PRODUCT SAFETY SERVICING GUIDELINES FOR AUDIO-VIDEO PRODUCTS

IMPORTANT SAFETY NOTICE

This manual was prepared for use only by properly trained audio-visual service technicians.

When servicing this product, under no circumstances should the original design be modified or altered without permission from Zenith Electronics Corporation. All components should be replaced only with types identical to those in the original circuit and their physical location, wiring and lead dress must conform to original layout upon completion of repairs.

Special components are also used to prevent x-radiation, shock and fire hazard. These components are indicated by the letter "x" included in their component designators and are required to maintain safe performance. No deviations are allowed without prior approval by Zenith Electronics Corporation.

Circuit diagrams may occasionally differ from the actual circuit used. This way, implementation of the latest safety and performance improvement changes into the set is not delayed until the new service literature is printed.

CAUTION: Do not attempt to modify this product in any way. Never perform customized installations without manufacturer's approval. Unauthorized modifications will not only void the warranty, but may lead to property damage or user injury.

Service work should be performed only after you are thoroughly familiar with these safety checks and servicing guidelines.

GRAPHIC SYMBOLS

The exclamation point within an equilateral triangle is intended to alert the service personnel to important safety information in the service literature.

The lightning flash with arrowhead symbol within an equilateral triangle is intended to alert the service personnel to the presence of noninsulated "dangerous voltage" that may be of sufficient magnitude to constitute a risk of electric shock.

The pictorial representation of a fuse and its rating within an equilateral triangle is intended to convey to the service personnel the following fuse replacement caution notice:

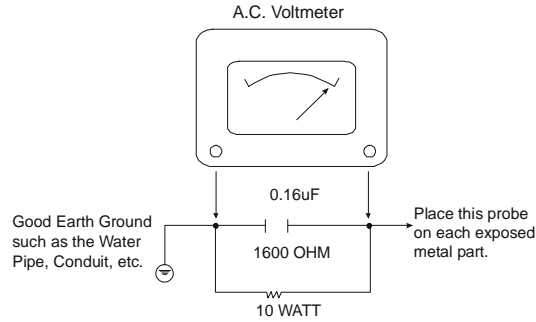

CAUTION: FOR CONTINUED PROTECTION AGAINST RISK OF FIRE, REPLACE ALL FUSES WITH THE SAME TYPE AND RATING AS MARKED NEAR EACH FUSE.

SERVICE INFORMATION

While servicing, use an isolation transformer for protection from AC line shock. After the original service problem has been corrected, make a check of the following:

FIRE AND SHOCK HAZARD

1. Be sure that all components are positioned to avoid a possibility of adjacent component shorts. This is especially important on items transported to and from the repair shop.
2. Verify that all protective devices such as insulators, barriers, covers, shields, strain reliefs, power supply cords, and other hardware have been reinstalled per the original design. Be sure that the safety purpose of the polarized line plug has not been defeated.
3. Soldering must be inspected to discover possible cold solder joints, solder splashes, or sharp solder points. Be certain to remove all loose foreign particles.
4. Check for physical evidence of damage or deterioration to parts and components, for frayed leads or damaged insulation (including the AC cord), and replace if necessary.
5. No lead or component should touch a receiving tube or a resistor rated at 1 watt or more. Lead tension around protruding metal surfaces must be avoided.
6. After re-assembly of the set, always perform an AC leakage test on all exposed metallic parts of the cabinet (the channel selector knobs, antenna terminals, handle and screws) to be sure that set is safe to operate without danger of electrical shock. **DO NOT USE A LINE ISOLATION TRANSFORMER DURING THIS TEST.** Use an AC voltmeter having 5000 ohms per volt or more sensitivity in the following manner: Connect a 1500 ohm, 10 watt resistor, paralleled by a .15 mfd 150V AC type capacitor between a known good earth ground water pipe, conduit, etc.) and the exposed metallic parts, one at a time. Measure the AC voltage across the combination of 1500 ohm resistor and .15 mfd capacitor. Reverse the AC plug by using a non-polarized adaptor and repeat AC voltage measurements for each exposed metallic part. Voltage measured must not exceed 0.75 volts RMS. This corresponds to 0.5 milliamp AC. Any value exceeding this limit constitutes a potential shock hazard and must be corrected immediately.

X-RADIATION

1. Be sure procedures and instructions to all service personnel cover the subject of x-radiation. The only potential source of x-rays in current TV receivers is the picture tube. However, this tube does not emit x-rays when the HV is at the factory-specified level. The proper value is given in the applicable schematic. Operation at higher voltages may cause a failure of the picture tube or high-voltage supply and, under certain circumstances may produce radiation in excess of desirable levels.
2. Only factory-specified CRT anode connectors must be used.
3. It is essential that the service personnel have available an accurate and reliable high-voltage meter.
4. When the high-voltage circuitry is operating properly, there is no possibility of an x-radiation problem. Every time a color chassis is serviced, the brightness should be run up and down while monitoring the high voltage with a meter, to be certain that the high voltage does not exceed the specified value and that it is regulating correctly.
5. When troubleshooting and making test measurements in a product with a problem of excessively high voltage, avoid being unnecessarily close to the picture tube and the high voltage power supply. Do not operate the product longer than necessary to locate the cause of excessive voltage.
6. Refer to HV, B+, and shutdown adjustment procedures described in the appropriate schematics and diagrams (where used).

IMPLOSION

1. All direct view picture tubes are equipped with an integral implosion protection system; take care to avoid damage during installation.
2. Use only the recommended factory replacement tubes.

TIPS ON PROPER INSTALLATION

1. Never install any receiver in a closed-in recess, cubbyhole, or closely fitting shelf space over, or close to, a heat duct, or in the path of heated air flow.
2. Avoid conditions of high humidity such as: outdoor patio installations where dew is a factor, near steam radiators where steam leakage is a factor, etc.
3. Avoid placement where draperies may obstruct venting. The customer should also avoid the use of decorative scarves or other coverings that might obstruct ventilation.
4. Wall- and shelf-mounted installations using a commercial mounting kit must follow the factory-approved mounting instructions. A product mounted to a shelf or platform must retain its original feet (or the equivalent thickness in spacers) to provide adequate air flow across the bottom. Bolts or screws used for fasteners must not touch any parts or wiring. Perform leakage tests on customized installations.
5. Caution customers against mounting a product on a sloping shelf or in a tilted position, unless the receiver is properly secured.
6. A product on a roll-about cart should be stable in its mounting to the cart. Caution the customer on the hazards of trying to roll a cart with small casters across thresholds or deep pile carpets.
7. Caution customers against using a cart or stand that has not been listed by Underwriters Laboratories, Inc. for use with its specific model of television receiver or generically approved for use with TVs of the same or larger screen size.
8. Caution customers against using extension cords. Explain that a forest of extensions, sprouting from a single outlet, can lead to disastrous consequences to home and family.

PRODUCT SAFETY SERVICING GUIDELINES FOR AUDIO-VIDEO PRODUCTS

X-RADIATION

To prevent possible exposure to x-radiation caused by excessive CRT Anode Voltage, the CH Chassis incorporates a "High Voltage Shutdown" circuit. This circuit senses the level of a flyback pulse from the "Flyback Transformer" representative of the actual high voltage on the CRT anode. When this level exceeds a predetermined voltage, the circuit shuts down the horizontal drive, preventing further generation of anode voltage. In this condition, the horizontal drive is "latched" off. The drive will remain off until power (via remote control or front panel) is re-cycled from 'Off' to 'On'.

SHUTDOWN CIRCUIT OPERATION

(Refer to Figure below)

Apply a voltage signal of an external power supply through the shutdown circuit (Refer to Figure shown below). Connect an accurate high voltage meter between the picture tube anode and chassis ground. Access the Video Menu and adjust Brightness and Contrast controls for minimum screen luminance. Wait until the Video Menu or display disappears. Read the high voltage meter, ramping up the external power supply from 4 to 8 volts, until the circuit shutdowns.

Measurement of the CRT Anode voltage must be performed using a high impedance high voltage meter, with no visible raster on the screen, and operating at nominal horizontal scanning frequency. Connect a strong broadcast signal (or TV signal generator operating at 15.734kHz horizontal scanning rate) to the RF input.

After discharging the CRT, connect a high impedance high voltage meter to the CRT anode. Turn the television 'on' and confirm a good signal is being displayed. Reduce Brightness and Contrast settings until the picture is well extinguished.

Observe the Anode voltage meter reading and compare with the table for the proper CRT screen size. If the voltage reading is higher than the maximum, verify circuit component values and proper operation.

NOTE:

The CH Chassis does NOT have a bleeder resistor to discharge the Anode voltage. High voltage can remain on the CRT Anode long after power is turned off. Before removing the CRT anode connection, turn off and unplug the television, then discharge the CRT Anode to DAG ground.

