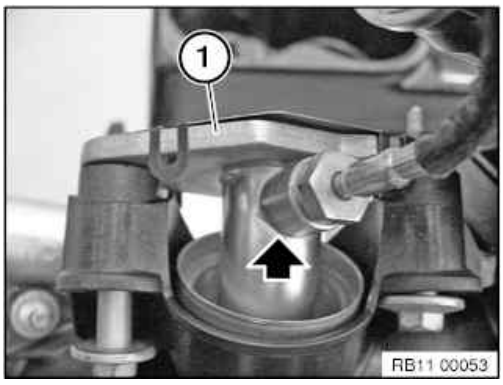
124 – Installing the intake plenum



- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.



- Install the exhaust-gas recirculation pipe (1) in the intake plenum.

cardiagn.com

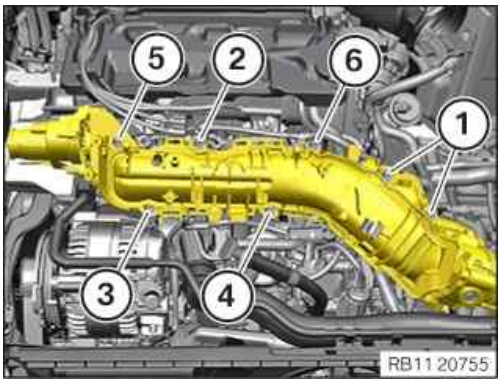
- Renew gaskets (2).

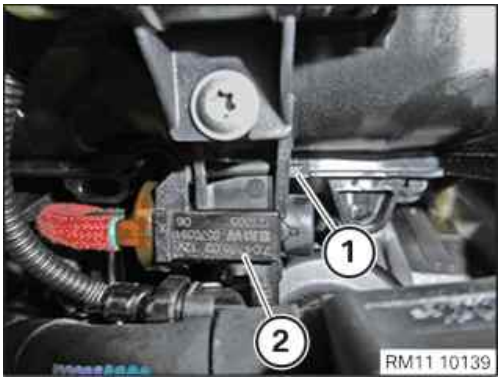
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



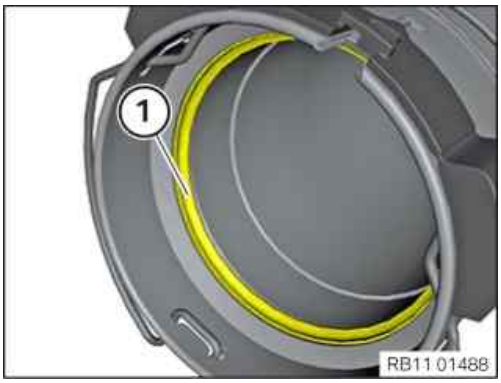
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm

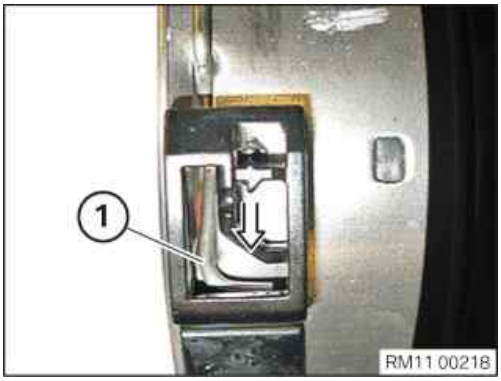


- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.



- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring



- Engage the lock (1) on the bracket (arrow).

cardiagn.com

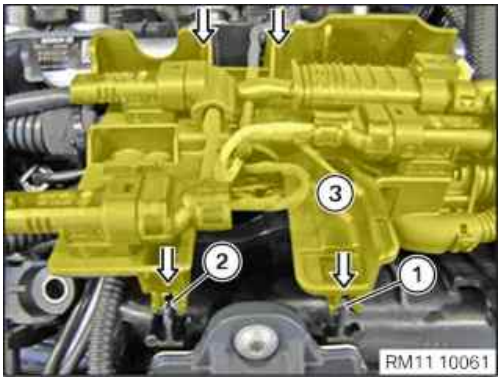
- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

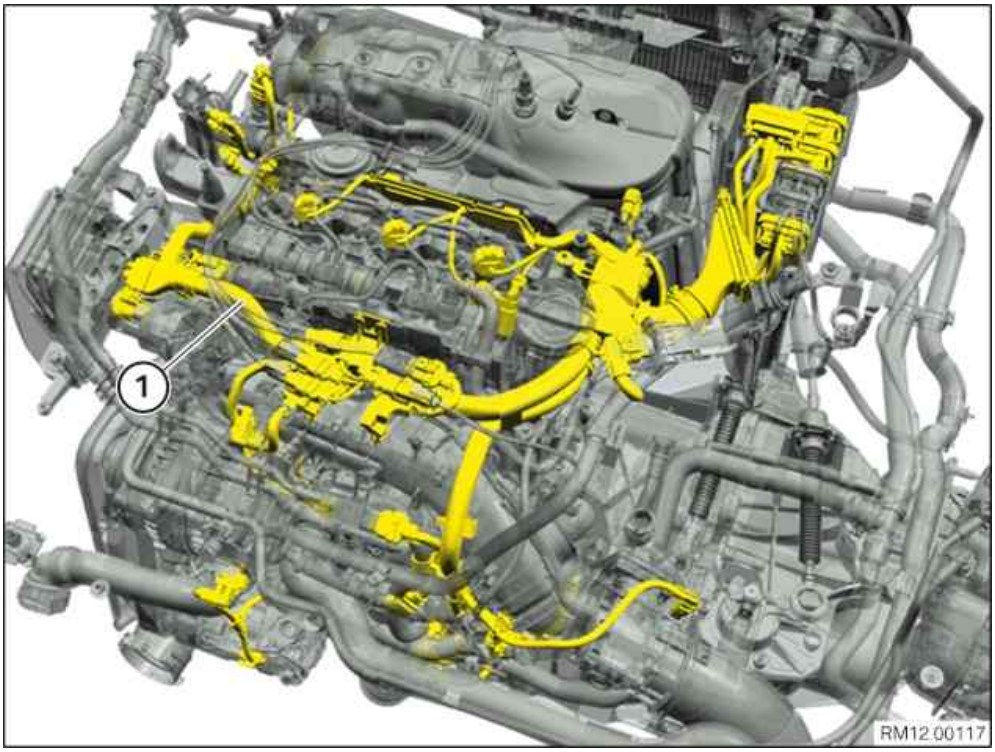
125 – Installing the cable clip for the intake plenum



- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).

126 – Fastening the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine



1 Wiring harness section for the engine

cardiagn.com

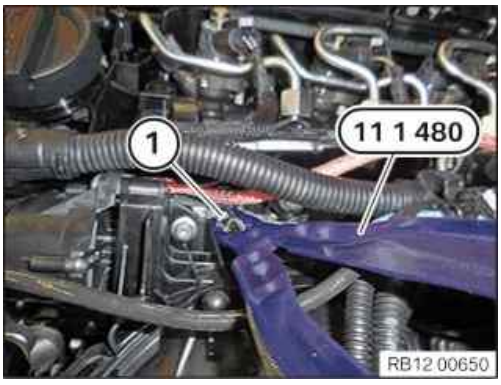
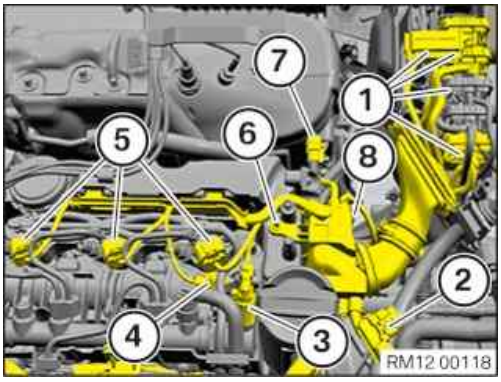
- Connect the coolant line (2) and lock the clamp.
- Connect and lock the connector (1).
- The locks must engage audibly.



- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

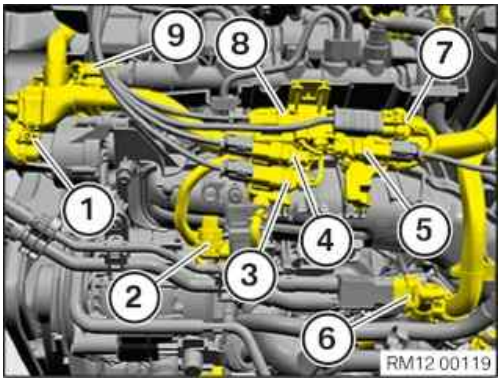


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.



- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.

cardiagn.com

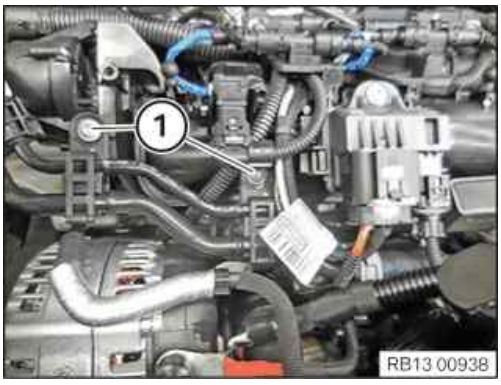
- Connect and lock the connector (2).

  Lock must audibly engage.
- Connect positive battery cable (1) on alternator and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

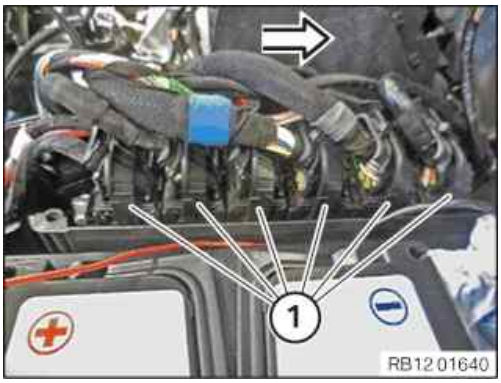


- Position fuel lines.
- Tighten the screws (1).

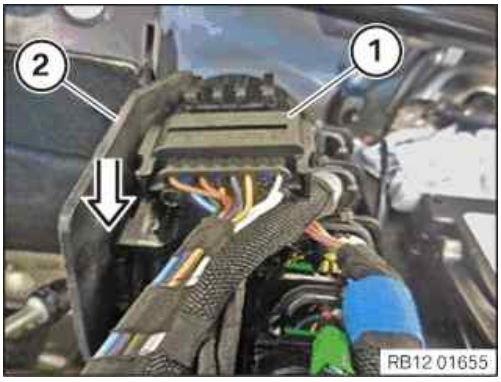
Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.

cardiagn.com

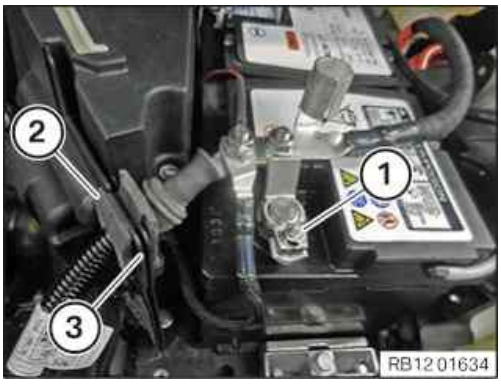
- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

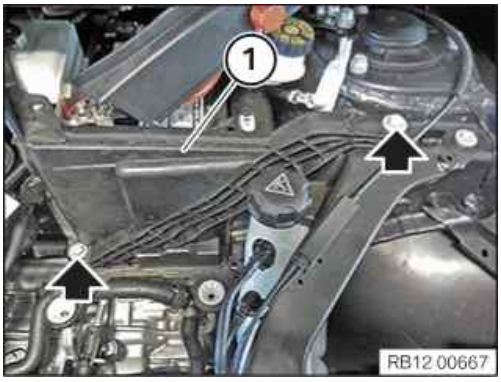
RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (1).
- Tighten screws (arrows).

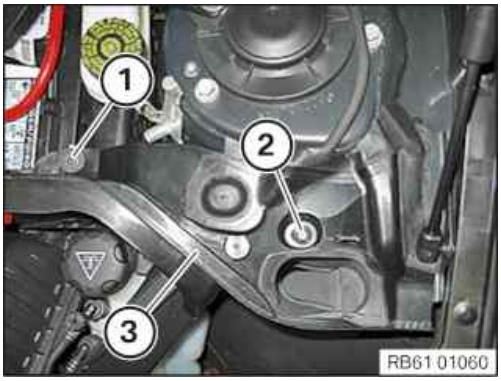
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw			2,8 Nm

127 – Installing clean air pipe

cardiagn.com

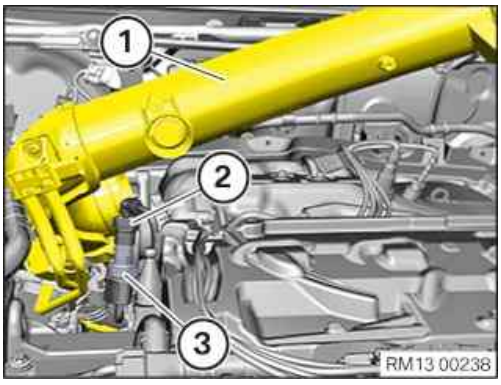
- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.



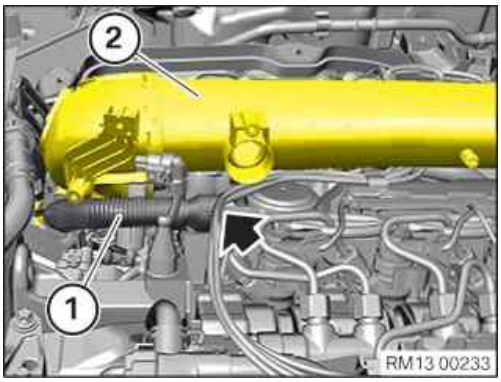
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

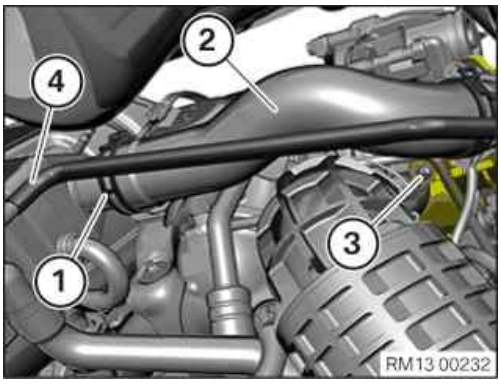
Exhaust gas pressure sensor		Tightening torque	13,5 Nm

- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

cardiagn.com

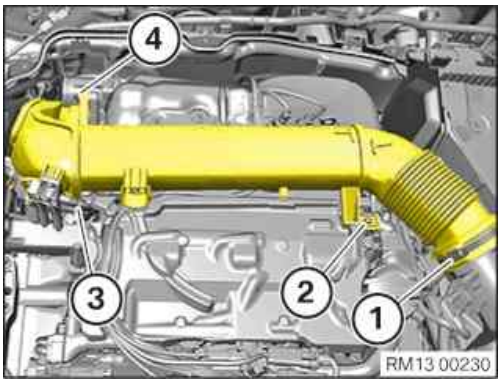
- Connect and lock the connector (1).

  The connector (1) must lock audibly.



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

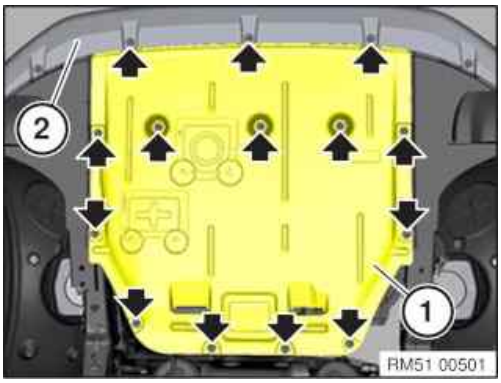
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

128 – Installing the front underbody protection

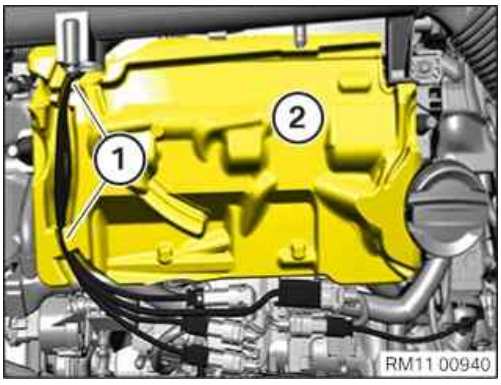


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

129 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

130 – Install resonator

cardiagn.com

- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

131 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

132 – Install the rear cowl panel cover

cardiagn.com

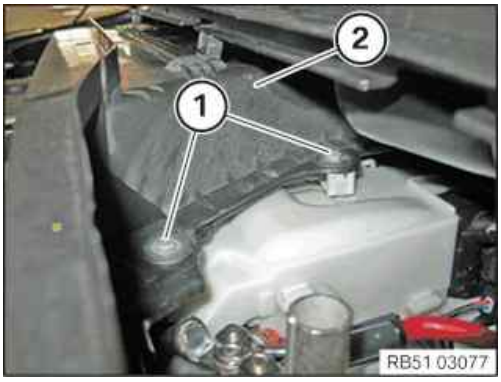
- Feed in and engage the rear cowl panel cover (1).

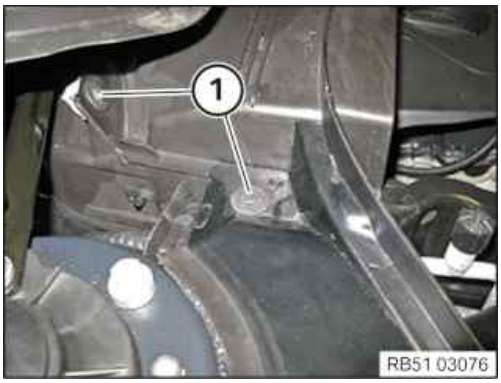
133 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

134 – Install vehicle battery

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

cardiagn.com

- Install vehicle battery (1).
- Tighten the holder with the bolt (4).

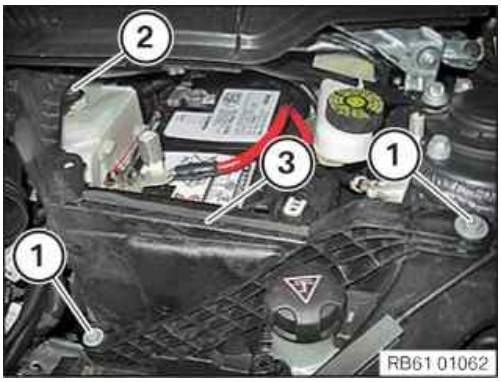
Battery terminal rail to battery tray

M8 screw		19 Nm

- Position the vent hose (2).
- Position the positive terminal.
- Tighten the nut (3) on the positive terminal.

Positive battery terminal

NutM6		5 Nm



- Insert the tension strut (3).
- Tighten down screw (2).

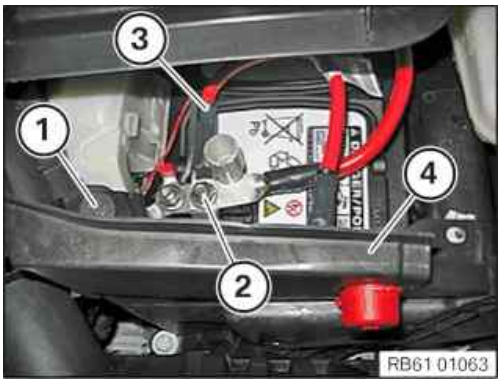
Battery cover

Screw		2,8 Nm

- Tighten the screws (1).

Trailing link

M8 screw		19 Nm



- Position the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten down screw (1).

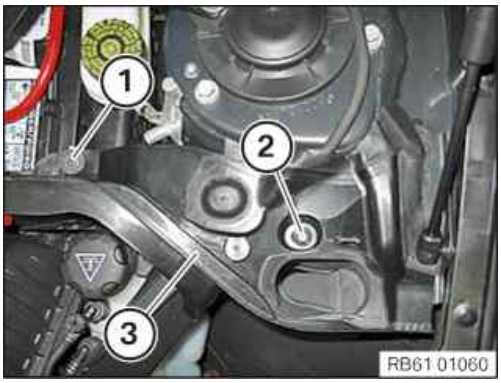
Battery cover

Screw		2,8 Nm

- Tighten the nut (2) on the positive terminal.

Positive battery cable to battery terminal

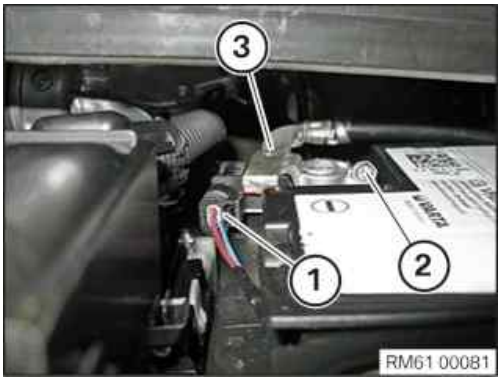
Nut M8		15,2 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm



- Position the negative battery terminal (3).
- Tighten nut (2).

Negative battery terminal (with IBS)

NutM6		5 Nm

- Connect connectors (1) and lock.

cardiagn.com

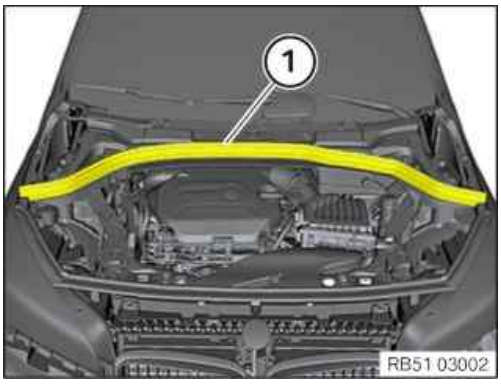
- Feed in the cowl panel cover (1).



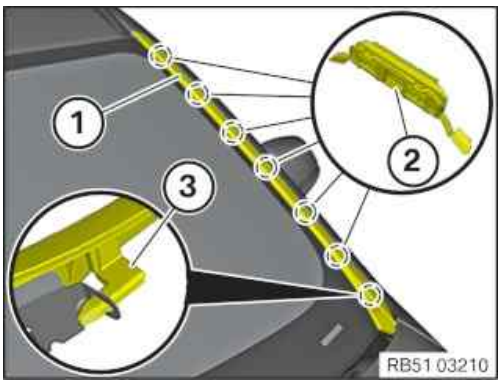
- Press the gasket (1) in a downwards direction.

135 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the gutter strip on the windscreen**



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

136 – Install left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the wiper arm**

cardiagn.com

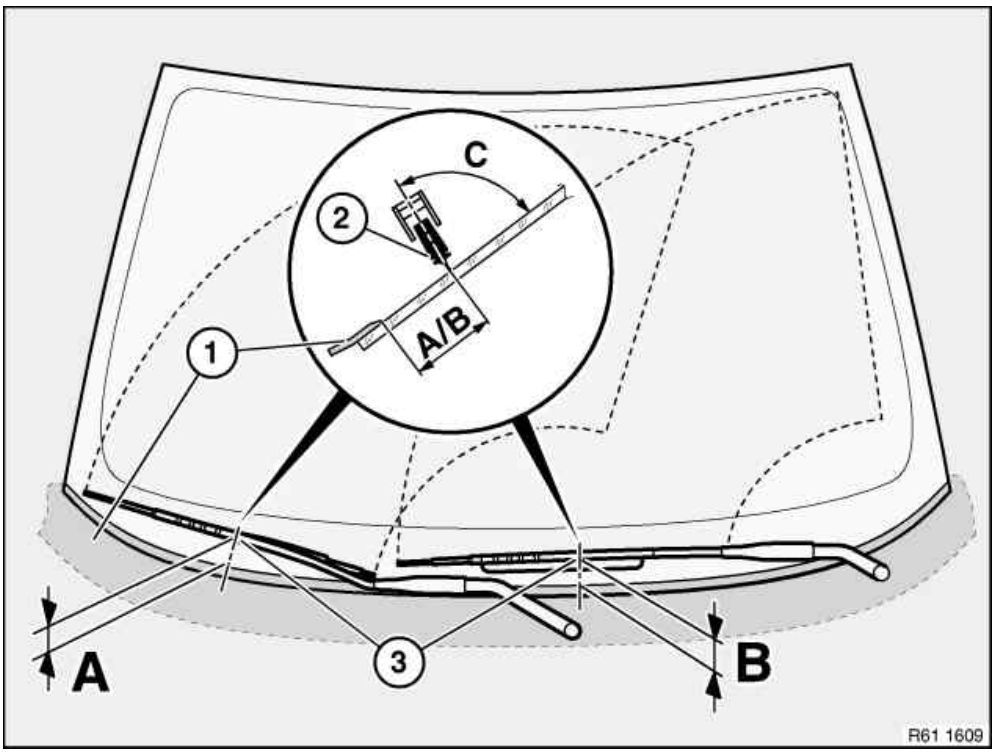
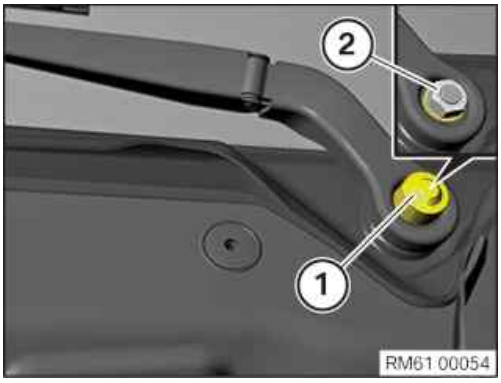
TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

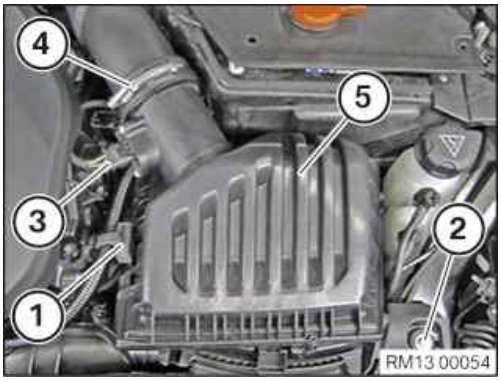
- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

137 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

cardiagn.com

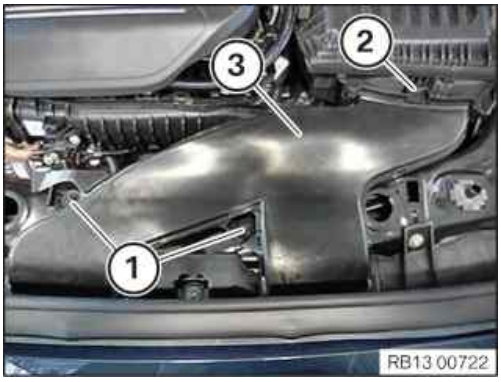
138 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

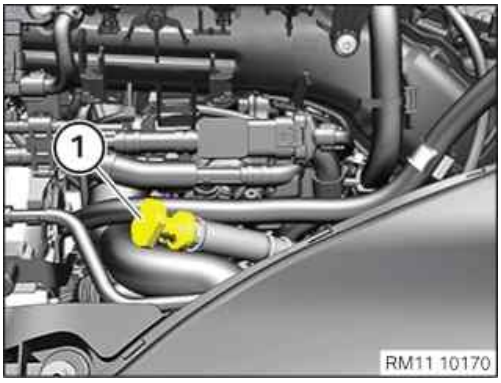
139 – Check engine oil level

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▶ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

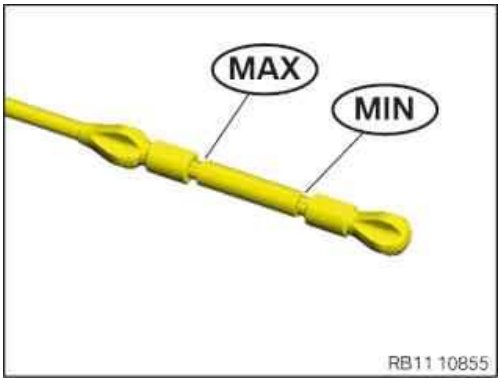


- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.



TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

140 – Fill and bleed the coolant circuit

▶ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

Used in step 123 126

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 123 126

M8		Tightening torque	19 Nm

Positive battery connection point cover to engine compartment partition wall

Used in step 123 126

		Tightening torque	3 Nm

Battery cover

Used in step 123 126 134

Screw			2,8 Nm

Intake plenum to cylinder head

Used in step 124

M6		Tightening torque	11 Nm

Positive battery cable to alternator

Used in step 126

M8		Tightening torque	19 Nm

Fuel line to intake plenum

Used in step 126

TS6x20		Tightening torque	5 Nm

Exhaust gas pressure sensor

Used in step 127

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

cardiagn.com

Clean air pipe to exhaust turbocharger — Used in step 127

Torx bolt BM8x25		Tightening torque	8 Nm

Clean air pipe to cylinder head cover — Used in step 127

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 127 137

Clamp		Tightening torque	3 Nm

Underbody protection front — Used in step 128

			3 Nm

Resonator to manifold and clean air pipe — Used in step 130

Screw TS6	Renew screw.	Tightening torque	5 Nm

Bulkhead cover, top — Used in step 133

Screw		Tightening torque	3 Nm

Battery terminal rail to battery tray — Used in step 134

M8 screw		19 Nm

Positive battery terminal — Used in step 134

NutM6		5 Nm

Trailing link — Used in step 134

M8 screw		19 Nm

Positive battery cable to battery terminal — Used in step 134

Nut M8		15,2 Nm

Negative battery terminal (with IBS) — Used in step 134

NutM6		5 Nm

Windscreen wiper arm — Used in step 136

Combination hexagon nut		Tightening torque	35 Nm

Intake silencer housing to lock bridge — Used in step 137

M6X30		Tightening torque	8 Nm

Intake neck to cross connection — Used in step 138

M6		Tightening torque	8 Nm

Overview of Special Tools

cardiagn.com

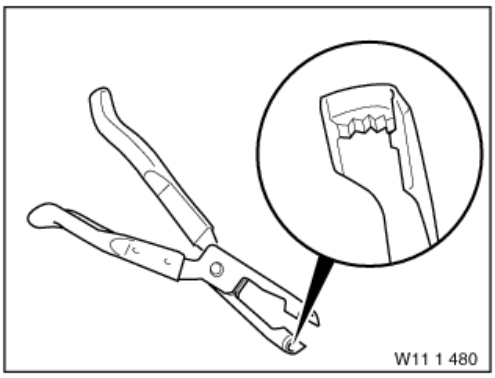
0 490 796 (11 1 480) Pliers



Common	Used in step 20
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 495 910 (37 1 152) Socket wrench

Common	Used in step 24 25 26 117 118 119
Usage	(Socket wrench)SW19
Included in the tool or work	0 495 908
Storage location	B21
Replaced by	
In connection with	
SI-Number	01 01 07 (333)

cardiagn.com

2 413 106 Fastener

Common Used in step 24 25 118 119

Usage	For avoiding contamination and damage of rail, injectors and high pressure pump.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 16 (419)

0 493 321 (13 5 250) Puller

Used in step 27

cardiagn.com

Common

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common

Used in step 27

Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

Common

Used in step 27

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

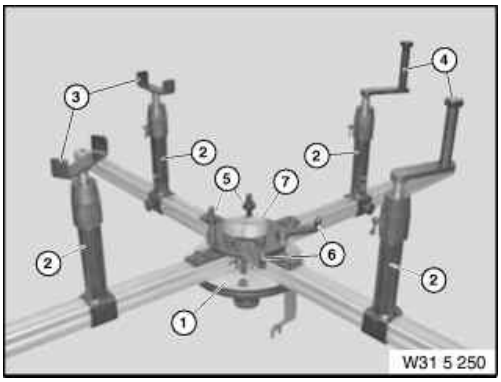
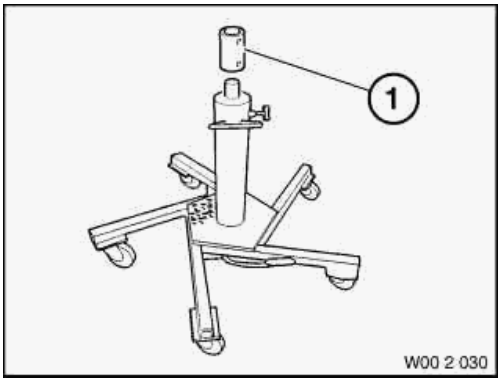
0 495 817 (31 5 251) Basic body



Common Used in step 43 67 72 100

Usage	(Basic body) No longer available separately, only via special tool set 31 5 250 (83 30 0 495 567)
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

0 490 133 (00 2 030) Device



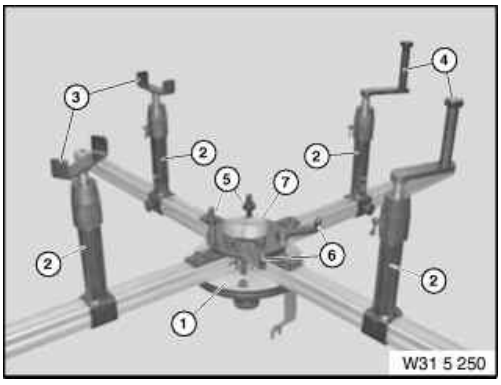
Common Used in step 43 67 72 100

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

0 495 821 (31 5 255) Adapter



Common Used in step 43 72

Usage	(take-up adapter for bore holes (2 x))
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

cardiagn.com

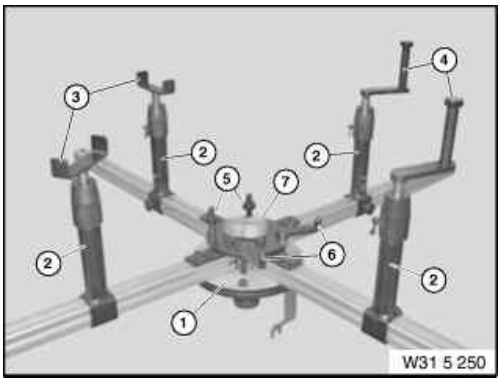
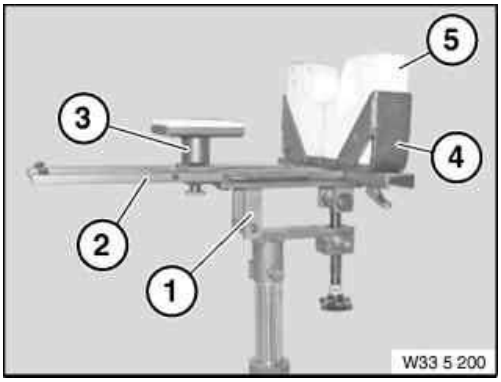
0 495 819 (31 5 253) Adapter



Common	Used in step 43 72
Usage	(take-up adapter U-section (2 x))
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

0 496 080 (33 5 206) Belt



Common	Used in step 43 67 72 100
Usage	(Tensioning strap)
Included in the tool or work	0 496 009
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

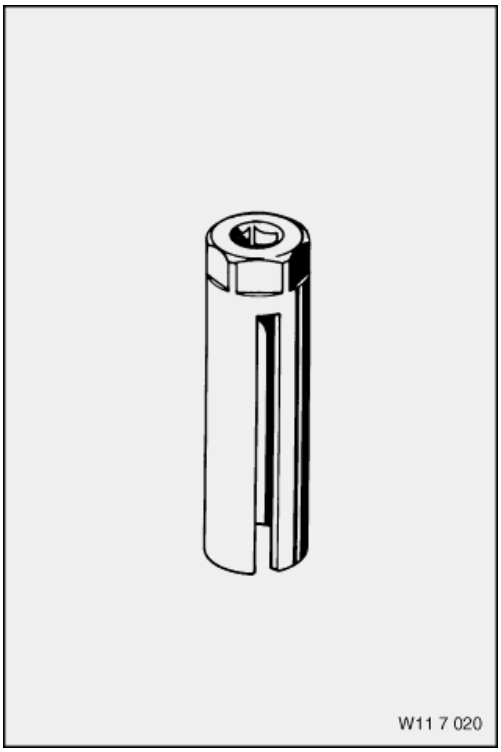
0 491 074 (11 7 020) Socket wrench insert



Common

Used in step 48 49 95

Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	

cardiagn.com

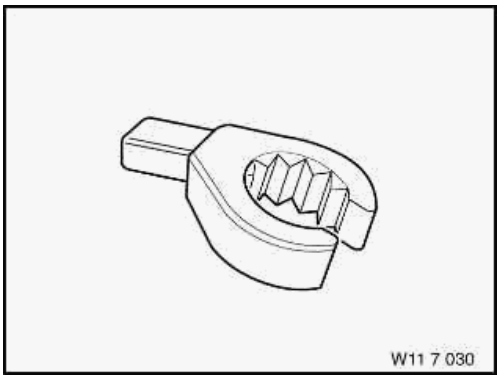
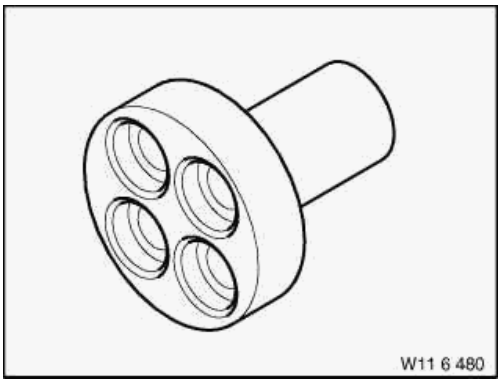
0 491 075 (11 7 030) Socket wrench insert



Common	Used in step 54 89
Usage	(Socket wrench insert 22 mm) For loosening and tightening the oxygen sensor
Included in the tool or work	
Storage location	A9
Replaced by	
In connection with	
SI-Number	01 06 95 (963)

0 493 380 (11 6 480) Connector



Common	Used in step 62 80
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

Common	Used in step 62 79 80
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

cardiagn.com

0 496 112 (11 8 760) Gauge

Common	Used in step 62 78 80
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

2 414 691 Support

Common	Used in step 67 72
Usage	To support the engine when the engine support is removed.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	2357071
SI-Number	01 12 16 (406)

2 357 071 Panel

Common	Used in step 67 72
Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

cardiagn.com

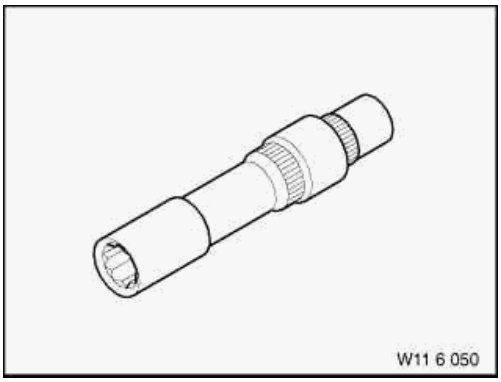
0 491 068 (11 6 050) Socket wrench insert



Common	Used in step 67 72
Usage	(Wrench socket AF 10) bi-hexagon/glow elements
Included in the tool or work	
Storage location	B10
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

2 459 012 Holder

Common	Used in step 67 72
Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

cardiagn.com

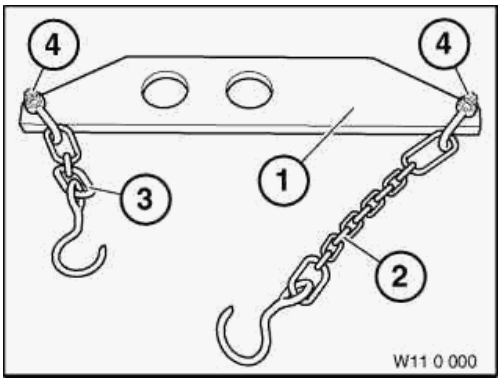
0 490 561 (11 0 000) Lifting gear



Common

Used in step 67 72

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

0 494 362 (11 9 000) Device

Used in step 67

cardiagn.com

Common

Usage	(Cylinder head expander tool)
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 03 02 (833)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 366 (11 9 001)		**Device**	
6	0 494 371 (11 9 006)		**Insert** (Aluminium strip)	
11	0 494 376 (11 9 012)		**Basket** (Valve spring cage) Engine M41, M51, S50	
17	0 495 028 (11 9 017)		**Basket** (Valve spring cage) Engine N52	
2	0 494 367 (11 9 002)		**Rod**	
3	0 494 368 (11 9 003)		**Adapter** (Sliding block)	
4	0 494 369 (11 9 004)		**Tab**	
5	0 494 370 (11 9 005)		**Quick fastener**	
7	0 494 372 (11 9 007)		**Shaped part** (shaped part)	
8	0 494 373 (11 9 008)		**Shaped part** (Shaped part) Shaped part made of plastic	
9	0 494 374 (11 9 009)		**Lever**	
10	0 494 375 (11 9 011)		**Hook**	
12	0 494 377 (11 9 013)		**Basket** (Valve spring cage) Engine M43, M73	
13	0 494 378 (11 9 014)		**Basket** (Valve spring cage) Engine M44, M52, M54, M56, M62, S52, S54, S62	
14	0 494 379 (11 9 015)		**Basket** (Valve spring cage) Engine M47, M47TU, M57, M57TU, N40, N42, N62, N73	
15	0 494 380 (11 9 016)		**Basket** (Valve spring cage) Engine M21, M40	

cardiagn.com

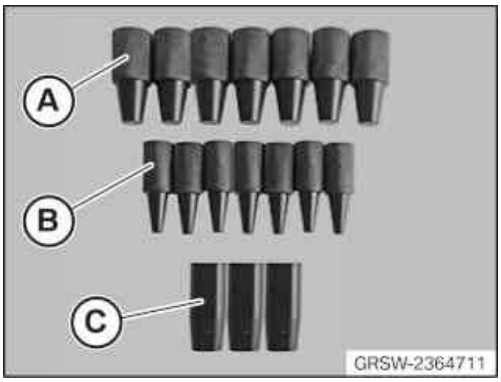
2 364 711 Plug



Common Used in step 68

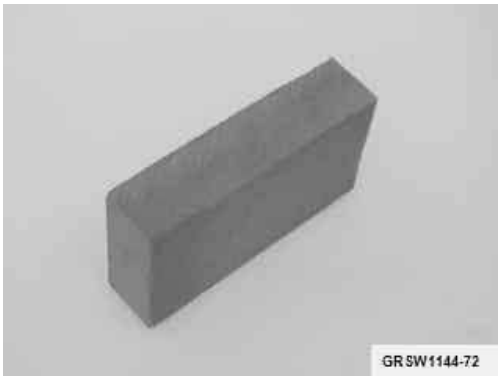
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

0 495 103 (11 4 471) Scraper

Common Used in step 68

Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

0 495 104 (11 4 472) Extractor



Common Used in step 68

Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
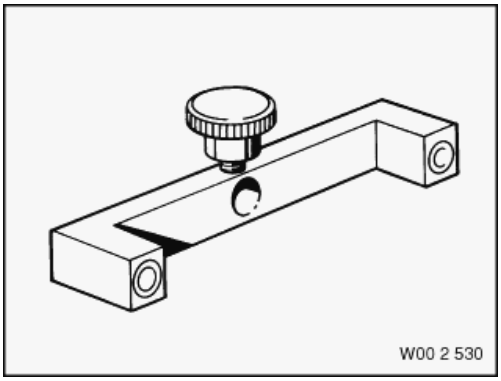
In connection with	
SI-Number	

0 490 185 (00 2 530) Bridge



Common Used in step 70

Usage	(Measuring bridge) For determining the piston projection (Diesel)
Included in the tool or work	
Storage location	A3
Replaced by	
In connection with	
SI-Number	

cardiagn.com

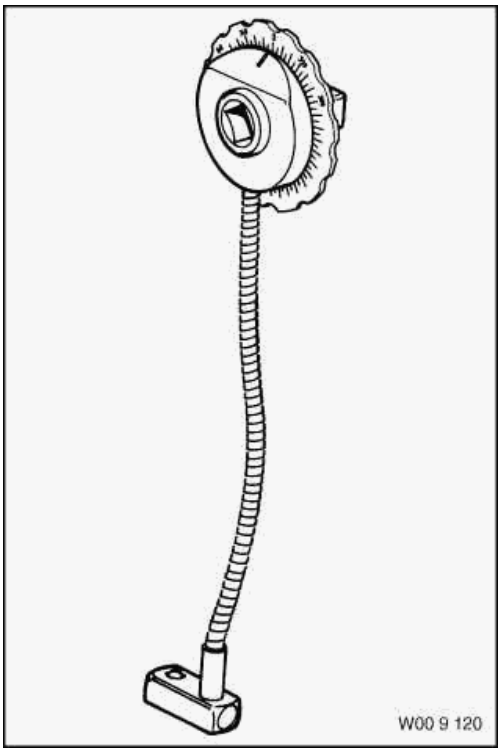
0 490 504 (00 9 120) Torque angle measuring dial



Common Used in step 72

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
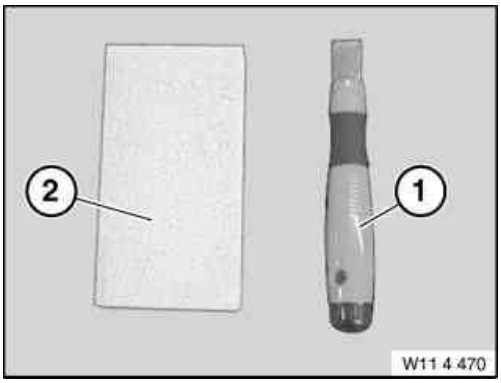
In connection with	
SI-Number	

0 495 102 (11 4 470) Tool



Common Used in step 82

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

cardiagn.com

2 344 011 Tool

Common	Used in step 109
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
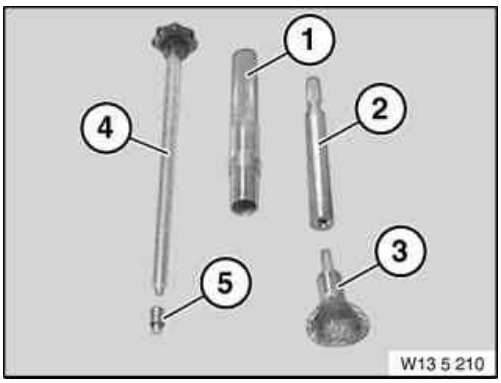
SI-Number	08 08 12 (872)

0 493 763 (13 5 215) Plug



Common	Used in step 116
Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
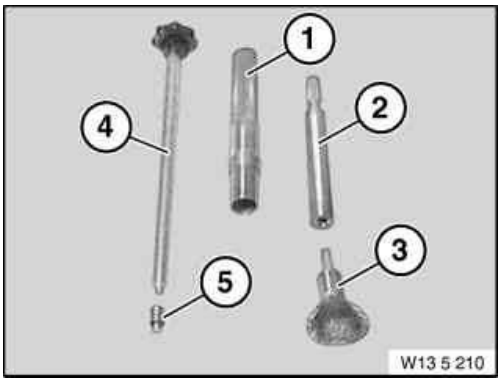
SI-Number	

0 493 762 (13 5 214) Rod



Common	Used in step 116
Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

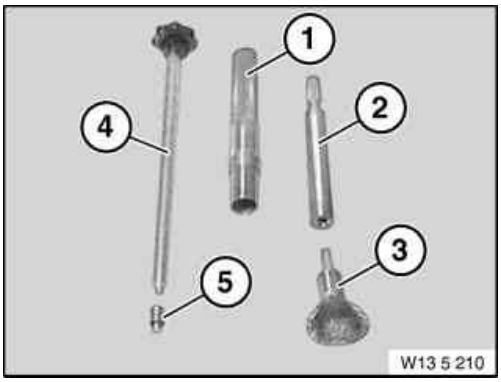
0 493 758 (13 5 210) Tool



Common

Used in step 116

Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

Replacement tools:

cardiagn.com

0 495 221 (36 1 323) Wheel stud

Common	Used in step 34
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 224 (36 1 326) Wheel stud

Common	Used in step 34
Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 225 (36 1 327) Wheel stud

Common	Used in step 34
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number

Overview Technical Data

Valve underprotrusion	Used in step 70
	0,8 (0,7 - 0,9) mm

Cylinder head flatness	Used in step 71
Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

Chain tensioner piston seal on cylinder head	76
Exhaust-gas recirculation cooler seal on exhaust manifold	121
Exhaust-gas recirculation cooler seal on intake plenum	121

cardiagn.com

11 12 001 Replace the cylinder head cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

PRELIMINARY WORK

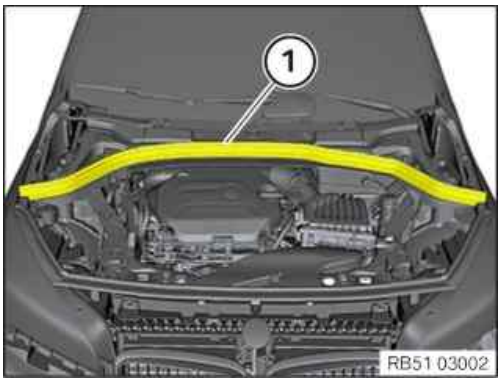
1 – Disconnecting all battery earth leads

- See additional information.

2 – Remove the seal for the rear bonnet

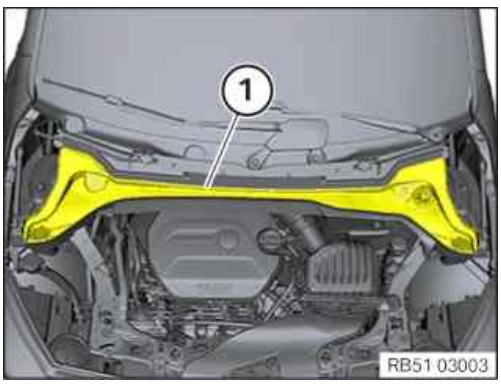
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

3 – Removing front cowl panel cover



- Guide the front cowl panel cover (1) out toward the top and remove it.

4 – Remove left and right wiper arm

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

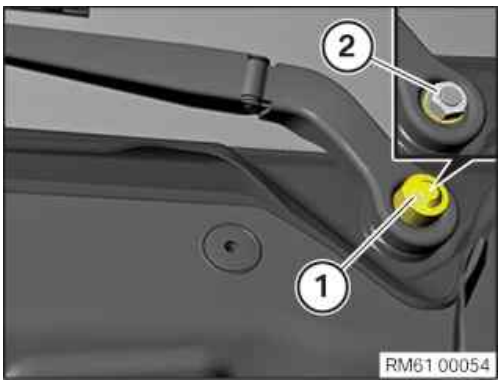
▶ **Remove the wiper arm**

RISK OF DAMAGE

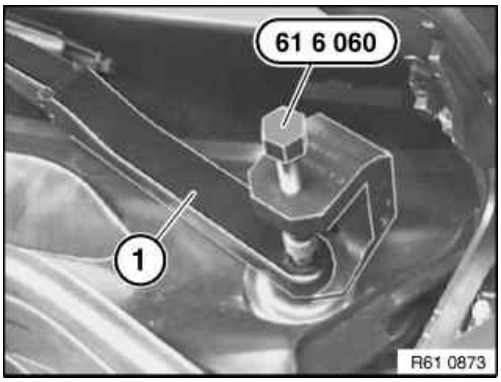
Damage to wiper console

While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.



- Remove the protective cap (1).
- Loosen nut (2).



- Pull off the wiper arm (1) using special tool .

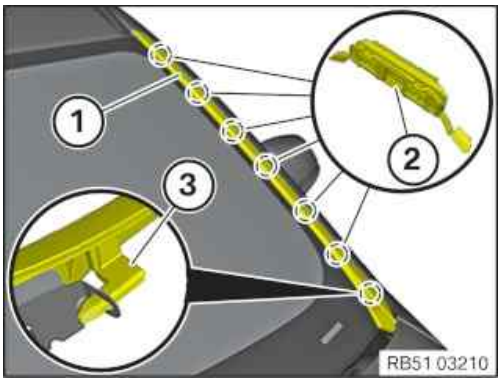
5 – Remove the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

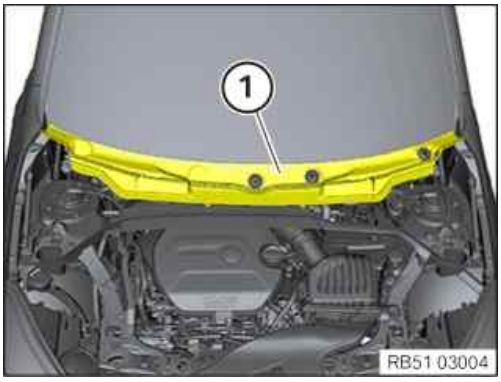
▶ **Remove the gutter strip on the windscreen**

cardiagn.com



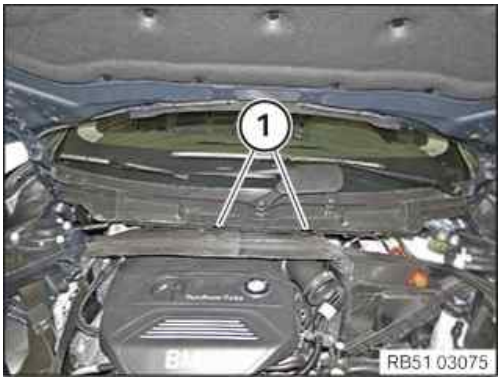
- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

6 – Remove the rear cowl panel cover

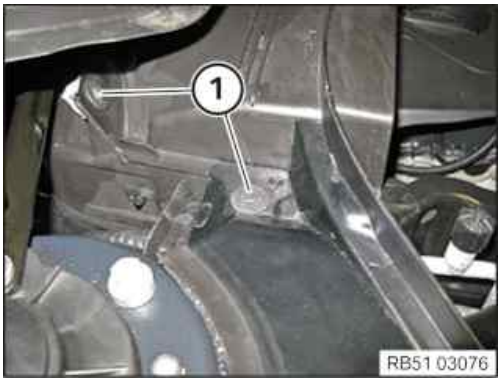


- Disengage and guide out the rear cowl panel cover (1) towards the top.

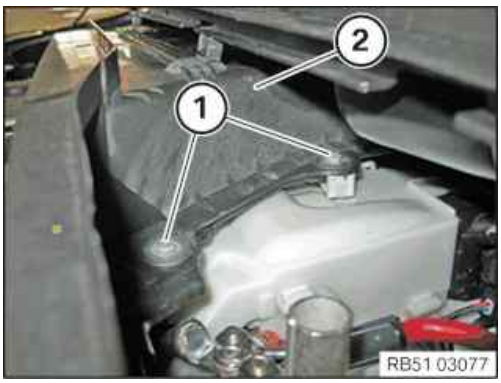
7 – Removing the upper bulkhead cover



- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

cardiagn.com

8 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

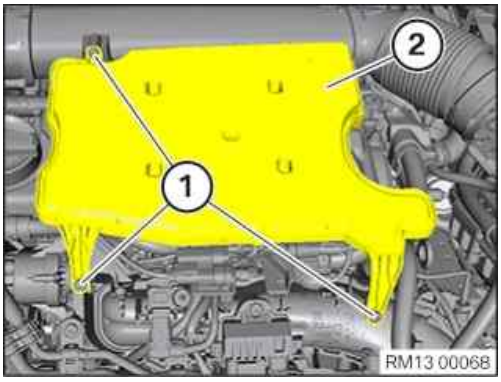
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

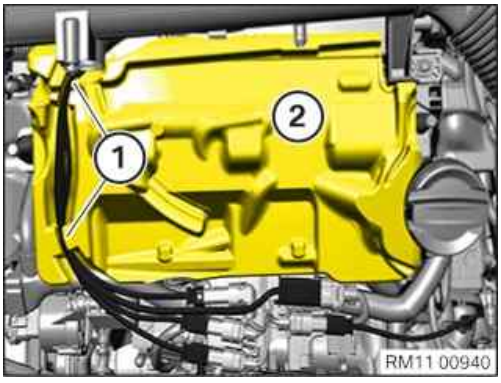
- Unclip the acoustic cover from the marked areas towards the top.

9 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

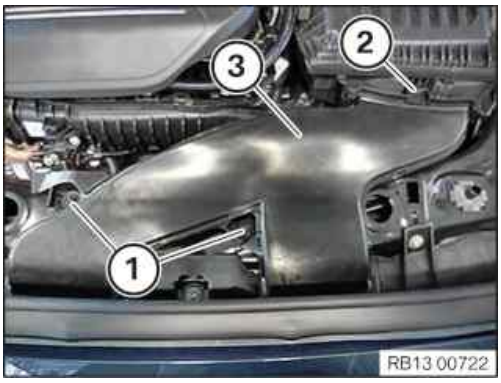
10 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

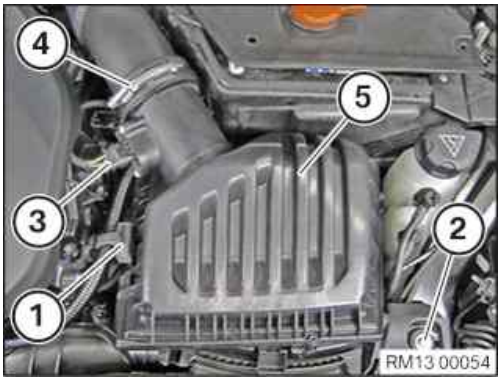
11 – Remove the intake neck for intake silencer housing

cardiagn.com



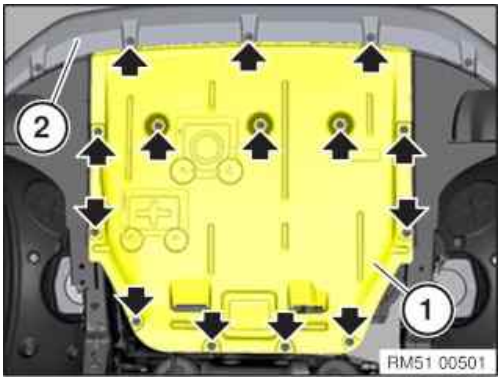
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

12 – Removing intake silencer housing



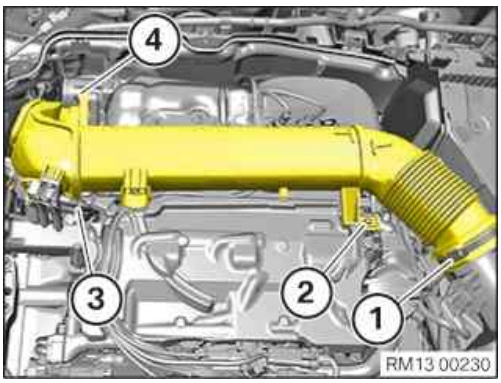
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

13 – Removing the front underbody protection



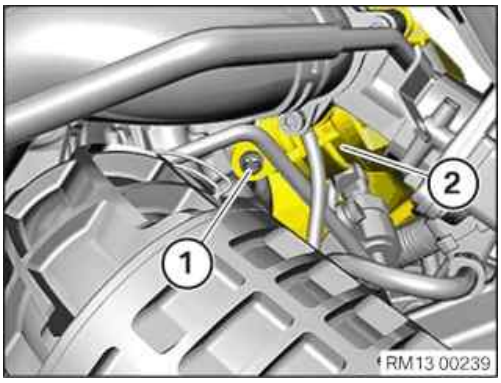
- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

14 – Partially detach the clean air pipe

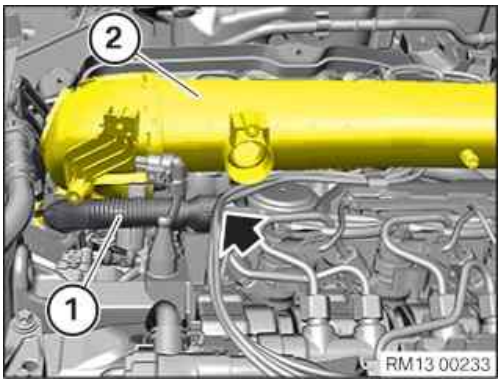


- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).

cardiagn.com



- Unscrew the screw (1) from the clean air pipe (2).

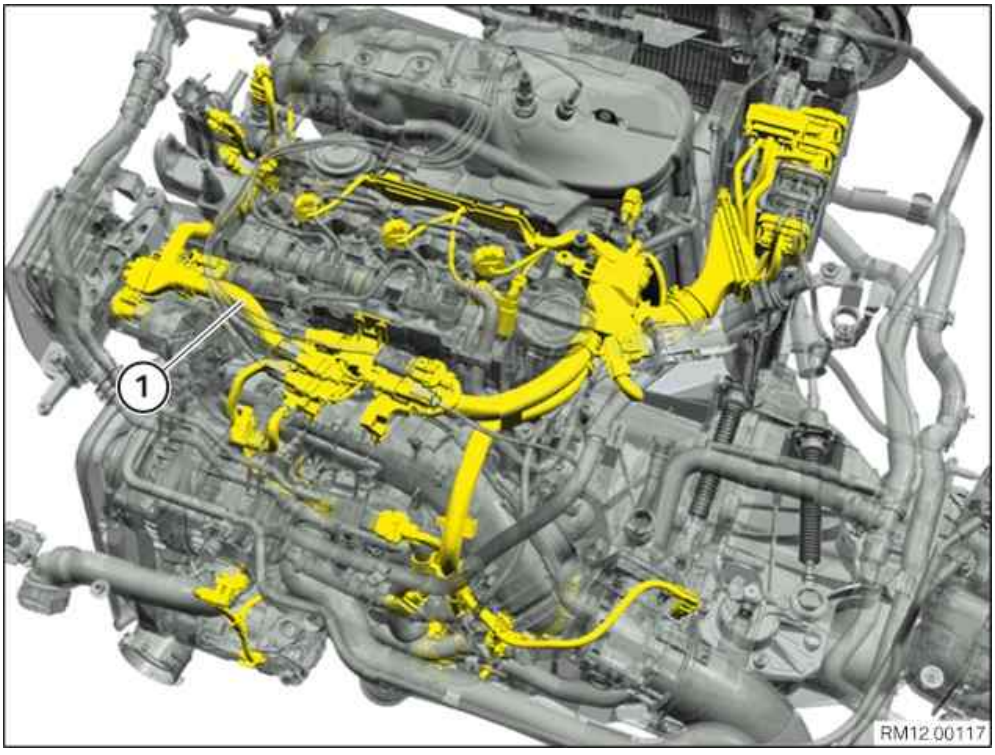


- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

- Thread out the clean air pipe (1) and set it aside as shown.

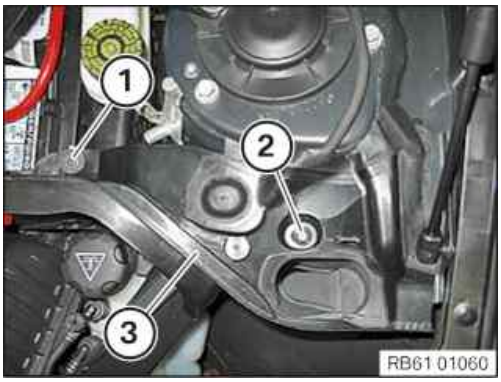
15 – Releasing the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine



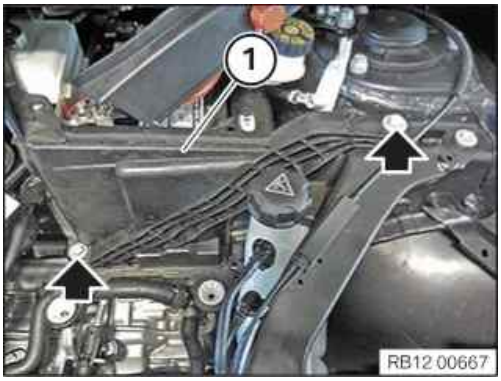
1 Wiring harness section for the engine

cardiagn.com

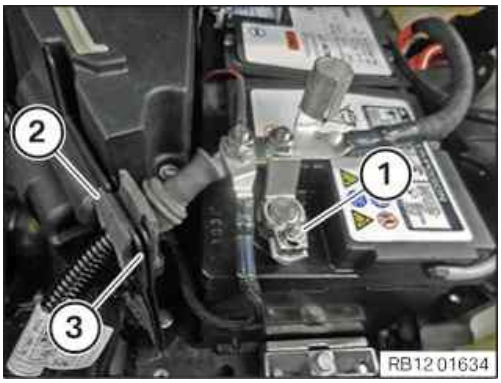


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

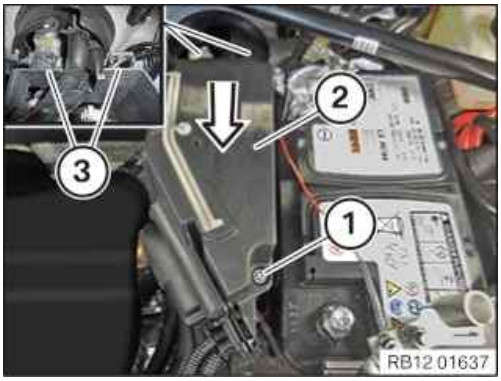
- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.