SAFETY CIRCUIT TEST PROCEDURE

Before turning the TV on, connect the HV meter's negative probe (-) to ground (DAG ground recommended) and the positive probe (+) in the anode of the CRT. Connect a 1 Giga Ohm resistor in parallel with the HV meter. Then connect the external power supply's negative output (-) to chassis ground, that is, the negative lead of B+ filter capacitor, CX3420. Turn on the TV. Apply a video signal or tune the TV to a raster pattern. Adjust the G2 potentiometer for minimum, and set the brightness and contrast levels to minimum. Now adjust the output voltage of the external power supply to 124 VDC for CA25V/27V or 130 VDC for CA32V/36V. Then start increasing the voltage on the external power supply until the TV shuts down, and read the HV on the meter just before the voltage starts dropping.

Equipment required:

- Video Generator.
- HV DC meter (0 to 40 KV, high Z).
- External variable power supply (0V to 200 VDC @ 5Amps minimum).
- 1 Giga ohm, 5%, 2W film resistor.

NOTE:

The external power supply may require a diode for blocking voltage from the chassis power supply to the external power supply. The diode should be connected between the positive output of the external power and B+ of the chassis.

The cathode should be facing the B+ of the chassis. The recommended diode is Part No. 103-00339-04A (400 V of VRRM @ 3 Amps of average rectified forward current).

CRT ANODE VOLTAGE

CRT Screen Size	Nominal Anode Voltage (kv)	Max Anode Voltage (kv)
19/20"	27.6	28.8
25"	27.6	28.8
27"	28.0	29.4
32"	30.0	31.0
36"	30.0	31.0

INTRODUCTION

INTRODUCTION

The CH series chassis will be used on the "B" line Commercial Products. This covers the 19, 20, 25, 27, 32, and 36 inch screen sizes. The concept of this chassis is to make one board for all models regardless of screen size. During the manufacturing process, the microprocessor will be programmed for the added features. Additional plug in boards with Jack Packs will be added to the chassis to accommodate the different features; PCZTV Scan Converter, Stereo, Mono, FM radio, etc. These sets do not have a comb filter.

The CH series chassis features seven ICs for all signal, sync, and sweep processing.

ICX2200 - Handles all of the audio/video, sync and sweep drive processing.

IC6000 - Main microprocessor. It is tied directly to the keyboard and the infrared detector.

IC6001 - System memory.

IC2100 - Handles vertical sweep.

IC2500 - Video switch.

ICX3412 - Power supply. This is a switching type supply powered by a bridge rectifier circuit. At turn on, voltages for the vertical and video output circuit are derived from the sweep circuit.

CONNECTIONS

CAMPORT

Some models have video and right/left audio input jacks at the front of the receiver. These jacks can be used to view video tapes from a VCR or Camcorder. When the video cable is plugged into the jack, the shorting jack J1 opens, placing a high at pin 10 of the IC6000 microprocessor. This switches the TV into the auxiliary mode. As long as the cables are attached, the TV set will be locked in auxiliary mode. Use of a remote control or buttons on the front of the set will not permit switching into tuner mode until the video cable is disconnected.

SUPERPORT - MPI

Zenith Commercial Product receivers are now being adapted to interact with other equipment. Prime examples of this can be found in Lodging and Health Care situations where the set is controlled from the main office.

All this is made possible by the new technology that is being built into these receivers. The SuperPort and/or Multiple Protocol Interface (MPI) jack and associated circuitry allow remote control of the set.

MULTIPLE PROTOCOL INTERFACE

Television functions and features are controlled by the communication of commands and status information through a Superport by the MPI interface.

EBC (EDGE BOARD CARD)

Allows easy access for removing/installing accessory modules providing a rail mounted slide-through card. These cards might contain one of the above features.

CONNECTION CENTER ON BACK OF TV

The connection on the back of the TV contains the input and output interfaces.

CONNECTIONS (continued)

CONNECTION CENTER ON BACK OF TV

The connection center on the rear of the TV allows for connection of the viewing source. The diagrams list the use of each jack on the connection center.

1. ANTENNA/CABLE JACK

Use the jack for 75-ohm antenna-type signal connections to the TV. Attach antenna, cable TV line, or other video equipment to jack. The input cable may come from an outdoor or master antenna, cable TV line, cable decoder box, or the RF output from a VCR.

2. SUPERPORT LOCATION

Provides for easy installation of local service provider accessory module without removing the cabinet back. Module is housed inside the TV cabinet and receives operating power and all necessary interface signals through internal connections.

3. MPI (Multiple Protocol Interface) JACK

Standard RJ11 jack to provide interface with in-room entertainment and video services. Also used with installer's programmer (page 1-11) for programming other TVs in the system with the same features as the master TV.

4. VIDEO IN AND AUDIO IN

Use the Video and Audio In jacks for baseband video and audio input signals from a VCR or other signal source.

5. MATRIX SPEAKER OUT

Use this jack for connection of an 8-ohm extension speaker to get television sound at a remote location. The speaker in the TV remains active, while a monaural audio output is heard from the remote speaker.

6. PILLOW SPEAKER JACK

Use the 6-pin jack for connection of an optional pillow speaker or wired remote control unit. Recommended pillow speaker is Curbell Model A-6050-001 or equivalent. Pillow speaker/control unit is not provided with the TV.

7. PILLOW SPKR/TV SPKR SWITCH

In the PILLOW SPKR Position - The pillow speaker is ON.
In the TV SPKR position - The built-in TV speaker is On.

8. EBC KNOB

For handling-removal of EBC cover.

CONNECTIONS (continued)

PILLOW SPEAKER INTERFACE

Description

The pillow speaker interface within the TV, provides three remote control lines and an audio output. It is intended for connection to a patient-pendant remote control, or entertainment audio and nurse call system. All lines are isolated from the AC power line and ground. Isolation of the control lines is provided by optoisolators. These are no relays or inductive components in the control lines. Isolation of the audio output is provided by an optoisolator too.

Purpose of Interface Pins

Pin #1 External TVON /OFF closure.

Pin #2 Open (not used).

Pin #3 External Channel Up Closure or Data In.

Pin #4 Common for External Control.

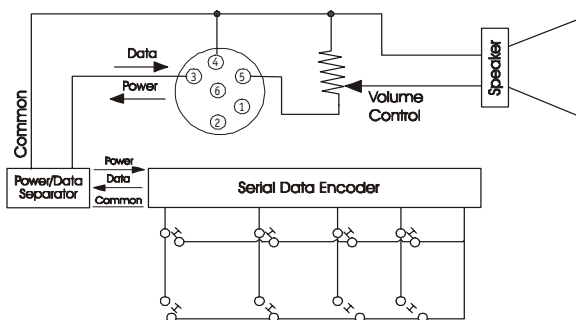

Pin #5 Audio Output. The impedance from this pin to earth ground is a nominal 10 Megohm static leakage resistor in parallel with an 1100 picofarad capacitor.

Pin #6 External Channel Down Closure.

- 1 TV On/Off
- 2 Open
- 3 Chan Up/Data In
- 4 Common
- 5 Audio Out
- 6 Chan Down

Theory of Multiplexed Data Mode

Pins 3 and 4 support a built-in interface which allows multiple functions on a single wire by means of serial digital coding. Pin 3 will source up to 2 mA during the digital "0" interval to supply operating power for the digital encoder located in the pillow speaker. The coder must sink a minimum of 5 mA to pin 4 during the digital "1" interval and provide the correct serial data stream. Pillow speakers meeting this specification are available from independent manufacturers such as Curbell, Inc. (Manufacturers wishing to produce compatible pillow speakers or other products should contact Zenith Commercial Products for detailed specifications). An isolated audio output is at pins 4 and 5.

Theory of Simple Switch Mode

Mode pins 1, 3, and 6 are connected to pin 4 by way of momentary-action switches to activate indicated control function. These pins are 13 Vdc positive with respect to pin 14 when the switches are open. Loop current is 8 mA with the switches closed. Isolated audio output is at pins 4 and 5. Mode of operation is identical to previous Zenith models using the 5-Wire Interface with the exception of higher open circuit voltage (was 7 Vcd) and higher loop current (was 2.5 mA).

CONNECTIONS (continued)

Settings Min/Max Volume Levels

Use the following procedure to adjust minimum volume and maximum volume for pillow speaker. This procedure not only sets the maximum volume level that the pillow speaker can produce, but also prevents the TV's volume from accidentally being adjusted to level which is too low or too loud.

1. Connect pillow speaker. Place INT/EXT speaker switch on back of TV in EXT position.
2. Set VOLUME control on pillow speaker to maximum volume position.
3. Access Service Menu by following the instructions given in the "Service Menu" section of this book. Select the MAX volume. Use the **ADJUST** key to set highest desired volume level within the range of 0 to 63. This will be the highest desired volume level, as heard at the pillow speaker.
4. Select the MIN volume. Use the **ADJUST** key to set the lowest desired volume level within the range of 0 to 63. This will be the lowest desired volume level as heard at the pillow speaker.
5. Make no further adjustments and exit the Service Menu.