- Remove screws (arrows).
- Guide out tension strut (1) and remove.

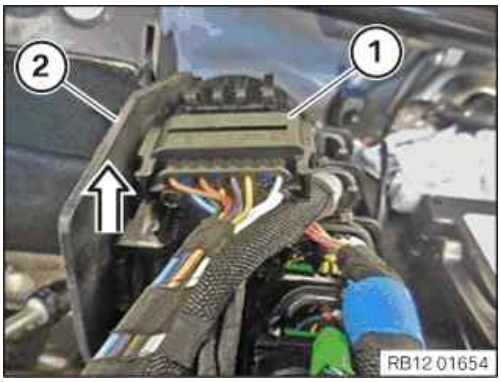


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

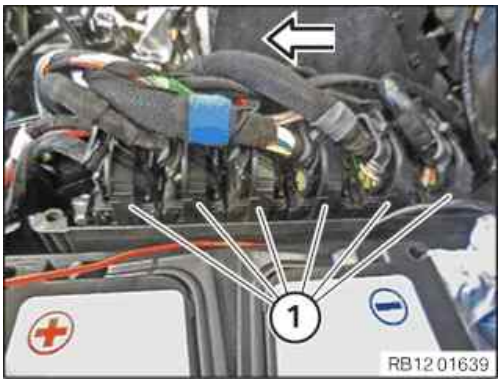


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

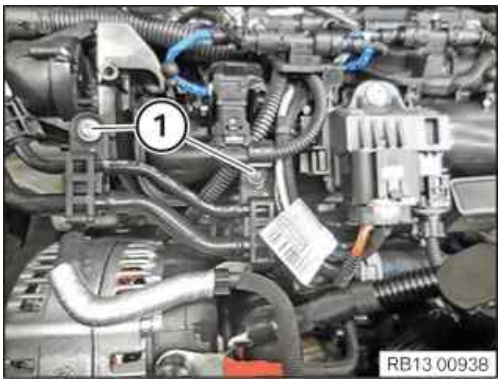


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

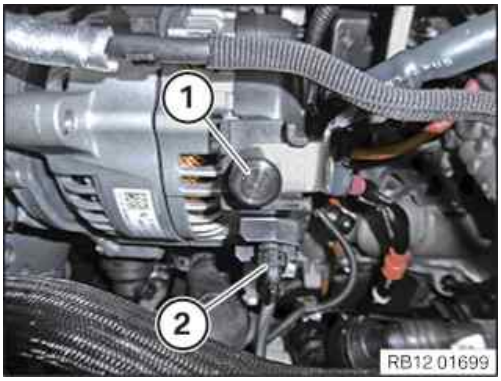


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).

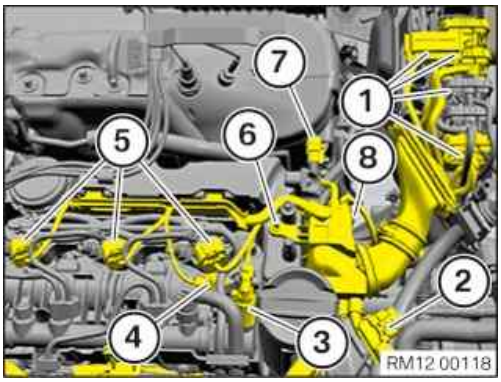


- Loosen screws (1).

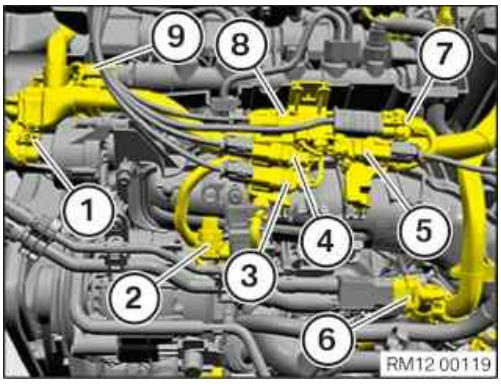


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.

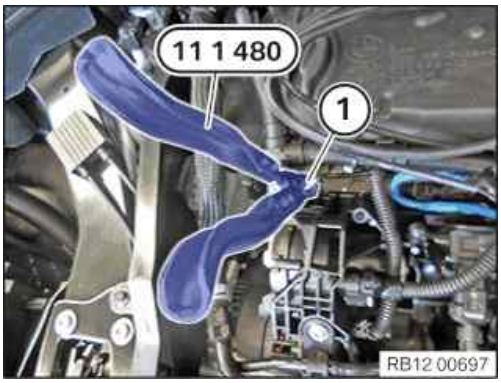
cardiagn.com



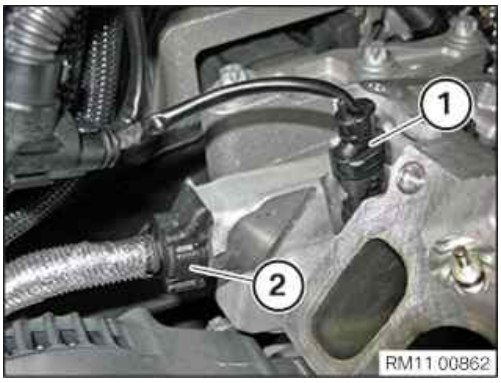
- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock connector (3) and pull off from fuel pressure regulator.
- Unlock connector (4) and disconnect from camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock connector (7) and disconnect from differential pressure sensor.



- Unlock connector (1) and pull it off the servomotor for the swirl flap.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock connector (3) and pull off from exhaust temperature sensor downstream from the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock connector (6) and pull off from the fuel pressure and temperature sensor.
- Unlock and disconnect the connector (7) from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.

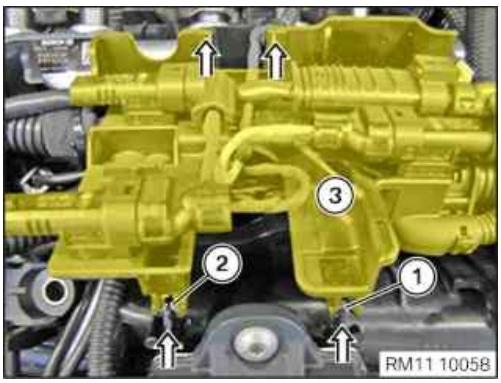


- Unlock connector (1) at all glow elements using special tool **0 490 796 (11 1 480)** and release.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.



- Unlock and loosen connector (1).
- Unlock the clamp of the coolant line (2) and release the coolant line.

16 – Removing the cable clips from the intake plenum



- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.

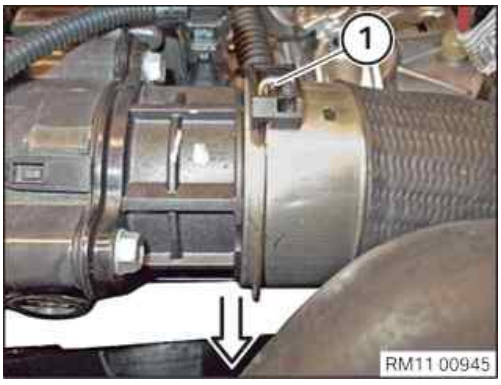
cardiagn.com

17 – Removing the intake plenum

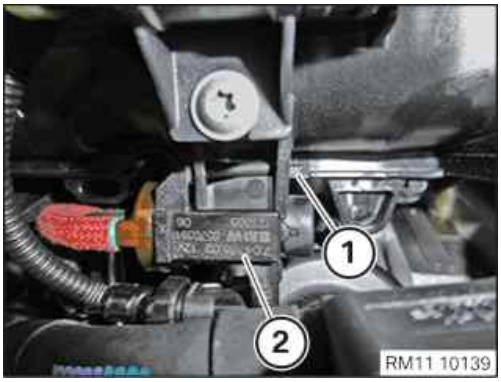
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

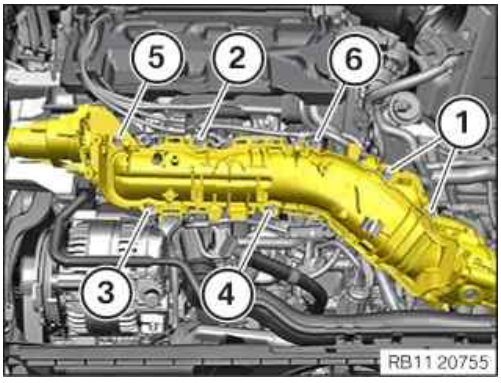
- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

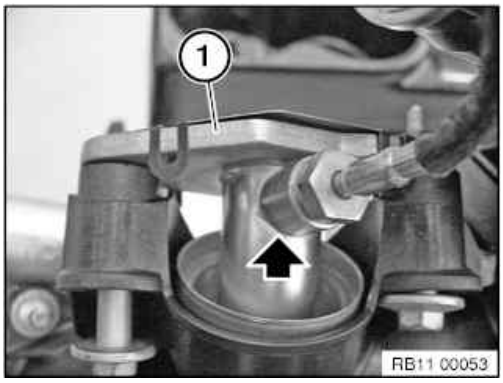


- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.

cardiagn.com



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

18 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

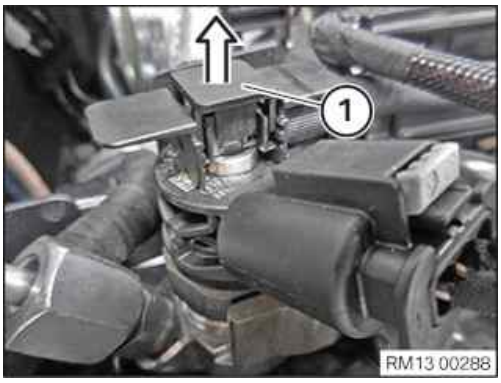
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

19 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

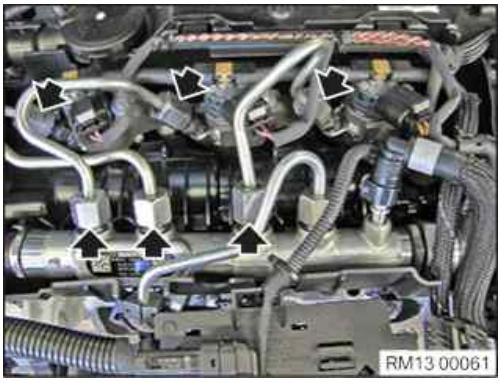
cardiagn.com

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

20 – Remove the high pressure line between the high pressure pump and the rail

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

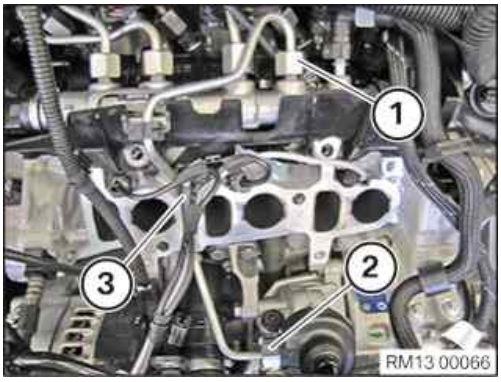
- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Loosen union nut (1) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Loosen union nut (2) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Catch and dispose of escaping fuel.
- Feed the high pressure line (3) out and remove.
- Seal open connections using special tool **2 413 106**.

21 – Remove high-pressure rail

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

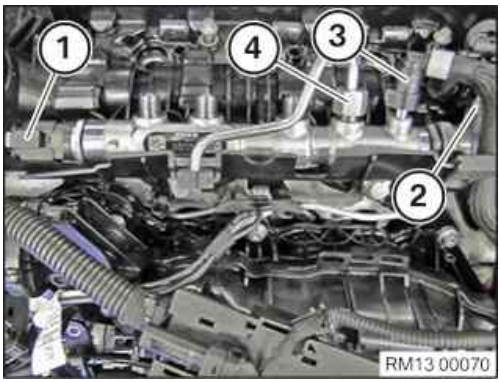
cardiagn.com

TECHNICAL INFORMATION

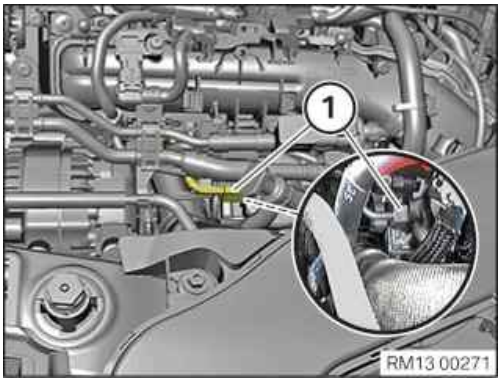
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

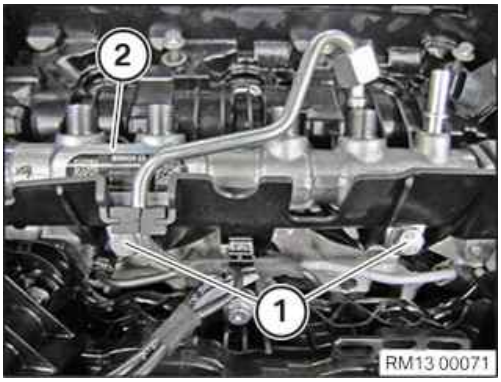
Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.



- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

22 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Electrostatic discharge.

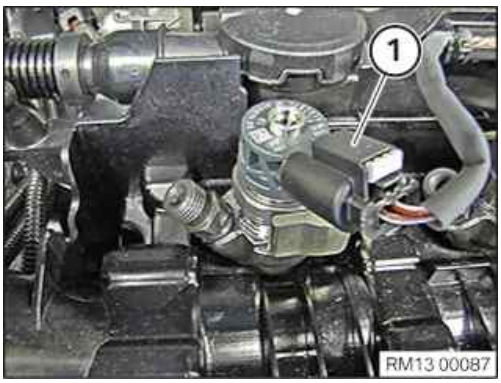
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

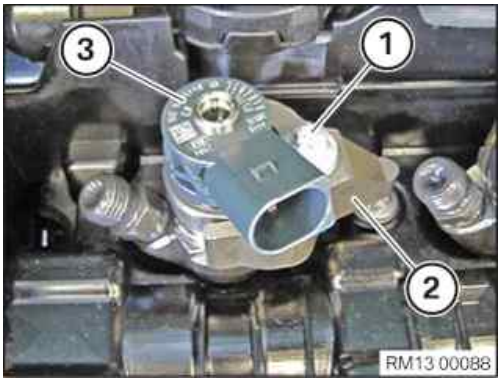
cardiagn.com

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.



- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

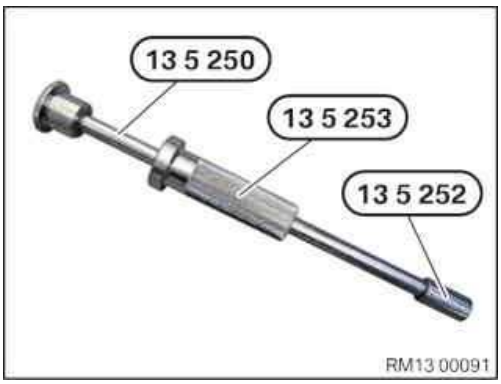
▶ **Loosen stuck injectors**

RISK OF DAMAGE

Contaminant or foreign body.

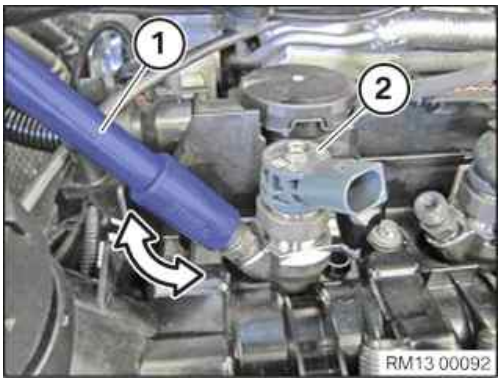
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

cardiagn.com



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

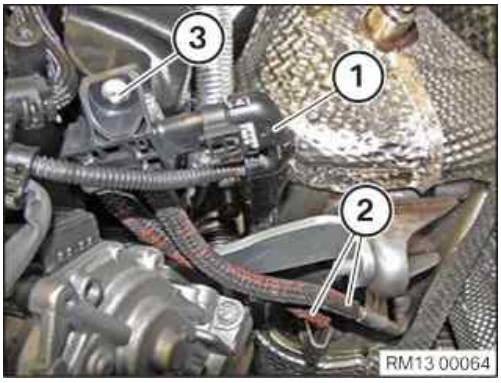
23 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

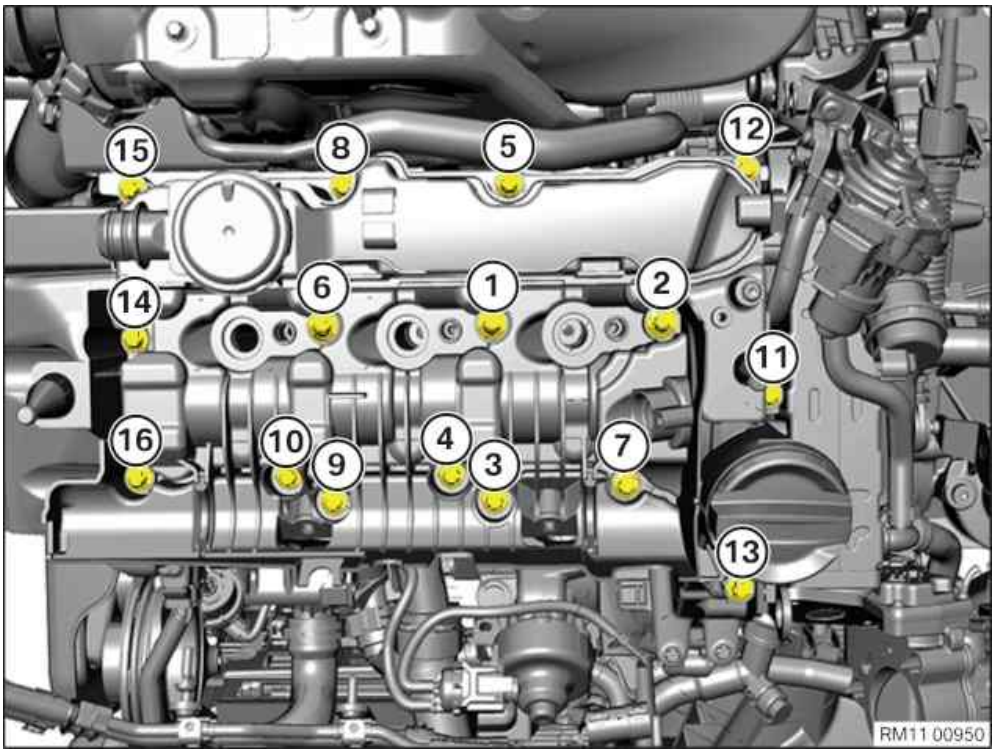


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

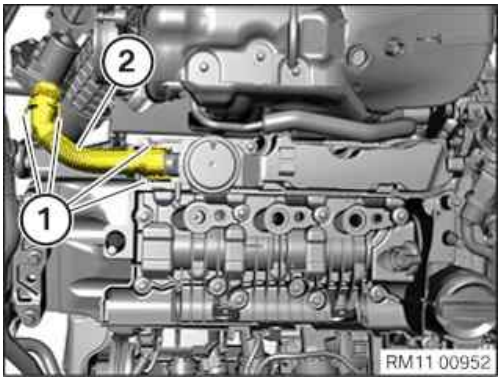
24 – Removing the cylinder head cover

cardiagn.com

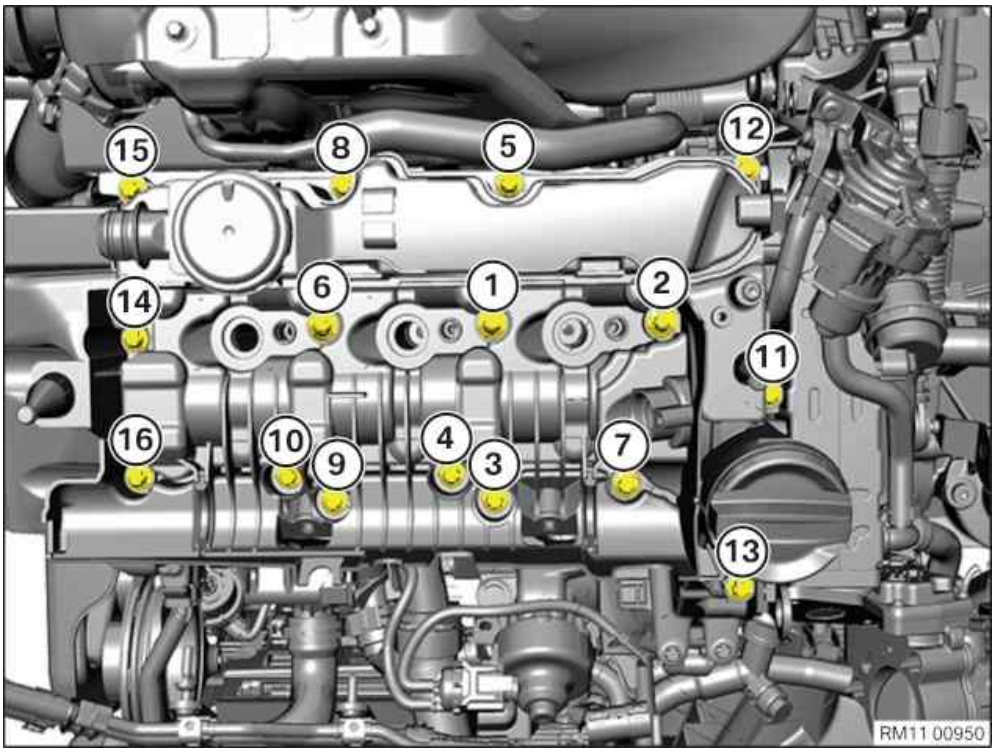
Overview: Screw connection of the cylinder head cover



1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).



- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

cardiagn.com

25 – Renewing the cylinder head cover

RISK OF DAMAGE

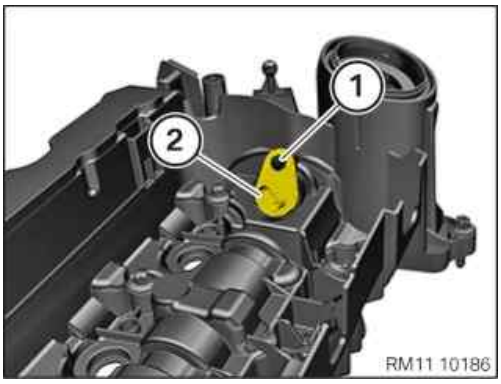
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

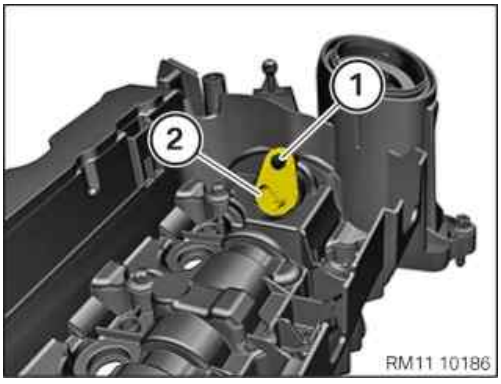
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Loosen screw (1).
- Feed out and remove the camshaft sensor (2).

- Check the sealing ring (1) for damage and renew where required.



- Guide in camshaft sensor (2) into the new cylinder head cover and install it.

  Parts: Cylinder head cover
- Tighten down screw (1).

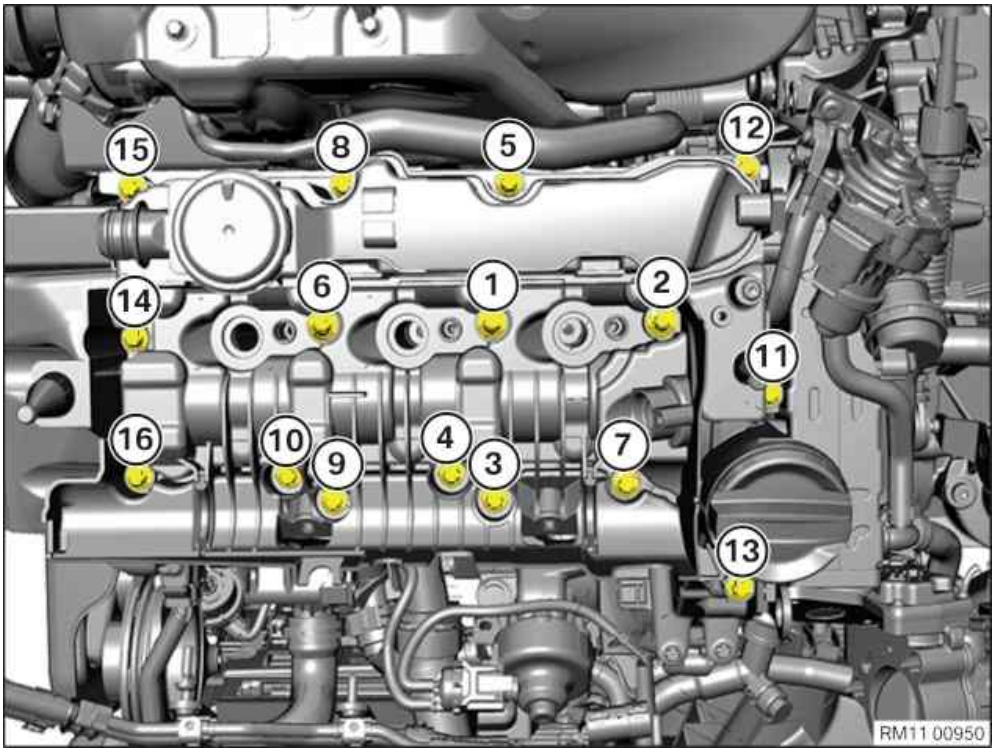
Camshaft sensor to cylinder head cover

TS5x20		Tightening torque	4 Nm

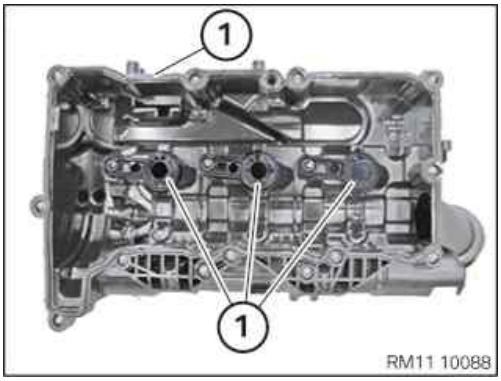
cardiagn.com

26 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover



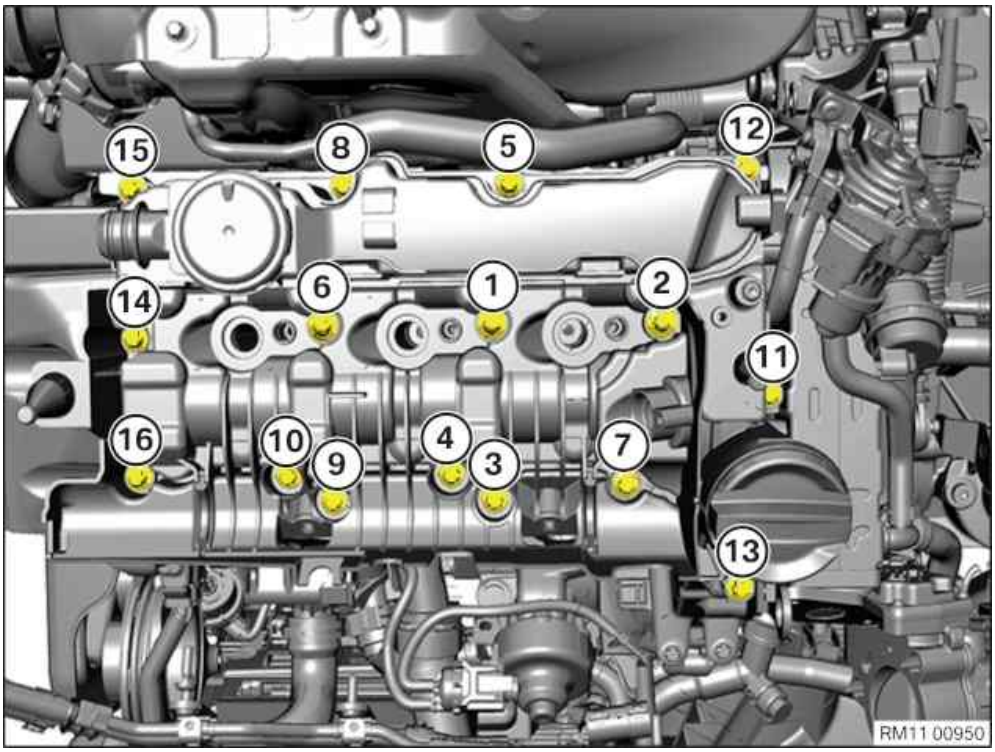
1 to 16 Bolts of the cylinder head cover



- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

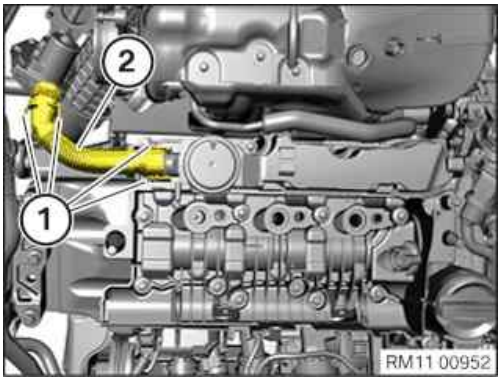
cardiagn.com



- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

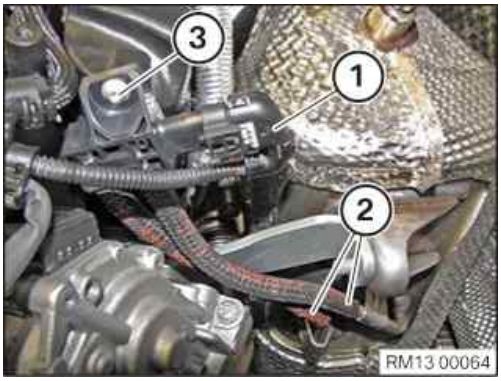
M6		Tightening torque.	8,5 Nm



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

27 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

28 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

cardiagn.com

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

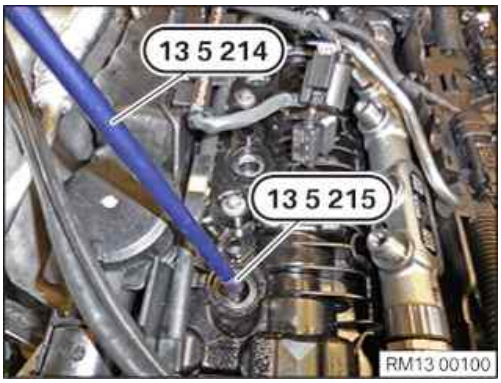
- Wear safety goggles.

RISK OF DAMAGE

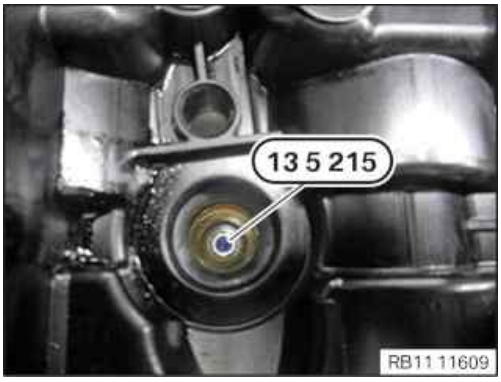
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

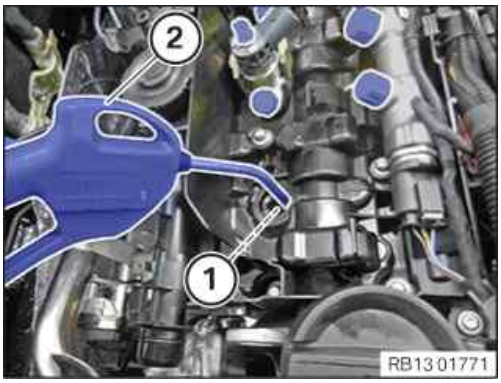


- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

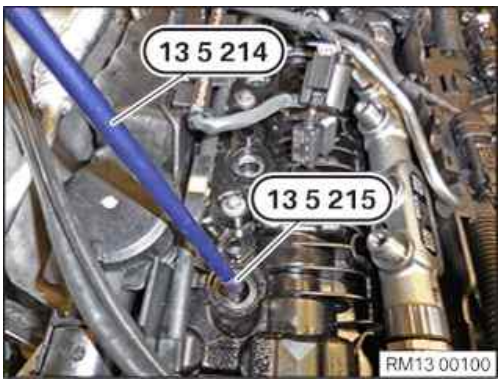
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

cardiagn.com

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.



- Blow out injector shaft (1) with air gun (2).



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

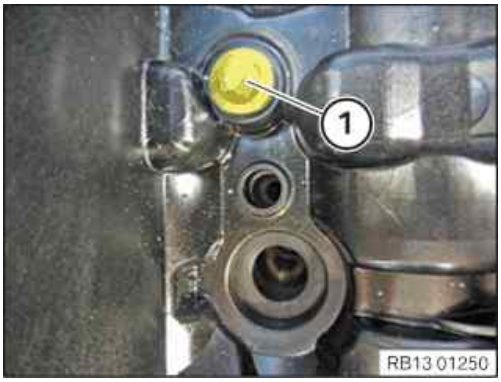
▶ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

cardiagn.com

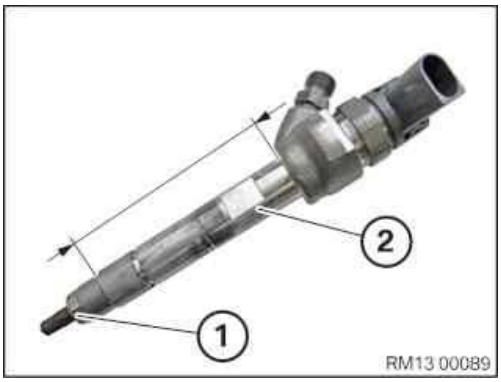
▶ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

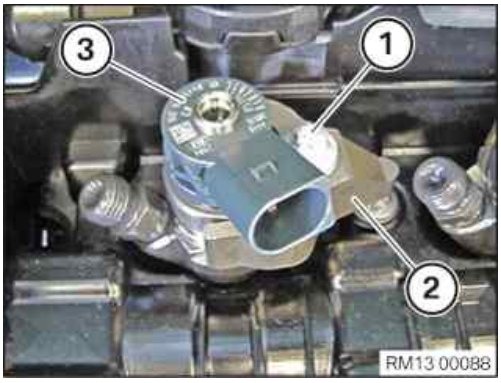


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

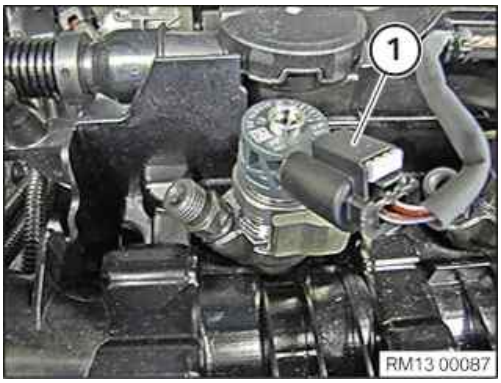
Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▶ **Replacement: Perform injection quantity compensation**

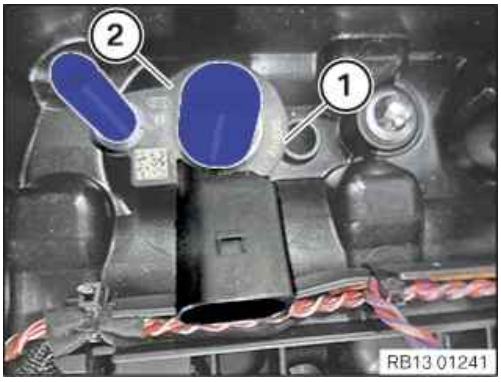
TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

cardiagn.com

NOTICE

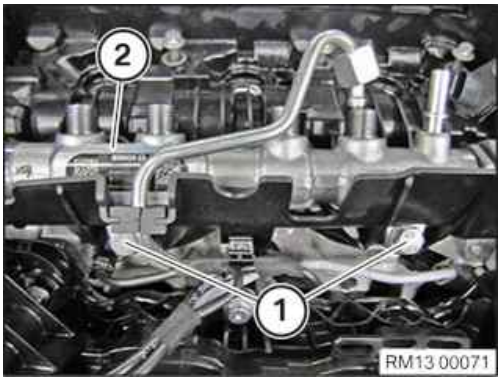
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

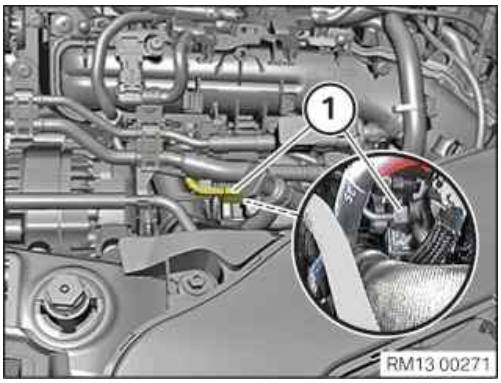
29 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm



TECHNICAL INFORMATION

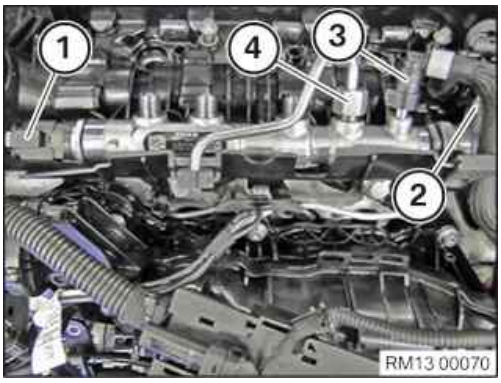
Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

30 – Installing high pressure line between rail and high pressure pump

WARNING

Working on fuel system.

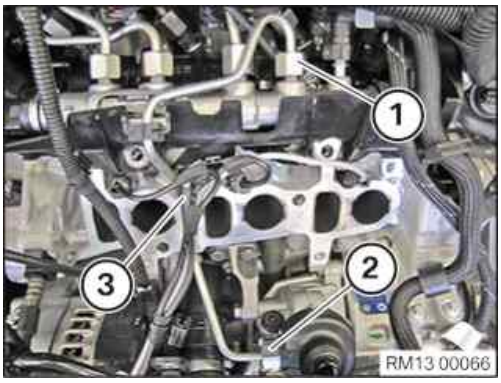
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com



- Remove special tool **2 413 106**.
- Thread in and install the high pressure line (3).
- Make sure that the rubber grommet is positioned correctly in the area of the cylinder head cover.
- Tighten the union nut (1) hand-tight.
- Tighten the union nut (2) hand-tight.
- Ensure that high pressure line (3) is installed without any strain.

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the union nut (1) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Tighten the union nut (2) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

31 – Installing high pressure lines between rail and injectors

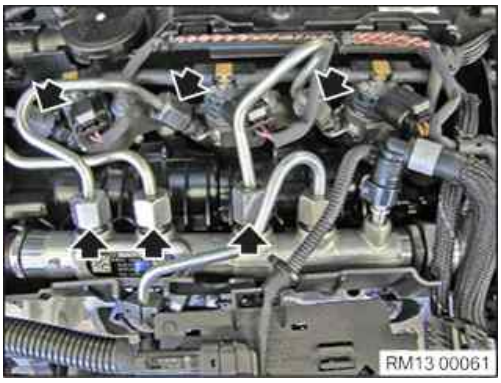
TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

32 – Connect the leakage oil line on the injector

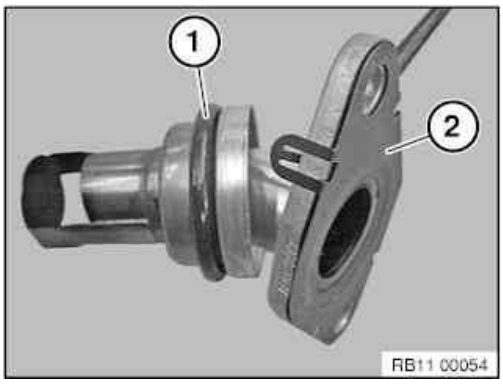
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

33 – Installing the intake plenum

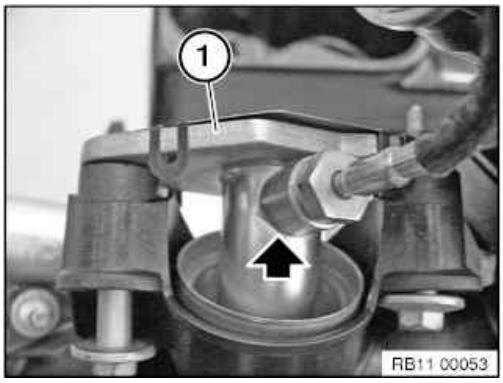


- Renew O-ring (1).

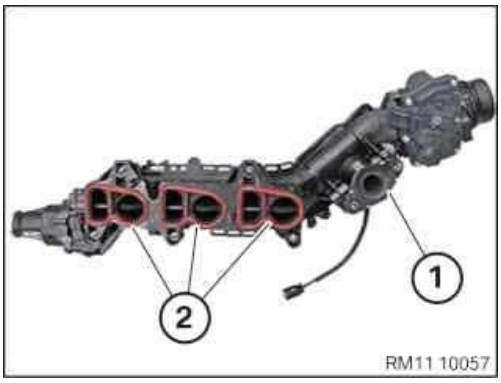
  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.

cardiagn.com

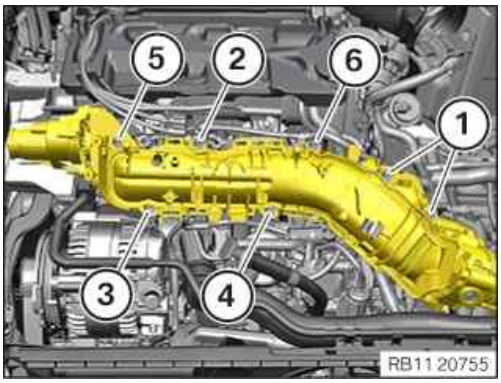


- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

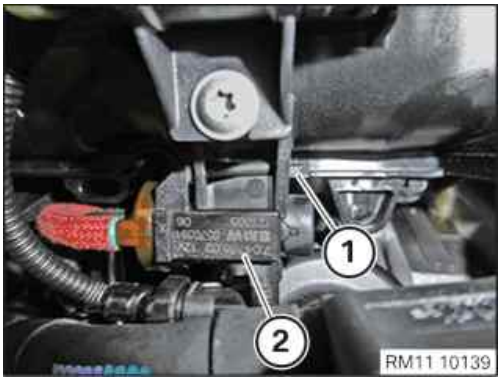
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



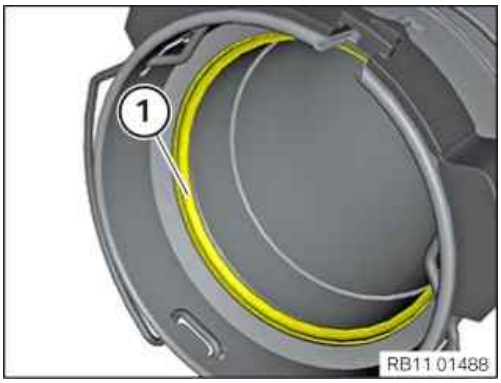
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



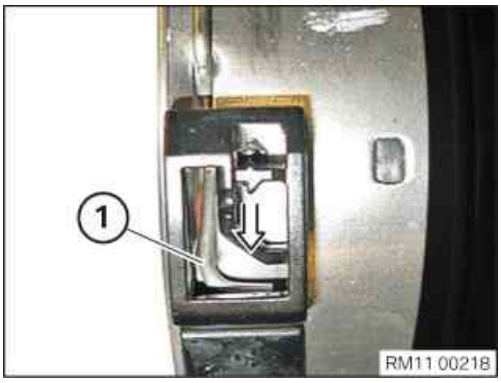
- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.



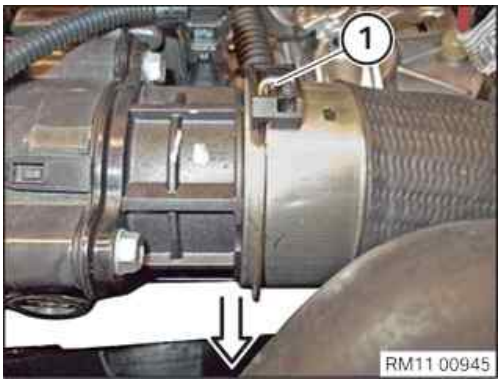
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com

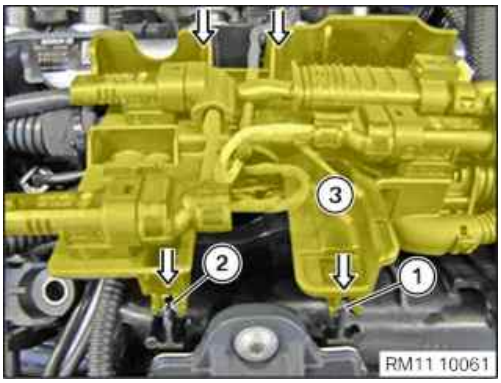


- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.
  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

34 – Installing the cable clip for the intake plenum

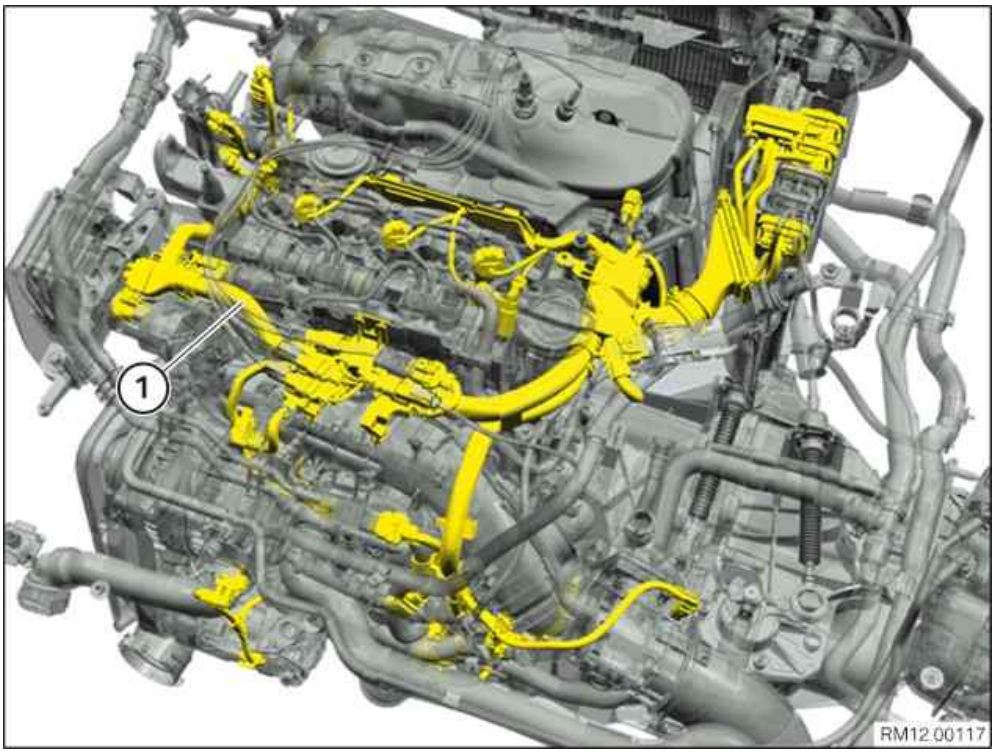


- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).

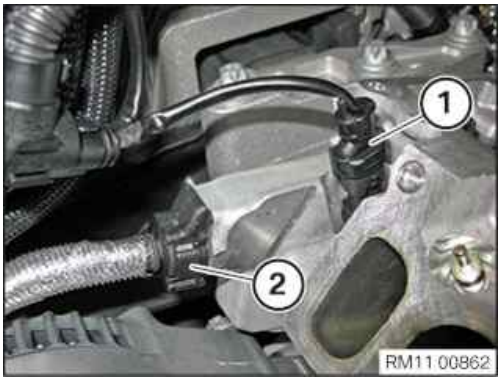
35 – Fastening the wiring harness section for the intake plenum

cardiagn.com

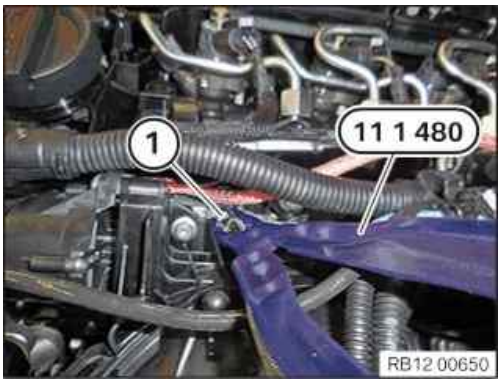
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine



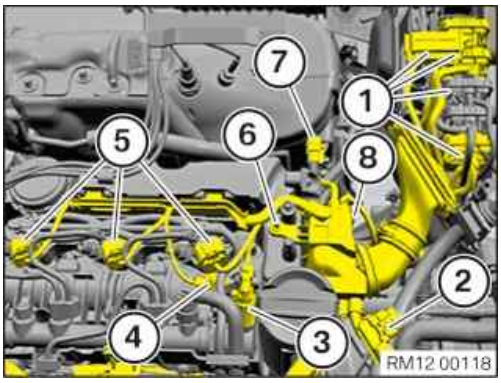
- Connect the coolant line (2) and lock the clamp.
- Connect and lock the connector (1).
- The locks must engage audibly.



- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

cardiagn.com

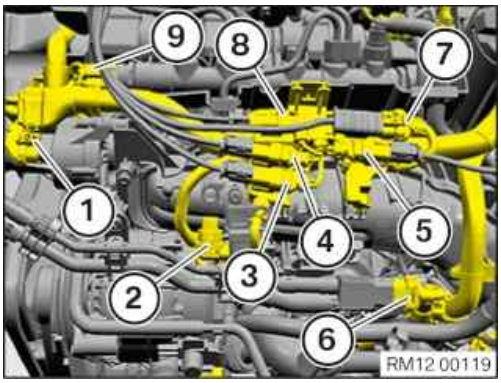


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

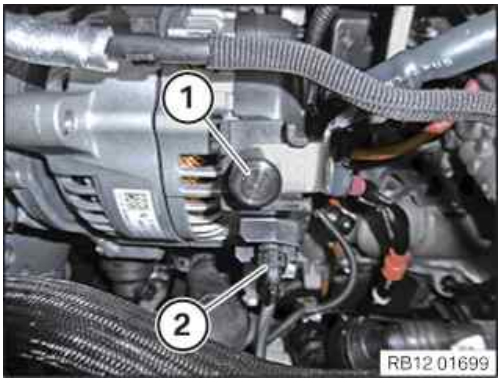
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.



- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.

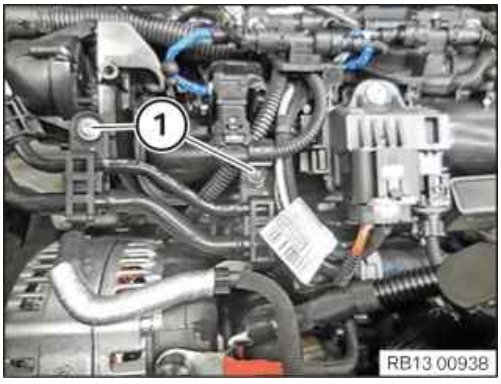


- Connect and lock the connector (2).

  Lock must audibly engage.
- Connect positive battery cable (1) on alternator and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

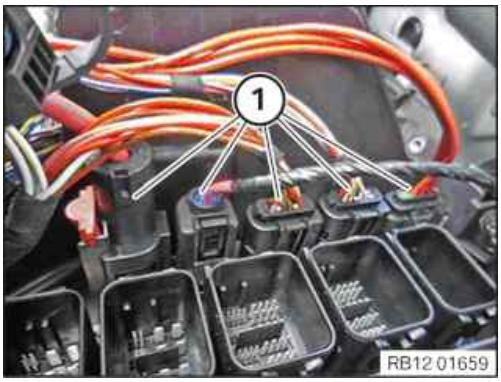


- Position fuel lines.
- Tighten the screws (1).

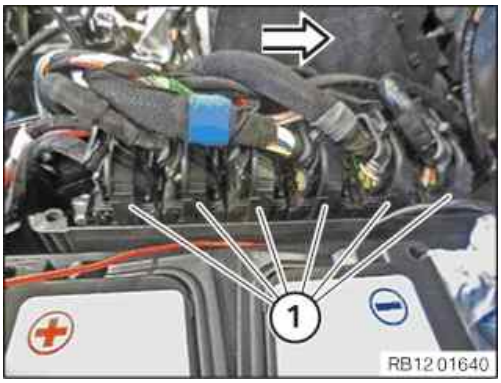
Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

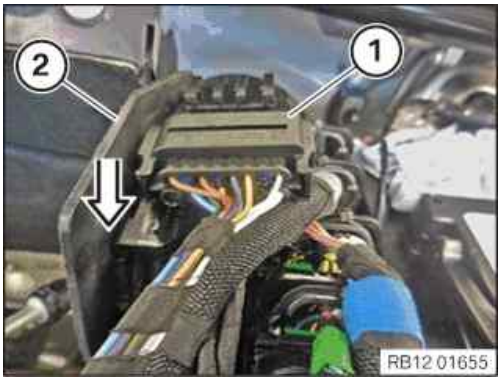
cardiagn.com



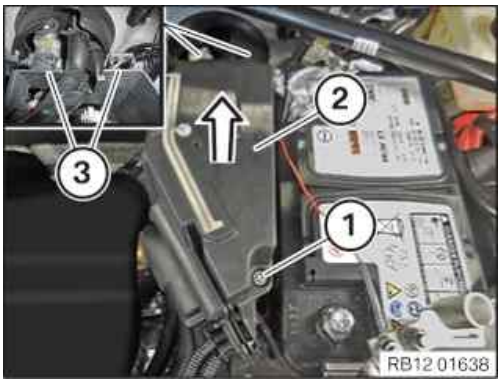
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

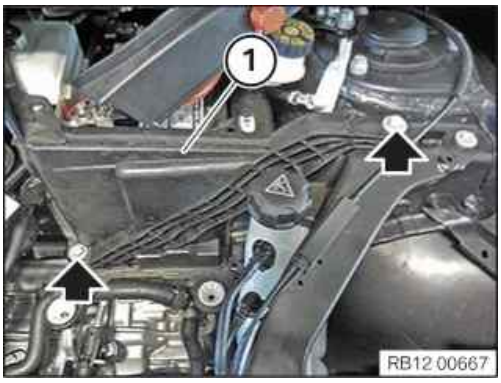
RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (1).
- Tighten screws (arrows).

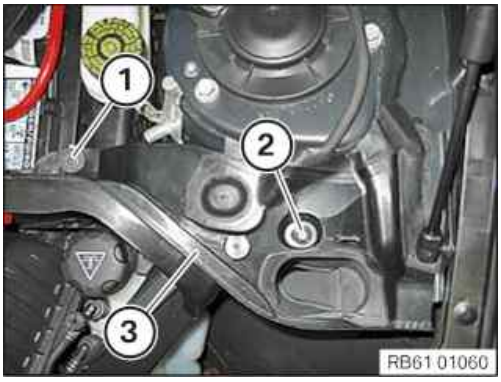
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

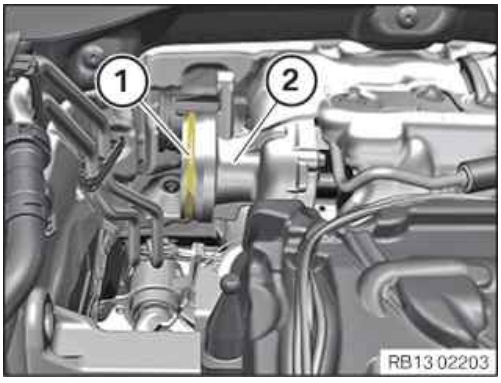


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

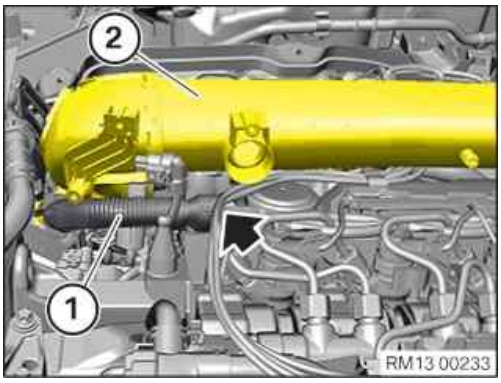
36 – Partially securing clean air pipe



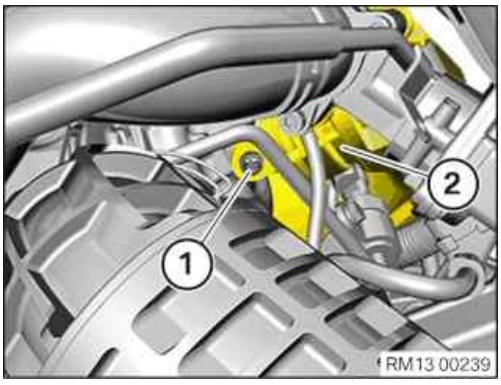
- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

- Feed in clean air pipe (1) and install.

cardiagn.com



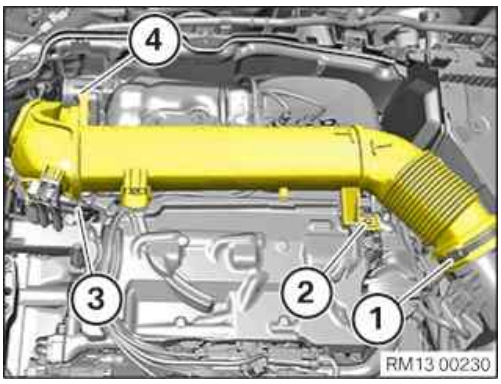
- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten screw (1) from clean air pipe (2).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

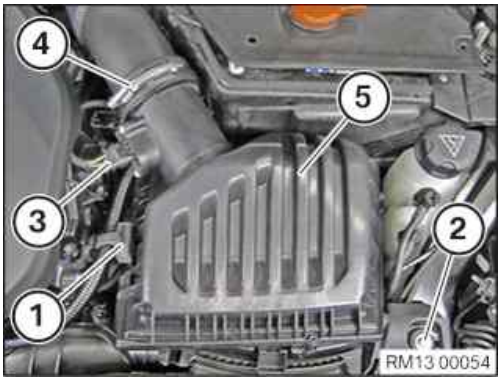
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

37 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing

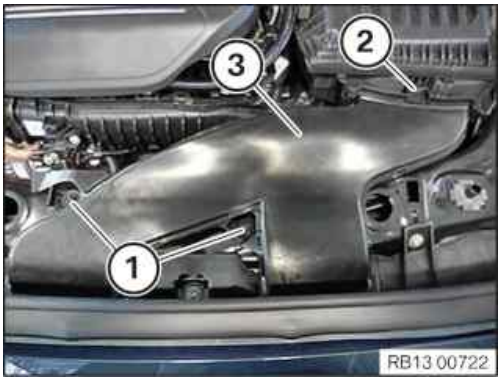
Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

cardiagn.com

38 – Install the intake neck for the intake filter housing



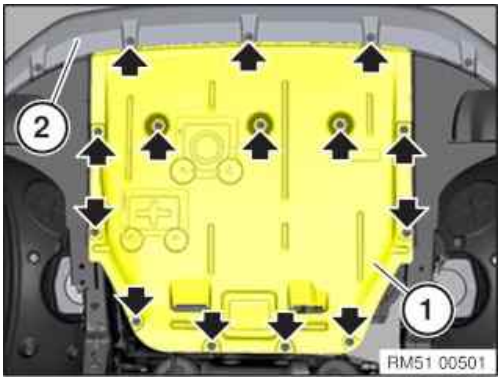
- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

39 – Installing the front underbody protection

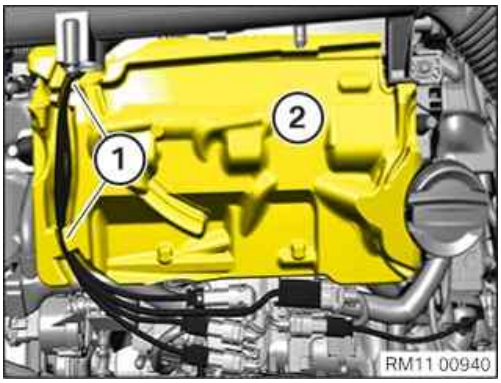


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

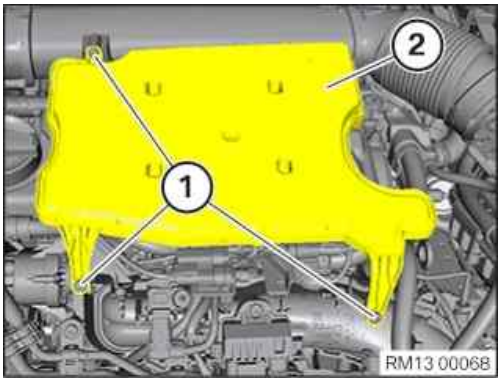
			3 Nm

40 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

41 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

42 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

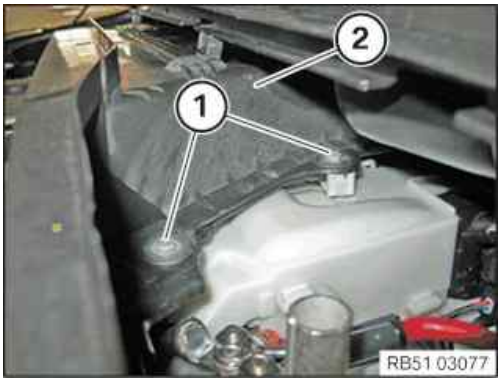
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

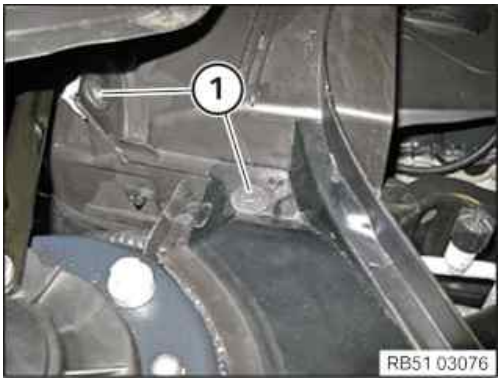
43 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

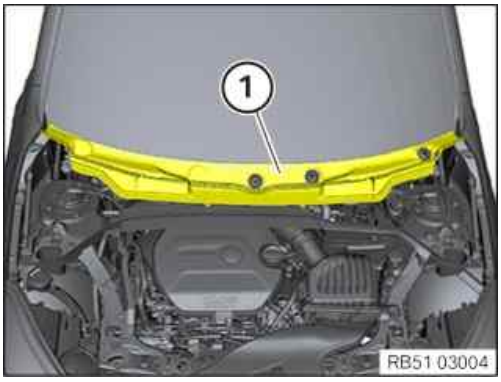
cardiagn.com

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

44 – Install the rear cowl panel cover



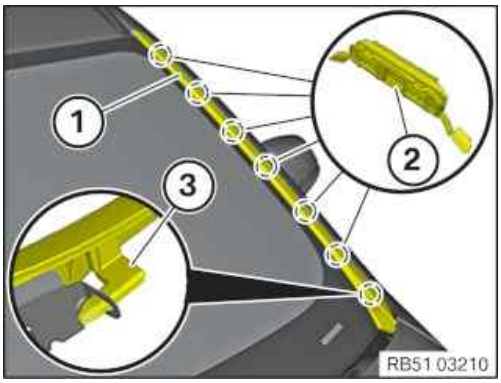
- Feed in and engage the rear cowl panel cover (1).