The TV is now adjusted for minimum and maximum volume settings. All further adjustments of the TV's volume should be made by using the VOLUME control on the pillow speaker.

USER REMOTE - MBR3447Z

To use the TV functions defined below, make sure that the remote is set to operate TV.
Press TV on the remote to select TV.

MBR3447Z
124-00233

Note: Keys dedicated to VCR functions will still operate the VCR while the remote is in TV mode.

PATIENT REMOTE - SC637Z

HEALTHVIEW SERIES

This remote control is intended for use by patients, guests and others. It provides access to basic TV and FM radio operations.

SC637Z
124-00213-05

GUEST REMOTE - SC652Z

CONCIERGE SERIES

This remote control is intended for use by guests and others. It provides access only to basic TV operations.

SC652Z
124-00213-02

GUEST REMOTE - SC692Z

CONCIERGE SERIES

This remote control is intended for use by guests and others. It provides access to basic TV and FM operations.

SC692Z
124-00213-03

INSTALLER REMOTE - HP602Z

OPERATION

This remote control is available as an optional item for the equipment installer. It provides access to all on-screen menus and special features that cannot be accessed from the control panel on the TV.

PURPOSE

This installer's remote control is designed to aid installers in programming and setting up these TVs in lodging facilities.

HP602Z
124-00213-06

INSTALLER'S PROGRAMMER - LT1500

QUICKSET II PROGRAMMER

The QuickSet II programmer (LT1500) allows custom setup and programming information to be quickly copied from a master TV into multiple television sets. Once learned from the master, setup data is retained in the LT1500 for future use and recall.

When using the LT1500, operation will be easier if the TV is connected to a good-quality signal and operating with a stable picture displayed. To operate the LT1500, use indicated keys on an HP602 or LP702 installer's remote or MBR3447 user's remote, or the front panel keys on the TV receiver.

Begin programming process by setting up a master TV set using one of the installer's remotes or the MBR remote. Set all features that will be customized including channel scan list, channel labels, and installer menu setups. Follow instructions in the operating guide for the specific model TV.

Next, connect the LT1500 to the master TV set using the cable provided with the programmer. Connect the cable between the MPI jacks on the TV and programmer.

Connecting the programmer to a TV set automatically activates the programmer power-switching circuits.

Once connected, check the "Status Indicator" LED on the programmer. If the indicator is green and flashing a double-blink "heartbeat" pattern, proceed to next step.

Note: A slowly flashing green light indicates there is a problem with communications between TV and programmer. In this case, check for damaged cable, poor contacts, or other connection problems. If status indicator is red, the programmer batteries are low and should be replaced. Use 4 good-quality alkaline AA batteries.

If communications are good, the sign-on screen will be displayed on the TV screen as shown on the quick setup instructions that accompany the LT1500. If the intention is to set TV or programmer real-time clocks, and not the clone clock or TV clock time settings, then press a key to proceed to main clone menu.

If a previously stored TV setup is in a particular clone memory, it may be changed if desired by overwriting it with a new setup. There is no need for a separate memory clear operation.

Setups stored in programmer memory are nonvolatile and will be retained even after a battery change.

CLONE SELECTION MENU CHOICES

LEARN FROM TV

Select "Learn From TV" then press ON/OFF, POWER, or ENTER to begin learning process.

Alternatively, use the TV front panel CHANNEL UP or CHANNEL DOWN keys to highlight choice.

Press ON/OFF, POWER, or ENTER to activate.

The next screen will allow a choice of four available memories to store this TV setup. With four memories available, four different TV setups can be stored in the LT1500.

Using the On-screen menu, choose a memory or choose to return to the main selection menu; then press ON/OFF, POWER or ENTER to activate your selection.

The next screen allows one last opportunity to check the versions of TV and clone setups.

Press ON/OFF or POWER to activate learning cycle, or press any other key to return to the selection menu to make other choices.

Once a process has begun, the TV screen will display "LEARNING IN PROGRESS". Please wait for the process to complete. When the TV screen displays "LEARNING COMPLETED", press any key to end the learning process and return to the clone selection menu.

INSTALLER'S PROGRAMMER - LT1500 (continued)

TEACH TO TV

Select "TEACH TO TV", and then press ON/OFF, POWER, or ENTER to begin teaching process.

Alternatively, use the TV front panel CHANNEL UP or CHANNEL DOWN keys to highlight the choice, and then press ON/OFF, POWER, or ENTER to activate.

The next screen displays a choice of the four available memories that can be copied to the TV.

Select the desired memory number, and then press ON/OFF, POWER or ENTER to begin the teaching process. Alternatively, use the TV front panel CHANNEL UP or CHANNEL DOWN keys to highlight your choice.

Then press ON/OFF, POWER, or ENTER to begin.

Using the on-screen menu, select a memory or return to the main selection menu. Then press ON/OFF, POWER, or ENTER to activate the selection.

The next screen allows for one last opportunity to check the versions of TV and clone setups. Press ON/OFF or POWER to activate the teaching cycle, or any other key to return to the selection menu to make other choices.

Once a process has begun, the TV screen will display the "TEACHING IN PROGRESS" message.

Please wait for the process to complete. When the TV screen displays "TEACHING COMPLETED", press any key to end the teaching process and return to the clone selection menu.

SET CLONE CLOCK FROM TV

To initially set the real-time clock in the LT1500 or update the time, select "SET CLONE FROM TV" and then press ON/OFF, POWER, or ENTER to copy current TV time to the clone clock.

Alternatively, use the TV front panel CHANNEL UP or CHANNEL DOWN keys to highlight the choice. Then press ON/OFF, POWER, or ENTER to activate.

This process will return the LT1500 to the sign-on screen to display the clone and TV clock settings. Press a key to go to the clone selection menu and perform other functions, or simply disconnect if time setting was the last task.

DISPLAY TV SETUP

Select "DISPLAY TV SETUP", and then press ON/OFF, POWER, or ENTER to begin the teaching process.

Alternatively, use the TV front panel CHANNEL UP or CHANNEL DOWN keys to highlight your choice. Then press ON/OFF, POWER, or ENTER to activate.

The TV screen will display the items in the service menu setups. Use this function to quickly check a TV for correct setup. Press any key to clear display and return to clone selection menu.

DISPLAY CLONE SETUP

Select "DISPLAY CLONE SETUP", and then press ON/OFF, POWER or ENTER to begin the teaching process. Alternatively, use the TV front panel CHANNEL UP or CHANNEL DOWN keys to highlight the choice, and then press ON/OFF, POWER or ENTER to activate.

The TV screen will display the memory selection menu.

Select the desired memory number, and then press ON/OFF, POWER, or ENTER to display contents of selected memory. Alternatively, use the TV front panel CHANNEL UP or CHANNEL DOWN keys to highlight the choice, then press ON/OFF, POWER or ENTER to begin.

The TV screen will display items in the installer menu setups. Use this function to quickly check contents of a particular clone memory for correct setup.

Press any key to clear the display and return to the clone selection menu.

OPERATION NOTES

Disconnect the LT1500 from the TV set when the desired task has been completed. Disconnecting the clone automatically switches it off. The real time clock continues to run when the main circuits are switched off.

After replacing exhausted batteries, or if the programmer behaves strangely after a static shock, use a paper clip or similar instrument inserted through the small hole marked "RESET" to activate the internal reset switch and restore normal operation. After reset, check the real-time clock setting. It may be necessary to reset the clock from a TV programmed to the correct time.

Note: *The LT1500 programmer is designed to be used with TV sets containing the 221-1390 and later microprocessors. Use with earlier TV sets may give unpredictable results.*

The specific microprocessor used in any TV set may be determined by activating the service menu. The microprocessor part number appears at the top of the screen when the service menu is activated. Processors before the 221-01390 have a limited screen display capability. They cannot display entire screens as shown in the quick setup instructions accompanying the LT1500 programmer. Use the printed menu illustrations on the quick setup sheet as an aid to making programming choices.