45 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▶ **Install the gutter strip on the windscreen**



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

46 – Install left and right wiper arm

NOTICE

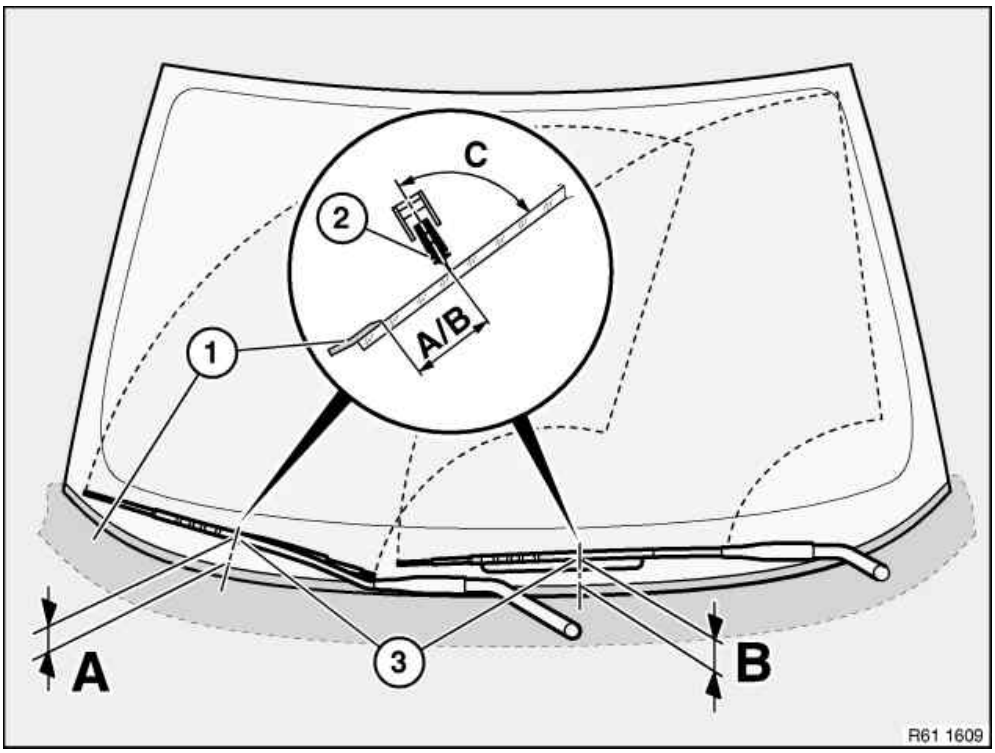
Description is for left component only. Procedure on the right side is identical.

▶ **Install the wiper arm**

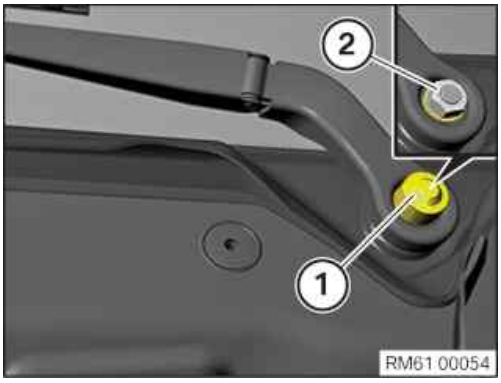
cardiagn.com

TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

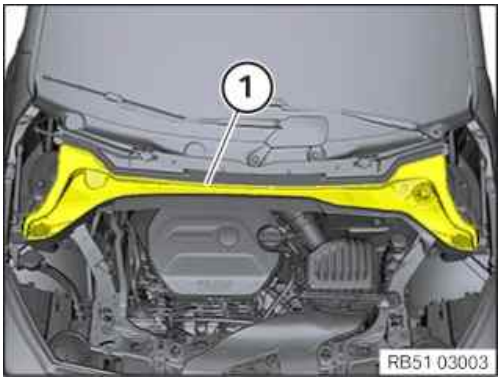
- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

47 – Installing front cowl panel cover



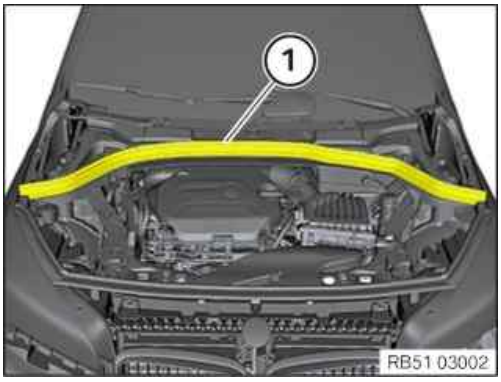
- Insert the cowl panel cover front (1) to the rear and install.
- Check cowl panel cover at front is correctly seated (1).

48 – Install the seal for the bonnet

cardiagn.com

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

49 – Disconnecting all battery earth leads

- See additional information.

Additional Information

Overview of Tightening Torques

Camshaft sensor to cylinder head cover — Used in step 25

TS5x20		Tightening torque	4 Nm

Cylinder head cover to cylinder head — Used in step 26

cardiagn.com

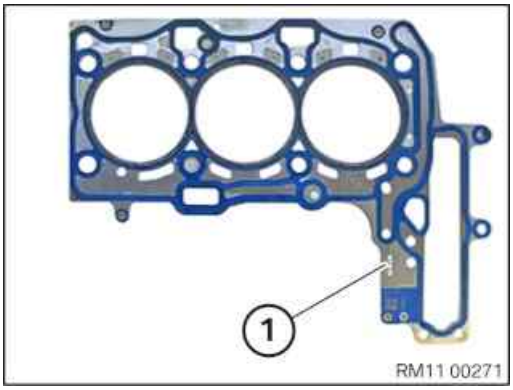
11 12 501 Replacing cylinder head gasket (B37C)

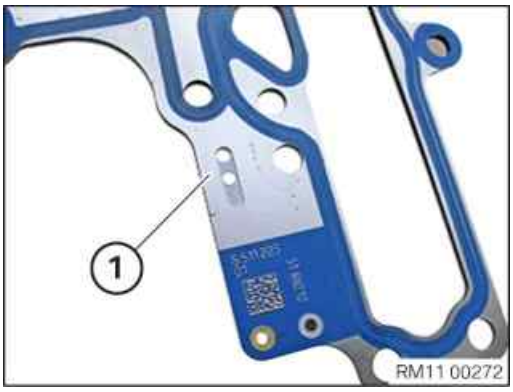
Necessary preliminary tasks:

- Remove cylinder head.



The cylinder head gasket is designed as a beaded metal gasket.

Note gasket thickness (1).



Highest piston protrusion at both measuring points of all 3 pistons determines thickness of cylinder head gasket.

Piston protrusion up to 0.42 mm

- Install 1 hole cylinder head gasket.

Piston protrusion >0.42 ... 0.53 mm

- Install 2 hole cylinder head gasket.

Piston protrusion over >0.53 ...0.68 mm

- Install 3 hole cylinder head gasket.

Concluding tasks:

- Install cylinder head.

cardiagn.com

This documentation refers to special tools that were not yet available when going to press.

11 13 000 Remove and install, seal or replace oil sump

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

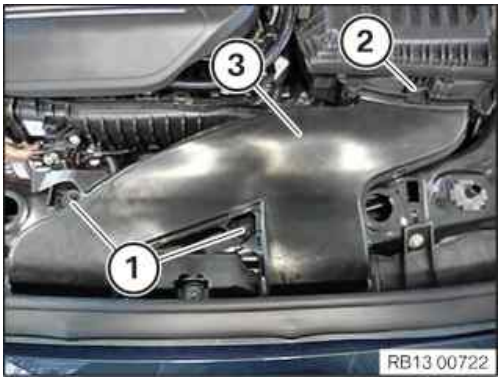
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

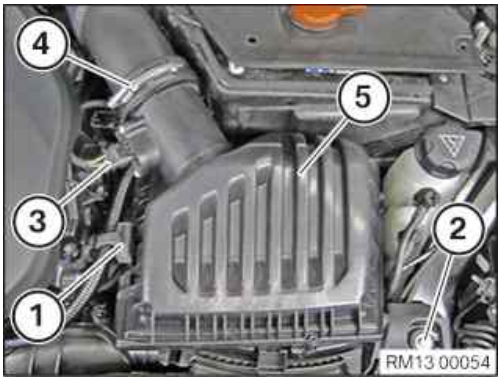
3 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

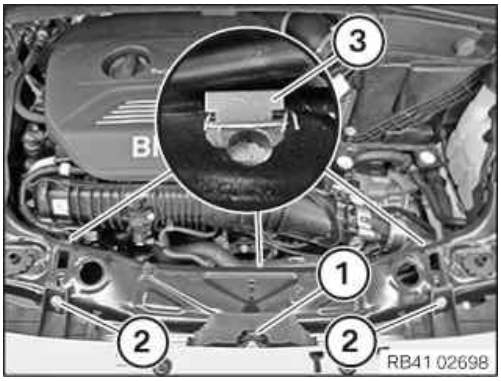
cardiagn.com

4 – Removing intake silencer housing

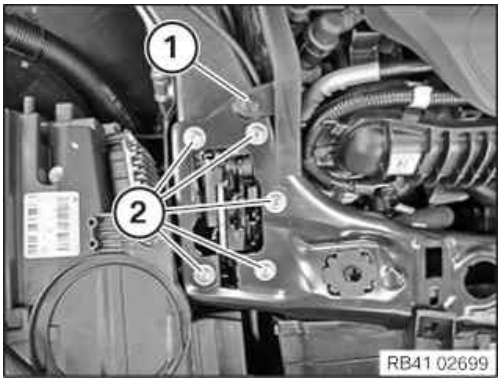


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

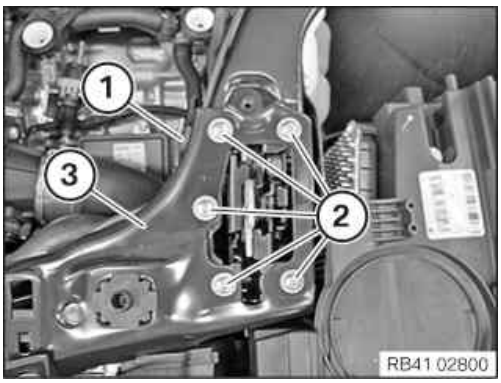
5 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

6 – Removing the fan cowl with electric fan

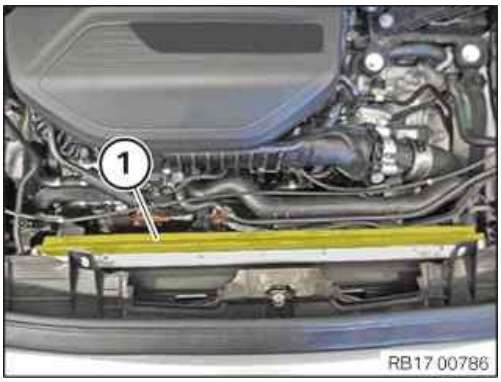
WARNING

Hot surfaces.

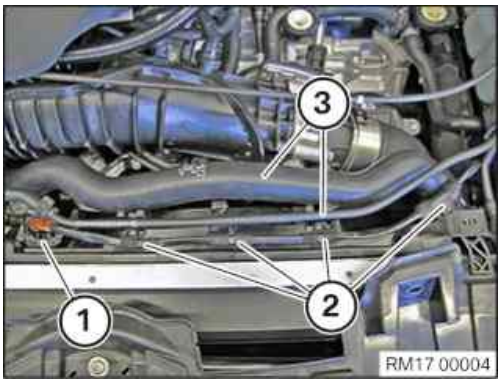
Risk of burning!

- Perform all work only on components that have cooled down.

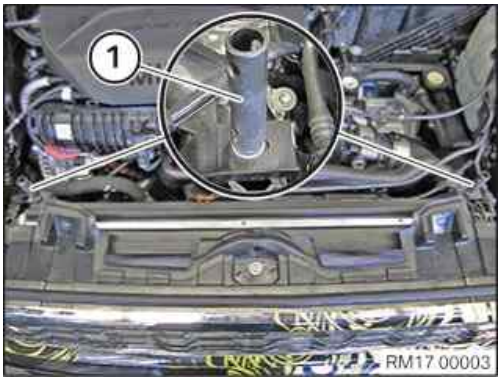
cardiagn.com



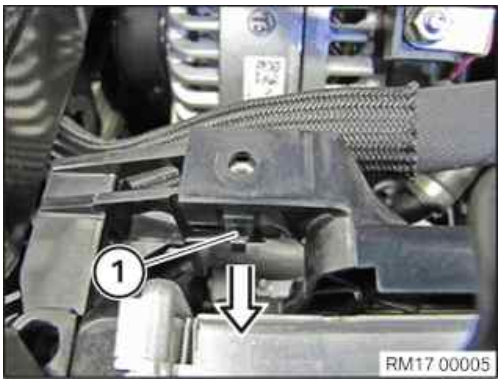
- Feed out and remove the sealing (1) from the radiator.



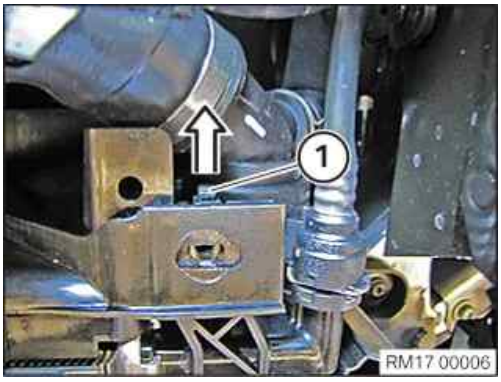
- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.



- Loosen screws (1).

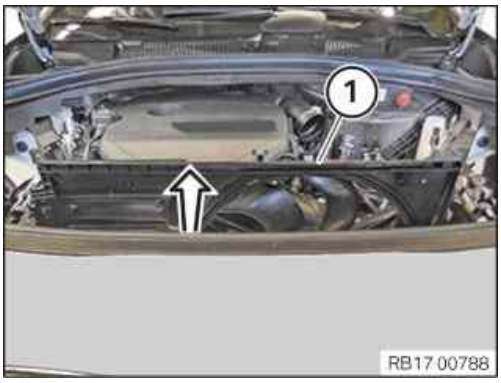


- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



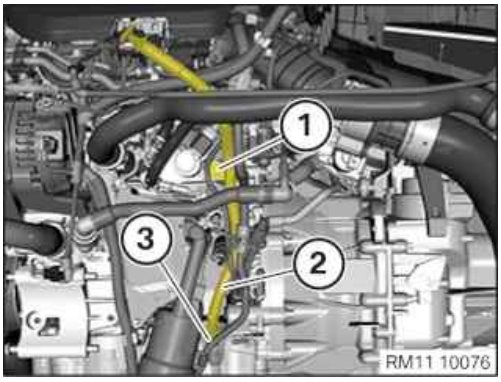
- Unlock the left lock (1) on the fan cowl in the direction of the arrow.

cardiagn.com



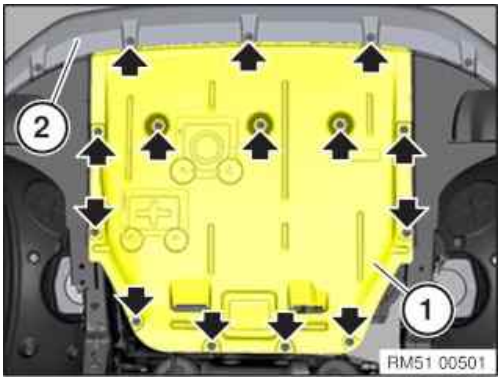
- Guide out fan cowl (1) in direction of arrow and remove.

7 – Removing the guide tube for the oil dipstick



- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- Remove sealing ring (3) from oil sump if necessary.

8 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

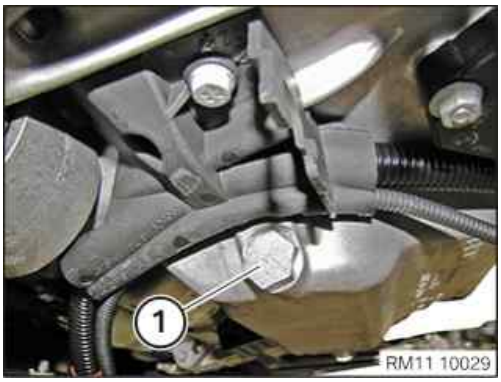
9 – Releasing the oil drain plug

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



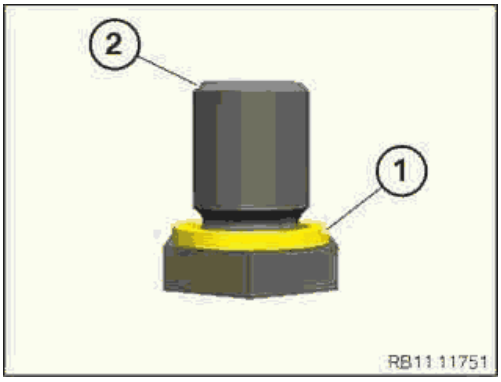
TECHNICAL INFORMATION

Catch and dispose of drained engine oil in a suitable collecting vessel.
Observe country-specific waste disposal regulations.

- Release oil drain plug (1).
- Drain engine oil.

cardiagn.com

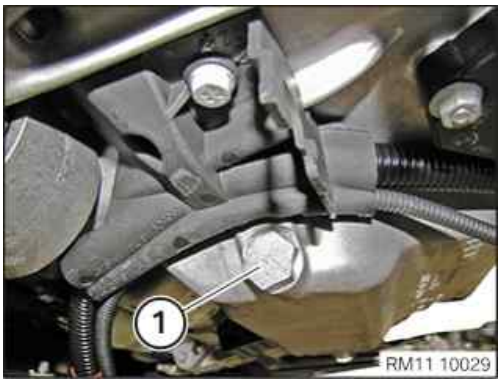
10 – Tightening the oil drain plug



- Renew sealing ring (1) on the oil drain plug (2).

  Parts: Sealing ring

- Guide in the sealing ring (1) on the oil drain plug (2) and install.



- Renew the sealing ring.

  Parts: Sealing ring

- Position oil drain plug (1) on the oil sump and tighten.

Oil drain plug on oil sump

M12x1.5	Renew the sealing ring.	Tightening torque	25 Nm

11 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

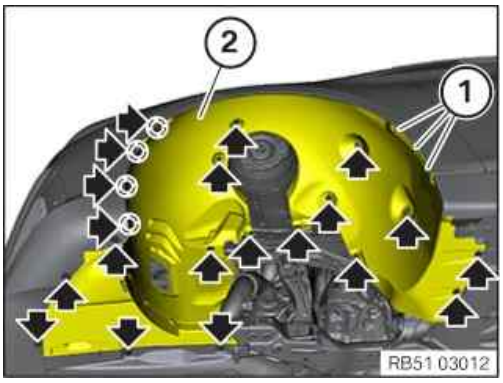
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

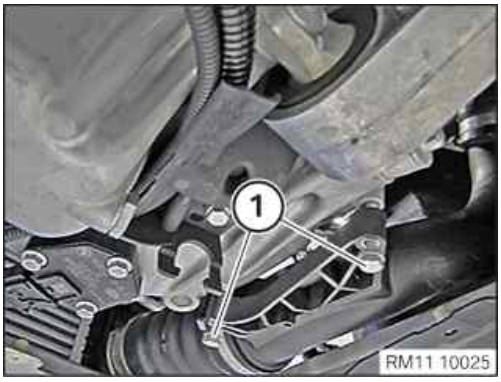
12 – Removing the front right wheel arch cover

cardiagn.com



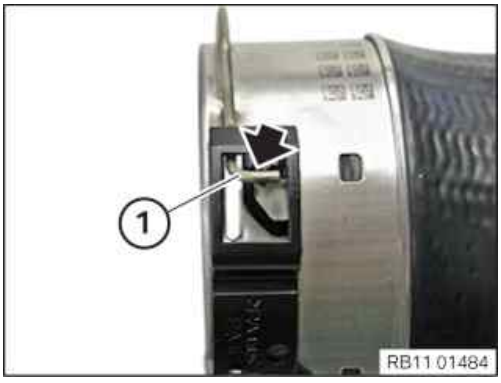
- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

13 – Remove right charge-air line

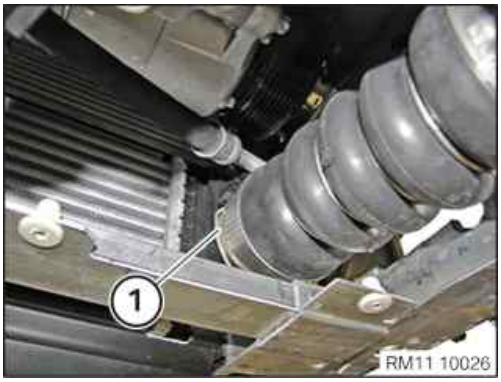


- Release charge air duct screws (1) on oil sump.

- Detach charge air duct screw connection (1) on crankcase.

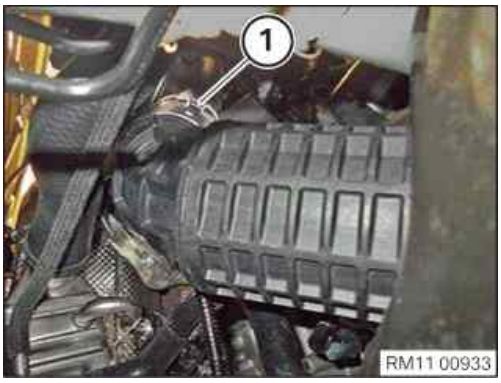


- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

cardiagn.com



- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

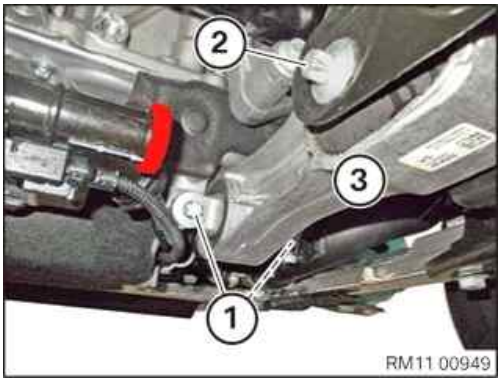
14 – Remove bracket with rubber mount

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

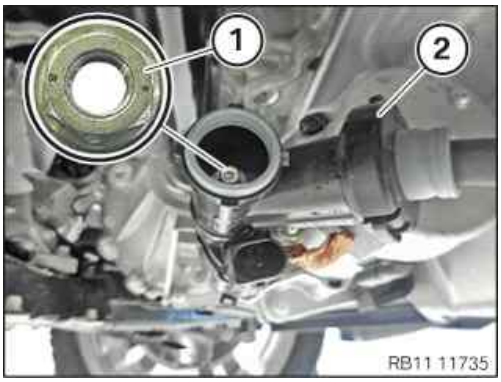


- Support the engine with the jack at a suitable point.
- Loosen screws (1) and (2).
- Guide out and remove holder (3).

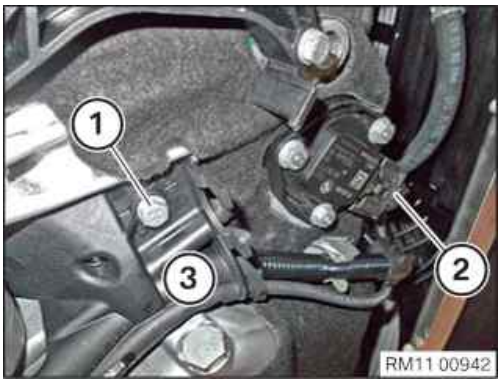
15 – Removing the acoustic cover of the oil sump

- Unlock connector (1) and pull off.
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).

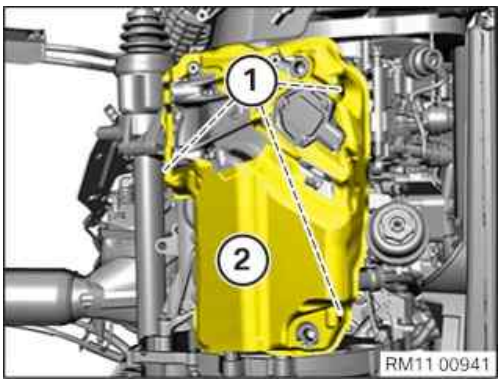
cardiagn.com



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.



- Unscrew the screw (1) on the wiring harness to the oil sump.
- Unlock and pull off connector (2) on the oil-level sensor.
- Place wiring harness (3) to one side.



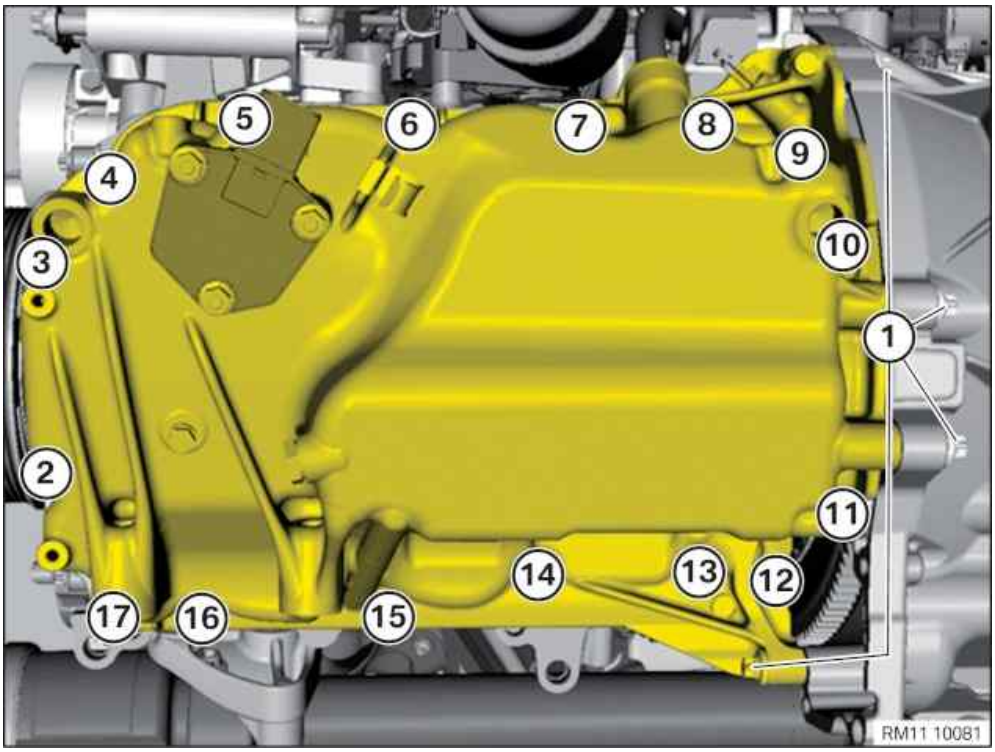
- Remove the expanding rivets (1) on both sides of the acoustic cover.
- Feed out and remove the acoustic cover (2).

MAIN WORK

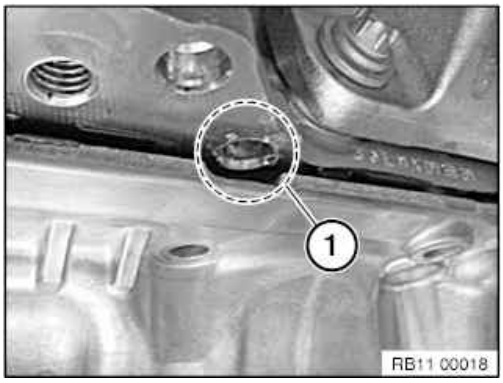
16 – Remove oil sump

- Loosen screws (1).
- Feed out starter motor and remove.

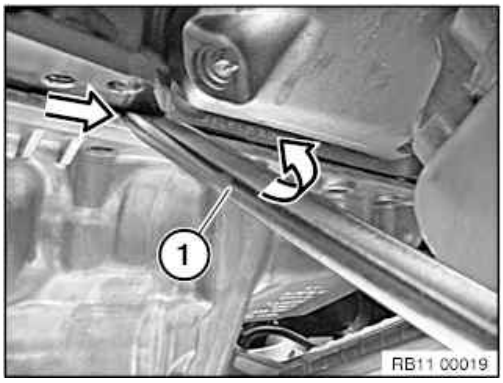
cardiagn.com



- Release transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).

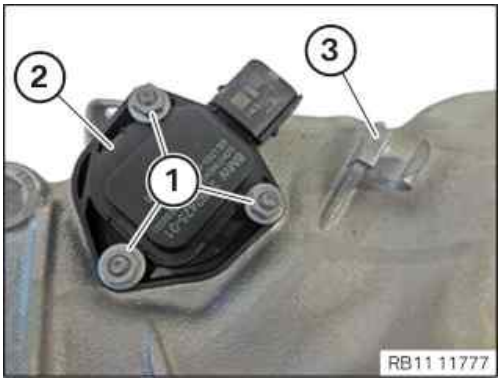


- Release the oil sump only in area (1).



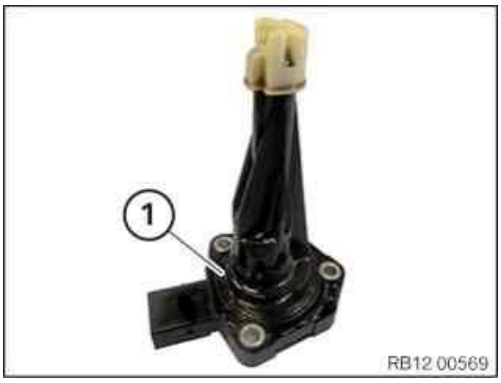
- Release the oil sump carefully using a suitable mounting lever (1) at the appropriate position in the direction of the arrow.
- Secure the oil sump to prevent it from falling.

17 – Renew oil sump



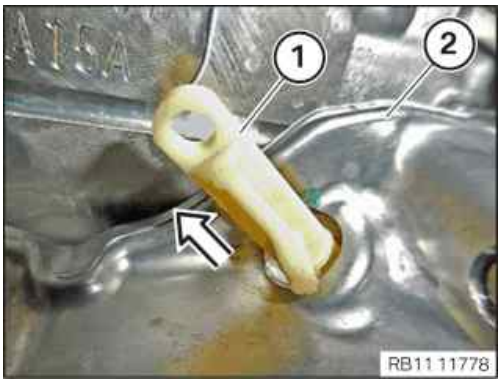
- Loosen nuts (1).
- Remove the oil-level sensor (2).
- Feed out and remove the clamp (3).

cardiagn.com

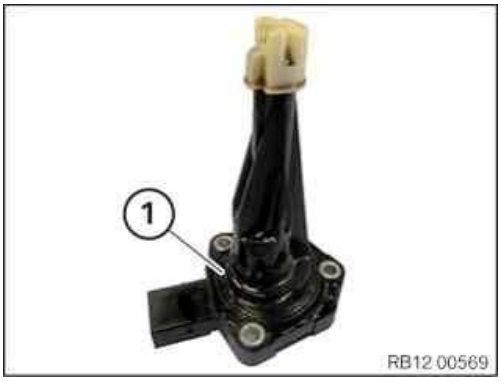


- Renew gasket (1).

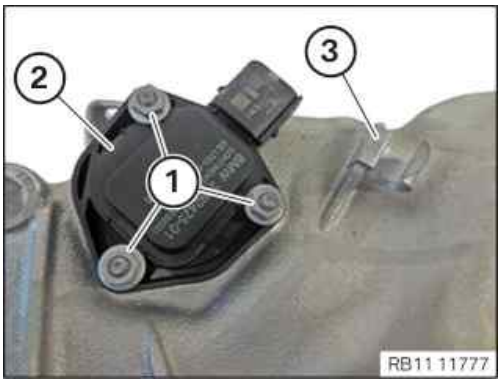
  Parts: Gasket



- Guide the seal plug (1) out of the oil sump (2) in the direction of the arrow and remove.



- Insert and install the new gasket (1).

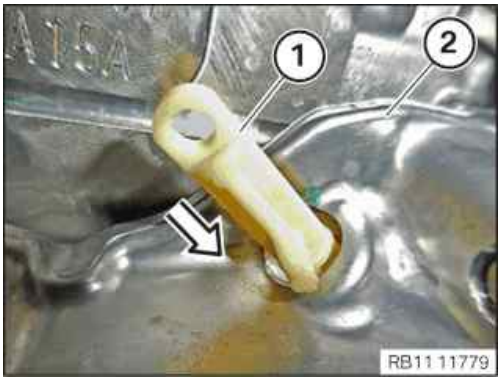


- Insert and install the oil-level sensor (2).
- Tighten nuts (1).

Oil level sensor to oil sump

M6		Jointing torque	2 Nm
		Tightening torque	8 Nm

- Secure clamp (3).



- Guide the seal plug (1) into the oil sump (2) in the direction of the arrow and install.

cardiagn.com

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Position the sealing compound (1) on special tool as shown.

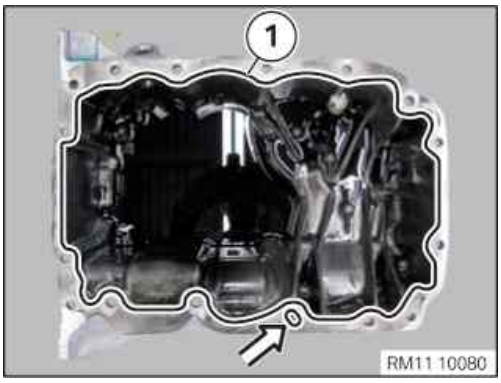
  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

cardiagn.com



TECHNICAL INFORMATION

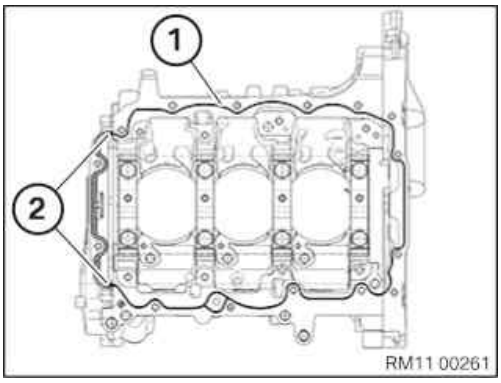
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound without replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.



TECHNICAL INFORMATION

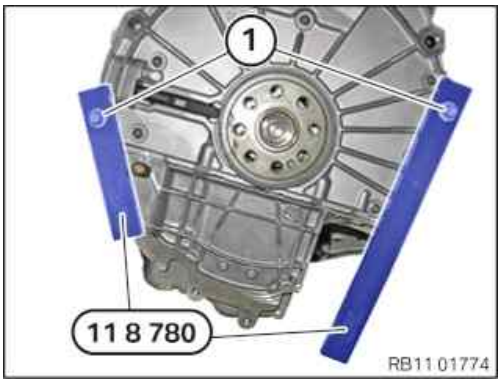
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound after replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Sealing bead (1) must overlap the seal (2) of the timing case cover by approx. **5 mm**.
- Completely surround the oil return orifice (arrow) with sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.

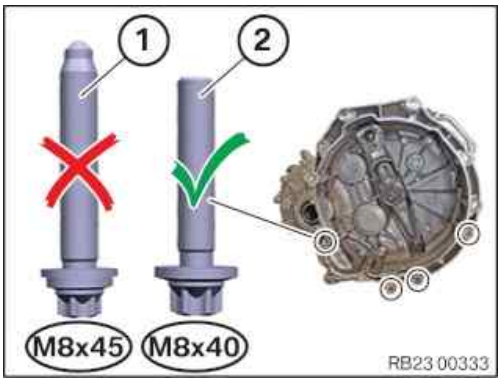


TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.

cardiagn.com



RISK OF DAMAGE

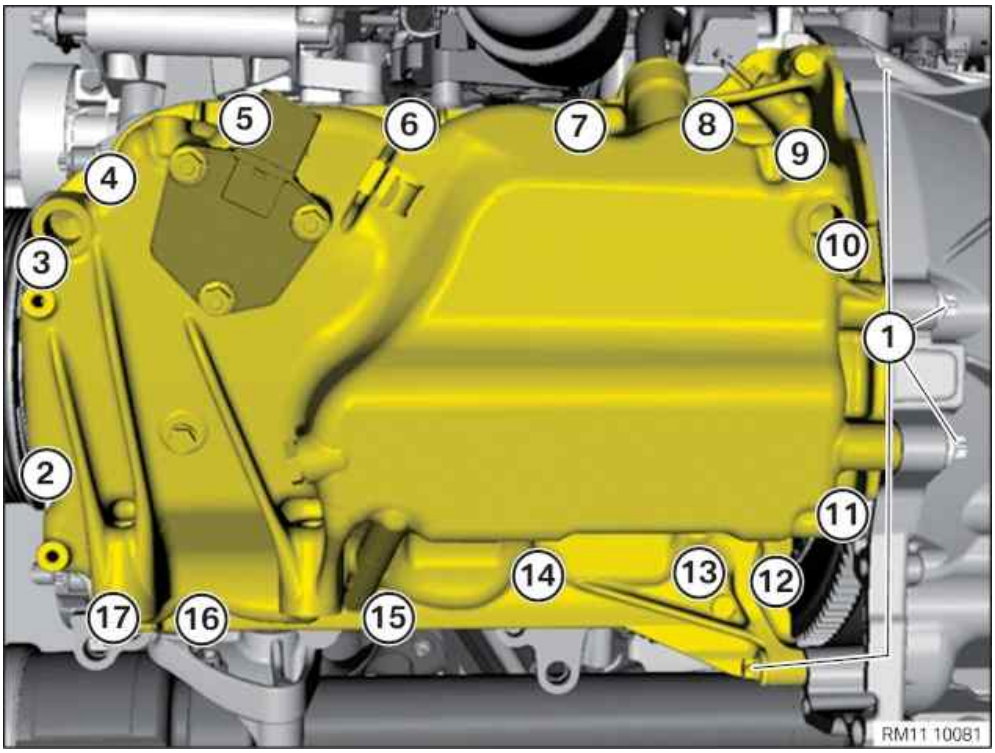
Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.



- Position and install the oil sump.
- Tighten screws (2) to (17) **hand-tight**, do **not** tighten fully.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws (2) to (17) on the oil sump.

Oil sump to crankcase

M8x30		Tightening torque	2 Nm
M8x110		Tightening torque	2 Nm

- Tighten the transmission bolts (1) on the oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nm

- Insert and install the starter motor .
- Tighten the screws (1).

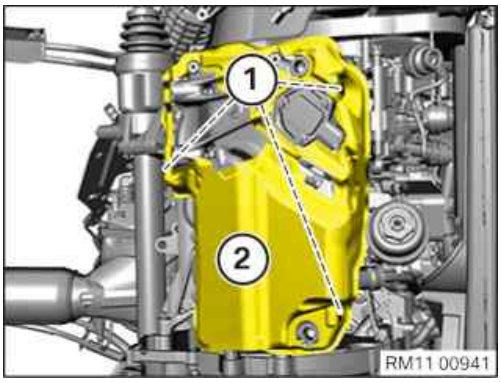
Starter motor to transmission

M8x45		Tightening torque	19 Nm

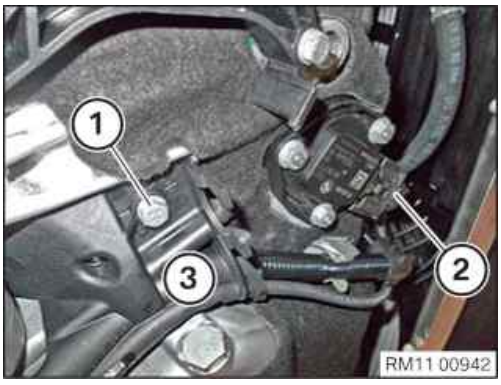
POSTPROCESSES

19 – Installing the acoustic cover for the oil sump

cardiagn.com



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).



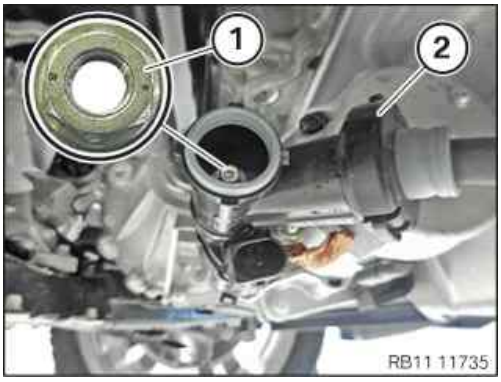
- Position wiring harness (3).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm

- Connect and lock the connector (2) on the oil-level sensor.

  The connector must lock audibly.



CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

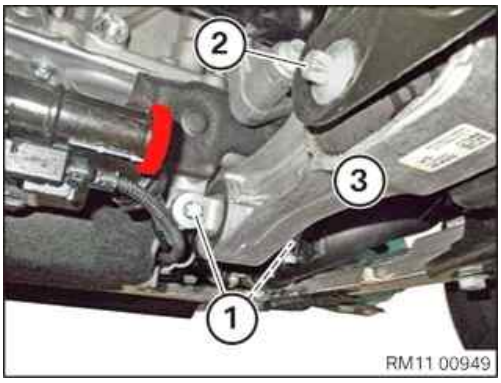
M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).

  The connector must engage audibly.

20 – Install the holder with the rubber mount

cardiagn.com



- Insert and install the holder (3).
- Tighten the screws (1) and (2) hand-tight.
- Release jack.
- Tighten down screw (2).

Holder to front axle support

M12		Tightening torque	100 Nm

- Tighten the screws (1).

Bracket to oil sump

M12		Tightening torque	100 Nm

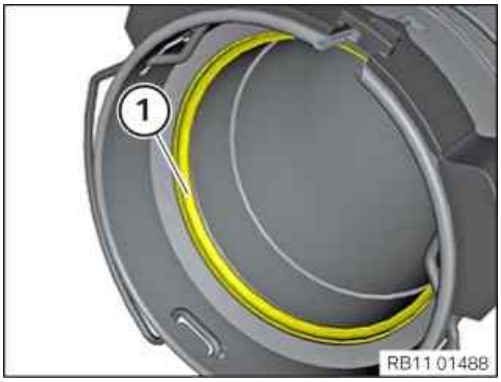
21 – Install right charge air duct

RISK OF DAMAGE

Damage to the exhaust turbocharger.

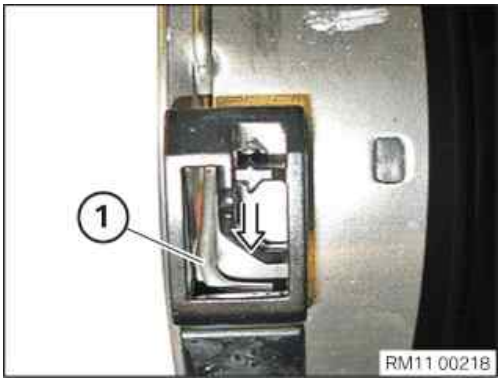
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

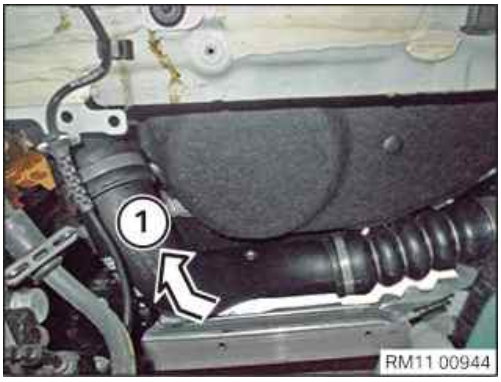


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

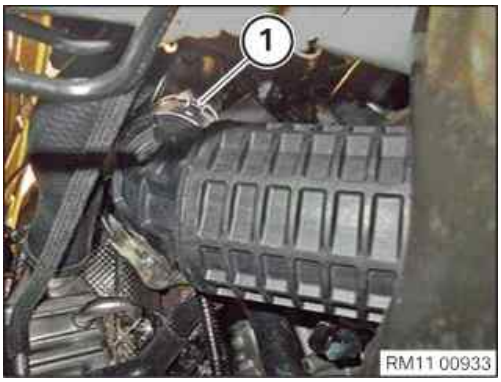


- Let the lock (1) engage at the holder (arrow).



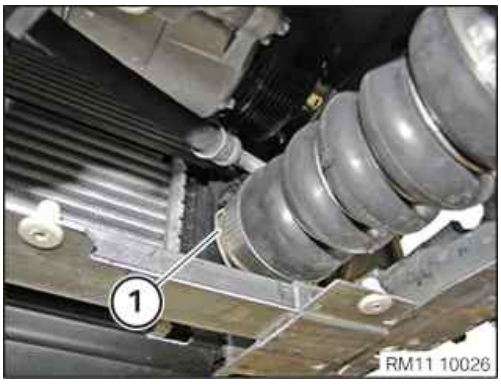
- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.

cardiagn.com



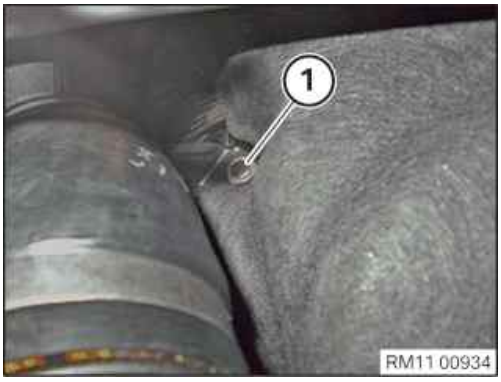
- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

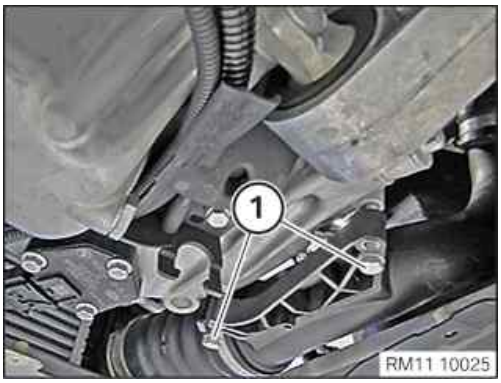
  The lock (1) must audibly engage.



- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm

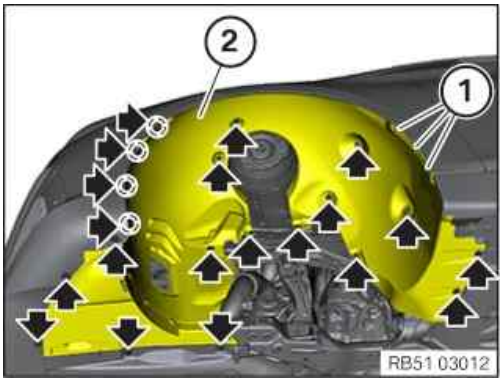


- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

22 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

23 – Installing the front right wheel

cardiagn.com

▶ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

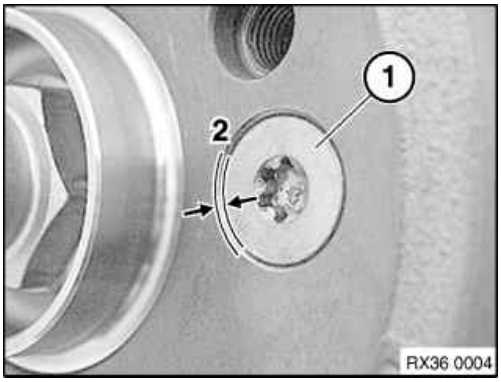
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

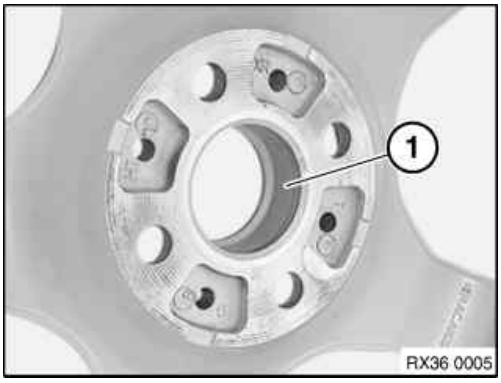


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

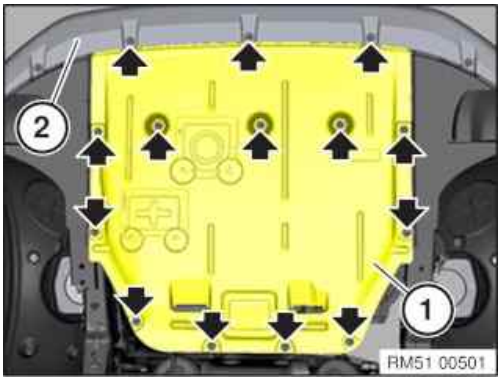
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

24 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

25 – Installing guide tube for oil dipstick

RISK OF DAMAGE

Contaminant or foreign body.

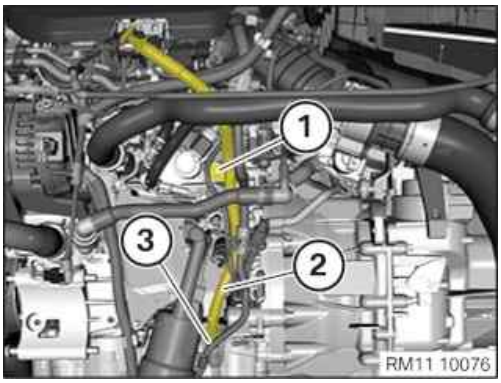
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Renew O-ring (1).

  Parts: O-ring



- Guide in guide tube (2) for oil dipstick and slide it into the oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

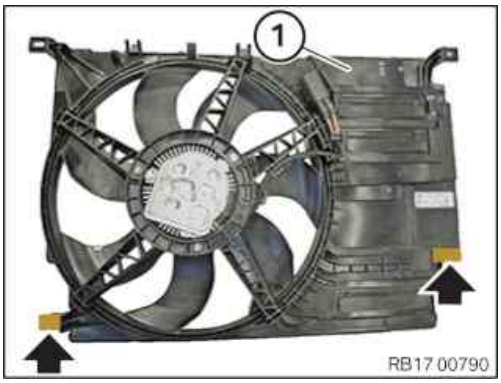
Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

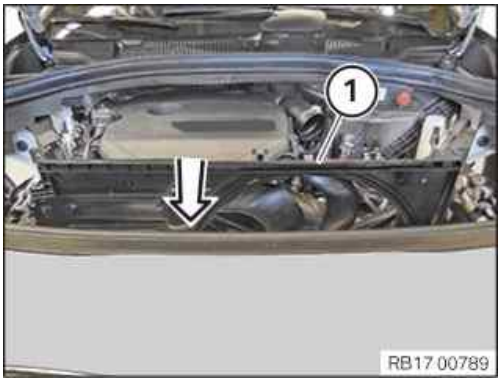
26 – Installing fan cowl with electric fan

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.



- Feed in and install the fan cowl (1) in the direction of the arrow.

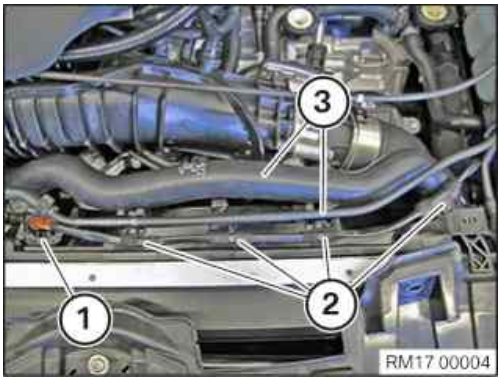
cardiagn.com

- Lock the left and right locks (arrows).

- Tighten the screws (1).

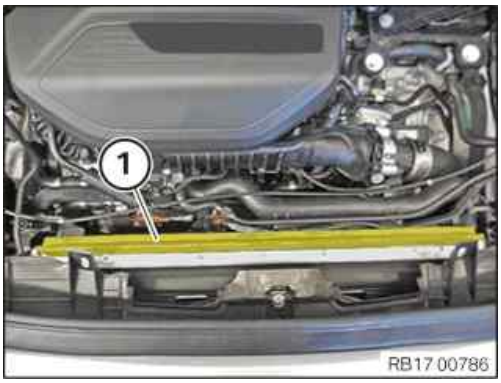
Fan cowl on radiator

M6X12		Tightening torque	6 Nm



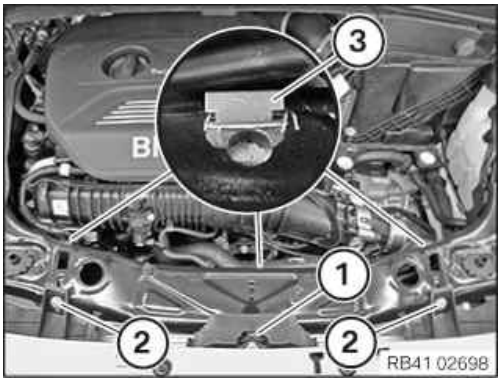
- Connect connectors (1) and lock.

  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).



- Guide the sealing (1) on the radiator in and install it.

27 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

M8		Tightening torque	25 Nm

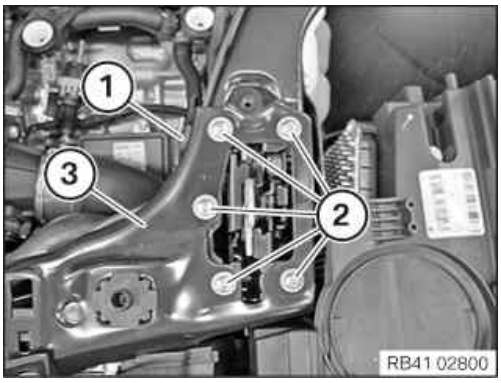
- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

cardiagn.com

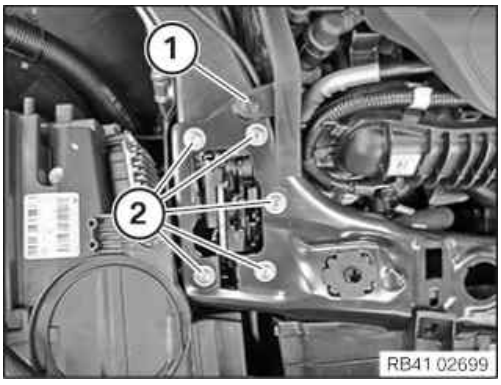


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



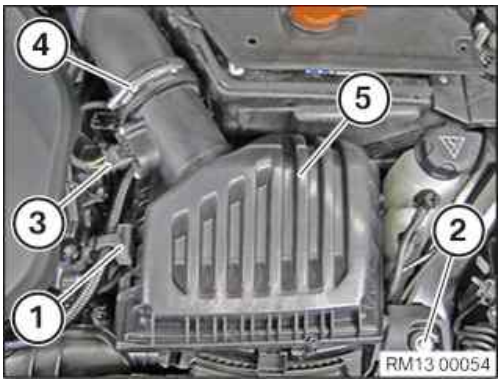
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

28 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

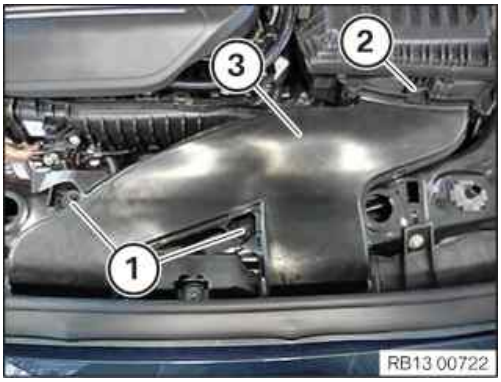
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

29 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

30 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

31 – Disconnecting all battery earth leads

- See additional information.

32 – Removing the oil filler cap

cardiagn.com

- Open oil filler cap (1).

33 – Topping up the engine oil

RISK OF DAMAGE

Damage to the petrol particulate filter.

Vehicles equipped with a petrol particulate filter must be operated with low-ash engine oil only.

- Use BMW Longlife-04 , BMW Longlife-12 FE or BMW Longlife-17 FE+ engine oils or engine oils approved by BMW matching the same specifications only.
- For additional information see: Overview of approved engine oils for BMW Group engines.

RISK OF DAMAGE

Engine damage caused by excessively filling the engine with engine oil.

Filling an excessive quantity of engine oil may cause engine damage.

- Observe the exact engine oil filling capacity.
- Drain the engine oil.

- Pour in engine oil.

Engine oilB37C15U1

Capacity of engine oil	4,8 l

Engine oil: Technically suitable engine oils for BMW Group engines

34 – Installing the oil filler cap

- Close oil filler cap (1).

35 – Check engine oil level

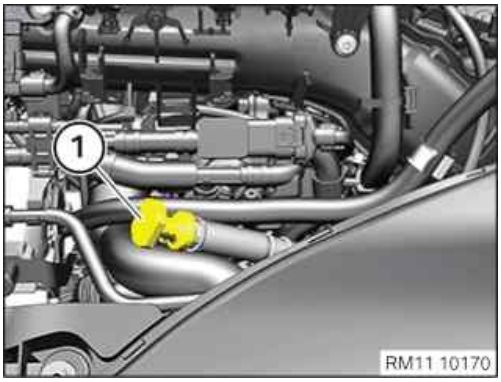
cardiagn.com

- Park vehicle on a horizontal surface.
- In the case of automatic transmission, shift to selector lever position N or P.
- Accelerator pedal is not pressed.
- Engine is running and is at operating temperature.
- Read off the engine oil level in the instrument cluster (KOMBI) or on the control display.
- Top up engine oil if necessary.

▶ **Check engine oil level**

TECHNICAL INFORMATION

Always check the engine oil level when the engine is at operating temperature (engine oil temperature > 70°C).

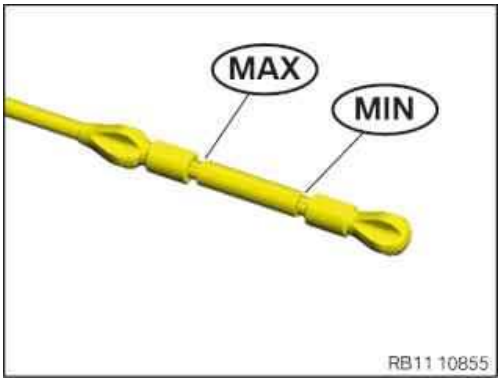


- Park vehicle on a horizontal surface.
- Stop the engine and wait for 5 minutes.
- Pull out the oil dipstick (1) and wipe off using a lint-free cloth.

TECHNICAL INFORMATION

Do not pull out or insert the oil dipstick into the guide tube too quickly or slowly.

- Push the oil dipstick (1) into the guide tube up to the limit position and pull it out again.



TECHNICAL INFORMATION

The engine oil level must be between the minimum mark and the maximum mark of the oil dipstick.

- Read the engine oil level on the oil dipstick.
- Top up engine oil if necessary.

Parts required

Designation	Used in step
Seal, guide tube for oil dipstick on oil sump	25

cardiagn.com

11 13 000 Removing and installing, sealing or replacing oil sump (B37C)

Special tools required:

- 11 4 472
- 11 4 471
- 2 469 803
- 11 8 780

Necessary preliminary work:

- Remove underbody protection
- Remove guide tube for oil dipstick
- Drain off engine oil
- Remove starter motor
- Removing the holder

Caution!

Engines with surface sealant:

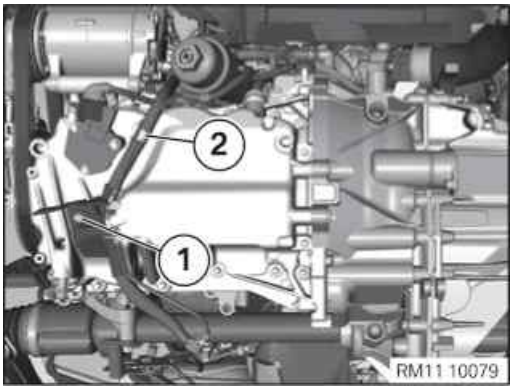
Application time of sealing bead **max.** 12 minutes.

Removal:

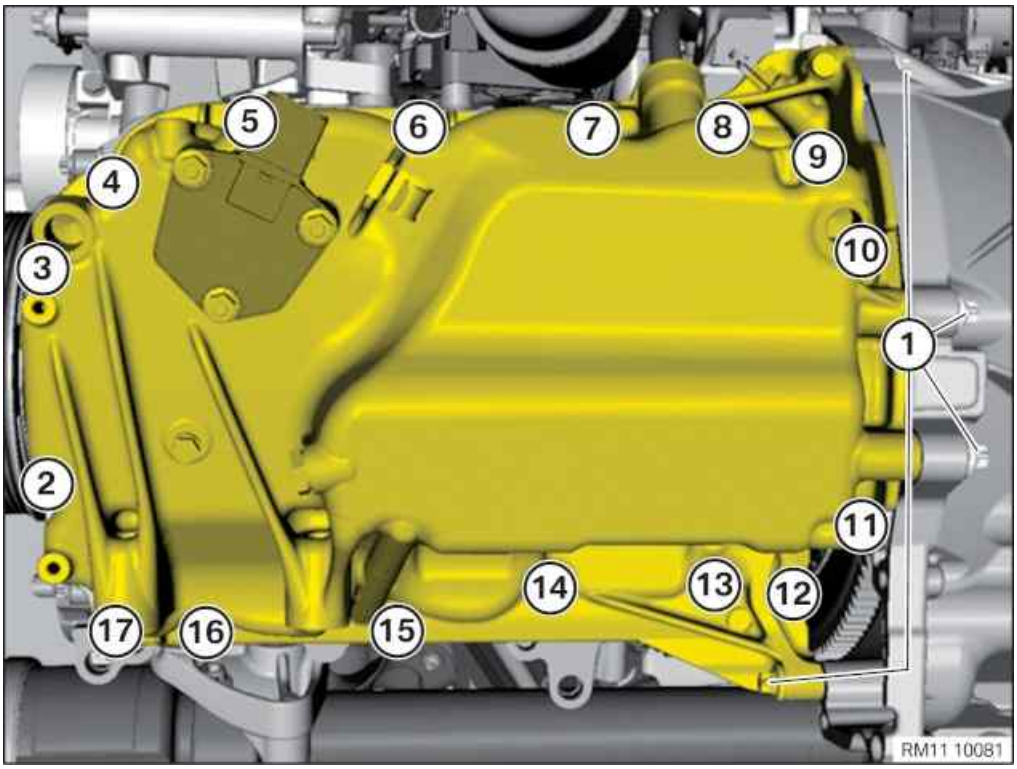
Release screws (1) from pressure pipe.

cardiagn.com

Unlock connector (1) and remove.

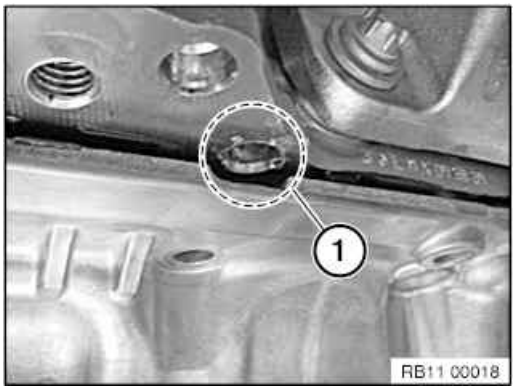


Release screw (1).
Release positive cable from clip (2).
Place wiring harness to one side.



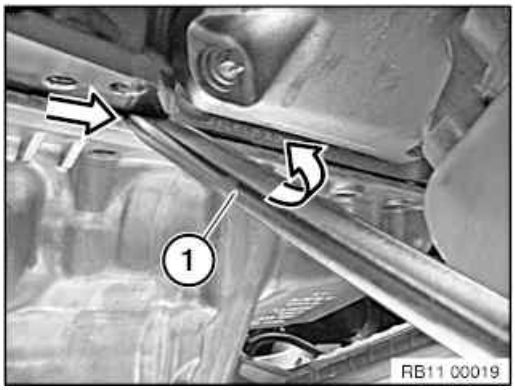
Release screws (1) from transmission.
Release screws (2-17).

cardiagn.com



Engine with liquid sealing compound: Caution!