USER MENUS 221-01390

INSTALLATION SETUP

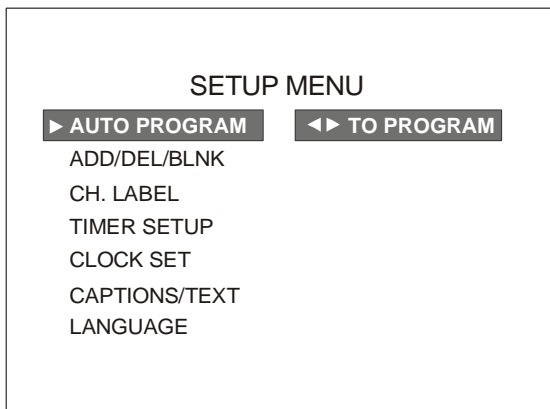

Installer's Remote and Clone Programmer

To perform the installation setup for several TVs, you need an installer's remote, such as the HP602Z (See 1-10), and the LT1500 Clone Programmer (See 1-11). The HP602Z Installer's Remote allows access to the Installer's Menu, User Menus, and Source/Channel Banks. The LT1500 Clone Programmer is used to duplicate a TV's setup and install it on one or more additional TVs.

Press the POWER key on the Installer remote control to turn on the TV.

SETUP MENU

Press the MENU key on the Installer's remote repeatedly so that the SETUP MENU appears on the screen.

AUTO PROGRAM

Using SELECT on the remote control, highlight AUTO PROGRAM on the screen. Then press a RIGHT/LEFT ADJ (Adjust) arrow button to reach the AUTO PROGRAM screen.

Using SELECT, choose either CABLE TV or OFF-AIR ANTENNA on your screen. (The flashing option is selected.)

Note: On some models, there are three jacks on the front of the TV that make connecting Audio/Video devices like Camcorders easy. To use the front jacks as the signal source, simply plug a composite video cable into the VIDEO jack. The TV will automatically change its source setting to CAMPORT, as indicated on the channel selection screen.

Press a RIGHT or LEFT ADJ arrow to begin the Channel Search. The receiver searches for available channels and stores them in memory for user access. Press ENTER when finished. Press the MENU key on the remote until the SETUP MENU reappears.

ADD/DEL/BLNK

Press SELECT repeatedly to highlight the ADD/DEL/BLNK option. Use the remote to select a channel. ADD/DELETE allows tailoring of the channel scan to eliminate unwanted channels and add desired channels that were not stored during Auto Programming.

Use the number keypad and ENTER to add a deleted channel. Using the RIGHT/LEFT ADJ arrows, pick whether a channel is Added, Deleted, or Blank. Blank is used by hospitals and institutions to send music or informational messages to an unused channel. When BLNK is selected, screen will be black while audio continues.

Select any other channels to be changed, and when finished, press ENTER to close the menu.

CH LABELS (Channel Labels)

Press the MENU key on the remote so that the SETUP MENU reappears.

Use SELECT to choose the CH LABELS option.

Pressing either the RIGHT/LEFT ADJ arrow repeatedly, pick the label you want from the list of available selections shown in the chart. Select other channels, and when you are finished, press ENTER to remove the menu.

Note: Although the next item on the Setup Menu is Timer Setup, the clock must be set first.

CHANNEL LABELS

A&E	CMTV	ESPN	HSE	NOS	TBN	VC
ABC	CNBC	ESPN2	HSN	PBS	TELE	VCR
ACTS	CNN	ET	IC	PLAY	TLC	VH-1
ADC	COM	EWTN	INSP	PTL	TMC	VISN
AMC	CSPN	FAM	JCN	QVC	TNN	VJN
BCC	CSP2	FNN	LIFE	RDS	TNT	WB
BET	CTN	FOX	MAX	REQ	TRAV	WGN
BRAV	CTV	F&V	ME/U	SC	TSN	WTBS
CA	DIS	FX	MMT	SCFI	TVA	WWOR
CBC	DISC	GALA	MTV	SHOW	TWC	YTV
CBN	E!	HBO	NBC	SIN	UPN	---
CBS	ENC	HN	NICK	TBS	USA	None

Note: Selecting this label option means the channel will not be displayed on the channel/time/audio signal display. Selecting the none option means the channel will not have a label.

USER MENUS 221-01390 (continued)

TIMER SETUP

Press MENU to show the SETUP MENU. Use SELECT to highlight TIMER SETUP.

With TIMER SETUP highlighted, use the RIGHT/LEFT ADJ arrow to pick from the preset times, the time that the TV will turn itself off, or set the SLEEP TIMER to Off to disable it.

Press ENTER to set the timer and return to TV viewing.

The Sleep Timer may be instantly set by pressing the TIMER key repeatedly. When you have made your selection, press ENTER to set the Sleep Timer and return to TV viewing.

CLOCK SET

Press MENU repeatedly to show the Setup menu. Use SELECT to highlight Clock Set.

Set the current time; use the Number keypad to enter the hours, then minutes. For example, enter 06, then 30, to set 6:30 on the clock. Use the TIMER key to specify AM or PM.

Press ENTER to start the clock and return to TV viewing.

CAPTION/TEXT

Using SELECT on the remote control, select CAPTION/TEXT on the screen.

Use the RIGHT/LEFT ADJ arrows to choose any of the following options: CAPTION 1, CAPTION 2, CAPTION 3, CAPTION 4, TEXT 1, TEXT 2, TEXT 3, or TEXT 4.

Press ENTER to close the menu.

Select CAPTIONS directly by pressing CC repeatedly to choose OFF, CAPTION 1, 2, 3, 4 or TEXT 1, 2, 3, 4.

CAPTION/TEXT is a feature that allows the TV to receive closed captions and/or text options when made available by the broadcaster.

Notes:

- *Availability and functionality of the CAPTION/TEXT features are determined only by each broadcaster and may not be available in your area.*
- *CAPTIONS - The term for the words that scroll across the bottom of the TV screen; usually the audio portion of a program, provided for the hearing impaired.*
- *TEXT - The term for the words that appear in a large black frame that almost covers the entire screen; usually messages provided by the broadcaster.*

Press the MENU key on the remote control to return to the Setup menu.

LANGUAGE

Press SELECT on the remote control and repeat to highlight LANGUAGE on your screen.

Press a RIGHT/LEFT ADJ arrow to choose one of the following options: English, Spanish or French.

Press ENTER to return to TV viewing.

AUDIO MENU

Press MENU repeatedly on the remote control until the AUDIO MENU appears.

Using SELECT on the remote control, highlight the setting you want to change. Choose from:

- **BASS:** Adjusts the amount of Bass (low frequency level) in the sound. Has 15 steps (0 to 14)
- **TREBLE:** Adjusts the amount of Treble (High frequency Level) in the sound. Has 15 steps (0 to 14)
- **BALANCE:** Adjusts the balance of sound between the left and right speakers. Has 15 steps (0 to 14).
- **AUDIO MODE:** Selects between stereo, Mono, Stereo or 2nd Audio/SAP. If 2nd Audio/SAP is selected, but current channels does not support SAP, then either Stereo or Mono will be heard.

USER MENUS 221-01390 (continued)

- FRONT SURR: can be set 'On' or 'Off', regardless of the current Audio Mode setting. However, the Front Surround effect can only be heard when the Audio Mode has been set to 'Stereo' and a Stereo signal is present.
- SOUNDRITE: Used to obtain a uniform volume level, particularly while changing channels. The SoundRite feature can be best demonstrated on a channel with no signal (snow).

Note: *The Hospital chassis does not have the above listed Audio Menu. Instead, it only has the option to turn the speakers On or Off.*

Press a RIGHT/LEFT ADJ arrow to adjust or change the option you have selected.

Press ENTER to return to TV viewing, or press SELECT to return to the Audio Menu to adjust another option.

VIDEO MENU

Press MENU repeatedly until the Video Menu appears.

Your options are:

- CONTRAST: Adjusts the contrast of the picture (difference between white and black). Has 64 steps (0 to 63).
- BRIGHTNESS: Adjusts the brightness of the picture (amount of white). Has 64 steps (0 to 63).
- COLOR: Adjusts the intensity of the color. Has 64 steps (0 to 63).
- TINT: Adjusts the tint of the color picture (balances between amounts of red and green in the TV picture). Has 64 steps (0 to 63).
- SHARPNESS: Raises or lowers the definition of the TV picture. The lower the level, the softer the images will appear (adjusts the sharpness of the picture). Has 64 steps (0 to 63).

- PICTURE PREF: Has two settings; PRESET and CUSTOM. In the Custom mode the brightness, contrast, color and tint can be set to a users particular liking. The preset settings brings up the factory setting for these controls. Preset is selected automatically after an AC power interrupt.

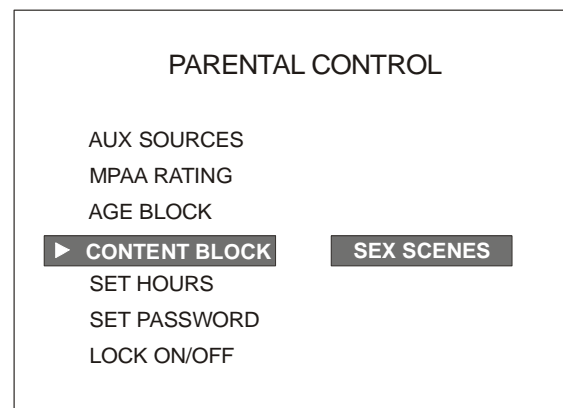

Use SELECT on the remote control to highlight the setting you want to change.

Press a RIGHT/LEFT ADJ arrow to adjust or change the option you have selected.

Press ENTER to return to TV viewing, or press SELECT to return to the Video Menu.

PARENTAL CONTROL

This optional feature can be used to prevent (block) unwanted programming from appearing on your TV.

PARENTAL CONTROL offers the user a wide variety of options and settings that restrict or block programming that can appear on the TV. PARENTAL CONTROL allows users the capability of defining which program ratings they consider acceptable to younger or more sensitive viewers.

PARENTAL CONTROL can be preset and turned on or off by a user who specifies the 4 number password. The number of hours blocked may also be specified.

General audience and children viewer blocks can both be programmed into the TV's memory. Viewer ratings are specified for both the TV industry and the motion picture industry; both rating systems can be used. The ratings are based mainly on children's ages.

USER MENUS 221-01390 (continued)

OVERVIEW

To ensure complete coverage for all TV programs (movies and regular TV shows), choose ratings from the Motion Picture Association of America (MPAA) Rating System chart and the TV Parental Guidelines Rating System chart (both shown below). Use the AGE BLOCK option for General Audiences and for Children. You can also add additional restrictions from the CONTENT BLOCK menu.

Things to Consider before Setting Up Parental Control:

Determine which ratings you consider acceptable for viewing. (For example, if you choose TV-PG, all of the more restrictive ratings will be blocked automatically: the viewer will not be able to see TV-PG, TV-14, or TV-MA rated programming.)

Select whether auxiliary video sources will be blocked in the AUX SOURCES block option. (Blocks signals from VCRs, DVD players, etc. connected to the TV Audio/Video input jacks). You could also leave AUX SOURCES unblocked, and then choose allowable ratings.

In the CONTENT BLK option, you can block program Content based on individual parameters such as Strong

Dialog, Bad Language, Sex Scenes, Violence Scenes, or Fantasy Violence Scenes.

You can set PARENTAL CONTROL to be active in the SET HOURS option for up to 12 hours.

Use the number keys on the remote to select a secret password in the SET PASSWORD option. Don't forget the password, as it is the only way you can access the PARENTAL CONTROL menu and change rating selections or turn PARENTAL CONTROL off. If you do not want PARENTAL CONTROL to be active all the time, you can turn it on or off with the LOCK ON/OFF option.

Notes:

- *You can set different PARENTAL CONTROL viewing restrictions for general audiences and for children - both can be active at the same time.*
- *Simply specifying one content block such as Sex Scenes, will not automatically block another type of content in the programs from appearing.*
- *Even if you choose to leave the AUX INPUTS unblocked, the ratings you specify will automatically restrict the programming that appears from the video sources.*

MOTION PICTURE ASSOCIATION OF AMERICA (MPAA) RATING SYSTEM

G	General Audiences	Content not offensive to most viewers.
PG	Parental Guidance Suggested	Content is such that parents may not want their children to view the program.
PG-13	Parental Guidance Suggested	Program is inappropriate for preteens, with a greater degree of offensive material than a PG-rated program.
R	Restricted viewing	Not for children under age 17. Strong elements of sex and/or violence.
NC-17	Restricted Viewing	Not for children under age 17 under any circumstances. Strong sexual content.
X	Hard Core Films	Same as NC-17 rating.

Note: *Zenith Electronics Corporation is not liable for any program content that appears when using this rating system; as always, user discretion is advised.*

TV PARENTAL GUIDELINE RATING SYSTEM

G	General Audiences	Content not offensive to most viewers.
TV-G	General Audience	Considered suitable for all audiences; children may watch unattended.
TV-PG	Parental Guidance Suggested	Unsuitable for younger children, may contain: Suggestive Dialog, Bad Language, Sex, and Violence Scenes.
TV-14	Parents Strongly Cautioned	Unsuitable for children under 14, may contain: Strong Dialog, Bad Language, Sex, and Violence Scenes.
TV-MA	Mature Audience Only	Adults only, may contain: Strong Dialog, Bad Language, Sex, and Violence Scenes.

CHILDRENS' CLASSIFICATIONS

TV-Y	Children	Considered suitable for all children under 7 years old.
TV-Y7	Children 7 and over	Considered suitable for children over 7, may contain Fantasy Violence Scenes.

USER MENUS 221-01390 (continued)

- *You cannot disable PARENTAL CONTROL by disconnecting the TV from power. Block hours will automatically reset to the original block time setting specified if power is disconnected.*
- *To reset the password, use the installer's remote control to deactivate the V-Chip in the Installer's menu (#53). Exit out of the Installer's Menu after deactivating the Parental Control. Then enter back in and reactivate the V-Chip.*

With the PARENTAL CONTROL menu on-screen, use SELECT to choose an option, such as CONTENT BLOCK. Use the LEFT/RIGHT ADJ arrows to show the CONTENT BLOCK menu, to adjust or set the rating for an option.

To block sex scenes, for example, use the "TV-PG and above" setting. To block dialog, use LEFT/RIGHT ADJ arrows to select among UNBLOCKED, TV-PG and above, or TV-14.

(See the Ratings Charts for rating meanings.)

After you have selected and adjusted the PARENTAL CONTROL menu options to your preferences:

- Set the number of hours Parental Control will be on.
- Set a 4 number password.
- Set the Lock On/Off option to either on or off.

Note: Some broadcasts do not include ratings information.

Channel/Time/Audio Display

Press ENTER. Shows currently selected channel or source, current time if the clock has been set, and incoming audio signal.

ALARM MENU

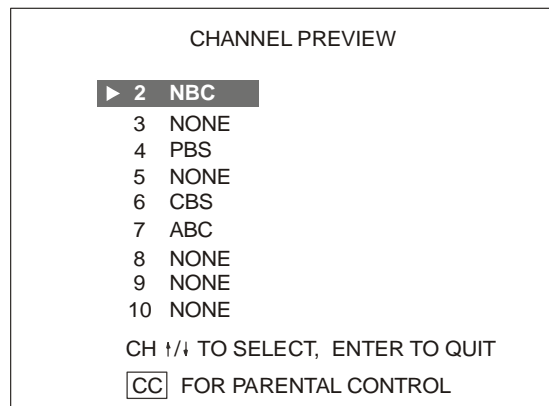

Press ALARM. Sets the time the wake up alarm will sound.

CH PREVIEW MENU

Press CH PREVIEW. Displays list of the available TV Channels, Guest Parental Control menu (if active) and Video Channel access.

Press CHANNEL UP/DOWN to select a channel, or menu, then ENTER to go to channel or menu.

Pressing CC will activate the Parental Control menu.

CAPTIONS DISPLAY

Press CC. Sets Caption/Text options: Off, Caption 1, 2, 3, 4 or Text 1, 2.

RADIO FEATURE

Pressing the TV/FM key allows the customer to listen the Radio.

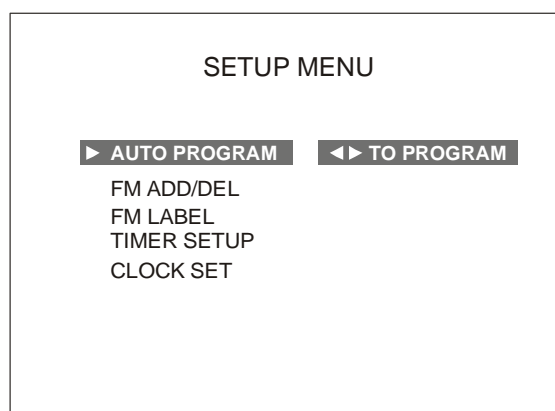

The Auto Program feature automatically searches for all available Radio Stations and marks them as 'added' so that they may be accessed via the channel Up/Down key.

USER MENUS 221-01390 (continued)

In the Auto Program screen:

- A message at the top displays "Auto Program" to let the customer know that they have entered the Auto Program feature.
- Up/Down and Left/Right Arrow keys are used for Auto Program selections.
- The current RF input type (Off Air Antenna or Cable TV) is highlighted. Use the Up/Down Arrow keys to change the RF input type.

To start the Auto Program, press the Left/Right Arrow key.

Note: While searching for radio stations, all keys except the Power key are disabled. This prevents an incomplete Auto Program procedure. Running the Auto Program will clear the factory mode, if it was active. This happens at the end of the Auto Program. If no radio stations are found, then the following message will appear: "Make sure that the antenna is connected, and try again".

FM ADD/DEL

Allows tailoring of the station scan results to eliminate weak and unwanted stations. Use FM ADD/DELETE to get rid of unwanted stations or to program back in a previously deleted station.