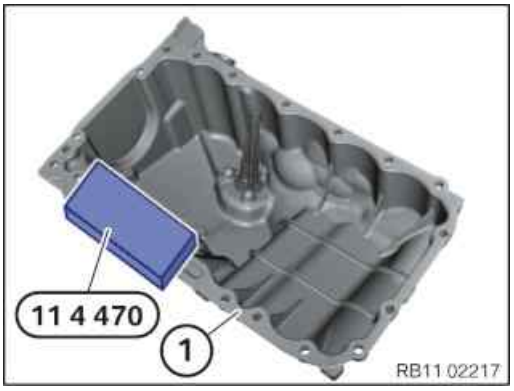
The oil sump can only be loosened in the areas (1) where an aperture is present in the oil sump.



Use a mounting lever (1) to release oil sump in direction of arrow at the correct location.

Preparation for installation:

Clean sealing residues from oil sump and crankcase.



Caution!

Do not use any metal-cutting tools (e.g. emery cloth).

Clean sealing surface (1) with special tool 11 4 472 and 11 4 472 of sealing residue.*Installation note:*
Clean sealing surface (1) with brake cleaner 3.3.

Sealing surface (1) must be free of oil, grease and cleaning agents.

Caution!

Do not use any metal-cutting tools (e.g. emery cloth).

Clean sealing surface (1) with special tool 11 4 471 and 11 4 472 of sealing residue.*Installation note:*
Clean sealing surface (1) with brake cleaner 3.3.

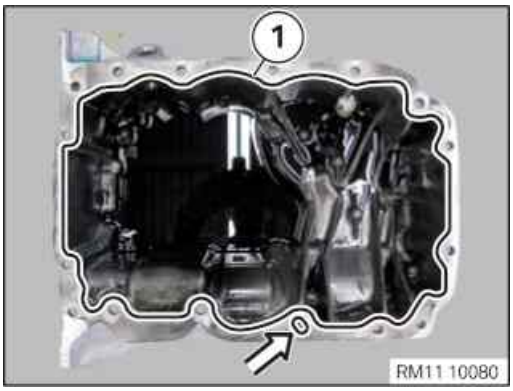
Sealing surface (1) must be free of oil, grease and cleaning agents.

cardiagn.com

Keep special tool 2 469 803 ready.

Position sealing compound (1) on special tool 2 469 803 as shown.

Parts: Sealing compound 2.2



Applying sealing compound without replacing front bottom gear case cover:

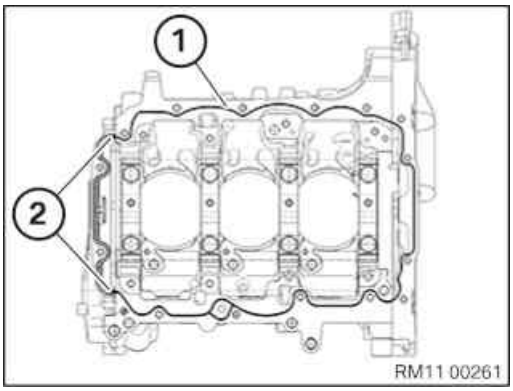
Apply sealing compound 2.2 in this area (1).

Make sure that the sealing bead runs along the inner edge.

The complete circumference of the oil return orifice (arrow) must be covered.

Installation note:
The oil sump must be installed approximately 10 minutes after application of the sealing compound.

Sealant height approximately 2 to 2.5 mm.



Applying sealing compound after replacing front bottom gear case cover:

Apply sealing compound 2.2 in this area (1).

Make sure that the sealing bead runs along the inner edge.

The complete circumference of the oil return orifice (arrow) must be covered.

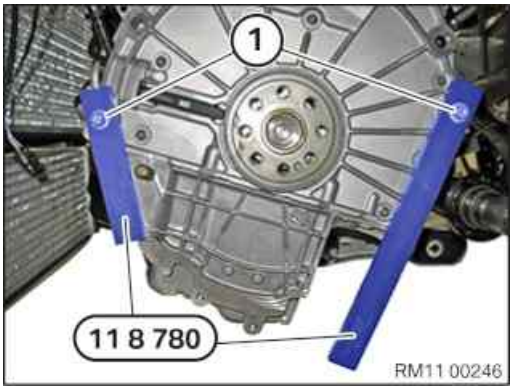
Sealing bead (1) must overlap with the gasket of the gear case cover approx. 5 mm (2).

Installation note:
The oil sump must be installed approximately 10 minutes after application of the sealing compound.

Sealant height approximately 2 to 2.5 mm.

Installation:

cardiagn.com



Installation note:
Special tool 11 8 780 is only necessary if the engine or the transmission is removed.

Position special tool 11 8 780 with transmission bolts (1) so that engine oil sump is exactly flush with engine block.

If necessary, renew fitting sleeves.

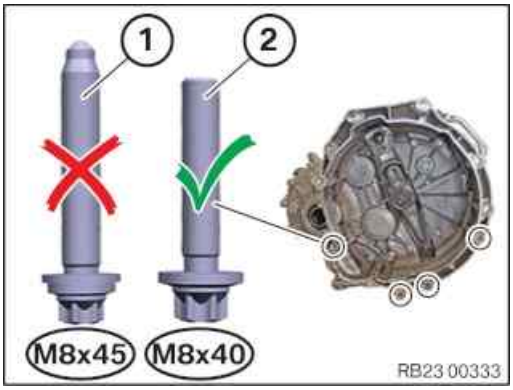
Caution!

Installing screws with an incorrect screw length may cause damage to the component.

Observe exact screw lengths.

Reinstall screws corresponding to the original screw length.

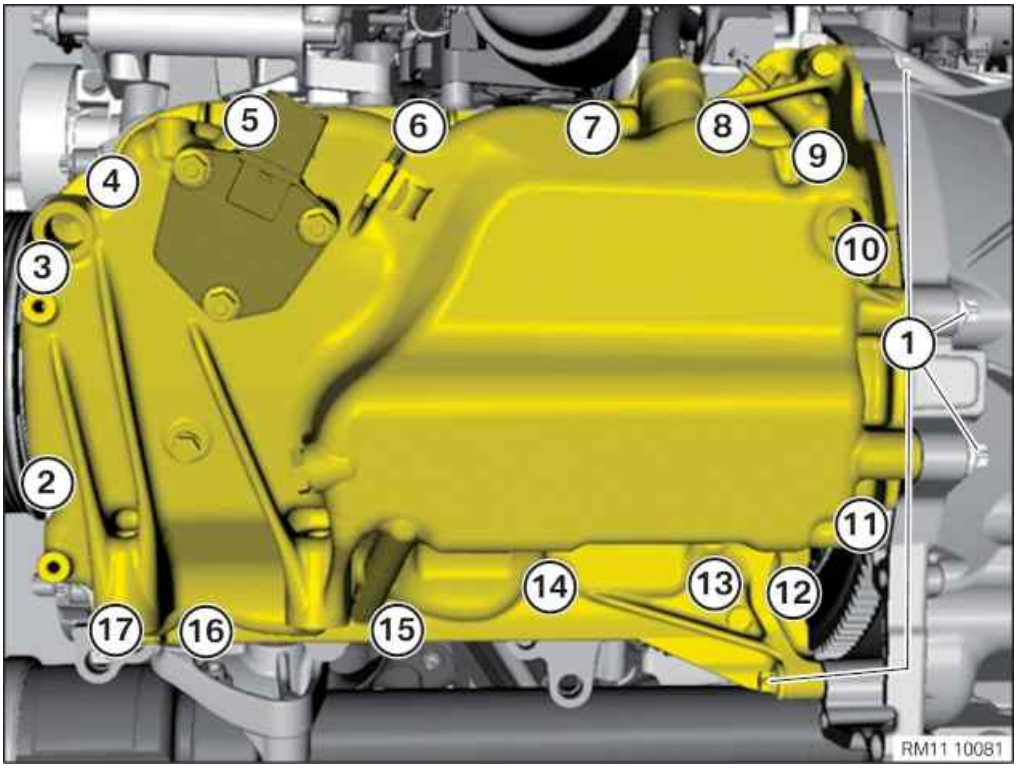
The oil sump may be damaged when using the incorrect screw length!



Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.

cardiagn.com



Installation note:
Tighten all screws (2-17) on oil sump with 5 Nm.

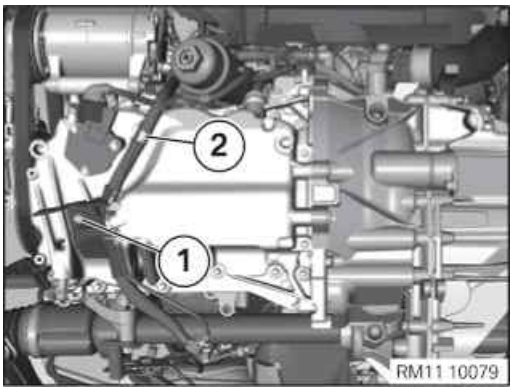
Join Torx screws (1) to 5 Nm.

Tighten down all screws on oil sump.

Tightening torque: 11 13 2AZ.

Tighten down Torx screws (1).

Tightening torque: 11 13 3AZ.



Tighten screw (1).

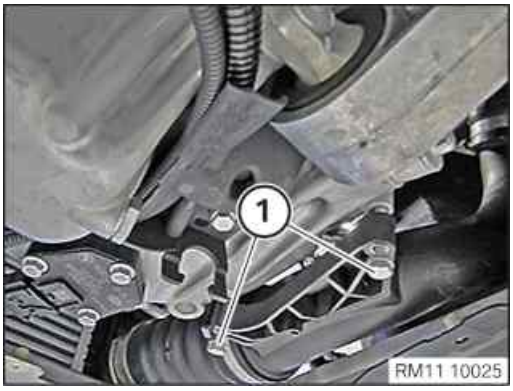
Tightening torque 12 52 4AZ.

Clip positive battery positive cable in clip (2).

Attach and lock connector (1).

Make sure the connector (1) engages audibly.

cardiagn.com



Tighten screws (1) of pressure pipe.

Required follow-up work:

- Install holder
- Install starter motor
- Install guide tube for oil dipstick
- Top up engine oil
- Install underbody protection

cardiagn.com

This documentation refers to special tools that were not yet available when going to press.

11 14 200 Detaching and attaching/replacing timing case cover on front at bottom

TECHNICAL INFORMATION

When removing the timing case cover, this must be renewed.
It is not permitted to reuse a removed timing case cover.

PRELIMINARY WORK

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

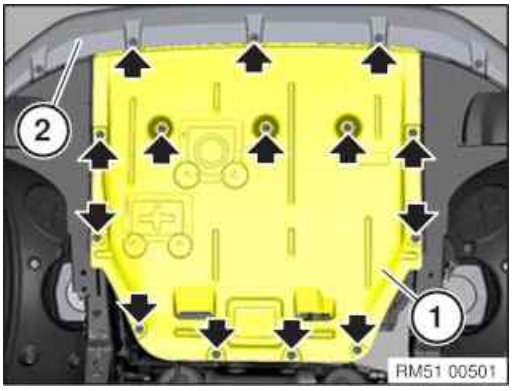
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

2 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

3 – Remove front right wheel

cardiagn.com

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

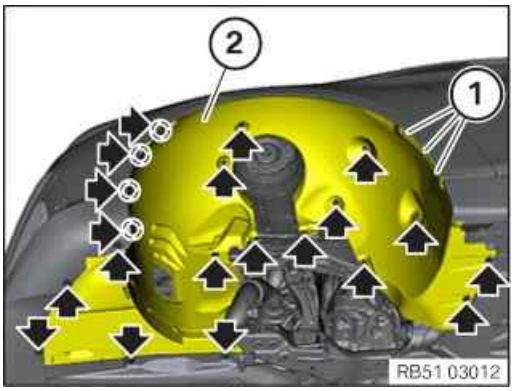
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

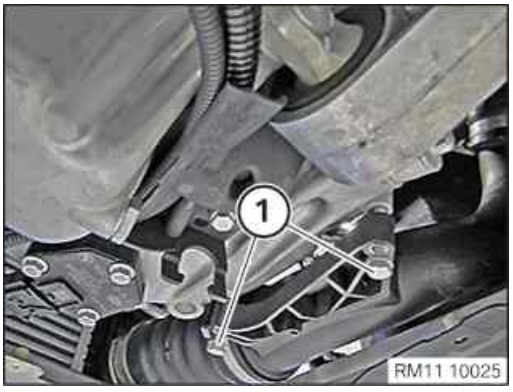
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

4 – Removing the front right wheel arch cover



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

5 – Remove right charge-air line

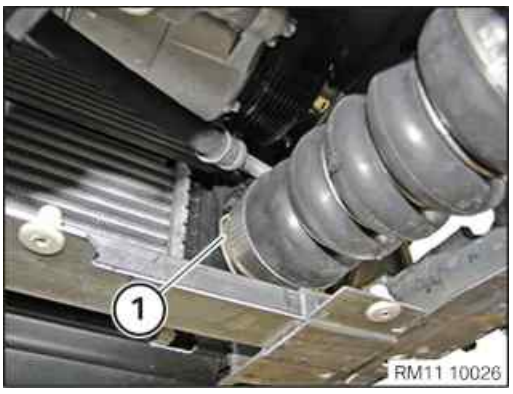


- Release charge air duct screws (1) on oil sump.

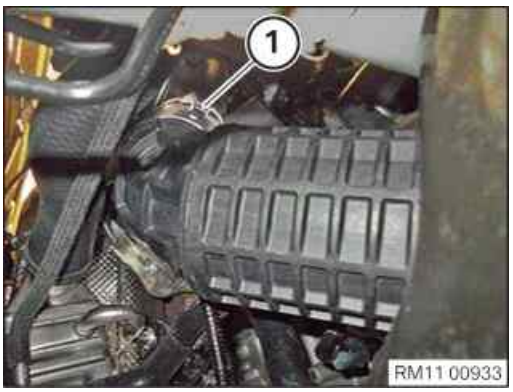
cardiagn.com

- Detach charge air duct screw connection (1) on crankcase.

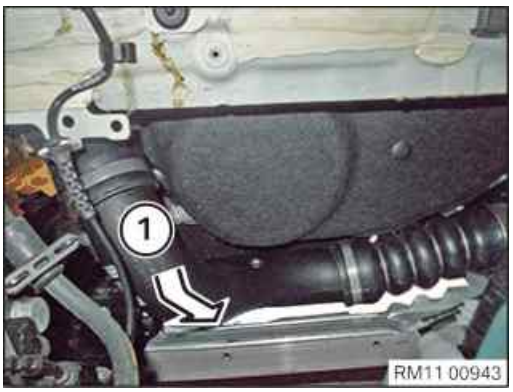
- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.



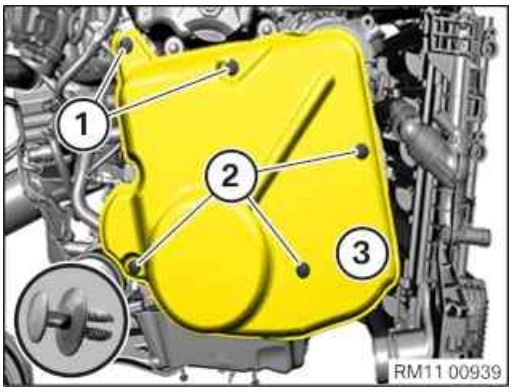
- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

6 – Removing the acoustic cover for the engine at the front

cardiagn.com



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

7 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION

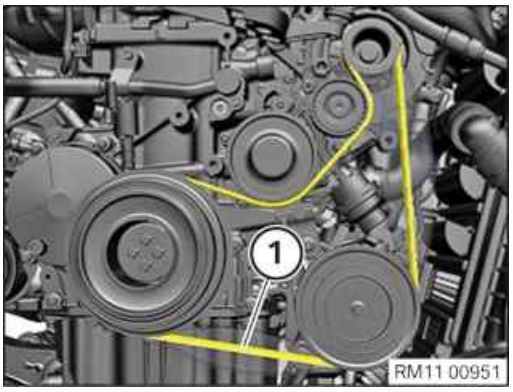
If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

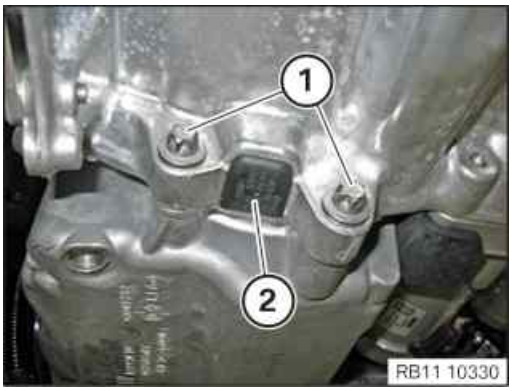
- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .

cardiagn.com

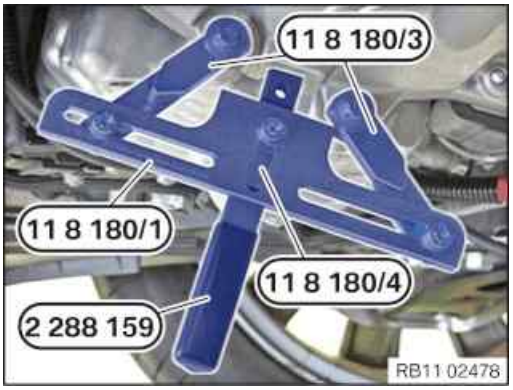


- Guide out the drive belt for the alternator (1) and remove it.

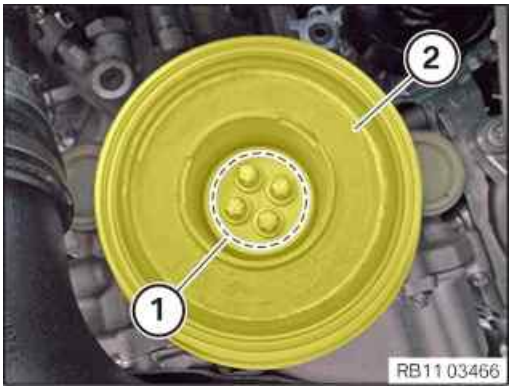
8 – Removing the vibration damper



- Release the transmission bolts (1).
- Remove the protective cap (2).



- Position special tool **0 493 587 (11 8 180)** as illustrated.
- Fasten the special tool **0 493 587 (11 8 180)** to the transmission with transmission bolts.

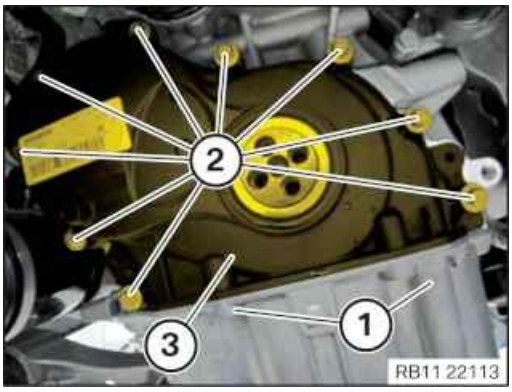


- Loosen screws in the area (1).
- Remove the vibration damper (2).

MAIN WORK

9 – Remove gear case cover

cardiagn.com



- Loosen screws (1).
- Loosen screws (2).
- Guide out and remove timing case cover (3).

10 – Preparation for installation of the timing case cover

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

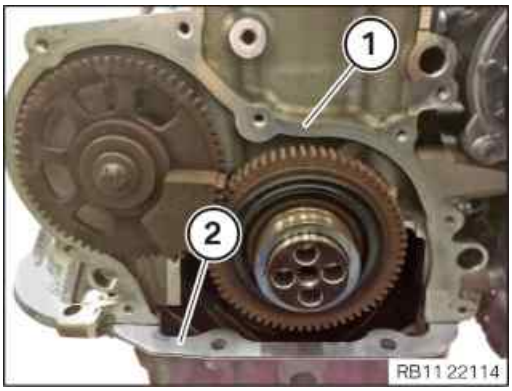
- Do not use any metal-cutting tools.

TECHNICAL INFORMATION

When removing the timing case cover, this must be renewed.
It is not permitted to reuse a removed timing case cover.

- Renew timing case cover (1).

  Parts: Gear case cover



TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Clean sealing surfaces (1) and (2)with the special tool **0 495 103 (11 4 471)** and the special tool **0 495 104 (11 4 472)**.
- Clean sealing surfaces (1) and (2) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

cardiagn.com

- Have the special tool ready.

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Position the sealing compound (1) on special tool as shown.

  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

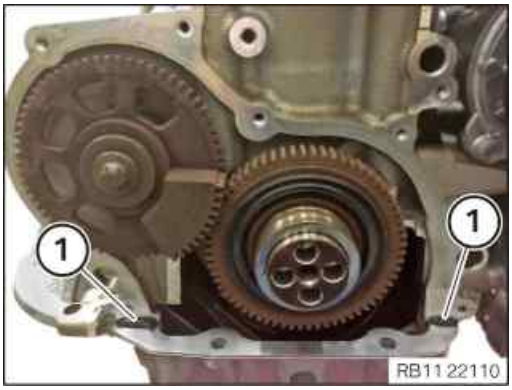
11 – Installing the timing case cover

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



TECHNICAL INFORMATION

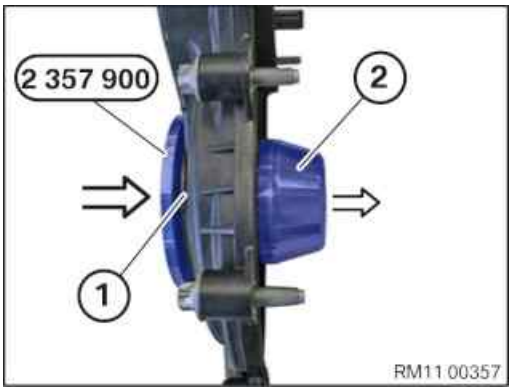
The maximum application time of the liquid sealing compound is 12 minutes.

- Apply sealing compound (1) approx. **5 mm** as shown.

  The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.

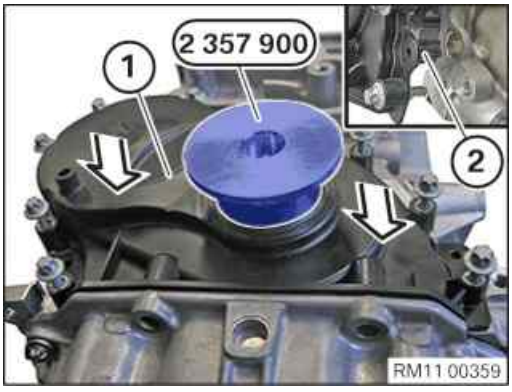
cardiagn.com

- Assemble special tool **2 357 900** as shown.
- Please note that no greases or lubricants may be used on the special tool **2 357 900**.



- Carefully slide the special tool **2 357 900** in the direction of the arrow through the sealing ring into the timing case cover (1).
- Make sure that the special tool **2 357 900** rests flat against the timing case cover (1).
- Remove the fitting aid (2).

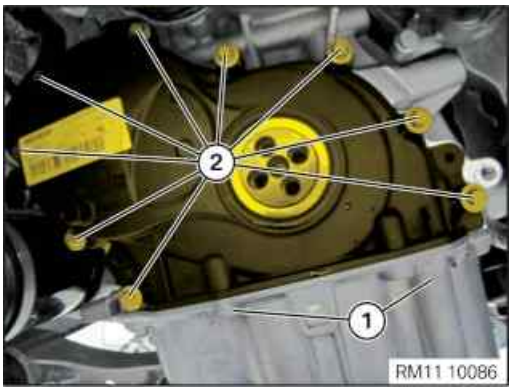
- Connect special tool **2 357 900** to the timing case cover (1) on the hub of the crankshaft (2).



- Feed in and install timing case cover (1) in the direction of the arrow.
- Ensure the guide pins (2) are fitted correctly.
- Tighten screws hand-tight.
- Remove special tool **2 357 900**.

- Make sure that the air guide (1) faces out.

cardiagn.com



- Hand-tighten the bolts (1).
- Tighten the screws (2) in a crosswise sequence with a tightening torque.

Timing case cover, front, to crankcase

M6	*Observe tightening specification.*	Tightening torque	4 Nm
		Angle of rotation	60 °

- Tighten the screws (1).

Oil sump to crankcase

M8x30		Tightening torque	24 Nm
M8x110		Tightening torque	24 Nm

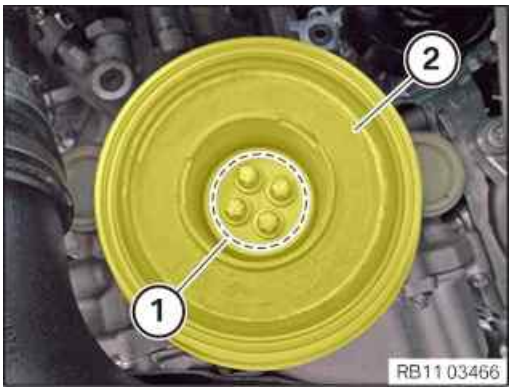
- Tighten the screws (2) in a crosswise sequence with an angle of rotation.

Timing case cover, front, to crankcase

M6	*Observe tightening specification.*	Tightening torque	4 Nm
		Angle of rotation	60 °

POSTPROCESSES

12 – Installing the vibration damper

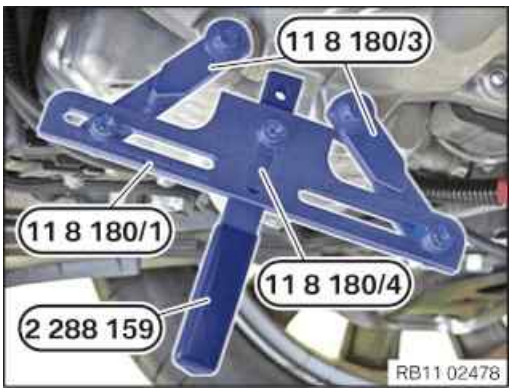


- Position vibration damper (2).
- Renew screws (1).

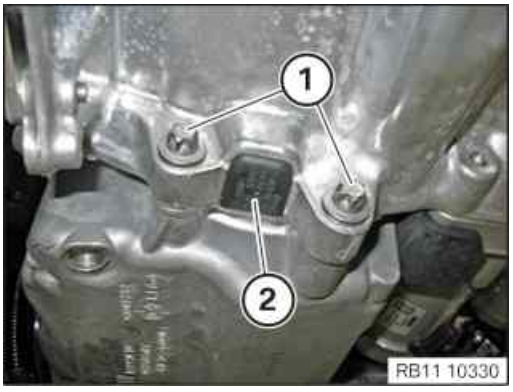
  Parts: Bolts
- Fasten the vibration damper (2) with the bolts (1).
- Tighten the screws (1).

Vibration damper with belt pulley to crankshaft

M10x65	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	120 °



- Release the transmission bolts and remove the special tool **0 493 587 (11 8 180)**.



- Tighten transmission screws (1).

Transmission to oil sump

M8			19 Nm

- Install protective cap (2).

13 – Installing the drive belt for alternator

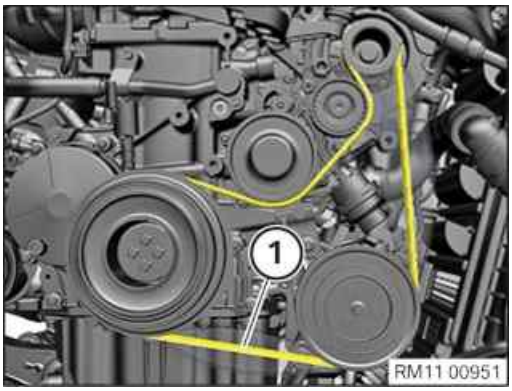
cardiagn.com

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

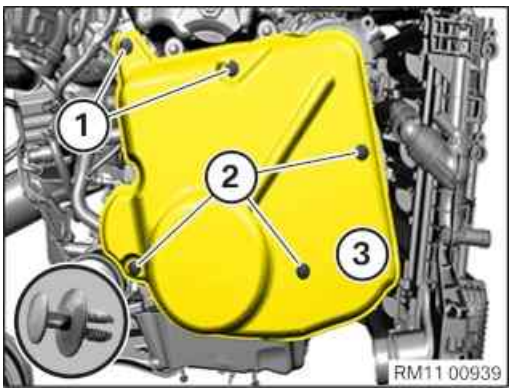
The drive belt must be replaced if contaminated with coolant- and oil residues.



- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

14 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

15 – Install right charge air duct

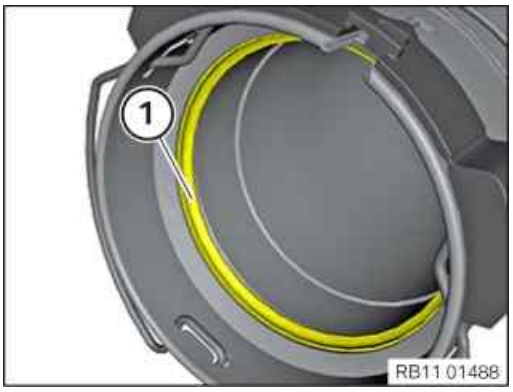
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

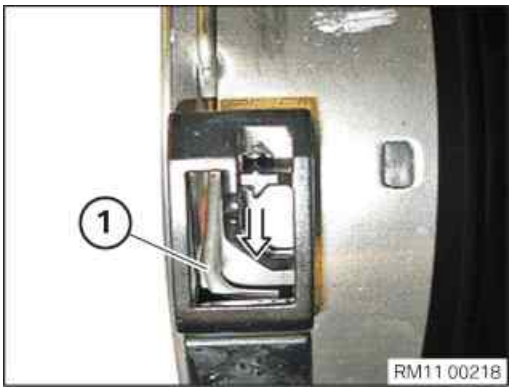
- Replace the gaskets and pressure pipe if necessary.

cardiagn.com

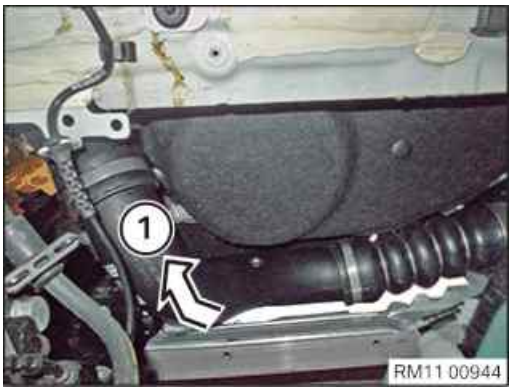


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

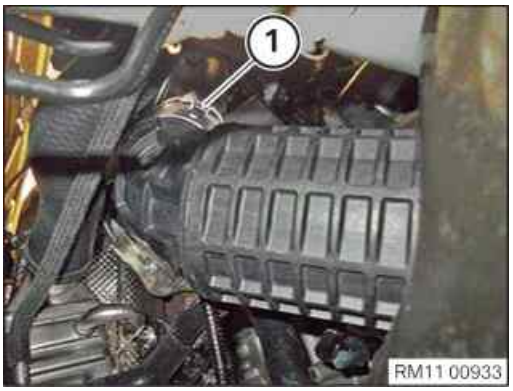
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).

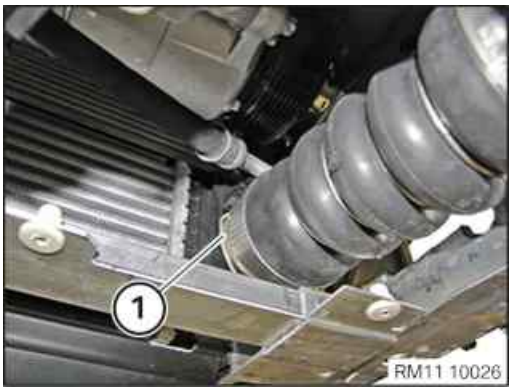


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

cardiagn.com

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

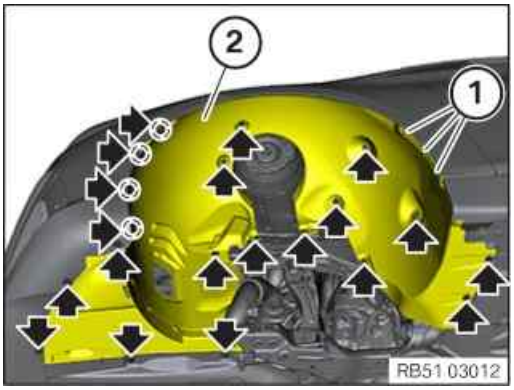
M6x25		Tightening torque	5 Nm

- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

16 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

17 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

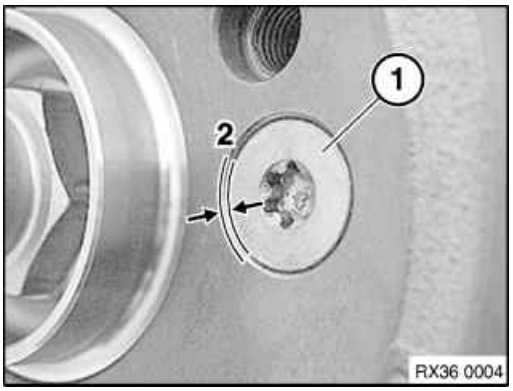
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

cardiagn.com

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

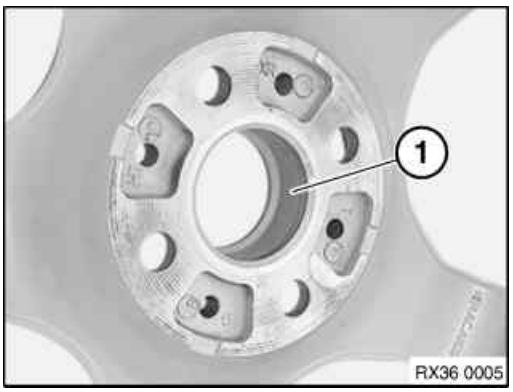


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts

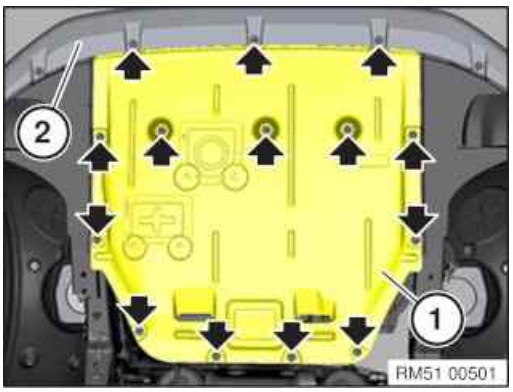
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

cardiagn.com

18 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

19 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

11 14 200 Detaching and attaching/replacing timing case cover on front at bottom (B37C)

Special tools required:

- 11 4 471
- 11 4 472
- 2 469 803
- 2 357 900

Caution!

When removing the timing case cover, renewing the timing case cover is **essential**.

Reuse of the timing case cover is **not** permitted.

Caution!

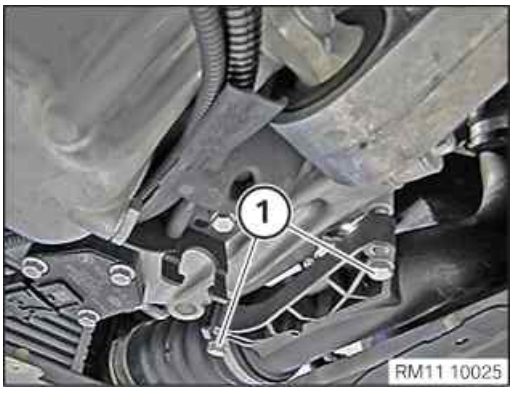
Engines with surface sealant:

Application time of sealing compound maximum 12 min.

Necessary preliminary work:

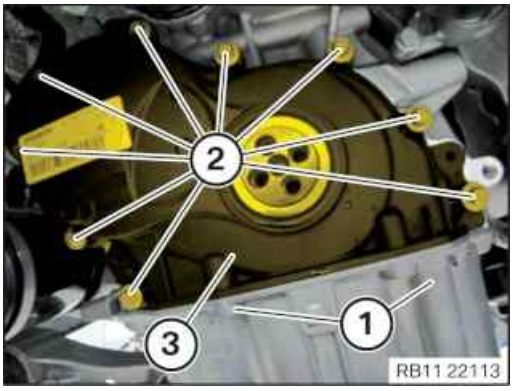
- Remove underbody protection
- Remove vibration damper.
- Remove belt tensioner for alternator.

Removal:



Loosen screws (1).

cardiagn.com



Release screws (1).

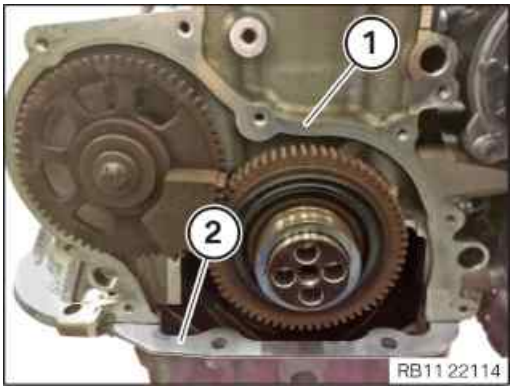
Unfasten screws (2).

Remove gear case cover (3).

Preparation for installation:

Renew timing case cover (1) **without fail**.

Parts: Gear case cover



Caution!

Do not use any metal-cutting tools (e.g. abrasive cloth) for cleaning the sealing surfaces.

Clean sealing surfaces (1) and (2) with special tool 11 4 471 and 11 4 472 of sealing residue.*Installation note:*
Clean sealing surfaces (1) and (2) with brake cleaner 3.3.

Sealing surfaces (1) and (2) **must be free** of oil, grease and cleaning agents.

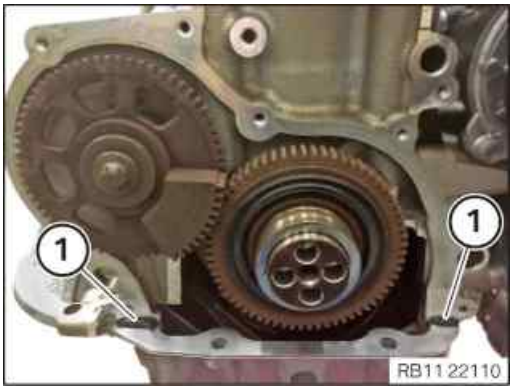
Keep special tool 2 469 803 ready.

cardiagn.com

Position sealing compound (1) on special tool 2 469 803 as shown.

Parts: Sealing compound 2.2

Installation:



Caution!

Application time of sealing compound **maximum** 12 min.

Sealing compound height approximately 2 - 2.5 mm.

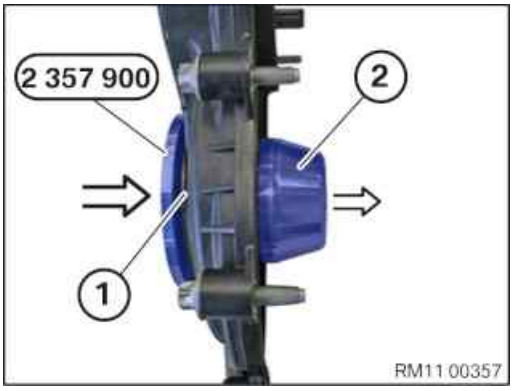
Apply sealing bead (1) approx. 5 mm as shown.

Assemble special tool 2 357 900 as shown.

Caution!

Do not use engine oil or lubricant.

cardiagn.com

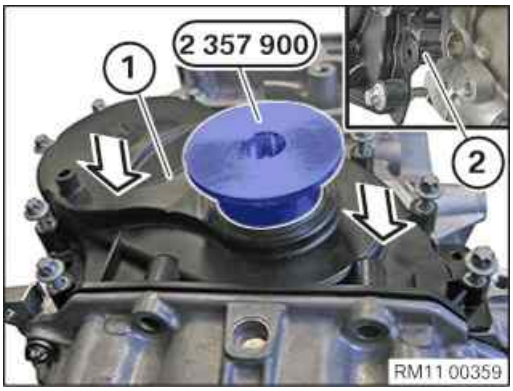


Caution!
Special tool must be resting on timing case cover (1).

Carefully push special tool 2 357 900 through sealing ring into timing case cover and abut.

Remove fitting aid (2).

Fit special tool 2 357 900 with timing case cover (1) on crankshaft hub (2).



Note:
Pay attention to both guide pins (2).

Mount timing case cover (1) on crankcase in direction of arrow.

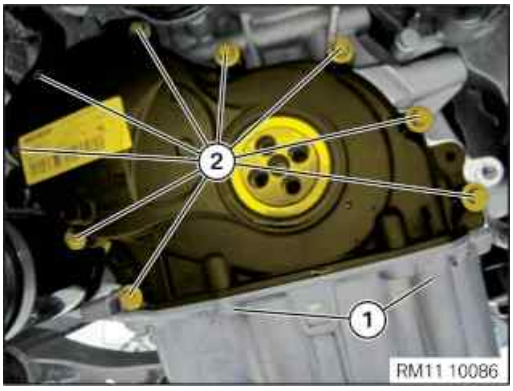
Abut screws.

Note:
Dust lip (1) must be facing outwards.

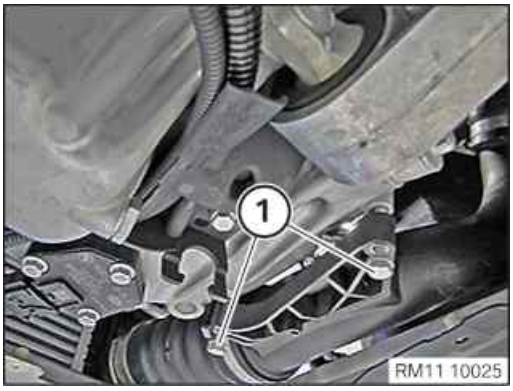
Remove special tool 2 357 900 .

Check installation position of dust lip (1).

cardiagn.com



Abut screws (2) crosswise.
Abut screws (1).
Tighten the screws (2) crosswise.
Tightening torque 11 14 3AZ.
Tighten screws (1).
Tightening torque: 11 13 2AZ.



Tighten down screws (1).
Tightening torque: 11 00 2AZ.

Required follow-up work:

- Install belt tensioner for alternator.
- Install vibration damper.
- Install underbody protection.

cardiagn.com

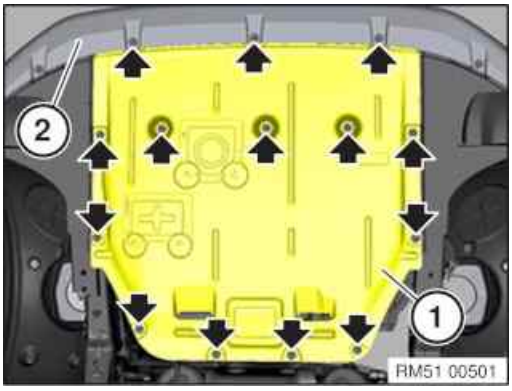
11 14 295 Remove and install / replace the acoustic cover for the oil sump

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

- See additional information.

2 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

3 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

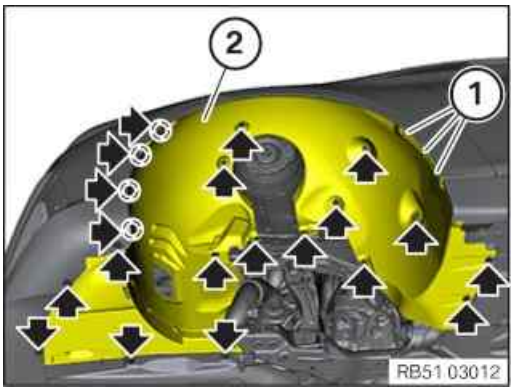
Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

4 – Removing the front right wheel arch cover

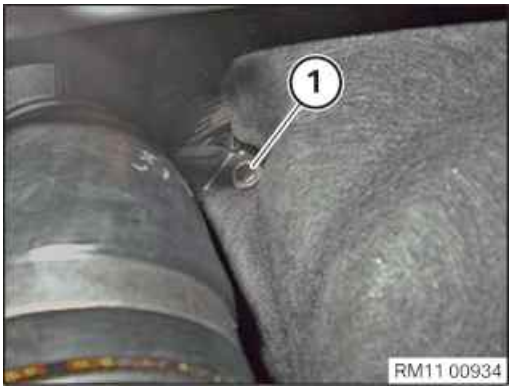
cardiagn.com



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

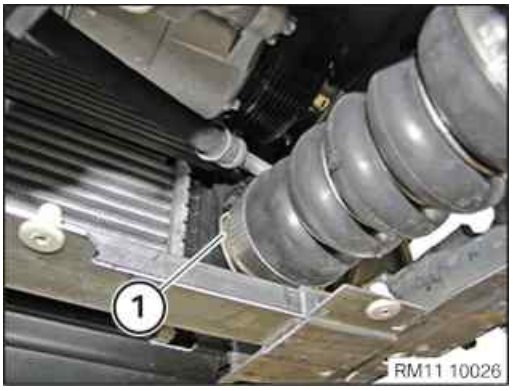
5 – Remove right charge-air line

- Release charge air duct screws (1) on oil sump.



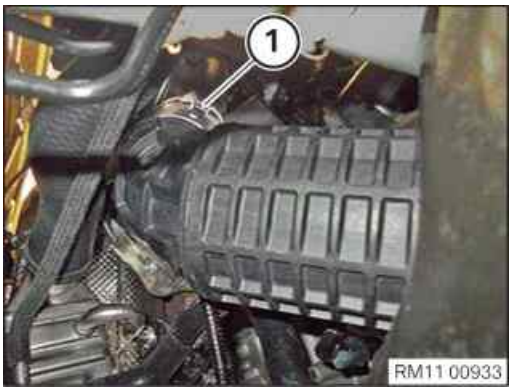
- Detach charge air duct screw connection (1) on crankcase.

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).

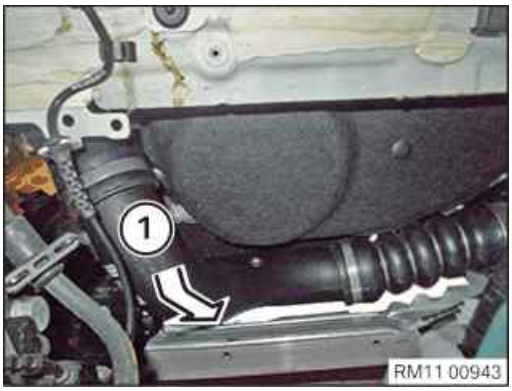


- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

cardiagn.com



- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

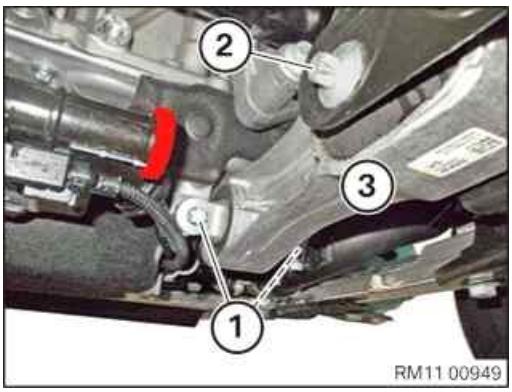
6 – Remove bracket with rubber mount

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.



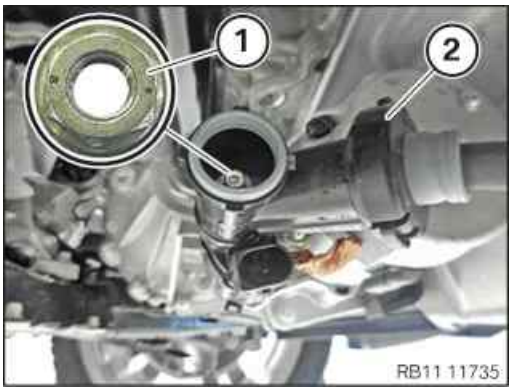
- Support the engine with the jack at a suitable point.
- Loosen screws (1) and (2).
- Guide out and remove holder (3).

MAIN WORK

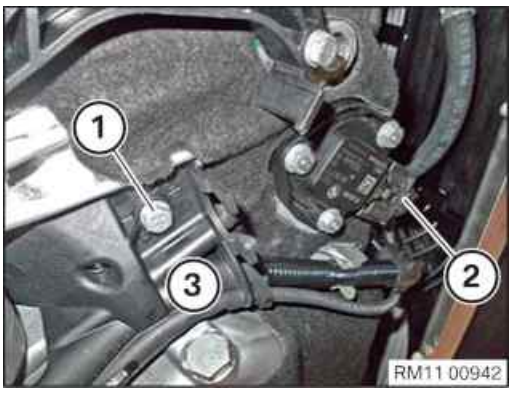
7 – Removing the acoustic cover of the oil sump

cardiagn.com

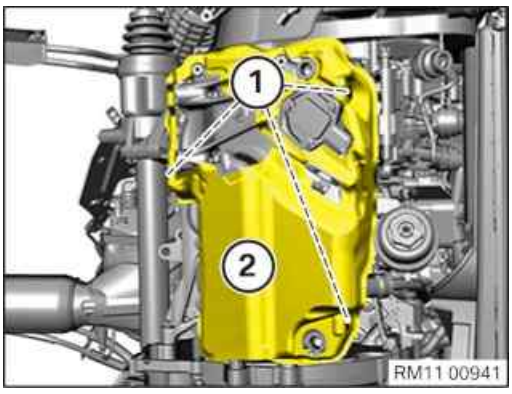
- Unlock connector (1) and pull off.
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

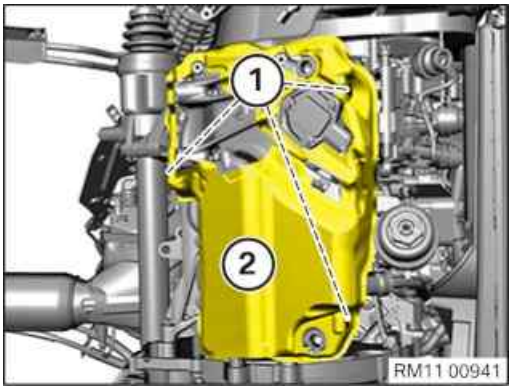


- Unscrew the screw (1) on the wiring harness to the oil sump.
- Unlock and pull off connector (2) on the oil-level sensor.
- Place wiring harness (3) to one side.



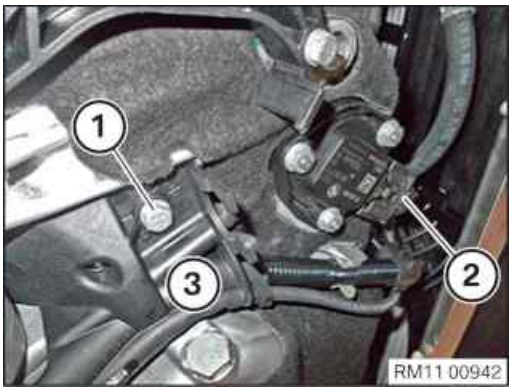
- Remove the expanding rivets (1) on both sides of the acoustic cover.
- Feed out and remove the acoustic cover (2).

8 – Installing the acoustic cover for the oil sump



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

cardiagn.com



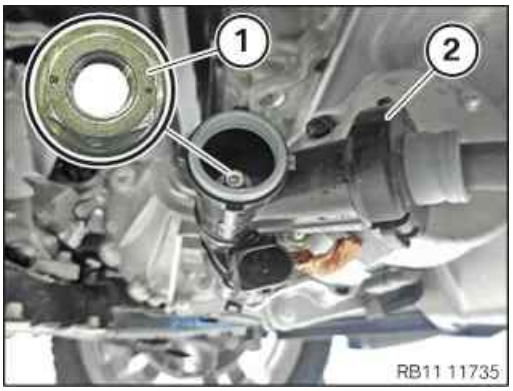
- Position wiring harness (3).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm

- Connect and lock the connector (2) on the oil-level sensor.

  The connector must lock audibly.



CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

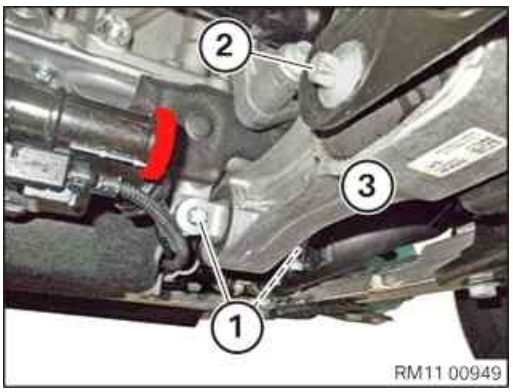
M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).

  The connector must engage audibly.

POSTPROCESSES

9 – Install the holder with the rubber mount



- Insert and install the holder (3).
- Tighten the screws (1) and (2) hand-tight.
- Release jack.
- Tighten down screw (2).

Holder to front axle support

M12		Tightening torque	100 Nm

- Tighten the screws (1).

Bracket to oil sump

M12		Tightening torque	100 Nm

10 – Install right charge air duct

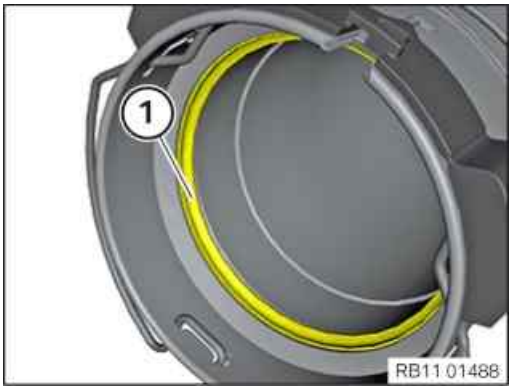
cardiagn.com

RISK OF DAMAGE

Damage to the exhaust turbocharger.

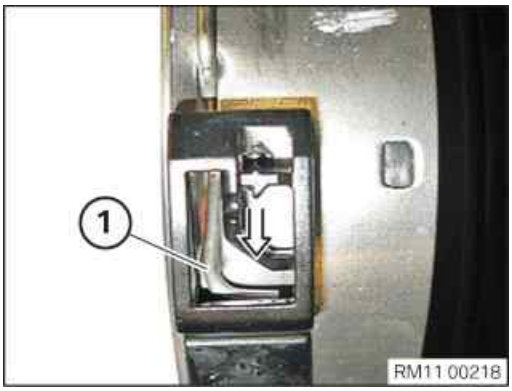
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

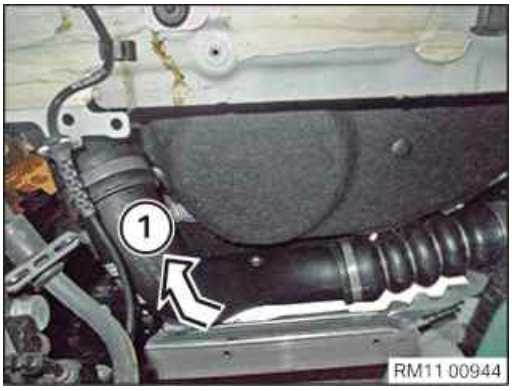


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

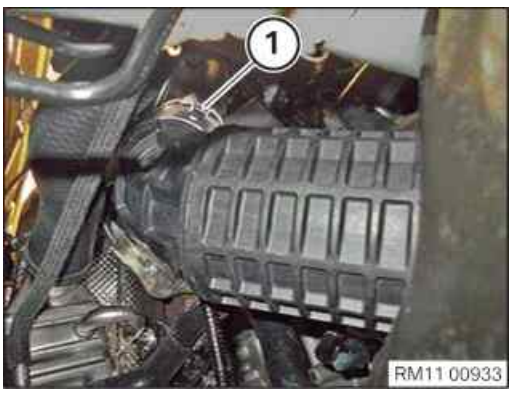
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).



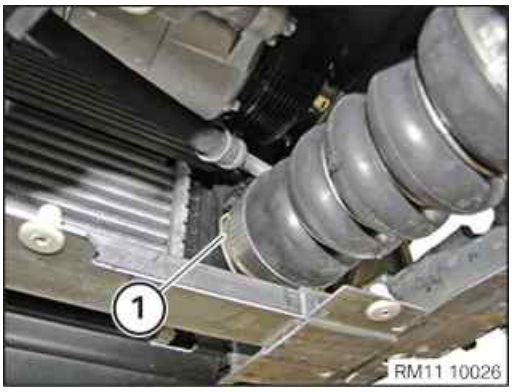
- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.

cardiagn.com



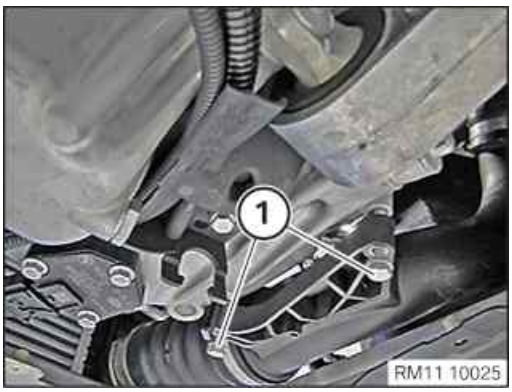
- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm

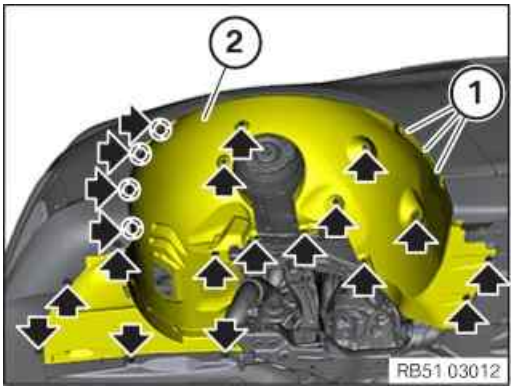


- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

11 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

12 – Installing the front right wheel

▶ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

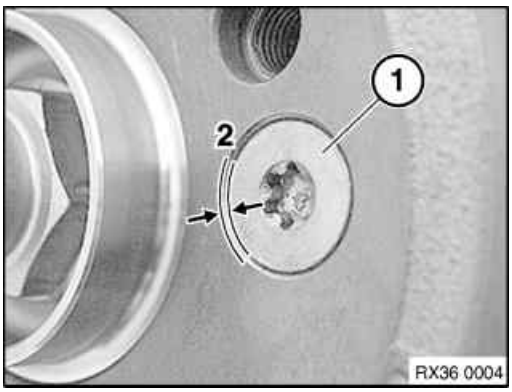
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

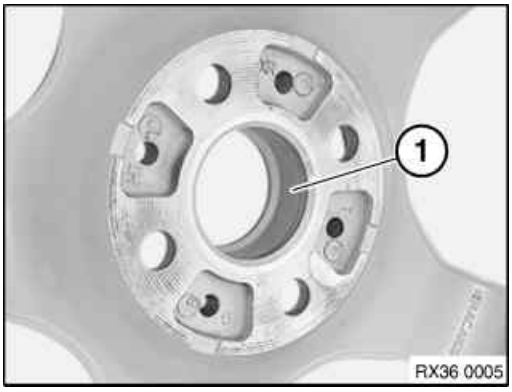


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts

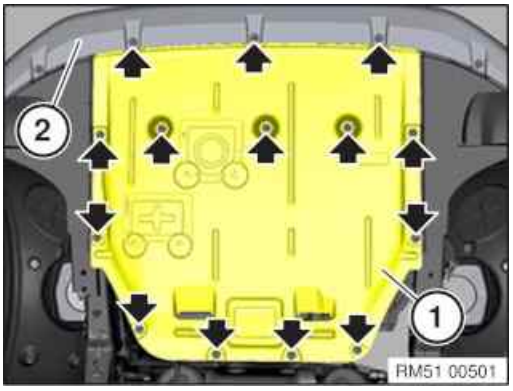
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

cardiagn.com

13 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

14 – Disconnecting all battery earth leads

- See additional information.

11 14 110 Removing and installing, sealing/replacing rear timing case cover (B37C)

Special tools required:

- 11 4 470
- 11 8 815
- 11 8 811
- 11 8 812
- 11 8 813
- 11 8 814
- 11 8 810

Important!

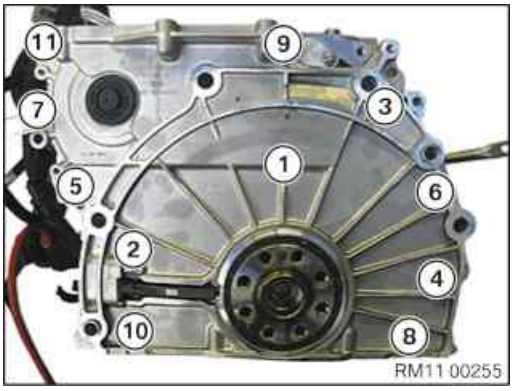
Engines with surface sealant:

Application time of sealing compound max. 12 minutes.

Necessary preliminary tasks:

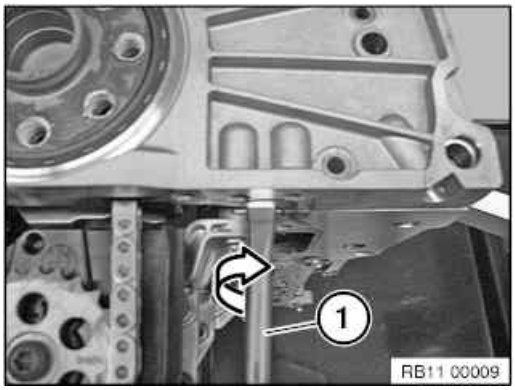
- Remove engine with gearbox.
- Mount engine on assembly stand.
- Remove flywheel.
- Remove cylinder head.
- Removing oil sump.

REMOVAL:

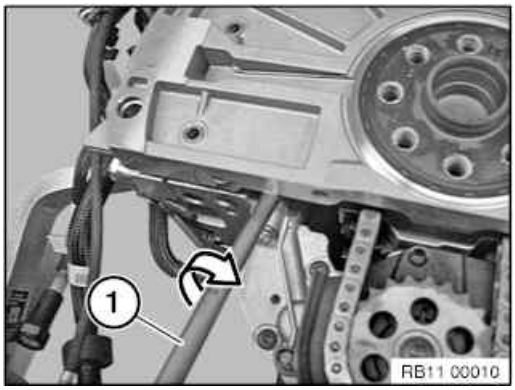


Release screws in the sequence **11 to 1**.

cardiagn.com

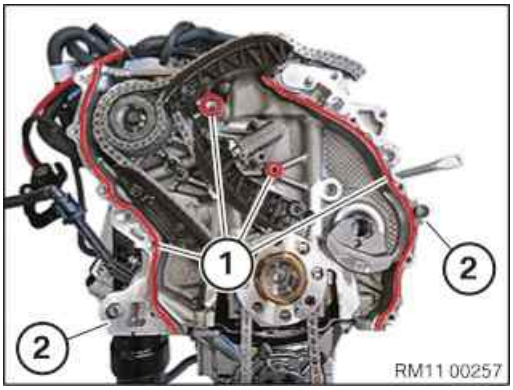


Loosen gear case cover with a screwdriver (1) in direction of arrow.



Loosen gear case cover with a screwdriver (1) in direction of arrow.

Remove gear case cover.



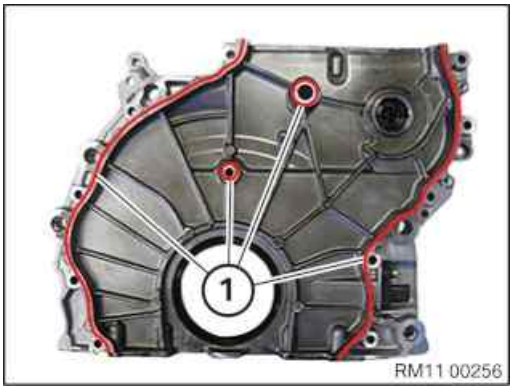
Important!

Do not use any metal-cutting tools (e.g. emery cloth).

Remove gasket remnants from the crankcase with special tool 11 4 470 .

Check that fitting sleeves (2) are correctly fitted, replace if necessary.

INSTALLATION:



When replacing the rear timing case cover:

Installation note:

Application time of sealing bead (1) max. 12 min.

Thickness of sealing bead: **1.5 to 2.0 mm**.

Apply sealing bead (1) at the positions indicated (see graphic) on the inside of the timing case cover.