Note: After using the FM Add/Del function, return to TV mode (press TV/FM key) before turning the TV off. This ensures that the FM Add/Del changes are saved in memory.

FM LABELS

Use FM Label to assign a label for the type of radio station shown in the Music ID display. For example, if the label ROCK is assigned to FM station 100.9, then ROCK will appear in the active stations list next to FM 100.9, whenever the Music ID display is shown. Labels available (besides Blank) include:

CLAS =	Classical	OTHE =	Other
COUN =	Country	RELI =	Religion
JAZZ =	Jazz	ROCK =	Rock
NEWS =	News	SPOR =	Sports
OLDI =	Oldies	TALK =	Talk

TIMER SETUP

Turns on the FM Radio's Sleep Timer menu. Select TIMER SETUP, then press RIGHT/LEFT ADJ to choose the time the FM radio is to remain on before it turns off. Choose from 15 minutes to 4 hours. Once the turn off time has been selected, press ENTER to activate the timer and close the menu.

CLOCK SET

Sets the clock in the receiver.

Note: If clock had been set in the TV menu mode, there is no need to set it in the radio mode.

USER MENUS 221-01390 (continued)

AUDIO MENU FOR RADIO

Use to adjust the sound options to your preferences. The display shows either Mono, Stereo or Muted.

Mono sets will only show the option to turn the speakers On or Off.

RADIO SCREEN SAVER

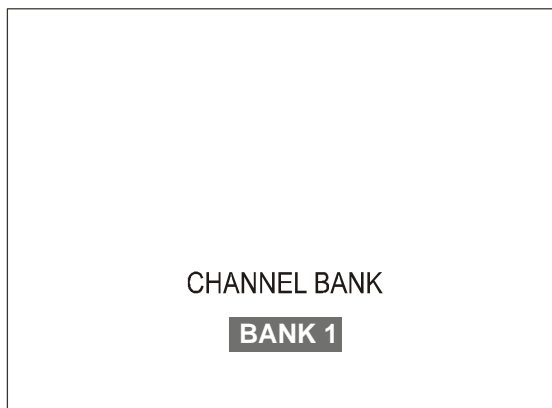

When the customer is done with setup, the radio screen saver turns on. The radio screen saver displays the Radio station, the audio mode, and the time as seen below.

This display is also scrolling down. Once the display reaches the bottom, it starts back at the top and keeps scrolling down. This scrolling occurs until the Menu key or the down arrow is pressed.

CHANNEL BANK

Allows to choose between one of 4 channel banks. Press SOURCE to change between banks.

PLANNING THE CHANNEL BANKS

Generally, TV channels are grouped into "program packages" with terms that are proposed to the end user. The user then opts for a package. Below is an example of how TV channels may be grouped.

<u>Channel Bank</u>	<u>Program package</u>
1	Basic cable channels
2	Extended cable channels
3	Extended with premium channels
4	Other cable service options

Sometimes only one or two channel banks may be needed. You may leave any unused bank with the channels. However, you may want to leave at least one channel in any unused bank. Then, if someone selects an unused bank, that channel will assure them that the TV is functional.

Note: *Some channels left over from factory testing may still be in the channel banks if you have not yet run Auto Program.*

ADDING/DELETING CHANNELS

A previously prepared programming chart is helpful.

1. Run AUTO PROGRAM (in the SETUP MENU). The channels available at your cable/antenna will be entered in all channel banks (1, 2, 3 and 4).

Notes:

- *Channels previously blanked will be cleared; channels entered that are not currently available will be deleted.*
 - *The Blank Channel feature is global. A channel will be blanked in all channel banks.*
2. Select a channel bank with a remote press SOURCE/BANK (and repeat). The Channel BANK and BANK number will be displayed.
 3. Use the ADD/DEL/BLNK option (also in the SETUP MENU) to customize your program package. You may delete channels or add some that have not been entered. You can also Blank a channel to accommodate an audio-only program source or for in-house communication. The ADD/DEL/BLNK option has more details.
 4. Repeat steps 2 and 3 to program another channel bank.

It is best to do ADD/DEL customizing before doing BLANKING. ADD and DEL (not BLNK) can be used independently for channel banks 1, 2, 3, and 4).

INSTALLERS MENU 221-01390

INSTALLERS MENU ADJUSTMENTS

To access the Installer's Menu, press and hold the MENU key until the User Menu display disappears, then press 9876, and then ENTER to access the Installer's Menu.

The black bar near the top of the screen indicates the part number of the software in the TV set. To the right is a number indicating that the module has been tested. The date on the black bar near the bottom of the screen indicates the date the module went through the factory.

When the Installer's menu appears, it displays the fourth Service Menu item: VERT POS. Use the SELECT UP/DOWN keys to toggle through all of the adjustments. Use ADJUST to make a change to the selected item.

00 FACT MENU: Use SELECT UP and DOWN Keys to select item 00, the Factory Mode. This item is used by the Factory when the module is being tested. It has two positions: 0 and 1. In the field, this item should always be left off (Zero is off).

When this item is off, only the first twenty-three items in the Installer's Menu can be accessed. They appear one at a time near the middle left of the screen. When this item is set to 1, 54 menu items are available.

In the Factory Menu, only the selected menu item is displayed, near the top of the screen, as shown in the figure.

When the Factory Menu is on, the AC Power-On feature is always enabled regardless of the setting of AC ON in the Installer's Menu. The TV set will automatically come on when AC is applied.

Use the remote to reenter the Installer's Menu to turn the Factory Menu off. The Factory Mode may also be turned off by setting the clock, or running the Auto Program feature in the customer Set Up menu.

01 PRESET PX: Stores customer menu adjustments in the nonvolatile memory of the EAROM. Selections are Custom and Preset-Store. Settings for Contrast, Brightness, Color and Tint are stored in this manner. 0 is custom and 1 is Preset stored.

02 POWER MANAGE: Range is 0-7. 1-7 is the length of time (in hours) that the set will continue to operate if unattended. When the set nears turnoff time, an on-screen message appears telling you to press any key to continue normal viewing. When set to 0, this feature is inactive.

03 VERT POS: Moves On-Screen Displays vertically. The Range is from 0-25. This adjustment is generally set at 5.

04 HORZ POS: Moves On-Screen Displays horizontally. Range is from 1-15. Generally set at 9.

05 BAND/AFC: There are eight positions:

- | | |
|----------------------|--------------------|
| 0 is Broadcast fixed | 4 is Broadcast afc |
| 1 is CATV afc | 5 is CATV fixed |
| 2 is HRC afc | 6 is HRC fixed |
| 3 is ICC afc | 7 is ICC fixed |

06 MIN VOLUME: Allows adjustment of minimum volume level. Range is 0-63. When this item is set to 0, the sound level can be adjusted down to zero.

07 MAX VOLUME: Allows the adjustment of maximum volume level. Range is 0-63. When this item is set to 63, the set has full adjustment capability.

08 AC ON: Has two positions; 0 is off, and 1 is on. In ON position, the TV set will turn on and off when AC power is applied.

09 KEY DEFEAT: Disables unmarked menu buttons on the TV's control panel. Range is 0-1. 0 is off and 1 is on. Set to 1 (On) to turn the keys off.

INSTALLERS MENU 221-01390 (continued)

10 STRT CH/VOL: Determines the channel that is selected automatically each time the TV is turned on and sets the audio volume level at turn-on. Range is 0-255. 0 is the Aux position and 255 is Off. Use ADJUST to change the channel number. START VOLUME is to be set before setting the start channel. Use the volume control to set the volume level.

11 HOSPITAL MODE: Range is 0-2. 0 is off. 1 is Hospital Bed 1 using Zenith Private Label IR Codes 21 or 121. 2 is Hospital Bed 2 using Zenith IR Codes 1 or 101. When item 22 (Feature Level) and HOSPITAL MODE are set to 0, Private Label is activated.

12 CHAN LOCK: Defeats tuning operations. Range is 0-1. 0 is Off and 1 is On. Use the START channel to lock on a particular channel.

13 GHOST CH: Ghost channel when item #11 is set to zero. Zero is off and 1 is on. When on, the channel number will stay on screen at all times, unless captions are present. The number moves slightly to prevent damage to the screen. If captions are on, ghost channel will not be present.

14 SCAN MODE: Range is 0-3. The sets turn off when channel scan buttons are being used. In 0 mode, scan off is inoperative. In position 1, the set will turn off between auxiliary and lowest channel. In position 2, the set will turn off between auxiliary and FM. In position 3, the set turns off after an FM station scan.

Scan Mode	Characteristics
0	AUX, TV, VCR3, VCR4
1	AUX, TV, VCR3, VCR4, ON/OFF
2	AUX, TV, VCR3, VCR4, FM
3	AUX, TV, VCR3, VCR4, FM, ON/OFF

15 TEXT MODE: Turns text mode on or off in the users menu. Range is 0-1. Zero is off and one is on. In on mode, user can call up text mode. Set to 0 unless text is being used.