Parts:

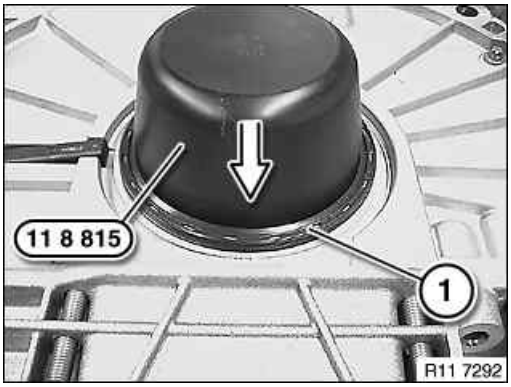
Sealing bead (1): sealant 2.2.

cardiagn.com

Important!

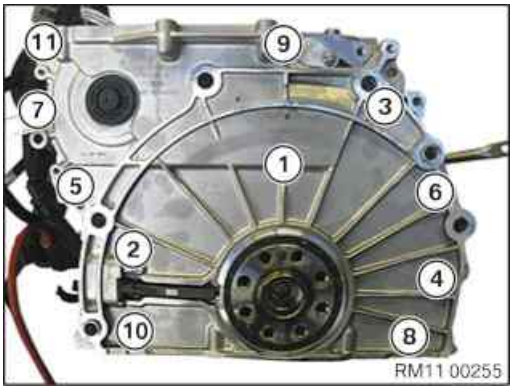
The radial shaft seal must be installed dry.

Do not use engine oil or lubricant.



Preassemble special tool 11 8 815 on crankshaft.

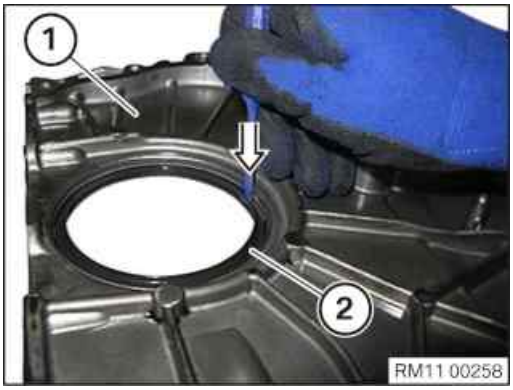
Mount the timing case cover with radial shaft seal (1).



Insert bolts.

Tighten bolts in the sequence **1 to 11**.

Tightening torque: 11 14 1AZ.

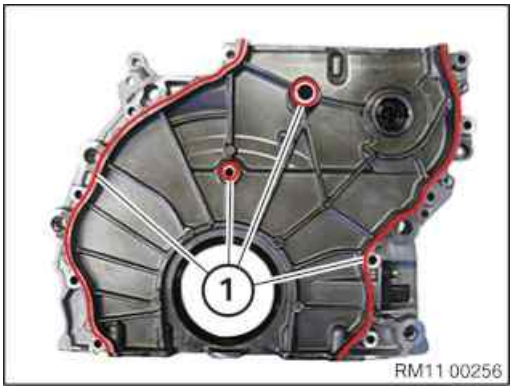


When reinstalling the timing case cover:

Support the timing case cover (1) from below.

Place punch inside in the radial shaft seal (2).

Drive radial shaft seal (2) outwards.



Installation note:
Application time of sealing bead (1) max. 12 minutes.

Thickness of sealing bead **1.5 to 2.0 mm**.

Important!
Do not use any metal-cutting tools (e.g. emery cloth).

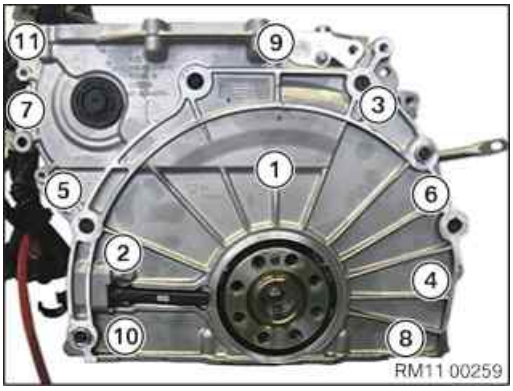
Remove gasket remnants from the timing case cover using special tool 11 4 470 .

Apply sealing bead (1) at the positions indicated (see graphic) on the inside of the timing case cover.

Parts:

Sealing bead (1): sealant 2.2.

cardiagn.com

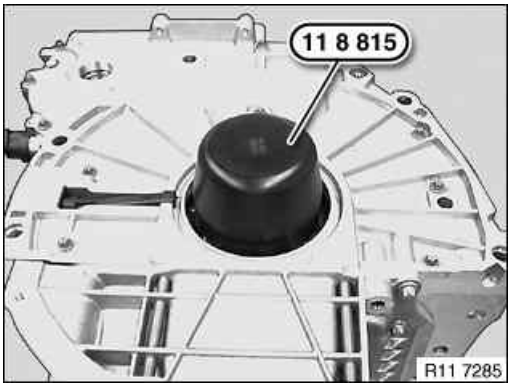


Mount timing case cover without radial shaft seal.

Insert bolts.

Tighten bolts in the sequence **1 to 11**.

Tightening torque: 11 14 1AZ.

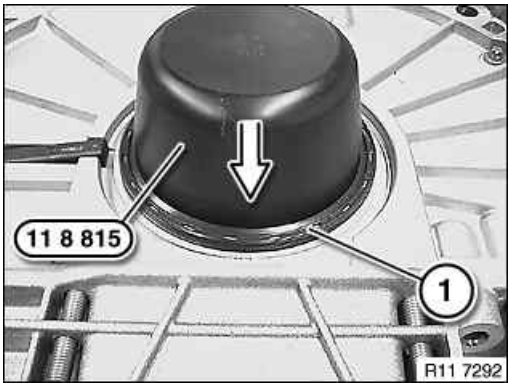


Position special tool 11 8 815 on crankshaft.*Note:*
Graphic shows: N47 D20.

Important!

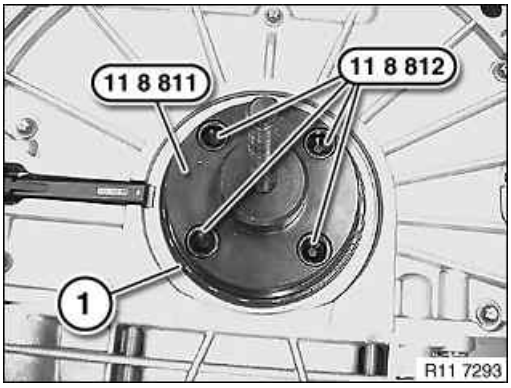
The radial shaft seal must be installed dry.

Do not use engine oil or lubricant.



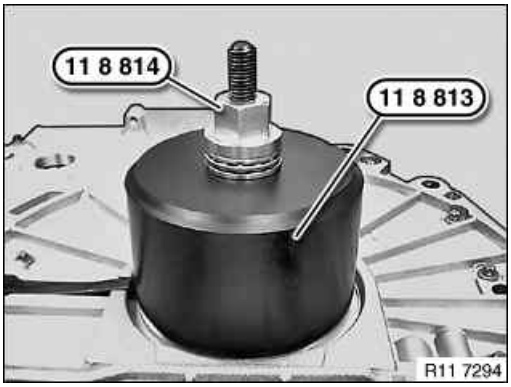
Use special tool 11 8 815 to fit the radial shaft seal (1) in the direction of the arrow up to the timing case cover and position.

Remove special tool 11 8 815 .

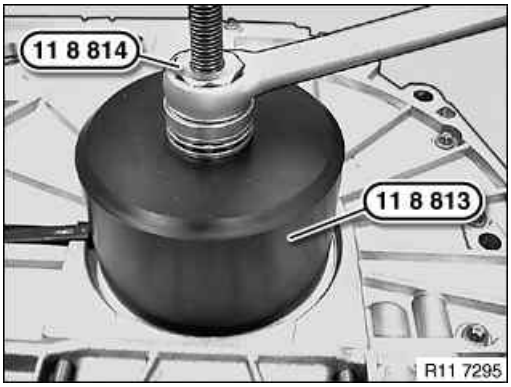


Fasten special tool 11 8 811 with special tool 11 8 812 on the crankshaft.

cardiagn.com



Slide on special tool 11 8 813 .
Screw down special tool 11 8 814 .



Press in radial shaft seal with special tool 11 8 813 .
Screw in special tool 11 8 813 up to gear case cover.

Remove all special tools 11 8 810 .

Concluding tasks:

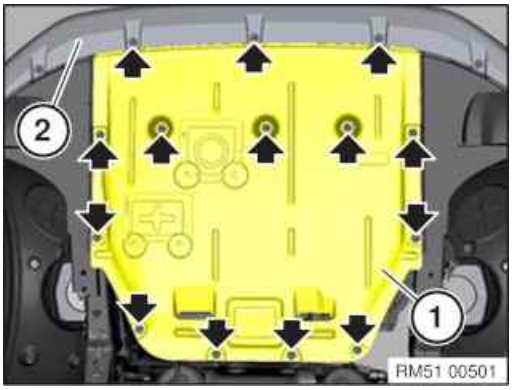
- Install oil sump.
- Install cylinder head.
- Install flywheel.
- Remove engine from assembly stand.
- Install engine with transmission.

cardiagn.com

11 14 290 Removing and installing/renewing front engine acoustic cover

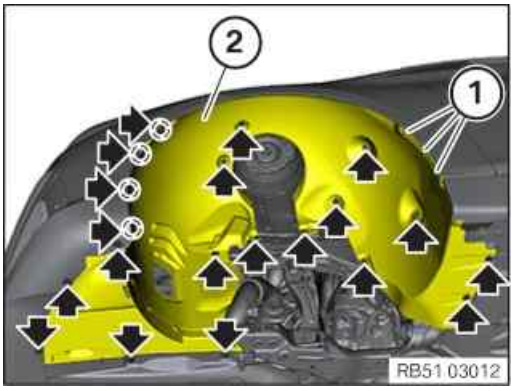
PRELIMINARY WORK

1 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

2 – Removing the front right wheel arch cover



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

3 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

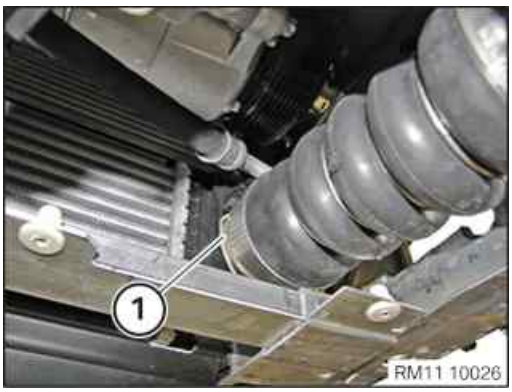
4 – Remove right charge-air line

cardiagn.com

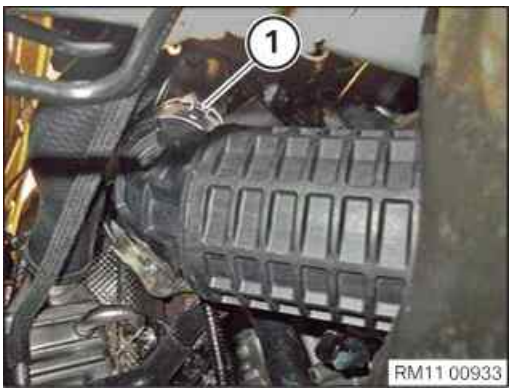
- Release charge air duct screws (1) on oil sump.

- Detach charge air duct screw connection (1) on crankcase.

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).

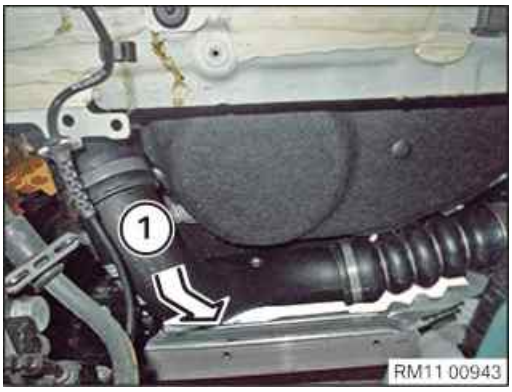


- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.



- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

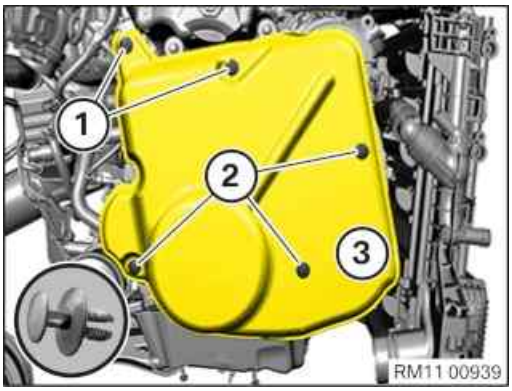
cardiagn.com



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

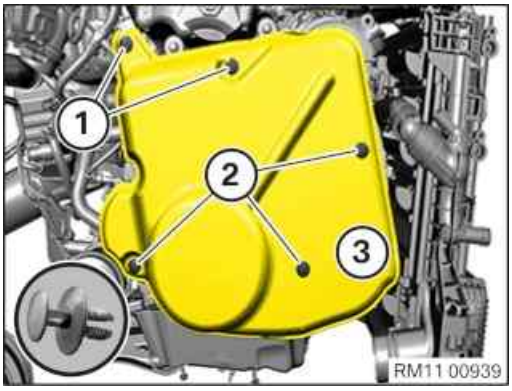
MAIN WORK

5 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

6 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

POSTPROCESSES

7 – Install right charge air duct

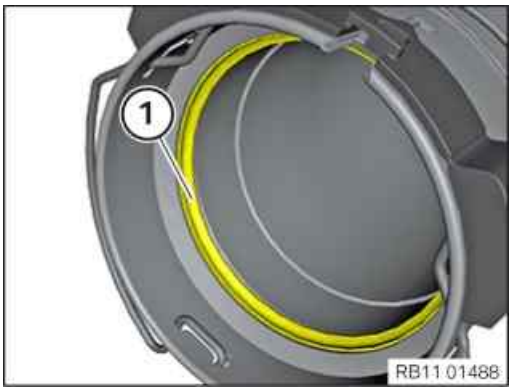
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

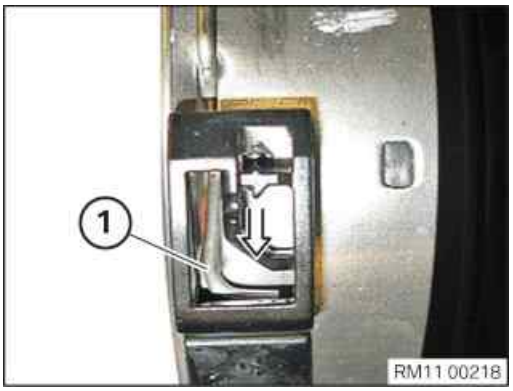
- Replace the gaskets and pressure pipe if necessary.

cardiagn.com

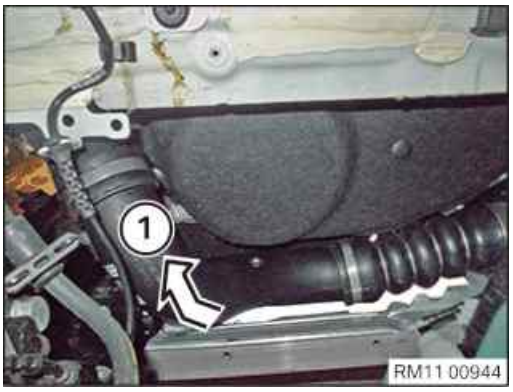


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

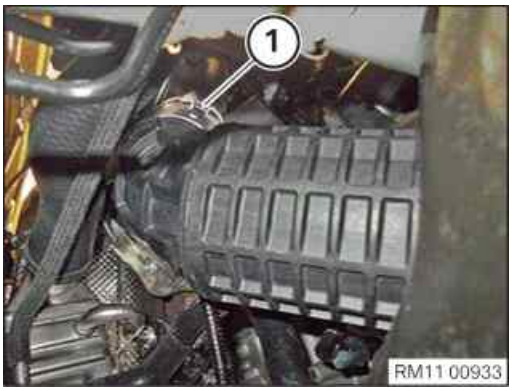
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).

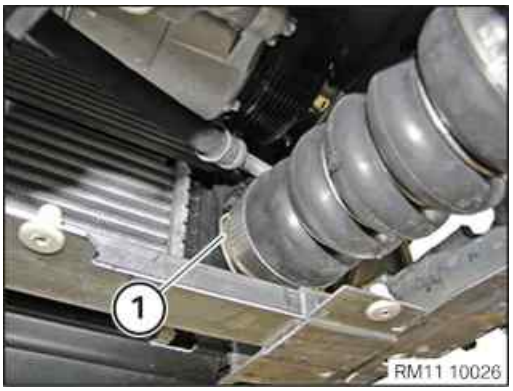


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

cardiagn.com

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

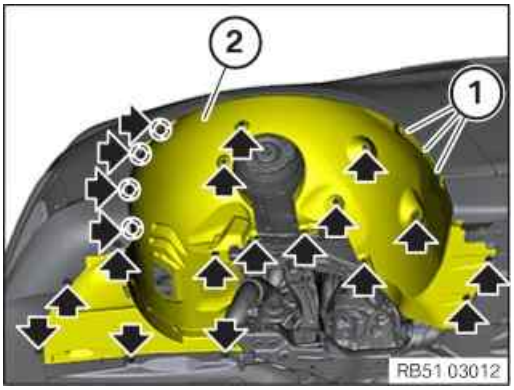
M6x25		Tightening torque	5 Nm

- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

8 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

9 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

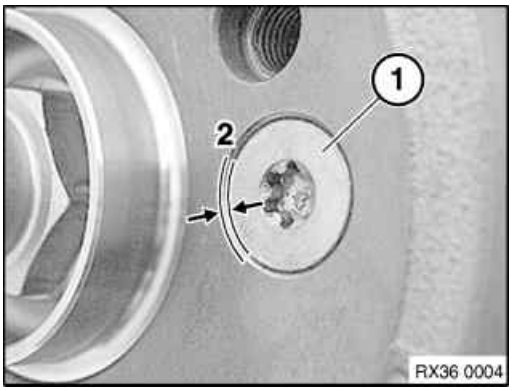
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

cardiagn.com

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

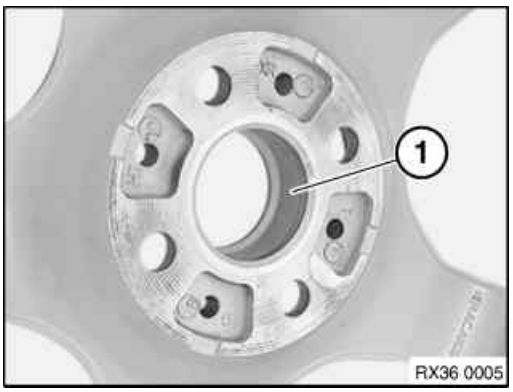


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

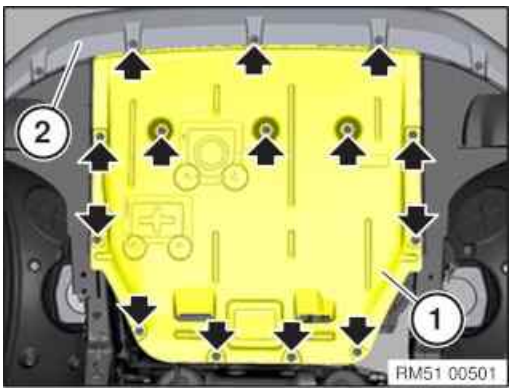
  Parts: Wheel bolts
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

cardiagn.com

10 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

Additional Information

Overview of Tightening Torques

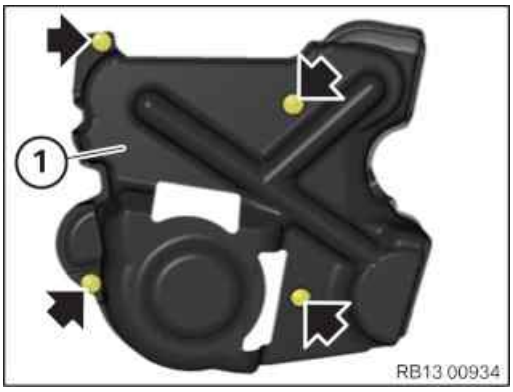
11 14 290 Removing and installing/replacing front acoustic engine cover (B37)

Necessary preliminary tasks:

- Remove acoustic cover
- Remove front underbody protection.
- Right charge air line. **(Loosen only)**

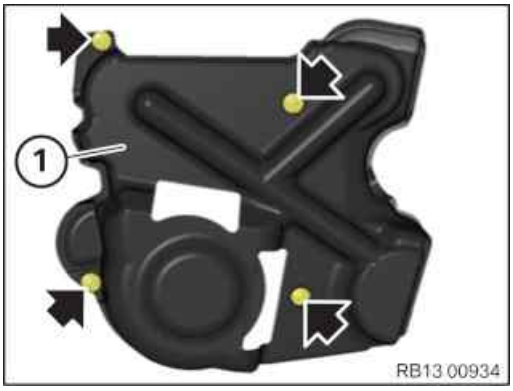
Removal:



Unlock and loosen clamp along the arrows.

Disengage acoustic cover (1) towards the bottom and remove.

Installation:



Feed in acoustic cover (1) and install.

Connect and lock clamps along the arrows.

Required reworking:

- Install the acoustic cover.
- Install front underbody protection.
- Install right charge air line.

cardiagn.com

This documentation refers to special tools that were not yet available when going to press.

11 14 110 Removing and installing/sealing or replacing bottom timing case cover

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.

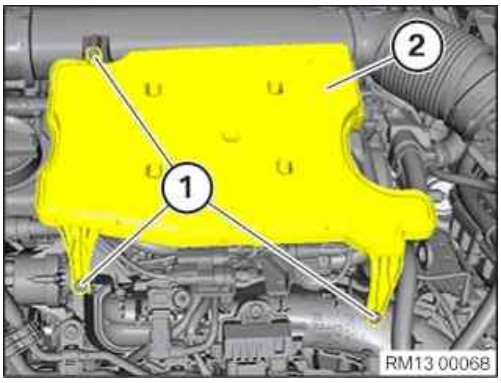
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

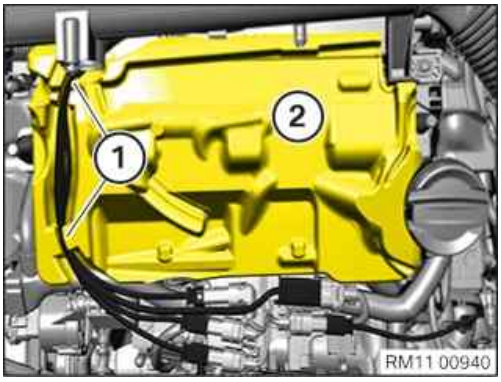
3 – Remove resonator

cardiagn.com



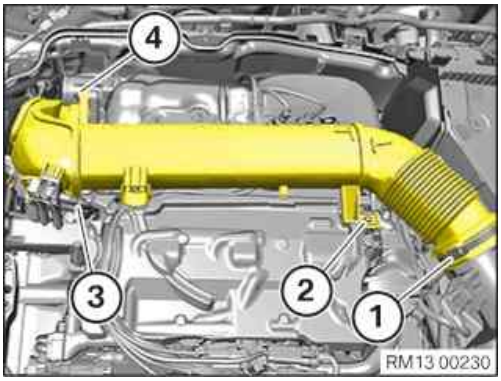
- Loosen screws (1).
- Guide out and remove the resonator (2).

4 – Remove the acoustic cover for the injectors

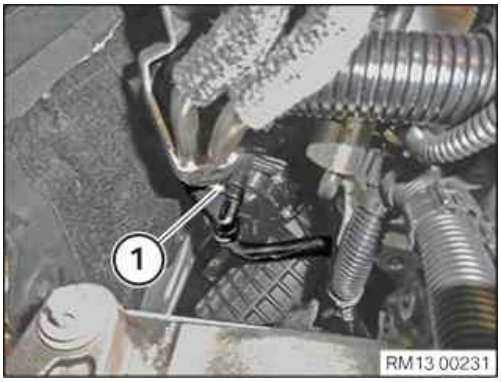


- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

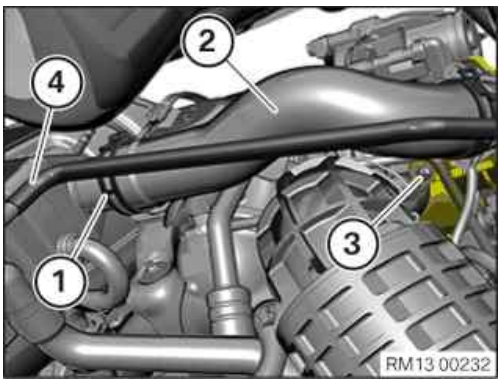
5 – Removing clean air pipe



- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).

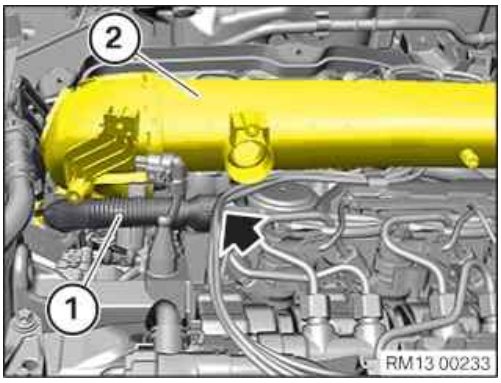


- Unlock and loosen connector (1).

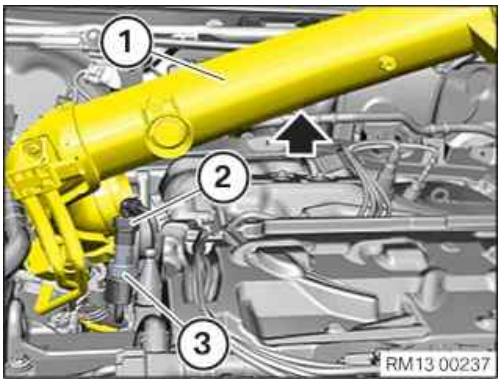


- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.

cardiagn.com



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

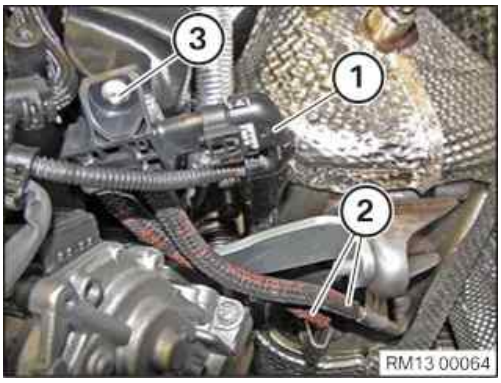
6 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

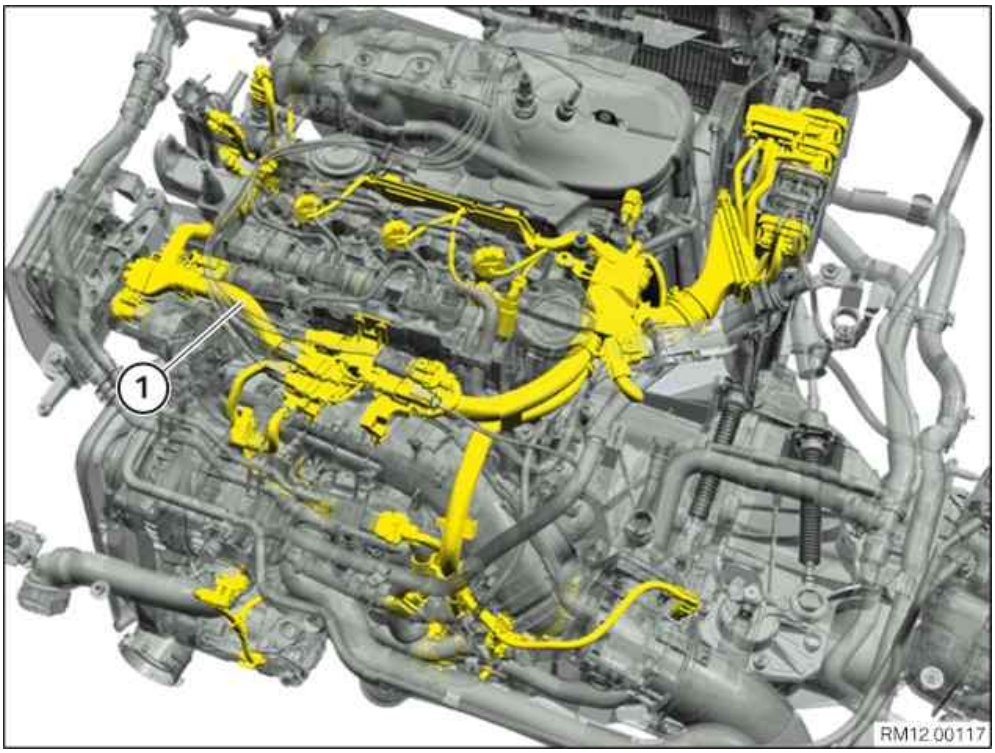


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

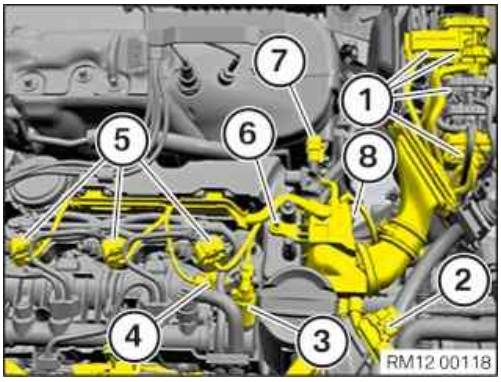
7 – Removing assemblies (on lifting table)

cardiagn.com

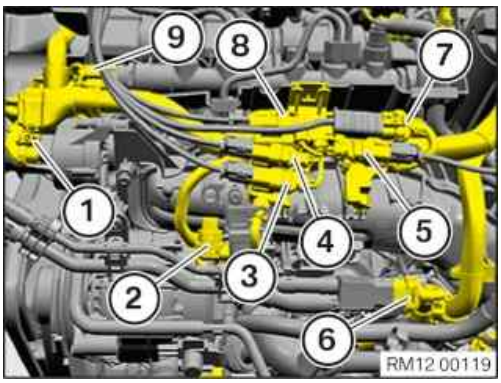
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine



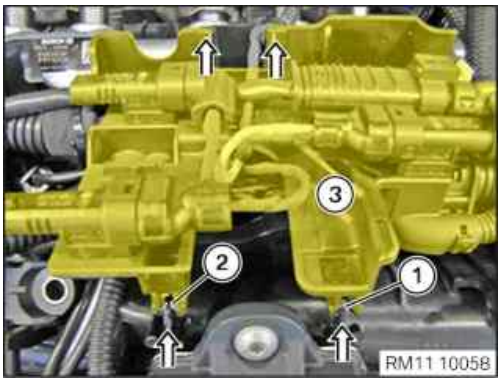
- Remove the connector (1) of the integrated supply module (PDM) and the DME control unit.
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock the connector (3) and disconnect it from the fuel pressure regulator.
- Unlock the connector (4) and disconnect it from the camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock the connector (7) and disconnect it from the differential pressure sensor.
- Unlock the connector (8) and disconnect it from the exhaust-gas recirculation valve.



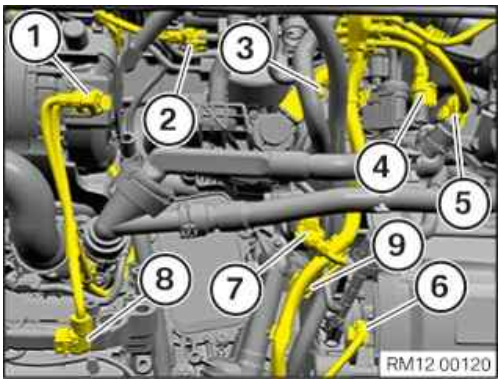
- Unlock the connector (1) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (6) and disconnect from the fuel pressure and temperature sensor.
- Unlock connector (7) and pull it off from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.
- Unlock connector (9) and pull off from the rail pressure sensor.

▶ **Removing the cable clips from the intake plenum**

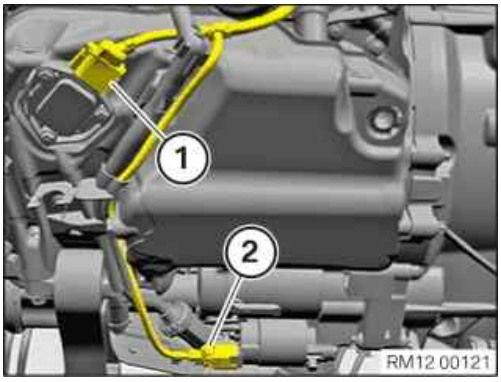
cardiagn.com



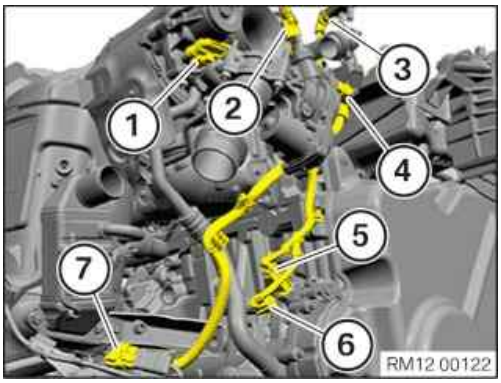
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.



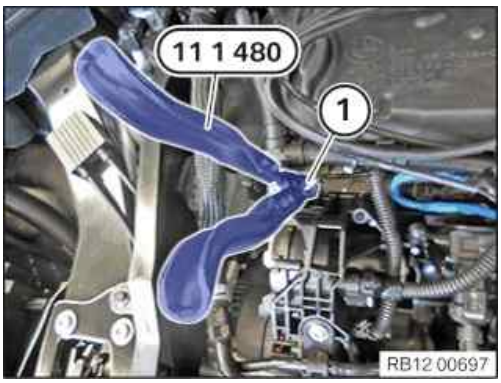
- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock the connector (3) and pull it off the high pressure pump.
- Unlock and disconnect the connector (4) from the electric changeover valve.
- Unlock connector (5) and pull off from throttle body.
- Unlock the connector (6) and pull it off the crankshaft sensor.
- Unlock the connector (7) and disconnect it from the oil pressure sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.



- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

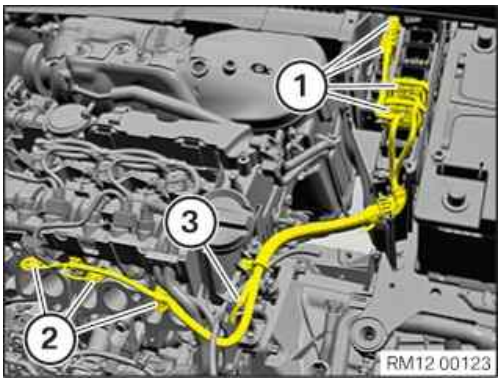


- Unlock the connector (1) and pull it off the exhaust turbocharger.
- Unlock the connector (2) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull off from low pressure exhaust-gas recirculation valve.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Unlock connector (7) and pull it off from the monitoring oxygen sensor.
- Detach, feed out and remove the wiring harness from the clamps.



- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

cardiagn.com



- Pull off the connector (2) of the glow elements using the special tool **0 490 796 (11 1 480)** .
- Loosen screw (3).
- Guide out and remove the connector (1) with the wiring harness.

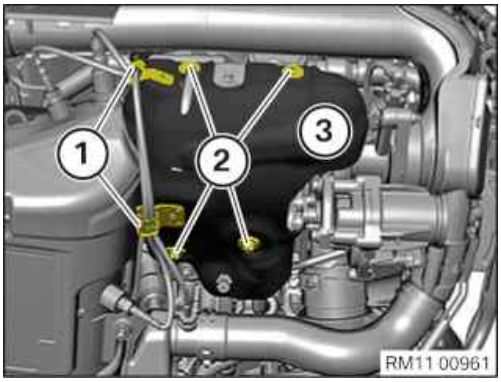
▶ Removing heat shield from top exhaust turbocharger

WARNING

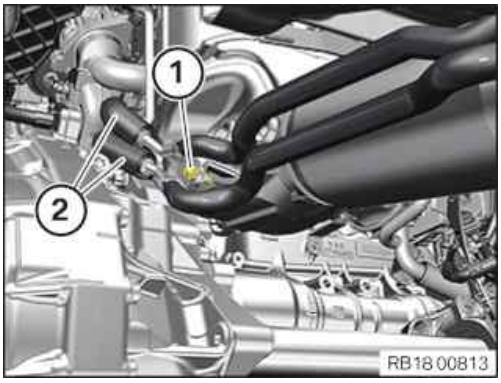
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



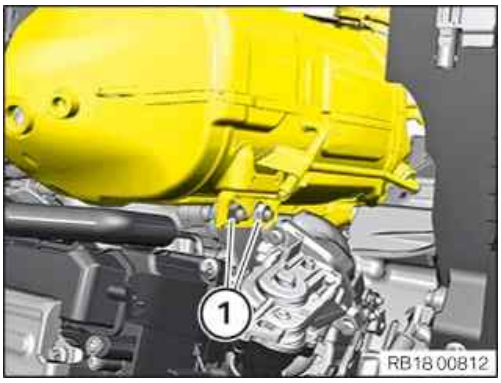
- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).



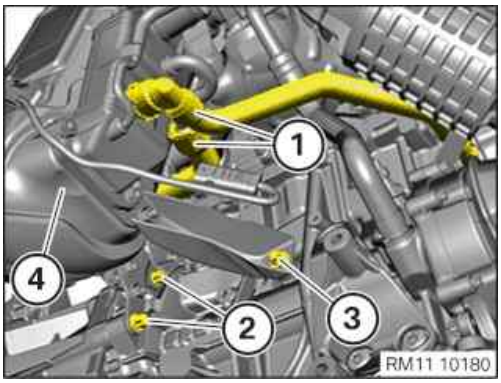
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

cardiagn.com



- Loosen nuts (1).



- Unlock and pull off coolant lines (1).
- Loosen screws (2).
- Loosen screw (3).
- Guide out and remove diesel particulate filter (4).

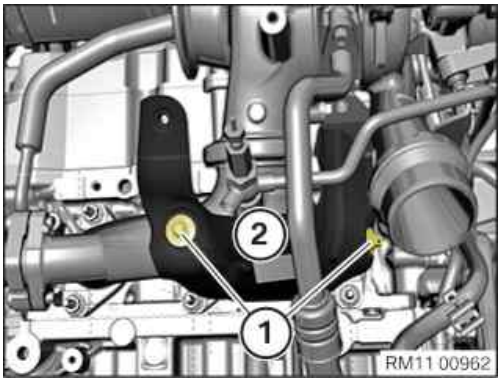
▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

▶ **Removing heat shield from rear exhaust turbocharger**

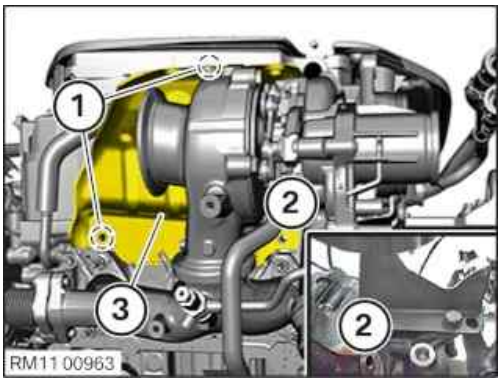
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



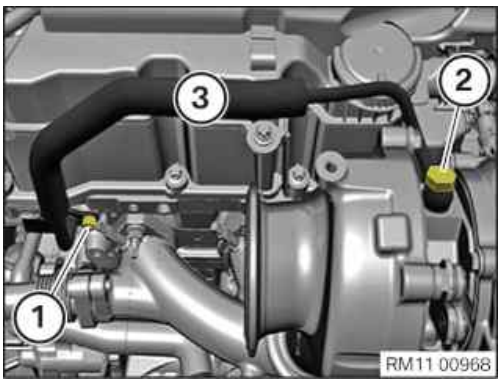
- Loosen screws (1).
- Loosen screw (2).

  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

▶ **Remove the oil feed line for the exhaust turbocharger**

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Loosen screw (1).
- Unscrew the banjo bolt (2).
- Pull the oil feed line (3) out of the cylinder head, guide it out and remove it.

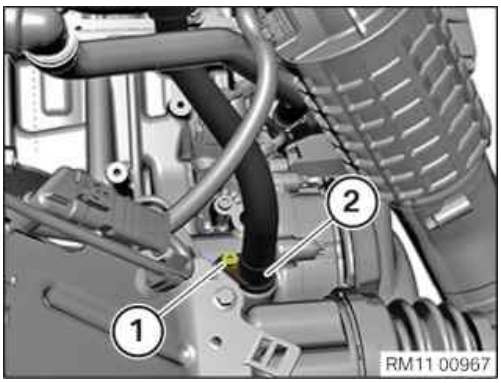
▶ **Removing the oil return line for the exhaust turbocharger**

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

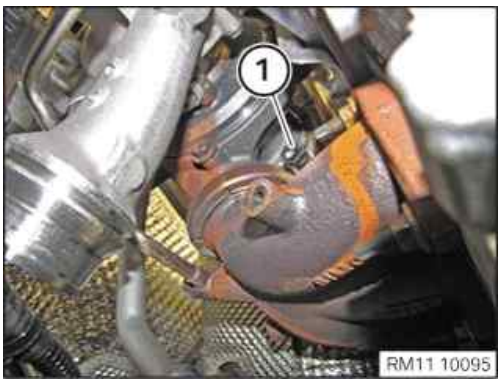
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screw (1).
- Pull the oil return line (2) out of the crankcase.

cardiagn.com

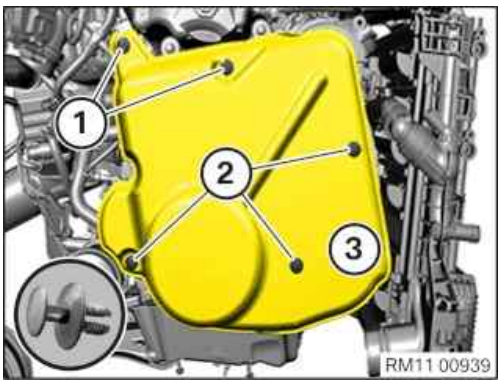
- Loosen screws (1).
- Feed out and remove oil return line (2) downwards.

- Release the screw (1) for the bracket on the exhaust turbocharger and on the crankcase.



- Release the V-clip (1) and remove.
- Take the exhaust turbocharger off of the exhaust manifold.

▶ **Removing the acoustic cover for the engine at the front**



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

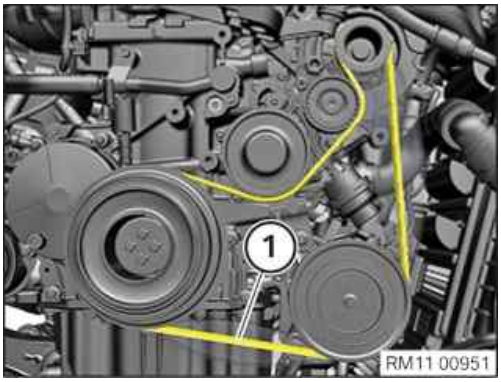
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

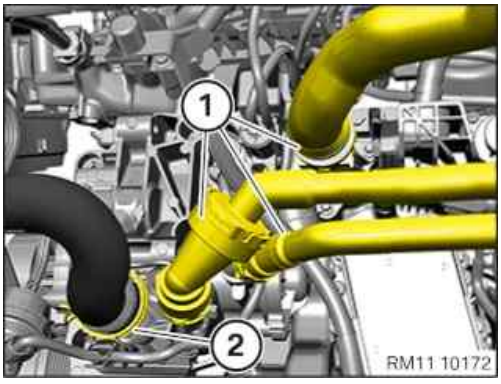
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .

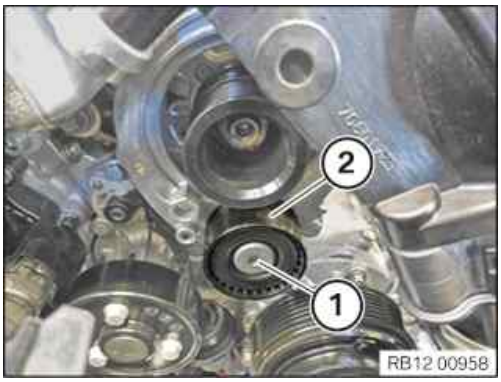


- Guide out the drive belt for the alternator (1) and remove it.

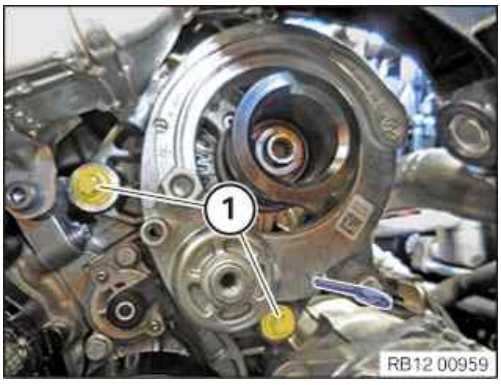


- Unlock and remove coolant lines (1).
- Release the clamp (2) and remove the coolant hose.

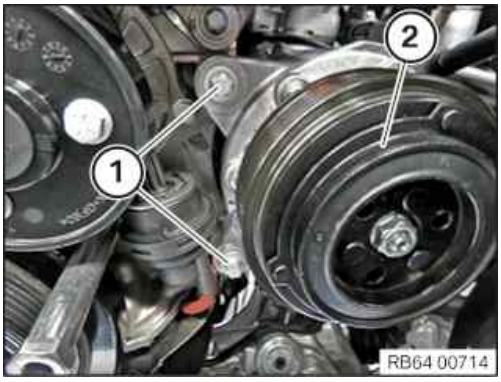
cardiagn.com



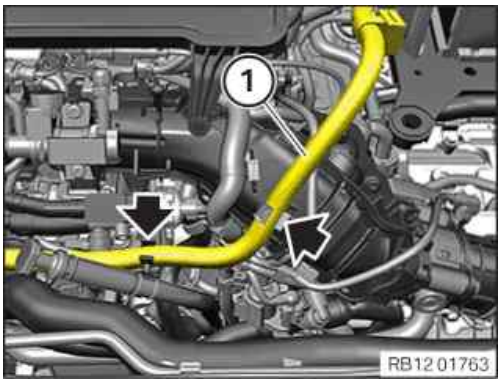
- Loosen screw (1).
- Remove the deflecting element (2).



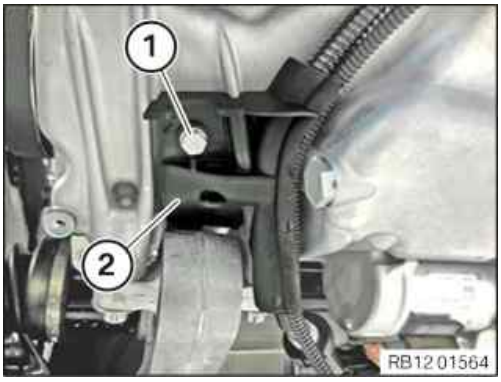
- Loosen screws (1).
- Remove alternator.



- Loosen screws (1).
- Remove air conditioning compressor (2).



- Release the positive battery cable (1) from the clamps (arrows).



- Loosen screw (1).
- Guide out and remove holder (2).

cardiagn.com

- Feed out positive battery cable from the clamps (1) and remove.

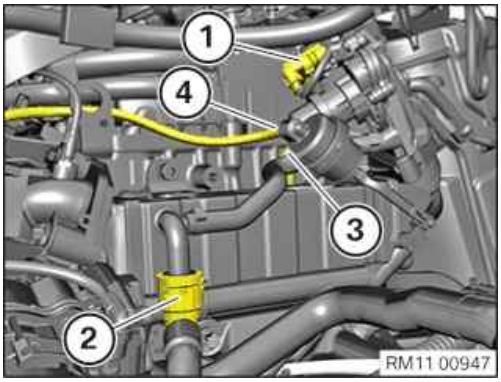
▶ Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

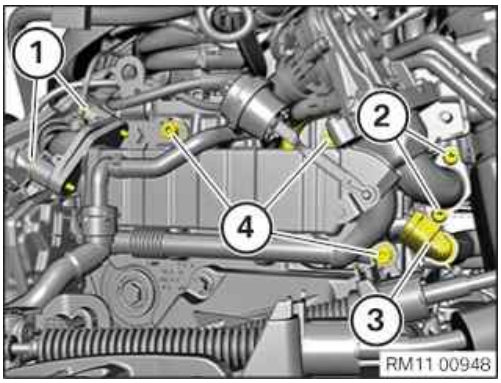
- Perform all work only on components that have cooled down.



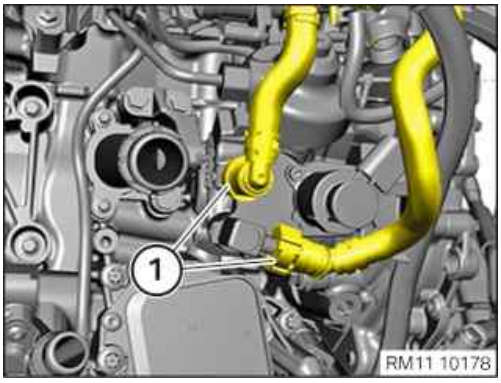
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

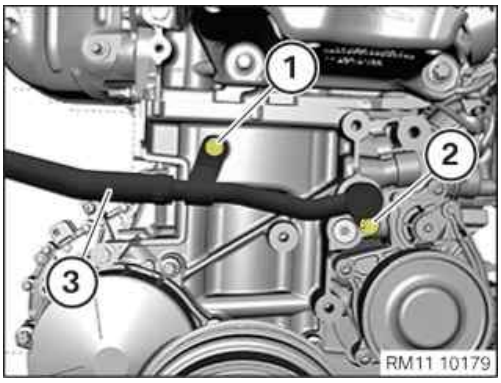


- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.



- Unlock the fuel lines (1) and release them from the high pressure pump.
- Remove the fuel lines (1) .

cardiagn.com



- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Detach the engine from the manual gearbox

Prerequisite

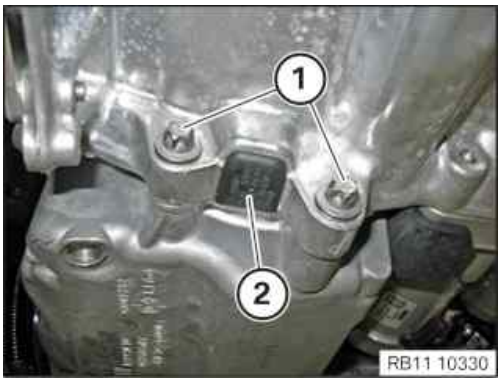
Engine has been removed.

CAUTION

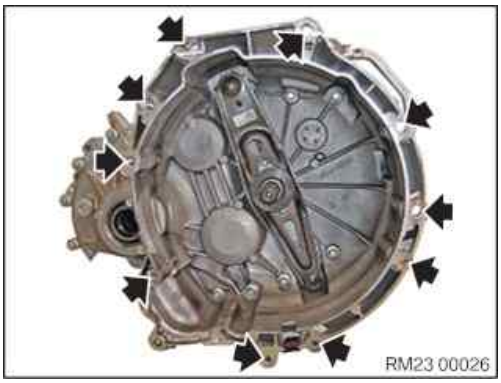
Heavy component.

Heavy components can lead to injury or damage.

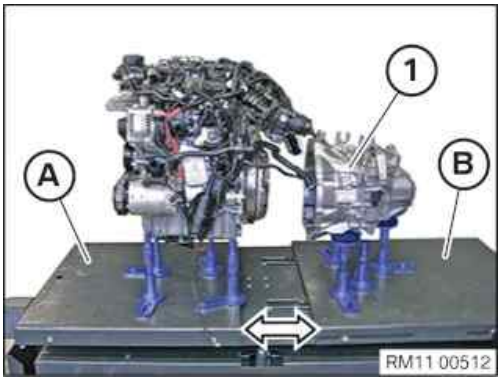
- Remove and install heavy components with the aid of another person/other persons.



- Loosen screws (1).
- Remove protective cap (2).



- Remove screws (arrows).



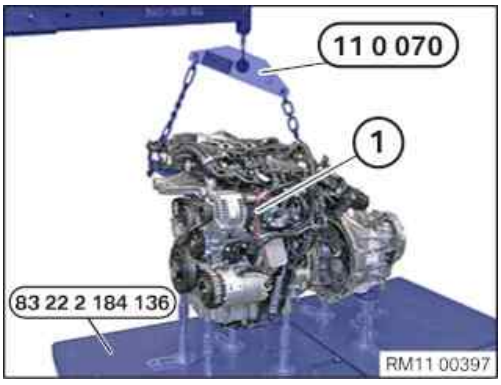
- Slide the table top (B) in the direction of the arrow and slide the manual gearbox (1) to the side.

cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm



- Attach engine lifter to special tool **0 490 579 (11 0 070)** and lift engine (1) off lifting table.

9 – Mount engine on assembly stand

CAUTION

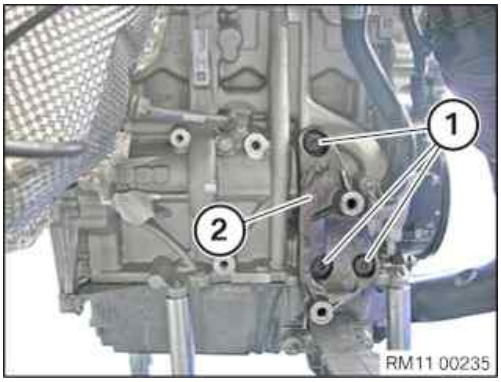
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

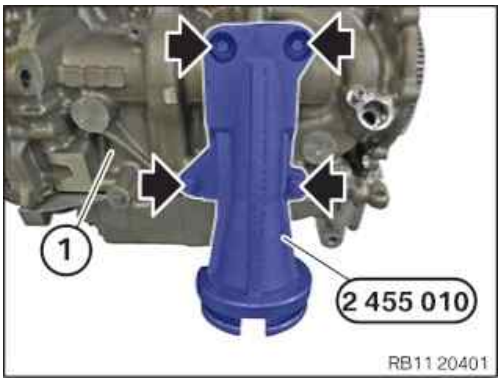
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Loosen screws (1).
- Guide out and remove holder (2).

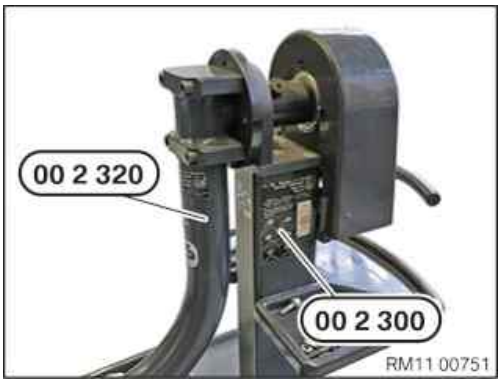
cardiagn.com



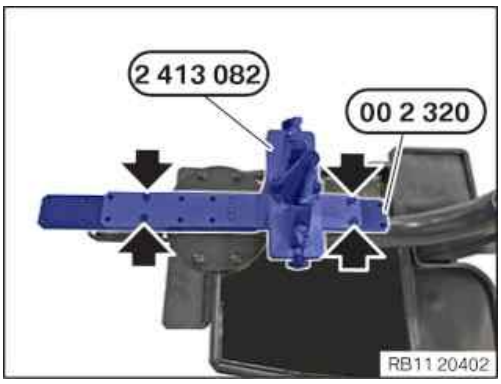
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm



- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.

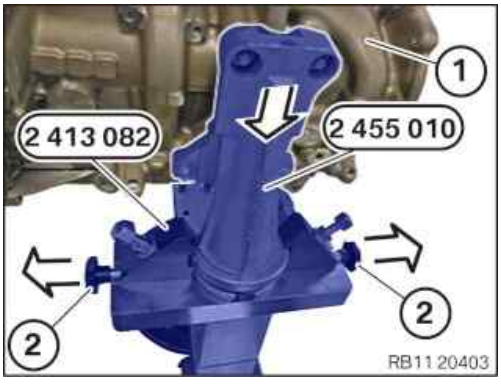


- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

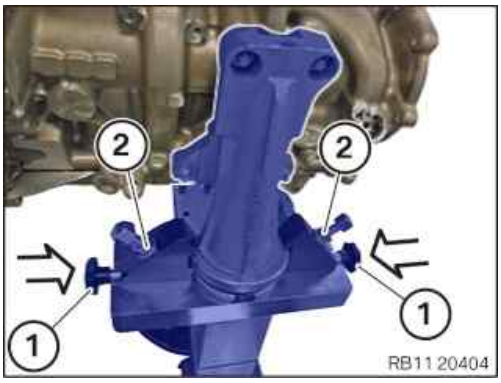
M14x35		Tightening torque	160 Nm

- Position the engine lifter with the special tool **0 490 579 (11 0 070)** and the engine on the special tool **0 495 187 (00 2 300)**.



- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

cardiagn.com



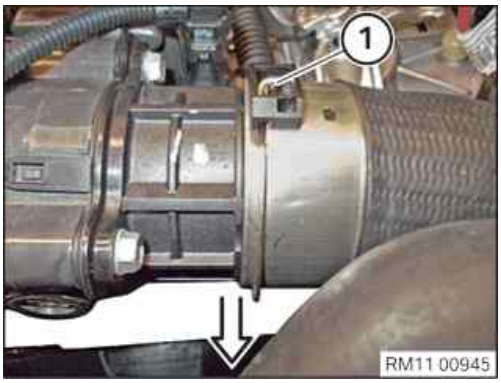
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).

10 – Removing the intake plenum

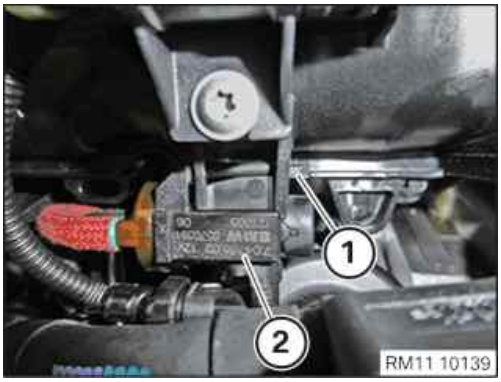
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).

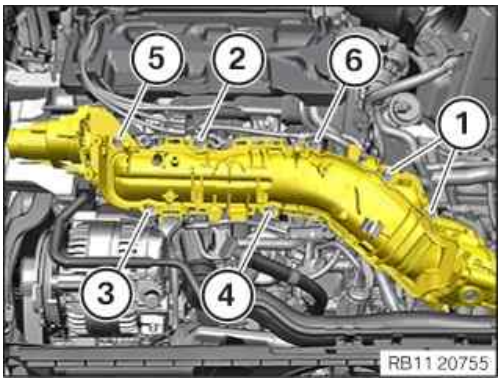


- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

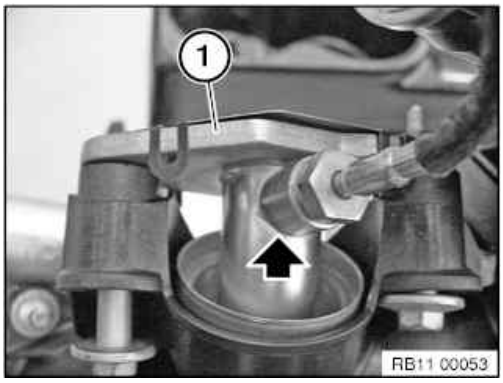


- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

11 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

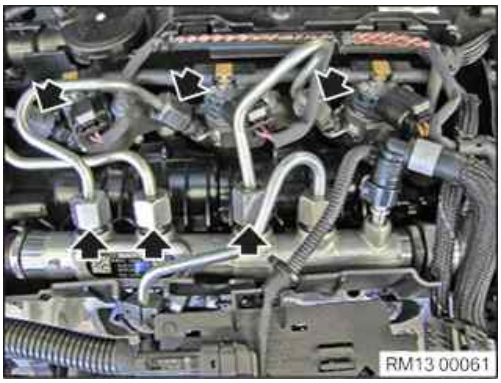
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

12 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

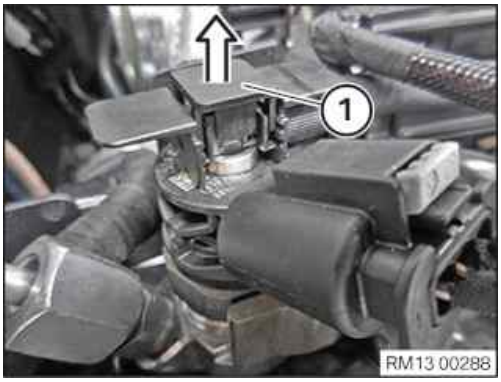
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

13 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Electrostatic discharge.

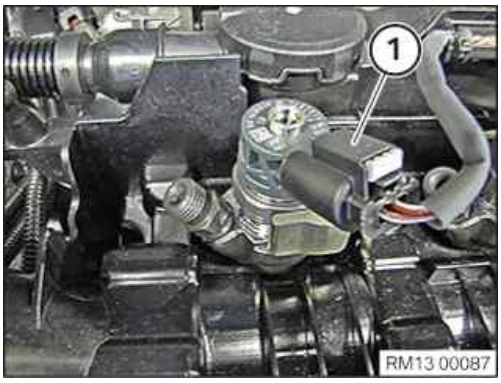
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

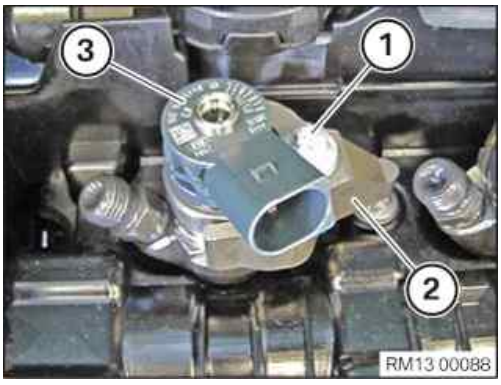
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com



- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

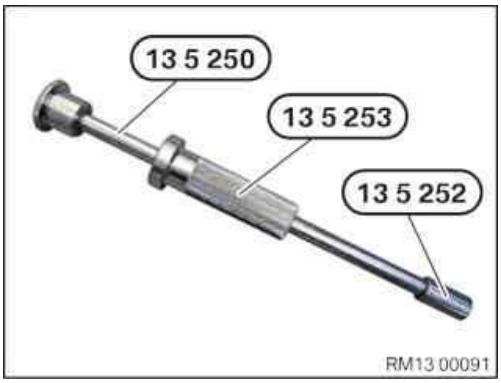
▶ **Loosen stuck injectors**

RISK OF DAMAGE

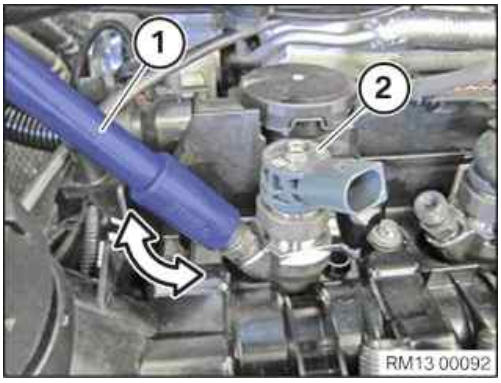
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

14 – Remove high-pressure rail

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

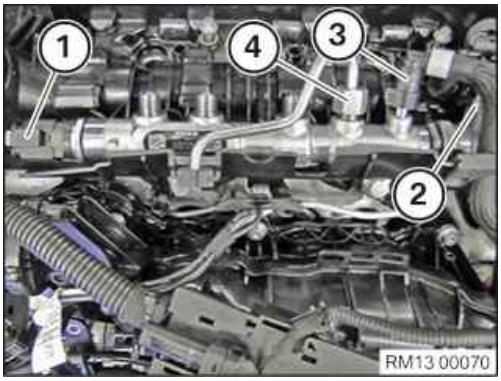
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

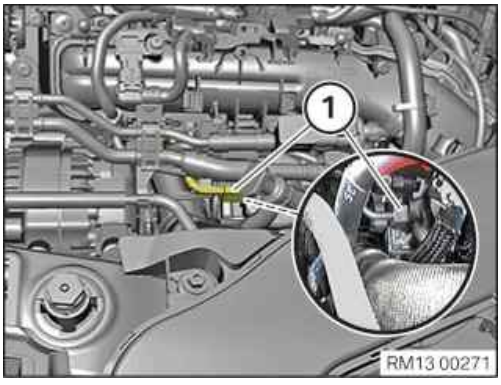
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

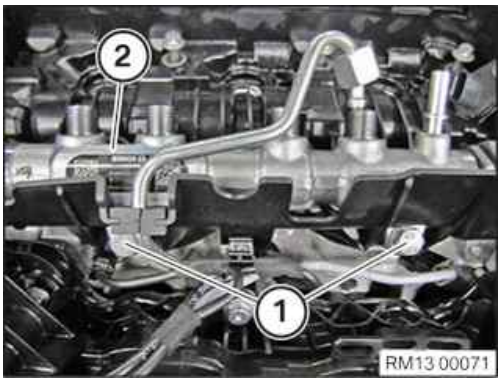


- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.

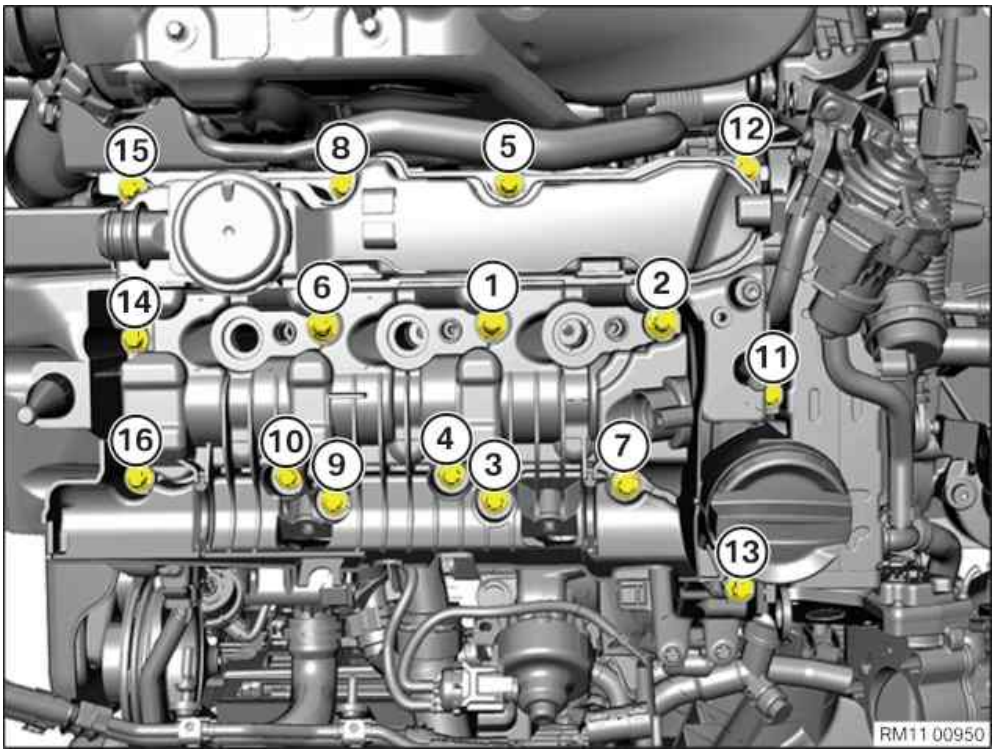
cardiagn.com



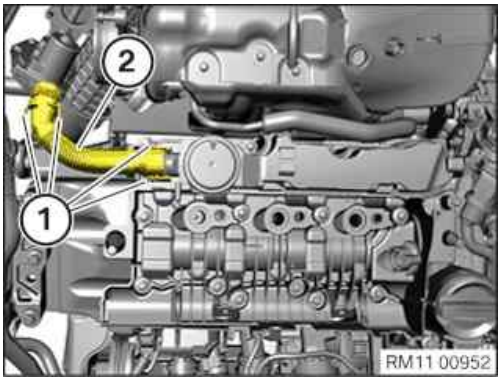
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

15 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover

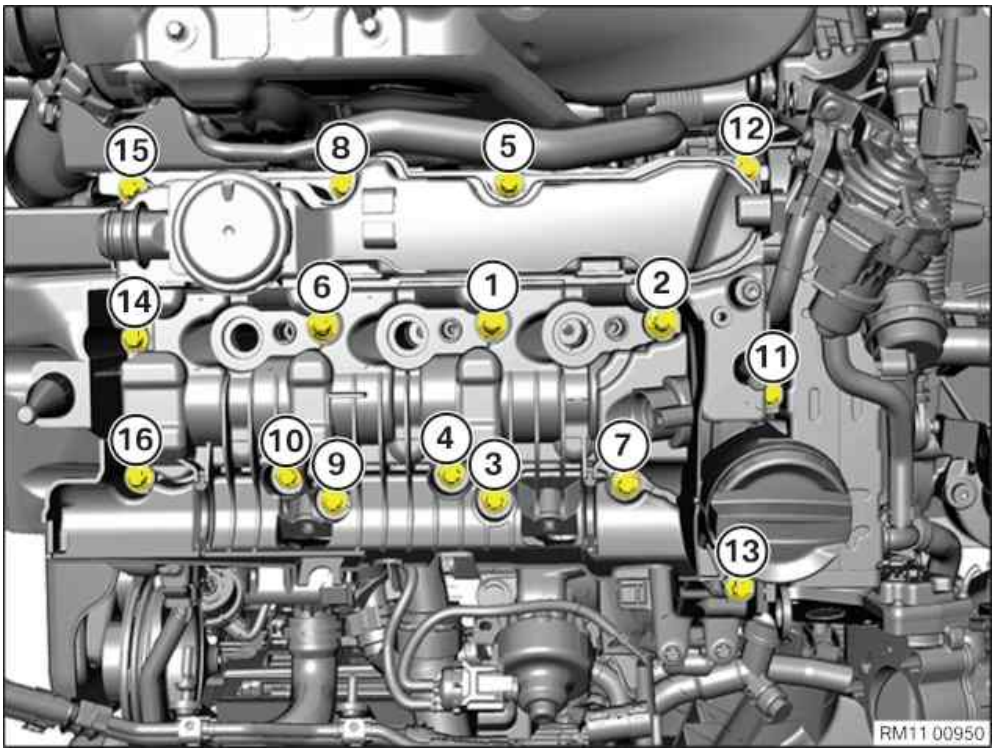


1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com



- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

16 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

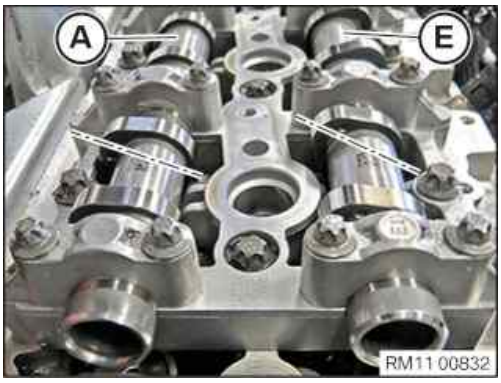
The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

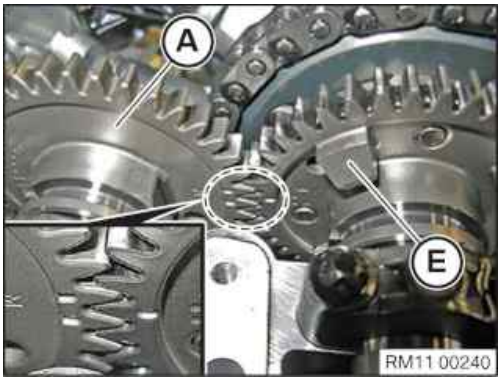
  Do **not** crank the engine in reverse.

cardiagn.com



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

17 – Remove chain tensioner piston

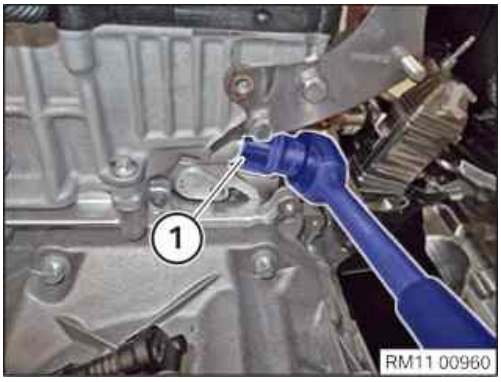
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

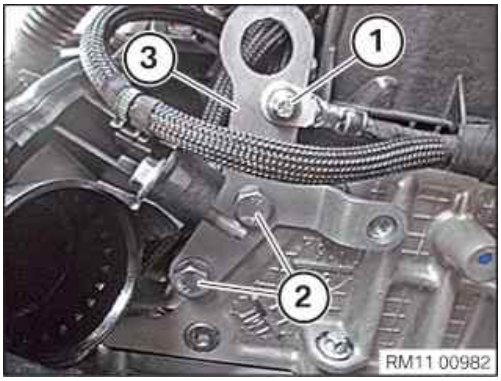


TECHNICAL INFORMATION

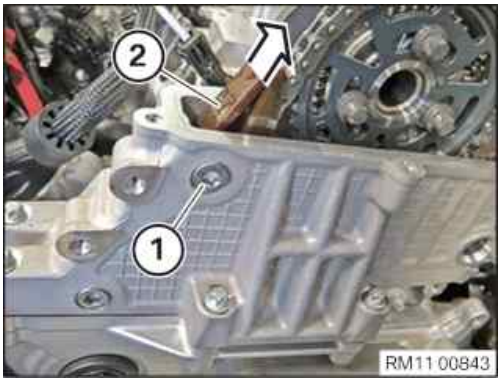
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

18 – Remove the timing chain guide rail

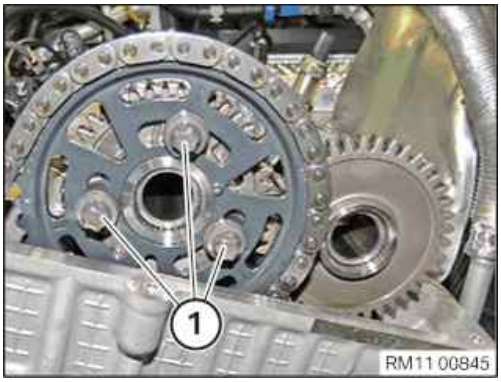


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

19 – Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

20 – Removing the camshaft support

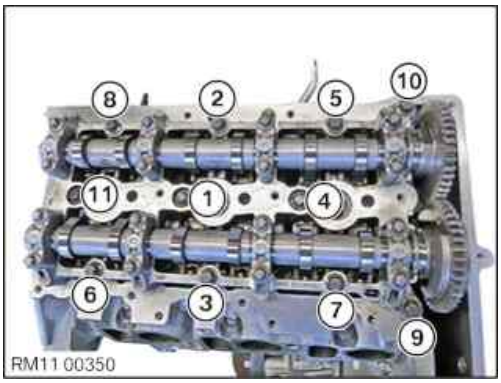
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen all screws step-by-step of the camshaft support in sequence (11) to (1).
- Remove camshaft support in upward direction.

  The camshafts remain installed in the camshaft support.

21 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

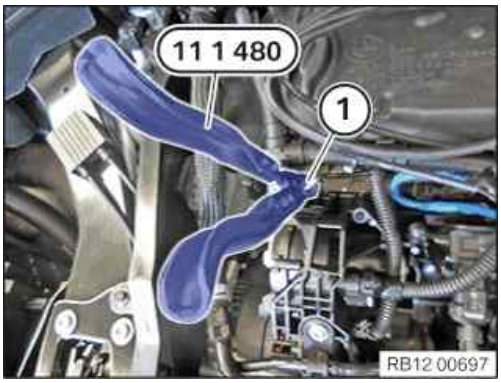
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

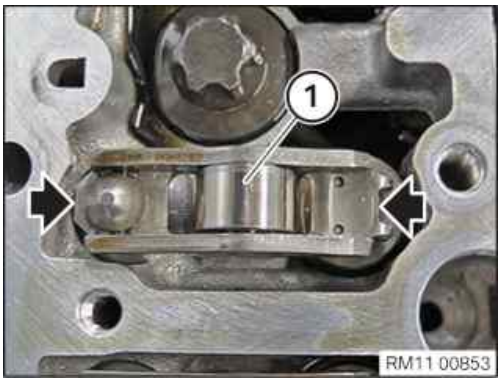


- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool **0 491 068 (11 6 050)** or conventional tools.
- Feed out preheating elements and remove.

22 – Remove roller cam followers

cardiagn.com



- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

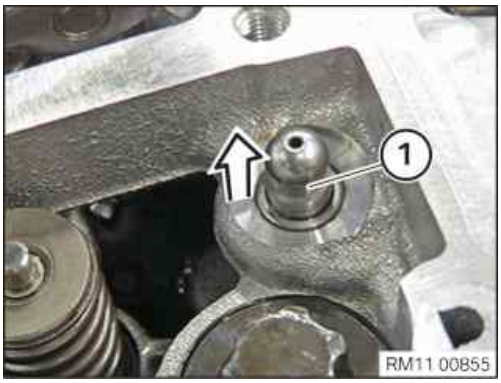
23 – Removing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

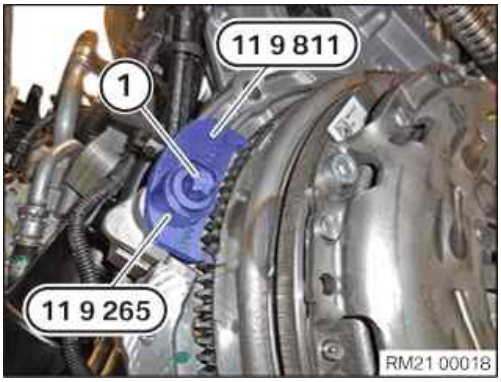
24 – Remove clutch

CAUTION

Materials harmful to health.

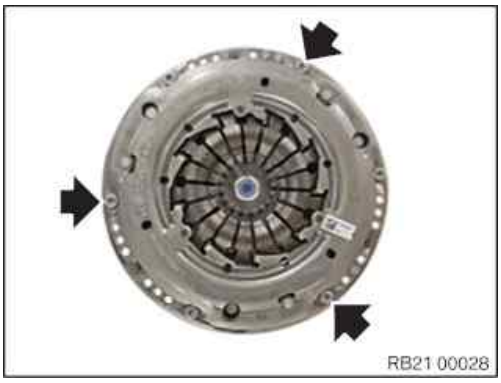
Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

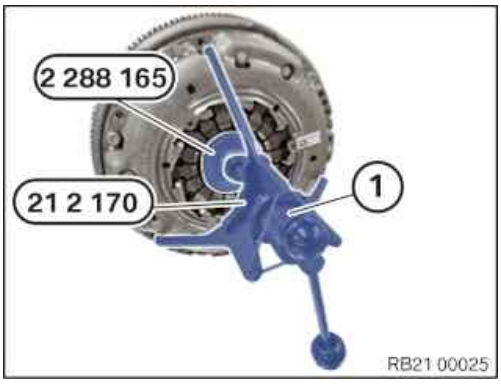


- Block flywheel with transmission bolt (1) and special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.

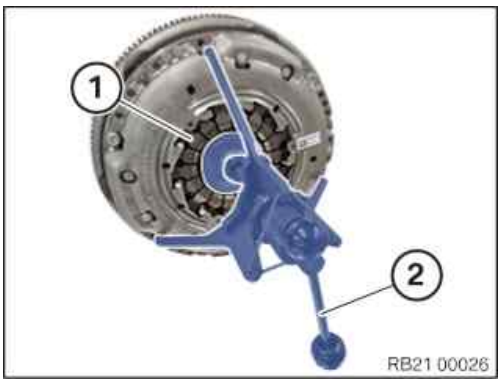
cardiagn.com



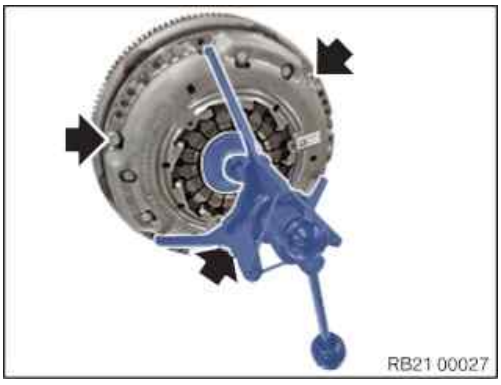
- Detach 3 screws to attach special tool **0 493 839 (21 2 170)** and **2 288 165**.



- Position special tool **0 493 839 (21 2 170)** and **2 288 165** and tighten on the knurled screw (1).



- Screw in the spindle (2) until the diaphragm spring (1) is preloaded and the clutch disc is free of tension.



- Loosen the remaining 3 screws and remove the clutch with clutch disc from the flywheel.

25 – Removing flywheel

CAUTION

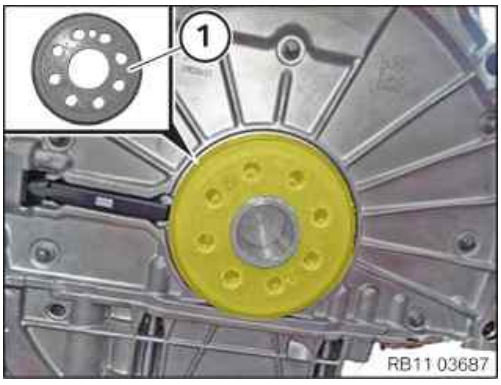
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

- Secure the flywheel with a transmission bolt (1) and with special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Remove flywheel.



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Remove the increment wheel (1) from the crankshaft and lay it down correctly.

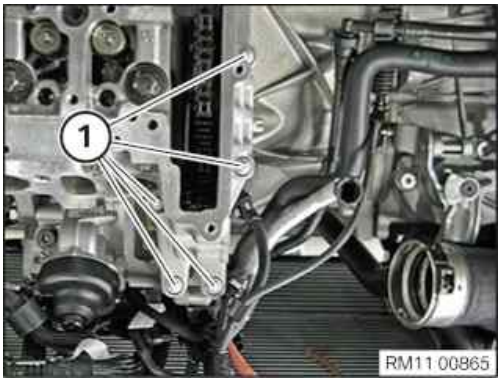
MAIN WORK

26 – Remove rear timing case cover

Prerequisite

Transmission is removed.

- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.

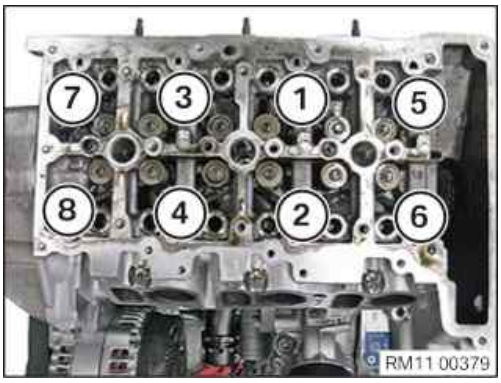


TECHNICAL INFORMATION

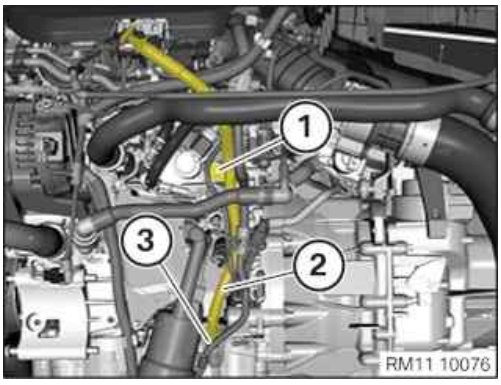
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).

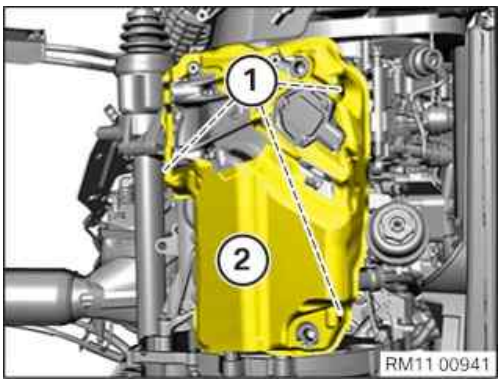
cardiagn.com



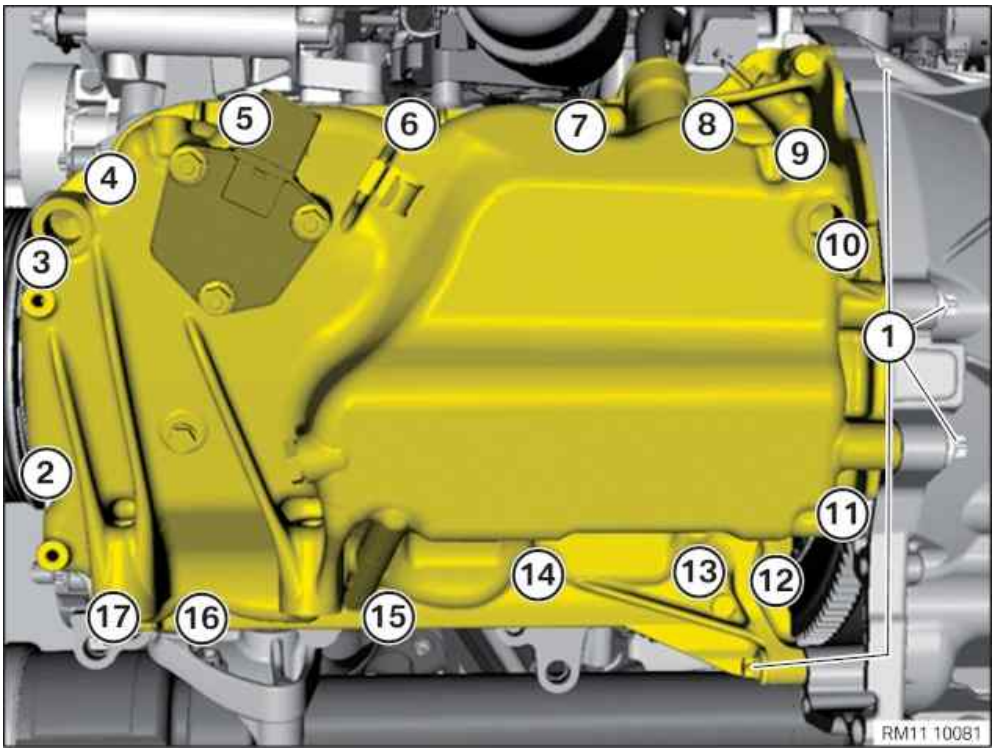
- Loosen the cylinder head bolts in the sequence from (8) to (1).



- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- If required, remove sealing ring (3) from oil sump.

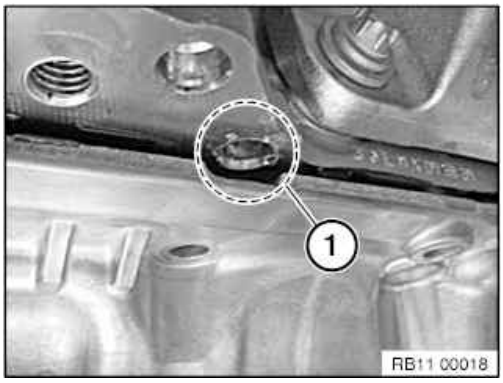


- Remove the expanding rivet (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).

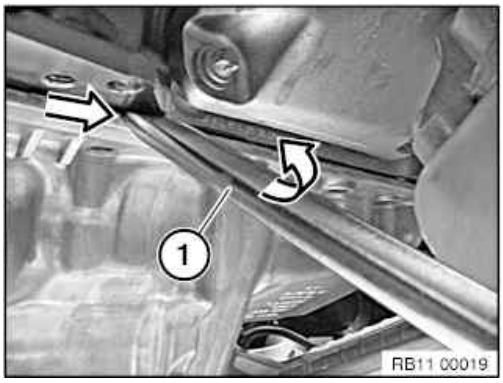


- Tighten the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).

cardiagn.com

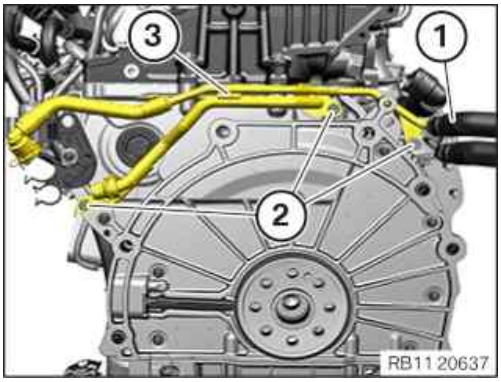


- Release oil sump only in area (1).

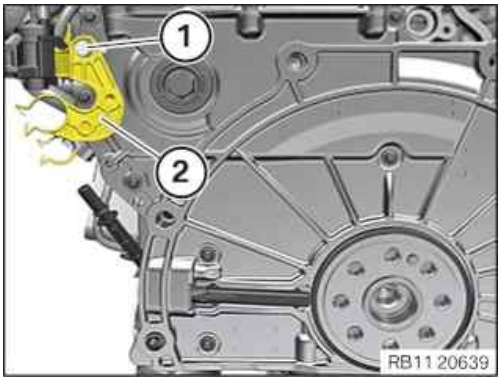


- Release the oil sump using a suitable mounting lever (1) carefully at the position intended for that.
- If required, secure the oil sump against falling.

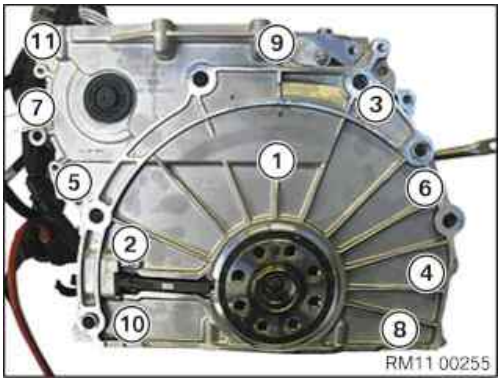
► **If installed: Remove coolant line of the SCR metering module**



- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).

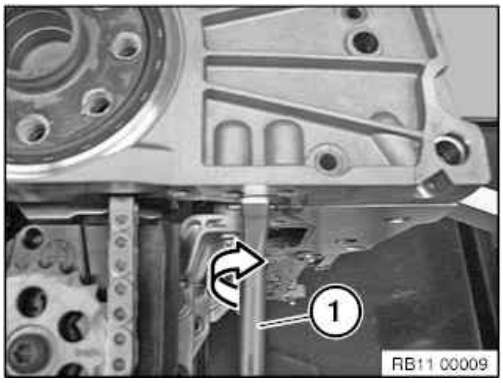


- Loosen screw (1).
- Guide out and remove holder (2).

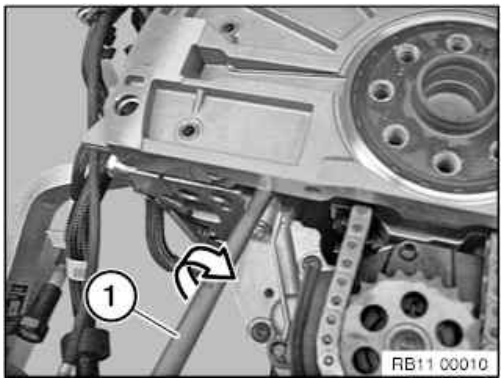


- Loosen screws in the order (11) to (1).

cardiagn.com



- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.

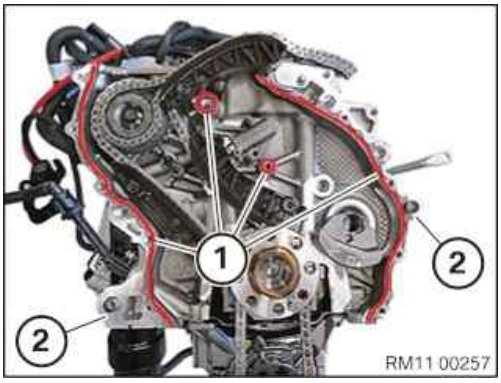


- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

27 – Install the rear timing case cover

Prerequisite

Transmission is removed.



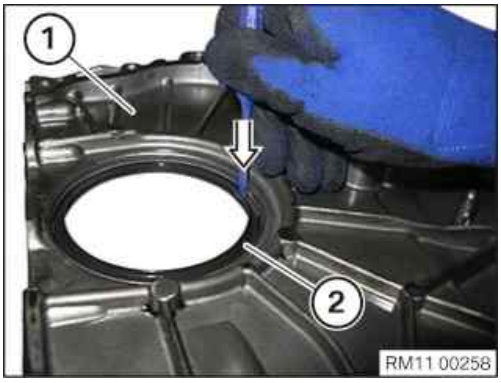
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

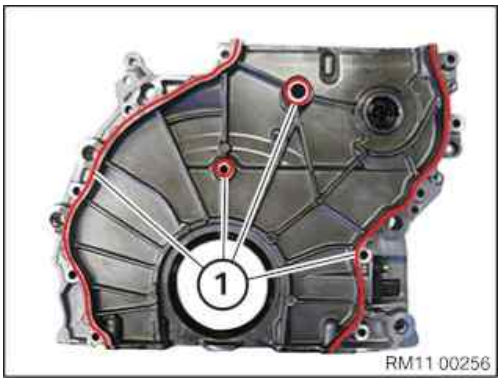
- Do not use any metal-cutting tools.

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.

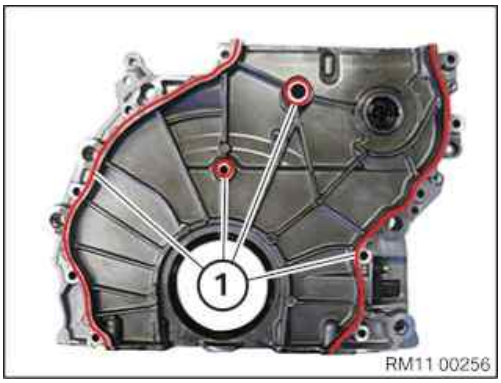


- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.

cardiagn.com



- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.

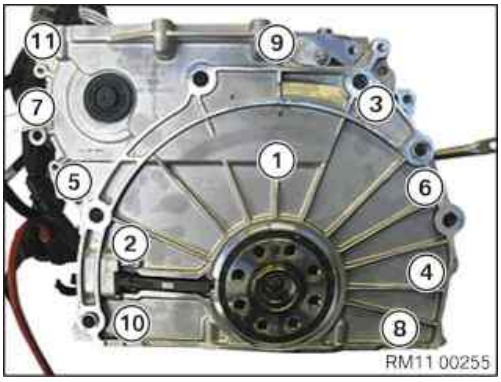


TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.



- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.

- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.

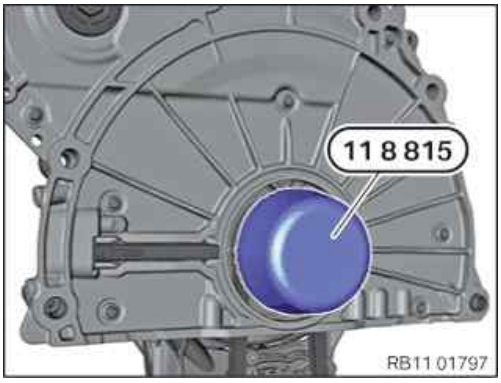
cardiagn.com

RISK OF DAMAGE

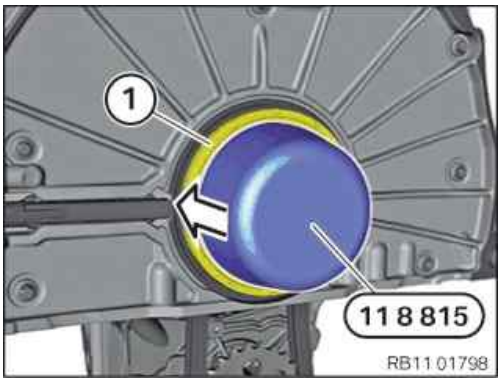
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.



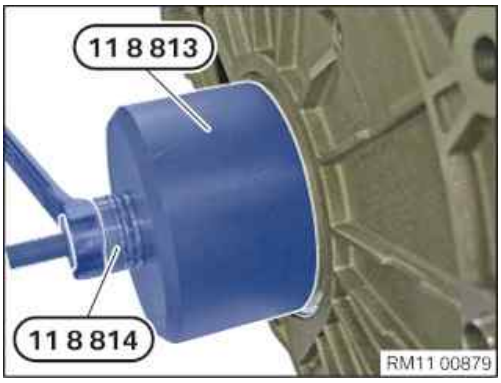
- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.

- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.

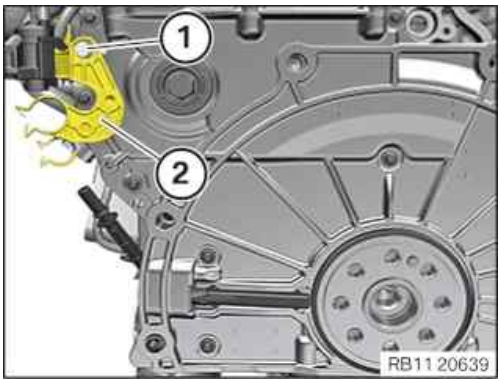
- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool**0 496 136 (11 8 814)**.

cardiagn.com

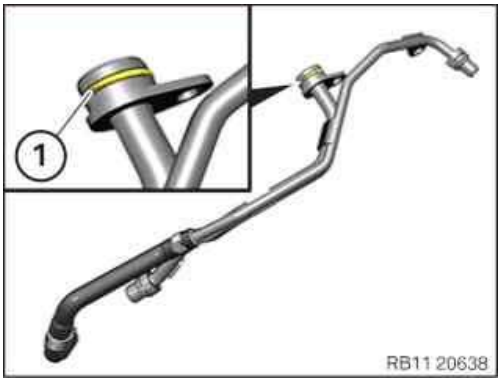


- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.



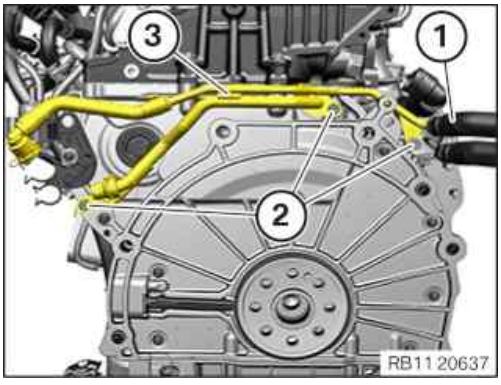
- Insert and install the holder (2).

▶ **If installed: Installing the coolant line of the SCR metering module**



- Renew the O-ring 1.

  Parts: O-ring



- Feed in and install coolant line (3).
- Tighten down screws (2).

SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.

▶ **Cleaning the sealing surface**

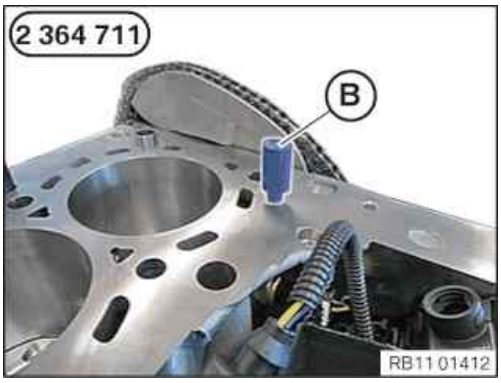
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com



- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

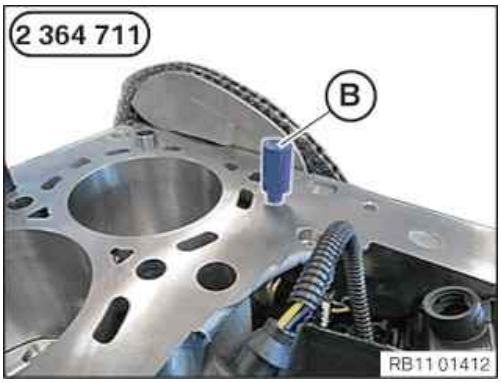
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

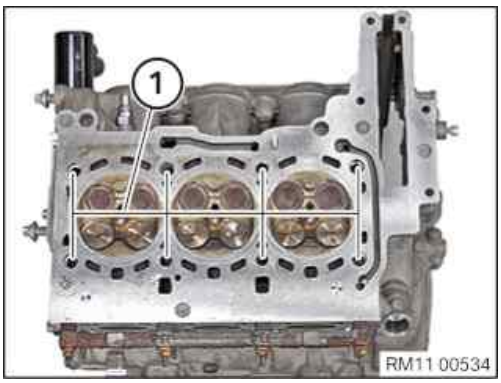
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.



- Remove special tool (B).

▸ Renewing the cylinder head gasket



RISK OF DAMAGE

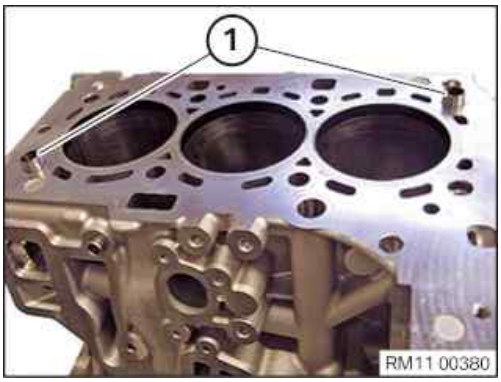
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

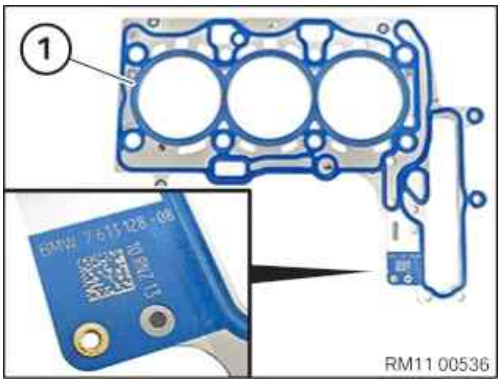
- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

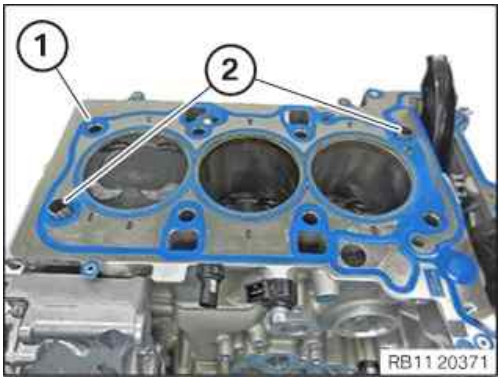
cardiagn.com



- Check the fitting sleeves (1) for secure fit and damage.

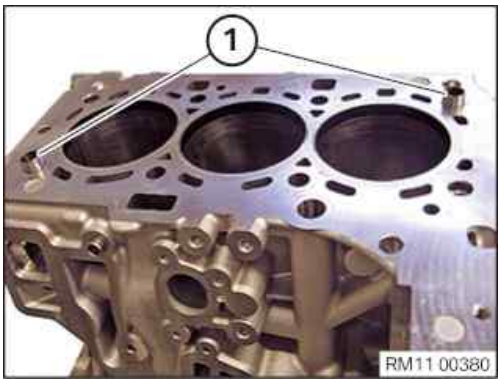


- Identify the cylinder head gasket (1) using the part number.
- **After work on the crankshaft drive and processing the cylinder head, the thickness of the cylinder head gasket must be determined.**



- Guide in the cylinder head gasket (1) and install.

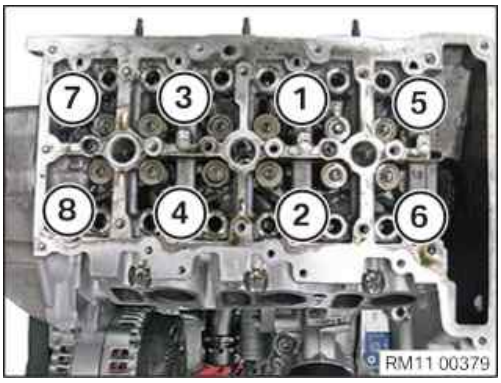
  Parts: Cylinder head gasket.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).



- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.
- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.

cardiagn.com



- Fit new cylinder head screws.

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

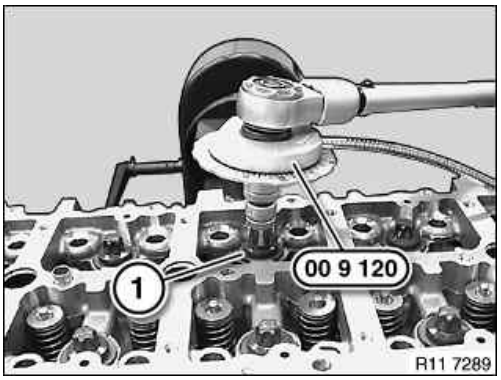
  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

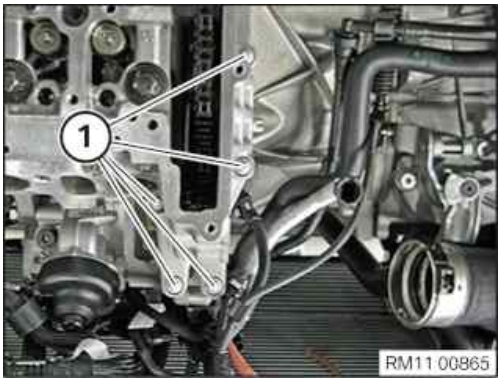
- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolts in the sequence (1) to (8).



- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °



- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

-

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1) and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

cardiagn.com

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1) and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Position the sealing compound (1) on special tool as shown.

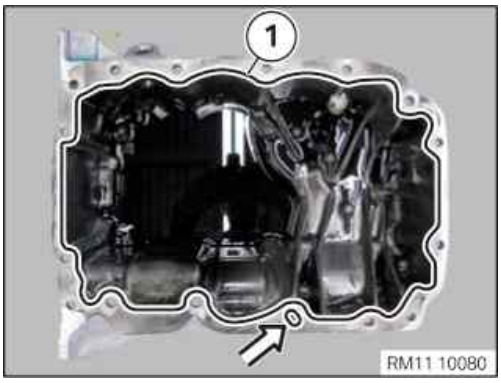
  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

cardiagn.com



TECHNICAL INFORMATION

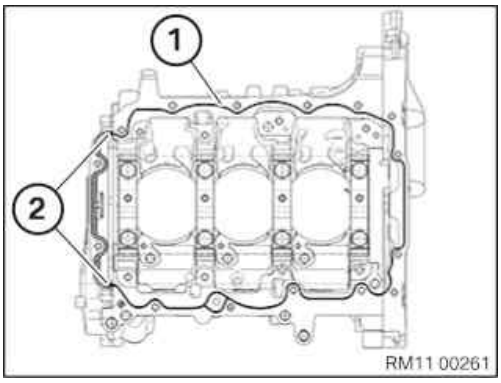
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound without replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.



TECHNICAL INFORMATION

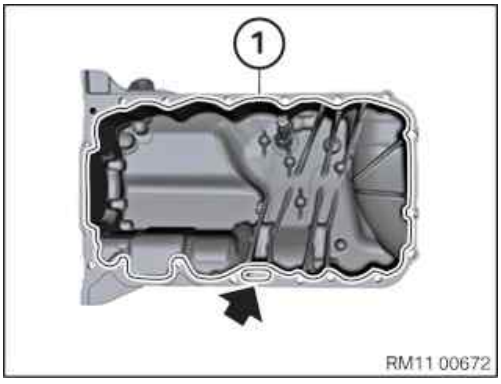
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound after replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Sealing bead (1) must overlap the seal (2) of the timing case cover by approx. **5 mm**.
- Completely surround the oil return orifice (arrow) with sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.



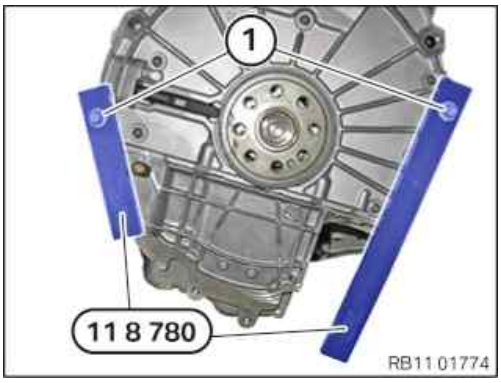
TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  The sealing compound must be applied along the inner edge.
- Completely encircle the oil return orifice (arrow) with the sealing compound.

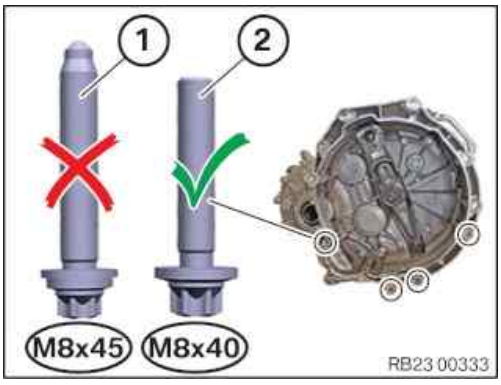
cardiagn.com



TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.



RISK OF DAMAGE

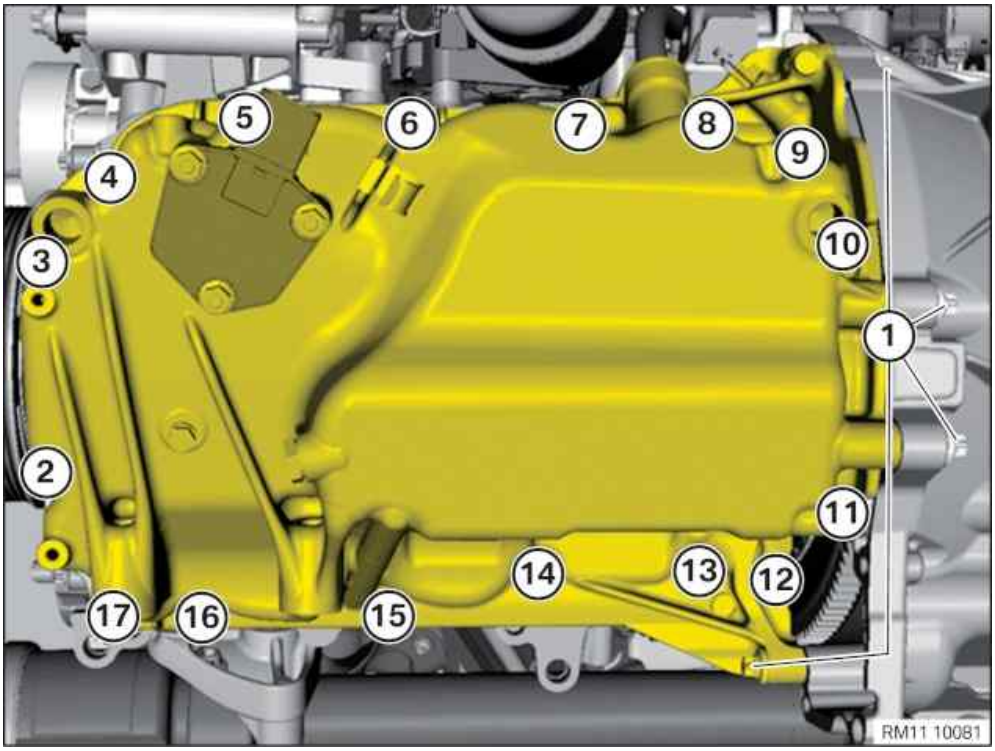
Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.



- Position and install the oil sump.
- Hand tighten the screws of oil sump (2) to (17) , but do **not** tighten completely yet.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.

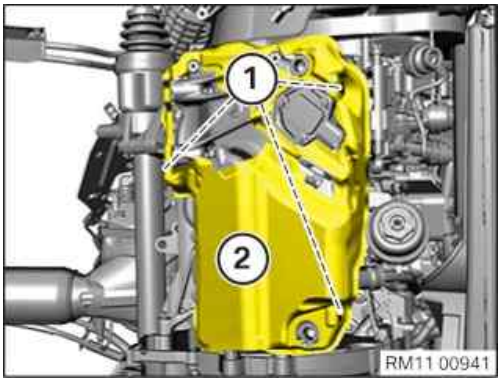
Oil sump to crankcase

M8x30		Tightening torque	2 Nm
M8x110		Tightening torque	2 Nm

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nm

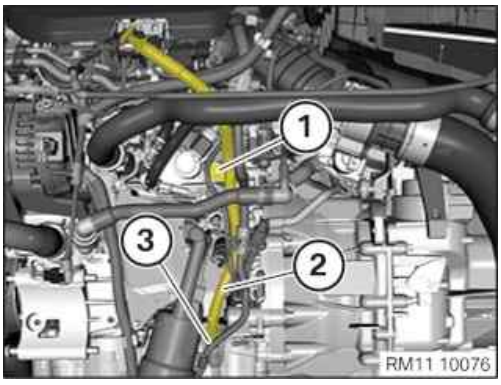


- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

cardiagn.com

- Renew O-ring (1).

  Parts: O-ring



- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

POSTPROCESSES

28 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

TECHNICAL INFORMATION

Clean all threads with a screw tap.

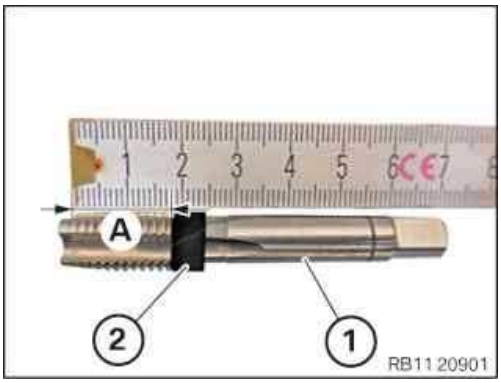
- Clean all screw threads (1).

- Use the set of special tools **2 285 058**.

Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

- Assemble tool set.

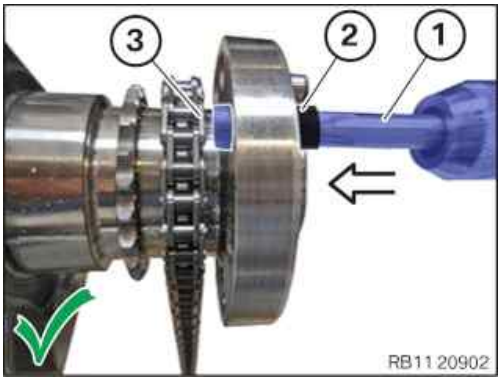
Number	Description
1	Tool holder
2	Thread cutter M12X1,5



- Mark the screw-in depth (A) on thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm



NOTICE

To provide a better overview: Shown with engine removed.

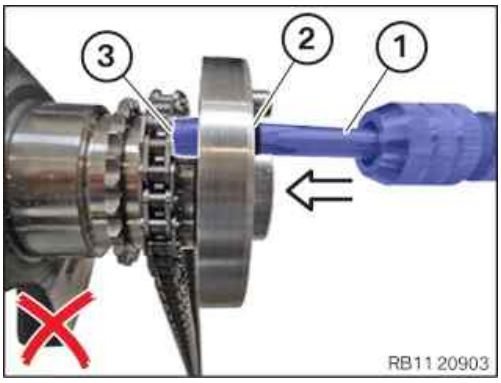
- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the screw-in depth (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).

cardiagn.com

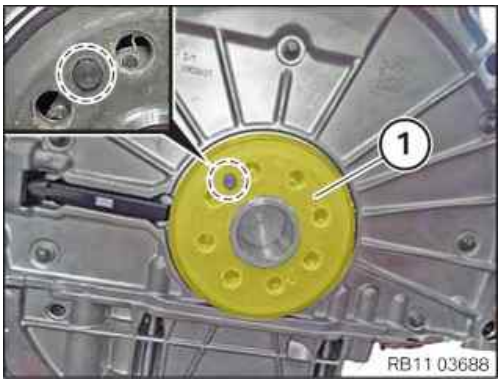


TECHNICAL INFORMATION

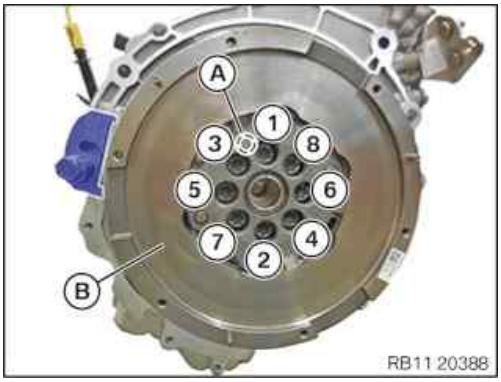
- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

- Make sure that the screw-in depth (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).



- During the installation, note the mark shown without fail.
- Install special tool (1) on the crankshaft as shown.



- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Observe tightening sequence. While doing so, begin with dowel pin (A).
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm

- Loosen the transmission bolt (1).
- Feed out and remove special tools **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** (5 mm) washer.

29 – Install clutch

CAUTION

Materials harmful to health.

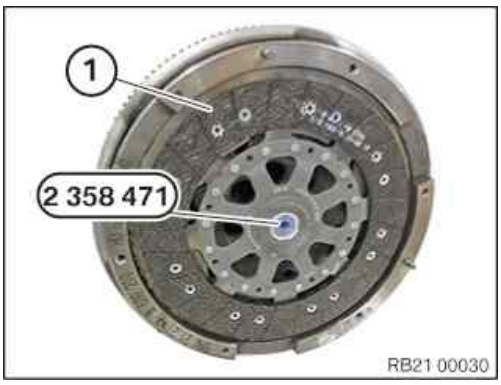
Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

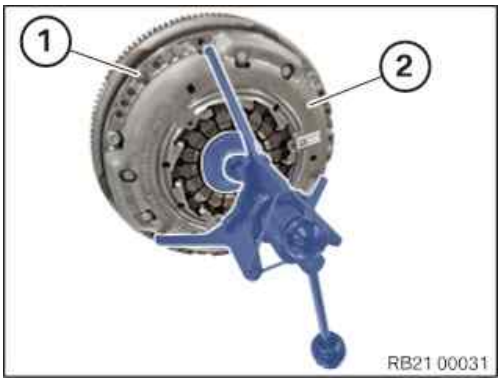
cardiagn.com

TECHNICAL INFORMATION

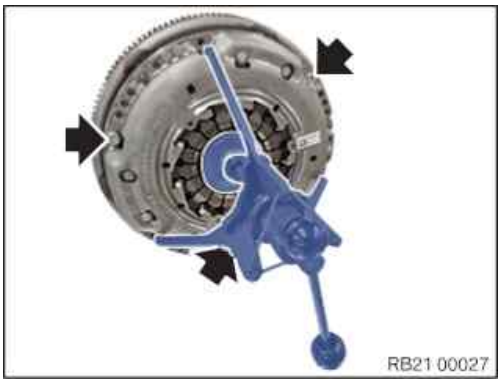
Handle the clutch disc carefully. Install the surfaces of the clutch disc in the correct mounting orientation.
Clean friction surfaces of the flywheel and the pressure plate with BMW-approved brake cleaner.
Note designation for ”engine side” / ”transmission side”.



- Centre the clutch disc (1) using special tool **2 358 471**.



- Mount the clutch (2) together with the special tool to the flywheel.
- Observe the dowel pins (1).
- The clutch (2) must be secured via the dowel pins (1).

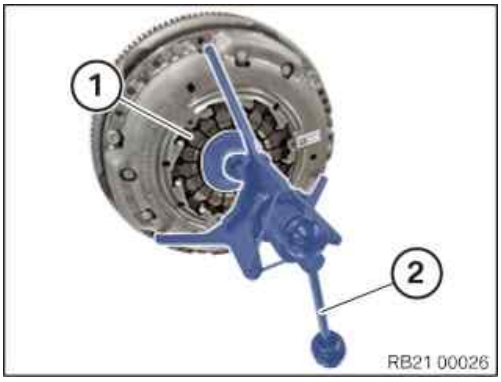


- Renew the bolts (arrows).

  Parts: Bolts
- Install and tighten screws (arrows).

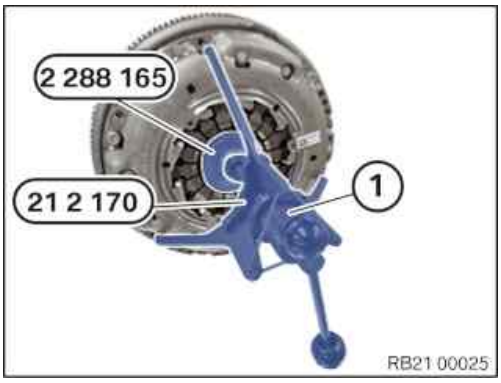
Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

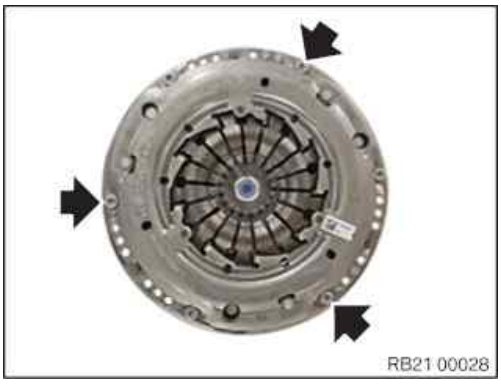


- Loosen the spindle (2) until the diaphragm spring (1) is fully relieved.

cardiagn.com



- Unscrew the knurled screw (1) and remove the special tool **0 493 839 (21 2 170)** with **2 288 165** from the clutch.



- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

- Withdraw special tool **2 358 471** from clutch disc with aid of accompanying screw.

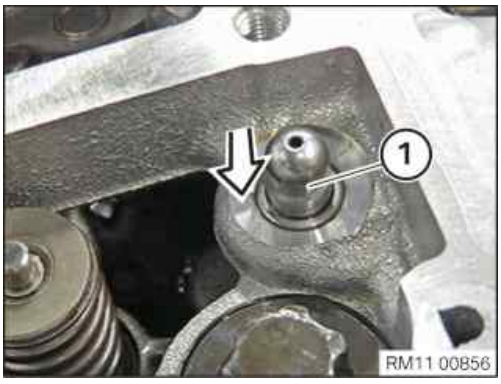
30 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



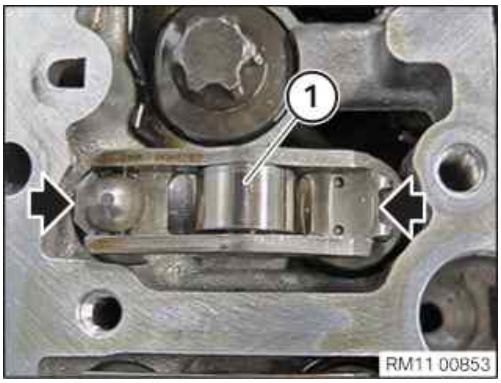
- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

31 – Install the roller cam followers

cardiagn.com

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

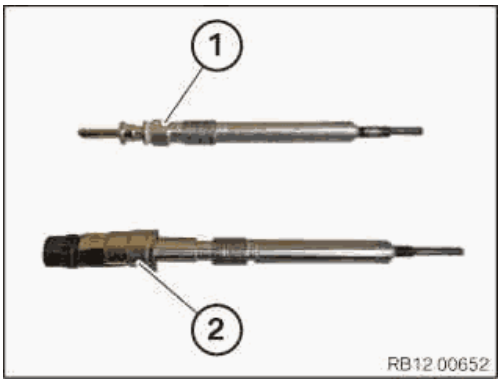


- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

32 – Install glow elements

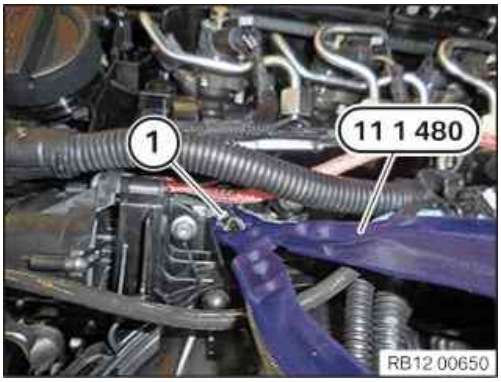


- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

33 – Installing the camshaft support

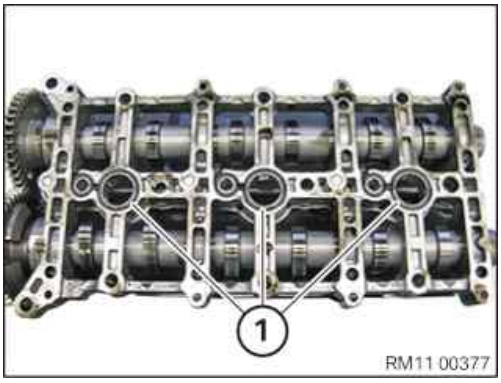
cardiagn.com

RISK OF DAMAGE

Damage of the engine and mounted parts.

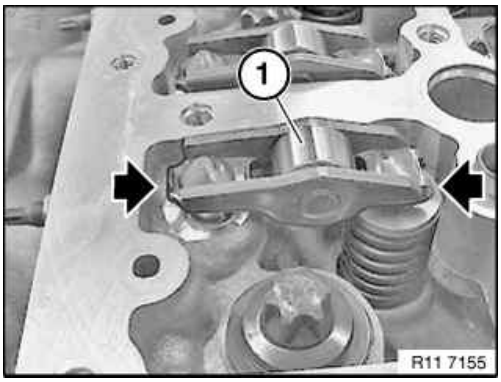
Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.

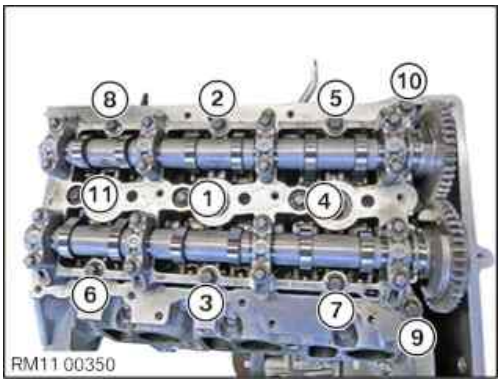


- Renew the seals (1) on the camshaft support.

  Parts: Seals



- Make sure the roller cam followers (1) have the correct mounting orientation.
- Position the camshaft support.



- Tighten the screws of the camshaft support incrementally in the sequence (1) to (11).

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

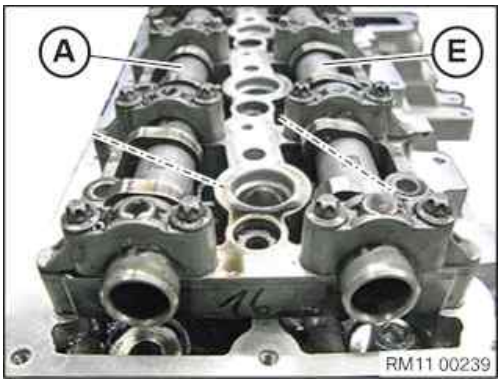
34 – Adjusting the timing of the camshafts

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.



- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.