16 SLEEP TIMER: Enables sleep timer feature. Range is 0-1. Zero is off and 1 is on.

17 ALARM: Enables Alarm feature. Range is 0-1. Zero is off and one is on.

18 CH OVER RIDE: Zero is off, one is on. In on mode, the TV works normally. This item is generally set to off so it can be controlled with entertainment unit. In off mode; Auto Program and Channel Add/Delete do not function.

19 OLD OCV: (On Command Video) Zero is off, one is on. Set to one for operation with "Spectramate" systems from On Command Corporation.

20 CAPTION LOCK: Zero is off, 1 is on. Set to 1 for operation to restore previous on/off state after TV is initially turned on.

21 FUNCTION PRE: (Function Menu Channel Preview) Range is 0-1. Zero is off and one is on. Set to 1 to suppress channel preview screen in the function menu with some pay per view systems.

22 FEATURE LEVEL: Range is 0-1. Zero is Zenith Private Label and one is Zenith. When item 11 (Hospital Mode) and FEATURE LEVEL are set to 0, Private Label is activated.

23 TRAP 3.58: Zero is off, one is on. Set to 1 for normal TV operation. Set to 0 if Y/C is used or chassis has a comb filter.

24 RF BAND PASS: Sets adjustment range of the customer control for brightness in therefore mode. Range is 0-1. Set to 1.

25 RF BRT: (RF brightness) Sets adjustment range of customer control for brightness in RF mode. Range is 0-63. A typical value is 30.

26 AUX BRT: (Auxiliary Brightness) Sets adjustment range of the customer control for brightness in AUX mode. Range is 0-63. Typical value is 30.

27 MAX CONTRAST: Sets adjustment range of customer control for contrast. Range is 0-63. Typical value is 63.

28 VERT SIZE: (Vertical Size) Range is 0-254.

29 HORZ SIZE: (Horizontal Size) Range is 0-254.

30 VERT PHASE: (Vertical Phase) Range is 0-7.

31 HORZ PHASE: (Horizontal Phase) Range is from 0-31.

32 AUD LEVEL: Sound Attenuation range is 0-63.

33 RF AGC: (Rf Automatic Gain Control) Range is from 0-63. 48 is a general setting. Tune in weakest available channel and adjust for a snow- free picture.

34 HORZ AFC: Range is 0-1. Set to 0. 0=AFC2 Normal. 1=AFC2 X 3.

35 WHITE COMPRESS: (White Compression) The range is 0 to 1. Set to 0. 0 = Enable and 1 = Disable.

36 60HZ SW: (60 Hertz Switched) The range is 0 to 2.

32 MAX CONTRAST: Sets adjustment range of customer control for contrast. Range is from 0-63. Set to 63.

INSTALLERS MENU 221-01390 (continued)

33 60HZ SW: A sync stability item. Range is 0-1. Zero is off. Set to 0.

34 PIF VCO: Range is 0-127.

35 WHITE COMP: 0 is off, 1 is on.

36 60HZ SW: Range is 0-2.

37 PIF VCO: Range is 0-127.

Items 38 through 42 vary with CRT*

38 RED CUT: B&W tracking adjustment. Range is 0 to 255. Typical value is 20.

39 GREEN CUT: B&W tracking adjustment. Range is 0-255. Typical value is 0.

40 BLUE CUT: B&W tracking adjustment. Range is 0-255. Typical value is 28.

41 GREEN GAIN: B&W tracking adjustment. Range is 0-255. Typical value is 45.

42 BLUE GAIN: B&W tracking adjustment. Range is 0-254. Typical value is 70.

43 6 KEY SYSTEM: Keyboard type. Set to 1 for 6 key and 0 for 10 key.

44 A ATT: Input level adjustment. Range is 0-15.

45 STEREO VCO: (Stereo Voltage-Controlled Oscillator) range is 0-63. Typical value range 10-39.

46 A FILTER: (Second Audio Program Voltage-Controlled Oscillator) Stereo, SAP, and dBx filter adjustment. Range is from 0-63.

47 A SPECTRL: Adjustment of stereo separation (3kHz). Range is 0-63.

48 WIDE BAND: Adjustment of stereo separation (300kHz). Range is 0-63.

49 MAX BLK HRS: Maximum amount of hours before the Parental Control password expires. Range is 0-99.

50 STEREO: Enables stereo circuitry if present. Range is 0-1.

51 RADIO: Enables Radio circuitry if present. Range is 0-1.

52 AUX: Enables Aux. Sources. Range is 0-1.

53 V-CHIP: Enables Parental Control. Range is 0-1.

* Adjust only if CRT has been changed. The "CUT" adjustments affect the Lowlights and the "GAIN" adjustments affect the Highlights.

SERVICING

GENERAL INFORMATION

Servicing the CH chassis is the same as with other Zenith single-board chassis. If the set is dead, first check the standby and switched voltages. If the switched voltages do not appear, check the power "On" circuit. If the power supply is OK and the set will turn On, the Horizontal sweep circuit should be checked next. Is horizontal drive available from the video processor chip? If the sweep system does not start up, sweep-derived voltages will not be generated.

If the sweep and high-voltage circuits are OK and video or audio are missing, then the audio/video/tuner circuits should be checked. If the receiver is working but some feature is not working, check the Service Menu. Bring up the Service menu and check to be sure that all items are set correctly.

COMPONENT-LEVEL SERVICING

The following troubleshooting information is intended for component servicing on the 19" through 27" models. Replacement modules are available on an exchange basis for the 32" and 36" models.

If the CRT or Video processor IC are replaced, Black/White tracking must be reset. Refer to the Service Menus section of this book for Black/White tracking adjustments.

When troubleshooting video circuits, remember that all video travels through the PIP IC (if used) and the Video/Audio switcher IC. A defect in either of these IC's can result in no video.

WARNING!

DO NOT disconnect the Video output module from the CRT when troubleshooting 32" and 36" receivers. If the video output module is removed on these sets while power is ON, the CRT will arc and can be permanently damaged. Also, the technician is in danger of serious shock. There is a termination circuit (R5110) on the CRT module to prevent this from happening.

SERVICING THE POWER SUPPLY

Check the standby voltages first:

VDC at CX3407 ((usually 169.7 VDC when 120 VCA)

B+ at CX3610

NOTE: B + 130 VDC for CH 32 and 36 inch

+ 15 VDC at CX3800

+14 VDC at C3803

5 VDC at C3802

Power On at IC6000 pin 32

Check the following:

Keyboard input at IC6000 pin 7 and 8

IR input at IC6000 pin 15

Power On output at IC6000 pin 32

Q3802 power supply "turn On" transistor.

Check the Switches voltages:

+ 15 volts DC at CX3804

+ 15 volts DC for the Audio Amp at LX3805.

+9 volts DC C3806

SWEEP DERIVE VOLTAGES

+ 25 VOLTS dc AT (+) CX2105

+ 35 volts DC at the junction of CX3253 and DX3252

+ 215 VOLTS DC at the junction of CX3208 and RX3208

+ 33 volts DC at the junction of RX3216 and ZD6001

CRT FILAMENT

Check at pin 1 and 2 of connector 2F5. This should read voltages between 6.1 to 6.3 volts AC on a true RMS meter.

VIDEO PROCESSOR ICX2200

Check the following key operating Signals and voltages:

Luminance in at ICX2200 pin 45

Chroma in at ICX2200 pin 45

Horizontal drive at pin 32

Vertical drive pin 24

R Out 19

G Out 20

B Out 21

Serial Data, Serial Clock pins 27 and 28

VCC 9 volts pins 9,46,8,48

R in from micro (IC6000) at pin 15

G in from micro (IC6000) at pin 16

B in from micro (IC6000) at pin 17

SERVICING

MICROPROCESSOR

Check the following:

IR in on pin 15.

+ 5 volts on pin 27 and 18.

Serial Data, Serial Clock on pins 36 and 38

Reset pin 30.

Horiz. Flyback pin 1, Vertical puce on pin 2

R Out 52, G Out 51, B Out 50.

VERTICAL CIRCUIT ICX2100

Check the following:

Vertical drive ramp pin 3

Vertical out pin 1

+ 25 VDC at pin 10

HORIZONTAL CIRCUIT

Check the following:

Horizontal drive to base of Q3201 predriver.

Driver transformer output at base of QX3203.

Shutdown voltage at RX3010M.

Scan derived voltages + 25V,+ 35V, + 215V +33V.

HIGH VOLTAGE AND X RADIATION PROTECTION

A potential source of x-rays is the picture tube, if the high voltage (HV) is out of specification. When the HV is operating properly, there is no x-radiation. For the CH chassis family, the HV has no adjustments. A HV shutdown circuit is used to prevent excessive HV and x-ray emissions.

THEORY OF OPERATION (SHUTDOWN CIRCUIT)

This circuit basically monitors the sweep pulse voltage derived from the sweep transformer TX3204 pins 5 & 6.

This voltage is rectified, and applied to a 12V zener diode ZDX3004. When the HV reaches its maximum allowed, value (see drawing) the zener diode conducts, the voltage on pin 29 of the video processor (ICX2200) increases until it reaches the threshold voltage of 3.5 VDC, and shuts down the TV

If the shutdown circuit has operated, the microcontroller will prevent the TV from being turned on again, without first having to unplug the AC cord to reset the microcontroller.

Apply signal through the video generator or tune the TV color receiver to crosshatch pattern. Connect an accurate HV meter between the picture tube anode and chassis ground. Access Video Menu and adjust Brightness and Contrast controls for minimum screen luminance. Wait until, the Video Menu or display disappear. Read HV meter.

SERVICE ADJUSTMENTS

G2 ADJUSTMENT

Use the following procedure when resetting G2.

1. Set brightness and contrast in Video Menu to mid range.
2. Set color level to minimum.
3. Connect output of an NTSC generator to the antenna input on the receiver. Select a color bar signal and turn chroma off.
4. Adjust G2 control so that bar patterns range from completely black to a "not overdriven" (not saturated) white. There should also be a distinct difference between black and white bars. Different shades of gray should also be distinguishable if the G2 is set correctly.
5. Return color level control to its normal setting. Leave generator connected if RGB cutoff is to be adjusted.

ADJUSTMENT OF RGB CUTOFF

Note: The G2 control must be adjusted before RGB drive!

1. If main module or CRT have been replaced, set Service Menu items 41G Gain and 42 B Gain to default settings for the receiver's screen size.
2. Set color level to minimum and Tint to midrange.
3. Connect output of an NTSC generator to the antenna input of the receiver. Set the generator output to a pure white signal, chroma off.
4. Access Service Menu cutoff adjustments. (Factory mode item 00 must be set to 1 to gain access to adjustments).
5. Set menu items 38 R Cut, 39 G Cut, and 40 B Cut to 0. These are the cutoff values.
6. Carefully observe which color is predominant on the CRT screen. DO NOT change the cutoff control for cutoff controls for best white screen display.
7. Set the NTSC generator to a color bar signal and turn chroma off. Check that the TV set displays a good gray scale from black to white. If black level is too high, readjust G2 slightly.
8. Return color level control to normal.

IF AND AUDIO SERVICING

VIDEO DETECTOR

If there is no viewable picture on screen, access the Service Menu and check default settings for the following items:

#33 RF AGC should be at least 40.

#37 PIF VCO Set to 63.

Tune in a good off-the-air signal. Place a high-impedance voltmeter at pin 44 of ICX2200. Adjust item PIF VCO (#37) to 2.5 volts DC.

AGC DELAY

With a strong noise-free antenna signal, adjust RF AGC (#33) to a lower setting until the signal gets noisier. Increase the setting again for a noise-free picture.

Note: If the setting is too high above 50, the tuner input will overload. Under certain conditions, beats may also appear in the picture.

MTS STEREO DECODER ALIGNMENT

The purpose of this procedure is adjusting registers of SONY audio processor CXA2054S (IC1400).

If no audio is present, access the Service Menu and check the default setting for the following items:

#32 AUDIO LEVEL set to 46.

Tune in a strong off air signal.

Place a high impedance meter on pin 54 of ICX2200 or from + side of capacitor C1214. Adjust L1205 for 4 volts DC.

Note: Alignment should be accomplished at least five minutes after the set has been turned on.

STEREO LEVEL ADJUSTMENT

1. Apply an RF signal with good video and audio at 400Hz and 100% modulation.
2. Access item #32 AUDIO LEVEL on the Installer's Menu.
3. Place a high impedance meter on pin 19 of IC1400 or the positive side of capacitor C1427. Adjust item AUDIO LEVEL (#32) to 490 to 500mV AC.
4. Access item #44 A ATT on the Service Menu. Place a high impedance meter on pin 44 of IC1400. Adjust item A ATT (#44) to 490 to 500mV AC.

MTS MODELS: Enter settings in their appropriate locations in the Service Menu, items 44-48, (starting with the left most two digits for item 44).

Note: Items 44-48 have no effect on MONO models. Do not change default settings.

SERVICE ADJUSTMENTS

PURITY & CONVERGENCE SETUP PROCEDURE

PRELIMINARY SETUP

1. Allow the receiver to warm up for 15 to 20 minutes.
2. Degauss the CRT.
3. Connect a crosshatch generator to the receiver and "rough in" the static (center) convergence. Follow the Convergence Procedure.
4. Adjust for best focus.

PURITY ADJUSTMENT

1. Purity tab positioning. Set the 2 pole purity tabs together in the 3 or 9 o'clock positions and the 4- and 6-pole purity tabs together in the 12 or 6 o'clock positions.
2. Move yoke to the maximum forward funnel position.
3. Next, switch the crosshatch generator to a red field.
4. Pull the yoke toward the rear of the CRT neck, keeping it centered, until a red raster is displayed.
5. If the red raster is not displayed as a pure red field, adjust the 2-pole purity tabs until a pure field is obtained.
6. Check for proper yoke tilt setting.

CONVERGENCE ADJUSTMENT

1. Release locking assembly.
2. Connect crosshatch generator to the receiver and adjust static (center) convergence as follows:
 - a. Adjust the 4-pole static control by moving the two tabs separately to converge the red and blue lines horizontally. Move the two tabs together around the neck of the CRT (in a 45° arc) from the top-dead-center position to converge the red and blue lines vertically.
 - b. After the 4-pole control has been adjusted to superimpose the red and blue lines on top of one another. Use the 6-pole static adjustment to place the converged red and blue lines over the green line. Move the two tabs together around the neck of the CRT (in a 30° arc) from the top-dead-center position to move the lines vertically. Adjusting the two tabs separately will move the converged beam to the left or right. Using a crosshatch generator capable of producing individual fields, adjust the generator to produce a red field. Use the purity tabs to center a red stripe.

CRT Ring Location Purity
Adjust Tabs Beam Movement
for Convergence

Ring Pairs	Rotation direction of Both Tabs	Movement of Red and Blue Beams
6 Pole	Opposite	←B OR B→ ←R OR R→
Convergence R&B over G	Same	↑B R OR B R↑
4 Pole	Opposite	←B OR B→ R→ ←R
Convergence R over B	Same	↑B R OR B R↑

SERVICE ADJUSTMENTS (continued)

VERTICAL-TILT WEDGE ADJUSTMENT

The vertical lines at 6 and 12 o'clock are converged by vertically tilting the yoke and inserting a wedge at the top of the yoke until it is firmly seated between the CRT glass and the horizontal coils.

HORIZONTAL-TILT WEDGE ADJUSTMENT

The vertical lines at 3 o'clock and 9 o'clock are converged by horizontally tilting the yoke and inserting a wedge. Adjust first at 4 or 8 o'clock, whichever has the larger space, until the wedge is firmly seated between the CRT glass and yoke coils. Then, insert the 3rd wedge in the remaining horizontal tilt position until it is firmly seated between the CRT glass and yoke coils. Convergence at the 3 and 9 o'clock should be maintained during this operation.

When the 3 wedges are firmly installed and positioned for acceptable convergence, lock the wedges in place by applying a 2.5 inches long strip of tape across the tabs of each wedge firmly against the CRT glass. The CRT glass surface should be clean and free of dust and other foreign material.

UNUSUAL TILT CASE

There may be some instances where the picture tube and yoke will require vertical tilt in the opposite (up) direction to obtain convergence. In such cases, insert the vertical tilt wedge at the bottom (6 o'clock) position. Follow through on the horizontal tilt adjustment by using the 2 and 10 o'clock positions and secure each wedge with a piece of tape, as described above.

IMPROVING CRT CORNER PURITY

CRTs that display corner purity problems even after following the service procedures can be modified with a picture correction kit (P/N 949-50). The purity can be improved by placing a picture-correction magnet (included in the kit) on the CRT funnel. Refer to the following modification steps and illustration to place the magnet properly. Fully degauss the CRT before installing correction magnets.

MODIFICATION

1. Place the magnet on the CRT funnel as shown in the figure displayed below, in the quadrant exhibiting impurity.
2. Rotate the magnet in place to the position shown for best purity.
3. Place a piece of 1/2" by 2" long Fiberglass tape over the magnet to hold it in place.
4. Degauss the CRT once magnet is in place to insure that the magnet is not over the internal magnet shield.

Note: *If the magnet is placed over the internal magnet shield, any apparent purity correction will disappear after degaussing. Reposition the correction magnet off the internal shield and degauss again.*