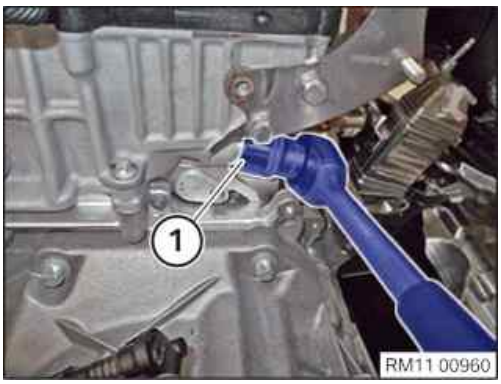
▸ **Remove chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▸ **Remove exhaust camshaft.**

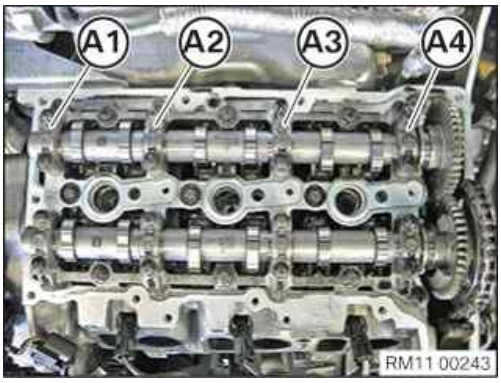
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

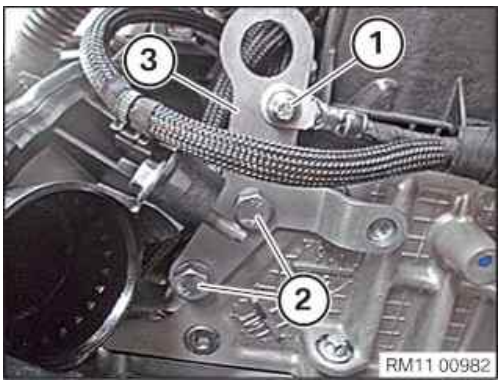


TECHNICAL INFORMATION

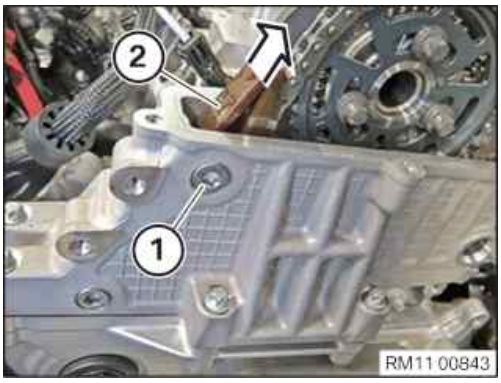
The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A4) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components in special tool **0 495 105 (11 4 480)** in an orderly fashion.

▸ Remove the timing chain guide rail

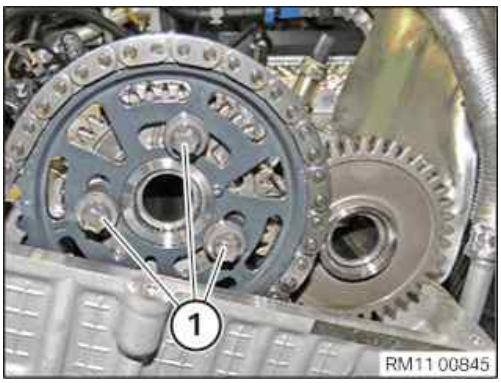


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▸ Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

▸ Installing exhaust camshaft

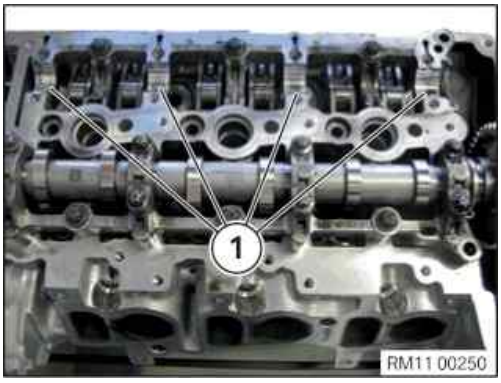
cardiagn.com

RISK OF DAMAGE

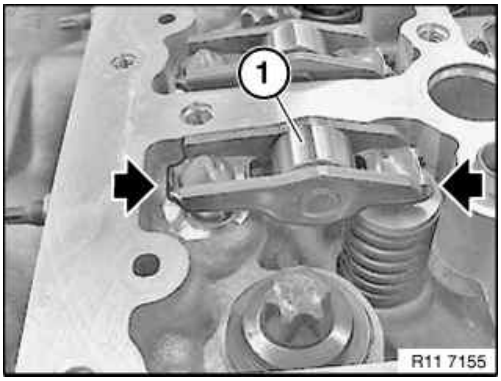
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

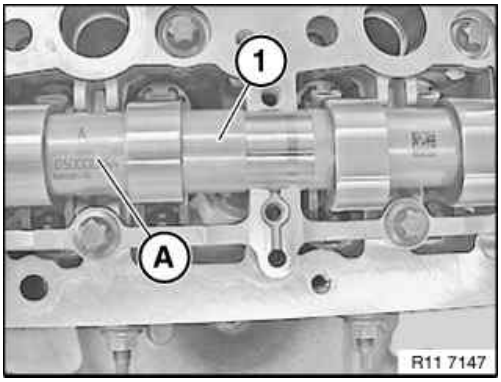
- Comply with the regulations for the installation and disassembly.
- Perform work with care.



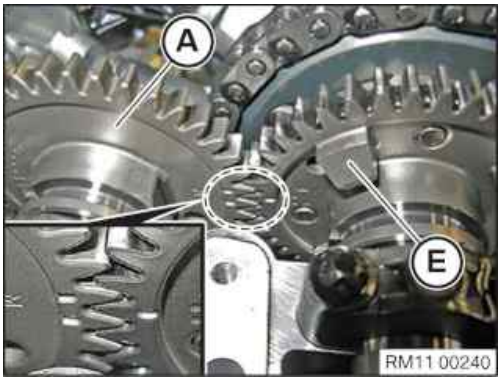
- Oil all bearing positions (1).



- Make sure the roller cam followers (1) have the correct mounting orientation.

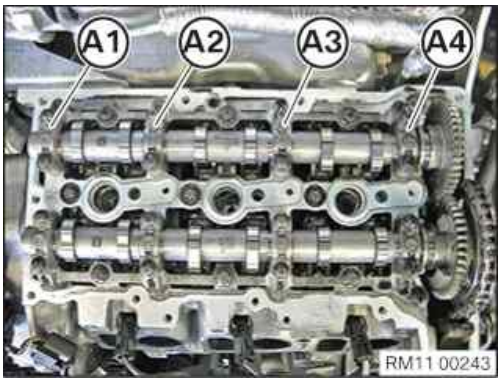


- Insert exhaust camshaft (1) so that the identification (A) points upwards.



- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

cardiagn.com



- Tighten all exhaust camshaft bearing caps (A1) to (A4) from the inside to the outside by 1/2 a turn at a time.

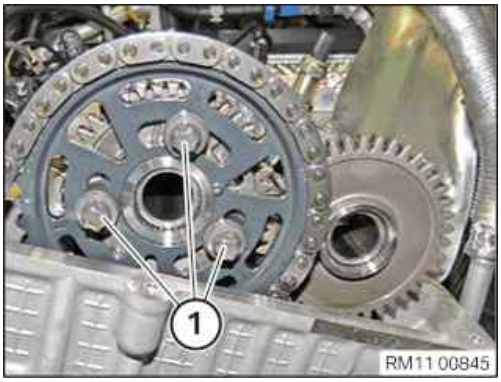
Intake and exhaust camshaft in camshaft support

M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

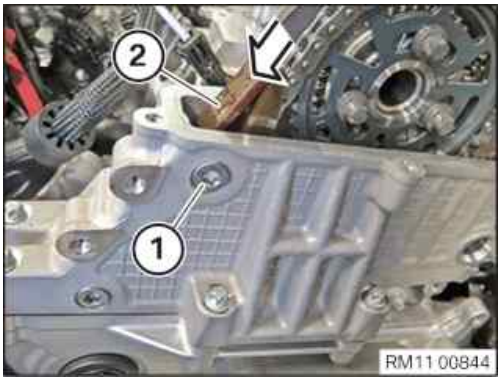
  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**



- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**



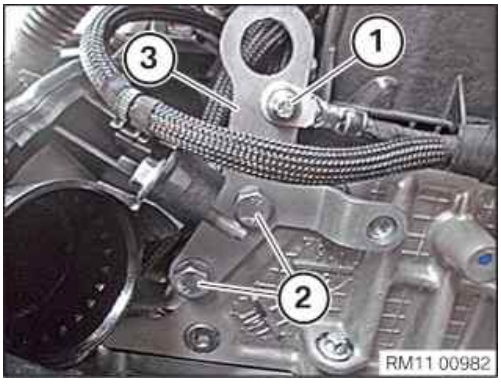
- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm



- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6			8 Nm

cardiagn.com

▶ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

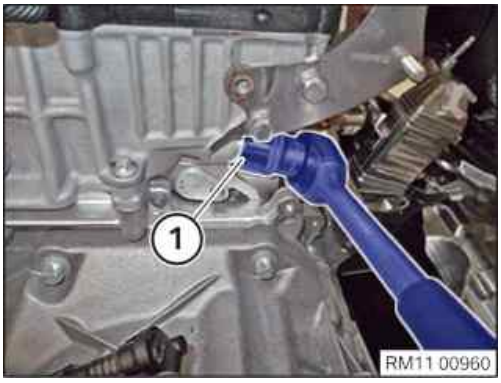
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

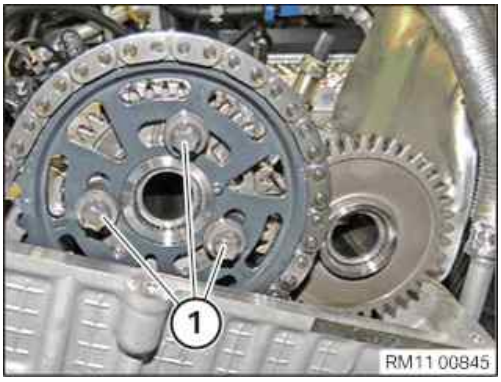


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

35 – Remove special tool to disconnect the crank shaft

cardiagn.com

- Remove special tool **2 288 380**.

36 – Removing the special tool to secure the exhaust camshaft

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

37 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

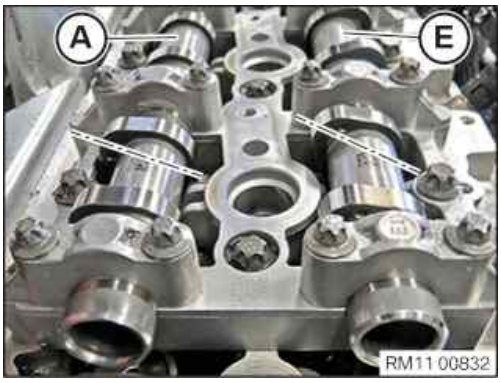
The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

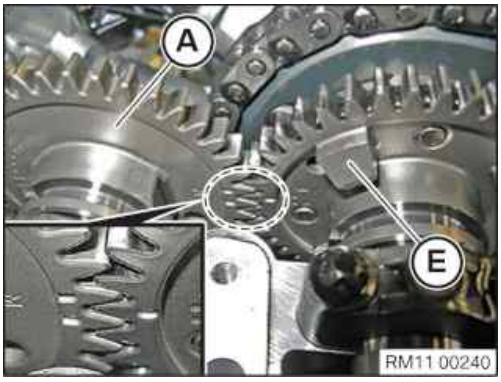
  Do **not** crank the engine in reverse.

cardiagn.com



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

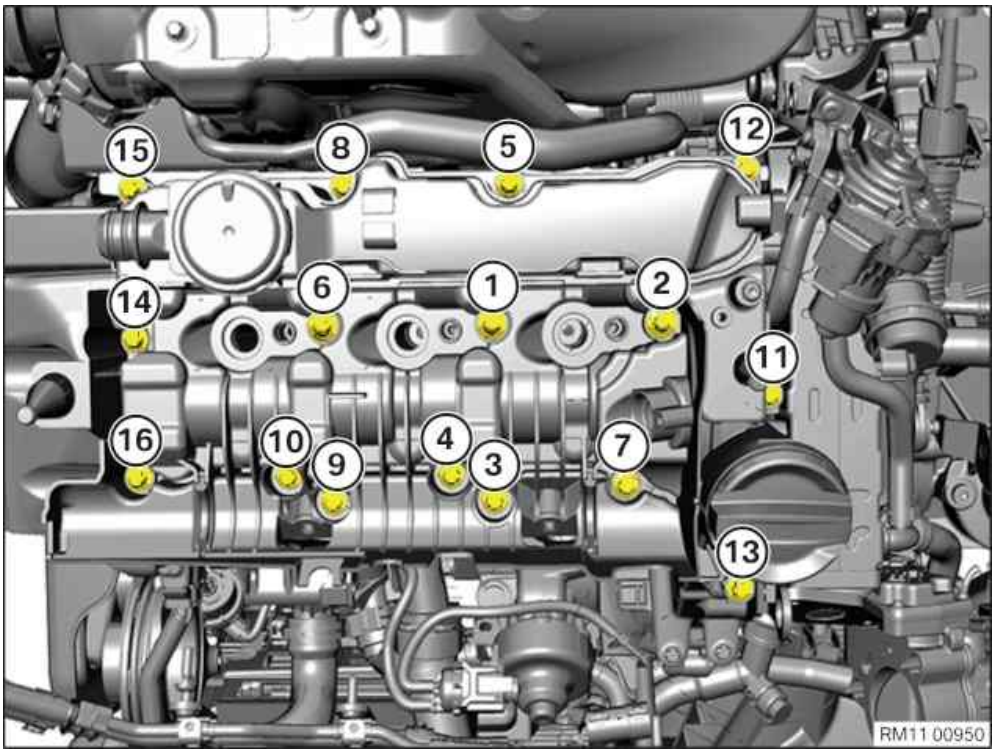
If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

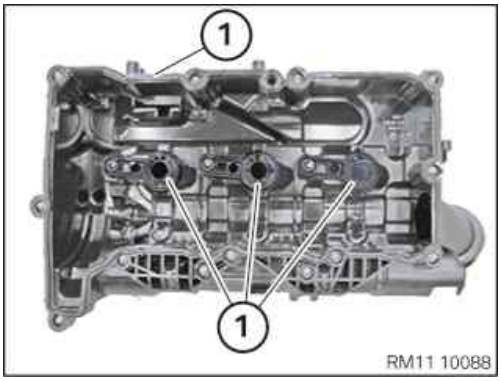
- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

cardiagn.com

Overview: Screw connection of the cylinder head cover

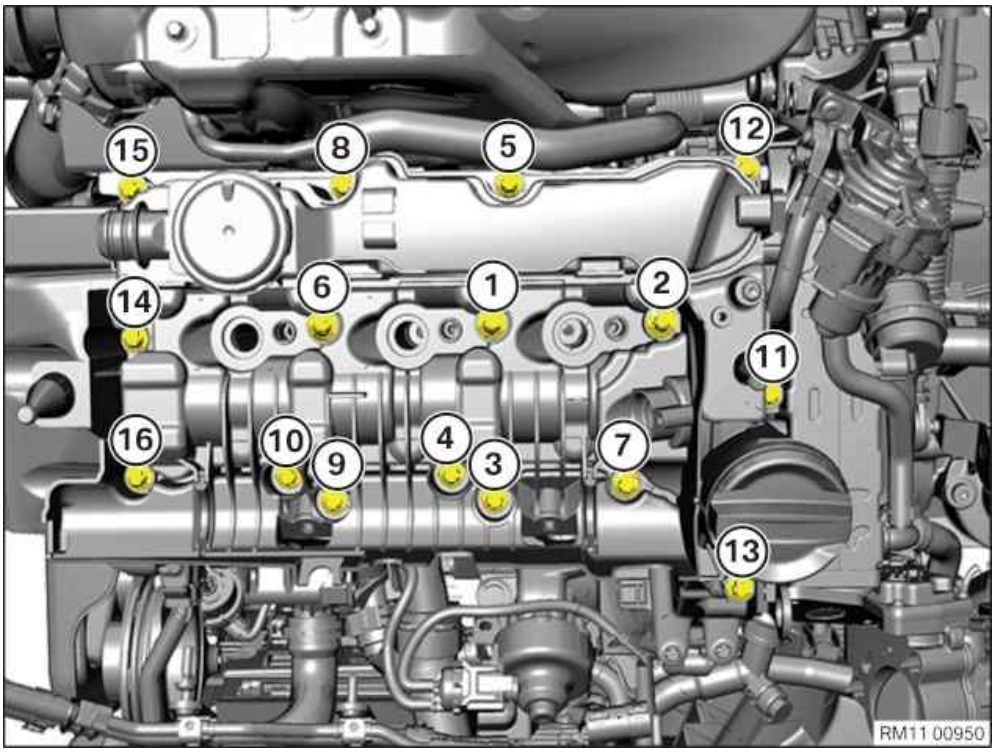


1 to 16 Bolts of the cylinder head cover



- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

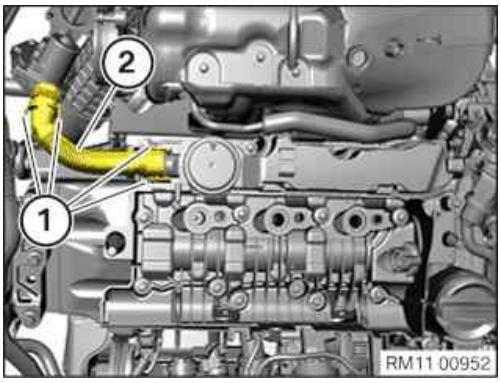


- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nm

cardiagn.com



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

39 – Installing injectors of injection system

▶ Cleaning the injector shafts

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

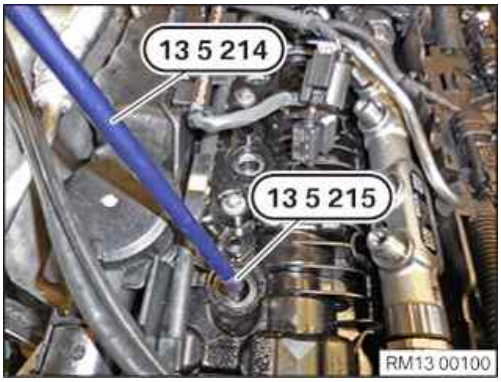
- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

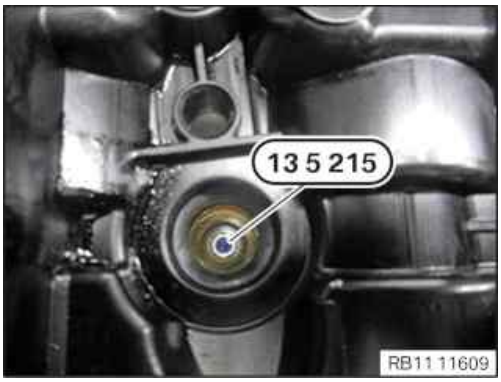
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

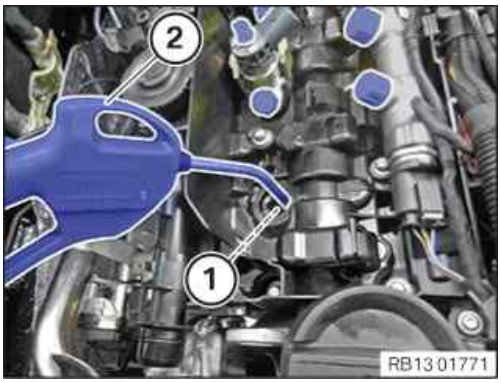
cardiagn.com



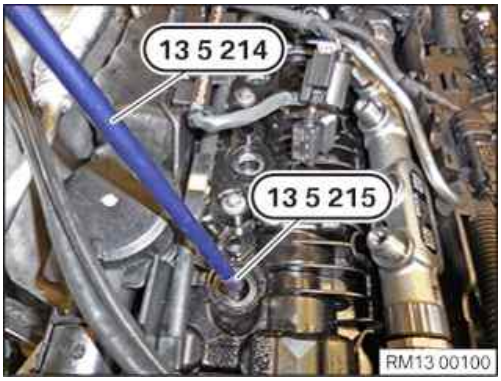
- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.



- Blow out injector shaft (1) with air gun (2).



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

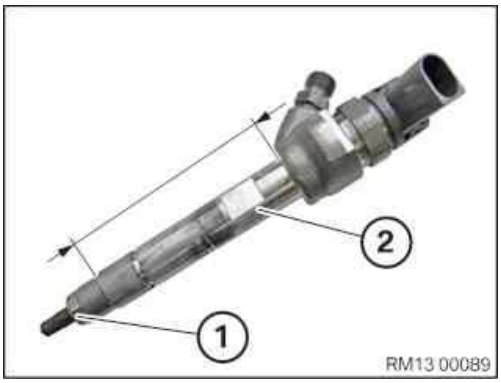
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

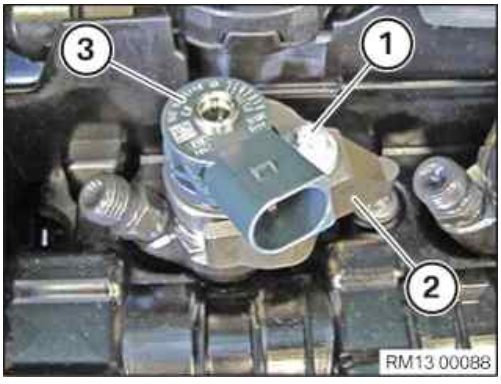


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070

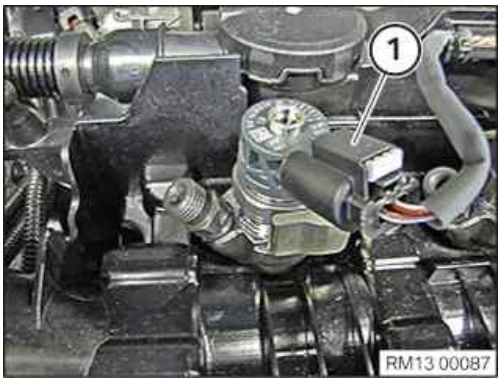


- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

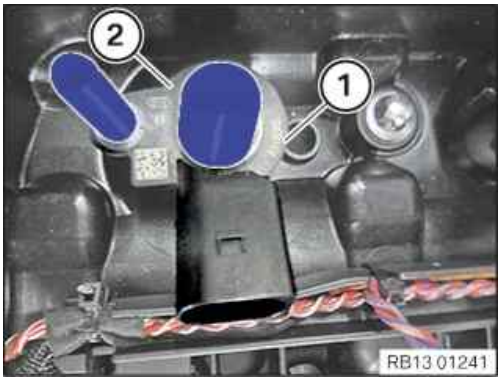
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

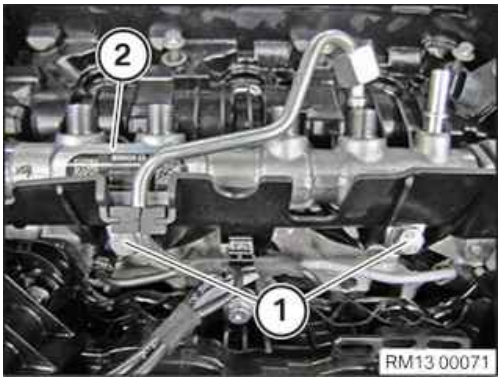
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

40 – Installing the rail

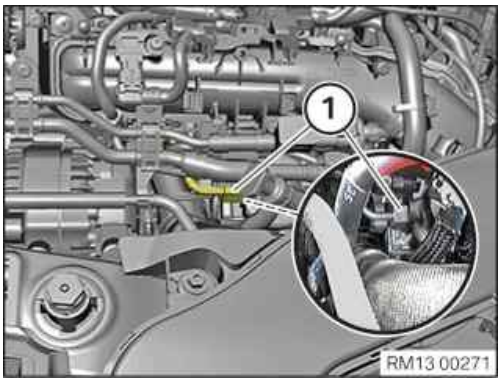


- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com



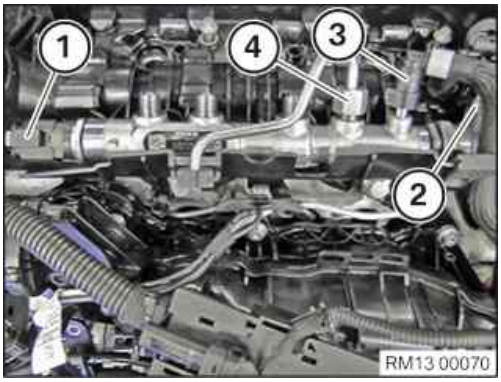
TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

41 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

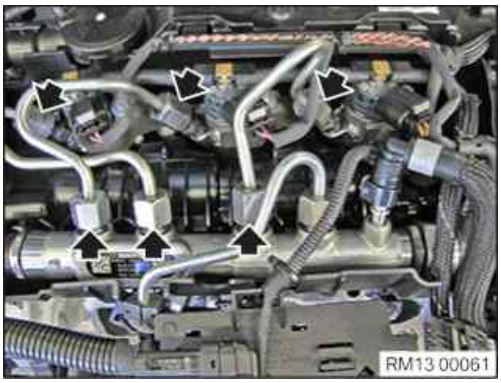
42 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

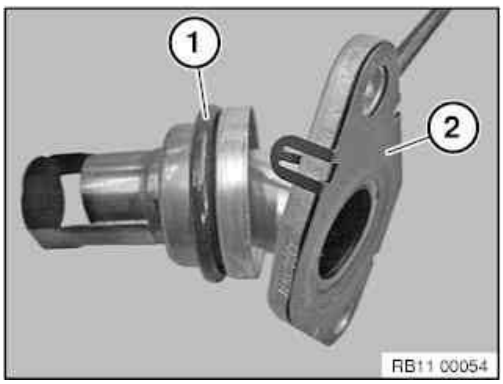
- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

43 – Installing the intake plenum

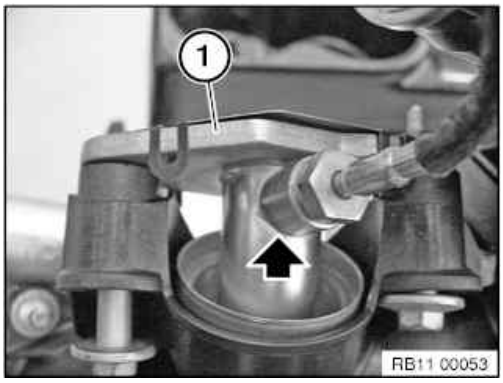


- Renew O-ring (1).

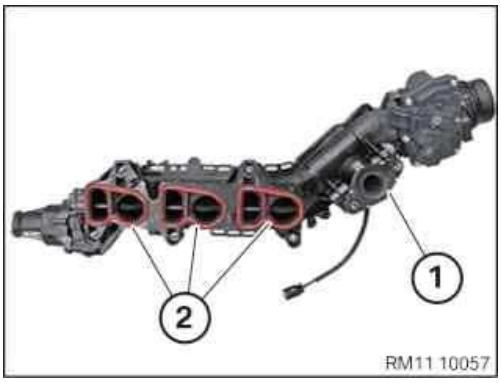
  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.

cardiagn.com

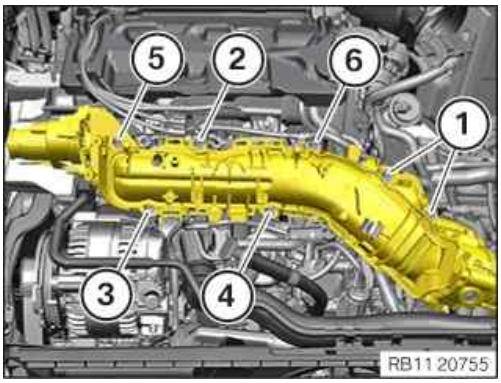


- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

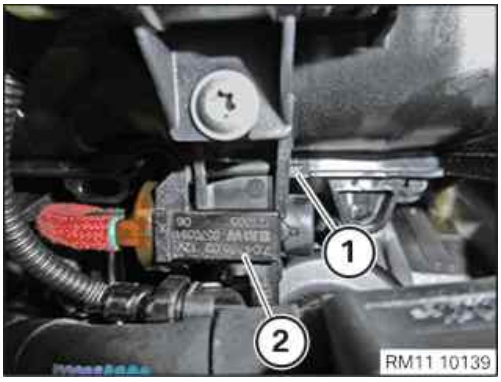
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



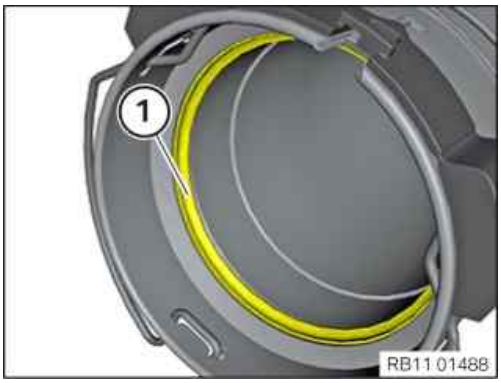
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



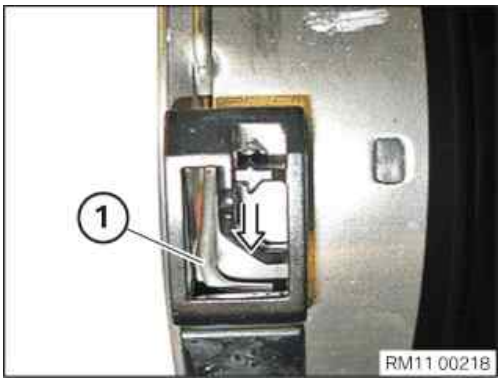
- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.



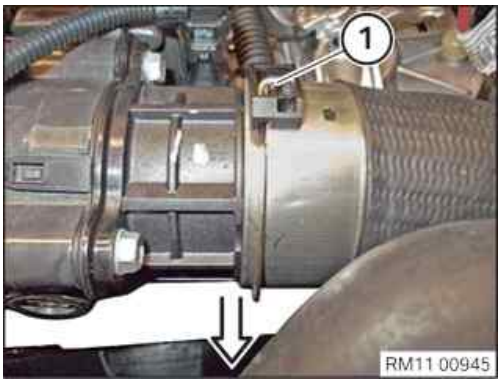
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com



- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

44 – Remove the engine from the assembly stand

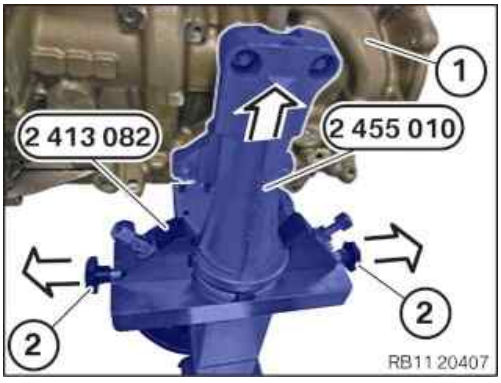
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

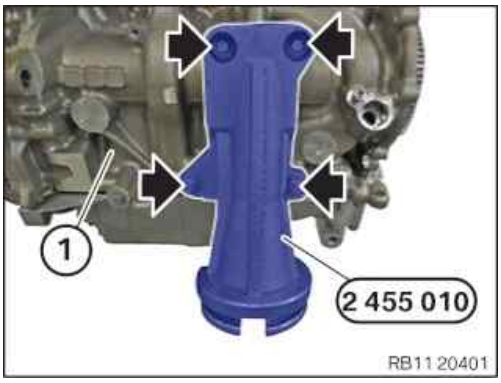
- Remove and install heavy components with the aid of another person/other persons.

- Insert engine lifter with special tool **0 490 579 (11 0 070)** and position engine (1).

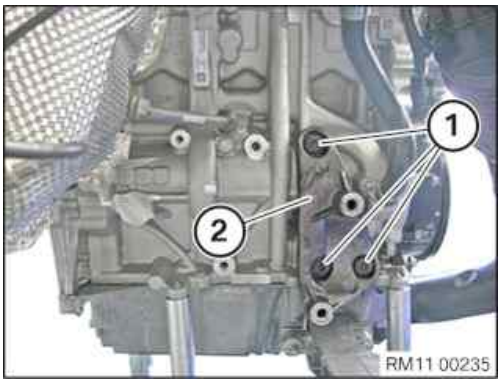


- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

cardiagn.com



- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.



- Insert and install the holder (2).
- Tighten the screws (1).

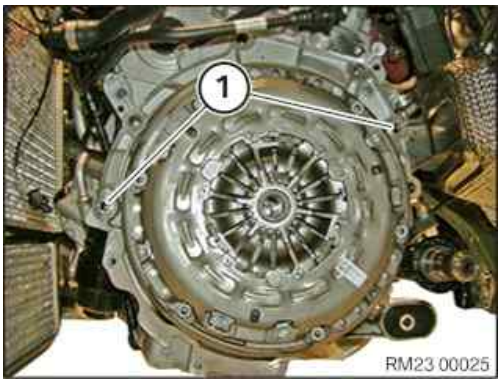
Holder to crankcase

M10		Tightening torque	38 Nm

45 – Mounting engine on manual gearbox

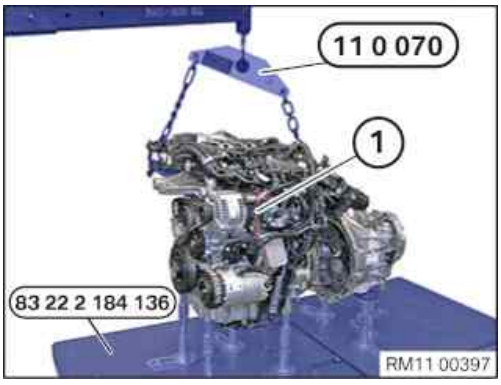
Prerequisite

Engine has been removed.



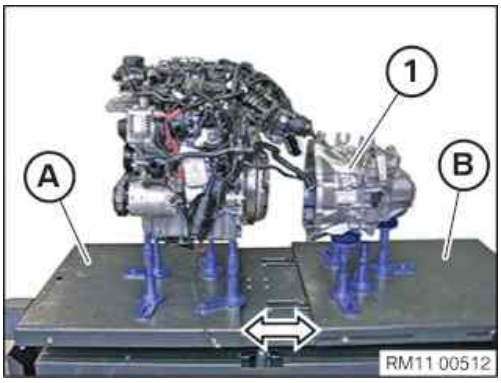
- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

- Remove any grease from the transmission input shaft (arrow) and clean the shaft.
- Do not grease transmission input shaft.
- Check the clutch disc for frictional corrosion in the gearing and renew if necessary.

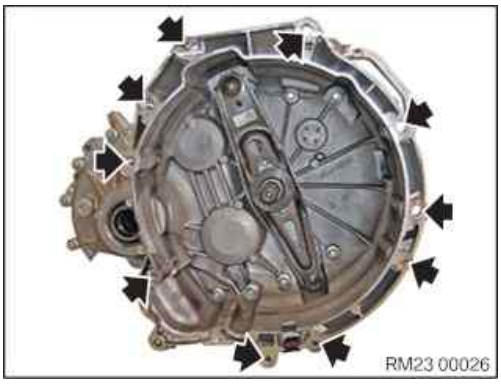


- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool **0 490 579 (11 0 070)**.
- Feed out engine lifter from engine (1) with special tool **0 490 579 (11 0 070)** and push aside.

cardiagn.com



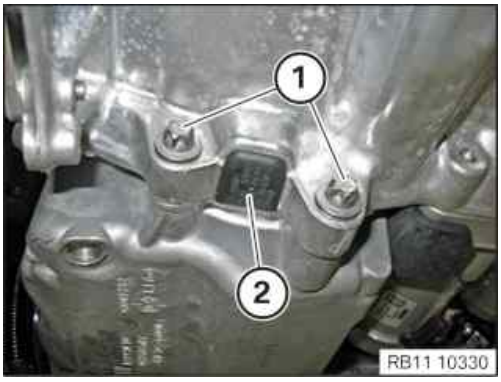
- Push table top (B) in direction of arrow and position manual gearbox (1) on engine.



- Tighten screws (arrows).

Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm



- Tighten the screws (1).

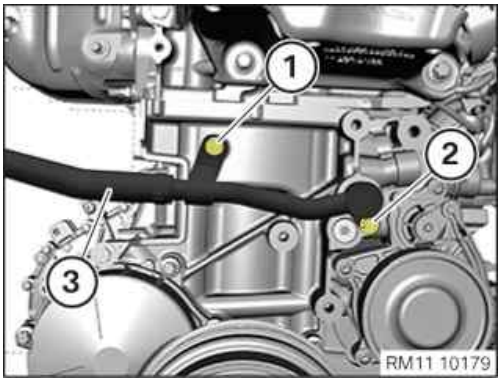
Transmission to oil sump

M8		Tightening torque	19 Nm

- Install the protective cap (2).

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

46 – Attaching assemblies (on lifting table)



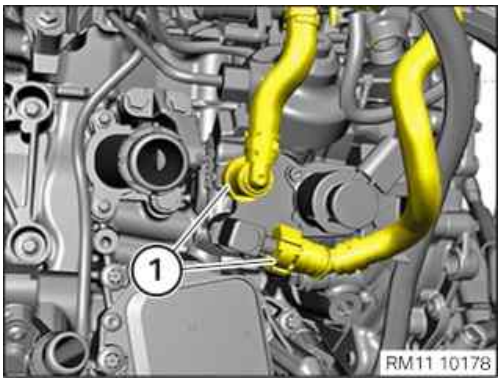
- Renew sealing ring of the coolant line (3).

  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm

cardiagn.com



- Connect and lock fuel lines (1).

  The locks must engage audibly.

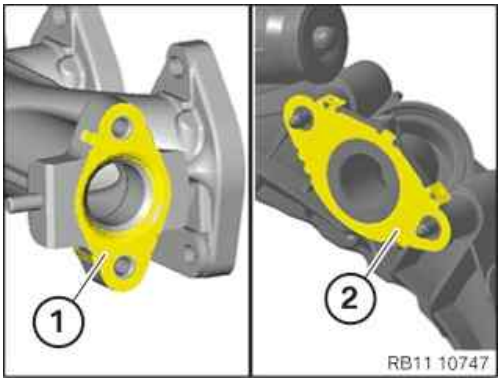
▶ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



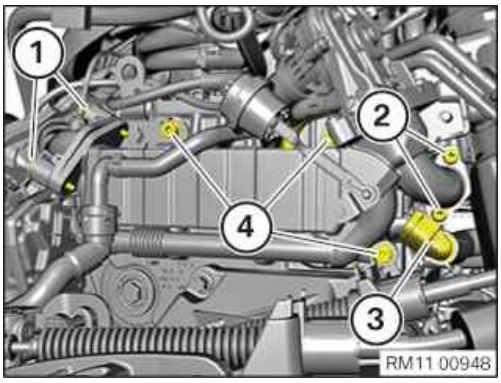
- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

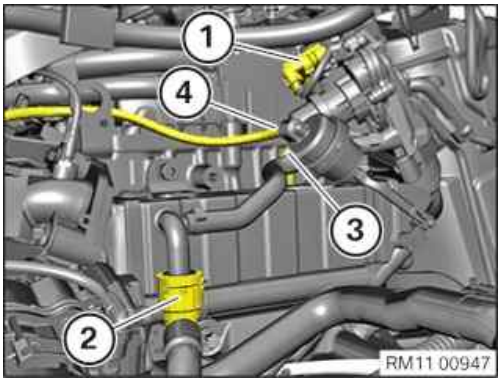
M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm



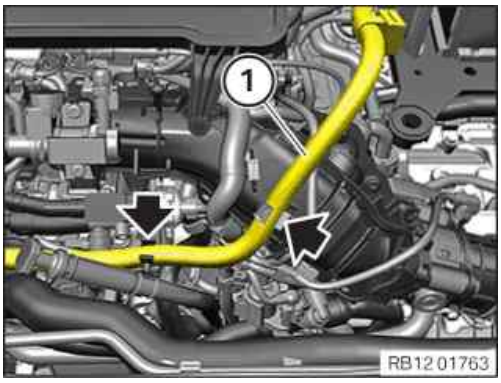
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

cardiagn.com



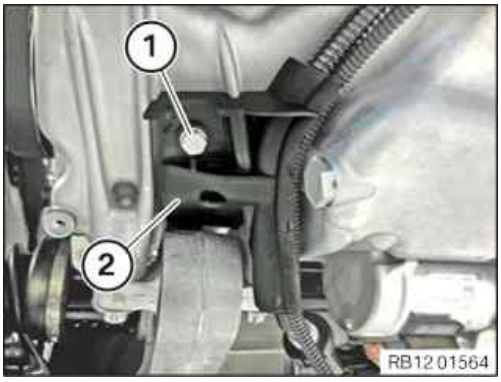
CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

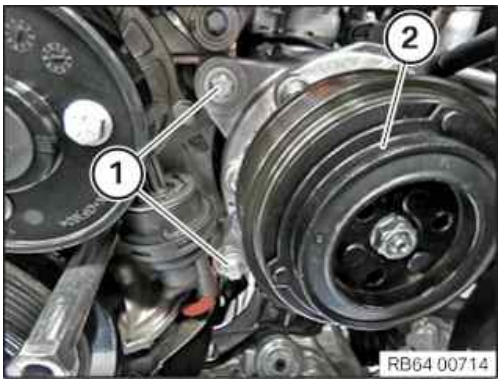
- Insert the positive battery cable (1) into the clamps (arrows).
- Feed in and install positive battery cable at the clamps (1).



- Insert and install the holder (2).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm



- Insert and install the air conditioning compressor (2).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

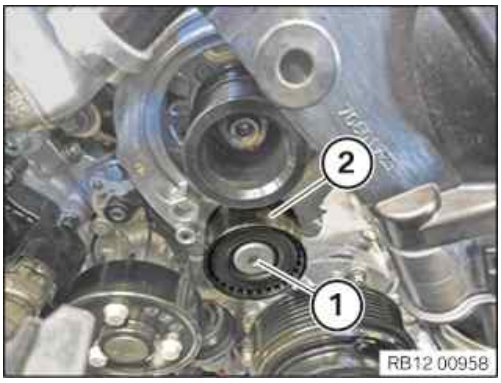
- Tighten the screws (1).

- Insert and install the alternator .
- Tighten the screws (1).

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

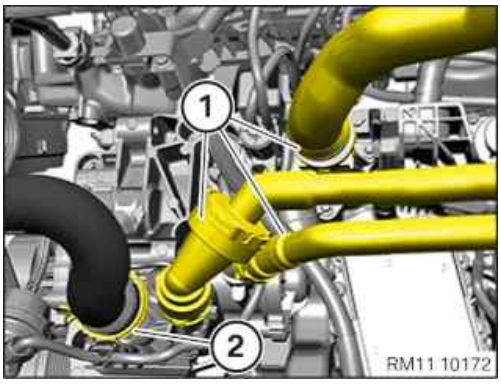
cardiagn.com



- Install the deflecting element (2).
- Tighten down screw (1).

Deflecting element to belt tensioner

M8		Tightening torque	38 Nm



- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The locks must engage audibly.

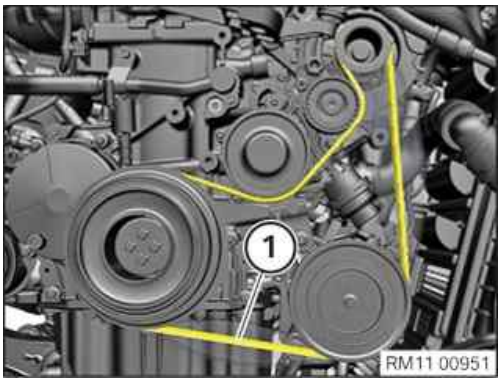
▸ Installing the drive belt for alternator

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

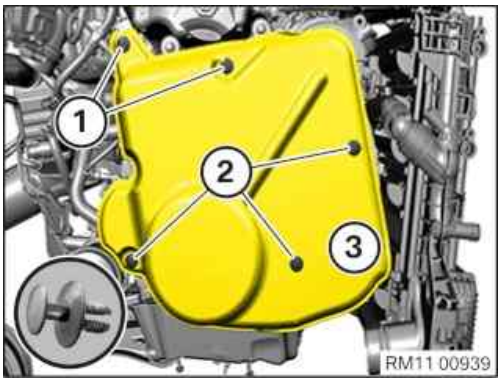


- Feed in the drive belt for the alternator (1) and install it.

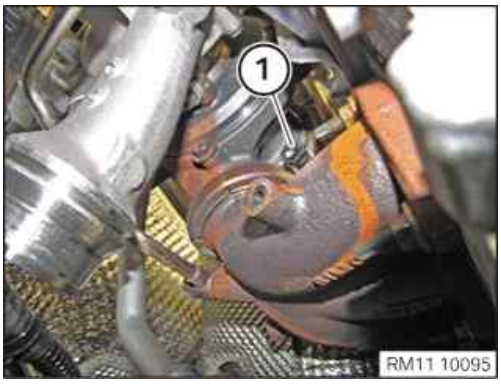
- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

▸ Install the acoustic cover for the engine at the front

cardiagn.com



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.



- Renew the seal between the exhaust turbocharger and the exhaust manifold.

  Parts: Gasket
- Position the exhaust turbocharger with the seal.
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Tighten down screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

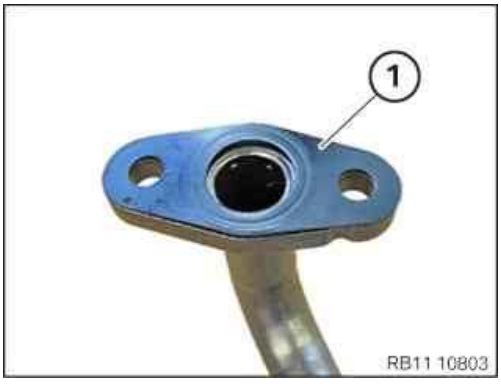
▸ **Installing the oil return line for the exhaust turbocharger**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

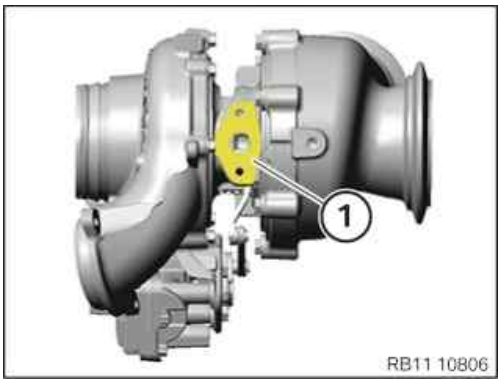


- Renew gasket (1).

  Parts: Gasket

cardiagn.com

- Check the O-ring (1) for damage and renew as needed.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean sealing surface (1).

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

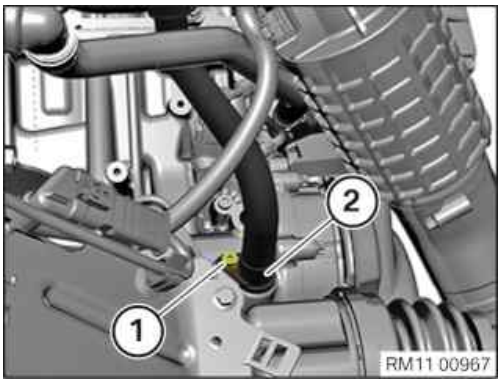
- Do not use any metal-cutting tools.

- Clean sealing surface.

- Feed in and install the oil return line (2) for the exhaust turbocharger.
- Ensure that gasket is correctly seated.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm



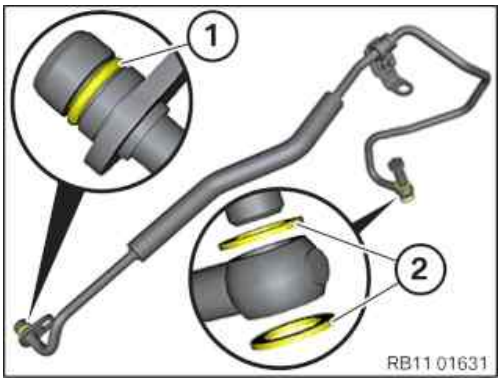
- Install oil return line (2) into crankcase.
- Make sure the O-ring is not damaged.
- Tighten down screw (1).

Oil return line to crankcase

M6x12		Tightening torque	8 Nm

▸ **Install the oil feed line for the exhaust turbocharger**

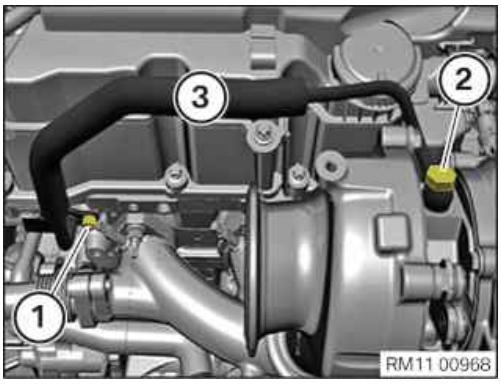
cardiagn.com



- Check the O-ring (1) for damage and replace the oil feed line as needed.

  Parts: Oil feed line
- Renew the sealing rings (2).

  Parts: Sealing ring



- Feed in oil feed line (3) and position.
- Position and tighten the screw (1).

Oil feed line on cylinder head

M6x12		Tightening torque	8 Nm

- Fit and tighten the banjo bolt (2).

  The sealing rings must be positioned correctly.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

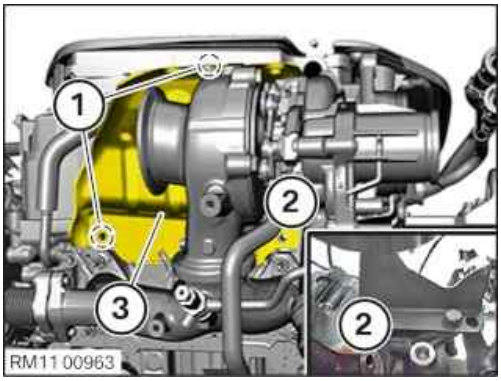
▸ **Installing heat shield on exhaust turbocharger at the rear**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

▸ **Installing heat shield on exhaust turbocharger at bottom**

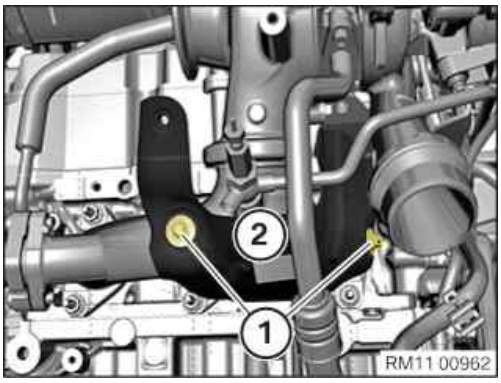
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Feed in and install the heat shield (2).
- Tighten the screws (1).

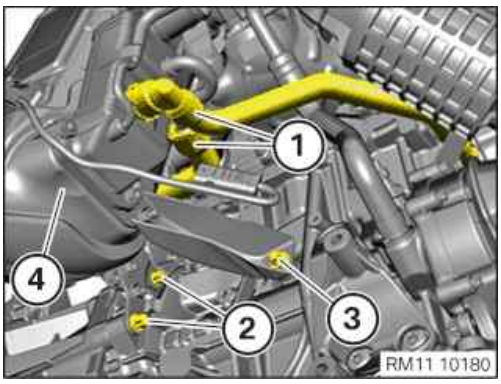
Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



- Insert and position the diesel particulate filter (4) .
- Tighten down screws (2).

Transmission to engine

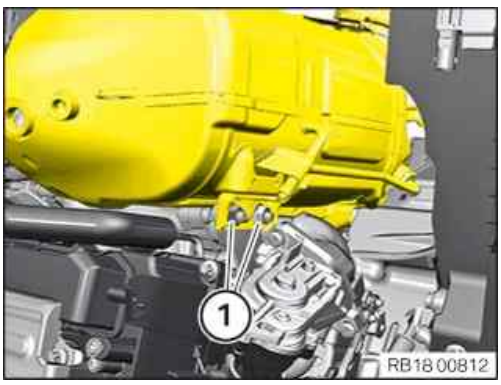
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Tighten down screw (3).

Holder to crankcase

M10		Tightening torque	38 Nm

- Connect and audibly lock coolant lines (1).



- Tighten nuts (1).

Diesel particle filter to holder

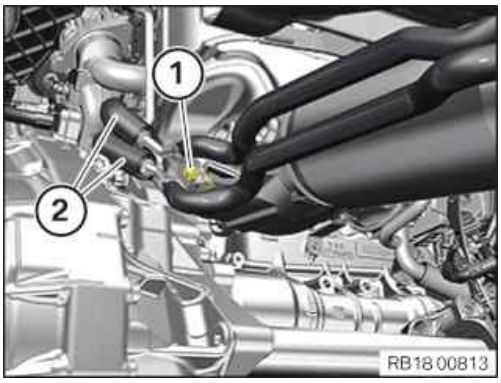
M8 hexagon nut		Tightening torque	19 Nm

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

cardiagn.com



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

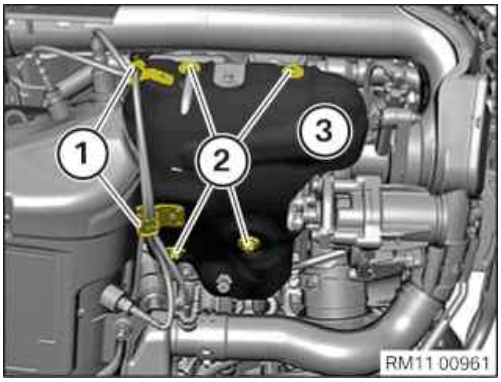
▶ **Install the heat shield on the exhaust turbocharger**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



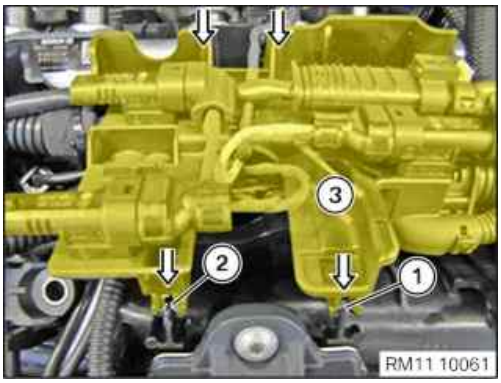
- Feed in and install the heat shield (3).
- Tighten down screws (2).

Heat shield for exhaust turbocharger

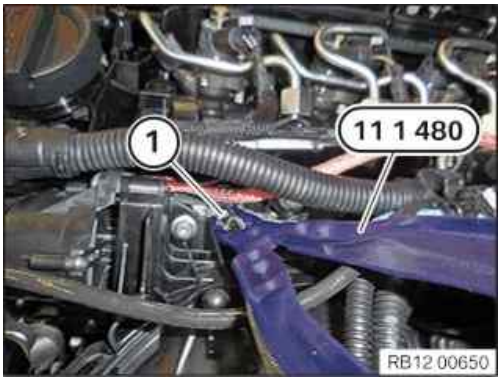
Torx screw BM 6x12		Tightening torque	10 Nm

- Secure cable in holders (1).

▶ **Installing the cable clip for the intake plenum**



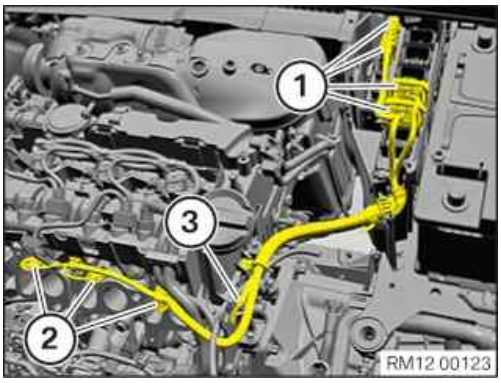
- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).



- Connect and lock the connector (1).

  The connector (1) must engage audibly.

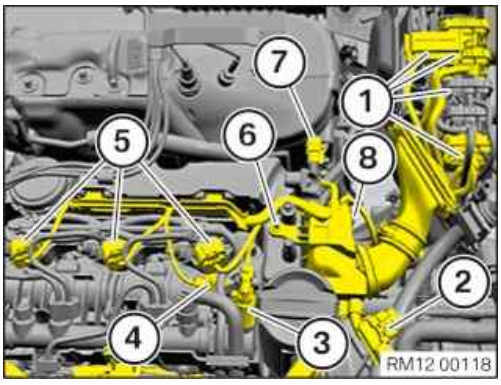
cardiagn.com



- Guide in and install the connector (1) with the wiring harness.
- Plug the connector (2) into the glow element and lock it audibly.
- Mount ground strap and tighten screw (3).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

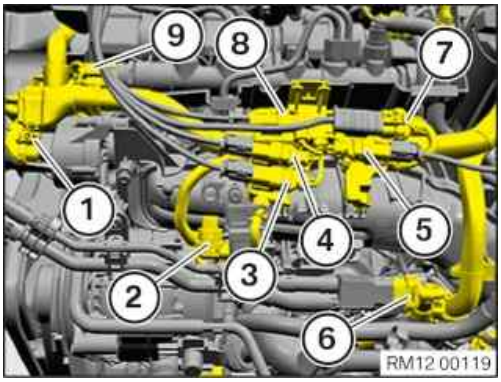


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route the connector (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

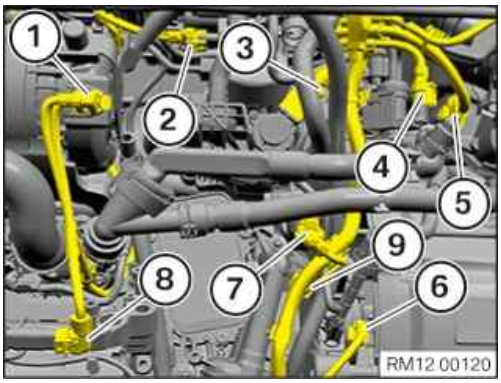
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.
- Attach connector (8) to the exhaust-gas recirculation valve and lock audibly.

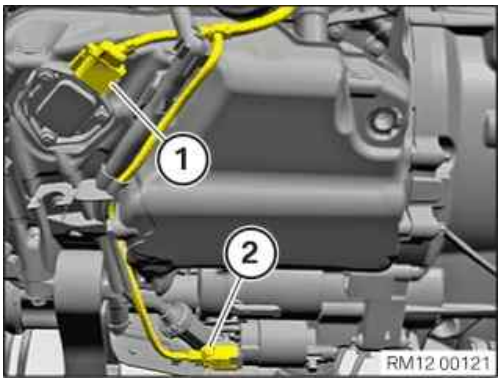


- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (9) to the rail pressure sensor and lock it audibly.

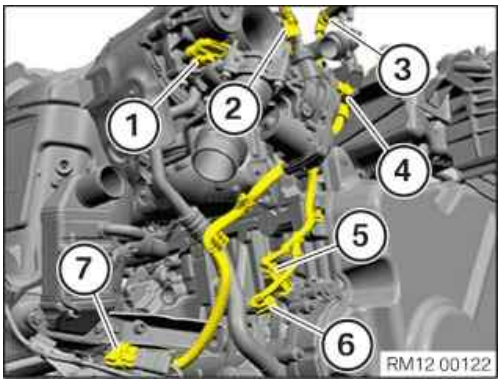


- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the high pressure pump and lock audibly.
- Connect the connector (4) to the electric changeover valve and lock audibly.
- Attach connector (5) to the throttle bodies and lock it audibly.
- Connect the connector (6) to the crankshaft sensor and lock it audibly.
- Connect the connector (7) to the oil pressure sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.

cardiagn.com

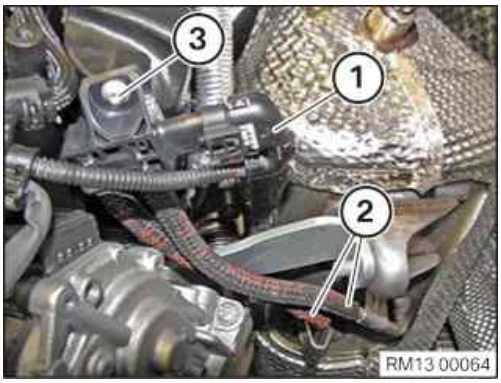


- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.



- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Attach connector (2) to the exhaust gas pressure sensor and lock it audibly.
- Attach connector (3) to the differential pressure sensor and lock it audibly.
- Attach connector (4) to the low pressure exhaust-gas recirculation valve and lock it audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.
- Connect the connector (7) to the monitoring oxygen sensor and lock audibly.

47 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

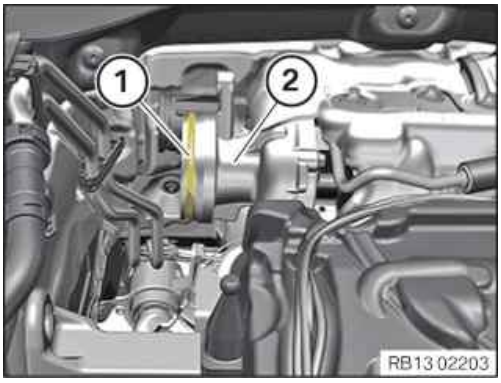
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

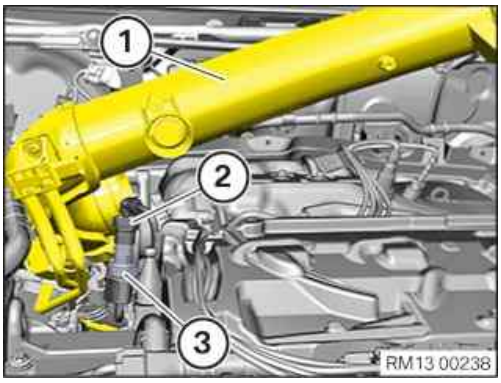
  The connector (1) must engage audibly.

48 – Installing clean air pipe



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com



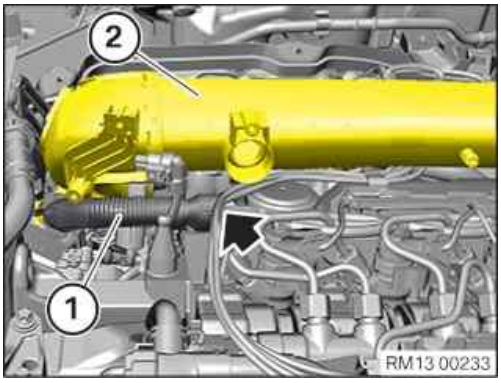
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

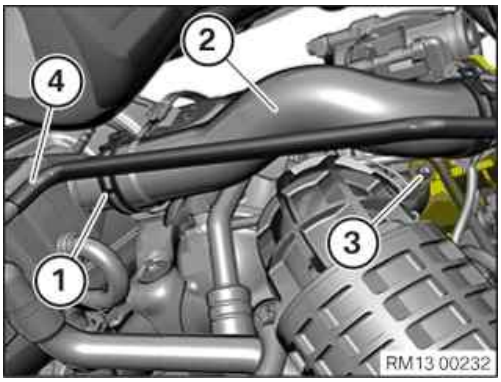
Exhaust gas pressure sensor		Tightening torque	13,5 Nm

- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

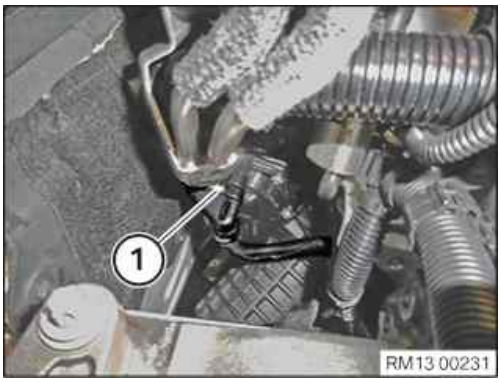
Torx bolt BM8x25		Tightening torque	8 Nm

- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

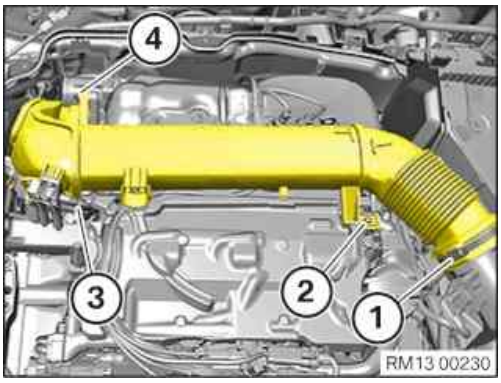
Clamp 15–19mm		Tightening torque	3 Nm



- Connect and lock the connector (1).

  The connector (1) must lock audibly.

cardiagn.com



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

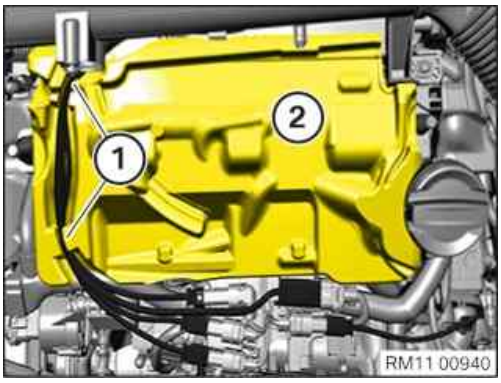
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

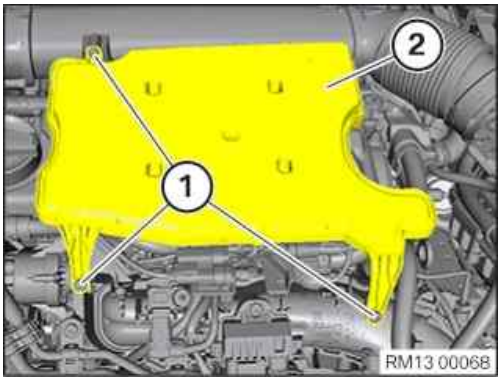
Clamp		Tightening torque	3 Nm

49 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

50 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

51 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

52 – Install engine

- See additional information.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head Used in step 8

M8		Tightening torque	21,5 Nm

Special tool 2 455 010 to crankcase Used in step 9

M10x30		Tightening torque	38 Nm

cardiagn.com

Special tool 11 8 930 to special tool 00 2 320

Used in step 9

M14x35		Tightening torque	160 Nm

Rear timing case cover to crankcase

Used in step 27

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

SCR coolant lines to crankcase end cover

Used in step 27

Hexagon screw M6x16		Tightening torque	8 Nm

Cylinder head to crankcase

Used in step 27

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

Cylinder head bolt to timing case cover

Used in step 27

M8x40		Tightening torque	19 Nm

Oil sump to crankcase

Used in step 27

M8x30		Tightening torque	24 Nm
M8x110		Tightening torque	24 Nm

Transmission to oil sump

Used in step 27 45

M8		Tightening torque	19 Nm

Guide tube for oil dipstick on engine

Used in step 27

M8x16		Tightening torque	19 Nm

Flywheel to crankshaft

Used in step 28

M12x1.5	Renew screws.	Tightening torque	120 Nm

Clutch to flywheel

Used in step 29

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

Glow elements to cylinder head

Used in step 32

Glow element		Tightening torque	13 Nm

Camshaft carrier to cylinder head

Used in step 33

M7x35		Tightening torque	13 Nm

Intake and exhaust camshaft in camshaft support

Used in step 34

M6x31		Tightening torque	10 Nm

Bearing journal to cylinder head

Used in step 34

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

Standard screw connection M8

Used in step 34

M8		Tightening torque	19 Nm

Standard screw connection M6

Used in step 34 46

M6			8 Nm

cardagn.com

Chain tensioner piston to cylinder head

Used in step 34

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Camshaft sprocket to camshaft

Used in step 34

M7x17.			17 Nm

Cylinder head cover to cylinder head

Used in step 38

M6		Tightening torque.	8,5 Nm

Clamping claw facing to cylinder head cover

Used in step 39

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 39

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

Rail on cylinder head cover

Used in step 40

Torx screw M8x25		Tightening torque	19 Nm

High pressure line between high pressure pump and rail

Used in step 40

High-pressure pipe		Tightening torque	28 Nm

High pressure lines between injector and rail

Used in step 42

High pressure lines		Tightening torque	28 Nm

Intake plenum to cylinder head

Used in step 43

M6		Tightening torque	11 Nm

Holder to crankcase

Used in step 44 46

M10		Tightening torque	38 Nm

Transmission to engine

Used in step 45 46

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 46

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 46

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 46

M8x28	Replace screws	Tightening torque	32 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 46

M8x20		Tightening torque	19 Nm

Bracket to oil sump

Used in step 46

M6		Tightening torque	8 Nm

cardiagn.com

Air conditioning compressor in component carrier — Used in step 46

M10		Tightening torque	38 Nm

Alternator to component carrier — Used in step 46

M10x75 / M10x125		Tightening torque	38 Nm

Deflecting element to belt tensioner — Used in step 46

M8		Tightening torque	38 Nm

Exhaust turbocharger to exhaust manifold — Used in step 46

V-band clamp		Tightening torque	19 Nm

Holder to exhaust turbocharger and crankcase — Used in step 46

M8x16		Tightening torque	22 Nm

Oil return line to turbocharger — Used in step 46

M6x12		Tightening torque	8 Nm

Oil return line to crankcase — Used in step 46

M6x12		Tightening torque	8 Nm

Oil feed line on cylinder head — Used in step 46

M6x12		Tightening torque	8 Nm

Oil feed line to exhaust turbocharger — Used in step 46

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

Heat shield for exhaust turbocharger — Used in step 46

Torx screw BM 6x12		Tightening torque	10 Nm

Exhaust turbocharger bracket to cylinder head — Used in step 46

Hexagon screw M 8x16		Tightening torque	19 Nm

Diesel particle filter to holder — Used in step 46

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger — Used in step 46

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Holder for coolant lines to diesel particulate filter — Used in step 46

Torx bolt BM6x16		Tightening torque	8 Nm

Ground cable to cylinder head — Used in step 46

M6x12		Tightening torque	8 Nm

Wiring harness to cylinder head cover — Used in step 46

TS5x20		Tightening torque	3,5 Nm

Differential pressure sensor to holder — Used in step 47

Screw		Tightening torque	4 Nm

cardiagn.com

Clamp for the pressure hose on the differential pressure sensor — Used in step 47 48

Clamp 15–19mm		Tightening torque	3 Nm

Exhaust gas pressure sensor — Used in step 48

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

Clean air pipe to exhaust turbocharger — Used in step 48

Torx bolt BM8x25		Tightening torque	8 Nm

Clean air pipe to cylinder head cover — Used in step 48

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 48

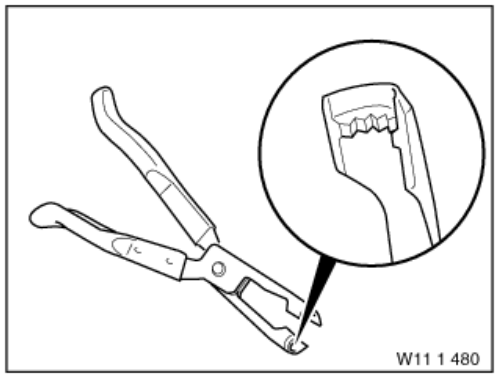
Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe — Used in step 50

Screw TS6	Renew screw.	Tightening torque	5 Nm

Overview of Special Tools

0 490 796 (11 1 480) Pliers



Common — Used in step 7 21

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

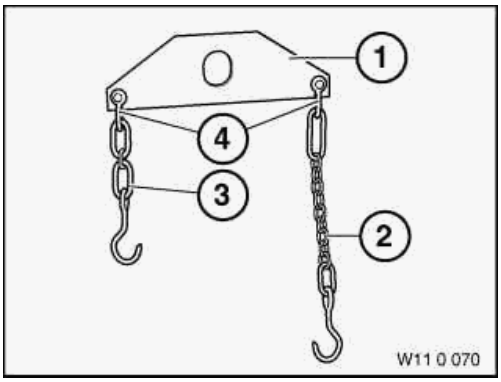
2 459 012 Holder

Common — Used in step 8 45

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

cardiagn.com

0 490 579 (11 0 070) Lifting gear



Common

Used in step 8 9 44 45

Usage	(Lifting gear) For removing and installing engines As of 08/2011, only available as a complete set, no separate components!. Delivered with TÜV inspection certificate and operating instructions.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 96 (107)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 493 753 (11 0 079)		**Shackle** (Shackle) 2 pieces As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 582 (11 0 073)		**Chain** (Chain) Version: short As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 580 (11 0 071)		**Lifting gear** (Cross member) As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 581 (11 0 072)		**Chain** (Chain) Version: long As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	

cardiagn.com

2 455 010 Engine support

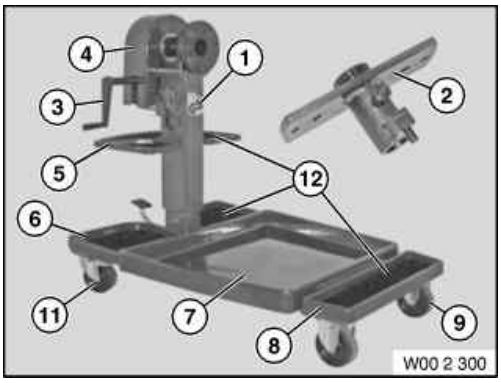
Common Used in step 9 44

Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 9

cardiagn.com



Common

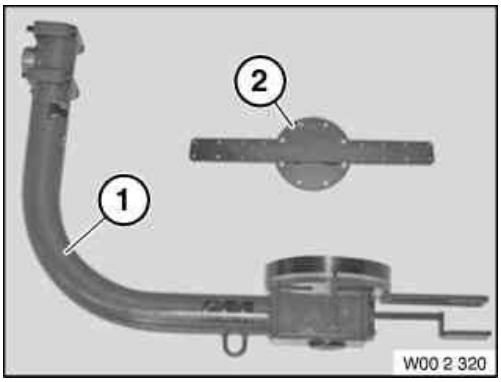
Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm



Common

Used in step 9

Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

0 495 910 (37 1 152) Socket wrench

Common

Used in step 11 14 40 42

Usage	(Socket wrench)SW19
Included in the tool or work	0 495 908
Storage location	B21
Replaced by	
In connection with	
SI-Number	01 01 07 (333)

cardiagn.com

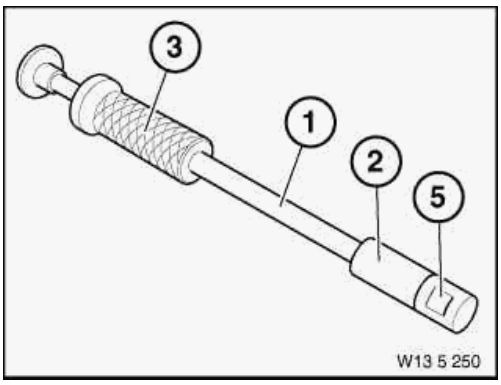
2 413 106 Fastener

Common

Used in step 11 42

Usage	For avoiding contamination and damage of rail, injectors and high pressure pump.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 16 (419)

0 493 321 (13 5 250) Puller



Common

Used in step 13

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

cardiagn.com

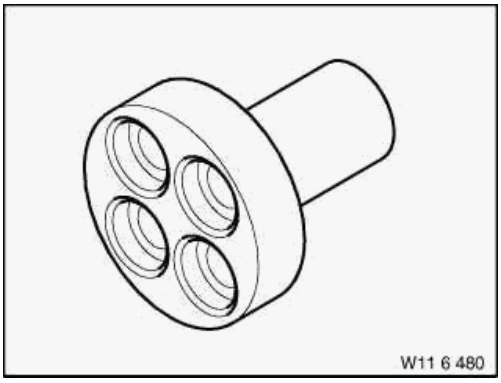
0 493 339 (13 5 252) Bush

Common	Used in step 13
Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

Common	Used in step 13
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector



Common	Used in step 16 34 37
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

cardiagn.com

2 288 380 Locating stud

Common Used in step 16 34 35 37

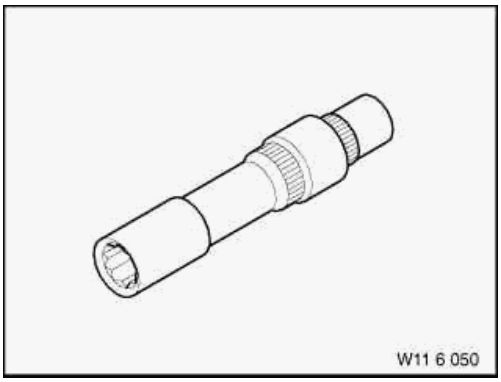
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common Used in step 16 34 36 37

Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 491 068 (11 6 050) Socket wrench insert



Common Used in step 21 32

Usage	(Wrench socket AF 10) bi-hexagon/glow elements
Included in the tool or work	
Storage location	B10
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

cardiagn.com

0 495 105 (11 4 480) oddments tray

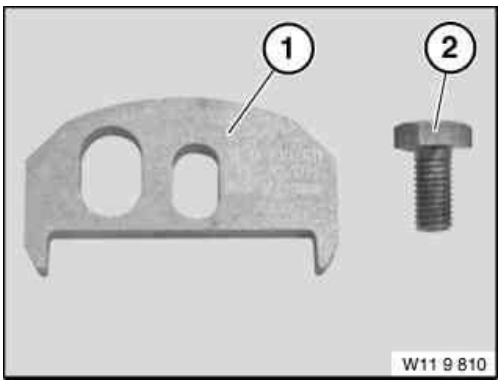
Common Used in step 22 23 34

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

0 496 171 (11 9 811) Holder



Common Used in step 24 25 28

Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

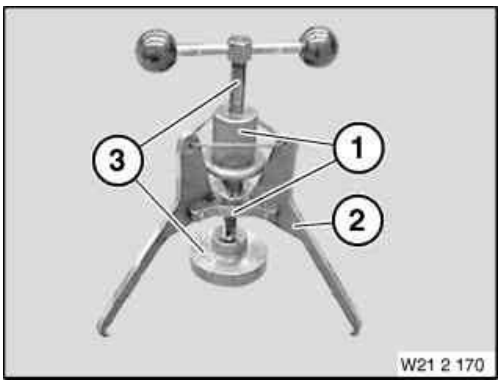
cardiagn.com

0 494 793 (11 9 265) Bush

Common Used in step 24 25 28

Usage	
Included in the tool or work	0 493 938
Storage location	A44
Replaced by	
In connection with	
SI-Number	

0 493 839 (21 2 170) Device



Common Used in step 24 29

Usage	(tensioning device) For resetting adjusting ring and installing self-adjusting clutch on flywheel without tension.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 00 (622)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 558 (21 2 171)		**Basic body** (Basic body) Basic body with adjusting spindle Deletion, only available via tool set	
2	0 494 559 (21 2 172)		**Claw** (Clamping claw (1 piece)) Available as part of complete tool set 0493839 only.	
3	0 494 560 (21 2 173)		**Spindle** (Pressure spindle with washer) Available as part of complete tool set 0493839 only.	

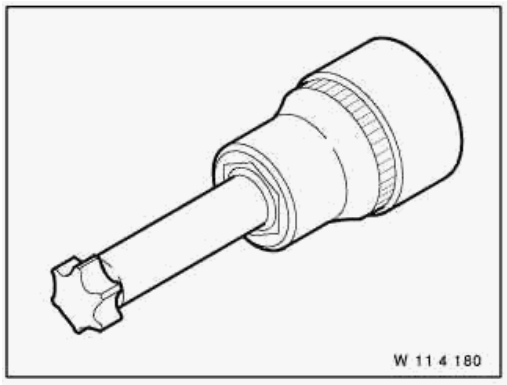
2 288 165 Synchronising key

Common Used in step 24 29

Usage	Conversion kit for 21 2 170, for orders till 02.2014. Orders as of March 2014 do not require the conversion, as the new thrust piece has been accounted for.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 09 14 (088)

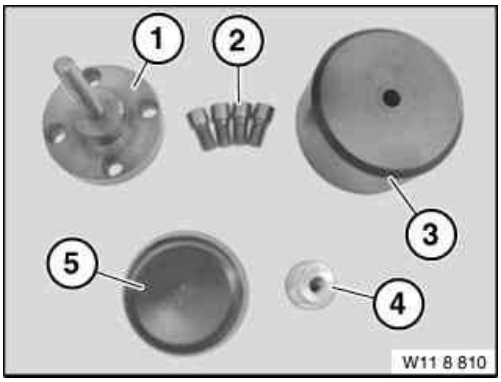
cardiagn.com

0 491 018 (11 4 180) Socket WAF 46



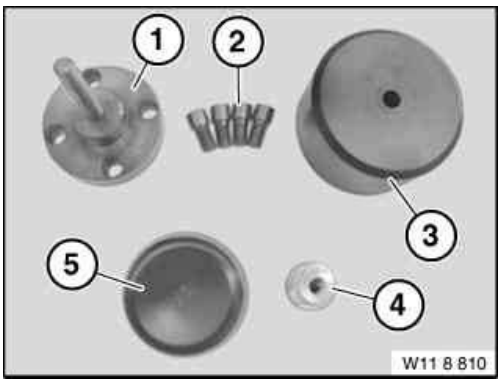
Common	Used in step 25 28
Usage	(screwdriver bit Torx T60) For releasing and tightening down dual-mass flywheel - model year: from Jan 94
Included in the tool or work	
Storage location	C9
Replaced by	
In connection with	
SI-Number	01 02 94 (777)

0 496 137 (11 8 815) Holding sleeve



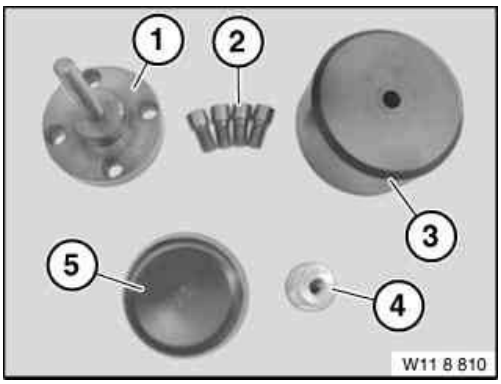
Common	Used in step 27
Usage	(Slip sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 496 133 (11 8 811) Basic body



Common	Used in step 27
Usage	Liquidation of existing inventory and then available only as a complete tool set 11 8 810 = 83 30 0 496 132 - as of 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

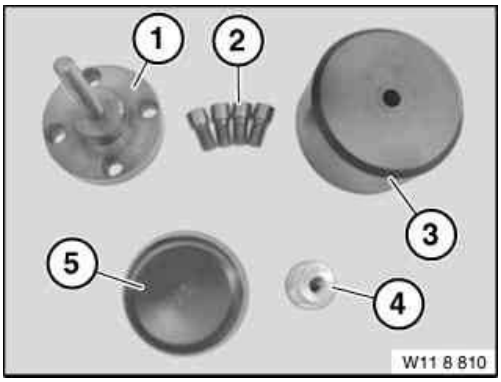
0 496 134 (11 8 812) Screw



Common	Used in step 27
Usage	(Screw set) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

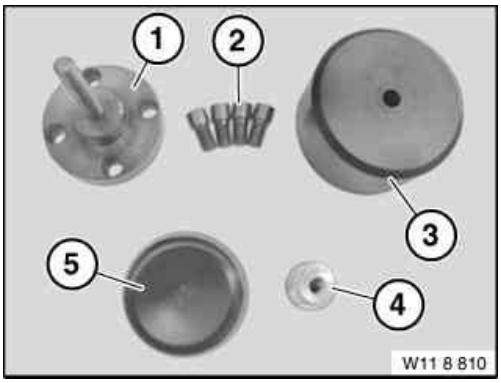
cardiagn.com

0 496 135 (11 8 813) Holding sleeve



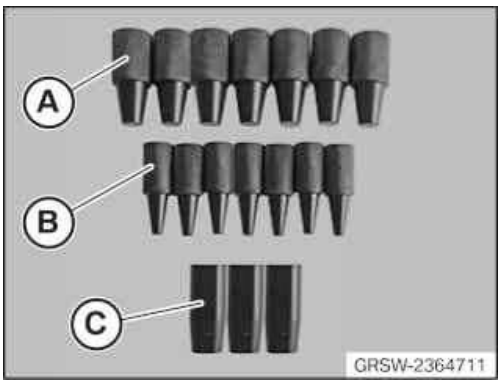
Common	Used in step 27
Usage	(Thrust sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 496 136 (11 8 814) Nut



Common	Used in step 27
Usage	(Nut with bearing) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

2 364 711 Plug



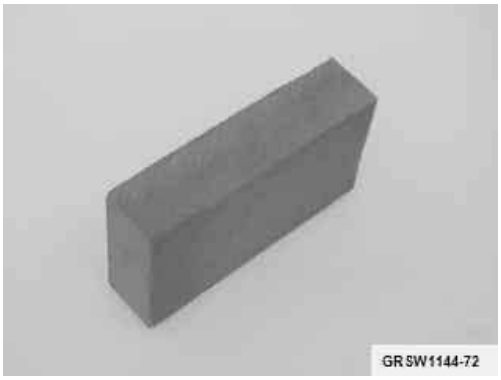
Common	Used in step 27
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

0 495 103 (11 4 471) Scraper

Common	Used in step 27
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

cardiagn.com

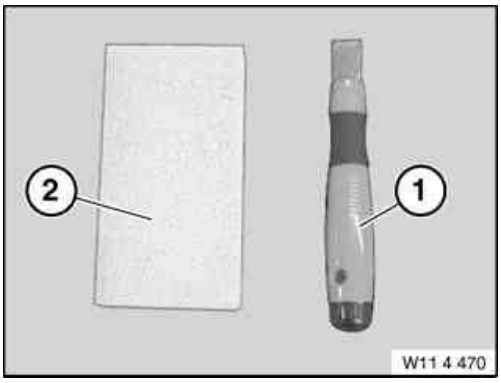
0 495 104 (11 4 472) Extractor



Common Used in step 27

Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

0 495 102 (11 4 470) Tool



Common Used in step 27

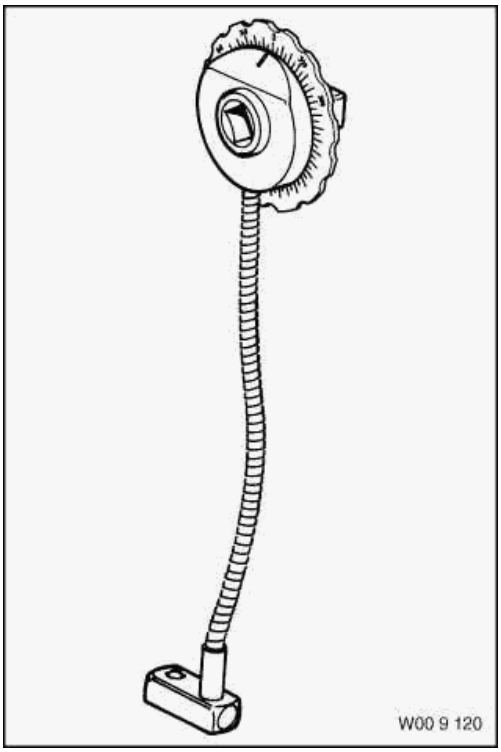
Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

cardiagn.com

0 490 504 (00 9 120) Torque angle measuring dial

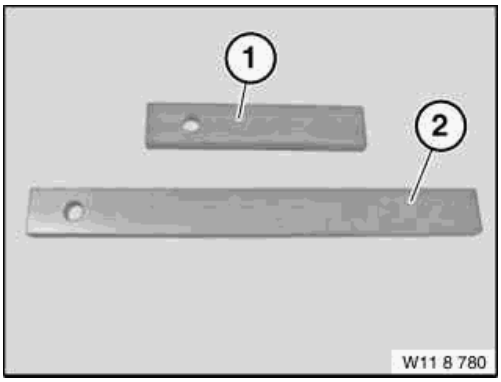


Common Used in step 27

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 496 120 (11 8 780) Plate



Common Used in step 27

Usage	(Mounting plates) For securing transmission oil sump when gearbox is removed.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 121 (11 8 781)		**Plate** (Mounting plate, short)Discontinued; only available via set 11 8 780 = 0496120.	
2	0 496 122 (11 8 782)		**Plate** (Mounting plate, long) Discontinued; only available via set 11 8 780 = 0496120.	

2 285 058 Tool set

Common Used in step 28

Usage	
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 02 14 (069)

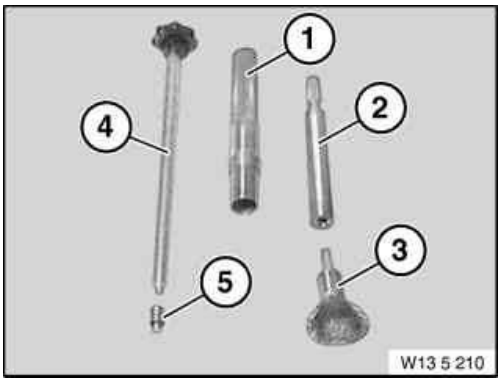
2 358 471 Clutch tool

Common Used in step 29

Usage	For installation of coupling drive plate.. (Getrag transmission) . Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A55
Replaced by	
In connection with	
SI-Number	01 09 14 (088)

cardiagn.com

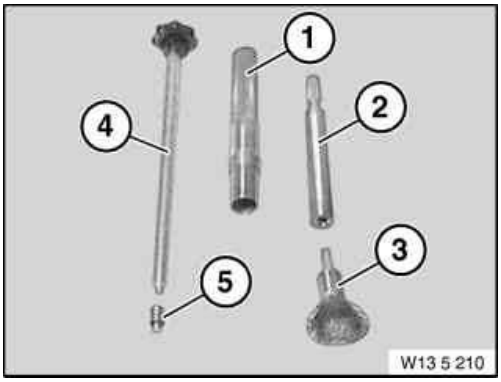
0 493 763 (13 5 215) Plug



Common Used in step 39

Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 762 (13 5 214) Rod

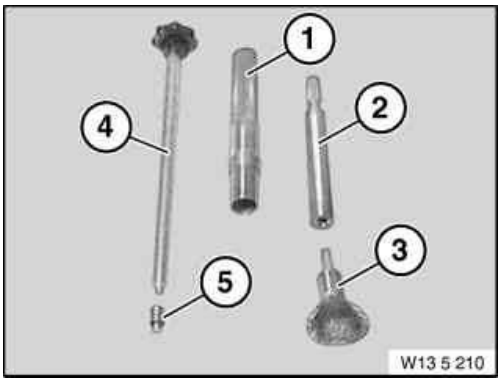


Common Used in step 39

Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 758 (13 5 210) Tool

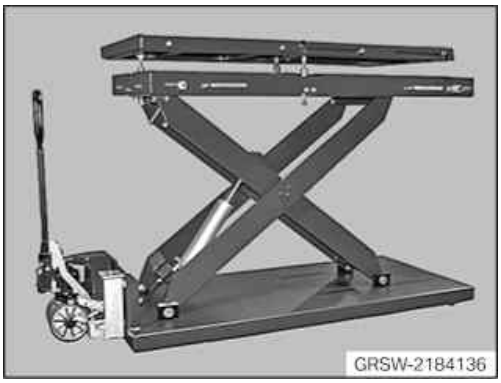


Common		Used in step 39
Usage	(Cleaning set) For injector channels	
Included in the tool or work		
Storage location	B4	
Replaced by		
In connection with		
SI-Number	01 05 00 (574)	

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

2 184 136 Mobile equipment table lift



Common		Used in step 45
Usage	Table lift MHT 1200	
Included in the tool or work		
Storage location		
Replaced by		
In connection with		
SI-Number	06 01 10 (649)	

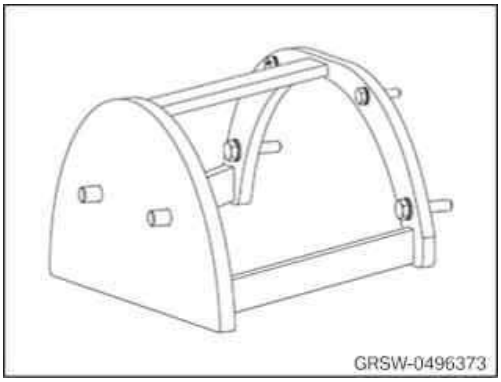
Replacement tools:

cardiagn.com

2 299 563 Adapter

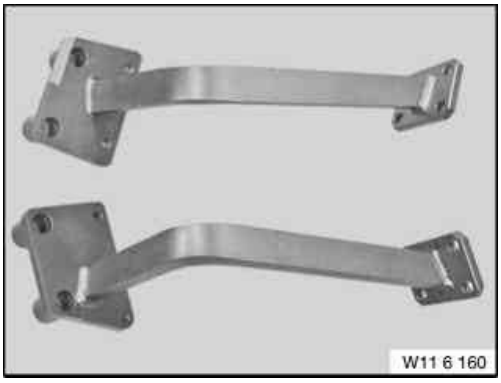
Common	Used in step 9
Usage	New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.
Included in the tool or work	0 495 187
Storage location	
Replaced by	
In connection with	
SI-Number	

0 496 373 (11 5 420) Plate



Common	Used in step 9
Usage	(Fixture) Engine S62
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	

0 496 680 (11 6 160) Support



Common	Used in step 9
Usage	For mounting N74 engine on the assembly stand. In combination with 00 2 300, 00 2 320
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	00 2 300; 00 2 320 = 0495196
SI-Number	01 31 09 (604)

11 14 110 Removing and installing/sealing or replacing bottom timing case cover

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.

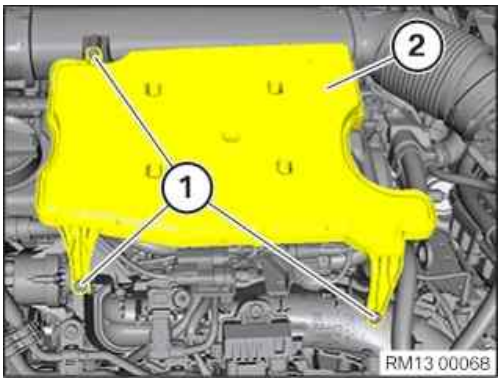
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

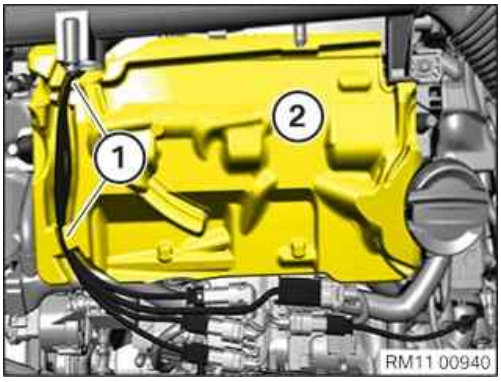
3 – Remove resonator

cardiagn.com



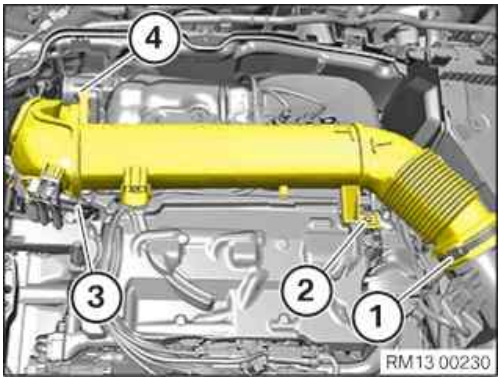
- Loosen screws (1).
- Guide out and remove the resonator (2).

4 – Remove the acoustic cover for the injectors

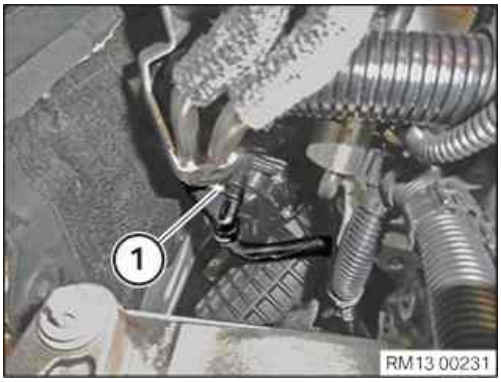


- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

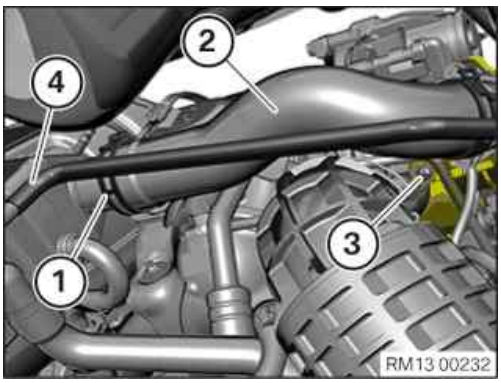
5 – Removing clean air pipe



- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).

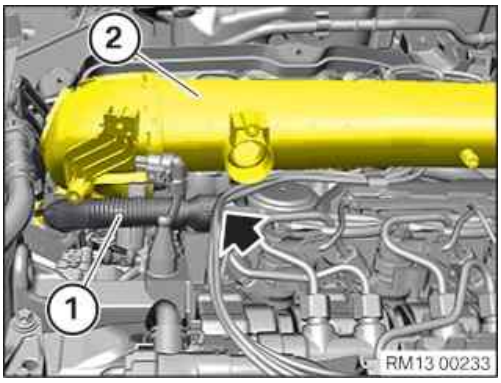


- Unlock and loosen connector (1).

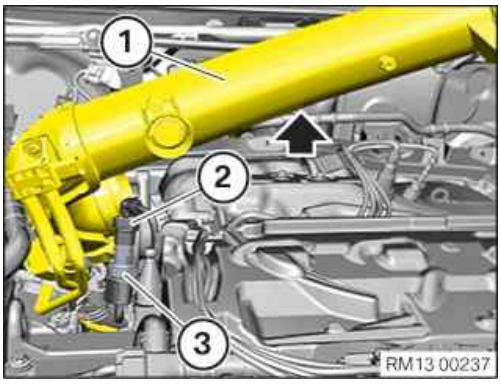


- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.

cardiagn.com



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

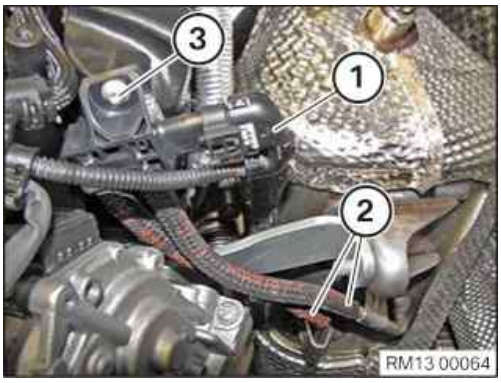
6 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

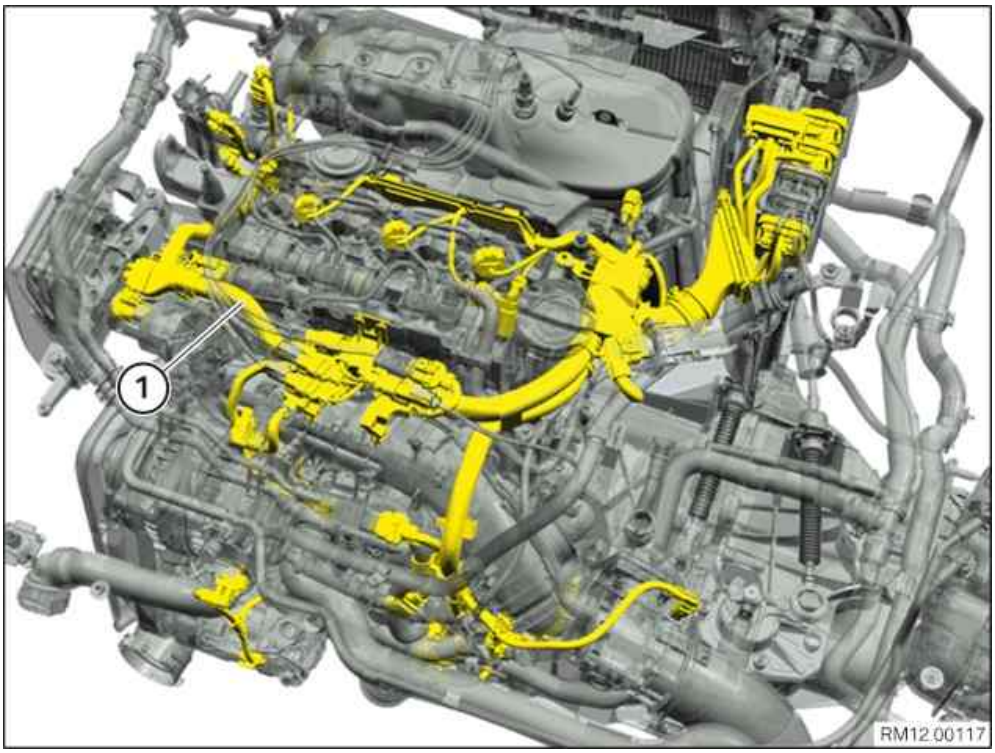


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

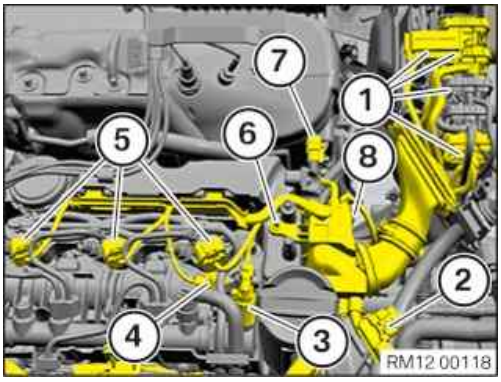
7 – Removing assemblies (on lifting table)

cardiagn.com

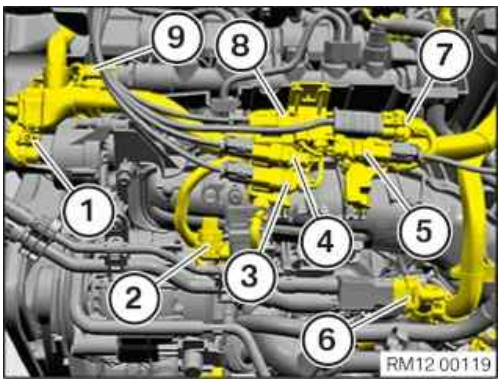
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine



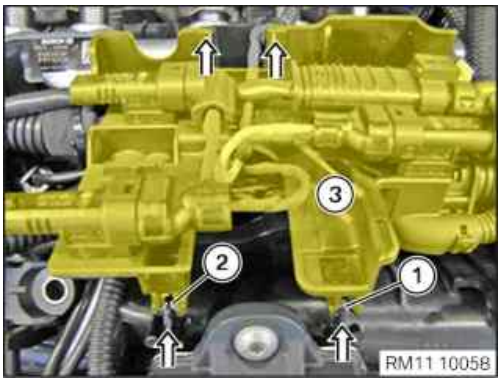
- Remove the connector (1) of the integrated supply module (PDM) and the DME control unit.
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock the connector (3) and disconnect it from the fuel pressure regulator.
- Unlock the connector (4) and disconnect it from the camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock the connector (7) and disconnect it from the differential pressure sensor.
- Unlock the connector (8) and disconnect it from the exhaust-gas recirculation valve.



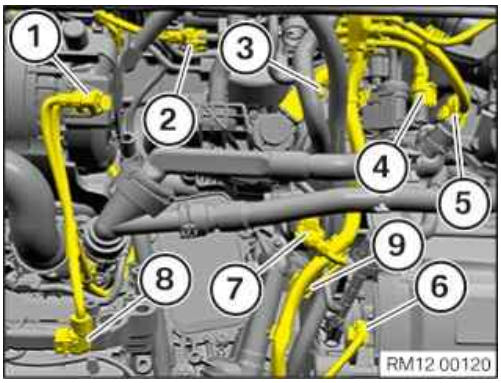
- Unlock the connector (1) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (6) and disconnect from the fuel pressure and temperature sensor.
- Unlock connector (7) and pull it off from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.
- Unlock connector (9) and pull off from the rail pressure sensor.

▶ **Removing the cable clips from the intake plenum**

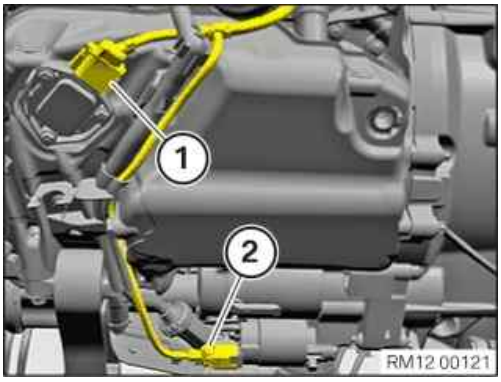
cardiagn.com



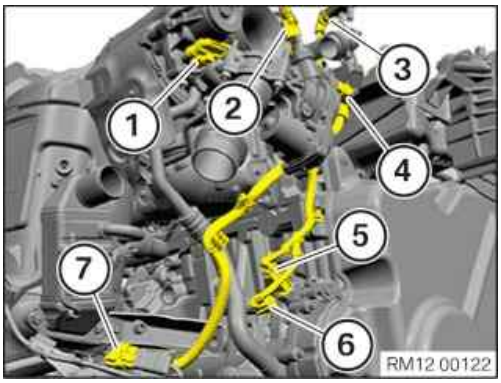
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.



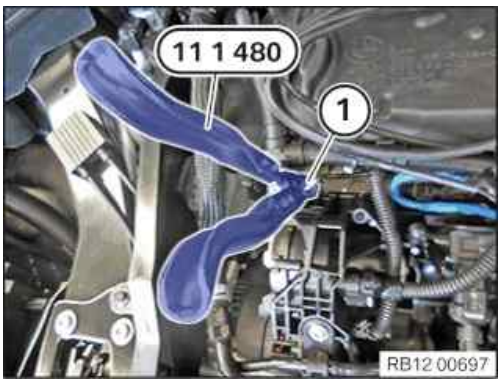
- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock the connector (3) and pull it off the high pressure pump.
- Unlock and disconnect the connector (4) from the electric changeover valve.
- Unlock connector (5) and pull off from throttle body.
- Unlock the connector (6) and pull it off the crankshaft sensor.
- Unlock the connector (7) and disconnect it from the oil pressure sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.



- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

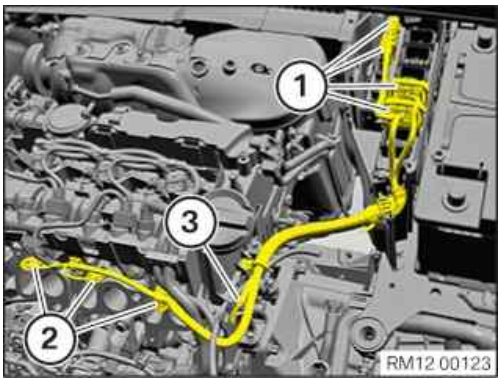


- Unlock the connector (1) and pull it off the exhaust turbocharger.
- Unlock the connector (2) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull off from low pressure exhaust-gas recirculation valve.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Unlock connector (7) and pull it off from the monitoring oxygen sensor.
- Detach, feed out and remove the wiring harness from the clamps.



- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

cardiagn.com



- Pull off the connector (2) of the glow elements using the special tool **0 490 796 (11 1 480)** .
- Loosen screw (3).
- Guide out and remove the connector (1) with the wiring harness.

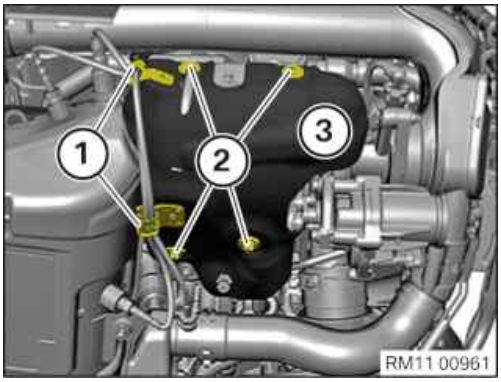
▶ Removing heat shield from top exhaust turbocharger

WARNING

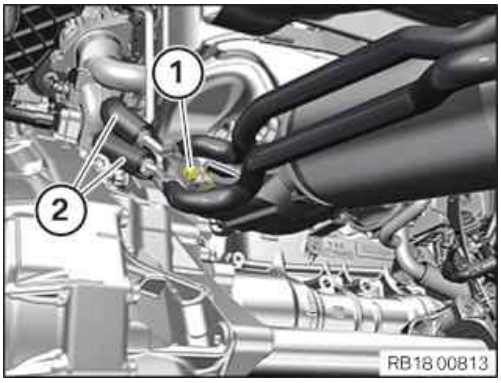
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



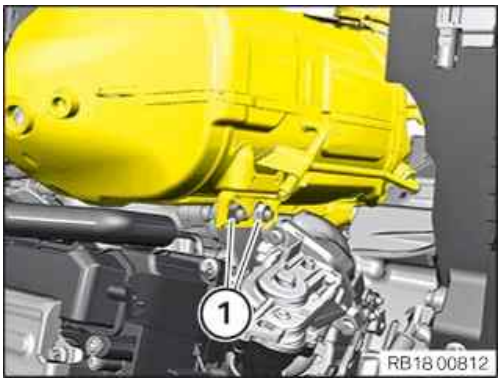
- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).



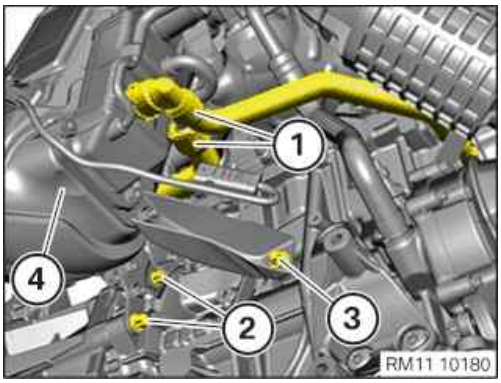
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

cardiagn.com



- Loosen nuts (1).



- Unlock and pull off coolant lines (1).
- Loosen screws (2).
- Loosen screw (3).
- Guide out and remove diesel particulate filter (4).

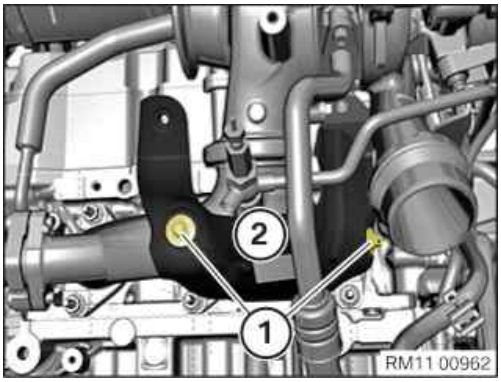
▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

▶ **Removing heat shield from rear exhaust turbocharger**

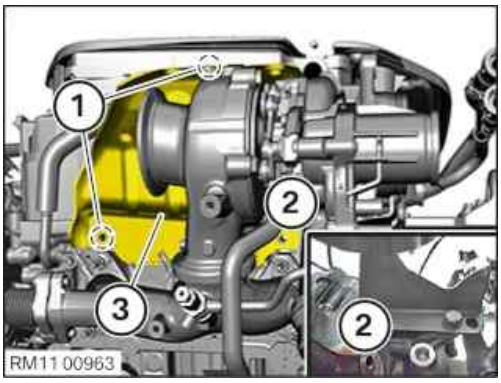
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



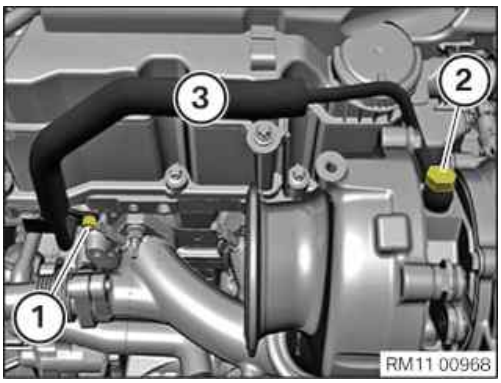
- Loosen screws (1).
- Loosen screw (2).

  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

▶ **Remove the oil feed line for the exhaust turbocharger**

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Loosen screw (1).
- Unscrew the banjo bolt (2).
- Pull the oil feed line (3) out of the cylinder head, guide it out and remove it.

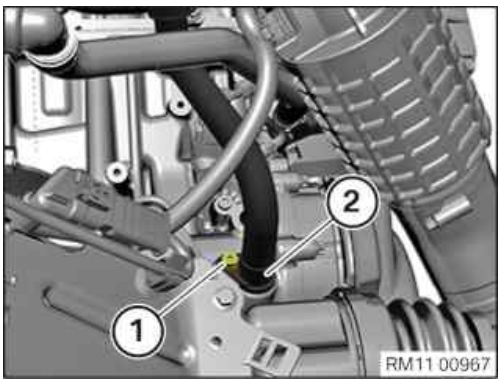
▶ **Removing the oil return line for the exhaust turbocharger**

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

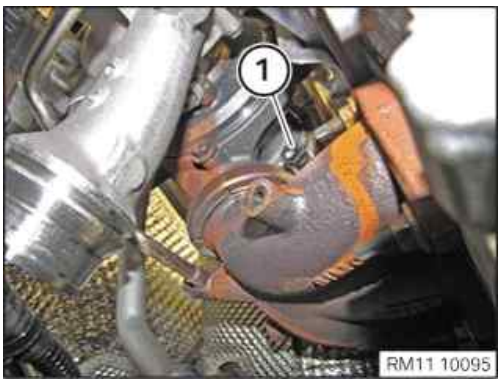
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screw (1).
- Pull the oil return line (2) out of the crankcase.

cardiagn.com

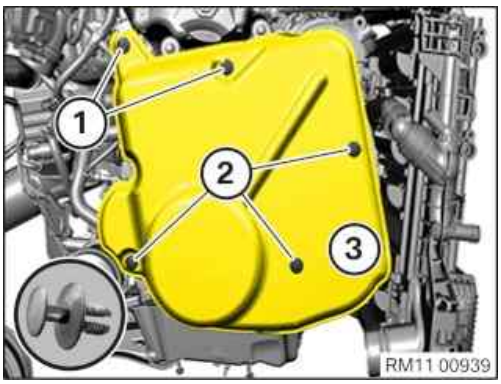
- Loosen screws (1).
- Feed out and remove oil return line (2) downwards.

- Release the screw (1) for the bracket on the exhaust turbocharger and on the crankcase.



- Release the V-clip (1) and remove.
- Take the exhaust turbocharger off of the exhaust manifold.

▶ **Removing the acoustic cover for the engine at the front**



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

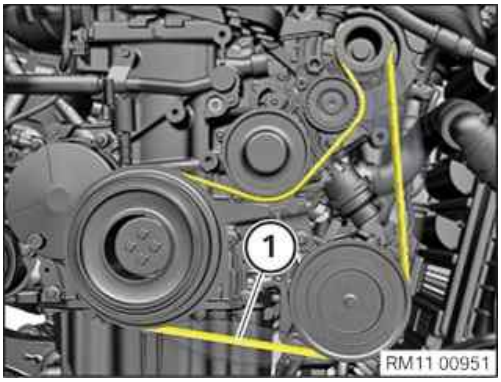
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

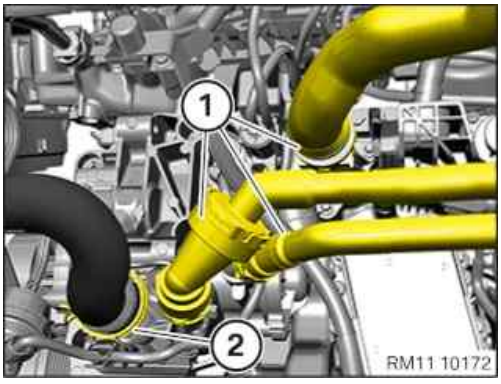
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .

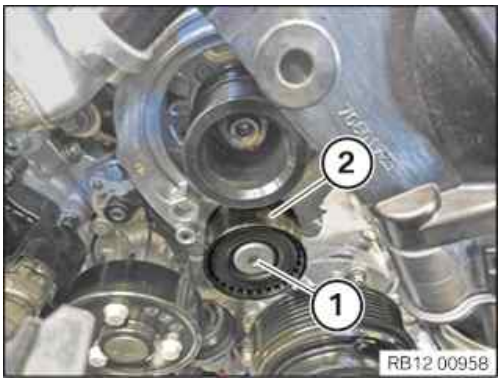


- Guide out the drive belt for the alternator (1) and remove it.

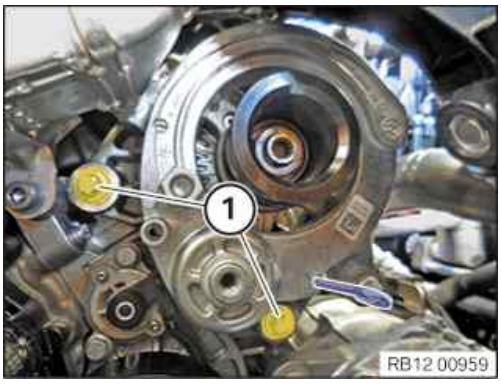


- Unlock and remove coolant lines (1).
- Release the clamp (2) and remove the coolant hose.

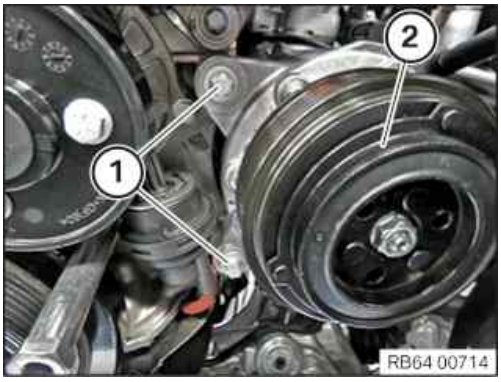
cardiagn.com



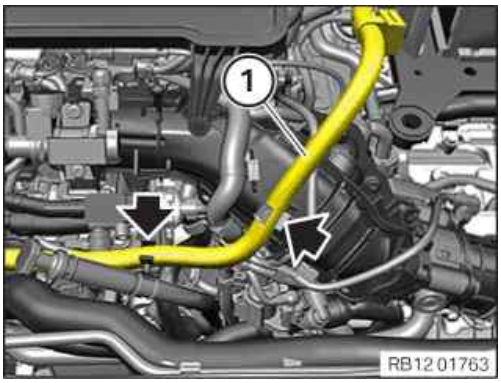
- Loosen screw (1).
- Remove the deflecting element (2).



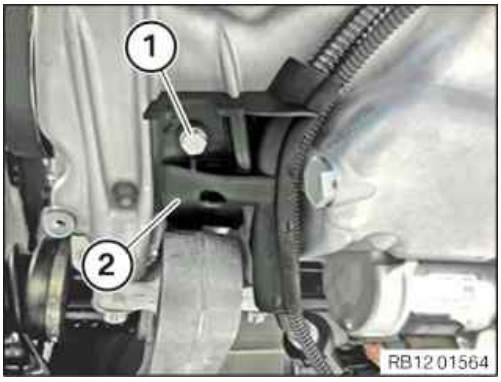
- Loosen screws (1).
- Remove alternator.



- Loosen screws (1).
- Remove air conditioning compressor (2).



- Release the positive battery cable (1) from the clamps (arrows).



- Loosen screw (1).
- Guide out and remove holder (2).

cardiagn.com

- Feed out positive battery cable from the clamps (1) and remove.

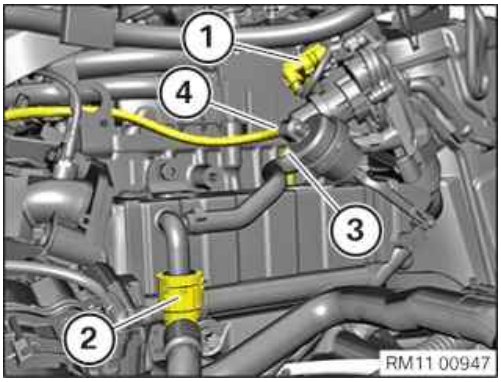
▶ Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

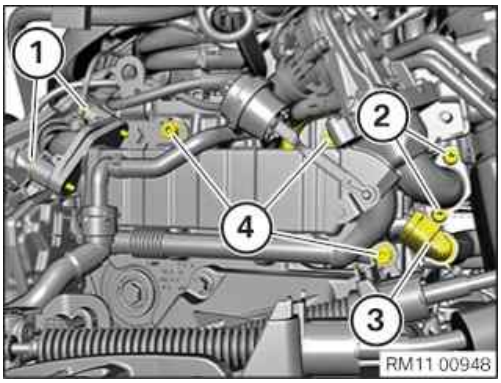
- Perform all work only on components that have cooled down.



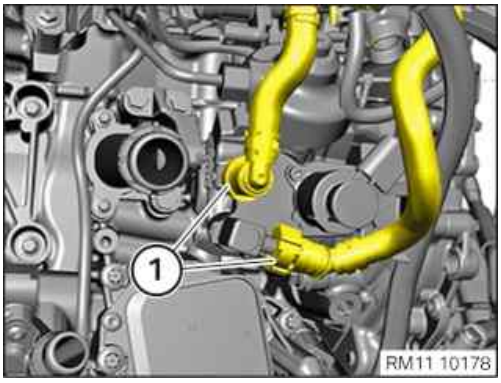
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

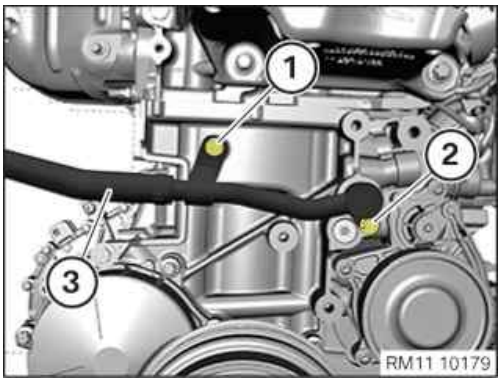


- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.



- Unlock the fuel lines (1) and release them from the high pressure pump.
- Remove the fuel lines (1) .

cardiagn.com



- Loosen screws (1) and (2).
- Remove coolant line (3).

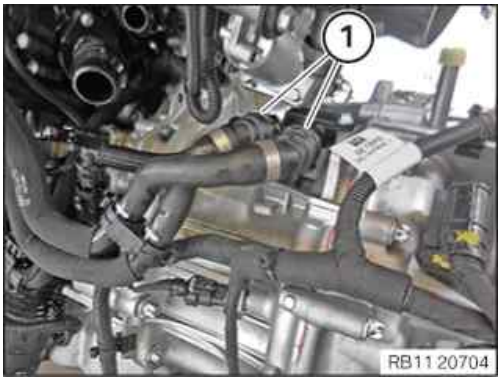
8 – Disconnect the engine from the double-clutch transmission (DKG)

RISK OF DAMAGE

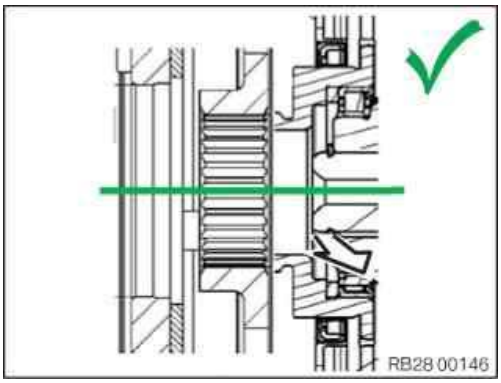
Damage to the flywheel and the double-clutch transmission (DKG).

Damage to the flywheel and the double-clutch transmission (DKG) due to incorrect removal and installation of the double-clutch transmission (DKG).

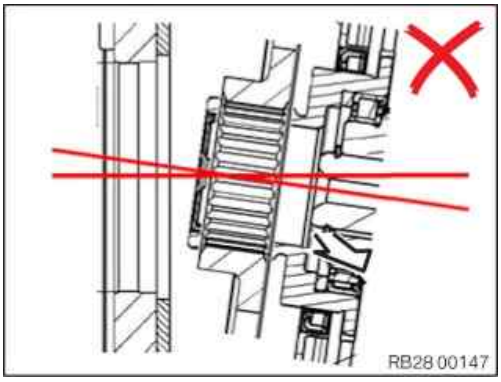
- Align the double-clutch transmission (DKG) absolutely horizontally during removal and installation.



- Unlock and release coolant line (1).
- Catch and dispose of escaping coolant.

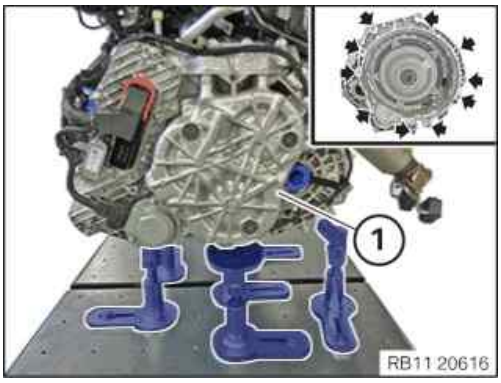


- **Correct:** Pull the double-clutch transmission (DKG) horizontally off the flywheel.

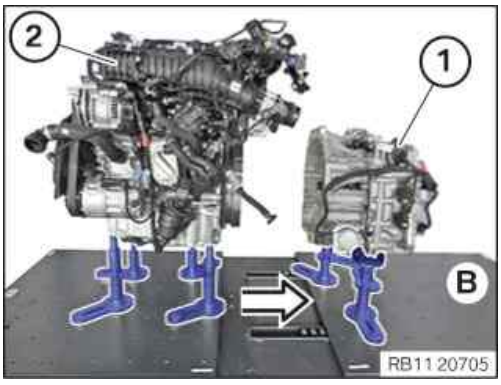


- **Wrong:** Do not pull the double-clutch transmission (DKG) off the flywheel if it is tilted.

cardiagn.com



- Remove screws (arrows).
- Pull the double-clutch transmission (DKG) (1) off the flywheel when it is **absolutely** horizontal.



NOTICE

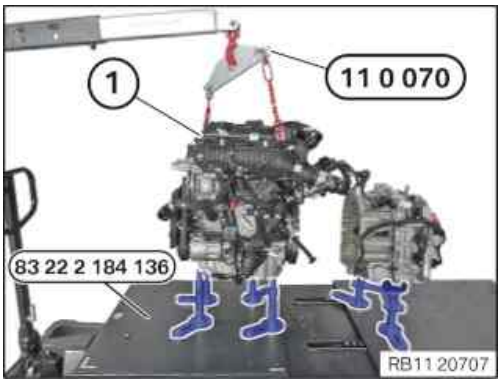
Schematic diagram is for example purposes. Some parts may differ in certain details.

- Slide table top (B) in the direction of arrow and disconnect double-clutch transmission (DKG) (1) from the engine (2).

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Attach the engine lifter with the special tool **0 490 579 (11 0 070)** and lift the engine (1) off the lifting table.

9 – Mount engine on assembly stand

CAUTION

Heavy component.

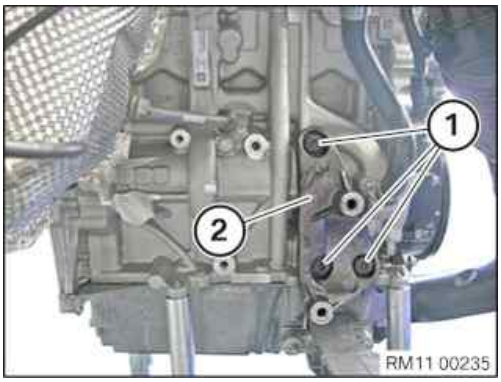
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

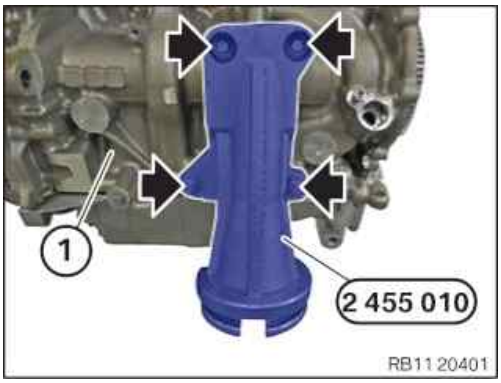
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



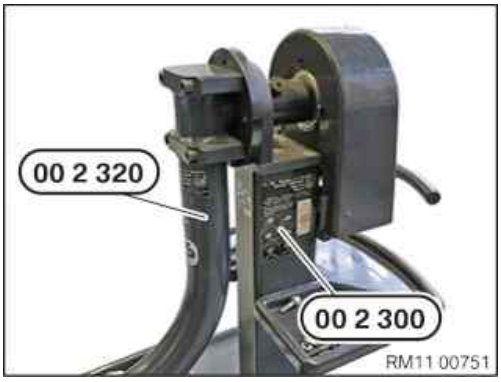
- Loosen screws (1).
- Guide out and remove holder (2).



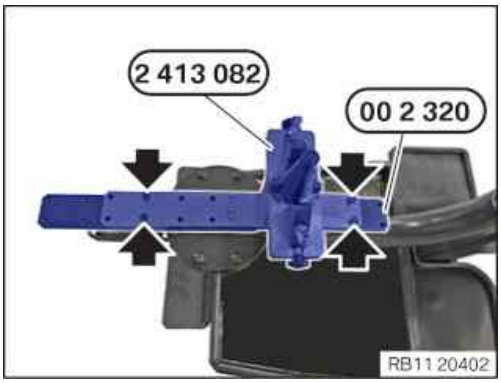
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm



- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.



- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm

- Position the engine lifter with the special tool **0 490 579 (11 0 070)** and the engine on the special tool **0 495 187 (00 2 300)**.

cardiagn.com
